FLIGHT CONTROLS - DDG MAINTENANCE PROCEDURES

1. General

A. This procedure has maintenance tasks for the Master Minimum Equipment List (MMEL) maintenance requirements as shown in the Dispatch Deviations Guide (DDG). These tasks are used to prepare the airplane for flight with certain systems/components inoperative.

B. This procedure also has the tasks that put the airplane back to its usual condition.

C. These are the tasks for the components in the flight controls system:

(1) DDG 27-21-01 Rudder Trim Indicator Inoperative - Preparation

(2) DDG 27-21-01 Rudder Trim Indicator Inoperative - Restoration

(3) DDG 27-21-02 STBY RUD ON Light Inoperative - Preparation

(4) DDG 27-21-02 STBY RUD ON Light Inoperative - Restoration

(5) DDG 27-31-01 FEEL DIFF PRESS Light System Inoperative - Preparation

(6) DDG 27-31-01 FEEL DIFF PRESS Light System Inoperative - Restoration

(7) DDG 27-61-01 Flight Spoiler Systems Inoperative - Preparation

(8) DDG 27-61-01 Flight Spoiler Systems Inoperative - Restoration

(9) DDG 27-62-01 Auto Speedbrake System Inoperative - Preparation

(10) DDG 27-62-01 Auto Speedbrake System Inoperative - Restoration

(11) DDG 27-62-02 SPEEDBRAKES EXTENDED Light Inoperative - Preparation

(12) DDG 27-62-02 SPEEDBRAKES EXTENDED Light Inoperative - Restoration

(13) DDG 27-83-02 AUTO SLAT FAIL Light System Inoperative - Preparation

(14) DDG 27-83-02 AUTO SLAT FAIL Light System Inoperative - Restoration

(15) DDG 27-88-01 Leading Edge Flap/Slat Position Light Systems - Leading Edge Indications for Slats 1, 2, 7 and 8 Inoperative - Preparation

(16) DDG 27-88-01 Leading Edge Flap/Slat Position Light Systems - Leading Edge Indications for Slats 1, 2, 7 and 8 Inoperative - Restoration

TASK 27-00-00-040-812

2. DDG 27-21-01 Rudder Trim Indicator Inoperative - Preparation

A. General

(1) This task gives the maintenance steps which prepare the airplane for flight with the Rudder Trim Indicator inoperative.

B. References

Reference	Title
27-21-00-800-801	Rudder Hydraulic System A, B, or Standby Pressurization (P/B 201)
27-21-00-840-801	Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Rudder Trim Indicator Deactivation

SUBTASK 27-00-00-860-063

(1) Do this task to pressurize the rudder hydraulic systems A and B: TASK 27-21-00-800-801.

SUBTASK 27-00-00-720-001

(2) Do these steps to make sure that the rudder trim actuator operates normally:

(a) Set the rudder trim knob to the NOSE LEFT position.

1) Make sure that the captain's left rudder pedal moves forward, and the right rudder pedal moves aft.

(b) Set the rudder trim knob to the NOSE RIGHT position.

1) Make sure that the captain's left rudder pedal moves aft, and the right rudder pedal moves forward.

SUBTASK 27-00-00-860-064

(3) Do this task to return the aircraft to its condition before rudder hydraulic system pressurization: TASK 27-21-00-840-801.

SUBTASK 27-00-00-410-004

(4) Install an INOP placard next to the deactivated Rudder Trim indicator.

——— END OF TASK ———

TASK 27-00-00-440-812

3. DDG 27-21-01 Rudder Trim Indicator Inoperative - Restoration

A. General

(1) This task puts the airplane back to its usual condition after operation with the Rudder Trim Indicator inoperative.

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Rudder Trim Indicator Restoration

SUBTASK 27-00-00-010-005

(1) Remove the INOP placard next to the Rudder Trim Indicator.

——— END OF TASK ———

TASK 27-00-00-040-813

4. DDG 27-21-02 STBY RUD ON Light Inoperative - Preparation

A. General

(1) This task gives the maintenance steps which prepare the airplane for flight with the STBY RUD ON indicator light inoperative.

B. References

Reference	Title

D. STBY RUD ON Light Deactivation

SUBTASK 27-00-00-860-001

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task to pressurize the rudder hydraulic systems A and B: TASK 27-21-00-800-801.

SUBTASK 27-00-00-810-001

(2) Do these steps to make sure that the rudder operates normally and independently on hydraulic system A and B:

(a) Set the FLT CONTROL A switch to ON and the FLT CONTROL B switch to OFF.

(b) While holding the tiller to prevent tire scrub, make sure that the rudder pedal forces are normal by pushing the captain's left rudder pedal forward until it touches the stop and hold.

1) Have a ground observer make sure that the rudder moves left.

(c) While continuing to hold the tiller, release the left rudder pedal and confirm normal rudder pedal forces by pushing the captain's right rudder pedal forward until it touches the stop and hold.

1) Have a ground observer make sure that the rudder moves right.

(d) While continuing to hold the tiller, release the captain's right rudder pedal.

1) Have a ground observer make sure that the rudder moves back to neutral.

(e) Set the FLT CONTROL B switch to ON and the FLT CONTROL A switch to OFF.

(f) While holding the tiller to prevent tire scrub, make sure that the rudder pedal forces are normal by pushing the captain's left rudder pedal forward until it touches the stop and hold.

1) Have a ground observer make sure that the rudder moves left.

(g) While continuing to hold the tiller, release the left rudder pedal and confirm normal rudder pedal forces by pushing the captain's right rudder pedal forward until it touches the stop and hold.

1) Have a ground observer make sure that the rudder moves right.

(h) While continuing to hold the tiller, release the captain's right rudder pedal.

1) Have a ground observer make sure that the rudder moves back to neutral.

SUBTASK 27-00-00-810-002

(3) Do these steps to make sure that the standby hydraulic pump is operating normally:

(a) Set the FLT CONTROL A switch to STBY RUD and the FLT CONTROL B switch to OFF.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) While holding the tiller to prevent tire scrub, make sure that the rudder pedal forces are normal by pushing the captain's left rudder pedal forward until it touches the stop and hold.

1) Have a ground observer make sure that the rudder moves left.

(c) While continuing to hold the tiller, release the left rudder pedal and confirm normal rudder pedal forces by pushing the captain's right rudder pedal forward until it touches the stop and hold.

1) Have a ground observer make sure that the rudder moves right.

(d) While continuing to hold the tiller, release the captain's right rudder pedal.

1) Have a ground observer make sure that the rudder moves back to neutral.

SUBTASK 27-00-00-860-002

(4) Open this circuit breaker and install safety lock:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	15	C01628	FORCE FIGHT MONITOR

(a) Make sure that the STBY RUD ON light is off.

SUBTASK 27-00-00-860-066

(5) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-00-00-930-001

(6) Attach an INDICATOR INOP placard to the STBY RUD ON indicator light on the P6-2 panel.

——— END OF TASK ———

TASK 27-00-00-440-813

5. DDG 27-21-02 STBY RUD ON Light Inoperative - Restoration

A. General

(1) This task puts the airplane back to its usual condition after operation with the STBY RUD ON indicator light inoperative.

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
325	Vertical Fin - Rudder

C. STBY RUD ON Light Restoration

SUBTASK 27-00-00-860-003

(1) Remove the safety lock and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	15	C01628	FORCE FIGHT MONITOR

SUBTASK 27-00-00-930-002

(2) Remove the INDICATOR INOP placard from the STBY RUD ON indicator on the P6-2 panel.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-00-00-040-814

6. DDG 27-31-01 FEEL DIFF PRESS Light System Inoperative - Preparation

(Figure 901, Figure 902, Figure 903)

A. General

(1) This task gives the maintenance steps that prepare the airplane for flight with the FEEL DIFF PRESS light system inoperative.

B. References

Reference	Title

F. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

G. Elevator Feel System Test

SUBTASK 27-00-00-860-005

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task to pressurize the elevator hydraulic systems A and B: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-00-00-860-006

(2) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

SUBTASK 27-00-00-730-004

(3) Set the Proximity Sensor Electronics Unit (PSEU) to the ground mode.

(a) Set the GND TEST switch, on the P61-4 panel, to the ENABLE position.

(b) Press SYS button on the Multi Function Display (MFD) panel.

(c) Select MAINT -> ONBD MAINT -> OTHER FUNCTIONS -> SPECIAL FUNCTIONS -> ATA System 32: PSEU -> PSEU Air/Ground Override -> CONTINUE -> OPERATE FUNCTION -> CONTINUE -> START FUNCTION.

(d) Select SET SYS 1 & 2 ON GND.

(e) SELECT CONTINUE -> STOP FUNCTION.

SUBTASK 27-00-00-860-007

(4) Use the STAB TRIM switches to set the stabilizer to 4 units of trim.

SUBTASK 27-00-00-860-008

(5) Put the FLT CONTROL A and B switches to the OFF position.

SUBTASK 27-00-00-860-009

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(6) Use the bar, SPL-1677, to make sure that the horizontal stabilizer "B" dimension is 39.17 ±0.01 in. (994.92 ±0.26 mm) (Figure 903).

SUBTASK 27-00-00-860-010

(7) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-00-00-010-001

(8) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-00-00-950-002

(9) Apply a seal to the drain hole in each pitot probe on the vertical fin.

(a) Use vinyl adhesive Scotch Brand No.471 tape, G02219, and polyethylene film, G00252, to cover and seal the drain holes.

SUBTASK 27-00-00-930-018

CAUTION

WHENEVER AN OPENING IS COVERED, MAKE SURE THAT CONDITION IS VISIBLE FROM GROUND. ENGINES SHOULD NOT BE OPERATED WITH COVERS IN PLACE BECAUSE COVERS CAN COME OFF AND DAMAGE ENGINES.

(10) Attach a "PITOT PROBES COVERED" tag, G02447, that has "PITOT PROBES COVERED" printed on it in black letters, to the top of the left control wheel in the flight deck with wire.

WARNING

WHEN THE DRAIN HOLES ARE COVERED, MAKE SURE THAT CONDITION IS VISIBLE FROM THE GROUND. IN ADDITION, ATTACH A TAG TO THE LEFT CONTROL WHEEL IN THE FLIGHT DECK AS A REMINDER THAT THE STATIC PORTS ARE COVERED. FAILURE TO OBSERVE AND REMOVE COVERINGS OVER STATIC PORTS BEFORE FLIGHT CAN CAUSE LARGE ERRORS IN AIRSPEED-SENSING AND ALTITUDE-SENSING SIGNALS. THIS CAN LEAD TO LOSS OF SAFE FLIGHT.

(a) Put one end of a 4 ft (1.22 m) or longer piece of the orange barricade tape, G02443, over the black polyethylene sheet covering the drain holes of the pitot probes and secure the upper edge with a 5 in. (12.70 cm) strip of the adhesive Scotch Brand No.471 tape, G02219.

1) Smooth Scotch Brand No.471 tape, G02219, on the airplane surface to make sure that the bond is satisfactory.

SUBTASK 27-00-00-010-004

(11) Remove the drain plugs from the systems A and B pitot lines.

NOTE: The systems A and B pitot lines are below the elevator feel computer.

SUBTASK 27-00-00-860-073

(12) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

SUBTASK 27-00-00-480-002

(13) Install the regulator, SPL-1742, or equivalent air data model test set, COM-1914.

(a) Connect the pressure gage lines from the regulator, SPL-1742, or equivalent air data model test set, COM-1914, to the drain holes of the pitot lines.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION MAKE SURE THAT THE PITOT PROBE HAS NO ADDED WEIGHT ON IT FROM THE TEST HOSE. THE WEIGHT OF THE TEST HOSE CAN BEND OR TWIST THE PITOT PROBE OUT OF TOLERANCE.

(b) Connect the pressure lines from the regulator, SPL-1742, or equivalent air data model test set, COM-1914, to the pitot probes on the vertical fin.

SUBTASK 27-00-00-790-002

(14) Do a check for pressure leakage in the feel pitot system.

CAUTION DO NOT INCREASE THE PRESSURE TO MORE THAN 5 PSIG (437 KCAS) DURING THE TEST. IF THE PRESSURE IS MORE THAN 5 PSIG, IT CAN CAUSE DAMAGE TO THE ELEVATOR FEEL COMPUTER.

(a) Operate the regulator, SPL-1742, or equivalent air data model test set, COM-1914, to pressurize the pitot system to 4.7 psig (32.4 kPa) - 4.9 psig (33.8 kPa).

(b) Set the shutoff valve in the regulator, SPL-1742, or equivalent air data model test set, COM-1914, to the OFF position.

(c) Make sure that the pressure does not decrease more than 0.3 psig (2.1 kPa) during a 2 minute time.

(d) Operate the regulator, SPL-1742, or equivalent air data model test set, COM-1914, to decrease the pressure to zero.

SUBTASK 27-00-00-720-002

(15) Test the control column force, use one of the two methods.

SUBTASK 27-00-00-740-007

(16) Method 1 (recommended): test the control column force, use the MFD FLIGHT CONTROL display.

(a) Set up the MAX Display System (MDS).

(b) Select MAINT -> MAINT DATA PGS -> 27 FLIGHT CONTROL DISPLAY (Figure 902).

(c) Make sure that the FLT CONTROL A and B switches are in the ON position.

(d) Move the captain's control column lightly forward and aft to put the elevator system in the neutral position.

1) Attach DO NOT OPERATE tags, STD-858, on the control columns.

(e) Record right elevator position that is displayed on the screen.

NOTE: This value shows the neutral position of the right elevator.

1) Make sure that the right elevator position is in the range of 4.0 ± 0.3 degree.

(f) Calculate the trailing edge up test target position value, as follows:

1) Take away 2.0 degrees from the value of the right elevator neutral position.

NOTE: This value shows the trailing edge up test target position.

(g) Put FLT CONTROL B switch to the OFF position and leave FLT CONTROL A switch in the ON position.

(h) Remove the DO NOT OPERATE tags, from the control columns.

(i) Move the captain's control column slowly aft with a push/pull gauge (0-50 lbs), STD-1100, until the MFD display right elevator value will be equal to the trailing edge up test target position value.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Do not allow the column to move beyond the target elevator positions and back in the direction of neutral before the force is recorded.
   a) If a column overshoot occurs, return the column to neutral and repeat the step.
2) Make sure that the column is not held in place when a force is read.
   a) Read the column force at the moment when the column reaches the correct position.
3) Record the control column force.
4) Make sure that the force to hold the control column is at 27.5 lbf (122.3 N) - 47.5 lbf (211.3 N).

(j) Move the captain's control column lightly forward and aft to put the elevator system in the neutral position.

(k) Calculate the trailing edge down test target position value, as follows:

1) Add 2.0 degrees to the value of the right elevator neutral position.

   NOTE: This value shows the trailing edge down test target position.

(l) Move the captain's control column slowly forward with a push/pull gauge (0-50 lbs), STD-1100, until the MFD display right elevator value will be equal to the trailing edge down test target position value.

1) Do not allow the column to move beyond the target elevator positions and back in the direction of neutral before the force is recorded.
   a) If a column overshoot occurs, return the column to neutral and repeat the step.
2) Make sure that the column is not held in place when a force is read.
   a) Read the column force at the moment when the column reaches the correct position.
3) Record the control column force.
4) Make sure that the force to hold the control column at 29 lbf (129 N) - 52 lbf (231 N).

(m) Put FLT CONTROL A switch to the OFF position and FLT CONTROL B switch to the ON position.

(n) Move the captain's control column lightly forward and aft to put the elevator system in the neutral position.

(o) Move the captain's control column slowly aft with a push/pull gauge (0-50 lbs), STD-1100, until the MFD display right elevator value will be equal to the trailing edge up test target position value.

1) Do not allow the column to move beyond the target elevator positions and back in the direction of neutral before the force is recorded.
   a) If a column overshoot occurs, return the column to neutral and repeat the step.
2) Make sure that the column is not held in place when a force is read.
   a) Read the column force at the moment when the column reaches the correct position.
3) Record the control column force.
4) Make sure that the force to hold the control column is at 27.5 lbf (122.3 N) - 47.5 lbf (211.3 N).

(p) Move the captain's control column lightly forward and aft to put the elevator system in the neutral position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(q) Move the captain's control column slowly forward with a push/pull gauge (0-50 lbs), STD-1100, until the MFD display right elevator value will be equal to the trailing edge down test target position value.

1) Do not allow the column to move beyond the target elevator positions and back in the direction of neutral before the force is recorded.

a) If a column overshoot occurs, return the column to neutral and repeat the step.

2) Make sure that the column is not held in place when a force is read.

a) Read the column force at the moment when the column reaches the correct position.

3) Record the control column force.

4) Make sure that the force to hold the control column at 29 lbf (129 N) - 52 lbf (231 N).

SUBTASK 27-00-00-730-001

(17) Method 2 (optional): test the control column force, use masking tape on the tail cone.

(a) Make sure that the FLT CONTROL A and B switches are in the ON position.

CAUTION DO NOT INCREASE THE PRESSURE TO MORE THAN 5 PSIG (437 KCAS) DURING THE TEST. IF THE PRESSURE IS MORE THAN 5 PSIG, IT CAN CAUSE DAMAGE TO THE ELEVATOR FEEL COMPUTER.

(b) Operate the regulator, SPL-1742, or equivalent air data model test set, COM-1914, to pressurize the pitot systems to 2.47 ±0.05 psi (17.03 ±0.34 kPa).

(c) Install a piece of the Scotch Flatback Masking Tape 250, G00270, on the tail cone along the direction of the right elevator trailing edge travel.

NOTE: Elevator travel measuring tool can be used instead of tape method.

(d) Attach the adapter, SPL-1674, to the captain's control column.

(e) Move the captain's control column lightly to put the elevator system in the neutral position.

1) Attach DO NOT OPERATE tags, STD-858, on the control columns.

(f) Make a mark of the neutral position of the elevator trailing edge on Scotch Flatback Masking Tape 250, G00270 (Figure 901).

1) Use this mark of the neutral position as a reference.

(g) Remove the DO NOT OPERATE tags, from the control columns.

(h) Measure and mark 1.20 in. (30.48 mm) above the neutral mark.

NOTE: This mark will be the trailing edge up test target position.

(i) Measure and mark 1.20 in. (30.48 mm) below the neutral mark.

NOTE: This mark will be used as the trailing edge down test target position.

(j) Put FLT CONTROL B switch to the OFF position and leave FLT CONTROL A switch in the ON position.

(k) Move the captain's control column aft with a push/pull gauge (0-50 lbs), STD-1100, to set the elevator trailing edge to 1.20 ±0.05 in. (30.48 ±1.27 mm) up from the neutral position.

1) Do not allow the column to move beyond the target elevator positions and back in the direction of neutral before the force is recored.

a) If a column overshoot occurs, return the column to neutral and repeat the step.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure that the column is not held in place when a force is read.
   a) Read the column force at the moment when the column reaches the correct position.
3) Make sure that the force to hold the control column at this position is 27.5 lbf (122.3 N) - 47.5 lbf (211.3 N).

(l) Move the captain's control column lightly forward and aft to put the elevator system in the neutral position.

(m) Move the captain's control column forward with a push/pull gauge (0-50 lbs), STD-1100, to set the elevator trailing edge to 1.20 ±0.05 in. (30.48 ±1.27 mm) down from the neutral position.
1) Do not allow the column to move beyond the target elevator positions and back in the direction of neutral before the force is recorded.
   a) If a column overshoot occurs, return the column to neutral and repeat the step.
2) Make sure that the column is not held in place when a force is read.
   a) Read the column force at the moment when the column reaches the correct position.
3) Make sure that the force to hold the control column at this position is 29 lbf (129 N) - 52 lbf (231 N).

(n) Put FLT CONTROL A switch to the OFF position and FLT CONTROL B switch to the ON position.

(o) Move the captain's control column aft with a push/pull gauge (0-50 lbs), STD-1100, to set the elevator trailing edge to 1.20 ±0.05 in. (30.48 ±1.27 mm) up from the neutral position.
1) Do not allow the column to move beyond the target elevator positions and back in the direction of neutral before the force is recorded.
   a) If a column overshoot occurs, return the column to neutral and repeat the step.
2) Make sure that the column is not held in place when a force is read.
   a) Read the column force at the moment when the column reaches the correct position.
3) Make sure that the force to hold the control column at this position is 27.5 lbf (122.3 N) - 47.5 lbf (211.3 N).

(p) Move the captain's control column lightly forward and aft to put the elevator system in the neutral position.

(q) Move the captain's control column forward with a push/pull gauge (0-50 lbs), STD-1100, to set the elevator trailing edge to 1.20 ±0.05 in. (30.48 ±1.27 mm) down from the neutral position.
1) Do not allow the column to move beyond the target elevator positions and back in the direction of neutral before the force is recorded.
   a) If a column overshoot occurs, return the column to neutral and repeat the step.
2) Make sure that the column is not held in place when a force is read.
   a) Read the column force at the moment when the column reaches the correct position.
3) Make sure that the force to hold the control column at this position is 29 lbf (129 N) - 52 lbf (231 N).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-00-00-730-003

(18) Methods 1 and 2: do the feel limit functionality test, as follows:

(a) Move the captain's control column lightly forward and aft to put the elevator system in the neutral position.

(b) Make sure that the pitot pressure is in range 2.42 psig (16.69 kPa) - 2.52 psig (17.37 kPa).

(c) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

1) Wait at least 15 seconds.

(d) Move the captain’s control column slowly aft to the trailing edge up test target position.

NOTE: The value of the trailing edge up test target position depends on the method you use to test control column force.

1) Do not allow the column to move beyond the target elevator positions and back in the direction of neutral before the force is recorded.

a) If a column overshoot occurs, return the column to neutral and repeat the step.

2) Make sure that the column is not held in place when a force is read.

a) Read the column force at the moment when the column reaches the correct position.

3) Record the control column force.

(e) Move the captain's control column lightly forward and aft to put the elevator system in the neutral position.

(f) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

1) Wait at least 20 seconds.

2) Ignore the FEEL DIFF PRESS light, on the P5-3 panel.

(g) Move the captain’s control column slowly aft to the trailing edge up test target position.

NOTE: The value of the trailing edge up test target position depends on the method you used to test control column force.

1) Do not allow the column to move beyond the target elevator positions and back in the direction of neutral before the force is recorded.

a) If a column overshoot occurs, return the column to neutral and repeat the step.

2) Make sure that the column is not held in place when a force is read.

a) Read the column force at the moment when the column reaches the correct position.

3) Record the control column force.

(h) Calculate the difference of forces when the circuit breaker is opened and closed.

1) Make sure that the difference in forces at least 20 lbf (89 N).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-00-00-840-002

(1) Move the captain's control column back to neutral position.

SUBTASK 27-00-00-840-001

(2) Decrease the pitot pressure to pitot tubes to 0 psig (0 kPa).

SUBTASK 27-00-00-080-001

(3) Remove the adapter, SPL-1674, protractor, SPL-1680, and any other tools from the captain's control column.

SUBTASK 27-00-00-080-002

(4) Remove any Scotch Flatback Masking Tape 250, G00270, from the aircraft.

SUBTASK 27-00-00-080-003

(5) Remove vinyl adhesive Scotch Brand No.471 tape, G02219, and black polyethylene sheet polyethylene film, G00252, used to cover and seal the drain holes, and the 4 ft (1.22 m) or longer piece of the orange barricade tape, G02443, from the drain hole in each vertical fin pitot probe.

SUBTASK 27-00-00-080-004

(6) Remove the regulator, SPL-1742, or equivalent air data model test set, COM-1914.

(a) Disconnect the air pressure lines of the regulator, SPL-1742, or equivalent air data model test set, COM-1914, from both vertical fin pitot probes.

(b) Disconnect the pressure gage lines of the regulator, SPL-1742, or equivalent air data model test set, COM-1914, from systems A and B drain lines.

SUBTASK 27-00-00-860-074

(7) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

SUBTASK 27-00-00-420-001

(8) Install the drain plugs to the systems A and B drain lines.

SUBTASK 27-00-00-860-011

(9) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

SUBTASK 27-00-00-410-001

(10) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-00-00-860-012

(11) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-00-00-730-005

(12) Set the Proximity Switch Electronic Unit (PSEU) to the normal mode (TASK 32-09-00-860-802).

I. FEEL DIFF PRESS Light Deactivation

SUBTASK 27-00-00-930-003

(1) Install a LIGHT INOP placard to the FEEL DIFF PRESS light.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-00-00-440-814

7. DDG 27-31-01 FEEL DIFF PRESS Light System Inoperative - Restoration

A. General

(1) This task puts the airplane back to its usual condition after operation with the FEEL DIFF PRESS light system inoperative.

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. FEEL DIFF PRESS Light Restoration

SUBTASK 27-00-00-930-004

(1) Remove the LIGHT INOP placard from the FEEL DIFF PRESS light.

——— END OF TASK ———

TASK 27-00-00-040-811

8. DDG 27-61-01 Flight Spoiler Systems Inoperative - Preparation

A. General

(1) This task gives the maintenance steps which prepare the airplane for flight with a single flight spoiler pair inoperative.

NOTE: The flight spoilers include spoiler pairs 2/11, 3/10, 4/9 and 5/8. Flight spoiler pair 5/8 must stay serviceable.

B. References

D. Prepare for the procedure

SUBTASK 27-00-00-860-051

(1) Extend trailing edge flaps to the full extend position to gain access to the PCUs (TASK 27-51-00-860-803).

SUBTASK 27-00-00-860-052

(2) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-00-00-860-053

(3) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	11	C04040	GROUND SPOILER CONTROL
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-00-00-860-067

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

E. Procedure

SUBTASK 27-00-00-820-004

(1) Operate the manual release cam on the bottom of the PCU and manually move the spoiler panel up as needed to gain access to the PCU connector.

SUBTASK 27-00-00-020-002

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. SUDDEN MOVEMENT CAN OCCUR WHEN YOU DISCONNECT THE OPPOSITE SPOILERS PCU-ELECTRICAL-CONNECTOR. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Disconnect, cap and stow the electrical connector from the PCU.

SUBTASK 27-00-00-820-003

(3) Manually move the spoiler panel to the stowed position.

SUBTASK 27-00-00-020-003

(4) Do the steps again for the opposite spoiler.

NOTE: Spoilers pairs are 2/11, 3/10 and 4/9.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-00-00-860-054

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

SUBTASK 27-00-00-860-068

(2) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	11	C04040	GROUND SPOILER CONTROL
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-00-00-860-055

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-00-00-860-056

(4) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

G. Spoiler Operational Check

SUBTASK 27-00-00-710-007

(1) Make sure the deactivated spoiler panels remain in the stowed position.

(a) Turn the control wheel full counterclockwise. Make sure that the serviceable left wing flight spoilers extend.

(b) Make sure that the inoperative left wing spoiler panel stays down.

(c) Center the control wheel. Make sure that the serviceable left wing flight spoilers retract.

(d) Turn the control wheel full clockwise. Make sure that the serviceable right wing flight spoilers extend.

(e) Make sure that the inoperative right wing spoiler panel stays down.

(f) Center the control wheel. Make sure that the serviceable right wing spoilers retract.

SUBTASK 27-00-00-700-004

(2) Use the Onboard Maintenance Function (OMF) to perform the ground test for the flight spoilers. Do this task: Flight Spoiler Test, TASK 27-61-45-730-805.

NOTE: This will extinguish the SPOILERS light on the P5-3 panel.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-00-00-810-010

(3) If necessary, extinguish the MAINT light on the P5-1 panel. Do this task: Fault Interrogation for a Maintenance Message, TASK 31-65-00-750-801.

——— END OF TASK ———

TASK 27-00-00-440-811

9. DDG 27-61-01 Flight Spoiler Systems Inoperative - Restoration

A. General

(1) This task puts the airplane back to its usual condition after operation with a single flight spoiler pair inoperative.

NOTE: The flight spoilers include spoiler pairs 2/11, 3/10, 4/9 and 5/8.

B. References

Reference	Title

29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)
31-65-00-750-801	Fault Interrogation for a Maintenance Message (P/B 201)

C. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
211	Flight Compartment - Left
212	Flight Compartment - Right
563	Left Wing - Spoiler No. 4
564	Left Wing - Spoiler No. 3
565	Left Wing - Spoiler No. 2
663	Right Wing - Spoiler No. 9
664	Right Wing - Spoiler No. 10
665	Right Wing - Spoiler No. 11

D. Prepare for the procedure

SUBTASK 27-00-00-860-057

(1) Extend trailing edge flaps to the full extend position to gain access to the PCUs (TASK 27-51-00-860-803).

SUBTASK 27-00-00-860-058

(2) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-00-00-860-059

(3) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	11	C04040	GROUND SPOILER CONTROL

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-00-00-860-069

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

E. Procedure

SUBTASK 27-00-00-820-005

(1) Operate the manual release cam on the bottom of the PCU and manually move the spoiler panel up as needed to gain access to the PCU connector.

SUBTASK 27-00-00-910-001

(2) Before connecting the electrical connector, do this task: Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802.

SUBTASK 27-00-00-020-004

(3) Connect the electrical connector for the PCU.

SUBTASK 27-00-00-820-006

(4) Manually move the spoiler panel to the stowed position.

SUBTASK 27-00-00-020-005

(5) Do the steps again for the opposite spoiler.

NOTE: Spoilers pairs are 2/11, 3/10 and 4/9.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-00-00-860-060

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-00-00-860-070

(2) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	11	C04040	GROUND SPOILER CONTROL
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-00-00-860-061

WARNING

MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-00-00-860-062

(4) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

G. Spoiler Operational Check

SUBTASK 27-00-00-700-003

(1) Use the Onboard Maintenance Function (OMF) to perform the ground test for the flight spoilers. Do this task: Flight Spoiler Test, TASK 27-61-45-730-805.

NOTE: The deactivated spoiler pair will be restored after this test is performed.

H. MAINT Light Status Message

SUBTASK 27-00-00-750-001

(1) Uncheck the applicable MAINT light Status Message(s) on the MAINT LIGHT menu (TASK 31-65-00-750-801).

END OF TASK

TASK 27-00-00-040-815

10. DDG 27-62-01 Auto Speed Brake System Inoperative - Preparation

A. General

(1) This task gives the maintenance steps which prepare the airplane for flight with the Auto Speed Brake System inoperative.

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Auto Speed Brake System Deactivation

SUBTASK 27-00-00-710-005

(1) Make sure that the manual speed brake operates correctly.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-00-00-010-002

(2) Open this circuit breaker and install safety lock:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	9	C00440	FLIGHT CONTROL AUTO SPEED BRAKE

SUBTASK 27-00-00-930-009

(3) Attach an AUTO SPOILER INOP placard to the speed brake control lever.

——— END OF TASK ———

TASK 27-00-00-440-815

11. DDG 27-62-01 Auto Speed Brake System Inoperative - Restoration

A. General

(1) This task puts the airplane back to its usual condition after operation with the Auto Speed Brake System inoperative.

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Auto Speed Brake System Restoration

SUBTASK 27-00-00-860-021

(1) Remove the safety lock and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	9	C00440	FLIGHT CONTROL AUTO SPEED BRAKE

SUBTASK 27-00-00-930-011

(2) Remove the AUTO SPOILER INOP placard from the speed brake control lever.

——— END OF TASK ———

TASK 27-00-00-040-816

12. DDG 27-62-02 SPEEDBRAKES EXTENDED Light Inoperative - Preparation

A. General

(1) This task gives the maintenance steps which prepare the airplane for flight with the SPEEDBRAKES EXTENDED indicator light inoperative.

B. References

Reference	Title

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. SPEEDBRAKES EXTENDED Indicator Light Deactivation

SUBTASK 27-00-00-860-022

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task to pressurize the speed brake hydraulic systems A and B: TASK 27-62-00-800-801.

SUBTASK 27-00-00-040-002

(2) Do these steps to test the speedbrake actuator:

(a) Make sure that the wheel chocks are installed (CHOCK INSTALLATION, PAGEBLOCK 10-11-05/201).

(b) Put the speedbrake lever in the DOWN position.

NOTE: The spoilers will move down during this step.

(c) Make sure that the flight and ground spoilers are all down.

(d) Put the speedbrake lever in the FLIGHT DETENT.

NOTE: The spoilers will move up during this step.

(e) Make sure that the flight and ground spoilers deploy.

(f) Put the speedbrake lever in the DOWN position.

NOTE: The spoilers will move down during this step.

(g) Make sure that the flight and ground spoilers are all down.

(h) Make sure that the stabilizer trim is in the green band.

(i) Put the flap lever to a takeoff position.

(j) Release the parking brake.

WARNING

MAKE SURE THAT YOU OPEN THE CIRCUIT BREAKER FOR THE WEATHER RADAR SYSTEM. THE FORWARD MOVEMENT OF A THRUST LEVER CAN CAUSE THE AUTOMATIC OPERATION OF THE SYSTEM. THE OPERATION OF THIS SYSTEM CAN CAUSE SERIOUS INJURY TO PERSONS AND DAMAGE TO EQUIPMENT IN THE AREA OF THE NOSE RADOME.

(k) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	7	C01678	WEATHER RADAR RT RIGHT

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
D	13	C00120	WEATHER RADAR RT

(l) With engines not running, move both thrust levers beyond 60 degrees.

(m) Make sure that the Takeoff Configuration Warning Horn does not sound.

(n) Move the thrust levers to idle.

(o) Set the parking brake.

(p) Put the flaps to the retract position.

(q) If the SPEEDBRAKES EXTENDED light remains illuminated while on the ground, remove the light bulb.

(r) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	7	C01678	WEATHER RADAR RT RIGHT

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
D	13	C00120	WEATHER RADAR RT

SUBTASK 27-00-00-930-012

(3) Attach an INDICATOR INOP placard to the SPEEDBRAKES EXTENDED indicator light.

SUBTASK 27-00-00-860-023

(4) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

——— END OF TASK ———

TASK 27-00-00-440-816

13. DDG 27-62-02 SPEEDBRAKES EXTENDED Light Inoperative - Restoration

A. General

(1) This task puts the airplane back to its usual condition after operation with the SPEEDBRAKES EXTENDED indicator light.

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
325	Vertical Fin - Rudder

C. SPEEDBRAKES EXTENDED Indicator Light Restoration

SUBTASK 27-00-00-410-003

(1) If necessary, install the SPEEDBRAKES EXTENDED indicator light bulb.

SUBTASK 27-00-00-930-013

(2) Remove the INDICATOR INOP placard from the SPEEDBRAKES EXTENDED indicator.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-00-00-040-817

14. DDG 27-83-02 AUTO SLAT FAIL Light System Inoperative - Preparation

A. General

(1) This task gives the maintenance steps which prepare the airplane for flight with an AUTO SLAT FAIL light on the forward annunciator panel inoperative.

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

D. AUTO SLAT FAIL Light Deactivation

SUBTASK 27-00-00-010-003

(1) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-00-00-740-002

(2) Do the EXISTING FAULTS test on the SMYD BITE:

(a) Push the ON/OFF switch.

NOTE: The display will show “EXISTING FAULTS?”.

(b) Push the YES switch.

1) Make sure that the display shows NO FAULTS.

(c) Push the MENU switch to return to the “EXISTING FAULTS?” display.

(d) Push the ON/OFF switch to turn the SMYD display off.

SUBTASK 27-00-00-410-002

(3) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-00-00-930-014

(4) Attach a LIGHT INOP placard to the AUTO SLAT FAIL light.

——— END OF TASK ———

TASK 27-00-00-440-817

15. DDG 27-83-02 AUTO SLAT FAIL Light System Inoperative - Restoration

A. General

(1) This task puts the airplane back to its usual condition after operation with an AUTO SLAT FAIL light on the forward annunciator panel inoperative.

B. Location Zones

Zone	Area
211	Flight Compartment - Left

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Zone	Area
212	Flight Compartment - Right

C. AUTO SLAT FAIL Light Restoration

SUBTASK 27-00-00-930-015

(1) Remove the LIGHT INOP placard from the AUTO SLAT FAIL light.

——— END OF TASK ———

TASK 27-00-00-040-818

16. DDG 27-88-01 Leading Edge Flap/Slat Position Light System Inoperative - Preparation

(Figure 904)

A. General

(1) This task gives the maintenance steps which prepare the airplane for flight with the Leading Edge (LE) slat indications inoperative.

B. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Leading Edge Flap/Slat Position Light System Deactivation

SUBTASK 27-00-00-860-018

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize the hydraulic system B to 3000 ±100 psi (211 ±7 kg/cm^2) (TASK 29-11-00-860-801).

SUBTASK 27-00-00-710-002

(2) Cycle the flaps.

SUBTASK 27-00-00-210-001

(3) Make sure that the remaining LE devices annunciator panel, P5-12 lights operate normally during flap extension and retraction.

SUBTASK 27-00-00-740-001

(4) Check to see which Trailing Edge (TE) flap lever positions result in an inoperative LE indication.

SUBTASK 27-00-00-710-003

(5) Set the flap lever to the position which makes the faulty indication.

SUBTASK 27-00-00-930-008

(6) Make sure that the LE and TE devices are in the correct position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-00-00-710-004

(7) Do these steps to make sure that both stall warning systems operate normally:

(a) Make sure that hydraulic system B pressure is between 3000 ±100 psi (211 ±7 kg/cm^2).

(b) Push and hold the STALL WARNING TEST NO. 1 and NO. 2 switches on the stall warning test panel, P5 Overhead Panel.

(c) Make sure that the control column stick shakers operate for more than five seconds.

(d) If both stick shakers do not operate normally, do these steps:

1) Open this circuit breaker and install safety lock:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	7	C01208	STALL WARN ASYM MODE

2) Push and hold the STALL WARNING TEST NO. 1 and NO. 2 switches on the stall warning test panel, P5 Overhead Panel.

3) Make sure that the control column stick shakers operate normally.

(8) If the inoperative slat indication occurs at more than one flap position, repeat the above procedure to make sure both Stall Warning Systems at Flaps 0, Flaps1, and Flaps 10 operate normally.

SUBTASK 27-00-00-860-065

(9) Remove power from hydraulic system B (TASK 29-11-00-860-805).

SUBTASK 27-00-00-410-005

(10) Install a LIGHT INOP placard next to the applicable deactivated LE slat indications.

B. Control Cables Identification and Assembly Specifications

SUBTASK 27-09-14-960-001

(1) If it is necessary to replace the cables, do these tasks:

- Control Cables Removal, TASK 20-10-91-000-801

ECCN 9E991 BOEING PROPRIETARY - See title page for details

- Control Cables Installation, TASK 20-10-91-400-801.

SUBTASK 27-09-14-700-001

(2) If the aileron control cables were replaced, do these tasks:

- Aileron Cables Adjustment, TASK 27-11-00-820-801
- Aileron Trim Response Test, TASK 27-11-00-730-801
- Aileron Travel Test, TASK 27-11-00-700-810
- Control Wheel Centering Check, TASK 27-11-00-700-804
- Aileron Control Wheel Force Test, TASK 27-11-00-700-805.

(3) If the rudder control cables were replaced, do these tasks:

- Rudder Control Cables RA and RB Adjustment, TASK 27-21-00-820-803
- Rudder Travel Test, TASK 27-21-00-700-805
- Rudder Centering Test, TASK 27-21-00-700-803
- Rudder Pedal Forces Test, TASK 27-21-00-700-804.

(4) If the elevator control cables were replaced, do these tasks:

- Elevator Control Cables EA and EB and Pitch Force Transducers - Adjustment, TASK 27-31-00-820-801
- Elevator and Elevator Trim Control System - Operational Test, TASK 27-31-00-710-801
- Elevator Travel Limit - Test, TASK 27-31-00-700-805
- Control Column Travel and Centering - Test, TASK 27-31-00-700-809
- Control Column Power Force - Test, TASK 27-31-00-700-810.

(5) If the trailing edge flap control cables were replaced, do these tasks:

- Trailing Edge Flap Control System Adjustment and Test, TASK 27-51-00-820-801
- Trailing Edge Flap System Test, TASK 27-51-00-730-801
- Alternate Flap Control System Functional Test, TASK 27-51-00-720-803.

(6) If the inboard trailing edge flap/aft flap drive cables were replaced, do the cable adjustment steps in this task:

- Inboard Aft Flap Actuating Mechanism Installation, TASK 27-51-14-400-801.

(7) If the horizontal stabilizer control cables were replaced, do these tasks:

- Stabilizer Control Cable and Chain - Adjustment, TASK 27-41-00-820-801
- Stabilizer Manual Trim and Trim Indicator - Test, TASK 27-41-00-700-801
- Horizontal Stabilizer Trim Control System Friction Test, TASK 27-41-00-700-802
- Stabilizer Electric Trim System Test, TASK 27-41-00-700-803
- Stabilizer Trim Wheel Free Movement Test, TASK 27-41-00-700-804
- Stabilizer Clutch Friction System Test, TASK 27-41-00-700-806.

SUBTASK 27-09-14-860-001

(8) Identify and make control cable assemblies for these flight control systems, as necessary:

- Figure 201
- Figure 202
- Figure 203
- Figure 204

ECCN 9E991 BOEING PROPRIETARY - See title page for details

- Figure 205
- Figure 206.

SUBTASK 27-09-14-860-002

(9) Swage control cables with dies for the next larger size AN standard terminals for all BACT14A terminals.

TASK 27-09-14-820-801

3. Control Cables - Rigging

A. General

(1) Before you do cable adjustment, permit a minimum of one hour at a constant ambient temperature of ± 5 degrees F (± 2.8 degrees C) for the airframe temperature to become stable.

(a) It is recommended to do the cable adjustments in a controlled environment such as a hangar.

NOTE: Direct sunlight on the airframe will cause the cable readings to be inaccurate.

(b) All temperature readings will be taken as ambient outside but adjacent to the applicable area of the airframe.

(c) The cable tension values will not be correct when there are temperature differences along the cable run.

(2) Before you do cable adjustment, allow the tensiometer to stabilize to the same ambient temperature as the airplane.

TASK 27-09-14-860-802

4. Cable Control - Tension Measurement

A. General

(1) This task gives the instructions to measure the tension of the control cables.

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

E. Control Cable Tension Measurement

SUBTASK 27-09-14-860-003

(1) For the aileron control cables use a high tension cable tensiometer, COM-1554, or low tension cable tensiometer, COM-1553, to measure the cable tension (Table 201).

Table 201/27-09-14-993-801 Aileron Cable Rigging Load

Temperature	AA & AB	ABSA & ABSB	ACBA1 & ACBA2 ACBB1 & ACBB2
108°F (42.2°C)	183 +10 / -30 lb (83 +5 / -14 kg)	271 +10 / -30 lb (123 +5 / -14 kg)	76 +10 / -30 lb (34 +5 / -14 kg)
106°F (41.1°C)	181 +10 / -30 lb (82 +5 / -14 kg)	269 +10 / -30 lb (122 +5 / -14 kg)	75 +10 / -30 lb (34 +5 / -14 kg)
104°F (40.0°C)	180 +10 / -30 lb (82 +5 / -14 kg)	267 +10 / -30 lb (121 +5 / -14 kg)	74 +10 / -30 lb (34 +5 / -14 kg)
102°F (38.9°C)	178 +10 / -30 lb (81 +5 / -14 kg)	264 +10 / -30 lb (120 +5 / -14 kg)	74 +10 / -30 lb (34 +5 / -14 kg)
100°F (37.8°C)	177 +10 / -30 lb (80 +5 / -14 kg)	262 +10 / -30 lb (119 +5 / -14 kg)	73 +10 / -30 lb (33 +5 / -14 kg)
98°F (36.7°C)	175 +10 / -30 lb (79 +5 / -14 kg)	260 +10 / -30 lb (118 +5 / -14 kg)	73 +10 / -30 lb (33 +5 / -14 kg)
96°F (35.6°C)	174 +10 / -30 lb (79 +5 / -14 kg)	258 +10 / -30 lb (117 +5 / -14 kg)	72 +10 / -30 lb (33 +5 / -14 kg)
94°F (34.4°C)	172 +10 / -30 lb (78 +5 / -14 kg)	256 +10 / -30 lb (116 +5 / -14 kg)	72 +10 / -30 lb (33 +5 / -14 kg)
92°F (33.3°C)	171 +10 / -30 lb (78 +5 / -14 kg)	254 +10 / -30 lb (115 +5 / -14 kg)	71 +10 / -30 lb (32 +5 / -14 kg)
90°F (32.2°C)	169 +10 / -50 lb (77 +5 / -23 kg)	251 +10 / -50 lb (114 +5 / -23 kg)	71 +10 / -50 lb (32 +5 / -23 kg)
88°F (31.1°C)	168 +10 / -50 lb (76 +5 / -23 kg)	249 +10 / -50 lb (113 +5 / -23 kg)	70 +10 / -50 lb (32 +5 / -23 kg)
86°F (30.0°C)	166 +10 / -50 lb (75 +5 / -23 kg)	247 +10 / -50 lb (112 +5 / -23 kg)	70 +10 / -50 lb (32 +5 / -23 kg)

-20°F (-28.9°C)	146 lb (66.2 kg)	116 lb (52.6 kg)	151 lb (68.5 kg)
-22°F (-30.0°C)	145 lb (65.8 kg)	115 lb (52.2 kg)	150 lb (68.0 kg)
-24°F (-31.1°C)	144 lb (65.3 kg)	114 lb (51.7 kg)	149 lb (67.6 kg)
-26°F (-32.2°C)	142 lb (64.4 kg)	112 lb (50.8 kg)	147 lb (66.7 kg)
-28°F (-33.3°C)	141 lb (64.0 kg)	111 lb (50.3 kg)	146 lb (66.2 kg)
-30°F (-34.4°C)	140 lb (63.5 kg)	110 lb (49.9 kg)	145 lb (65.8 kg)
-32°F (-35.6°C)	139 lb (63.0 kg)	109 lb (49.4 kg)	144 lb (65.3 kg)
-34°F (-36.7°C)	137 lb (62.1 kg)	107 lb (48.5 kg)	142 lb (64.4 kg)
-36°F (-37.8°C)	136 lb (61.7 kg)	106 lb (48.1 kg)	141 lb (64.0 kg)
-38°F (-38.9°C)	135 lb (61.2 kg)	105 lb (47.6 kg)	140 lb (63.5 kg)
-40°F (-40.0°C)	133 lb (60.3 kg)	103 lb (46.7 kg)	138 lb (62.6 kg)

*[1] If cable tension checks are required after system rig and prior/during functional test, the nominal tension tolerance is +5 lb (2 kg)/-30 lb (-14 kg).

*[2] If cable tension checks are required after system functional test completion and during maintenance, the nominal tension tolerance is +5 lb (2 kg)/-80 lb (-36 kg) when measured in a temperature range of 40°F (4°C) to 90°F (32°C). If the tension checks are made outside of this temperature range, then the nominal tension tolerance is +5 lb (2 kg)/-30 lb (-14 kg).

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLIGHT CONTROL CABLES AIR PRESSURE SEALS - MAINTENANCE PRACTICES

1. General

A. This procedure gives the location of the air pressure seals for the control cables of the flight control systems.

TASK 27-09-17-860-801

2. Location of the Flight Control Cables Air Pressure Seals

(Figure 201)

A. References

Reference	Title
20-10-04-000-802	Control Cable Half Ball Pressure Seal Removal (P/B 401)
20-10-04-400-802	Control Cable Half Ball Pressure Seal Installation (P/B 401)

B. Location Zones

Zone	Area
311	Area Aft of Pressure Bulkhead - Left
312	Area Aft of Pressure Bulkhead - Right

C. Location of the FLight Control Cables Air Pressure Seals

SUBTASK 27-09-17-860-001

(1) Find the air pressure seals (Table 201).

Table 201/27-09-17-993-801 Air Pressure Seals

Cable System	Number of Seals	Location	Access Panel Number
Left Elevator Cables	2	Aft Pressure Bulkhead	311BL
Right Elevator Cables	2	Aft Pressure Bulkhead	311BL
Rudder Cables	2	Aft Pressure Bulkhead	311BL
Stabilizer Trim Cables	2	Aft Pressure Bulkhead	311BL

SUBTASK 27-09-17-960-001

(2) If it is necessary to remove the seals, do this task: Control Cable Half Ball Pressure Seal Removal, TASK 20-10-04-000-802.

SUBTASK 27-09-17-960-002

(3) If it is necessary to install the seals, do this task: Control Cable Half Ball Pressure Seal Installation, TASK 20-10-04-400-802.

FLIGHT CONTROL CABLE GUARD - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) The removal of a cable guard.

(2) The installation of a cable guard.

TASK 27-09-18-000-801

2. Control Cable Guard Removal

(Figure 401)

A. References

Reference	Title

53-21-00-000-801	Passenger Cabin Floor Panel Removal (P/B 401)

B. Location Zones

Zone	Area
141	Aft Cargo Compartment - Left
142	Aft Cargo Compartment - Right

C. Access Panels

Number	Name/Location
822	Aft Cargo Door
822AR	Access Panel on Aft Cargo Door - External
822BR	Access Panel on Aft Cargo Door

D. Procedure

SUBTASK 27-09-18-010-001

(1) Open these access panels:

Number	Name/Location
822	Aft Cargo Door
822AR	Access Panel on Aft Cargo Door - External
822BR	Access Panel on Aft Cargo Door

SUBTASK 27-09-18-860-001

(2) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-09-18-860-002

(3) Do this task: Potable Water System - Deactivation, TASK 38-42-00-800-801.

SUBTASK 27-09-18-940-001

(4) Attach DO-NOT-OPERATE tags to the control columns.

SUBTASK 27-09-18-010-002

(5) Get access to the aft cable guards.

(a) Remove the aft bulkhead lining in the aft cargo area.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-18-020-001

(6) Remove the aft cable guards (Figure 401).

(a) Loosen the clamps and remove the cable guards.

SUBTASK 27-09-18-010-003

CAUTION

DO NOT REMOVE THE TAPE FROM THE SCREWS ON THE CEILING LINING. IF YOU REMOVE THE TAPE, YOU CAN CAUSE DAMAGE TO THE CEILING LINING.

(7) Get access to the cable guards, hydraulic tubes and the water tubes in the cargo ceiling.

NOTE: Go through the tape with a screwdriver to loosen the screws.

(a) If it is necessary, remove the ceiling lining in the aft cargo area (TASK 50-10-03-000-801).

SUBTASK 27-09-18-010-004

(8) Get access to the hydraulic tube.

SIA 001-014

(a) If it is necessary, remove the seats on the left side of the passenger area (TASK 25-22-00-000-801).

SIA ALL

(b) If it is necessary, remove the carpets on the left side of the passenger area (TASK 25-27-15-000-801).

(c) If it is necessary, remove the floor panels on the left side of the passenger area (TASK 53-21-00-000-801).

SUBTASK 27-09-18-020-002

(9) Remove the water pressure tube in the aft cargo area (Figure 401).

SUBTASK 27-09-18-020-003

(10) Remove the hydraulic tube and the cable guards in the aft cargo area (Figure 401).

F. Procedure

SUBTASK 27-09-18-640-001

(1) Lubricate the cables in the cable guard area. Do this task: Control Cable Lubrication, TASK 12-26-00-600-801.

SUBTASK 27-09-18-420-001

(2) Install the hydraulic tubes (Figure 401).

SUBTASK 27-09-18-420-002

(3) Install the aft cable guards (Figure 401).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Put the cable guard assembly [1] in its position.

(b) Install the washers on the sleeve of the cable guard assembly [1].

1) Connect each set of washers with a screw and a nut.

(c) Put the cable guard assembly [2] into the sleeve of the cable guard assembly [1].

1) Install the three bolts on the cable guard assembly [2] into the slots on the sleeve of the cable guard assembly [1].

2) Tighten the nut until the bolt does not turn easily.

(d) Put the clamp on the end of the cable guard assembly [2] between the two rivets.

1) Tighten the clamp.

(e) Install the cable guard assembly [3] with the slot on the assembly inboard.

1) Tighten the clamps to hold the guard assemblies.

2) Make sure a minimum clearance of 0.10 in. (2.5 mm) (adjust tubing as necessary) is kept between the cable guard and the hydraulic or the water tubings.

SUBTASK 27-09-18-940-002

(4) Remove the DO-NOT-OPERATE tags from the control columns.

SUBTASK 27-09-18-700-001

(5) Do a test of the cables to make sure there is free movement (PAGEBLOCK 27-31-00/501).

SUBTASK 27-09-18-860-003

(6) Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-09-18-790-001

(7) Examine the hydraulic tubes for leaks.

SUBTASK 27-09-18-860-004

(8) Do this task: Potable Water System - Activation, TASK 38-42-00-800-802.

SUBTASK 27-09-18-860-005

(9) Examine the water pressure tube for leaks.

SUBTASK 27-09-18-410-004

(10) Install all floor panels that were removed (TASK 53-21-00-400-801).

SUBTASK 27-09-18-410-001

(11) Install all carpets that were removed (TASK 25-27-15-400-801).

SIA 001-014

SUBTASK 27-09-18-410-002

(12) Install all seats that were removed (TASK 25-22-00-400-801).

SIA ALL

SUBTASK 27-09-18-860-006

(13) Install all cargo compartment lining that was removed (TASK 50-10-03-400-801).

SUBTASK 27-09-18-860-007

(14) Apply new Nitto P-212HD WHT tape, G50344 tape on the screws.

SUBTASK 27-09-18-410-003

(15) Close these access panels:

Number	Name/Location
822	Aft Cargo Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Number	Name/Location
822AR	Access Panel on Aft Cargo Door - External
822BR	Access Panel on Aft Cargo Door

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLIGHT CONTROLS HYDRAULIC MODULE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the flight controls hydraulic module.

(2) An installation of the flight controls hydraulic module.

B. The flight controls hydraulic module is referred to as the "hydraulic module" in this procedure.

C. There are two hydraulic modules installed on the airplane. The hydraulic module for the hydraulic system A is found in the left main wheel well. The hydraulic module for the hydraulic system B is found in the right main wheel well.

D. Each hydraulic module contains these components:

(1) A check valve

(2) A low pressure warning switch

(3) A compensator cartridge

(4) A spoiler shutoff valve

(5) A flight controls shutoff valve.

TASK 27-09-21-000-801

2. Flight Controls Hydraulic Module Removal

(Figure 401)

STD-1110	Container - Hydraulic Fluid Resistant, 5 Gallon (19 Liter)

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Removal

SUBTASK 27-09-21-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-21-860-001

(2) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-09-21-860-002

(3) Do this task: Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

SUBTASK 27-09-21-860-003

(4) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

E. Flight Controls Hydraulic Module Removal

SUBTASK 27-09-21-020-001

(1) Remove the hydraulic module [1]:

(a) Disconnect the electrical connector [13] from the low pressure warning switch [15].

(b) Disconnect the electrical connector [14] from the flight controls shutoff valve [17].

(c) Disconnect the electrical connector [18] from the spoiler shutoff valve [16].

(d) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(e) If there was corrosion, refer to SWPM 20-60-03.

(f) Disconnect the hydraulic tubing from the hydraulic module [1].

1) Use a 5 gallon (19 liter) hydraulic fluid resistant container, STD-1110 to catch hydraulic fluid that drains from the hydraulic module [1].

(g) Remove the bolts [6] and washers [7] to disconnect the hydraulic module [1] from the top mounting bracket.

(h) Remove the bolts [8] and washers [9] to disconnect the hydraulic module [1] from the bottom mounting bracket.

(i) Remove the hydraulic module [1] from the airplane.

SUBTASK 27-09-21-420-001

(2) Install protective caps on the ends of the hydraulic tubing.

SUBTASK 27-09-21-020-002

(3) If you will install a new hydraulic module [1], do these steps:

(a) Remove the unions [3] and packings [2] in ports 1, 2 and 5 from the hydraulic module [1].

1) Discard the packing [2].

(b) Remove the unions [5] and packings [4] in ports 4 and 7 from the hydraulic module [1].

1) Discard the packings [4].

(c) Remove the check valve [10] and packing [4] in port 3 from the hydraulic module [1].

1) Discard the packing [4].

(d) Remove the reducer [11] and packing [12] in port 6 from the hydraulic module [1].

1) Discard the packing [12].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-21-420-002

(4) Install protective caps in the open ports of the hydraulic module [1].

END OF TASK

E. Flight Controls Hydraulic Module Installation

SUBTASK 27-09-21-020-003

(1) Remove protective caps from the open ports of the hydraulic module [1].

SUBTASK 27-09-21-420-003

(2) If they are not installed, install the unions [3], unions [5], check valve [10], reducer [11], packings [2], packings [4], and packing [12] on the hydraulic module [1]:

(a) Apply MCS 352B fluid, D00054 (recommended) or hydraulic fluid, D00153 (alternative) to the unions [3], unions [5], reducer [11] and new packings [2], new packings [4] and new packing [12].

(b) Install the new packings [2] and unions [3] in ports 1, 2 and 5 on the hydraulic module [1].

(c) Install the new packings [4] and unions [5] in ports 4 and 7 on the hydraulic module [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Install the new packing [4] and check valve [10] in port 3 on the hydraulic module [1].

1) Install the check valve [10] with the free flow arrow pointed away from the hydraulic module [1].

(e) Install the new packing [12] and reducer [11] in port 6 on the hydraulic module [1].

SUBTASK 27-09-21-020-004

(3) Remove the protective caps from the hydraulic tubing.

SUBTASK 27-09-21-420-004

(4) Install the hydraulic module [1]:

(a) Put the hydraulic module [1] on its mounting bracket.

(b) Connect the hydraulic module [1] to the top mounting bracket with the bolts [6] and washers [7].

(c) Connect the hydraulic module [1] to the bottom mounting bracket with the bolts [8] and washers [9].

(d) Connect the hydraulic tubing to the hydraulic module [1].

1) Tighten the B-nuts on the hydraulic lines for ports 3 and 4 to 170 ±9 in-lb (19 ±1 N·m).

2) Tighten the B-nuts on the hydraulic lines for ports 1, 5, 2, and 7 to 270 ±14 in-lb (31 ±2 N·m).

3) Tighten the B-nut on the hydraulic line for port 6 to 140 ±7 in-lb (16 ±1 N·m).

(e) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

1) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

2) If there was corrosion, refer to SWPM 20-60-03, to correct the problem.

(f) Apply the D5026NS or ZC-026 compound, G50171 to the connectors (SWPM 20-60-03).

(g) Connect the electrical connector [18] to the spoiler shutoff valve [16].

(h) Connect the electrical connector [14] to the flight controls shutoff valve [17].

(i) Connect the electrical connector [13] to the low pressure warning switch [15].

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-09-21-860-004

(1) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-09-21-860-009

(2) Do this task: Hydraulic Reservoirs Pressurization, TASK 29-09-00-860-801.

SUBTASK 27-09-21-860-010

(3) Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-21-610-001

(4) If it is necessary to service the hydraulic reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-09-21-730-001

(5) Do this task: Flight Controls Hydraulic Module Test, TASK 27-09-21-700-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLIGHT CONTROLS HYDRAULIC MODULE - ADJUSTMENT/TEST

1. General

A. There is one task in this procedure which is the test of the flight controls hydraulic module.

B. The flight controls hydraulic module is referred to as the "hydraulic module" in this procedure.

C. The hydraulic module for hydraulic system A is found in the left main wheel well. The hydraulic module for hydraulic system B is found in the right main wheel well.

TASK 27-09-21-700-801

2. Flight Controls Hydraulic Module Test

(Figure 501, Figure 502)

A. General

(1) In this procedure, the two hydraulic modules [3] are tested at the same time.

B. References

Reference	Title
29-11-00 P/B 201	HYDRAULIC SYSTEMS A AND B - MAINTENANCE PRACTICES

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

212	Flight Compartment - Right

D. Prepare for the Test

SUBTASK 27-09-21-860-006

(1) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
E	14	C00316	INDICATOR MASTER DIM SECT 4

SUBTASK 27-09-21-860-007

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize hydraulic systems A and B (PAGEBLOCK 29-11-00/201).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Flight Controls Hydraulic Module Test

SUBTASK 27-09-21-720-001

(1) Do the test of the hydraulic module [3]:

(a) Make sure the two FLT CONTROL switches, on the P5-3 flight controls panel, are in the ON position.

(b) Make sure the two SPOILER switches, on the P5-3 flight controls panel, are in the ON position.

(c) Make sure the manual override levers [4] of the spoiler shutoff valve [1] and flight controls shutoff valve [2] on the two hydraulic modules [3] are in position 1.

(d) Operate the aileron control wheel, control column, and rudder pedal sets to bleed the hydraulic system.

(e) Make sure there is no leakage of hydraulic fluid at the hydraulic modules [3].

(f) Set the two SPOILER switches to the OFF position.

(g) Make sure the manual override lever [4] of the spoiler shutoff valve [1] on both hydraulic modules [3] is in position 2.

(h) Turn the aileron control wheel.

(i) Make sure the spoilers do not operate.

(j) Set the two FLIGHT CONTROL switches to the OFF position.

(k) Make sure the manual override lever [4] of the flight controls shutoff valve [2] on both hydraulic modules [3] is in position 2.

(l) Make sure the two LOW PRESSURE warning lights, on the P5-3 flight controls panel, come on.

(m) Set the two FLIGHT CONTROL switches to the ON position.

(n) Make sure the two LOW PRESSURE warning lights go off.

(o) Set the two SPOILER switches to the ON position.

SUBTASK 27-09-21-860-008

(2) Remove pressure from hydraulic systems A and B (PAGEBLOCK 29-11-00/201).

SUBTASK 27-09-21-210-001

(3) Make sure the LOW PRESSURE lights come on.

SUBTASK 27-09-21-210-002

(4) Make sure the master warning and caution lights and the flight controls warning light come on.

FLIGHT CONTROLS SHUTOFF VALVE AND VALVE MOTOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Removal of the flight controls shutoff valve assembly (the shutoff valve and the shutoff valve motor).

(2) An installation of the flight controls shutoff valve assembly (the shutoff valve and the shutoff valve motor).

(3) A removal of the flight controls shutoff valve motor.

(4) An installation of the flight controls shutoff valve motor.

B. The flight controls shutoff valve is part of the flight controls hydraulic module. The hydraulic module for the hydraulic system A is found in the left main wheel well. The hydraulic module for the hydraulic system B is found in the right main wheel well.

C. The flight controls shutoff valve is referred to as the shutoff valve and the flight controls shutoff valve motor is referred to as the shutoff valve motor in this procedure.

D. You can replace the shutoff valve motor with the shutoff valve installed in the flight controls hydraulic module.

TASK 27-09-31-000-801

2. Flight Controls Shutoff Valve Removal

(Figure 401)

A. General

(1) This task is the removal of the flight controls shutoff valve assembly, that contains the shutoff valve motor and shutoff valve.

E. Prepare for the Removal

SUBTASK 27-09-31-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-09-31-860-001

(2) If there is power on hydraulic system A or B, remove hydraulic power for applicable hydraulic system (TASK 29-11-00-860-805).

NOTE: Remove power from hydraulic system A for the left shutoff valve. Remove power from hydraulic system B for the right shutoff valve.

SUBTASK 27-09-31-860-002

(3) Do this task: Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

SUBTASK 27-09-31-860-003

(4) If you remove the left shutoff valve, do this step:

(a) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-09-31-860-004

(5) If you remove the right shutoff valve, do this step:

(a) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

F. Flight Controls Shutoff Valve Removal

SUBTASK 27-09-31-020-001

(1) Remove the shutoff valve [8].

(a) Disconnect the electrical connector [1] from the shutoff valve motor [6].

(b) After you disconnect the electrical connector [1], examine the electrical connector [1] for corrosion.

NOTE: The inspection of the electrical connector can be done after the removal step or before the installation step of the electrical connector. This is an operator option.

(c) If there was corrosion, refer to SWPM 20-60-03, to correct the problem.

(d) Remove the four bolts [2] and washers [3] that attach the shutoff valve [8] to the hydraulic module housing [5].

(e) Put a 5 gallon (19 liter) container, STD-1154, below the shutoff valve [8] to catch hydraulic fluid.

(f) Carefully lift the shutoff valve [8] straight up to remove it from the hydraulic module housing [5].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Discard the packings [10] and packing [12].

(g) Put a cover on the hydraulic module housing [5] to keep contamination out of the open valve hole.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-09-31-400-801

3. Flight Controls Shutoff Valve Installation

(Figure 401)

A. General

(1) This task is the installation of the flight controls shutoff valve assembly, that contains the shutoff valve motor and shutoff valve.

B. References

Reference	Title

212	Flight Compartment - Right

F. Flight Controls Shutoff Valve Installation

SUBTASK 27-09-31-420-001

(1) If they are not installed, install the packings [12], backup rings [11], packings [10], and backup rings [9].

(a) Apply MCS 352B fluid, D00054 (recommended), or hydraulic fluid, D00153 (alternative), to the packings [12], backup rings [11], packings [10], and backup rings [9].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Install the packings [12], backup rings [11], packings [10], and backup rings [9] on the shutoff valve [8].

SUBTASK 27-09-31-420-002

(2) Install the shutoff valve [8].

(a) Carefully install the shutoff valve [8] in the hydraulic module housing [5].

(b) Install the bolts [2] and washers [3] to attach the shutoff valve [8] to the hydraulic module housing [5].

(c) Tighten the bolts [2] to 35 ±5 in-lb (4.0 ±0.6 N·m).

(d) Install the MS20995NC32 lockwire, G01912, on the four bolts [2] (TASK 20-10-44-400-801).

(e) If you did not examine the electrical connector [1] at the removal step, do these steps:

NOTE: The inspection of the electrical connector can be done after the removal step or before the installation step of the electrical connector. This is an operator option.

1) Before you connect the electrical connector [1], examine the electrical connector [1] for corrosion.

2) If there was corrosion, refer to SWPM 20-60-03, to correct the problem.

(f) Apply the D5026NS or ZC-026 compound, G50171, to the electrical connector [1] (SWPM 20-60-03).

(g) Connect the electrical connector [1] to the shutoff valve motor [6].

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-09-31-860-005

(1) If you removed the left shutoff valve, do this step:

(a) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-09-31-860-006

(2) If you removed the right shutoff valve, do this step:

(a) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-09-31-610-001

(3) If it is necessary to service the hydraulic reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-09-31-860-016

(4) For the applicable hydraulic system, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-09-31-730-001

(5) Do this task: Flight Controls Shutoff Valve Test, TASK 27-09-31-710-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-09-31-000-802

4. Flight Controls Shutoff Valve Motor Removal

(Figure 401)

A. General

(1) The shutoff valve motor can be removed with the shutoff valve installed in the flight controls hydraulic module.

B. References

Reference	Title
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)
SWPM 20-60-03	SPECIAL PROTECTION OF ELECTRICAL CONNECTORS

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Removal

SUBTASK 27-09-31-480-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-09-31-860-007

(2) If the left motor will be removed, do this step:

(a) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-09-31-860-008

(3) If the right motor will be removed, do this step:

(a) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

E. Flight Controls Shutoff Valve Motor Removal

SUBTASK 27-09-31-020-002

(1) Remove the shutoff valve motor [6].

(a) Disconnect the electrical connector [1] from the shutoff valve motor [6].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) After the electrical connector [1] is disconnected, examine the electrical connector [1] for corrosion.

NOTE: The inspection of the electrical connector can be done after the removal step or before the installation step of the electrical connector. This is an operator option.

(c) If there was corrosion, correct the problem (SWPM 20-60-03).

(d) Set the manual override lever on the shutoff valve motor [6] to the position 2.

(e) Remove the screws [7] that attach the shutoff valve motor [6] to the shutoff valve [8].

(f) Remove the shutoff valve motor [6] from the shutoff valve [8].

SUBTASK 27-09-31-020-003

(2) If the shutoff valve motor [6] will be replaced, remove the shutoff valve motor data plate [13] (Figure 401).

(a) Keep the shutoff valve motor data plate [13] for the subsequent installation.

NOTE: The data plate is for the flight controls shutoff valve assembly accountability/traceability and will be installed on the new motor.

——— END OF TASK ———

TASK 27-09-31-400-802

5. Flight Controls Shutoff Valve Motor Installation

(Figure 401)

A. General

(1) The shutoff valve motor can be installed with the shutoff valve installed in the flight controls hydraulic module.

B. References

Reference	Title

F. Flight Controls Shutoff Valve Motor Installation

SUBTASK 27-09-31-420-003

(1) If the shutoff valve motor data plate [13] was removed, install the shutoff valve motor data plate [13] on the new shutoff valve motor [6] (Figure 401).

SUBTASK 27-09-31-420-005

(2) Install the shutoff valve motor [6].

(a) Make sure that the manual override lever on the shutoff valve motor [6] is set to the position 2.

(b) Set the shutoff valve motor [6] on the shutoff valve [8].

(c) Engage the shutoff valve motor [6] with the valve cam.

(d) Install the screws [7].

(e) Install MS20995NC32 lockwire, G01912, on the screws [7] (TASK 20-10-44-400-801).

(f) If the electrical connector [1] was not examined at the removal step, do these steps:

NOTE: The inspection of the electrical connector can be done after the removal step or before the installation step of the electrical connector. This is an operator option.

1) Before the electrical connector [1] is connected, examine the electrical connector [1] for corrosion.

2) If there was corrosion, correct the problem (SWPM 20-60-03).

(g) Apply D5026NS or ZC-026 compound, G50171, to the electrical connector [1] (SWPM 20-60-03).

(h) Connect the electrical connector [1] to the shutoff valve motor [6].

G. Flight Controls Shutoff Valve Motor Installation Test

SUBTASK 27-09-31-860-009

(1) Set the manual override lever on the shutoff valve motor [6] to the position 1.

SUBTASK 27-09-31-860-010

(2) If the left motor was removed, do this step:

(a) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-09-31-860-011

(3) If the right motor was removed, do this step:

(a) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-09-31-730-002

(4) Do this task: Flight Controls Shutoff Valve Test, TASK 27-09-31-710-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLIGHT CONTROLS SHUTOFF VALVE - ADJUSTMENT/TEST

1. General

A. This procedure has the task to do a test of the flight controls shutoff valve.

TASK 27-09-31-710-801

2. Flight Controls Shutoff Valve Test

A. General

(1) The flight controls shutoff valve is part of the flight controls hydraulic module. The hydraulic module for the hydraulic system A is found in the left main wheel well. The hydraulic module for the hydraulic system B is found in the right main wheel well.

B. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Test

SUBTASK 27-09-31-860-013

(1) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-09-31-860-014

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize hydraulic systems A and B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

E. Flight Controls Shutoff Valve Test

SUBTASK 27-09-31-710-001

(1) Do a test of flight controls shutoff valve.

(a) Make sure that the FLT CONTROL switches, on the P5 flight controls panel, are in the ON position.

(b) Make sure that the manual override lever on the flight controls shutoff valve motor is in position 1 for hydraulic systems A and B.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Operate the aileron control wheel to bleed air from the hydraulic system lines and components.

1) Make sure that there is no leakage of hydraulic fluid at the flight control hydraulic modules.

(d) Operate the aileron control wheel, control column, and rudder pedals.

1) Make sure that the ailerons, elevators, and rudder operate satisfactory.

(e) Set the FLT CONTROL switches to the OFF position.

1) Make sure that the manual override lever on the flight controls shutoff valve motor is in position 2 for hydraulic systems A and B.

(f) Operate the rudder pedals.

NOTE: The rudder must not operate hydraulically, but the rudder pedals will operate manually. Some rudder surface movement can occur if the pedal input is large enough to mechanically displace the PCU actuating piston. Full rudder authority may be available.

1) Make sure that the force to operate the rudder pedals is higher now than when you set the FLT CONTROLS switches to the ON position.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-09-31-860-015

(1) Set the FLT CONTROL switches to the ON position.

(a) Make sure that the manual override lever on the flight controls shutoff valve motor is in position 1 for hydraulic systems A and B.

SUBTASK 27-09-31-040-001

(2) Remove pressure from hydraulic systems A and B, do this task Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLIGHT CONTROLS PANEL (P5-3) - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the flight controls panel, referred to as the flight controls panel

(2) An installation of the flight controls panel.

B. The flight controls panel (P5-3) is on the captain's overhead panel. The flight controls panel has the lights and switches used by the primary and auxiliary flight control system hydraulic supply valves.

TASK 27-09-45-000-801

2. Flight Controls Panel Removal

(Figure 401)

A. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

SUBTASK 27-09-45-710-001

(3) Do this test of the hydraulic system valve control:

(a) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
D	15	C01401	LANDING GEAR AIR/GND RELAY

(b) To get access to the P92 panel, open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

WARNING

WHEN YOU OPEN THE P91 AND P92 PANELS, MAKE SURE THAT THE OUTER DOOR STAYS AS OPEN AS POSSIBLE. IF THE OUTER DOOR TURNS IN, THE ATTACHED DOOR COMPONENTS COULD TOUCH THE INNER DOOR COMPONENTS. THIS CAN CAUSE AN ARC CONDITION WHEN YOU SUPPLY POWER. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT AND INJURY TO PERSONNEL CAN OCCUR.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

WARNING

DO NOT TOUCH THE CONDUCTORS IN THE P91 AND P92 PANELS. BE CAREFUL WHEN YOU GET ACCESS TO THE CIRCUIT BREAKERS ON THE INNER SIDE OF THE P91 AND P92 PANELS (ROW F). IF IT IS POSSIBLE, REMOVE AIRPLANE ELECTRICAL POWER FIRST. THE P91 AND P92 PANELS HAVE HIGH VOLTAGES AND CURRENTS. ELECTRICAL VOLTAGE AND CURRENT CAN KILL YOU OR CAUSE INJURIES.

(c) Open this circuit breaker and install safety tag:

Power Distribution Panel Number 2, P92

Row	Col	Number	Name
F	2	C01449	STANDBY HYDRAULIC PUMP

NOTE: With these circuit breakers open the standby pump and the alternate flap drive motor will not operate.

(d) Make sure that these switches on the flight controls module assembly [1] are in the OFF position:

1) FLT CONTROL A, and FLT CONTROL B
2) SPOILER A, and SPOILER B
3) ALTERNATE FLAPS arm switch
4) ALTERNATE FLAPS control switch.

(e) Do this test of the control of the system A and system B flight control hydraulic valves from the flight controls module assembly [1]:

NOTE: The flight control hydraulic valves are installed on the left and right sides of the forward bulkhead of the landing gear wheel well.

1) Move the FLT CONTROL A switch to the ON position.
   a) Make sure that the system A flight control valve moves to position 1.
   b) Make sure that the system B flight control valve does not move (stays in position 2).
2) Move the FLT CONTROL B switch to the ON position.
   a) Make sure that the system B flight control valve moves to position 1.
3) Move the FLT CONTROL A switch to the OFF position.
   a) Make sure that the system A flight control valve moves to position 2.
   b) Make sure that the system B flight control valve does not move (stays in position 1).
4) Move the FLT CONTROL B switch to the OFF position.
   a) Make sure that the system B flight control valve moves to position 2.

(f) Do this test of the control of the system A and system B spoiler hydraulic valves from the flight controls module assembly [1]:

NOTE: The spoiler hydraulic valves are installed on the left and right sides of the forward bulkhead of the landing gear wheel well.

1) Move the SPOILER A switch to the ON position.
   a) Make sure that the system A spoiler valve moves to position 1.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

b) Make sure that the system B spoiler valve does not move (stays in position 2).

2) Move the SPOILER B switch to the ON position.

a) Make sure that the system B spoiler valve moves to position 1.

3) Move the SPOILER A switch to the OFF position.

a) Make sure that the system A spoiler valve moves to position 2.

b) Make sure that the system B spoiler valve does not move (stays in position 1).

4) Move the SPOILER B switch to the OFF position.

a) Make sure that the system B spoiler valve moves to position 2.

(g) Set the SPOILER A and B switches to the ON position.

WARNING

WHEN YOU OPEN THE P91 AND P92 PANELS, MAKE SURE THAT THE OUTER DOOR STAYS AS OPEN AS POSSIBLE. IF THE OUTER DOOR TURNS IN, THE ATTACHED DOOR COMPONENTS COULD TOUCH THE INNER DOOR COMPONENTS. THIS CAN CAUSE AN ARC CONDITION WHEN YOU SUPPLY POWER. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT AND INJURY TO PERSONNEL CAN OCCUR.

WARNING

DO NOT TOUCH THE CONDUCTORS IN THE P91 AND P92 PANELS. BE CAREFUL WHEN YOU GET ACCESS TO THE CIRCUIT BREAKERS ON THE INNER SIDE OF THE P91 AND P92 PANELS (ROW F). IF IT IS POSSIBLE, REMOVE AIRPLANE ELECTRICAL POWER FIRST. THE P91 AND P92 PANELS HAVE HIGH VOLTAGES AND CURRENTS. ELECTRICAL VOLTAGE AND CURRENT CAN KILL YOU OR CAUSE INJURIES.

(h) Remove the safety tag and close this circuit breaker:

Power Distribution Panel Number 2, P92

Row	Col	Number	Name
F	2	C01449	STANDBY HYDRAULIC PUMP

NOTE: If you will perform the "Test of the hydraulic system indications and lights" next, do not close the STANDBY HYDRAULIC PUMP circuit breaker on the P92 panel.

(i) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
D	15	C01401	LANDING GEAR AIR/GND RELAY

SUBTASK 27-09-45-710-002

(4) Do this test of the hydraulic system indications and lights:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING WHEN YOU OPEN THE P91 AND P92 PANELS, MAKE SURE THAT THE OUTER DOOR STAYS AS OPEN AS POSSIBLE. IF THE OUTER DOOR TURNS IN, THE ATTACHED DOOR COMPONENTS COULD TOUCH THE INNER DOOR COMPONENTS. THIS CAN CAUSE AN ARC CONDITION WHEN YOU SUPPLY POWER. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT AND INJURY TO PERSONNEL CAN OCCUR.

WARNING DO NOT TOUCH THE CONDUCTORS IN THE P91 AND P92 PANELS. BE CAREFUL WHEN YOU GET ACCESS TO THE CIRCUIT BREAKERS ON THE INNER SIDE OF THE P91 AND P92 PANELS (ROW F). IF IT IS POSSIBLE, REMOVE AIRPLANE ELECTRICAL POWER FIRST. THE P91 AND P92 PANELS HAVE HIGH VOLTAGES AND CURRENTS. ELECTRICAL VOLTAGE AND CURRENT CAN KILL YOU OR CAUSE INJURIES.

(a) Open this circuit breaker and install safety tag:

Power Distribution Panel Number 2, P92

Row	Col	Number	Name
F	2	C01449	STANDBY HYDRAULIC PUMP

(b) Move the FLT CONTROL A and B switches to the ON position.

1) Make sure that the FLT CONTROL - LOW PRESSURE A and B lights are ON.

(c) Move the ALTERNATE FLAPS arm switch to the ARM position.

1) Make sure that the STANDBY HYD - LOW PRESSURE light is ON.

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(d) Supply hydraulic power to systems A and B (PAGEBLOCK 29-11-00/201).

1) Make sure that the FLT CONTROL - LOW PRESSURE A and B lights are OFF.

WARNING WHEN YOU OPEN THE P91 AND P92 PANELS, MAKE SURE THAT THE OUTER DOOR STAYS AS OPEN AS POSSIBLE. IF THE OUTER DOOR TURNS IN, THE ATTACHED DOOR COMPONENTS COULD TOUCH THE INNER DOOR COMPONENTS. THIS CAN CAUSE AN ARC CONDITION WHEN YOU SUPPLY POWER. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT AND INJURY TO PERSONNEL CAN OCCUR.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

WARNING

DO NOT TOUCH THE CONDUCTORS IN THE P91 AND P92 PANELS. BE CAREFUL WHEN YOU GET ACCESS TO THE CIRCUIT BREAKERS ON THE INNER SIDE OF THE P91 AND P92 PANELS (ROW F). IF IT IS POSSIBLE, REMOVE AIRPLANE ELECTRICAL POWER FIRST. THE P91 AND P92 PANELS HAVE HIGH VOLTAGES AND CURRENTS. ELECTRICAL VOLTAGE AND CURRENT CAN KILL YOU OR CAUSE INJURIES.

(e) Remove the safety tag and close this circuit breaker:

Power Distribution Panel Number 2, P92

Row	Col	Number	Name
F	2	C01449	STANDBY HYDRAULIC PUMP

1) Make sure that the STANDBY HYD - LOW PRESSURE light is OFF.

(f) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

(g) Remove the power from hydraulic systems A and B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

(h) Move the ALTERNATE FLAPS arm switch to the OFF position.

(i) Do this test of the STANDBY HYD - LOW QUANTITY light:

1) Open this circuit breaker:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
E	14	C00316	INDICATOR MASTER DIM SECT 4

2) Disconnect the electrical connector D678 from the standby system reservoir switch S49.

NOTE: The standby system reservoir is on the keel beam in the main wheel well.

3) Connect a jumper wire between pins 1 and 2 on electrical connector D678.

4) Close this circuit breaker:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
E	14	C00316	INDICATOR MASTER DIM SECT 4

5) Make sure that the STANDBY HYD - LOW QUANTITY light is ON.

6) Open this circuit breaker:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
E	14	C00316	INDICATOR MASTER DIM SECT 4

7) Remove the jumper wire from electrical connector D678.

8) Connect the electrical connector D678 on the standby system reservoir switch S49.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

9) Close this circuit breaker:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
E	14	C00316	INDICATOR MASTER DIM SECT 4

10) Make sure that the STANDBY HYD - LOW QUANTITY light is OFF.

SUBTASK 27-09-45-710-003

(5) Do a test of the lights on the flight controls module assembly [1]:

NOTE: Some lights might be ON.

(a) Move and hold the LIGHTS switch on the P1 Captain's Panel to the TEST position.

1) Make sure that these lights are ON:

a) STANDBY HYD - LOW QUANTITY
b) STANDBY HYD - LOW PRESSURE
c) STANDBY HYD - STBY RUD ON
d) FLT CONTROL - LOW PRESSURE A
e) FLT CONTROL - LOW PRESSURE B
f) FEEL DIFFERENTIAL PRESS
g) SPEED TRIM FAIL
h) MACH TRIM FAIL
i) AUTO SLAT FAIL
j) SPOILERS
k) YAW DAMPER.

(b) Move the LIGHTS switch back to BRT.

SUBTASK 27-09-45-710-004

(6) Do a test of the YAW DAMPER light for the yaw damper system:

(a) Align the ADIRS. Do this task: Air Data Inertial Reference System - Alignment from the ISDU, TASK 34-21-00-820-802 or Air Data Inertial Reference System - Alignment from the FMC CDU, TASK 34-21-00-820-801 or Air Data Inertial Reference System - Automatic Alignment from the IRS MSU, TASK 34-21-00-820-803.

(b) Make sure that the FLT CONTROL B switch is ON.

(c) Turn the YAW DAMPER switch to ON.

1) Make sure that the light for the YAW DAMPER goes off.

(d) Turn the YAW DAMPER switch to OFF.

1) Make sure that the light for the YAW DAMPER comes on.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-45-710-005

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(7) Do this test of the alternate control system for the leading edge flaps and slats and the trailing edge flaps:

(a) Make sure that the flap control lever is in the FLAP UP detent.

NOTE: If the flap control lever is not in the FLAP UP detent, the flaps and slats might extend when hydraulic pressure is applied.

(b) Set the FLT CONTROL B switch to STBY RUD.

1) Make sure that the STANDBY HYD - LOW PRESSURE light comes on momentarily, and then goes off.

2) Make sure that the STBY RUD ON light on the P5-3 panel is illuminated.

(c) Set the ALTERNATE FLAPS arm switch to ARM.

1) Make sure that the leading edge flaps and slats and the trailing edge flaps do not extend.

WARNING

MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

CAUTION

DO NOT OPERATE THE TRAILING EDGE FLAPS WITH ELECTRICAL POWER MORE THAN ONE FULL EXTEND/RETRACT CYCLE IN 25 MINUTES. YOU CAN CAUSE DAMAGE TO THE FLAP ELECTRIC MOTORS IF YOU OPERATE THEM TOO FREQUENTLY.

(d) Move the ALTERNATE FLAPS control switch to the DOWN position.

1) Make sure that the leading edge flaps and slats and the trailing edge flaps extend.

NOTE: It is not necessary to fully extend the trailing edge flaps.

(e) Move the ALTERNATE FLAPS control switch to the UP position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that the trailing edge flaps retract.

NOTE: It is not necessary to fully retract the trailing edge flaps with alternate control.

(f) Move the ALTERNATE FLAPS ARM switch to the OFF position.

(g) Supply hydraulic power to system B (PAGEBLOCK 29-11-00/201).

1) Make sure that the trailing edge flaps fully retract.

2) Make sure that the leading edge flaps and slats fully retract.

(h) Move the FLT CONTROL B switch to the OFF position.

(i) Move the ALTERNATE FLAPS ARM switch to the ARM position.

1) Make sure that the STANDBY HYD - LOW PRESSURE light is off.

(j) Move the ALTERNATE FLAPS ARM switch to the OFF position.

(k) Move the FLT CONTROL B switch to the ON position.

(l) Move the ALTERNATE FLAPS control switch to the OFF position.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LOW PRESSURE WARNING SWITCH - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the low pressure warning switch.

(2) An installation of the low pressure warning switch.

B. The low pressure warning switch is referred to as the "pressure switch" in this procedure.

C. The pressure switch is part of the flight controls hydraulic module. One flight controls hydraulic module each is installed in the hydraulic systems A and B. The hydraulic module for hydraulic system A is found in the left main wheel well. The hydraulic module for hydraulic system B is found in the right main wheel well.

TASK 27-09-61-000-801

2. Low Pressure Warning Switch Removal

(Figure 401)

A. References

Reference	Title
29-09-00-860-802	Hydraulic Reservoirs Depressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)
SWPM 20-60-03	SPECIAL PROTECTION OF ELECTRICAL CONNECTORS

B. Tools/Equipment

Reference	Description
STD-1110	Container - Hydraulic Fluid Resistant, 5 Gallon (19 Liter)

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Low Pressure Warning Switch Removal

SUBTASK 27-09-61-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-09-61-860-001

(2) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-09-61-860-002

(3) Do this task: Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-61-860-003

(4) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
E	14	C00316	INDICATOR MASTER DIM SECT 4

SUBTASK 27-09-61-020-001

(5) Disconnect the electrical connector [4] from the low pressure warning switch [3].

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to SWPM 20-60-03, to correct the problem.

SUBTASK 27-09-61-020-002

(6) Remove the low pressure warning switch [3]:

(a) Use a 5 gallon (19 liter) hydraulic fluid resistant container, STD-1110, to catch hydraulic fluid that drains from the low pressure warning switch [3].

(b) Remove the lockwire from the low pressure warning switch [3].

(c) Remove the low pressure warning switch [3] from the flight controls hydraulic module [5].

(d) Remove and discard the packing [2].

(e) Put a cover on the hydraulic module housing to keep unwanted material out of the open port.

134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

E. Low Pressure Warning Switch Installation

SUBTASK 27-09-61-420-001

(1) If they are not installed, install the backup rings [1] and packing [2] on the low pressure warning switch [3].

(a) Apply MCS 352B fluid, D00054 (recommended), or hydraulic fluid, D00153 (alternative), to the backup ring [1] and new packing [2].

(b) Put the backup rings [1] and packing [2] in their position on the low pressure warning switch [3].

SUBTASK 27-09-61-420-002

(2) Install the low pressure warning switch [3].

(a) Install the low pressure warning switch [3] on the flight controls hydraulic module [5].

(b) Tighten the low pressure warning switch [3] to 362.5 ±12.5 in-lb (41.0 ±1.4 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Install a MS20995NC32 lockwire, G01912, on the low pressure warning switch [3] and nearest bolt (TASK 20-10-44-400-801).

SUBTASK 27-09-61-420-003

(3) Connect the electrical connector [4].

(a) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

1) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

2) If there was corrosion, correct the problem (SWPM 20-60-03).

(b) Apply D5026NS or ZC-026 compound, G50171, to the connector (SWPM 20-60-03).

(c) Connect the electrical connector [4] to the low pressure warning switch [3].

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-09-61-860-004

(1) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
E	14	C00316	INDICATOR MASTER DIM SECT 4

SUBTASK 27-09-61-610-001

(2) If servicing is necessary for hydraulic system A and B reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-09-61-710-001

(3) Do this task: Low Pressure Warning Switch Test, TASK 27-09-61-700-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LOW PRESSURE WARNING SWITCH - ADJUSTMENT/TEST

1. General

A. This procedure contains the test of the low pressure warning switch.

B. The low pressure warning switch is part of the flight controls hydraulic module. The flight controls hydraulic module for hydraulic system A is found in the left main wheel well. The flight controls hydraulic module for hydraulic system B is found in the right main wheel well.

TASK 27-09-61-700-801

2. Low Pressure Warning Switch Test

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Prepare for the Test

SUBTASK 27-09-61-480-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

D. Do a Test of the Low Pressure Warning Switch

SUBTASK 27-09-61-710-002

(1) Do a test of the low pressure warning switch:

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Supply hydraulic power to systems A and B (PAGEBLOCK 29-11-00/201).

(b) Operate the aileron control wheel, the control column, and the rudder pedals to bleed the hydraulic system.

(c) Make sure that there is no leakage of hydraulic fluid at the flight controls hydraulic module.

(d) Make sure the LOW PRESSURE light on the P5 forward overhead panel is not on.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Remove hydraulic power from systems A and B (PAGEBLOCK 29-11-00/201).

(f) Make sure the LOW PRESSURE light comes on.

(g) Make sure the MASTER CAUTION and the FLT CONT lights on the P7 lightshield panel are on.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLIGHT CONTROLS TRIM CORRECTION - ADJUSTMENT/TEST

1. General

A. This procedure contains these tasks:

(1) The adjustment of the trailing edge flaps for lateral trim

(2) The adjustment of the aileron balance tab to equalize lateral manual reversion forces

(3) The rudder trim adjustment for power on discrepancy correction

(4) The rudder trim adjustment for power off discrepancy correction

(5) The flight controls adjustment record

B. Make sure the control system components are correctly adjusted when you measure the trim necessary for level flight.

C. To measure the lateral trim error you must do a test flight with the flight profile detailed in the task.

D. It is not necessary to adjust the lateral trim if the aileron and rudder trim necessary to keep level flight are within the limits shown in the table found in the task below:

TASK 27-09-71-820-801

2. Trailing Edge Flap Adjustment for Lateral Trim and Test

(Figure 501, Figure 502, Figure 503, Figure 504, Figure 505, Figure 506, Figure 507)

A. General

(1) This task supplies the data necessary to adjust the trailing edge flaps to decrease the aileron trim necessary for straight and level flight during cruise, and with the trailing edge flaps extended.

(2) It is necessary to adjust the lateral trim if the aileron and rudder trim necessary to keep level flight are not in the limits shown in (Table 501).

NOTE: There are no specific limits or requirements for lateral trim outside of the flight test profile below. It is acceptable at other flight conditions to observe different trim settings from those specified.

Table 501/27-09-71-993-801 Lateral Trim Limits

Flight Condition	Aileron Trim	Rudder Trim	Airspeed	Altitude (feet)
Cruise (Flaps UP/Gear Up)	0.75 unit	0.5 unit left / 1.0 unit right	.78 mach	37,000 or higher
Low Speed (Flaps UP/Gear Up)	0.75 unit	0.75 unit	250 kias	10,000 to 17,000
Flaps Extended to 1 unit (Gear Up)	1.0 unit *[1]	1.0 unit	Flaps 1 Maneuver Speed	10,000 to 17,000
Flaps Extended to 15 units, Landing Gear Extended	1.0 unit *[1] *[2]	1.0 unit	Flaps 15 Maneuver Speed	10,000 to 17,000
Flaps Extended to 40 units, Landing Gear Extended	1.3 unit *[2]	1.0 unit	Vref+5	10,000 to 17,000

*[1] The aileron trim change between flap positions 1 and 15 must be less than 1.0 unit.

*[2] The aileron trim change between flap positions 15 and 40 must be less than 1.4 units. An aileron trim requirement shift from side to side is acceptable, provided it is within the limit of 1.4 units.

(3) There are three methods available to adjust the lateral trim.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) You can change the shims at the aft end of the carriages on the outboard flap to correct lateral trim during cruise.

NOTE: This method will have an effect on the lateral trim with the flaps extended.

(b) You can change length of the bellcranks on the aft flap drive for the outboard flap to correct lateral trim with the flaps extended.

NOTE: This method has the most effect with the flaps extended to the 40 unit position. There is no effect on the lateral trim with the flaps retracted, and a small effect with the flaps extended to 1 and 15 unit positions.

(c) You can change the compression of the bullnose seal on the inboard main flap. If the bullnose seals are not symmetric between the left and right wings, the airflow past the seals can cause lateral trim errors with the flaps extended to 40-units. This airflow can cause the aft flap bellcrank adjustment to be not effective.

NOTE: This method will have an effect on the lateral trim with the flaps fully extended and with the change in the lateral trim between the 15-unit and 40-unit positions.

(4) You can do more than one of the adjustments to correct for lateral trim problems. The charts shown in this task are for single adjustments. The results shown in the charts can be added together if you do multiple adjustments.

667	Right Wing - Outboard Flap

E. Find the Necessary Flap Adjustment

SUBTASK 27-09-71-820-001

(1) Do a check of these other systems to make sure that they are not the cause of the lateral trim error.

(a) Make sure that the ailerons are adjusted correctly.

1) To check the ailerons, do this task: Do A Check of the Aileron System Adjustment, TASK 27-11-00-820-806.

2) Make sure that the aileron downrig is symmetric between the left and right aileron in the limit of 0.10 in. (2.54 mm).

(b) Make sure that the rudder is adjusted correctly.

1) To check the rudder, do this task: Rudder Centering Test, TASK 27-21-00-700-803.

(c) Make sure that the outboard trailing edge flaps and aft flaps are adjusted correctly.

1) For the outboard trailing edge flaps, do this task: Outboard Trailing Edge Flap Adjustment, TASK 27-51-21-820-801.

2) For the outboard aft flap, do this task: Outboard Aft Flap Installation, TASK 27-51-22-400-801.

a) Make sure that the main flap to aft flap mismatch trailing edge dimensions are in the limits.

(d) Make sure that the inboard trailing edge flaps are adjusted correctly, do this task: Inboard Trailing Edge Flap Adjustment, TASK 27-51-11-820-801.

1) Make sure that the torque tube door is sealed correctly.

NOTE: If the torque tube door is not sealed near the flap leading edge when the flaps are extended to flaps 40 units, lateral trim problems can occur.

(e) Make sure that the spoilers are adjusted correctly.

1) To check the spoilers, do this task: Flight Spoiler Adjustment, TASK 27-61-00-820-802.

2) Make sure that the spoilers on the left and right wings are adjusted symmetrically.

SUBTASK 27-09-71-750-001

(2) Do a test flight to find the lateral trim necessary for straight and level flight for all flight conditions.

NOTE: One unit of aileron trim is equal to six degrees of control wheel rotation.

NOTE: There are no specific limits or requirements for lateral trim outside of this flight test profile. It is acceptable at other flight conditions to observe different trim settings from those specified.

(a) To find the aileron trim necessary during cruise, fly with these conditions.

1) Flight speed: Approximately 0.78 mach.

2) Altitude: 37,000 feet or higher.

3) Fuel load: Balanced in the limit of 150 lb (68 kg).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Throttles: Balanced thrust in the limit of 1 percent N1 difference, with autothrottles OFF.

5) Autopilot engaged with in HDG SEL, with the wings level.

(b) Apply rudder trim to get zero heading change.

(c) Disengage the autopilot.

(d) Apply aileron trim to keep the wings level and maintain zero heading change.

(e) Write down the amount and direction of aileron trim necessary to maintain straight and level flight.

NOTE: This is the trim for the Cruise condition.

(f) To find the aileron trim necessary for low speed cruise, and with the flaps extended, fly with these conditions.

1) Altitude: Between 10,000 to 17,000 feet.

2) Fuel load: Balanced in the limit of 150 lb (68 kg).

3) Throttles: Balanced thrust in the limit of 1 percent N1 difference, with autothrottles OFF.

4) Autopilot OFF.

(g) Fly at 250 kias, with the flaps retracted.

(h) Apply rudder trim to get zero heading change.

(i) Apply aileron trim to keep the wings level and maintain zero heading change.

(j) Write down the amount and direction of aileron trim necessary to maintain straight and level flight.

I NOTE: This is the trim for the Low Speed Flaps UP.

(k) Change the airspeed to flaps 1 maneuvering speed, and extend the flaps to the 1-unit position.

(l) Apply rudder trim to get zero heading change.

(m) Apply aileron trim to keep the wings level and maintain zero heading change.

(n) Write down the amount and direction of aileron trim necessary to maintain straight and level flight.

NOTE: This is the trim for the flaps 1 unit.

(o) Change the airspeed to flaps 15 maneuvering speed, and extend the flaps to the 15-unit position, and extend the landing gear.

(p) Apply rudder trim to get zero heading change.

(q) Apply aileron trim to keep the wings level and maintain zero heading change.

(r) Write down the amount and direction of aileron trim necessary to maintain straight and level flight.

NOTE: This is the trim for the flaps 15 units.

(s) Change the airspeed to Vref +5 knots, and extend the flaps to the 40-unit position.

(t) Apply rudder trim to get zero heading change.

(u) Apply aileron trim to keep the wings level and maintain zero heading change.

(v) Write down the amount and direction of aileron trim necessary to maintain straight and level flight.

NOTE: This is the trim for the flaps 40 units.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-71-800-001

(3) If the aileron trim necessary to maintain level flight is not in the limits shown in (Table 501) primarily for the cruise condition, then do the steps in Lateral Trim Correction for the Cruise Condition below.

SUBTASK 27-09-71-800-002

(4) If the aileron trim necessary to maintain level flight is not in the limits shown in (Table 501) primarily for the flaps extended to 40-units condition, then do the steps in Lateral Trim Correction for the Flaps Extended Condition below.

SUBTASK 27-09-71-800-003

(5) If the aileron trim necessary to maintain level flight is more than 1.0 units for most of the flight conditions shown in (Table 501), and the trim values are either left or right, then do the steps in Lateral Trim Correction for the Multiple Flight Conditions below.

SUBTASK 27-09-71-800-004

(6) If the aileron trim necessary to maintain level flight is not in the limits shown in (Table 501) for the flaps extended to 40-units condition, or the change in the trim between the 15-unit and 40-unit conditions is not in the limit, then make sure that the inboard main flap bullnose seals are in the correct position.

(a) Do the steps in the Inboard Flap Bullnose Seal Position Adjustment below.

SUBTASK 27-09-71-800-007

(7) You can combine the adjustments to adjust the lateral trim for low speed, flaps 1 unit, and flaps 15 unit conditions.

F. Lateral Trim Correction for the Cruise Condition

NOTE: It is necessary to use these steps if the aileron trim necessary to keep level flight is not in the limits for the cruise condition. This change will also have some effect on the other flight conditions. This procedure changes the thickness of the shims on the carriages for the outboard flap.

SUBTASK 27-09-71-970-001

(1) Use the graphs to find the total shim thickness change necessary to correct the lateral trim error (Figure 501).

SUBTASK 27-09-71-970-002

(2) Find the thickness and the location of the shims that you will change:

NOTE: The thickness of the shims added on one wing added to the thickness of the shims removed from the other wing must be equal to the total shim thickness change. If it is possible, the total shim thickness change should be divided equally between the left and right wings. If the total shim change is 0.064 in. (1.626 mm) or less, you can change the shims in only one wing. The maximum permitted thickness of the shims on a carriage is 0.50 in. (12.70 mm). The minimum permitted thickness of the shims on a carriage is 0.00 inch.

(a) Flight test condition; Right Trim.

NOTE: Right aileron trim indicates a left wing heavy condition.

1) Add approximately 1/2 of the total shim thickness change to the carriages on the right outboard flap.

2) Remove approximately 1/2 of the total shim thickness change from the carriages on the left outboard flap.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Flight test condition; Left Trim.

NOTE: Left aileron trim indicates a right wing heavy condition.

1) Add approximately 1/2 of the total shim thickness change to the carriages on the left outboard flap.

2) Remove approximately 1/2 of the total shim thickness change from the carriages on the right outboard flap.

SUBTASK 27-09-71-040-001

(3) Prepare to change the thickness of the shims on the carriages for the outboard flaps.

(a) Extend the trailing edge flaps to the 40-unit position, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

(b) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-09-71-820-002

(4) Change the thickness of the shims [5] at the aft link fitting on the inboard and outboard carriages (Figure 502).

NOTE: The change in the thickness of the shims must be the same for the inboard carriage and the outboard carriage on a flap.

(a) At the outboard carriage [6], change the thickness of the shims [5].

1) Remove the nuts [4], washers [3], and bolts [2] that attach the aft link fitting [1] to the outboard carriage [6].

2) Add or remove shims [5] between the aft link fitting [1] and outboard carriage [6] to get the correct shim thickness.

3) Apply sealant, A00247, to the mating surfaces of the shims [5].

4) Put the shims [5] in their location between the aft link fitting [1] and outboard carriage [6].

NOTE: The maximum total thickness of the shims is 0.50 in. (12.70 mm). The minimum total thickness of the shims is 0.00 inch.

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

5) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [2].

a) Make sure that the bolts [2] are the correct length for installation with the new shim thickness.

6) Install the bolts [2], washers [3], and nuts [4] that attach the aft link fitting [1] to the outboard carriage [6].

(b) At the inboard carriage [11], change the thickness of the shims [5].

1) Remove the nuts [10], washers [9], and bolts [8] that attach the aft link fitting [7] to the inboard carriage [11].

2) Add or remove shims [5] between the aft link fitting [7] and inboard carriage [11] to get the correct shim thickness.

3) Apply sealant, A00247, to the mating surfaces of the shims [5].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Put the shims [5] in their location between the aft link fitting [7] and inboard carriage [11].

NOTE: The maximum thickness of the shims is 0.50 in. (12.70 mm). The minimum thickness of the shims is 0.00 inch.

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

5) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [8].

6) Install the bolts [8], washers [9] and nuts [10] that attach the aft link fitting [7] to the inboard carriage [11].

SUBTASK 27-09-71-940-001

(5) Put the airplane back to its usual condition.

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Retract the trailing edge flaps to the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

(c) Do a check of the fair and alignment of the aft flap [51] with the main flap, do this task: Outboard Aft Flap Installation, TASK 27-51-22-400-801.

NOTE: It is necessary to use a tolerance for the mismatch between the main flap and the aft flap of 0.000 ±0.030 in. (0.000 ±0.762 mm). This tolerance is smaller than the normal adjustment tolerance. This increases the effect of the lateral trim adjustment.

(d) Do a check of the clearances between the aft fairings and flap.

1) To check the outboard fairing on the outboard flap, do this task: Outboard Flap Outboard Support Fairing Adjustment, TASK 27-51-28-820-801.

2) To check the inboard fairing on the outboard flap, do this task: Outboard Flap Inboard Support Fairing Adjustment, TASK 27-51-28-820-802.

(e) Do a check of the clearances between the spoilers and the flap, do this task: Flight Spoiler Adjustment, TASK 27-61-00-820-802.

G. Lateral Trim Correction for the Flaps Extended Conditions

NOTE: It is necessary to use these steps if the aileron trim necessary to keep level flight is not in the limits with the flaps extended. This change will primarily effect the trim at the flaps 40 position, with less effect at the other flap positions. This change will not have an affect on the lateral trim with the flaps retracted. This procedure uses the adjustment fitting to change the length of the bellcranks on the carriages for the outboard flap.

SUBTASK 27-09-71-970-003

(1) Use the graphs to find the total length change of the bellcrank [34] necessary to correct the lateral trim error with the flaps extended (Figure 503).

NOTE: It is necessary to use the nuts on the adjustment fitting at the end of the bellcrank to change the length of the bellcrank.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-71-970-004

(2) Find the dimension and direction to adjust the nuts [32] for the adjustment fittings [31] on the bellcranks [34] (Figure 504).

NOTE: The number of turns of the nuts for the adjustment fitting on one wing should be the same, but in the opposite direction of the nuts on the other wing.

(a) Flight test condition; Right Trim.

NOTE: Right aileron trim indicates a left wing heavy condition.

1) Decrease the length of the bellcranks [34] on the right wing by the 1/2 the dimension shown in the graph.

2) Increase the length of the bellcranks [34] on the left wing by the 1/2 the dimension shown in the graph.

(b) Flight test condition; Left Trim.

NOTE: Left aileron trim indicates a right wing heavy condition.

1) Decrease the length of the bellcranks [34] on the left wing by the 1/2 the dimension shown in the graph.

2) Increase the length of the bellcranks [34] on the right wing by the 1/2 the dimension shown in the graph.

SUBTASK 27-09-71-860-001

(3) Extend the trailing edge flaps to the 40-unit position, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-09-71-040-002

(4) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-09-71-820-003

(5) Change the length of the bellcranks [34] on the inboard and outboard carriages (Figure 504).

NOTE: The change in the length of the bellcranks must be the same for the inboard carriage and the outboard carriage on a flap in the limit of 0.05 in. (1.27 mm). It is important to adjust the aft pushrods after you adjust the length of the bellcranks.

(a) Turn the applicable nut [32] on the bellcrank [34] to change the position of the adjustment fitting [31].

NOTE: To increase the length of the bellcrank, loosen the lower nut the distance shown in the graph. To decrease the length of the bellcrank, loosen the upper nut the distance shown. One full turn of a nut will change the length of the bellcrank by 0.05 in. (1.27 mm). You can use the distance from the top of the bellcrank to the bottom flange of the adjustment fitting as a reference dimension.

(b) Move the adjustment fitting [31] in the bellcrank [34].

(c) Engage the locking washer [33] with the bellcrank [34].

(d) Tighten the other nut [32] to hold the adjustment fitting [31].

(e) Install lockwire on the nuts [32].

SUBTASK 27-09-71-820-004

(6) Adjust the aft pushrods [53] for the aft flap [51] (Figure 505).

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Retract the trailing edge flaps to the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(d) Measure the mismatch between the aft flap [51] and main flap at the inboard and outboard ends of the aft flap [51].

(e) If the mismatch at the inboard and outboard ends of the aft flap [51] is not in the limit of 0.000 ±0.030 in. (0.000 ±0.762 mm), then adjust the length of the applicable aft pushrod [53].

NOTE: The tolerance on the mismatch is smaller than the normal adjustment tolerance. This increases the effect of the lateral trim adjustment.

1) Loosen the nuts [52] on the aft pushrod [53].

2) Turn the applicable aft pushrod [53] until the mismatch is in the limit at the inboard and outboard ends of the aft flap [51].

NOTE: For each 1/4 turn of the aft pushrods, the trailing edge of the aft flap will move approximately 0.04 in. (1.02 mm).

3) Tighten the nut [52] on the aft pushrod [53].

4) Install lockwire on the nuts [52].

SUBTASK 27-09-71-940-002

(7) Put the airplane back to its usual condition.

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Retract the trailing edge flaps to the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

H. Inboard Flap Bullnose Seal Compression Adjustment

NOTE: Use these steps if the flap position 40 trim inputs are out of limits or if the aileron trim change between flap positions 15 and 40 is not in the limit of 1.4 units. This adjustment will typically affect only flap position 40 trim.

NOTE: The front of the bullnose seals are not installed on adjustable retainers, therefore it is necessary to add or remove shims to adjust the forward portion of the bullnose seal compression. After the shim thickness has been adjusted, the aft retainer must be adjusted to achieve consistent seal compression.

SUBTASK 27-09-71-970-015

(1) Find the side from which to decrease the bullnose seal shim [110].

(a) Flight test condition: Right Trim at the 40-unit flap condition.

NOTE: Right aileron trim shows a left wing heavy condition.

1) Decrease shim [110] thickness below the bullnose seal [107] on the right main flap.

(b) Flight test condition: Left Trim at the 40-unit flap condition.

NOTE: Left aileron trim shows a right wing heavy condition.

1) Decrease shim [110] thickness below the bullnose seal [107] on the left main flap.

SUBTASK 27-09-71-970-016

(2) Find the correct thickness of the bullnose shim [110] to replace the existing shim [110].

(a) Extend the trailing edge flaps to the 15-unit or 30-unit position, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

(b) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(c) If the nose and main landing gear downlock pins are not installed, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-09-71-020-004

(3) Remove the bullnose seal [107] (Figure 507).

(a) If necessary, move the torque tube door [94] up and inboard to get access to the bullnose seal [107].

(b) Remove the bolts [108] and washers [109] that attach the bullnose seal [107] to the inboard flap [71].

(c) Remove the bullnose seal [107] from the inboard flap [71].

SUBTASK 27-09-71-800-010

(4) Measure the thickness of the bullnose seal [107].

NOTE: The bullnose shim can be made of more than one part.

NOTE: The bullnose shim can be one part that has different thicknesses.

NOTE: If the initial shim is less than 0.10 in. (2.54 mm), then you can install the shorter bullnose seal alternative. The short bullnose seal is 0.24 in. (6.10 mm) shorter than the tall bullnose seal.

(a) If the bullnose shim [110] has different thickness measure the thickness at locations A, B and C.

1) Determine the maximum thickness.

(b) Record the maximum thickness of the bullnose shim [110].

SUBTASK 27-09-71-800-011

(5) Make a new shim [110] for the bullnose seal [107].

(a) Make the new shim 0.10 in. (2.54 mm) less thick than the maximum thickness of the used shim.

NOTE: The new shim can be constant thickness even if the original shim was variable thickness.

(b) Make the outline of the bullnose seal [107] on the shim material.

NOTE: The material for the shim is optional. Non-metal materials can be used as the shim material. Nylon is one such material.

(c) Cut out the shim [110] of the material.

1) Make sure that the shim aligns with the shape of the bullnose seal [107] in the limit of 0.0 ±0.1 in. (0.0 ±2.5 mm).

(d) Drill the holes in the shim [110] to align with the holes in the bullnose seal [107].

SUBTASK 27-09-71-420-004

(6) Install the bullnose seal [107] and the new shim [110].

(a) If the shim material is metal, apply a layer of sealant, A00247, between the shim and the inboard flap [71].

(b) Put the bullnose seal [107] and the shim in their position on the inboard flap [71].

(c) Install the bullnose seal [107] and the washers [109] to attach the bullnose seal [107].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that the grip length of the bolts [108] is correct with the added thickness with the shims.

(d) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(e) Extend the trailing edge flaps to the 40-unit position, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

(f) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(g) Adjust the seal retainer at the aft end of the bullnose seal [107] until the seal compression on the upper aft end of the seal is the same as the compression at point B.

(h) Release the torque tube door [94] and let it close.

SUBTASK 27-09-71-940-007

(7) Put the airplane back to its usual condition.

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Retract the flaps to the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

TASK 27-09-71-820-802

3. Aileron Balance Tab Adjustment to Equalize Lateral Manual Reversion Forces

A. General

(1) Use this procedure to adjust the aileron balance tab if the difference in the lateral manual reversion forces is more than the permitted 2 to 1 ratio.

(2) In this task the aileron tab control rods are referred to as the "control rods".

B. References

Reference	Title
27-11-00-700-803	Manual Reversion Control Friction Test (P/B 501)

27-11-00-860-802	Pressure to the Aileron Hydraulic Systems A and B - Activation (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
572	Left Wing - Aileron
672	Right Wing - Aileron

D. Prepare for the Adjustment

SUBTASK 27-09-71-860-007

(1) Make sure the aileron balance tab is correctly adjusted.

(a) To do a check of the adjustment of the aileron balance tab, do this task: Aileron Balance Tab Adjustment (Recommended Method), TASK 27-11-00-820-803.

SUBTASK 27-09-71-860-008

(2) Make sure the aileron control wheel forces, with power off, are not more than the specified limits.

(a) To do a check of the aileron control wheel forces, do this task: Manual Reversion Control Friction Test, TASK 27-11-00-700-803.

SUBTASK 27-09-71-860-009

(3) Make sure the stop clearances at the quadrants of the power control unit are not out of tolerance.

(a) To do a check of the stop clearances, do this task: Pogo and Power Control Unit (PCU) Adjustment, TASK 27-11-00-820-802.

SUBTASK 27-09-71-860-010

(4) If the Flaps Up trim is more than 0.75 unit, make the trim correction first before you do the manual reversion correction.

(a) To adjust the trailing edge flap for lateral trim, do this task: Trailing Edge Flap Adjustment for Lateral Trim and Test, TASK 27-09-71-820-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-71-860-011

(5) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

E. Aileron Balance Tab Adjustment To Equalize Lateral Manual Reversion Forces

SUBTASK 27-09-71-970-010

(1) Make a record of the force necessary to turn the control wheel approximately 30 degrees in the clockwise direction.

SUBTASK 27-09-71-970-011

(2) Make a record of the force necessary to turn the control wheel approximately 30 degrees in the counterclockwise direction.

SUBTASK 27-09-71-970-012

(3) Divide the counterclockwise force by the clockwise force to get the force ratio, or divide the clockwise force by the counterclockwise force to get a force ratio value greater than 1.0.

SUBTASK 27-09-71-970-013

(4) Use the force ratio to find the correct length change for the control rod (Figure 508).

NOTE: For the left or right aileron balance tab, you must change the length of the control rods in sets. The adjustment of the two control rods must be the same amount. It is recommended that you split the adjustment equally between the left and right control rod sets.

(a) To correct high left forces (control wheel counterclockwise), do one of these steps:

1) Make the left control rod set shorter.
2) Make the right control rod set longer.
3) Make the left control rod set shorter and make the right control rod set longer.

(b) To correct high right forces (control wheel clockwise), do one of these steps:

1) Make the right control rod set shorter.
2) Make the left control rod set longer.
3) Make the right control rod set shorter and make the left control rod set longer.

SUBTASK 27-09-71-820-008

(5) Adjust the aileron balance tab [111] (Figure 509):

(a) Do these steps to get access to the aileron tab control rods [113]:

1) Move the aileron trailing edge to the down position.
2) Remove the bolts [122] that attach the forward removable fairing [123] to the aileron [112].
3) Remove the bolts [120] that attach the aft removable fairing [121] to the aileron balance tab [111].

(b) Loosen the jamnuts [124] and jamnuts [126] on the aileron tab control rods [113].

(c) Do these steps if coarse adjustment is necessary;

1) Remove the pins [119], nuts [118], washers [117], bushings [116], washers [115] and bolts [114] to disconnect the aileron tab control rods [113] from the aileron balance tab [111].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Turn the rod ends on the aileron tab control rods [113] for adjustment.

NOTE: One-half turn of the rod end lengthens the control rod 0.021 in. (0.53 mm). One-half turn of the rod end and the barrel [125] together changes the position of the tab trailing edge 0.025 in. (0.64 mm).

a) To raise the trailing edge of the aileron balance tab [111], lengthen the aileron tab control rods [113].

b) To lower the trailing edge of the aileron balance tab [111], shorten the aileron tab control rods [113].

3) Connect the aileron tab control rods [113] to the aileron balance tab [111];

a) Install the bushings [116], washers [115], washers [117], bolts [114] and nuts [118].

b) If there is binding between the aileron tab control rod [113] and the bolt [114] or deflection of the aileron tab control rods [113], adjust the control rod length.

c) Make sure there is a minimum of 0.015 in. (0.38 mm) gap between the bushing [116] and the washer [115].

d) Tighten the nuts [118] to 50 in-lb (5.6 N·m) - 80 in-lb (9.0 N·m).

e) Install the pins [119].

(d) Do these steps if fine adjustment is necessary:

1) Turn the barrel [125] on the aileron tab control rods [113].

NOTE: One turn of the barrel lengthens the control rod 0.008 in. (0.20 mm).

a) To raise the trailing edge of the aileron balance tab [111], lengthen the aileron tab control rods [113].

b) To lower the trailing edge of the aileron balance tab [111], shorten the aileron tab control rods [113].

2) Make sure the threads cover the inspection holes in the barrel [125].

(e) Tighten the jamnuts [124] to 100 in-lb (11.3 N·m) - 140 in-lb (15.8 N·m).

(f) Tighten the jamnuts [126] to 80 in-lb (9.0 N·m) - 100 in-lb (11.3 N·m).

(g) Install the bolts [120] that attach the aft removable fairing [121] to the aileron balance tab [111].

(h) Install the bolts [122] that attach the forward removable fairing [123] to the aileron [112].

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-09-71-860-012

(1) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

TASK 27-09-71-860-801

4. Rudder Trim Adjustment for Power On Discrepancy Correction

A. General

(1) It is necessary to do the rudder power on discrepancy correction if the airplane does not meet the rudder trim requirements shown in the table found in this task (TASK 27-09-71-820-801).

B. References

Reference	Title
27-21-00-700-805	Rudder Travel Test (P/B 501)

27-21-00-820-805	Control Rod for Standby Rudder Power Control Unit Adjustment (P/B 501)

C. Location Zones

Zone	Area
325	Vertical Fin - Rudder

D. Procedure

SUBTASK 27-09-71-860-014

(1) Do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

SUBTASK 27-09-71-820-010

(2) Adjust the rudder trim:

(a) Trim until the rudder trim indicator is ±0.25 units of the position noted on the flight squawk.

(b) Loosen the two index plate screws on the tailcone.

(c) Put the index plate at a position where the two sides of the rudder trailing edge are within the width of the tab on the index plate.

(d) Tighten the index plate screws.

SUBTASK 27-09-71-820-011

(3) Use the rudder trim knob to set the trim to indicate zero.

(a) Make sure you can install the rig pin, R-5.

SUBTASK 27-09-71-860-015

(4) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-09-71-820-012

(5) Adjust the input of the main power control unit (PCU) to align the rudder with the new index position. To do this, do this task: Control Rod for Main Rudder Power Control Unit Adjustment, TASK 27-21-00-820-804.

SUBTASK 27-09-71-820-013

(6) Adjust the input of the standby PCU to align with the main PCU. To do this, do this task: Control Rod for Standby Rudder Power Control Unit Adjustment, TASK 27-21-00-820-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-71-820-014

(7) Adjust the input of the rudder position sensor to align the rudder with the new index plate position.

SUBTASK 27-09-71-720-001

(8) Do this task: Rudder Travel Test, TASK 27-21-00-700-805.

——— END OF TASK ———

TASK 27-09-71-860-802

5. Rudder Trim Adjustment for Power Off Discrepancy Correction

FLIGHT CONTROLS SURFACES - INSPECTION/CHECK

1. General

A. This procedure contains these tasks:

(1) The inspection of the aileron.

(2) The inspection of the aileron balance tab freeplay.

(3) The inspection of the rudder.

(4) The inspection of the horizontal stabilizer.

(5) The inspection of the spoilers.

TASK 27-09-91-200-801

2. Aileron - Inspection

(Figure 601)

NOTE: This procedure is a scheduled maintenance task.

A. References

Reference	Title
27-11-11-200-801	Aileron Inspection (P/B 601)
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Tools/Equipment

Reference	Description
STD-753	Scale - Push/Pull, 0-25 pound (0-11 kilogram) Capacity, 1/4 pound (113 gram) Accuracy
STD-1238	Indicator - Dial
STD-1279	Mount - Device, Mounting, Holds the Dial Indicator

C. Location Zones

Zone	Area
572	Left Wing - Aileron
672	Right Wing - Aileron

D. Prepare for the Check

SUBTASK 27-09-91-860-001

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply power to the hydraulic systems A and B (TASK 29-11-00-860-801).

E. Do a Check of the Aileron Freeplay

SUBTASK 27-09-91-220-001

(1) Do a freeplay check of one aileron with no movement of the opposite aileron or the control wheel:

(a) Make sure the control wheel is at the center.

(b) Attach a mount, STD-1279, to the top wing structure (outboard of the aileron).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Attach a dial indicator, STD-1238 to take measurements from the outboard corner of the aileron trailing edge.

(d) Put the plunger of the dial indicator, STD-1238 within 0.1 in. (2.54 mm) forward of the trailing edge of the aileron.

1) Adjust the dial indicator, STD-1238 to zero.

CAUTION PUT SUFFICIENT PADDING BETWEEN THE FORCE SCALE, AND THE CONTROL SURFACE TO PREVENT DAMAGE TO THE CONTROL SURFACE. THE FORCE SCALE CAN CAUSE DAMAGE TO THE CONTROL SURFACE.

(e) With the push/pull scale 0-25 pound (0-11 kilogram), STD-753, push up with a force of approximately 5 lbf (22.24 N).

NOTE: Apply the load to the aileron balance tab cutout rib (adjacent to the outboard edge of the aileron tab) and centered within 0.5 in. (12.70 mm) of the trailing edge.

1) Make a record of the travel shown on the dial indicator.

2) Slowly remove the force.

(f) Do not adjust the dial indicator, STD-1238.

CAUTION PUT SUFFICIENT PADDING BETWEEN THE FORCE SCALE, AND THE CONTROL SURFACE TO PREVENT DAMAGE TO THE CONTROL SURFACE. THE FORCE SCALE CAN CAUSE DAMAGE TO THE CONTROL SURFACE.

(g) With the push/pull scale 0-25 pound (0-11 kilogram), STD-753, push down with a force of approximately 5 lbf (22.24 N).

NOTE: Apply the load to the aileron balance tab cutout rib (adjacent to the outboard edge of the aileron tab) and centered within 0.5 in. (12.70 mm) of the trailing edge.

1) Make a record of the travel shown on the dial indicator.

2) Slowly remove the force.

(h) Make sure the total up and down freeplay of the aileron is not more than 0.1 in. (2.54 mm).

(i) Remove the dial indicator, STD-1238.

(j) Remove the mount, STD-1279.

SUBTASK 27-09-91-200-002

(2) If the freeplay is not in the acceptable limits, do this task: Aileron Inspection, TASK 27-11-11-200-801.

SUBTASK 27-09-91-220-002

(3) Do the same freeplay check on the opposite aileron.

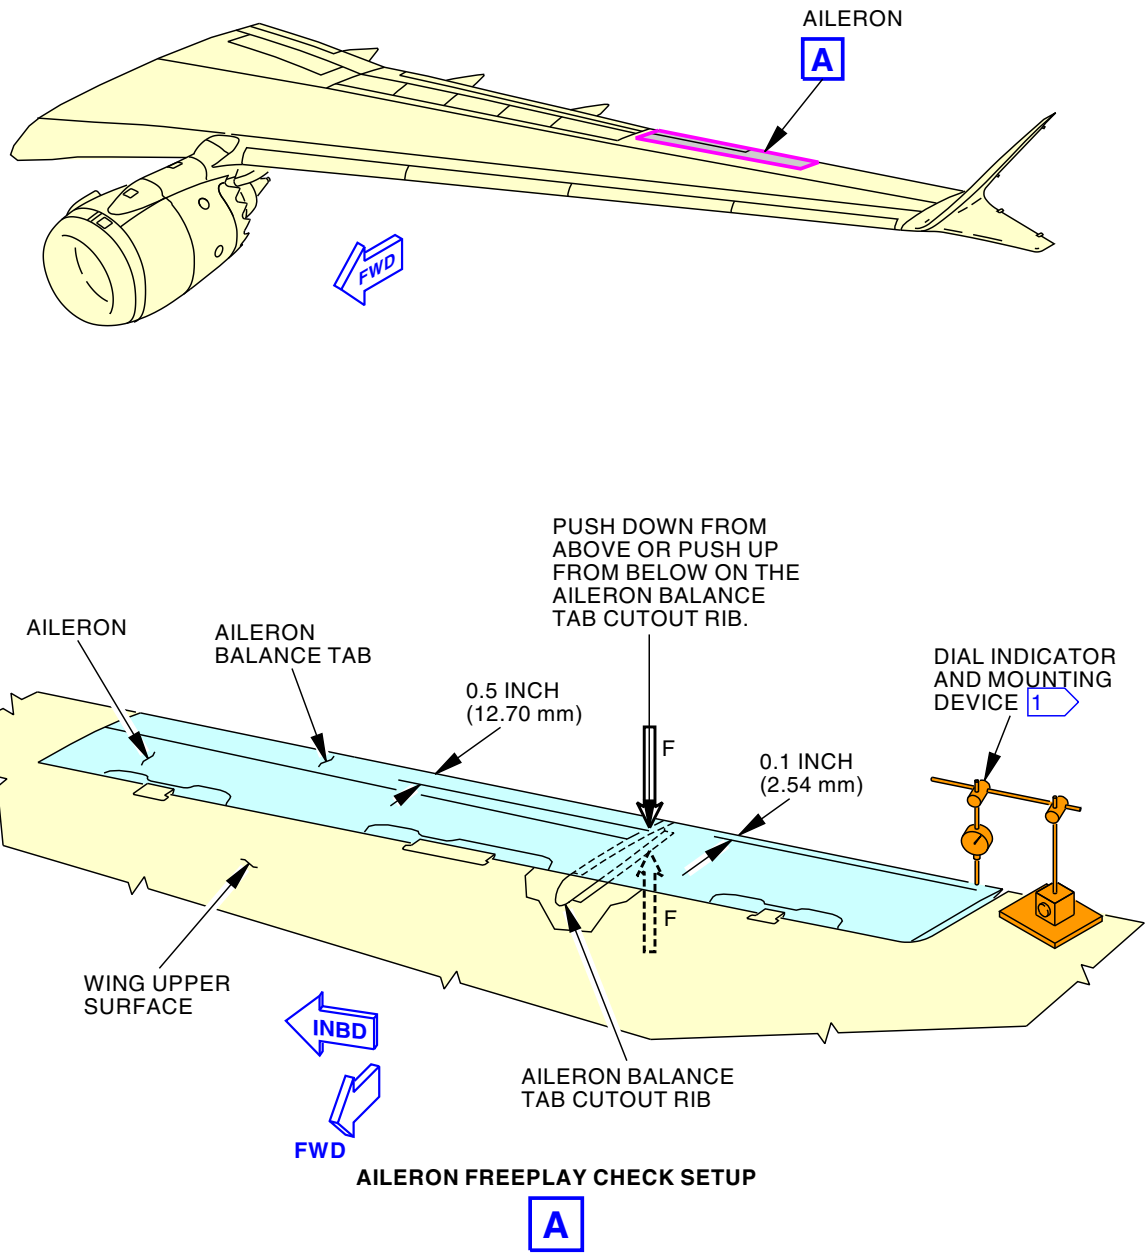
F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-09-91-000-001

(1) Remove power from the hydraulic systems A and B (TASK 29-11-00-860-805).

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details



AILERON FREEPLAY CHECK SETUP

STD-1107	Gauge - Feeler, 0.0 - 0.5 Inch, Readable to 1/1000th
STD-1238	Indicator - Dial
STD-1279	Mount - Device, Mounting, Holds the Dial Indicator
STD-1303	Caliper - Dial

C. Location Zones

Zone	Area
572	Left Wing - Aileron
672	Right Wing - Aileron

D. Prepare for the Check

SUBTASK 27-09-91-863-001

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply power to the hydraulic systems A and B (PAGEBLOCK 29-11-00/201).

E. Aileron Balance Tab Freeplay Check

SUBTASK 27-09-91-220-003

(1) Do a freeplay check of one aileron balance tab with no movement of the aileron:

(a) Make sure that the aileron does not move while you perform this freeplay check of the balance tab.

NOTE: If the aileron moves, the reading on the indicator will not be accurate.

(b) Make sure that the control wheel is at the center.

(c) Attach the mount, STD-1279, and dial indicator, STD-1238, to the aileron.

(d) Put the plunger of the dial indicator, STD-1238, within 0.1 in. (2.54 mm) forward of the aileron balance tab trailing edge, and opposite of the tab control rods.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Adjust the dial indicator, STD-1238, to zero.

CAUTION PUT SUFFICIENT PADDING BETWEEN THE FORCE SCALE, AND THE CONTROL SURFACE TO PREVENT DAMAGE TO THE CONTROL SURFACE. THE FORCE SCALE CAN CAUSE DAMAGE TO THE CONTROL SURFACE.

(e) With the push/pull scale 0-25 pound (0-11 kilogram), STD-753, push up with a force of approximately 5 lbf (22.24 N).

1) Apply the force 0.25 in. (6.35 mm) from the trailing edge of the aileron balance tab, directly under the plunger of the dial indicator, STD-1238.

2) Make a record of the travel shown on the dial indicator, STD-1238.

3) Slowly remove the force.

(f) Do not adjust the dial indicator, STD-1238.

CAUTION PUT SUFFICIENT PADDING BETWEEN THE FORCE SCALE, AND THE CONTROL SURFACE TO PREVENT DAMAGE TO THE CONTROL SURFACE. THE FORCE SCALE CAN CAUSE DAMAGE TO THE CONTROL SURFACE.

(g) With the push/pull scale 0-25 pound (0-11 kilogram), STD-753, push down with a force of approximately 5 lbf (22.24 N).

1) Apply the force 0.25 in. (6.35 mm) from the trailing edge of the aileron balance tab, 0.5 in. (12.70 mm) or less from the plunger of the dial indicator, STD-1238.

2) Make a record of the travel shown on the dial indicator, STD-1238.

3) Slowly remove the force.

(h) Add the up and down freeplay of the aileron balance tab to get the total up and down freeplay of the aileron balance tab.

1) Make sure that the total up and down freeplay of the aileron balance tab is not more than 0.06 in. (1.52 mm).

(i) Remove the dial indicator, STD-1238.

(j) Remove the mount, STD-1279.

SUBTASK 27-09-91-220-012

(2) Do these steps to make sure that the axial play (inboard-outboard direction) of the aileron balance tab is not more than 0.04 in. (1.02 mm).

(a) Hold the aileron balance tab around the trailing edge and with hand pressure, move it outboard.

(b) Use a 0.0 - 0.5 Inch feeler gauge, STD-1107, or a dial caliper, STD-1303, to measure the clearance between the aileron and the outboard end of the aileron balance tab.

1) Make a record of this clearance.

(c) Hold the aileron balance tab around the trailing edge and with hand pressure, move it inboard.

(d) Measure the clearance between the aileron and the outboard end of the aileron balance tab.

1) Make a record of the clearance dimension.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Make sure that the difference between the two measured clearances, or the axial play, is not more than 0.04 in. (1.02 mm).

SUBTASK 27-09-91-200-001

(3) If the freeplay of the aileron balance tab is not in the acceptable limits, do these tasks:

- Aileron Balance Tab Inspection, TASK 27-11-21-200-801
- Aileron Tab Control Rods Inspection, TASK 27-11-34-200-801.

SUBTASK 27-09-91-220-004

(4) Do the same freeplay check on the aileron balance tab of the opposite aileron.

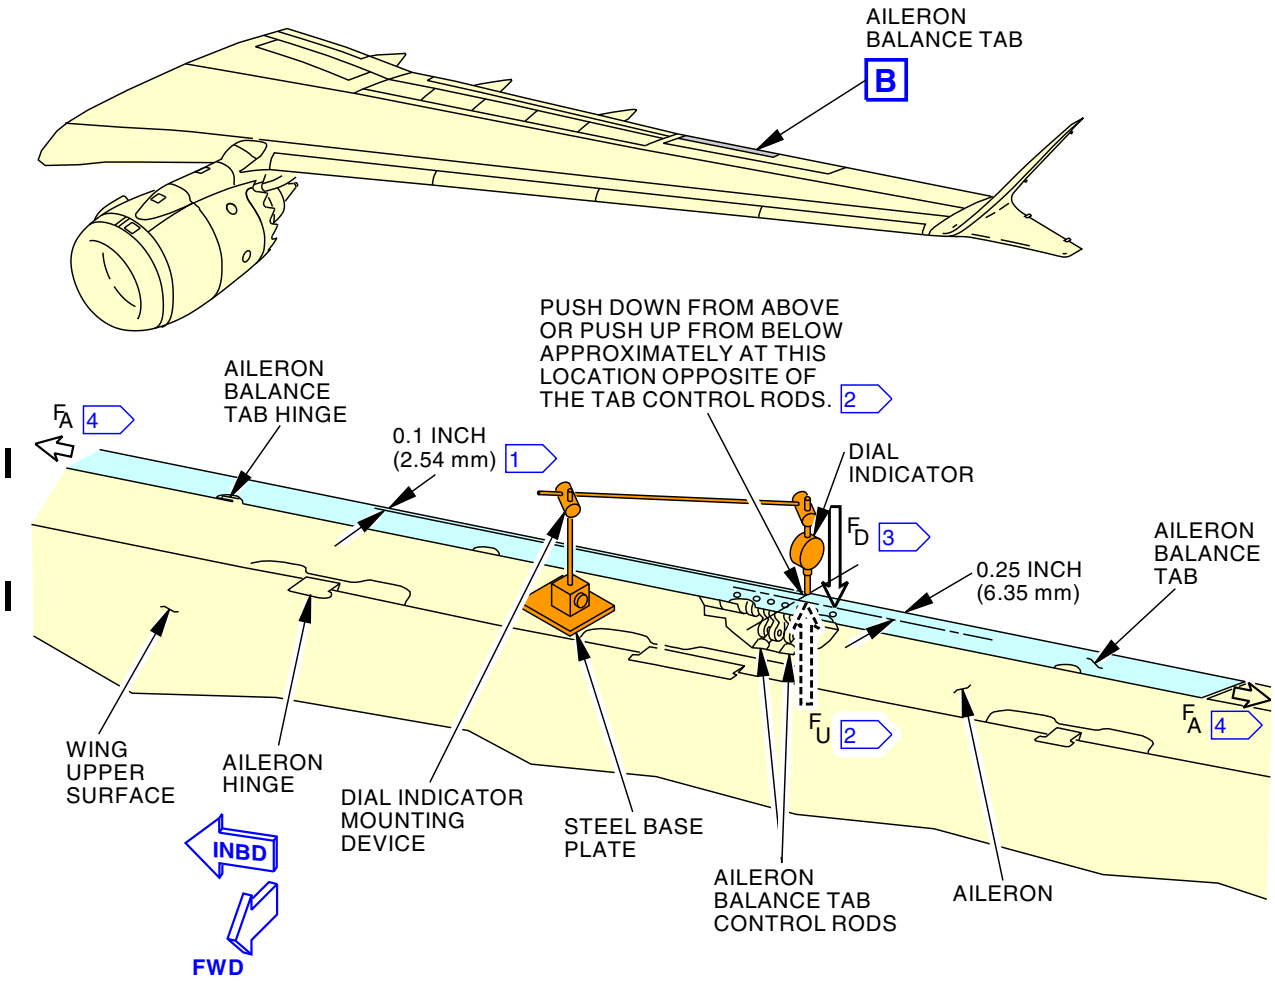
F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-09-91-860-007

(1) Remove power from hydraulic systems A and B (TASK 29-11-00-860-805).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details



LEFT AILERON BALANCE TAB FREEPLAY CHECK
(RIGHT AILERON BALANCE TAB IS OPPOSITE)

B

1 THE PLUNGER SHOULD BE WITHIN 0.1 INCH (2.54 mm) FORWARD OF THE TRAILING EDGE OF THE AILERON BALANCE TAB, AND OPPOSITE OF THE TAB CONTROL RODS.

2 APPLY THE UPWARD FORCE, FU, 0.25 INCH (6.35 mm) FORWARD OF THE TRAILING EDGE OF THE AILERON BALANCE TAB, APPROXIMATELY UNDER THE PLUNGER OF THE DIAL INDICATOR.

3 APPLY THE DOWNWARD FORCE, FD, 0.25 INCH (6.35 mm) FORWARD OF THE TRAILING EDGE OF THE AILERON BALANCE TAB, 0.5 INCH (12.70 mm), OR LESS, FROM THE PLUNGER OF THE DIAL INDICATOR.

4 USE HAND PRESSURE TO MOVE THE AILERON OUTBOARD, THEN INBOARD TO DETERMINE THE AILERON BALANCE TAB AXIAL FREEPLAY.

E. Procedure

SUBTASK 27-09-91-860-003

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply power to the hydraulic systems A and B (PAGEBLOCK 29-11-00/201).

SUBTASK 27-09-91-220-005

(2) Do the rudder hinge bearing and Power Control Unit (PCU) bearing freeplay check:

(a) Make sure the rudder and rudder pedals are in the neutral position.

(b) Make sure the rudder trim indicator is at the zero unit of trim.

(c) Attach the dial indicator, STD-1238 with mount, STD-1279 at the lower end of the rudder trailing edge.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION USE A LOADING BLOCK AT THE SPECIFIED LOCATION TO MOVE THE RUDDER SURFACE. TOO MUCH FORCE OR THE INCORRECT LOCATION WILL CAUSE DAMAGE TO THE RUDDER.

(d) Use a block, STD-1278 and push/pull scale 0-25 pound (0-11 kilogram), STD-753 to move the rudder to the left side with a force of 12 ±4 lbf (53.38 ±17.79 N) and release slowly.

NOTE: Apply the force approximately6 in. (152.40 mm) -8 in. (203.20 mm) from the bottom of the trailing edge and 3 in. (76.20 mm) forward of the trailing edge.

1) Make a record of the rudder position on the dial indicator.

CAUTION USE A LOADING BLOCK AT THE SPECIFIED LOCATION TO MOVE THE RUDDER SURFACE. TOO MUCH FORCE OR THE INCORRECT LOCATION WILL CAUSE DAMAGE TO THE RUDDER.

(e) Use a block, STD-1278 and push/pull scale 0-25 pound (0-11 kilogram), STD-753 to move the rudder to the right side with a force of 12 ±4 lbf (53.38 ±17.79 N) and release slowly.

NOTE: Apply the force approximately 6 in. (152.40 mm) - 8 in. (203.20 mm) from the bottom of the trailing edge and 3 in. (76.20 mm) forward of the trailing edge.

1) Make a record of the rudder position on the dial indicator, STD-1238.

(f) Make sure the difference between the left and right positions is not more than 0.05 in. (1.27 mm).

1) If the difference is more than 0.05 in. (1.27 mm), then replace the bearings on the rudder hinge or power control units.

(g) Use a block, STD-1278 and push/pull scale 0-25 pound (0-11 kilogram), STD-753 to move the rudder to the left side with a force of 12 ±4 lbf (53.38 ±17.79 N) and release slowly.

NOTE: Apply the force approximately 6 in. (152.40 mm) - 8 in. (203.20 mm) from the bottom of the trailing edge and 3 in. (76.20 mm) forward of the trailing edge.

1) Make a record of the rudder position on the dial indicator, STD-1238.

(h) Make sure the difference between the two left positions is not more than 0.03 in. (0.76 mm).

(i) Remove the dial indicator, STD-1238 from the rudder.

SUBTASK 27-09-91-860-004

(3) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

——— END OF TASK ———

27-CMR-10

TASK 27-09-91-200-804

5. Horizontal Stabilizer - Inspection

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) This task is to calculate the freeplay of the horizontal stabilizer (Figure 604). The freeplay is measured individually at three support locations that support the weight of the horizontal stabilizer: the jackscrew, the Left Hand Side (LHS) pivot hinge, and the Right Hand Side (RHS) pivot hinge. A total freeplay value will then be calculated using the freeplay values of the three locations.

(2) All three supports are under load due to the horizontal stabilizer static weight. To measure the freeplay at a support, an adequate amount of reverse load is needed. Weights are placed on top of the front spar area to create the required reverse load at the support where the freeplay is to be measured. Weights such as shotbags and persons are used as examples in this procedure.

NOTE: The user has the option to use other types of weights in the procedure.

(3) The freeplay is measured using a displacement gauge, such as a dial indicator, STD-1238, to check the movement (or slack) at the support mechanism when the load at the support is reversed.

NOTE: The user has the option to use other types of displacement gauges to replace the following tools in the procedure:

- dial indicator, STD-1238
- mount, STD-1279

(4) For the LHS pivot hinge or the RHS pivot hinge freeplay measurement, a table is provided to calculate each individual weight's contribution to the total reverse load. A total of 2500 ± 200 lbs of reverse load is required. This table is intended to facilitate the user in the placement of weights to meet the required reverse load at the pivot hinge support where the freeplay is to be measured.

(5) For the jackscrew freeplay measurement, two sets of weights of a total of 1000 ± 40 lbs (500 ± 20 lbs per set) are required. The weights are applied in the area of the front spar of the horizontal stabilizer.

(6) For this task, only these dimensions will be used:

(a) Linear dimensions are in inches (in.)

(b) Weights are in pounds (lbs.)

NOTE: The tolerances of the pivot hinge total reverse load and the total jackscrew weights are provided. The variation of individual weights and distance measurements must meet those tolerances given.

E. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Prepare for the Check

SUBTASK 27-09-91-010-001

(1) On the stabilizer trim actuator, do this step:

(a) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-09-91-480-001

(2) Using either the STAB TRIM switches on the control wheels or using the stabilizer manual trim wheel on the control stand, set the horizontal stabilizer at 4 units of trim as indicated by the horizontal stabilizer position indicator on the control stand.

G. Horizontal Stabilizer Freeplay Inspection

SUBTASK 27-09-91-220-014

(1) Do a check of the freeplay for the pivot hinges (LHS and RHS) of the stabilizer center section (Figure 605).

(a) Measure the freeplay of the LHS pivot hinge (D1):

1) Attach a dial indicator, STD-1238, with a mount, STD-1279, to the LHS of the fuselage at the Body Station 1156 pivot bulkhead (Figure 605 (Sheet 1), View A).

a) Make sure that the plunger of the dial indicator, STD-1238, is approximately perpendicular to the stabilizer lower surface where it contacts the LHS retainer.

b) Position the dial indicator, STD-1238, to allow for subsequent plunger extension and dial travel of 0.13 inches minimum.

2) Set the dial indicator, STD-1238, to zero.

NOTE: Movement of equipment or personnel inside the fuselage can cause inaccuracy with the dial indicator readings. The dial indicator, STD-1238, should be stable at zero before weight application.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Gently place weights on top of the RHS stabilizer front spar in the area shown (Figure 605 (Sheet 3)).
   a) Protect the upper surface of the horizontal stabilizer as necessary to make sure that the weights do not cause damage.
   b) Apply weights per the "Weight Application Requirements and Calculation of Total Reverse Load (For Pivot Hinge Freeplay Measurements Only)" section of this task.
4) Record the measurement of the extension of the plunger of the dial indicator, STD-1238 as "D1".

   NOTE: Movement of equipment or personnel inside the fuselage can cause inaccuracy with the dial indicator readings. The dial indicator, STD-1238, should show a stable reading when recording the freeplay measurement.
5) Gently remove the weights from the RHS stabilizer.
6) Make sure that the dial indicator value returns to 0 ± 0.003 inch.
   a) If this is not met, check the plunger contact, mount, and function of the dial indicator, STD-1238, to troubleshoot.
   b) If this is not met, redo the freeplay check of the LHS pivot hinge.
7) Remove the dial indicator, STD-1238, and mount, STD-1279, from the LHS of the fuselage.

(b) Measure the freeplay of the RHS pivot hinge (D2):
1) Attach a dial indicator, STD-1238, with a mount, STD-1279, to the RHS of the fuselage at the Body Station 1156 pivot bulkhead (Figure 605 (Sheet 1), View A).
   a) Make sure that the plunger of the dial indicator, STD-1238, is approximately perpendicular to the stabilizer lower surface where it contacts the RHS retainer.
   b) Position the dial indicator, STD-1238, to allow for subsequent plunger extension and dial travel of 0.13 inches minimum.
2) Set the dial indicator, STD-1238, to zero.

   NOTE: Movement of equipment or personnel inside the fuselage can cause inaccuracy with the dial indicator readings. The dial indicator, STD-1238, should be stable at zero before weight application.
3) Gently place weights on top of the LHS stabilizer front spar in the area shown (Figure 605 (Sheet 3)).
   a) Protect the upper surface of the horizontal stabilizer as necessary to make sure that the weights do not cause damage.
   b) Apply weights per the "Weight Application Requirements and Calculation of Total Reverse Load (For Pivot Hinge Freeplay Measurements Only)" section of this task.
4) Record the measurement of the extension of the plunger of the dial indicator, STD-1238 as "D2".

   NOTE: Movement of equipment or personnel inside the fuselage can cause inaccuracy with the dial indicator readings. The dial indicator, STD-1238, should show a stable reading when recording the freeplay measurement.
5) Gently remove the weights from the LHS stabilizer.
6) Make sure that the dial indicator value returns to 0 ± 0.003 inch.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) If this is not met, check the plunger contact, mount, and function of the dial indicator, STD-1238, to troubleshoot.

b) If this is not met, redo the freeplay check of the RHS pivot hinge.

7) Remove the dial indicator, STD-1238, and mount, STD-1279, from the RHS of the fuselage.

SUBTASK 27-09-91-220-015

(2) Do a check of the freeplay for the stabilizer jackscrew (Figure 607).

(a) Measure the freeplay of the stabilizer jackscrew (D3):

1) Make sure that the stabilizer is at 4 units of trim.

2) Attach a dial indicator, STD-1238, with a mount, STD-1279, to the Body Station 1088 bulkhead structure (Figure 607, View B).

a) Make sure that the plunger of the dial indicator, STD-1238, is approximately perpendicular to the surface where it contacts the stabilizer center section (Texas Star structure).

b) Position the dial indicator, STD-1238, to allow for subsequent plunger contraction and dial travel of 0.13 inches minimum.

3) Set the dial indicator, STD-1238, to zero.

NOTE: Movement of equipment or personnel inside the fuselage can cause inaccuracy with the dial indicator readings. The dial indicator, STD-1238, should be stable at zero before weight application.

4) Gently place weights on top of the LHS and RHS stabilizer front spars (Figure 607, View C).

a) Protect the upper surface of the horizontal stabilizer as necessary to make sure that the weights do not cause damage.

b) Place weights within the weight application area shown. Distribute the weights to avoid localized high pressure at contact.

5) Record the measurement of the contraction of the plunger of the dial indicator, STD-1238, as "D3".

NOTE: Movement of equipment or personnel inside the fuselage can cause inaccuracy with the dial indicator readings. The dial indicator, STD-1238, should show a stable reading when recording the freeplay measurement.

6) Gently remove the weights from the LHS and RHS stabilizers.

7) Make sure that the dial indicator value returns to 0 ± 0.003 inch.

a) If this is not met, check the plunger contact, mount, and function of the dial indicator, STD-1238, to troubleshoot.

b) If this is not met, redo the freeplay check of the stabilizer jackscrew.

8) Remove the dial indicator, STD-1238, and mount, STD-1279, from the Body Station 1088 bulkhead structure.

SUBTASK 27-09-91-220-016

(3) Calculate the total freeplay, referred as “H”, of the horizontal stabilizer:

(a) Use the values D1, D2, and D3 to calculate H:

$H = 1.25 \times D3 + [(D1 + D2)/2]$

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-09-91-220-017

(4) Do a check of the D1, D2, D3, and H values:

(a) If the "D1" value is more than 0.066 inch, then replace the LHS bearing.

1) Remove the hinge fitting. Do this task: Horizontal Stabilizer Center Section Hinge Fitting Removal, TASK 27-41-31-000-801.

2) Make sure that the bearing is replaced and that other related parts are serviceable.

3) Install a new or serviceable hinge fitting. Do this task: Horizontal Stabilizer Center Section Hinge Fitting Installation, TASK 27-41-31-400-801.

(b) If the "D2" value is more than .066 inch, then replace the RHS bearing.

1) Remove the hinge fitting. Do this task: Horizontal Stabilizer Center Section Hinge Fitting Removal, TASK 27-41-31-000-801.

2) Make sure that the bearing is replaced and that other related parts are serviceable.

3) Install a new or serviceable hinge fitting. Do this task: Horizontal Stabilizer Center Section Hinge Fitting Installation, TASK 27-41-31-400-801.

(c) If the "D3" value is more than 0.056 inch, then replace the stabilizer ball nut, ballscrew, and jackscrew gearbox.

1) Remove the stabilizer ball nut, ballscrew, and jackscrew gearbox. Do this task: Stabilizer Ball Nut and Jackscrew Gearbox Removal, TASK 27-41-81-000-801.

2) Install the new or serviceable stabilizer ball nut, ballscrew, and jackscrew gearbox. Do this task: Stabilizer Ball Nut and Jackscrew Gearbox Installation, TASK 27-41-81-400-801.

(d) If the "H" value is more than 0.078 inch, then do one or both of the following replacement options as necessary:

1) Replace the bearings at both the LHS and RHS pivot hinge support (Horizontal Stabilizer Center Section Hinge Fitting Removal, TASK 27-41-31-000-801 and Horizontal Stabilizer Center Section Hinge Fitting Installation, TASK 27-41-31-400-801) and other related parts that are not serviceable.

2) Replace the stabilizer ball nut, ballscrew, and jackscrew gearbox (Stabilizer Ball Nut and Jackscrew Gearbox Removal, TASK 27-41-81-000-801 and Stabilizer Ball Nut and Jackscrew Gearbox Installation, TASK 27-41-81-400-801).

NOTE: Fleet history shows that the hinge bearings wear significantly more than the jackscrew does, and this should be considered when making repairs to restore “H” to within limits.

(5) If any replacement(s) are done to restore D1, D2, D3, and H values to be within their respective limits, then perform the horizontal stabilizer freeplay inspection procedure again for verification.

(6) Record the inspection date and the following data of the freeplay check in a history log:

(a) D1, D2, D3, and H values.

(b) Any replaced parts when restoring D1, D2, D3, and H values to be within their respective limits.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Weight Application Requirements and Calculation of Total Reverse Load (For Pivot Hinge Freeplay Measurements Only)

(Figure 606)

NOTE: This section is for providing additional information on how to apply weights and calculate the total reverse load.

SUBTASK 27-09-91-220-018

WARNING MAKE SURE THAT THE WEIGHTS ARE STABLE AND SAFELY SET. DO NOT LET PERSONNEL IN THE AREA BELOW THE STABILIZER. IF YOU DO NOT OBEY, THE WEIGHTS CAN CAUSE INJURY TO PERSONNEL AND DAMAGE TO THE AIRCRAFT.

(1) Apply enough weights during Pivot Hinge Freeplay Inspections so that a Total Reverse Load of 2500 ± 200 lbs is achieved (Figure 605 (Sheet 3)).

NOTE: Make sure that proper fall protection is in place when personnel are used as weights. The weight per person should not exceed 220 lbs.

(a) Make sure that any weights used have a base area to contact the stabilizer with in order to avoid localized loading point. Soft padding, if needed, can be used to distribute the load and protect the surface of the horizontal stabilizer.

(b) For any type of weights applied, make sure that the pressure at the contact area is less than 4 psi average.

SUBTASK 27-09-91-940-001

(2) Locate Point 0 on the horizontal stabilizer upper surface.

(a) Point 0 is the upper aft and inboard corner of the leading edge (LE) skin common to LE Station 198.23.

SUBTASK 27-09-91-970-001

(3) For each weight (or stack of weights) applied, do the following:

(a) Record the weight (or total of the stacked weights) in pounds.

(b) Record the distance in inches.

NOTE: This is the distance between Point 0 and the Center of Gravity (CG) of the applied weight (or stack of weights), along the direction of the front spar centerline.

(c) If the CG of the individual weight (or individual stack of weights) cannot be placed along the front spar, it is acceptable to shift the weight(s) in the AFT direction, so long as the CG of the weight(s) is approximately positioned atop an inspar rib.

SUBTASK 27-09-91-970-002

(4) Calculate the Total Reverse Load using the table below:

NOTE: In the Total Reverse Load table, weight and distance must be recorded in pounds and inches. Using metric values will cause the calculated Total Reverse Load to be in error.

Table 601/27-09-91-993-801 Total Reverse Load Table

Weight locations	(A) Enter the weight in lbs.	(B) Enter the distance in inches.	(C)	(D) Multiply (B) by (C)	(E)	(F) Add (E) to (D)	Reverse Load in lbs. Multiply (A) by (F)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 601/27-09-91-993-801 Total Reverse Load Table (Continued)

Weight locations	(A)	(B)	(C)	(D)	(E)	(F)	Reverse Load in lbs.

D. Prepare for the Check

SUBTASK 27-09-91-860-005

WARNING MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE TRAILING EDGE FLAPS, AND THE LEADING EDGE FLAPS AND SLATS. THESE SURFACES WILL MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(1) Extend the trailing edge flaps to the FLAP DOWN position with primary control. Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

NOTE: You can do a check of the spoilers with hydraulic power on or off.

SUBTASK 27-09-91-480-002

(2) Attach a mount, STD-1279 to the spoiler trailing edge.

(a) Adjust the dial indicator, STD-1238 to zero.

E. Spoiler Inspection

SUBTASK 27-09-91-220-010

(1) Do a check of the freeplay for spoilers No. 1, 2, 3, 4, 5, 8, 9, 10, 11 and 12:

CAUTION PUT SUFFICIENT PADDING BETWEEN THE FORCE SCALE, AND THE CONTROL SURFACE TO PREVENT DAMAGE TO THE CONTROL SURFACE. THE FORCE SCALE CAN CAUSE DAMAGE TO THE CONTROL SURFACE.

(a) Use a force gauge, COM-1557 and apply approximately 21 lbf (93.41 N), 0.5 in. (12.70 mm) forward of the spoiler trailing edge and directly opposite of the power control actuator.

NOTE: The up force of approximately 21 lbf (93.41 N) consists of the spoiler panel weight of 16 lb (7.26 kg) plus 5 lbf (22.24 N) push force.

(b) Measure the freeplay on the inboard edge of the spoiler not more than 0.5 in. (12.70 mm) from the trailing edge.

(c) Make sure the spoiler freeplay is not more than 0.1 in. (2.54 mm).

SUBTASK 27-09-91-220-011

(2) Do a check of the freeplay for spoilers No. 6 and 7 (graphite/composite):

CAUTION PUT SUFFICIENT PADDING BETWEEN THE FORCE SCALE, AND THE CONTROL SURFACE TO PREVENT DAMAGE TO THE CONTROL SURFACE. THE FORCE SCALE CAN CAUSE DAMAGE TO THE CONTROL SURFACE.

(a) Use a force gauge, COM-1557 and apply an up force of approximately 32 lbf (142.34 N), 0.5 in. (12.70 mm) forward of the spoiler trailing edge and at the middle between the two spoiler power control actuators.

NOTE: The up force of approximately 32 lbf (142.34 N) consists of the spoiler panel weight of 27 lb (12.25 kg) plus 5 lbf (22.24 N) push force.

(b) Measure the freeplay on the inboard edge of the spoiler not more than 0.5 in. (12.70 mm) from the trailing edge.

(c) Make sure the spoiler freeplay is not more than 0.2 in. (5.08 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-09-91-080-003

(1) Remove the dial indicator, STD-1238.

SUBTASK 27-09-91-080-004

(2) Remove the mount, STD-1279.

SUBTASK 27-09-91-860-006

WARNING MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE TRAILING EDGE FLAPS, AND THE LEADING EDGE FLAPS AND SLATS. THESE SURFACES WILL MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(3) Retract the trailing edge flaps with primary control. Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

——— END OF TASK ———

AILERON AND AILERON TRIM CONTROL SYSTEM - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Pressure from the aileron hydraulic systems A and B - Deactivation.

(2) Pressure to the aileron hydraulic systems A and B - Activation.

TASK 27-11-00-860-801

2. Pressure from the Aileron Hydraulic Systems A and B - Deactivation

(Figure 201)

A. General

(1) This procedure removes pressure from the aileron hydraulic systems A and B before you do maintenance on the aileron control system.

B. References

Reference	Title
SWPM 20-60-03	Special Protection of Electrical Connectors

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1675	Assembly - Lock, Flight Controls (used on valve p/n 10-60581-2 and 10-60581-3) Part #: F80049-65 Supplier: 81205 Opt Part #: F80049-56 Supplier: 81205

D. Location Zones

Zone	Area

211	Flight Compartment - Left
212	Flight Compartment - Right
572	Left Wing - Aileron
672	Right Wing - Aileron

E. Pressure from the Aileron Hydraulic Systems A and B - Deactivation

WARNING

MAKE SURE THAT THERE IS NO PRESSURE IN THE HYDRAULIC SYSTEM. PRESSURE IN THE HYDRAULIC SYSTEM CAN MOVE THE CONTROL SURFACES, CABLES, LANDING GEARS, AND LANDING GEAR DOORS QUICKLY. THEIR MOVEMENT CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

SUBTASK 27-11-00-860-001

(1) Remove pressure from the aileron hydraulic systems A and B.

(a) Set the FLT CONTROL A and B switches on the forward overhead panel, P5, to the OFF position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

(c) Set the ELEC 2, HYD PUMPS A and ELEC 1, HYD PUMPS B switches on the forward overhead panel, P5, to the OFF position.

(d) Operate the rudder pedals to decrease the remaining hydraulic system pressure.

SUBTASK 27-11-00-480-001

(2) Install the lock, SPL-1675, on the flight controls shutoff valves for systems A and B.

(a) Disconnect the electrical connectors from the shutoff valves.

NOTE: The flight controls shutoff valve is part of the flight controls hydraulic module. The hydraulic module for hydraulic system A is found in the left main wheel well. The hydraulic module for hydraulic system B is found in the right main wheel well.

(b) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(c) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

(d) Make sure that the manual override levers on the shutoff valves are moved to position 2.

(e) Install the lock, SPL-1675, on each shutoff valve.

1) Make sure to install the detent pin.

F. Aileron Control System - Tryout

NOTE: This tryout is to make sure that the Aileron Control System is in a zero energy state.

SUBTASK 27-11-00-010-015

(1) Make sure that these circuit breakers are open and have safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-11-00-410-011

(2) Make sure that the lock, SPL-1675, is correctly installed on each flight controls shutoff valve.

SUBTASK 27-11-00-710-001

(3) Rotate the captain's or first officer's control wheel through full travel in each direction from the neutral position.

NOTE: The force required to move the aileron control surfaces increases significantly when the wheel rotation has exceeded 7 degrees.

SUBTASK 27-11-00-080-001

(1) Remove the lock, SPL-1675, from the flight controls shutoff valves for systems A and B.

(a) Remove the lock, SPL-1675, from the shutoff valves.

1) Make sure that the detent pin is removed first from the lock, SPL-1675.

(b) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

1) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

2) If there was corrosion, correct the problem (SWPM 20-60-03).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Apply D5026NS or ZC-026 compound, G50171, to the connectors (SWPM 20-60-03).

(d) Install electrical connectors on the shutoff valves.

(e) Move the manual override levers on the shutoff valves to position 1.

SUBTASK 27-11-00-860-103

(2) Set the ELEC 2, HYD PUMPS A and ELEC 1, HYD PUMPS B switches, on the P5 forward overhead panel, to the ON position.

SUBTASK 27-11-00-860-002

(3) Set the FLT CONTROL A and B switches, on the P5 forward overhead panel, to the ON position.

SUBTASK 27-11-00-860-003

(4) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-11-00-610-001

(5) If it is necessary to service the hydraulic reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) Adjustment of the aileron cables
(2) Adjustment of the pogo and Power Control Unit (PCU)
(3) Adjustment of the aileron balance tab (Recommended Method)
(4) Adjustment of the aileron balance tab (Alternate Method)
(5) Adjustment of the aileron feel and centering unit
(6) Check of the aileron system adjustment
(7) Test of the aileron surface friction and motion
(8) Test of the manual reversion control friction
(9) Test of the aileron response (operation)
(10) Test of the control wheel centering check
(11) Test of the aileron control wheel force
(12) Test of the aileron trim response
(13) Operational test of the transfer mechanism
(14) Functional test of the transfer mechanism
(15) Test of the control wheel travel stop
(16) Test of the control wheel travel interference
(17) Test of the aileron balance tab position
(18) Test of the aileron travel
(19) Functional test of the aileron PCU pogos
(20) Flight test to find and correct asymmetrical flight control forces

TASK 27-11-00-820-801

2. Aileron Cables Adjustment

(Figure 501, Figure 502)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Before you do cable adjustment, permit a minimum of one hour at a constant ambient temperature of ±5°F (±2.8°C) for the airframe temperature to become stable.

(a) It is recommended to do the cable adjustments in a controlled environment such as a hangar.

NOTE: Direct sunlight on the airframe will cause the cable readings to be inaccurate.

(b) All temperature readings will be taken as ambient outside but adjacent to the applicable area of the airframe.

(c) The cable tension values will not be correct when there are temperature differences along the cable run.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) It is recommended that airplanes supplied with the cables that contain higher zinc coating (Grade D or Grade K) be re-tensioned 3 to 4 months into service. This will bring the tension of the control cables within the desired range. After the cables are re-tensioned, the high zinc cables (Grade D or Grade K) will continue to relax at a rate that is equivalent to the Grade B cables. To identify the grade of the cable, refer to the table below:

Table 501/27-11-00-993-802 Control Cable Grades and Diameters

CONTROL CABLE DIAMETER (TERMINAL SIZE REF)	CONSTRUCTION FIRST DASH NUMBER *[1]								
	GRADE A				GRADE B		GRADE D		GRADE K
	ZINC		TIN OVER ZINC		ZINC	TIN OVER ZINC	ZINC	TIN OVER ZINC	ZINC
	7 X 7	7 X 19	7 X 7	7 X 7 (RT)	7 X 19	7 X 19	7 X 19	7 X 19	7 X 19
.094 (3/32)	3B	3A	3D	3E *[2]	- — —	- — —	- — —	- — —	- — —
.125 (1/8)	- — —	4A	- — —	- — —	4F	4C	4J	4H	4K
.188 (3/16)	- — —	- — —	- — —	- — —	- — —	- — —	6J*[3]	- — —	- — —

*[1] First dash number in the part number of the cable. Example: BACC2C-3D-01085-CE is Grade A, Tin Over Zinc, 7 x 7.

*[2] Code 3E is specified only where there is a specific requirement for REDUCED TOLERANCE (RT) percent elongation wire rope, 7 X 7 RT, per BMS7-265.

*[3] Only Grade D .125 (1/8) cables (4J and 4H) are high zinc cables.

(e) It is recommended that cable assemblies on each side of a cable loop be replaced at the same time using the same cable grade material in order to minimize asymmetric relaxation.

(2) Make sure that you only adjust the applicable aileron cable or cables.

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-11-00-010-001

(3) Remove these access panels if you adjust cables AA and AB or cables ACBA and ACBB (TASK 53-14-01-020-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

SUBTASK 27-11-00-860-004

(4) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-11-00-480-003

(5) Use a high tension cable tensiometer, COM-1554, or low tension cable tensiometer, COM-1553, to measure the cable tension (TASK 27-09-14-860-802).

NOTE: This step measures the cable tension to make sure that the cable adjustment is necessary.

G. Aileron Transfer Cables ACBA and ACBB Adjustment

SUBTASK 27-11-00-860-005

(1) Make sure that the captain's and the first officer's control wheels are in the neutral position:

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize hydraulic systems A and B (TASK 29-11-00-860-801).

(b) Operate the aileron trim switches on the control stand panel, P8, until you can freely install and remove the rig pin A/S-15, from the rigging pin kit, SPL-1585 (Figure 501).

(c) Remove power from hydraulic systems A and B (TASK 29-11-00-860-805).

SUBTASK 27-11-00-820-002

WARNING

MAKE SURE THAT THERE IS NO PRESSURE IN THE HYDRAULIC SYSTEM. PRESSURE IN THE HYDRAULIC SYSTEM CAN MOVE THE CONTROL SURFACES, CABLES, LANDING GEARS, AND LANDING GEAR DOORS QUICKLY. THEIR MOVEMENT CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(2) If you install new ACBA1, ACBA2, ACBB1, and ACBB2 cables, do these steps to adjust the cables (Figure 502):

(a) Install the straight edge, SPL-1671, across the top of the two control wheels.

(b) Tighten cables ACBA2 and ACBB2 to 140 lbf (623 N) - 175 lbf (778 N).

1) Make sure that one end of the first officer's control wheel is 0.50 in. (12.70 mm) or less from the straight edge, SPL-1671.

(c) Remove the straight edge, SPL-1671.

(d) Cycle the control wheels ± 90 degrees 25 times.

(e) Decrease the cable tension to 0 lbf (0 N) - 20 lbf (89 N).

(f) Repeat these steps for cables ACBA1 and ACBB1.

(g) Attach the straight edge, SPL-1671, across the upper ends of both control wheels.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(h) Tighten cables ACBA2 and ACBB2 to the specified cable rigging tension for ACBA2 and ACBB2 (TASK 27-09-14-860-802).

1) Make sure that one end of the first officer's control wheel is 0.20 in. (5.08 mm) or less from the straight edge, SPL-1671.

(i) Tighten cables ACBA1 and ACBB1 to the specified cable rigging tension for ACBA1 and ACBB1 (TASK 27-09-14-860-802).

1) Make sure that one end of the first officer's control wheel is 0.20 in. (5.08 mm) or less from the straight edge, SPL-1671.

(j) Remove the straight edge, SPL-1671.

(k) Cycle the control wheels ± 90 degrees 10 times.

1) Make sure that the cable tension is still within the specified cable rigging tension for cables ACBA1, ACBA2, ACBB1, and ACBB2 (TASK 27-09-14-860-802).

(l) Put the captain's control wheel back to the neutral position.

1) Move the control wheel quickly back and forth about neutral to make sure that it is in the center position.

(m) Do not adjust cables ACBA1, ACBA2, ACBB1, and ACBB2 after they have been tightened to the specified cable rigging tension (TASK 27-09-14-860-802).

SUBTASK 27-11-00-750-004

(3) Use a low tension cable tensiometer, COM-1553, to measure the cable tension (TASK 27-09-14-860-802).

SUBTASK 27-11-00-820-003

(4) If the ACBA1, ACBA2, ACBB1, and ACBB2 cables are not new, do these steps to adjust the cables:

(a) Attach the straight edge, SPL-1671, across the upper ends of both control wheels.

(b) Tighten cables ACBA2 and ACBB2 to the specified cable rigging tension for ACBA2 and ACBB2 (TASK 27-09-14-860-802).

1) Make sure that one end of the first officer's control wheel is 0.20 in. (5.08 mm) or less from the straight edge, SPL-1671.

(c) Tighten cables ACBA1 and ACBB1 to the specified cable rigging tension for ACBA1 and ACBB1 (TASK 27-09-14-860-802).

1) Make sure that one end of the first officer's control wheel is 0.20 in. (5.08 mm) or less from the straight edge, SPL-1671.

(d) Remove the straight edge, SPL-1671.

(e) Cycle the control wheels ± 90 degrees 10 times.

1) Make sure that the cable tension is still within the specified cable rigging tension for cables ACBA1, ACBA2, ACBB1 and ACBB2 (TASK 27-09-14-860-802).

(f) Put the captain's control wheel back to the neutral position.

1) Move the control wheel quickly back and forth about neutral to make sure that it is in the center position.

SUBTASK 27-11-00-480-006

(5) Install the turnbuckle clip locks.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Aileron Body Cables AA and AB Adjustment

SUBTASK 27-11-00-860-007

(1) Make sure that the captain's and the first officer's control wheels are in the neutral position:

> **WARNING** KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize hydraulic systems A and B (TASK 29-11-00-860-801).

(b) Operate the aileron trim switches, on the P8 control stand panel, until you can freely install and remove the rig pin A/S-15, from the rigging pin kit, SPL-1585 (Figure 501).

(c) Remove power from hydraulic systems A and B (TASK 29-11-00-860-805).

SUBTASK 27-11-00-210-001

(2) Make sure that the centering cam follower roller is firmly in the cam detent (Figure 505).

SUBTASK 27-11-00-820-004

> **WARNING** MAKE SURE THAT THERE IS NO PRESSURE IN THE HYDRAULIC SYSTEM. PRESSURE IN THE HYDRAULIC SYSTEM CAN MOVE THE CONTROL SURFACES, CABLES, LANDING GEARS, AND LANDING GEAR DOORS QUICKLY. THEIR MOVEMENT CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(3) If you install new cables AA and AB, do these steps to adjust the cables (Figure 502):

(a) Tighten the turnbuckles on the cables to get the tension to 230 lbf (1023 N) - 250 lbf (1112 N).

(b) Operate the captain's control wheel 25 times.

1) Do not turn the control wheel more than 100 degrees from the neutral position.

(c) Reduce the tension in the cables to get the specified cable rigging tension for cables AA and AB (TASK 27-09-14-860-802).

(d) Operate the captain's control wheel 10 times.

1) Make sure that the cable tension is still within the specified cable rigging tension for cables AA and AB (TASK 27-09-14-860-802).

(e) Put the captain's control wheel back to the neutral position.

1) Move the control wheel quickly back and forth about neutral to make sure that it is in the center position.

SUBTASK 27-11-00-750-005

(4) Use a high tension cable tensiometer, COM-1554, or low tension cable tensiometer, COM-1553, to measure the cable tension (TASK 27-09-14-860-802).

SUBTASK 27-11-00-820-005

(5) If the cables AA and AB are not new, do these steps to adjust the cables:

(a) Tighten the turnbuckles on the cables to get the specified cable rigging tension for cables AA and AB (TASK 27-09-14-860-802).

(b) Operate the captain's control wheel 10 times.

1) Make sure that the cable tension is still within the specified cable rigging tension for cables AA and AB (TASK 27-09-14-860-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Put the captain's control wheel back to the neutral position.

1) Move the control wheel quickly back and forth about neutral to make sure that it is in the center position.

SUBTASK 27-11-00-860-010

(6) Make sure that you can easily install and remove these rig pins from the rigging pin kit, SPL-1585 (Figure 501):

- Rig pin A/S-4 in the aileron bus drum
- Rig pin A/S-15 in the aileron trim actuator.

SUBTASK 27-11-00-820-006

(7) If you cannot easily install and remove the rig pin A/S-4 or rig pin A/S-15, adjust the cables AA and AB:

NOTE: Do not adjust the cables ACBA1, ACBA2, ACBB1, and ACBB2.

(a) Loosen the turnbuckle on one cable and tighten the turnbuckle on the other cable the same quantity until you can easily install and remove the rig pin.

SUBTASK 27-11-00-860-011

(8) Use a high tension cable tensiometer, COM-1554, or low tension cable tensiometer, COM-1553, to measure the cable tension.

(a) Make sure that the cable tension is still within the specified cable rigging tension for cables AA and AB (TASK 27-09-14-860-802).

SUBTASK 27-11-00-860-012

(9) Attach the straight edge, SPL-1671, on the captain's and first officer's control wheels.

(a) Make sure that one end of the first officer's control wheel is 0.20 in. (5.08 mm) or less from the straight edge, SPL-1671.

SUBTASK 27-11-00-420-001

(10) Install the turnbuckle clip locks.

I. Aileron Wing Cables ABSA and ABSB Adjustment

SUBTASK 27-11-00-820-007

(1) Make sure that the pogos and power control unit is correctly adjusted before you do the wing cables adjustment (TASK 27-11-00-820-802).

SUBTASK 27-11-00-480-007

(2) Install the rig pin A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drum.

SUBTASK 27-11-00-820-008

WARNING

MAKE SURE THAT THERE IS NO PRESSURE IN THE HYDRAULIC SYSTEM. PRESSURE IN THE HYDRAULIC SYSTEM CAN MOVE THE CONTROL SURFACES, CABLES, LANDING GEARS, AND LANDING GEAR DOORS QUICKLY. THEIR MOVEMENT CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(3) If you install new cables ABSA and ABSB, do these steps to adjust the cables (Figure 502):

(a) Tighten the turnbuckles on the cables to get the tension to 420 lbf (1868 N) - 440 lbf (1957 N).

(b) Remove the rig pin A/S-4.

(c) Operate the captain's control wheel 25 times.

1) Do not turn the control wheel more than 100 degrees from the neutral position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Install the rig pin A/S-4.

(e) Reduce the tension in the cables to get the specified cable rigging tension for cables ABSA and ABSB (TASK 27-09-14-860-802).

(f) Remove the rig pin A/S-4.

(g) Operate the captain's control wheel 10 times.

1) Make sure that the cable tension is still within the specified cable rigging tension for cables ABSA and ABSB (TASK 27-09-14-860-802).

(h) Put the captain's control wheel back to the neutral position.

1) Move the control wheel quickly back and forth about neutral to make sure that it is in the center position.

SUBTASK 27-11-00-750-006

(4) Use a high tension cable tensiometer, COM-1554, or low tension cable tensiometer, COM-1553, to measure the cable tension (TASK 27-09-14-860-802).

SUBTASK 27-11-00-820-009

(5) If the cables ABSA and ABSB are not new, do these steps to adjust cables ABSA and ABSB:

(a) Tighten the turnbuckles until you get the specified cable rigging tension for cables ABSA and ABSB (TASK 27-09-14-860-802).

(b) Remove the rig pin A/S-4.

(c) Operate the captain's control wheel 10 times.

1) Make sure that the cable tension is still within the specified cable rigging tension for cables ABSA and ABSB (TASK 27-09-14-860-802).

(d) Put the captain's control wheel back to the neutral position.

1) Move the control wheel quickly back and forth about neutral to make sure that it is in the center position.

SUBTASK 27-11-00-480-008

(6) Install the rig pin A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drum.

SUBTASK 27-11-00-860-013

(7) Make sure that the aileron is in the rig position (Figure 506).

NOTE: The aileron rig position is measured 3.0 ±0.1 in. (76.20 ±2.54 mm) forward of the aft, inboard corner of the fixed lower panel, and 3.0 ±0.1 in. (76.20 ±2.54 mm) forward of the aft, outboard corner of the aileron. At this location, the distance between the lower surface of the fixed lower panel and the lower surface of the aileron should be 0.25 ±0.03 in. (6.35 ±0.76 mm).

(a) If the aileron is not in the rig position, adjust the turnbuckles for each cable.

SUBTASK 27-11-00-860-014

(8) Use a high tension cable tensiometer, COM-1554, or low tension cable tensiometer, COM-1553, to measure the cable tension.

(a) Make sure that the cable tension is still within the specified cable rigging tension for cables ABSA and ABSB (TASK 27-09-14-860-802).

SUBTASK 27-11-00-420-002

(9) Install the turnbuckle clip locks.

SUBTASK 27-11-00-080-002

(10) Remove rig pin A/S-4.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

J. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-410-002

(1) Install these access panels if they were removed to adjust cables AA and AB or cables ACBA and ACBB (TASK 53-14-01-420-801).

(a) Install these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

SUBTASK 27-11-00-410-012

(2) Close this access door:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-11-00-860-015

(3) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

——— END OF TASK ———

E. Prepare for the Adjustment

SUBTASK 27-11-00-480-009

WARNING MAKE SURE THAT YOU INSTALL THE DOWNLOCK PINS ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-11-00-860-016

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize hydraulic systems A and B (TASK 29-11-00-860-801).

SUBTASK 27-11-00-860-017

(3) Operate the aileron trim switches on the control stand panel, P8, until you can freely install and remove the rig pin A/S-15, from the rigging pin kit, SPL-1585, in the aileron trim actuator (Figure 501).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-00-860-018

(4) Remove power from hydraulic systems A and B (TASK 29-11-00-860-805).

F. Pogo and the Power Control Unit (PCU) Adjustment

SUBTASK 27-11-00-860-019

(1) Make sure that you can freely install and remove the rig pin A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drum (Figure 501).

SUBTASK 27-11-00-820-010

(2) If you cannot easily install and remove the rig pin A/S-4, adjust the pogos [1] in the specified sequence:

NOTE: When adjustment of the four pogos is necessary, make sure that you follow these instructions in the specified sequence. Incorrect adjustment of the upper and lower pogos on system A or B PCU when adjusted in the opposite directions will cause the incorrect condition of 'free fit' of rig pin A/S 4.

(a) Disconnect the upper and lower pogos from system B PCU and the upper pogo from system A PCU.

1) Remove the pins [8], nuts [7], washers [6], bushings [5], washers [4] and bolts [3] to disconnect the four pogos [1] from the power control units.

(b) Adjust the lower (primary) pogo [1] on system A PCU:

NOTE: The initial length of the pogo (rod-end to rod-end) is approximately 13.78 in. (350.0 mm) and the drain holes are down.

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

1) Pressurize hydraulic system A (TASK 29-11-00-860-801).
2) Loosen the locknut [2] on the pogo [1].
3) Turn the shaft in the barrel and left clevis to adjust the length of the pogo [1] until you can freely install and remove rig pin A/S-4 in the aileron bus drum.
4) Tighten the locknut [2] to 160 ±10 in-lb (18.1 ±1.2 N·m).
5) Make sure that you can freely install and remove rig pin A/S-4.
   a) If it is necessary, adjust the lower pogo [1] on system A PCU again.
6) Remove power from hydraulic system A (TASK 29-11-00-860-805).
7) Make sure that the bushing flanges on the left hand clevis are pointed up, and the drain hole in the clevis barrel is pointed down, when the clevis is re-connected.
8) Install MS20995NC40 lockwire, G02436, on the locknut [2].

(c) Adjust the lower (primary) pogo on system B PCU;

NOTE: You must adjust the lower pogo on system A PCU first before you adjust the lower pogo on system B PCU.

1) Install the bolt [3], washer [4], bushing [5], washer [6], nut [7] and pin [8] to connect the lower pogo to the system B PCU.

NOTE: The initial length of the pogo (rod-end to rod-end) is approximately 13.78 in. (350.0 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure that the drain holes on the pogo [1] are down.

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

2) Pressurize hydraulic system B (TASK 29-11-00-860-801).
3) Loosen the locknut [2] on the pogo [1].
4) Turn the shaft in the barrel and the left clevis to adjust the length of the lower pogo [1] on system B PCU until you can easily install and remove rig pin A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drum.
5) Tighten the locknut [2] to 160 ±10 in-lb (18.1 ±1.2 N·m).
6) Make sure that you can easily install the rig pin A/S-4 in the aileron bus drum.
   a) If it is necessary, adjust the lower pogo [1] on system B PCU again.
7) Remove power from hydraulic system B (TASK 29-11-00-860-805).
8) Make sure that the bushing flanges on the left hand clevis are pointed up, and the drain hole in the celvis barrel pointed down, when the clevis is re-connected.
9) Install MS20995NC40 lockwire, G02436 on the locknut [2].

(d) Adjust the upper (secondary) pogo [1] on system A PCU:

1) Loosen the locknut [2] on the pogo [1].
2) Turn the shaft in the barrel and left clevis to adjust the length of the upper pogo [1] until you can easily install the bolt [3].
   a) Install the bolt [3] with the washer [4], bushing [5], washer [6], nut [7] and pin [8] to connect the upper pogo [1] to the system A PCU.
   b) Make sure that the drain holes on the pogo [1] are down.
3) Tighten the locknut [2] to 160 ±10 in-lb (18.1 ±1.2 N·m).
4) Make sure that the bolt [3] fits freely in its hole.
   a) If it is necessary, adjust the upper pogo [1] on system A PCU again.

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

5) Pressurize hydraulic system A (TASK 29-11-00-860-801).
6) Make sure that you can freely install and remove the rig pin A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drum (Figure 501).

CAUTION DO NOT ADJUST THE LOWER POGO ON SYSTEM B PCU. YOU CAN GET FREE RIG PIN WHEN THE POGOS ARE INCORRECTLY ADJUSTED IN OPPOSITE DIRECTIONS. YOU WILL MISRIG THE SYSTEM B PCU IF YOU ADJUST THE SYSTEM B POGO.

7) If you cannot freely install and remove the rig pin A/S-4, do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Remove the pin [8], nut [7], washer [6], bushing [5], washer [4] and bolt [3] to disconnect the upper pogo [1] from the system A PCU.

b) Adjust the length of the lower pogo [1] on system A PCU again until you can easily install and remove the rig pin A/S-4.

c) Do the adjustment of the upper pogo [1] on system A PCU again from the beginning.

d) Do not adjust the lower pogo [1] on the system B PCU.

8) Remove power from hydraulic system A (TASK 29-11-00-860-805).

9) Install MS20995NC40 lockwire, G02436, on the locknut [2].

(e) Adjust the upper (secondary) pogo [1] on system B PCU:

1) Turn the shaft in the barrel and left clevis to adjust the length of the upper pogo [1] until you can easily install the bolt [3] in the PCU lever.

a) Install the bolt [3] with washer [4], bushing [5], washer [6], nut [7] and pin [8] to connect the upper pogo [1] to the system B PCU.

b) Make sure that the drain holes on the pogo are down.

2) Tighten the locknut [2] to 160 ±10 in-lb (18.1 ±1.2 N·m).

3) Make sure that the bolt [3] fits freely in the hole.

a) Adjust the upper pogo [1] on system B again if it is necessary.

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

4) Pressurize hydraulic system B (TASK 29-11-00-860-801).

5) Make sure that you can easily install and remove the rig pin A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drum (Figure 501).

CAUTION DO NOT ADJUST THE UPPER OR LOWER POGO ON SYSTEM A PCU. YOU CAN GET FREE RIG PIN WHEN THE POGOS ARE INCORRECTLY ADJUSTED IN OPPOSITE DIRECTIONS. YOU WILL MISRIG THE SYSTEM A PCU IF YOU ADJUST THE SYSTEM A POGOS.

6) If you cannot easily install and remove the rig pin A/S-4, do these steps:

a) Remove the pins [8], nuts [7], washers [6], bushings [5], washers [4] and bolts [3] to disconnect the upper pogo [1] from the system B PCU.

b) Adjust the lower pogo [1] on system B PCU again until you can easily install and remove rig pin A/S-4, from the rigging pin kit, SPL-1585.

c) Do the adjustment of the upper pogo [1] on system B PCU again from the beginning.

7) Remove power from hydraulic system B (TASK 29-11-00-860-805).

8) Make sure that the left pogo clevis bushing flanges are pointed up, and the drain hole in the pogo barrel is pointed down, when the pogo is re-connected.

9) Install MS20995NC40 lockwire, G02436, on the locknut.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-00-480-010

(3) Install the rig pin A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drum.

SUBTASK 27-11-00-480-011

(4) Install the rig pin A/S-15, from the rigging pin kit, SPL-1585, in the aileron trim actuator.

SUBTASK 27-11-00-820-011

(5) Visually do a check to make sure that the valve arms on the upper and lower pogos for each PCU are at the center between the stops (Figure 503, View C).

(a) If the valve arms are not at the center between the stops, adjust the four pogos [1] in the same specified sequence as above.

SUBTASK 27-11-00-820-012

(6) Make sure that the gaps between the lug on the top aileron bus drum and the screws [12] on the bottom aileron bus drum are0.05 ±0.01 in. (1.27 ±0.25 mm) (Figure 503, View A-A).

(a) If the gap is out of tolerance, do these steps;

1) Remove the MS20995NC40 lockwire, G02436.

2) Loosen the nut [13].

3) Adjust the screw [12] until the gap is 0.05 ±0.01 in. (1.27 ±0.25 mm).

4) Install the MS20995NC40 lockwire, G02436, on the two screws [12] and nuts [13].

SUBTASK 27-11-00-080-003

(7) Remove rig pins A/S-15 and A/S-4.

END OF TASK

TASK 27-11-00-820-803

4. Aileron Balance Tab Adjustment (Recommended Method)

(Figure 504)

A. References

Reference	Title
27-11-00-860-801	Pressure from the Aileron Hydraulic Systems A and B - Deactivation (P/B 201)
27-11-00-860-802	Pressure to the Aileron Hydraulic Systems A and B - Activation (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1682	Protractor - Aileron Tab Alignment Part #: F80222-11 Supplier: 81205

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
572	Left Wing - Aileron
672	Right Wing - Aileron

D. Prepare for Adjustment

SUBTASK 27-11-00-860-020

(1) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

E. Aileron Balance Tab Adjustment (Recommended Method)

NOTE: You can adjust the aileron balance tab [31] with the aileron [32] in the faired position or with the aileron [32] at the downrig position.

NOTE: Measurements can also be taken with protractor, SPL-1682, if it is necessary.

SUBTASK 27-11-00-820-013

(1) Do these steps to do a check of the aileron balance tab [31] with the aileron [32] in the faired position:

(a) Align the lower surface of the aileron trailing edge flush with the lower trailing edge surface of the adjacent fixed wing structure to ±0.03 in. (0.76 mm) at the outboard end of the aileron.

(b) Make sure that the outboard lower trailing edge surface of the aileron balance tab [31] aligns with the lower trailing edge surface of the aileron [32] to ±0.03 in. (0.76 mm).

1) If this condition is not met, adjust the aileron balance tab [31].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-00-220-001

(2) Do these steps to do a check of the aileron balance tab [31] with the aileron [32] in the downrig position (Figure 506):

NOTE: The aileron rig position is measured 3.0 ±0.1 in. (76.2 ±2.5 mm) forward of the aft, inboard corner of the fixed lower panel, and 3.0 ±0.1 in. (76.2 ±2.5 mm) forward of the aft, outboard corner of the aileron. At this location, the distance between the lower surface of the fixed lower panel and the lower surface of the aileron should be 0.25 ±0.03 in. (6.35 ±0.76 mm).

(a) Measure the vertical distance between the lower surface of the aileron balance tab [31] to the lower surface of the aileron [32] at the outboard end of the aileron balance tab [31] (dimension A)(Figure 504):

NOTE: You must measure the distance from the lower aft most points of the aileron balance tab [31] and the aileron [32].

1) Make sure the dimension A is 0.078 ±0.070 in. (1.98 ±1.78 mm).

(b) If the dimension A is out of tolerance, adjust the aileron balance tab [31].

SUBTASK 27-11-00-820-014

(3) Do these steps to adjust the aileron balance tab [31]:

(a) Move the aileron trailing edge to the down position.

(b) Remove the bolts [45] that attach the forward removable fairing [46] to the aileron.

(c) Remove the bolts [43] that attach the aft removable fairing [44] to the aileron balance tab [31].

(d) Loosen the jam nuts [47] and jam nuts [49] on the aileron tab control rods [33].

NOTE: You must adjust the two aileron tab control rods [33] the same quantity.

(e) Do these steps if a coarse adjustment is necessary:

1) Remove the pins [42], nuts [41], washers [40], bushings [39], washers [38] and bolts [37] to disconnect the aileron tab control rods [33] from the aileron balance tab [31].

2) Turn the rod ends on the tab control rods [33] for adjustment.

NOTE: One-half turn of the rod end changes the position of the tab trailing edge 0.067 in. (1.70 mm). One-half turn of the rod end and the barrel [48] together changes the position of the tab trailing edge 0.080 in. (2.03 mm).

a) To raise the trailing edge of the aileron balance tab [31], lengthen the aileron tab control rods [33].

b) To lower the trailing edge of the aileron balance tab [31], shorten the aileron tab control rods [33].

3) Connect the aileron tab control rods [33] to the aileron balance tab [31].

a) Install the bushings [39], washers [38], washers [40], bolts [37] and nuts [41].

b) If there is binding between the aileron tab control rods [33] and the bolt [37], adjust the length of the aileron tab control rods [33].

c) Make sure there is a minimum of 0.015 in. (0.38 mm) gap between the bushing [39] and the washer [38].

d) Tighten the nuts [41] to 65 ±15 in-lb (7.3 ±1.7 N·m).

e) Install the pins [42].

(f) Do these steps if fine adjustment is necessary:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Turn the barrels [48] on the aileron tab control rods [33].

NOTE: One turn of the barrel, with the rod end fixed, changes the position of the tab trailing edge 0.027 in. (0.69 mm).

a) To raise the trailing edge of the aileron balance tab [31], lengthen the aileron tab control rods [33].

b) To lower the trailing edge of the aileron balance tab [31], shorten the aileron tab control rod [33].

2) Make sure the threads are visible in the inspection holes in the barrel [48].

(g) Tighten the jam nuts [47] to 120 ±20 in-lb (13.6 ±2.3 N·m).

(h) Tighten the jam nuts [49] to 90 ±10 in-lb (10.2 ±1.2 N·m).

(i) Install the bolts [43] that attach the aft removable fairing [44] to the aileron balance tab [31].

(j) Install the bolts [45] that attach the forward removable fairing [46] to the aileron.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-080-019

(1) If used to take measurements, remove the protractor, SPL-1682.

SUBTASK 27-11-00-440-001

(2) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-00-700-001

(3) Do this task: Flight Test to Find and Correct Asymmetrical Flight Control Forces, TASK 27-11-00-750-801.

NOTE: For each aileron tab, if both control rods [33] are adjusted, then flight test is necessary.

If only one rod is adjusted, and you can verify that the remaining rod had not been replaced or adjusted since the last flight test, then flight test is not necessary.

If only one rod is adjusted, and you can not verify that the remaining rod had not been replaced or adjusted since the last flight test, then flight test is necessary.

D. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

E. Prepare for the Adjustment

SUBTASK 27-11-00-480-012

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-00-860-025

WARNING	MAKE SURE THAT PERSONNEL AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THE CONTROL SURFACES, THE THRUST REVERSERS AND THE LANDING GEAR CAN MOVE SUDDENLY WITH THE PRESSURIZATION OF A HYDRAULIC SYSTEM. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize hydraulic systems A and B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-11-00-820-017

(3) Make sure that the springs [63] on the feel and centering unit [61] are not loose.

(a) If the springs [63] are loose, tighten the nuts [65] on the eyebolts [66] until you see 4 to 5 threads beyond the nuts [65].

(b) Do not stretch the springs [63] from free length.

F. Aileron Feel and Centering Unit Adjustment

SUBTASK 27-11-00-860-026

(1) Shake the control wheels to make sure that the wheels are in the neutral position.

SUBTASK 27-11-00-710-002

(2) Do this task: Control Wheel Centering Check, TASK 27-11-00-700-804.

SUBTASK 27-11-00-970-001

(3) Measure the control wheel breakout force in the clockwise and counterclockwise directions:

(a) Install the adapter, SPL-1674, to the captain's control wheel.

NOTE: If the adapter is not available, put a tangent force to the captain's control wheel at a 6.5 in. (165 mm) radius.

(b) Remove the map holder assembly from the first officer's control wheel.

(c) Install the mount, SPL-1670 and the protractor, SPL-1680, to the first officer's control wheel.

(d) Set the indicator on the protractor, SPL-1680, to zero degrees.

(e) Turn the control wheel clockwise until the aileron starts to move.

1) Using a push/pull scale 0-25 pound (0-11 kilogram), STD-753, make sure that the force to turn the control wheel is not more than 29.0 in-lb (3.3 N·m) or 4.5 lbf (20.0 N).

(f) Release the control wheel.

(g) Turn the control wheel counterclockwise until the aileron starts to move.

1) Using a push/pull scale 0-25 pound (0-11 kilogram), STD-753, make sure that the force to turn the control wheel is not more than 29.0 in-lb (3.3 N·m) or 4.5 lbf (20.0 N).

SUBTASK 27-11-00-820-018

(4) If the control wheels center properly, and breakout forces are within the limits above, then no adjustment is necessary.

SUBTASK 27-11-00-820-019

(5) If the control wheels are not in the center or the breakout forces are out of tolerance, adjust the tension of the springs [63] on the centering unit [61]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Hold the eyebolt [66] while you tighten or loosen the nut [65] in 1/2 turn increments.

NOTE: You must tighten the two eyebolts [66] equally. Tighten the eyebolts [66] to increase the spring forces. Loosen the eyebolts [66] to decrease the spring forces.

(b) Adjust the nuts [65] until the force to turn the control wheel is not more than 29.0 in-lb (3.3 N·m) or 4.5 lbf (20.0 N).

(c) Tighten the checknuts [64].

(d) Make sure that the shaft [70] can turn freely.

SUBTASK 27-11-00-750-001

(6) After adjustment of breakout forces above, do the following steps to do a check of the breakout forces and make sure that the control wheel is centered properly:

(a) Turn the control wheel clockwise until the aileron starts to move.

1) Make sure that the force to turn the control wheel is not more than 29.0 in-lb (3.3 N·m) or 4.5 lbf (20.0 N).

(b) Release the control wheel.

1) Make sure that the control wheel goes back to the neutral position in 0.0 ±0.4 units of trim (2.4 degrees).

(c) Turn the control wheel counterclockwise until the aileron starts to move.

1) Make sure that the force to turn the control wheel is not more than 29.0 in-lb (3.3 N·m) or 4.5 lbf (20.0 N).

(d) Release the control wheel.

1) Make sure that the control wheel goes back to the neutral position in 0.0 ±0.4 units of trim (2.4 degrees).

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-080-004

(1) Remove the adapter, SPL-1674, from the captain's aileron control wheel.

SUBTASK 27-11-00-080-005

(2) Remove the mount, SPL-1670 and the protractor, SPL-1680, from the first officer's control wheel.

SUBTASK 27-11-00-410-006

(3) Install the map holder assembly to the first officer's control wheel.

SUBTASK 27-11-00-080-006

(4) Remove power from hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-11-00-480-013

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-11-00-010-004

(2) Open this access panel:

Number	Name/Location
112A	Forward Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Do a Check of the Aileron System Adjustment

SUBTASK 27-11-00-820-020

(1) Do a check of the aileron system adjustment.

(a) Attach the straight edge, SPL-1671, on the captain's and first officer's control wheels.

(b) Make sure that a rig pin A/S-4, from the rigging pin kit, SPL-1585, can be freely installed in the aileron bus drum (Figure 501).

1) If a rig pin A/S-4 cannot be freely installed, do this task: Pogo and Power Control Unit (PCU) Adjustment, TASK 27-11-00-820-802.

(c) Remove rig pin A/S-4 from the aileron bus drum.

(d) Remove the straight edge, SPL-1671, from the captain's and first officer's control wheels.

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(e) Pressurize hydraulic systems A and B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(f) Operate the aileron trim switches on the control stand panel, P8, until the rig pin A/S-15 from the rigging pin kit, SPL-1585, can be freely installed and removed (Figure 501).

(g) Make sure that the captain's control wheel is the center of the neutral position.

1) Gently move the control wheel in the backlash band.

2) Make sure that the center of the backlash band aligns with the protractor zero position.

(h) Make sure that the index mark on the captain's control wheel aligns with the zero mark on the control column.

(i) Attach the straight edge, SPL-1671, on the captain's and first officer's control wheels.

(j) Make sure that the top ends of the control wheels touch the straight edge, SPL-1671.

(k) Make sure that one end of the first officer's control wheel is no more than 0.20 in. (5.1 mm) from the straight edge, SPL-1671.

1) If the control wheels do not align, adjust the cables ACBA and ACBB, do this task: Aileron Cables Adjustment, TASK 27-11-00-820-801.

(l) Make sure that these rig pins, from the rigging pin kit, SPL-1585, can be freely installed and removed (Figure 501):

NOTE: Install these rig pins at the same time.

1) Rig pin A/S-4 in the aileron bus drum

2) Rig pin A/S-15 in the aileron trim actuator.

(m) If the above rig pins cannot be freely installed and removed, adjust the cables AA and AB, do this task: Aileron Cables Adjustment, TASK 27-11-00-820-801.

(n) Remove the straight edge, SPL-1671, from the captain's and first officer's control wheels.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(o) Make sure that the aileron is in the rig position (Figure 506).

NOTE: The aileron rig position is measured 3.0 ±0.1 in. (76.2 ±2.5 mm) forward of the aft, inboard corner of the fixed lower panel, and 3.0 ±0.1 in. (76.2 ±2.5 mm) forward of the aft, outboard corner of the aileron. At this location, the distance between the lower surface of the fixed lower panel and the lower surface of the aileron should be 0.25 ±0.03 in. (6.35 ±0.76 mm).

1) If the aileron is not in the rig position, adjust the cables ABSA and ABSB, do this task: Aileron Cables Adjustment, TASK 27-11-00-820-801.

(p) Make sure that the aileron balance tab aligns with the aileron.

1) Measure the distance between the rig position of the aileron balance tab [31] to the aileron lower surface (dimension A) (Figure 504).

NOTE: You must measure from the lower aft most point of the aileron balance tab.

a) At the outboard end of the aileron balance tab, make sure that the dimension A is 0.078 ±0.070 in. (2.0 ±1.8 mm) or 1.07 ±0.25 degrees.

2) If the aileron balance tab does not align with the aileron, do this task: Aileron Balance Tab Adjustment (Recommended Method), TASK 27-11-00-820-803.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-410-003

(1) Close this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-11-00-860-028

(2) Remove power from hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

TASK 27-11-00-700-801

7. Aileron Surface Friction and Motion Test

(Figure 506, Figure 507)

A. References

Reference	Title
27-11-00-860-801	Pressure from the Aileron Hydraulic Systems A and B - Deactivation (P/B 201)
27-11-00-860-802	Pressure to the Aileron Hydraulic Systems A and B - Activation (P/B 201)

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Prepare for the Test

SUBTASK 27-11-00-860-029

(1) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-11-00-020-001

(2) Disconnect the aileron control rod [81] from the aileron [32]. (Figure 507)

(a) Remove the pin [82], nut [83], washer [84], bushing [85], washer [88] and bolt [89] to disconnect the aileron control rod [81] from the aileron [32].

SUBTASK 27-11-00-860-030

(3) Make sure that the Flap Lever is in the up, retracted position.

D. Do a Test of the Aileron Friction and Motion

SUBTASK 27-11-00-720-001

(1) Do a test of the aileron friction and motion:

NOTE: During this test, the force is positive (+) if you need to push the aileron to get it to a specified position. The force is negative (-) if you need to hold the aileron to keep it at a specified position.

(a) Move the aileron surface to the rig position and release (Figure 506).

NOTE: The aileron rig position is measured 3.0 ±0.1 in. (76.2 ±2.5 mm) forward of the aft, inboard corner of the fixed lower panel, and 3.0 ±0.1 in. (76.2 ±2.5 mm) forward of the aft, outboard corner of the aileron. At this location, the distance between the lower surface of the fixed lower panel and the lower surface of the aileron should be 0.25 ±0.03 in. (6.35 ±0.76 mm).

(b) If the aileron moves away from the rig position, do these steps:

1) Hold the aileron at the rig position with a force scale at 8.75 ±0.50 in. (222.3 ±12.8 mm) aft of the hinge centerline and perpendicular to the aileron chord plane (held negative (-) force).

2) Slowly apply or relax the force as it is necessary until the aileron moves up and down from the rig position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Measure the force that is necessary to move the aileron up (up positive (+) force).

b) Measure the force that is necessary to move the aileron down (down positive (+) force).

3) Add the up force with the down force.

NOTE: Add the forces with the same signs. Subtract forces with the opposite signs.

4) Make sure the total of the two values is not more than 5 lbf (22.2 N).

(c) If the aileron does not move away from the rig position, do these steps;

1) Slowly apply a force perpendicular to the aileron chord plane 8.75 ±0.50 in. (222.3 ±12.8 mm) aft of the hinge centerline.

2) Measure the force that is necessary to move the aileron up (up force).

3) Measure the force that is necessary to move the aileron down (down force).

4) Add the up force with the down force.

NOTE: Add the forces with the same signs. Subtract forces with the opposite signs.

5) Make sure the total of the two forces is not more than 5 lbf (22.2 N).

(d) Measure the maximum positive force necessary to move the aileron to these specified positions:

1) Make sure that the aileron moves smoothly throughout its travel, and that there is no binding at the aileron hinges and seals.

2) Move the aileron from the rig position to the full down position.

3) Move the aileron from the full down position to the full up position.

4) Move the aileron from the full up position to the rig position.

(e) Make sure the force is not more than 13 lbf (57.8 N) for aileron down.

(f) Make sure the force is not more than 3 lbf (13.3 N) aileron up.

(g) Measure the aileron travel before the aileron touches the wing structure at the upper and lower limits of travel.

NOTE: Apply only enough force to maintain contact while you measure the aileron travel.

1) Make sure the aileron travels a minimum of 3.67 in. (93.2 mm) up before the aileron touches the structure.

2) Make sure the aileron travels a minimum of 3.15 in. (80.0 mm) down before the aileron touches the structure.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-020-002

(1) Connect the aileron control rod [81] to the aileron [32].

(a) Install the bushing [85], bolt [89], washer [88], washer [84], nut [83], and pin [82] to connect the aileron control rod [81] to the aileron.

SUBTASK 27-11-00-860-031

(2) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

——— END OF TASK ———

TASK 27-11-00-700-803

8. Manual Reversion Control Friction Test

NOTE: This procedure is a scheduled maintenance task.

A. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1670	Mount - Control Wheel Protractor Part #: F72790 Supplier: 81205
SPL-1674	Assembly - Adapter, Control Wheel, Torque and Force Test Part #: C27060-22 Supplier: 81205 Opt Part #: C27060-1 Supplier: 81205 Opt Part #: F72867-1 Supplier: 81205
SPL-1680	Protractor Assembly - Control Column Part #: A27021-29 Supplier: 81205 Part #: G76002-42 Supplier: 81205 Opt Part #: 4MIT65B80307-1 Supplier: 81205 Opt Part #: F52485-500 Supplier: 81205 Opt Part #: G76002-19 Supplier: 81205 Opt Part #: G76002-37 Supplier: 81205
STD-1019	Wrench - Torque, 0 to 600 in-lbs (0 to 67.78 N·m)

B. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right
572	Left Wing - Aileron
672	Right Wing - Aileron

C. Prepare for the Test

SUBTASK 27-11-00-010-010

(1) Remove the map holder assembly from the first officer's control wheel.

SUBTASK 27-11-00-480-015

(2) Install the mount, SPL-1670, and the protractor, SPL-1680, to the first officer's control wheel.

SUBTASK 27-11-00-480-016

(3) Install the adapter, SPL-1674, to the captain's control wheel.

SUBTASK 27-11-00-860-037

(4) Make sure that the aileron trim system is at the center.

SUBTASK 27-11-00-860-038

(5) Set the protractor, SPL-1680, to zero degrees.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Manual Reversion Control Friction Test

SUBTASK 27-11-00-730-001

(1) Do the manual reversion control friction test:

(a) Use the torque wrench, STD-1019, on the adapter, SPL-1674, to measure the force that is necessary to turn the captain's control wheels in the clockwise direction.

NOTE: If the adapter, SPL-1674, is not available, apply a tangent force to the captain's control wheel at 6.5 in. (165 mm).

1) Turn the control wheel in the clockwise direction until the ailerons start to move.

a) Make sure that the force is 215 in-lb (24.3 N·m) or 33.1 lbf (147.2 N) or less.

2) Continue to turn the control wheel to 20 degrees.

a) Make sure that the force is 243 in-lb (27.5 N·m) or 37.4 lbf (166.4 N) or less.

3) Continue to turn the control wheel to 40 degrees.

a) Make sure that the force is 279 in-lb (31.5 N·m) or 42.9 lbf (190.8 N) or less.

4) Continue to turn the control wheel to 75 degrees.

a) Make sure that the force is 333 in-lb (37.6 N·m) or 51.2 lbf (227.7 N) or less.

(b) Measure the force that is necessary to turn the captain's control wheel in the counterclockwise direction.

NOTE: If the adapter, SPL-1674, is not available, apply a tangent force to the captain's control wheel at 6.5 in. (165 mm) radius.

1) Turn the control wheel in the counterclockwise direction until the ailerons start to move.

a) Make sure that the force is 215 in-lb (24.3 N·m) or 33.1 lbf (147.2 N) or less.

2) Continue to turn the control wheel to 20 degrees.

a) Make sure that the force is 243 in-lb (27.5 N·m) or 37.4 lbf (166.4 N) or less.

3) Continue to turn the control wheel to 40 degrees.

a) Make sure that the force is 279 in-lb (31.5 N·m) or 42.9 lbf (190.8 N) or less.

4) Continue to turn the control wheel to 75 degrees.

a) Make sure that the force is 333 in-lb (37.6 N·m) or 51.2 lbf (227.7 N) or less.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-080-009

(1) Remove the mount, SPL-1670, and the protractor, SPL-1680, from the first officer's control wheel.

SUBTASK 27-11-00-410-005

(2) Install the map holder assembly to the first officer's control wheel.

SUBTASK 27-11-00-080-010

(3) Remove the adapter, SPL-1674, from the captain's control wheel.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-11-00-710-801

9. Aileron Response (Operational) Test

A. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right
572	Left Wing - Aileron
672	Right Wing - Aileron

C. Prepare for the Test

SUBTASK 27-11-00-860-041

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize hydraulic systems A and B (TASK 29-11-00-860-801).

D. Aileron Response (Operational) Test

SUBTASK 27-11-00-710-003

(1) Do the aileron response test:

(a) Turn the aileron control wheel through full travel in each direction from the neutral position.

1) Make sure the ailerons can move smoothly through the full range of travel.

(b) Remove pressure from the hydraulic system A (TASK 29-11-00-860-805).

(c) Turn the aileron control wheel in the clockwise direction from the neutral position.

1) Make sure the trailing edges of the left aileron moves down and the aileron tab moves up.

2) Make sure the trailing edges of the right aileron moves up and the aileron tab moves down.

(d) Turn the aileron control wheel in the counterclockwise direction from the neutral position.

1) Make sure the trailing edges of the left aileron moves up and the aileron tab moves down.

2) Make sure the trailing edges of the right aileron moves down and the aileron tab moves up.

(e) Remove pressure from the hydraulic system B (TASK 29-11-00-860-805).

(f) Pressurize the hydraulic system A (TASK 29-11-00-860-801)..

(g) Turn the aileron control wheel in the clockwise direction from the neutral position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure the trailing edges of the left aileron moves down and the aileron tab moves up.

2) Make sure the trailing edges of the right aileron moves up and the aileron tab moves down.

(h) Turn the aileron control wheel in the counterclockwise direction from the neutral position.

1) Make sure the trailing edges of the left aileron moves up and the aileron tab moves down.

2) Make sure the trailing edges of the right aileron moves down and the aileron tab moves up.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-860-042

(1) Remove pressure from the hydraulic system A (TASK 29-11-00-860-805).

——— END OF TASK ———

TASK 27-11-00-700-804

10. Control Wheel Centering Check

A. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Prepare for the Check

SUBTASK 27-11-00-860-045

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize hydraulic systems A and B (TASK 29-11-00-860-801).

D. Control Wheel Centering Check

SUBTASK 27-11-00-720-003

(1) Do the centering check:

(a) Turn the captain's control wheel in the clockwise direction from the neutral position (zero units) to 6 units of trim (36 degrees).

(b) Turn the captain's control wheel back to 2 units of trim and release the control wheel.

(c) Make sure the control wheel goes back to the neutral position in 0.0 ±0.4 units of trim (±2.4 degrees).

(d) Turn the captain's control wheel in the counterclockwise direction from the neutral position (zero units) to 6 units of trim.

(e) Turn the captain's control wheel back to 2 units of trim and release the control wheel.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Make sure the control wheel goes back to the neutral position in 0.0 ±0.4 units of trim (±2.4 degrees).

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-860-046

(1) Remove power from hydraulic systems A and B (TASK 29-11-00-860-805).

211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Test

SUBTASK 27-11-00-860-049

(1) Make sure that you can freely install and remove the rig pin A/S-15, from the rigging pin kit, SPL-1585, in the aileron trim actuator.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-00-860-050

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THE CONTROL SURFACES, THE THRUST REVERSERS AND THE LANDING GEAR CAN MOVE SUDDENLY WITH THE PRESSURIZATION OF A HYDRAULIC SYSTEM. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize hydraulic systems A and B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-11-00-480-017

(3) Install the adapter, SPL-1674, to the captain's control wheel.

NOTE: If the adapter is not available, put a tangent force to the captain's control wheel at a 6.5 in. (165 mm) radius.

SUBTASK 27-11-00-010-011

(4) Remove the map holder assembly from the first officer's control wheel.

SUBTASK 27-11-00-480-018

(5) Install the mount, SPL-1670 and the protractor, SPL-1680, to the first officer's control wheel.

E. Do a Test of the Control Wheel Force

SUBTASK 27-11-00-730-002

(1) Do a check of the control wheel force:

(a) Set the indicator on the protractor, SPL-1680, to zero degrees.

(b) Turn the control wheel clockwise until the aileron starts to move.

1) Make sure that the force to turn the control wheel is not more than 29.0 in-lb (3.3 N·m) or 4.5 lbf (20.0 N).

(c) Continue to turn the control wheel clockwise to 5 degrees.

1) Make sure that the force to turn the control wheel is not more than 35.5 in-lb (4.0 N·m) or 5.5 lbf (24.5 N).

(d) Continue to turn the control wheel clockwise to 20 degrees.

1) Make sure that the force to turn the control wheel is not more than 56.0 in-lb (6.3 N·m) or 8.5 lbf (37.8 N).

(e) Continue to turn the control wheel clockwise to 40 degrees.

1) Make sure that the force to turn the control wheel is not more than 89.5 in-lb (10.1 N·m) or 14.0 lbf (62.3 N).

(f) Continue to turn the control wheel clockwise to 75 degrees.

1) Make sure that the force to turn the control wheel is not more than 123.5 in-lb (14.0 N·m) or 19.0 lbf (84.5 N).

(g) Release the control wheel.

1) Make sure that the control wheel goes back to the neutral position.

(h) Turn the control wheel counterclockwise until the aileron starts to move.

1) Make sure that the force to turn the control wheel is not more than 29.0 in-lb (3.3 N·m) or 4.5 lbf (20.0 N).

(i) Continue to turn the control wheel counterclockwise to 5 degrees.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that the force to turn the control wheel is not more than 35.5 in-lb (4.0 N·m) or 5.5 lbf (24.5 N).

(j) Continue to turn the control wheel counterclockwise to 20 degrees.

1) Make sure that the force to turn the control wheel is not more than 56.0 in-lb (6.3 N·m) or 8.5 lbf (37.8 N).

(k) Continue to turn the control wheel counterclockwise to 40 degrees.

1) Make sure that the force to turn the control wheel is not more than 89.5 in-lb (10.1 N·m) or 14.0 lbf (62.3 N).

(l) Continue to turn the control wheel counterclockwise to 75 degrees.

1) Make sure that the force to turn the control wheel is not more than 123.5 in-lb (14.0 N·m) or 19.0 lbf (84.5 N).

(m) Release the control wheel.

1) Make sure that the control wheel goes back to the neutral position.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-080-011

(1) Remove the adapter, SPL-1674, from the captain's aileron control wheel.

SUBTASK 27-11-00-080-012

(2) Remove the mount, SPL-1670 and the protractor, SPL-1680, from the first officer's control wheel.

SUBTASK 27-11-00-410-007

(3) Install the map holder assembly to the first officer's control wheel.

SUBTASK 27-11-00-080-013

(4) Remove power from hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

D. Prepare for the Test

SUBTASK 27-11-00-860-054

(1) Make sure that you can freely install and remove the rig pin A/S-15, from the rigging pin kit, SPL-1585, in the aileron trim actuator.

(2) Remove rig pin A/S-15 from the aileron trim actuator.

SUBTASK 27-11-00-480-019

(3) Install the adapter, SPL-1674, on the captain's control wheel.

NOTE: If the adapter, SPL-1674, is not available, put a tangent force to the captain's control wheel at a 6.5 in. (165.1 mm) radius.

SUBTASK 27-11-00-010-012

(4) Remove the map holder assembly from the first officer's control wheel.

SUBTASK 27-11-00-480-020

(5) Install the mount, SPL-1670, and the protractor, SPL-1680, on the first officer's control wheel.

SUBTASK 27-11-00-860-097

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Pressurize hydraulic systems A and B (TASK 29-11-00-860-801).

E. Aileron Trim Response Test

SUBTASK 27-11-00-730-005

(1) Operate the Captain's control wheel through full travel clockwise and counterclockwise a minimum six times.

(a) Turn the captain's control wheel back to the neutral position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-00-730-006

(2) Make sure that the pointer decal on the captain's and first officer's control wheels align with the aileron trim decal (zero unit) to a tolerance of 0.00 ±0.02 in. (0.0 ±0.5 mm).

SUBTASK 27-11-00-730-007

(3) At the same time push and hold the aileron trim switches in the LEFT WING DOWN direction until the trim actuator stops.

(a) Make sure that the two control wheels turn in the counterclockwise direction.

SUBTASK 27-11-00-730-008

(4) Record the necessary time for the actuator to move to full LEFT WING DOWN trim.

(a) Make sure the time is less than 30 seconds.

SUBTASK 27-11-00-730-009

(5) Record the captain's wheel position at full LEFT WING DOWN trim.

(a) Make sure the wheel position is at a minimum 9.5 units.

NOTE: When you read the control wheel position, shake the captain's control wheel to make sure that the control system is centered in the trim detent.

SUBTASK 27-11-00-730-017

(6) Manually turn the captain's control wheel to the left stop (105 degrees) counterclockwise.

SUBTASK 27-11-00-730-026

(7) Manually turn and hold the captain's control wheel to the right stop (105 degrees) clockwise.

(a) Make sure that the control wheel moves freely through travel.

SUBTASK 27-11-00-730-027

(8) Release the captain's control wheel.

(a) Make sure that the control wheel goes back to at least 9.5 units counterclockwise position.

NOTE: When you read the control wheel position, shake the captain's control wheel to make sure that the control system is centered in the trim detent.

SUBTASK 27-11-00-730-028

(9) Record the captain's wheel position.

SUBTASK 27-11-00-730-029

(10) At the same time push and hold both aileron trim switches until the captain's and first officer's control wheels align with the aileron trim decal (zero unit) to a tolerance of 0.00 ±0.02 in. (0.0 ±0.5 mm)

(a) Shake the Captain's control wheel to get zero trim units.

SUBTASK 27-11-00-730-030

(11) At the same time push and hold the aileron trim switches in the RIGHT WING DOWN direction until the trim actuator stops.

(a) Make sure that the two control wheels turn in the clockwise direction.

SUBTASK 27-11-00-730-031

(12) Record the necessary time for the actuator to move to full RIGHT WING DOWN trim.

(a) Make sure the time is less than 30 seconds.

SUBTASK 27-11-00-730-032

(13) Record the captain's wheel position at full RIGHT WING DOWN trim.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Make sure the wheel position is at a minimum 9.5 units.

NOTE: When you read the control wheel position, shake the captain's control wheel to make sure that the control system is centered in the trim detent.

SUBTASK 27-11-00-730-033

(14) Manually turn the captain's control wheel to the left stop (105 degrees) clockwise.

SUBTASK 27-11-00-730-034

(15) Manually turn and hold the captain's control wheel to the right stop (105 degrees) counterclockwise.

(a) Make sure that the control wheel moves freely through travel.

SUBTASK 27-11-00-730-035

(16) Release the captain's control wheel.

(a) Make sure that the control wheel goes back to at least 9.5 units clockwise position.

NOTE: When you read the control wheel position, shake the captain's control wheel to make sure that the control system is centered in the trim detent.

SUBTASK 27-11-00-730-036

(17) Record the captain's wheel position.

SUBTASK 27-11-00-730-037

(18) At the same time push and hold the aileron trim switches in the RIGHT WING DOWN direction until the trim actuator stops.

(a) Make sure that the control wheel is at least 9.5 units clockwise position.

NOTE: When you read the control wheel position, shake the captain's control wheel to make sure that the control system is centered in the trim detent.

SUBTASK 27-11-00-730-038

(19) Turn and hold the captain's control wheel at 75 degrees counterclockwise.

SUBTASK 27-11-00-730-039

(20) Record the force to hold the captain's wheel at 75 degrees counterclockwise.

(a) Make sure that the force to hold the control wheel is not more than 137 in-lb (15.5 N·m) or 21.0 lbf (93.4 N).

SUBTASK 27-11-00-730-040

(21) Release the captain's control wheel.

SUBTASK 27-11-00-730-041

(22) At the same time push and hold the aileron trim switches in the LEFT WING DOWN direction until the trim actuator stops.

(a) Make sure that the control wheel is at least 9.5 units counterclockwise position.

NOTE: When you read the control wheel position, shake the captain's control wheel to make sure that the control system is centered in the trim detent.

SUBTASK 27-11-00-730-042

(23) Turn and hold the captain's control wheel at 75 degrees clockwise.

SUBTASK 27-11-00-730-043

(24) Record the force to hold the captain's wheel at 75 degrees clockwise.

(a) Make sure that the force to hold the control wheel is not more than 137 in-lb (15.5 N·m) or 21.0 lbf (93.4 N).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-00-730-044

(25) Release the captain's control wheel.

SUBTASK 27-11-00-730-045

(26) At the same time push and hold both aileron trim switches in the RIGHT WING DOWN direction until the captain's and first officer's control wheels align with the aileron trim decal (zero unit) to a tolerance of 0.00 ±0.02 in. (0.0 ±0.5 mm)

(a) Shake the Captain's control wheel to get zero trim units.

SUBTASK 27-11-00-730-046

(27) At the same time push and hold the FORWARD aileron trim switch in the LEFT WING DOWN direction for a minimum of 3 seconds.

(28) At the same time push and hold the FORWARD aileron trim switch in the RIGHT WING DOWN direction for a minimum of 3 seconds.

(a) Make sure that the control wheels do not move.

SUBTASK 27-11-00-730-047

(29) At the same time push and hold the AFT aileron trim switch in the LEFT WING DOWN direction for a minimum of 3 seconds.

(30) At the same time push and hold the AFT aileron trim switch in the RIGHT WING DOWN direction for a minimum of 3 seconds.

(a) Make sure that the control wheels do not move.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-860-055

(1) Remove power from hydraulic systems A and B (TASK 29-11-00-860-805).

SUBTASK 27-11-00-080-014

(2) Remove the adapter, SPL-1674, from the captain's aileron control wheel.

SUBTASK 27-11-00-080-015

(3) Remove the mount, SPL-1670, and the protractor, SPL-1680, from the first officer's control wheel.

SUBTASK 27-11-00-410-008

(4) Install the map holder assembly to the first officer's control wheel.

——— END OF TASK ———

TASK 27-11-00-710-802

13. Transfer Mechanism Operational Test

(Figure 501)

NOTE: This procedure is a scheduled maintenance task.

A. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

ECCN 9E991 BOEING PROPRIETARY - See title page for details

C. Prepare for the Test

SUBTASK 27-11-00-860-058

WARNING

MAKE SURE THAT PERSONNEL AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THE CONTROL SURFACES, THE THRUST REVERSERS AND THE LANDING GEAR CAN MOVE SUDDENLY WITH THE PRESSURIZATION OF A HYDRAULIC SYSTEM. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize hydraulic systems A and B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-11-00-210-002

(2) Make sure the FLT CONTROL A and B switches, on the forward overhead panel, P5, are ON.

SUBTASK 27-11-00-860-059

(3) Make sure that the aileron trim control system is at the neutral position.

D. Transfer Mechanism Operational Test

SUBTASK 27-11-00-710-004

(1) Do the operational test of the transfer mechanism:

(a) Operate the two aileron trim switches to put the aileron control wheels to the neutral (zero unit) position.

(b) Shake the control wheel to center the aileron system.

(c) Turn the captain's control wheel fully clockwise and hold.

(d) Turn the first officer's control wheel counterclockwise through neutral and beyond 10 units left aileron, and return the control wheel to full clockwise.

1) After the initial breakout, the force required to continue wheel motion should increase steadily and smoothly.

Verify that there is no binding or sudden increase in the force required to turn the wheel.

(e) Turn the captain's control wheel fully counterclockwise and hold.

(f) Turn the first officer's control wheel clockwise through neutral and beyond 10 units right aileron, and return the control wheel to full counterclockwise.

1) After the initial breakout, the force required to continue wheel motion should increase steadily and smoothly.

Verify that there is no binding or sudden increase in the force required to turn the wheel.

(g) Return the captain's control wheel to neutral.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-860-060

(1) Remove power from hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-11-00-700-806

14. Transfer Mechanism Functional Test

(Figure 501)

NOTE: This procedure is a scheduled maintenance task.

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Test

SUBTASK 27-11-00-860-063

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize hydraulic systems A and B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-11-00-860-098

(2) Make sure that the FLT CONTROL A and B switches, on the P5 forward overhead panel, are in the ON position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-00-860-064

(3) Make sure that you can freely install and remove the rig pin A/S-15, from the rigging pin kit, SPL-1585, in the aileron trim actuator (Figure 501).

SUBTASK 27-11-00-010-013

(4) Remove the map holder assembly from the captain's control wheel:

(a) Remove the three screws that hold the map holder assembly to the control wheel.

NOTE: The three screws will be used to install the torque adapter in the next subtask.

(b) Remove the map holder assembly.

SUBTASK 27-11-00-480-021

(5) Install the torque adapter, SPL-1674, on the captain's control wheel.

NOTE: If the adapter, SPL-1674, is not available, apply a tangent force to the captain's control wheel at 6.5 in. (165 mm) radius.

(a) Use the three screws from the map holder assembly to install the torque adapter.

SUBTASK 27-11-00-860-100

(6) Do one of the steps that follow:

(a) Use the MAX Display System (MDS) to view the captain and first officer's control column positions during this test.

1) Follow the steps on the MDS:

a) MAINT

b) MAINT DATA PGS

c) 27 FLIGHT CONTROL - DISPLAY

d) CAPT CTRL WHL and SCE FO CTRL WHL.

(b) Install the mount, SPL-1670, and protractor, SPL-1680, to the captain's control wheel.

E. Transfer Mechanism Functional Test

SUBTASK 27-11-00-720-004

(1) Do the functional test of the transfer mechanism:

(a) Operate the two aileron trim switches to put the aileron control wheels to the neutral (zero unit) position.

(b) Shake the control wheel to center the aileron system.

(c) Hold the first officer's control wheel at the neutral position.

(d) Turn the captain's control wheel clockwise from the neutral position.

1) Make sure that the breakout force is 240 in-lb (27 N·m) - 436 in-lb (49 N·m) or 37 lbf (165 N) - 67 lbf (298 N).

NOTE: The “breakout” force occurs when the captain's control wheel starts to move with the first officer's control wheel hold in the neutral position.

2) Make sure that the force at 75 degrees is 330 in-lb (37 N·m) - 676 in-lb (76 N·m) or 51 lbf (227 N) - 104 lbf (463 N).

(e) Turn the captain's control wheel counterclockwise from the neutral position.

1) Make sure that the breakout force is 240 in-lb (27 N·m) - 436 in-lb (49 N·m) or 37 lbf (165 N) - 67 lbf (298 N).

NOTE: The “breakout” force occurs when the captain's control wheel starts to move with the first officer's control wheel hold in the neutral position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure that the force at 75 degrees is 330 in-lb (37 N·m) - 676 in-lb (76 N·m) or 51 lbf (227 N) - 104 lbf (463 N).

(f) Turn and hold the first officer's control wheel clockwise at 80 degrees from the neutral position.

(g) Turn the captain's control wheel counterclockwise until the transfer mechanism stops touch.

1) Make sure that the captain's control wheel turns a minimum of 138 degrees from the starting position (80 degrees clockwise).

2) Make sure that the transfer mechanism can move freely when you turn the control wheel.

(h) Turn and hold the first officer's control wheel counterclockwise at 80 degrees from the neutral position.

(i) Turn the captain's control wheel clockwise until the transfer mechanism stops touch.

1) Make sure that the captain's control wheel turns a minimum of 138 degrees from the starting position (80 degrees counterclockwise).

2) Make sure that the transfer mechanism can move freely when you turn the control wheel.

(j) Turn and hold the first officer's control wheel clockwise at 80 degrees from the neutral position.

(k) Turn the captain's control wheel counterclockwise 130 degrees from the starting position (80 degrees clockwise).

1) Make sure that the maximum force to turn the captain's control wheel is 900 in-lb (102 N·m) or 138 lbf (614 N).

(l) Turn and hold the first officer's control wheel counterclockwise at 80 degrees from the neutral position.

(m) Turn the captain's control wheel clockwise 130 degrees from the starting position (80 degrees counterclockwise).

1) Make sure that the maximum force to turn the captain's control wheel is 900 in-lb (102 N·m) or 138 lbf (614 N).

(n) Return both control wheels to neutral.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-860-065

(1) Remove power from hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-11-00-080-016

(2) If applicable, remove the mount, SPL-1670, and protractor, SPL-1680, from the captain's control wheel.

SUBTASK 27-11-00-000-001

(3) Remove the torque adapter, SPL-1674, from the captain's control wheel:

(a) Remove the three screws that hold the torque adapter to the control wheel.

(b) Remove the torque adapter, SPL-1674.

SUBTASK 27-11-00-410-009

(4) Install the map holder assembly to the captain's control wheel:

(a) Pup the map holder assembly in place on the captain's control wheel.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Install the three screws that hold the map holder assembly.

SUBTASK 27-11-00-860-099

(5) Make sure that the FLT CONTROL A and B switches, on the P5 forward overhead panel, are in the ON position.

——— END OF TASK ———

TASK 27-11-00-700-807

15. Control Wheel Travel Stop Test

NOTE: This procedure is a scheduled maintenance task.

A. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1670	Mount - Control Wheel Protractor Part #: F72790 Supplier: 81205
SPL-1680	Protractor Assembly - Control Column Part #: A27021-29 Supplier: 81205 Part #: G76002-42 Supplier: 81205 Opt Part #: 4MIT65B80307-1 Supplier: 81205 Opt Part #: F52485-500 Supplier: 81205 Opt Part #: G76002-19 Supplier: 81205 Opt Part #: G76002-37 Supplier: 81205

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Do a Test of the Control Wheel Travel Stop

SUBTASK 27-11-00-020-005

(1) Remove the map holder assembly from the first officer's control wheel.

SUBTASK 27-11-00-480-022

(2) Install the mount, SPL-1670 and the protractor, SPL-1680, on the first officer's control wheel.

(a) Set the indicator on the protractor, SPL-1680, to zero degree.

SUBTASK 27-11-00-720-005

(3) Do the test of the control wheel travel stop:

(a) Turn the captain's control wheel clockwise until the control wheel stops.

1) Make sure the first officer's control wheel turns a minimum of 105 degrees.

NOTE: A minimum of 105 degrees control wheel travel is required for the captain's control wheel to touch the forward stop. This large deflection can be necessary for certain flight conditions in manual reversion.

The system reaches the aft quadrant stop at approximately 90 degrees. Additional force will be necessary to stretch the control cable past 90 degrees until the control wheel stops.

(b) Turn the captain's control wheel counterclockwise until the control wheel stops.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure the first officer's control wheel moves freely and turns a minimum of 105 degrees.

NOTE: Turn the control wheel 105 degrees clockwise to make sure the minimum travel requirements of the control wheel are met and that there are no obstructions in the control column and control wheel installations. A minimum of 105 degrees control wheel travel is required for the captain's control wheel to touch the forward stop. This large deflection can be necessary for certain flight conditions in manual reversion. The system reaches the aft stops at approximately 90 degrees. Apply additional force to turn the control wheel more than 90-95 degrees. The control cables stretch slightly when the control wheels are turned beyond 90 degrees.

SUBTASK 27-11-00-080-017

(4) Remove the protractor, SPL-1680 and the mount, SPL-1670, from the first officer's control wheel.

SUBTASK 27-11-00-420-003

(5) Install the map holder assembly to the first officer's control wheel.

——— END OF TASK ———

TASK 27-11-00-700-808

16. Control Wheel Travel Interference Test

A. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Control Wheel Travel Interference Test

SUBTASK 27-11-00-700-002

(1) Do the test of the control wheel travel interference:

(a) Hold the control column full forward and do the following steps:

1) Turn the control wheel to the full left (counterclockwise) position.

a) Make sure that you make a slow and deliberate movement of the control wheel.

NOTE: If you move the control wheel too quickly, the binding will not be felt.

2) Make sure that the control wheel travel is smooth through the full turn.

3) Turn the control wheel to the center position.

4) Turn the control wheel to the full right (clockwise) position.

a) Make sure that you make a slow and deliberate movement of the control wheel.

NOTE: If you move the control wheel too quickly, the binding will not be felt.

5) Make sure that the control wheel travel is smooth through the full turn.

6) Turn the control wheel to the center position.

(b) Hold the control column full aft and do the following steps:

1) Turn the control wheel to the full left (counterclockwise) position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure that you make a slow and deliberate movement of the control wheel.

NOTE: If you move the control wheel too quickly, the binding will not be felt.

2) Make sure that the control wheel travel is smooth through the full turn.

3) Turn the control wheel to the center position.

4) Turn the control wheel to the full right (clockwise) position.

a) Make sure that you make a slow and deliberate movement of the control wheel.

NOTE: If you move the control wheel too quickly, the binding will not be felt.

5) Make sure that the control wheel travel is smooth through the full turn.

6) Turn the control wheel to the center position.

7) Return the control column to the neutral position.

——— END OF TASK ———

TASK 27-11-00-700-809

17. Aileron Balance Tab Position Test

A. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
572	Left Wing - Aileron
672	Right Wing - Aileron

B. Aileron Balance Tab Position Test

SUBTASK 27-11-00-720-006

(1) Do a test of the position of the aileron LEFT balance tab:

NOTE: For all aileron tab measurements in this test, measure the distances from the LOWER surface of the aileron tab at the tip of the trailing edge to the LOWER surface of the aileron at the tip of the trailing edge.

(a) Set the aileron at the rig position (Figure 506).

NOTE: The aileron rig position is measured 3.0 ±0.1 in. (76.2 ±2.5 mm) forward of the aft, inboard corner of the fixed lower panel, and 3.0 ±0.1 in. (76.2 ±2.5 mm) forward of the aft, outboard corner of the aileron. At this location, the distance between the lower surface of the fixed lower panel and the lower surface of the aileron should be 0.25 ±0.03 in. (6.35 ±0.76 mm).

(b) Measure the vertical distance from the tip of the outboard trailing edge of the aileron tab to the tip of the adjacent aileron trailing edge.

1) Make sure the distance is 0.078 ±0.070 in. (2.0 ±1.8 mm).

(c) Manually move the aileron DOWN so that the tip of the outboard lower trailing edge of the aileron is 3.39 ±0.10 in. (86.1 ±2.5 mm) below the tip of the lower trailing edge of the adjacent fixed trailing edge surface.

(d) Measure the distance from the tip of the lower surface of the aileron tab to the tip of the lower surface of the adjacent aileron trailing edge.

1) Make sure the aileron balance tab moves UP 0.88 ±0.10 in. (22.4 ±2.6 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Manually move the aileron UP so that the tip of the outboard lower trailing edge of the aileron is 4.59 ±0.10 in. (116.6 ±2.6 mm) above the tip of the lower trailing edge of the adjacent fixed trailing edge surface.

(f) Measure the distance from the tip of the lower surface of the aileron tab to the tip of the lower surface of the adjacent aileron trailing edge.

1) Make sure the aileron balance tab moves DOWN 1.14 ±0.10 in. (29.0 ±2.6 mm).

SUBTASK 27-11-00-720-007

(2) Do a test of the position of the aileron RIGHT balance tab:

NOTE: For all aileron tab measurements in this test, measure the distances from the LOWER surface of the aileron tab at the tip of the trailing edge to the LOWER surface of the aileron at the tip of the trailing edge.

(a) Set the aileron at the rig position (Figure 506).

NOTE: The aileron rig position is measured 3.0 ±0.1 in. (76.2 ±2.5 mm) forward of the aft, inboard corner of the fixed lower panel, and 3.0 ±0.1 in. (76.2 ±2.5 mm) forward of the aft, outboard corner of the aileron. At this location, the distance between the lower surface of the fixed lower panel and the lower surface of the aileron should be 0.25 ±0.03 in. (6.35 ±0.76 mm).

(b) Measure the vertical distance from the tip of the outboard trailing edge of the aileron tab to the tip of the adjacent aileron trailing edge.

1) Make sure the distance is 0.078 ±0.070 in. (2.0 ±1.8 mm).

(c) Manually move the aileron DOWN so that the tip of the outboard lower trailing edge of the aileron is 3.39 ±0.10 in. (86.1 ±2.5 mm) below the tip of the lower trailing edge of the adjacent fixed trailing edge surface.

(d) Measure the distance from the tip of the lower surface of the aileron tab to the tip of the lower surface of the adjacent aileron trailing edge.

1) Make sure the aileron balance tab moves UP 0.88 ±0.10 in. (22.4 ±2.5 mm).

(e) Manually move the aileron UP so that the tip of the outboard lower trailing edge of the aileron is 4.59 ±0.10 in. (116.6 ±2.6 mm) above the tip of the lower trailing edge of the adjacent fixed trailing edge surface.

(f) Measure the distance from the tip of the lower surface of the aileron tab to the tip of the lower surface of the adjacent aileron trailing edge.

1) Make sure the aileron balance tab moves DOWN 1.14 ±0.10 in. (29.0 ±2.5 mm).

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Reference	Description
SPL-1670	Mount - Control Wheel Protractor Part #: F72790 Supplier: 81205
SPL-1680	Protractor Assembly - Control Column Part #: A27021-29 Supplier: 81205 Part #: G76002-42 Supplier: 81205 Opt Part #: 4MIT65B80307-1 Supplier: 81205 Opt Part #: F52485-500 Supplier: 81205 Opt Part #: G76002-19 Supplier: 81205 Opt Part #: G76002-37 Supplier: 81205

C. Prepare for the Test

SUBTASK 27-11-00-860-074

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THE CONTROL SURFACES, THE THRUST REVERSERS AND THE LANDING GEAR CAN MOVE SUDDENLY WITH THE PRESSURIZATION OF A HYDRAULIC SYSTEM. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize hydraulic systems A and B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-11-00-010-014

(2) Remove the map holder assembly from the captain's aileron control wheel.

SUBTASK 27-11-00-480-023

(3) Install the mount, SPL-1670 and the protractor, SPL-1680 to the captain's aileron control wheel.

D. Aileron Travel Test

SUBTASK 27-11-00-730-004

(1) Do a test of the aileron travel:

(a) Operate the captain's aileron control wheel through at least 6 full cycles then return the wheel to neutral position.

(b) Turn the captain's aileron control wheel more than 87 degrees counterclockwise from the neutral position and hold.

(c) Measure and record the distance between the outboard lower trailing edge of the aileron and the lower trailing edge of the adjacent fixed trailing structure for both the left and right ailerons.

1) Make sure that the left aileron moves up 4.83 ±0.20 in. (122.7 ±5.1 mm).

2) Make sure that the right aileron moves down 3.63 ±0.20 in. (92.2 ±5.1 mm).

3) Make sure that the aileron balance tab moves in the opposite direction to the aileron.

(d) Turn the captain's aileron control wheel more than 87 degrees clockwise from the neutral position and hold.

(e) Measure and record the distance between the outboard lower trailing edge of the aileron and the lower trailing edge of the adjacent fixed trailing structure for both the left and right ailerons.

1) Make sure that the right aileron moves up 4.83 ±0.20 in. (122.7 ±5.1 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure that the left aileron moves down 3.63 ±0.20 in. (92.2 ±5.1 mm).

3) Make sure that the aileron balance tab moves in the opposite direction to the aileron.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-080-018

(1) Remove the mount, SPL-1670 and the protractor, SPL-1680 from the captain's aileron control wheel.

SUBTASK 27-11-00-410-010

(2) Install the map holder assembly to the captain's aileron control wheel.

SUBTASK 27-11-00-860-075

(3) To remove power from hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

TASK 27-11-00-720-801

19. Aileron Power Control Unit (PCU) Pogos - Functional Test

(Figure 501 and Figure 508)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this task to do a check of the force that is necessary to extend each pogo of the aileron Power Control Unit (PCU).

(2) This task is applicable for the system A and B PCUs.

B. References

Reference	Title
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1585	Kit - Rigging Pin Part #: F70207-151 Supplier: 81205
SPL-1749	Tool - Lock Equipment, Aileron/Elevator PCU Input Rod (POGO) Part #: C27066-1 Supplier: 81205

D. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Aileron Power Control Unit (PCU) Pogos Functional Test

SUBTASK 27-11-00-480-026

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

(1) Make sure that the downlock pins are installed on the nose and main landing gear (TASK 32-00-01-480-801).

SUBTASK 27-11-00-020-003

(2) Make sure that you can freely install and remove rig pin A/S-15, from the rigging pin kit, SPL-1585, in the aileron trim actuator (Figure 501).

SUBTASK 27-11-00-860-077

(3) Remove power from hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-11-00-280-001

(4) Do a functional test of the system A (lower) pogo.

CAUTION MAKE SURE THAT THE TOOL IS INSTALLED CORRECTLY. IF YOU DO NOT OBEY, DAMAGE TO THE LOCKWIRE CAN OCCUR

(a) Install a tool, SPL-1749, on the system A (lower) aileron PCU piston (Figure 508).

(b) Turn the Captain's control wheel clockwise from the neutral position until system A (lower) pogos extend.

NOTE: Approximately 100 lbf (445 N) force is necessary to turn the control wheel.

(c) Make sure that the pogos extend approximately 0.20 in. (5.1 mm) minimum.

NOTE: Approximately 7 units of wheel required.

(d) Return the Captain's control wheel to the neutral position.

(e) Make sure that all four pogos retract to the original position.

SUBTASK 27-11-00-280-002

(5) Do a functional test of the system B (upper) pogo.

(a) Remove a tool, SPL-1749, from the system A (lower) aileron PCU piston.

CAUTION MAKE SURE THAT THE TOOL IS INSTALLED CORRECTLY. IF YOU DO NOT OBEY, DAMAGE TO THE LOCKWIRE CAN OCCUR

(b) Install the tool, SPL-1749, on the system B (upper) aileron PCU piston (Figure 508).

(c) Turn the Captain's control wheel clockwise from the neutral position until system B (upper) pogos extend.

NOTE: Approximately 100 lbf (445 N) force is necessary to turn the control wheel.

(d) Make sure that the pogos extend approximately 0.20 in. (5.1 mm) minimum.

NOTE: Approximately 7 units of wheel required.

(e) Return the Captain's control wheel to the neutral position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Make sure that the pogos retract to the original position.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-00-020-006

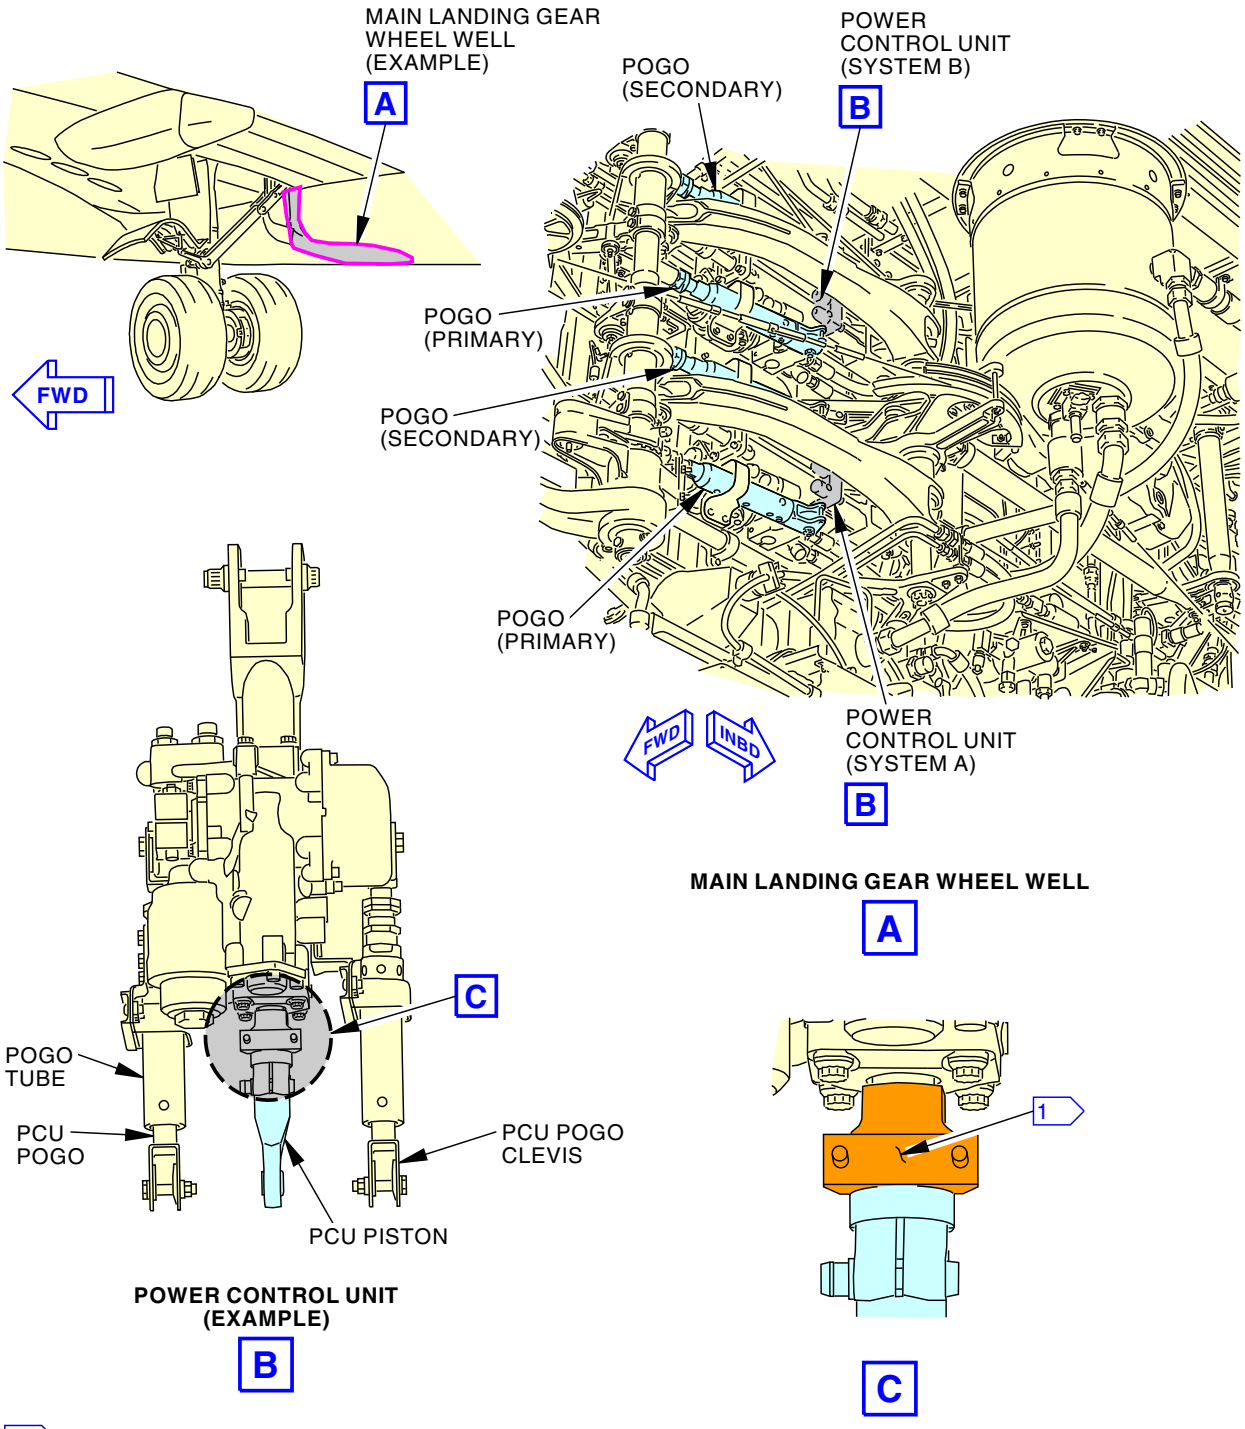
(1) Remove a tool, SPL-1749, from the system B (upper) aileron PCU piston.

SUBTASK 27-11-00-020-007

(2) Do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details



Aileron Power Control Unit (PCU) Pogos Functional Test

TASK 27-11-00-750-801

20. Flight Test to Find and Correct Asymmetrical Flight Control Forces

A. General

(1) An aileron system flight test to find and correct asymmetrical flight control forces is necessary after any of the following maintenance procedures:

(a) For the aileron:

1) Installation of a replacement aileron.

NOTE: Replacement of a new aileron, or one that is not the same as the one that was originally on the airplane, requires an aileron system flight test.

NOTE: A flight test is not required if the same ailerons that were removed from the airplane are re-installed without adjustment, modification, or repair.

2) Installation of an aileron that was repaired, repainted, or reworked and was subsequently rebalanced, either by on-jig or calculation method, and required adjustment of the aileron balance adjust weights (SRM 51-60).

NOTE: Any aileron which has been repaired, repainted, or reworked must meet the aerodynamic smoothness requirements of SRM 51-10-01.

3) Removal or replacement of the aileron front spar hinge bearing nearest to the tab control rods.

4) Replacement of any of the following components of the hinge bearing support fitting within the aileron front spar:

a) Installation of a replacement hinge at any of the aileron positions.

b) Installation of a replacement bearing support fitting at any of the aileron positions.

c) Installation of a replacement bearing in the aileron front support hinge at the inboard position, nearest the tab control rods.

NOTE: Installation of new aileron hinge bearings (except the one nearest the tab control rods) does not make a flight test necessary if the original bearing support fittings are installed in their original locations.

5) Installation of a replacement aileron rear spar tab hinge bearing support fitting.

NOTE: Installation of new tab hinge bearings does not make a flight test necessary if the original bearing support fittings are installed in their original locations.

(b) For the aileron tab:

1) Installation of a replacement aileron balance tab.

NOTE: Replacement of a new aileron tab, or one that is not the same as the one that was originally on the airplane, requires an aileron system flight test.

NOTE: A flight test is not required if the same aileron tab that was removed is re-installed without adjustment, modification, or repair.

2) Installation of a replacement front spar hinge of the aileron balance tab.

3) Installation of replacement bushings on the aileron balance tab front spar hinge nearest the aileron tab control rods.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) After an adjustment or replacement of an aileron tab control rod.

NOTE: For each aileron balance tab, if both control rods are adjusted, then flight test is necessary.

NOTE: If only one control rod is adjusted, and you can verify that the remaining rod had not been replaced or adjusted since the last flight test, then flight test is not necessary.

NOTE: If only one control rod is adjusted, and you can not verify that the remaining rod had not been replaced or adjusted since the last flight test, then flight test is necessary.

5) Installation of an aileron tab that was repaired, repainted, or reworked and required adjustment of the aileron tab adjust weights (SRM 51-60).

NOTE: Any aileron tab which has been repaired, repainted, or reworked must meet the aerodynamic smoothness requirements of SRM 51-10-01.

672	Right Wing - Aileron

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Prepare for the Test

SUBTASK 27-11-00-820-021

(1) Adjust the applicable system or systems before the flight test if you get these conditions (Table 27-09-71-993-801):

(a) The aileron trim is more than 3/4 unit at .78 mach and more than 37,000 feet, 3/4 unit at 250 knots and 10,000 to 17,000 feet, or more than 1 unit at any configuration other than gear up and flaps up.

(b) The rudder trim is more than 1/2 unit left or 1 unit right at .78 mach and more than 37,000 feet, 3/4 units at 250 knots and 10,000 to 17,000 feet, or 1 unit at any configuration other than gear up and flaps up.

SUBTASK 27-11-00-210-005

(2) Make sure that the airspeed is 250 knots.

SUBTASK 27-11-00-860-078

(3) Make sure that the flight altitude is 10,000 to 17,000 feet.

SUBTASK 27-11-00-860-079

(4) Make sure that the flaps are up.

SUBTASK 27-11-00-860-080

(5) Make sure that all persons are seated.

SUBTASK 27-11-00-860-081

(6) Make sure that the aileron trim is not more than 3/4 unit.

SUBTASK 27-11-00-860-082

(7) Make sure that the rudder trim is not more than 3/4 unit.

F. Flight Test

SUBTASK 27-11-00-860-083

(1) Move the control wheel to the neutral position.

SUBTASK 27-11-00-860-084

(2) Set the SPOILER A and B switches to OFF.

SUBTASK 27-11-00-860-085

(3) Make sure that the FLT CONTROL A and FLT CONTROL B switches are ON.

SUBTASK 27-11-00-860-086

(4) Set the FLT CONTROL A switch to OFF.

NOTE: The airplane may pitch up or down during transition.

SUBTASK 27-11-00-860-087

(5) Carefully move the elevators, ailerons, and rudder.

(a) Make sure that the control forces and operation do not change.

SUBTASK 27-11-00-860-088

(6) Set the FLT CONTROL A switch to ON.

SUBTASK 27-11-00-860-089

(7) Set the FLT CONTROL B switch to OFF.

NOTE: The airplane may pitch up or down during transition.

SUBTASK 27-11-00-860-090

(8) Set the FLT CONTROL A switch to ON.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Make sure that the control forces and operation do not change.

SUBTASK 27-11-00-860-091

(9) Set the FLT CONTROL B switch to STBY RUD.

SUBTASK 27-11-00-860-092

(10) Set the FLT CONTROL A switch to OFF.

NOTE: The airplane may pitch up or down during transition.

SUBTASK 27-11-00-280-003

(11) When hydraulics are switched off for the test, apply pitch and roll control input as required to maintain steady level flight.

SUBTASK 27-11-00-750-002

(12) Do these steps to find and correct asymmetrical flight control forces:

(a) Trim the airplane with the rudder to keep wings level flight.

(b) Make sure that the rudder trim does not change by more than 2 units.

1) If the change is more than 2 units, do this task: Control Rod for Standby Rudder Power Control Unit Adjustment, TASK 27-21-00-820-805.

2) If the standby rudder is in adjustment, do this task: Aileron Balance Tab Adjustment (Recommended Method), TASK 27-11-00-820-803.

(c) Make a note if there is a roll tendency.

(d) Turn the control wheel clockwise 30 degrees.

(e) Turn the control wheel counterclockwise 30 degrees.

(f) Make sure that the control wheel forces are symmetrical.

1) If the control wheel forces are not symmetrical by a ratio of 2 to 1 or more, then use the tool to measure the control wheel forces.

a) Use a force gauge, COM-1557, to push down on the right handgrip knob of the control wheel, until the wheel is turned 30 degrees clockwise.

b) Measure the control wheel force.

c) Use a force gauge, COM-1557, to push down on the left handgrip knob of the control wheel, until the wheel is turned 30 degrees counterclockwise.

d) Measure the control wheel force.

e) If the control wheel force in one direction is 2 or more times the force in the other direction, do this task: Aileron Balance Tab Adjustment to Equalize Lateral Manual Reversion Forces, TASK 27-09-71-820-802.

f) If the control wheel force in one direction is less than 2 times the force in the other direction, no action is necessary.

SUBTASK 27-11-00-860-093

(13) Set the FLT CONTROL A switch to STBY RUD.

SUBTASK 27-11-00-860-094

(14) Set the FLT CONTROL B switch to OFF.

SUBTASK 27-11-00-750-003

(15) Do all the steps to find and correct asymmetrical flight control forces again.

SUBTASK 27-11-00-860-095

(16) Set the SPOILER A and B, FLT CONTROL A and B switches back to ON.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-00-860-096

(17) Set the Yaw Damper switch, on the forward overhead panel, to the ON position.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON AND AILERON TRIM CONTROL SYSTEM - INSPECTION/CHECK

1. General

A. This procedure has these inspection tasks:

(1) Aileron Mechanical Components from the Control Wheel to the Aileron PCU's.

(2) Aileron Mechanical Components from the Aileron PCU to the Aileron and the Flight Spoiler Mechanical Control Path.

TASK 27-11-00-210-801

2. Aileron Mechanical Components Inspection - Forward components

(Figure 601)

NOTE: This procedure is a scheduled maintenance task.

A. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well

B. Access Panels

Number	Name/Location
112A	Forward Access Door

C. Procedure

SUBTASK 27-11-00-010-007

(1) To get access to the aileron mechanical components, do this step:

Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-11-00-210-006

(2) Do a general visual inspection of the forward aileron mechanical components to include the following:

(a) Control wheels

(b) Aileron control drum

(c) Bus drums.

SIA 001 PRE SB 737-29-1129

SUBTASK 27-11-00-210-008

(3) Examine the support assembly and lower hose assembly:

(a) Look for any chafing damage on the support assembly from the lower hose assembly.

1) If damage is found, the allowable limits are listed below:

a) Location - Any location long the support assembly

b) Depth - less than 0.125 in. (3.175 mm)

c) Length - 0.80 in. (20.32 mm) maximum

d) Width - equal to the width of the flange on the support assembly

e) If the support assembly is out of tolerance, repair or replace the part.

(b) Look for any chafing to the lower hose assembly where contact with the support assembly could have occurred.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SIA 001 PRE SB 737-29-1129 (Continued)

1) Replace the lower hose assembly if chafing is found.

SIA ALL

D. Return the Airplane to its Original Condition

SUBTASK 27-11-00-410-004

(1) Close this access panel:

Number	Name/Location
112A	Forward Access Door

AILERON - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Aileron Removal

(2) Aileron Installation.

B. The aileron has the aileron assembly, the aileron balance tab and four aileron balance panels.

TASK 27-11-11-000-801

2. Aileron Removal

(Figure 401, Figure 402)

A. References

Reference	Title
27-11-00-860-801	Pressure from the Aileron Hydraulic Systems A and B - Deactivation (P/B 201)
27-11-21-000-801	Aileron Balance Tab Removal (P/B 401)
27-11-34-000-801	Aileron Tab Control Rods Removal (P/B 401)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-2042	Sling - Aileron, Removal/Installation Part #: C27055-1 Supplier: 81205

C. Location Zones

Zone	Area
571	Left Wing - Fixed Trailing Edge
572	Left Wing - Aileron
671	Right Wing - Fixed Trailing Edge
672	Right Wing - Aileron

D. Access Panels

Number	Name/Location
571BB	Lower Outboard Fixed Trailing Edge Access Panel
571CB	Lower Outboard Fixed Trailing Edge Access Panel
571DB	Lower Outboard Fixed Trailing Edge Access Panel
572AB	Lower Aileron, Hinge Cover - WBL 423.00
572CB	Lower Aileron, Hinge Cover - WBL 447.00
572DB	Lower Aileron, Hinge Cover - WBL 469.00
572EB	Lower Aileron, Hinge Cover - WBL 481.00
572FB	Lower Aileron, Hinge Cover - WBL 502.00
572GB	Lower Aileron, Hinge Cover - WBL 528.00
572HB	Lower Aileron, Hinge Cover - WBL 553.00
671BB	Lower Outboard Fixed Trailing Edge Access Panel
671CB	Lower Outboard Fixed Trailing Edge Access Panel

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Number	Name/Location
671DB	Lower Outboard Fixed Trailing Edge Access Panel
672AB	Lower Aileron, Hinge Cover - WBL 423.00
672CB	Lower Aileron, Hinge Cover - WBL 447.00
672DB	Lower Aileron, Hinge Cover - WBL 469.00
672EB	Lower Aileron, Hinge Cover - WBL 481.00
672FB	Lower Aileron, Hinge Cover - WBL 502.00
672GB	Lower Aileron, Hinge Cover - WBL 528.00
672HB	Lower Aileron, Hinge Cover - WBL 553.00

E. Prepare for the Removal

SUBTASK 27-11-11-860-003

(1) Remove these access panels found on the lower panel of the outboard fixed trailing edge:

(a) On the left wing, open these access panels:

Number	Name/Location
571BB	Lower Outboard Fixed Trailing Edge Access Panel
571CB	Lower Outboard Fixed Trailing Edge Access Panel
571DB	Lower Outboard Fixed Trailing Edge Access Panel

(b) On the right wing, open these access panels:

Number	Name/Location
671BB	Lower Outboard Fixed Trailing Edge Access Panel
671CB	Lower Outboard Fixed Trailing Edge Access Panel
671DB	Lower Outboard Fixed Trailing Edge Access Panel

SUBTASK 27-11-11-860-004

(2) Remove these aileron access panels found on the lower wing surface adjacent to the leading edge of the aileron:

(a) On the left wing, open these access panels:

Number	Name/Location
572AB	Lower Aileron, Hinge Cover - WBL 423.00
572CB	Lower Aileron, Hinge Cover - WBL 447.00
572DB	Lower Aileron, Hinge Cover - WBL 469.00
572EB	Lower Aileron, Hinge Cover - WBL 481.00
572FB	Lower Aileron, Hinge Cover - WBL 502.00
572GB	Lower Aileron, Hinge Cover - WBL 528.00
572HB	Lower Aileron, Hinge Cover - WBL 553.00

(b) On the right wing, open these access panels:

Number	Name/Location
672AB	Lower Aileron, Hinge Cover - WBL 423.00
672CB	Lower Aileron, Hinge Cover - WBL 447.00
672DB	Lower Aileron, Hinge Cover - WBL 469.00
672EB	Lower Aileron, Hinge Cover - WBL 481.00
672FB	Lower Aileron, Hinge Cover - WBL 502.00
672GB	Lower Aileron, Hinge Cover - WBL 528.00
672HB	Lower Aileron, Hinge Cover - WBL 553.00

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-11-860-005

(3) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

F. Aileron Removal

SUBTASK 27-11-11-020-008

(1) Remove the aileron [1] with the sling, SPL-2042 (Figure 401).

(a) Install the sling, SPL-2042, on the aileron [1].

1) At hinge 2, do these steps (View C, Figure 402):

a) Remove the bolts [35], washers [14], radial seal retainer [37], and radial seal [39].

b) Remove the bolts [29], washers [14], radial seal retainer [33], and radial seal [31].

c) Remove and discard the pin [17].

d) Remove and keep the nut [18], washer [19], bushing [20], washer [21], and bolt [22].

2) At hinge 5, do these steps (View E, Figure 402):

a) If installed, remove the bolts [61], washers [14], and radial seal retainer [62].

b) Remove the bolts [52], washers [14], radial seal retainer [53], and radial seal [54].

c) Remove and discard the pin [55].

d) Remove and keep the nut [56], washer [57], bushing [58], washer [59], and bolt [60].

3) Attach the outboard C-bracket to the outboard clevis with the ball lock pin.

4) Attach the inboard C-bracket to the inboard clevis with the ball lock pin.

5) Put the sling in position around the trailing edge of the aileron [1].

6) Attach the inboard clevis to hinge 5 with the attached ball lock pin.

7) Attach the outboard clevis to hinge 2 with the attached ball lock pin.

8) Lift the sling with a cable and hook to hold the aileron [1].

SUBTASK 27-11-11-020-009

(2) Remove the aileron [1] with the sling, SPL-2042, attached.

(a) At hinge 6, do these steps (View F, Figure 402):

1) Remove the bolts [73] that attach the removable fairing [74] to the aileron [1].

2) Remove the removable fairing [74].

3) Remove and discard the pin [77].

4) Remove and keep the nut [78], washer [76], bushing [75], washer [72], and bolt [71] to disconnect the aileron control rod [67] from the aileron [1].

5) Remove the nut [82] and washer [83] to disconnect the bonding jumper [84] from the structure.

(b) At hinge 1, do these steps (View B, Figure 402):

1) Remove the bolts [23], washers [14], radial seal retainer [24], and radial seal [25].

2) If installed, remove the bolts [15], washers [14], and radial seal retainer [16].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Remove the nut [11] and washer [12] to disconnect the bonding jumper [13] from the structure.

(c) At hinge 3, do these steps (View C, Figure 402):

1) Remove the bolts [36], washers [14], radial seal retainer [38], and radial seal [40].

2) Remove the bolts [30], washers [14], radial seal retainer [34], and radial seal [32].

(d) At hinge 4, do these steps (View D, Figure 402):

1) Remove the bolts [86], washers [14], radial seal retainer [85], and radial seal [87].

2) Remove the bolts [43], washers [14], radial seal retainer [44], and radial seal [42].

3) Remove and discard the pins [45].

4) Remove and keep the nuts [46], washers [47], bushings [48], washers [49], and bolts [50] to disconnect the two tab control rods [41] from the forward fittings.

(e) Remove the hinge seals [7] from the balance panels [5] (View G, Figure 402).

1) Remove the bolts [4], bolts [6], bolts [27], bolts [8] with collars [9], bolts [88], washers [89], nuts [90], and balance weights [26].

2) Remove the bolts [3] and balance weights [28].

3) Remove the hinge seals [7] from the balance panels [5].

4) Remove and discard the pins [63].

5) Remove and keep the nuts [64], washers [65](under the nut), and bolts [66] to remove the aileron [1] from the aileron balance panels [5].

NOTE: The washer under the bolt is bonded to the hinge half.

(f) At hinge 6, do this step:

1) Remove and discard the pin [81].

2) Remove and keep the nut [80], washer [79], bushing [68], washer [69], and bolt [70].

(g) At hinges 1, 3 and 4, do this step:

1) Remove and discard the pin [17].

2) Remove and keep the nut [18], washer [19], bushing [20], washer [21], and bolt [22].

(h) Remove the aileron [1] from the structure.

SUBTASK 27-11-11-020-010

(3) Remove the aileron [1] without the sling, SPL-2042 (Figure 402).

(a) Disconnect the aileron control rod [67] and bonding jumper [84].

1) At hinge 6, do these steps:

a) Remove the bolts [73] that attach the removable fairing [74] to the aileron [1].

b) Remove the removable fairing [74].

c) Remove and discard the pin [77].

d) Remove and keep the nut [78], washer [76], bushing [75], washer [72], and bolt [71] to disconnect the aileron control rod [67] from the aileron [1].

e) Remove the nut [82] and washer [83] to disconnect the bonding jumper [84] from the structure.

(b) Remove the radial seals and radial seal retainers to get access to the aileron hinge and control rods connections.

1) At hinge 1, do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Remove the bolts [23], washers [14], radial seal retainer [24], and radial seal [25].

b) If installed, remove thebolts [15], washers [14], radial seal retainer [16].

c) Remove the nut [11] and washer [12] to disconnect the bonding jumper [13] from the structure.

2) At hinge 2, do these steps:

a) Remove the bolts [35], washers [14], radial seal retainer [37], and radial seal [39].

b) Remove the bolts [29], washers [14], radial seal retainer [33], and radial seal [31].

3) At hinge 3, do these steps:

a) Remove the bolts [36], washers [14], radial seal retainer [38], and radial seal [40].

b) Remove the bolts [30], washers [14], radial seal retainer [34], and radial seal [32].

4) At hinge 4, do these steps:

a) Remove the bolts [86], washers [14], radial seal retainer [85], and radial seal [87].

b) Remove the bolts [43], washers [14], radial seal retainer [44], and radial seal [42].

c) Remove and discard the pins [45]; retain the nuts [46], washers [47], bushings [48], washers [49], and bolts [50] to disconnect the two tab control rods [41] from the forward fittings.

5) At hinge 5, do these steps:

a) a) If installed, remove the bolts [61], washers [14], and radial seal retainer [62].

b) Remove the bolts [52], washers [14], radial seal retainer [53], and radial seal [54].

(c) Remove the hinge seals [7] from the balance panels [5].

1) Remove the bolts [4], bolts [6], bolts [27], bolts [8] with collars [9], bolts [88], washers [89], nuts [90], and balance weights [26].

2) Remove the bolts [3] and balance weights [28].

3) Remove the hinge seals [7] from the balance panels [5].

4) Remove and discard the pins [63].

5) Remove and keep the nuts [64], washers [65](under the nut), and bolts [66] to remove the aileron [1] from the aileron balance panels [5].

NOTE: The washer under the bolt is bonded to the hinge half.

(d) Hold the aileron [1] while you remove aileron [1] from the structure.

1) At hinges 1, 2, 3, and 4, remove and discard the pin [17].

a) Remove and keep the nut [18], washer [19], bushing [20], washer [21] and bolt [22].

2) At hinge 5, remove and discard the pin [55].

a) Remove and keep the nut [56], washer [57], bushing [58], washer [59], and bolt [60].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) At hinge 6, remove and discard the pin [81].

a) Remove and keep the nut [80], washer [79], bushing [68], washer [69], and bolt [70].

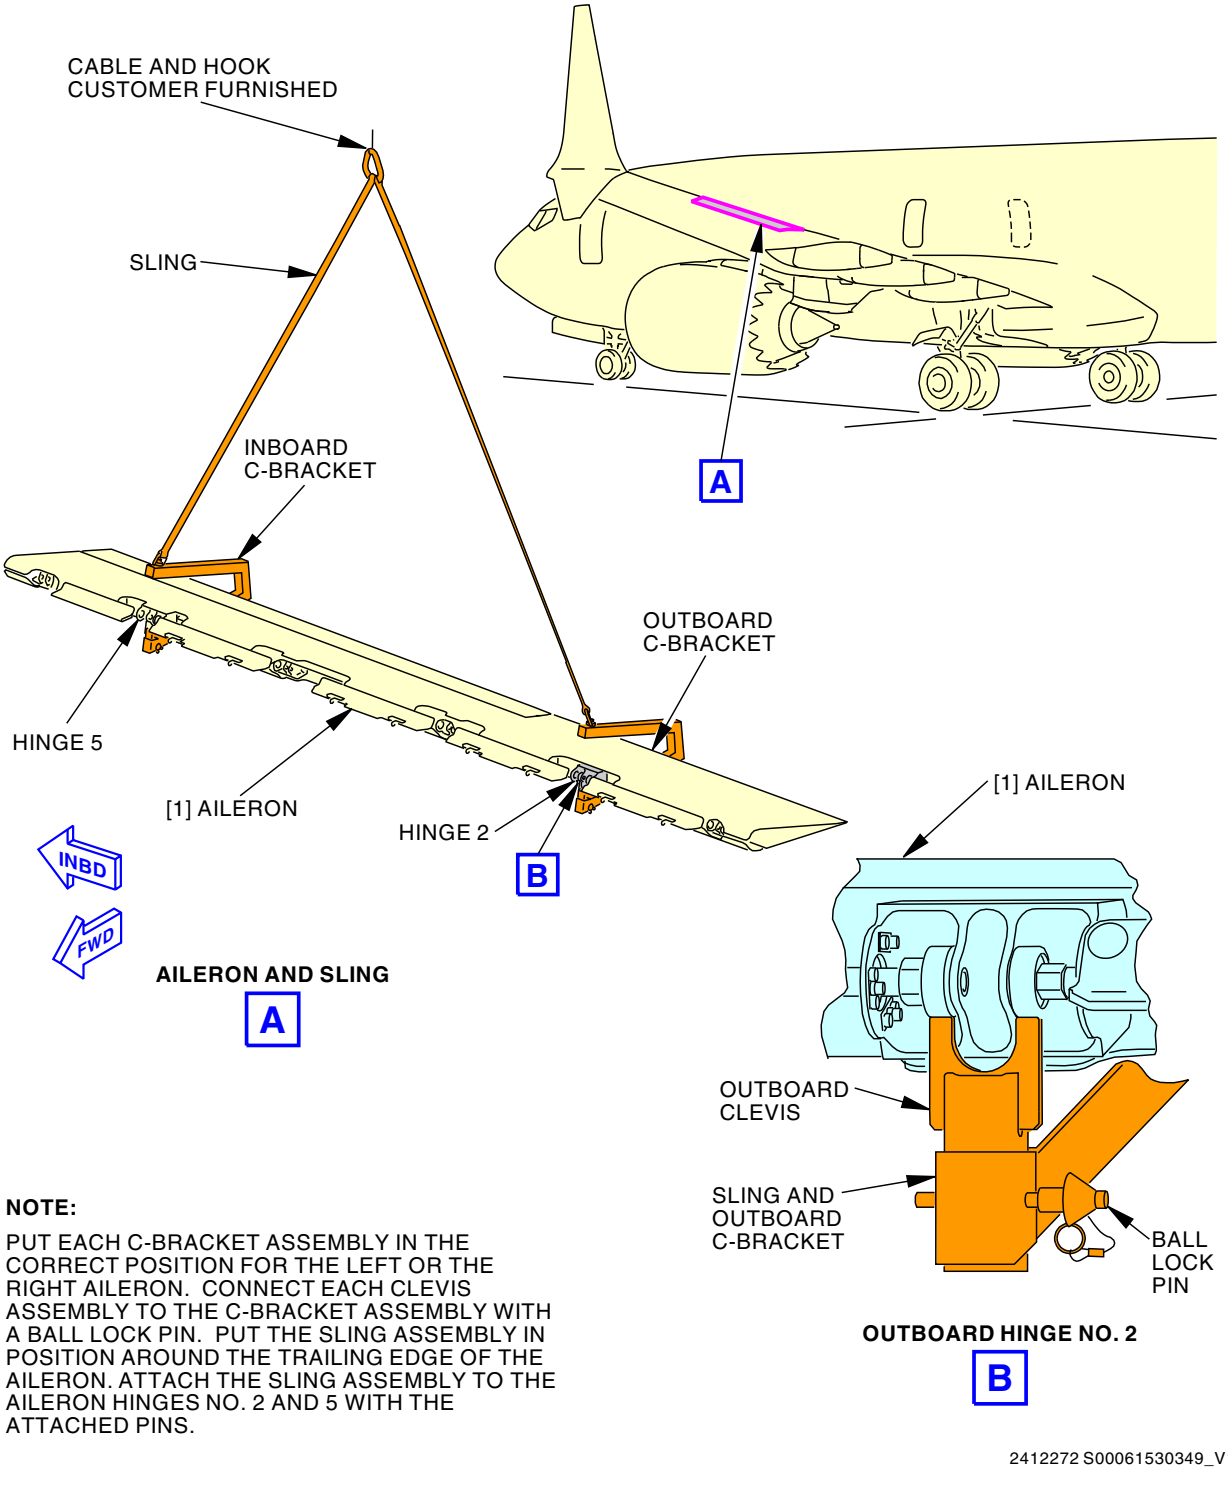
(e) Remove the aileron [1] from the structure.

SUBTASK 27-11-11-020-011

(4) If it is necessary to remove the aileron balance tab [2], do this task: Aileron Balance Tab Removal, TASK 27-11-21-000-801 or Aileron Tab Control Rods Removal, TASK 27-11-34-000-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details



NOTE:

PUT EACH C-BRACKET ASSEMBLY IN THE CORRECT POSITION FOR THE LEFT OR THE RIGHT AILERON. CONNECT EACH CLEVIS ASSEMBLY TO THE C-BRACKET ASSEMBLY WITH A BALL LOCK PIN. PUT THE SLING ASSEMBLY IN POSITION AROUND THE TRAILING EDGE OF THE AILERON. ATTACH THE SLING ASSEMBLY TO THE AILERON HINGES NO. 2 AND 5 WITH THE ATTACHED PINS.

TASK 27-11-11-400-801

3. Aileron Installation

(Figure 401, Figure 402, Figure 403, Figure 404, Figure 405)

A. General

(1) A flight test may be necessary after the installation of the component.

(2) Check the requirements in the "General" section of this task: Flight Test to Find and Correct Asymmetrical Flight Control Forces, TASK 27-11-00-750-801.

G. Aileron Installation

SUBTASK 27-11-11-220-001

(1) If you install used bolts, bushings, bearings or other components with worn areas, do this task: Aileron Inspection, TASK 27-11-11-200-801.

SUBTASK 27-11-11-420-001

(2) If you removed the aileron balance tab [2], do this task: Aileron Balance Tab Installation, TASK 27-11-21-400-801 or Aileron Tab Control Rods Installation, TASK 27-11-34-400-801.

SUBTASK 27-11-11-280-001

(3) Make sure that the correct number of balance weights [28] are installed on the lower surface of the aileron balance panels 3 and 4 (SRM PROCEDURE 51-60-03-0G-0).

SUBTASK 27-11-11-820-001

(4) Balance and stamp the aileron assembly with the new static balance hinge moment if you install a reworked, repaired, repainted, or new aileron assembly (SRM SUBJECT 51-60-01).

SUBTASK 27-11-11-400-001

(5) Install the aileron [1] with the sling, SPL-2042, (Figure 401).

(a) Make sure that the sling, SPL-2042, is installed on the aileron [1].

(b) If the sling, SPL-2042, is not installed, do these steps to install it:

1) Attach the outboard C-bracket to the outboard clevis with the ball lock pin.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Attach the inboard C-bracket to the inboard clevis with the ball lock pin.
3) Put the sling in position around the trailing edge of the aileron [1].
4) Attach the inboard clevis to hinge 5 with the attached ball lock pins.
5) Attach the outboard clevis to hinge 2 with the attached ball lock pins.
6) Lift the sling with a cable and hook to hold the aileron [1].

SUBTASK 27-11-11-420-002

(6) Install the aileron [1] on the hinges (Figure 402).
(a) Apply grease, D00633, to the outer diameters of all hinge bolts and bushings and inner diameters of bearings.
(b) Put the aileron [1] in position to install.
(c) Align the hinges with the support fittings.
(d) Connect the aileron [1] at hinge 6.
1) Install the bolt [70], washer [69], bushing [68], washer [79], and nut [80].
2) Tighten the nut [80] to 160 in-lb (18 N·m) - 240 in-lb (27 N·m).
3) Tighten the nut [80] to the lower end of the torque range.
a) Continue to tighten the nut until the next castellation aligns with the hole in the bolt [70].
4) Install the new pin [81].
(e) Connect the aileron [1], in the sequence that follows, at hinges 1, 4 and 3.
1) To install the pin in hinge 4, hold the aileron from below.
2) Install the bolt [22], washer [21], bushing [20], washer [19], and nut [18].
3) Tighten the nut [18] to 50 in-lb (6 N·m) - 80 in-lb (9 N·m).
4) Tighten the nut [18] to the lower end of the torque range.
a) Continue to tighten the nut until the next castellation aligns with the hole in the bolt [22].
5) Install the new pin [17].
(f) Remove the sling, SPL-2042, from the aileron [1].
1) Remove the outboard clevis from hinge 2.
2) Remove the inboard clevis from hinge 5.
3) Remove the sling, SPL-2042, from the trailing edge of the aileron [1].
4) Remove the ball lock pin and disconnect the outboard clevis from the outboard C-bracket.
5) Remove the ball lock pin and disconnect the inboard clevis from the inboard C-bracket.
(g) Connect the aileron [1] at hinge 5.
1) Install the bolt [60], washer [59], bushing [58], washer [57], and nut [56].
2) Tighten the nut [56] to 160 in-lb (18 N·m) - 240 in-lb (27 N·m).
3) Tighten the nut [56] to the lower end of the torque range.
a) Continue to tighten the nut until the next castellation aligns with the hole in the bolt [60].
4) Install the new pin [55].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(h) Connect the aileron [1] at hinge 2.
  1) Install the bolt [22], washer [21], bushing [20], washer [19], and nut [18].
  2) Tighten the nut [18] to 50 in-lb (6 N·m) - 80 in-lb (9 N·m).
  3) Tighten the nut [18] to the lower end of the torque range.
    a) Continue to tighten the nut until the next castellation aligns with the hole in the bolt [22].
  4) Install the new pin [17].

(i) Align the aileron [1] with the balance panels [5].
  1) Make sure that the washer under the bolt is bonded to the hinge half.
    a) If it is necessary, bond the washer to the hinge half with sealant, A00247.
  2) Install the bolts [66], washers [65], and nuts [64].
  3) Tighten the nuts [64] to 25 in-lb (3 N·m) - 35 in-lb (4 N·m).
  4) Tighten the nuts [64] to the lower end of the torque range.
    a) Continue to tighten the nut until the next castellation aligns with the hole in the bolts [66].
  5) Make sure that the gap between the bushings and the washers [65] is 0.01 in. (0.25 mm) minimum.
  6) Install the new pins [63].

(j) Attach the hinge seals [7] to the aileron balance panels [5].
  1) Attach the hinge seals [7] to the aileron balance panels [5].
    a) Make sure that the correct number of balance weights [28] are installed on aileron balance panels 3 and 4 (SRM PROCEDURE 51-60-03-0G-0).
  2) Apply compound, C00528, to bolts [3], bolts [4], bolts [6], bolts [27], and bolts [88].
  3) Install the balance weights [28] with bolts [3].
  4) Install the balance weights [26] with the bolts [8] with collars [9], bolts [27], bolts [6], bolts [4], bolts [88], washers [89], and nuts [90].

(k) At hinge 4, connect the tab control rods [41] to the forward fittings.
  1) Install the bolts [50], washers [49], bushings [48], washers [47], and nuts [46].
  2) Tighten the nuts [46] to 50 in-lb (6 N·m) - 80 in-lb (9 N·m).
  3) Tighten the nuts [46] to the lower end of the torque range.
    a) Continue to tighten the nut until the next castellation aligns with the hole in the bolts [50].
  4) Install the new pins [45].
  5) At hinge 1, do these steps:
    a) If removed, install the radial seal retainer [16], washers [14], and bolts [15].
    b) Install the radial seal [25], radial seal retainer [24], washers [14], and bolts [23].
    c) Connect the bonding jumper [13] with washer [12] and nut [11].
  6) At hinge 2, do these steps:
    a) Install the radial seal [31], radial seal retainer [33], washers [14], and bolts [29].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

b) Install the radial seal [39], radial seal retainer [37], washers [14], and bolts [35].

7) At hinge 3, do these steps:

a) Install the radial seal [32], radial seal retainer [34], washers [14], and bolts [30].

b) Install the radial seal [40], radial seal retainer [38], washers [14], and bolts [36].

8) At hinge 4, do these steps:

a) Install the radial seal [42], radial seal retainer [44], washers [14], and bolts [43].

b) Install the radial seal [87], radial seal retainer [85], washers [14], and bolts [86].

9) At hinge 5, do these steps:

a) Install the radial seal [54], radial seal retainer [53], washers [14], and bolts [52].

b) If removed, install the radial seal retainer [62], washers [14], and bolts [61].

SUBTASK 27-11-11-640-001

(7) Do this task: Aileron Hinge Lubrication, TASK 12-22-11-640-801

SUBTASK 27-11-11-420-003

(8) Install the aileron [1] without the sling, SPL-2042.

(a) Install the aileron [1] on the hinges:

1) Apply grease, D00633, to the outer diameters of all hinge bolts and bushings and inner diameters of bearing.

2) Put the aileron [1] in position to install.

3) Align the hinges with the support fittings.

4) Connect the aileron [1] at hinges 1, 2, 3 and 4.

a) Install the bolt [22], washer [21], bushing [20], washer [19], and nut [18].

b) Tighten the nuts nut [18] to 50 in-lb (6 N·m) - 80 in-lb (9 N·m).

c) Tighten the nut [18] to the lower end of the torque range.

<1> Continue to tighten the nut until the next castellation aligns with the hole in the bolt [22].

d) Install the new pin [17].

5) Connect the aileron [1] to hinge 5.

a) Install the bolt [60], washer [59], bushing [58], washer [57], and nut [56].

b) Tighten the nut [56] to 160 in-lb (18 N·m) - 240 in-lb (27 N·m).

c) Tighten the nut [56] to the lower end of the torque range.

<1> Continue to tighten the nut until the next castellation aligns with the hole in the bolt [60].

d) Install the new pin [55].

6) Connect the aileron [1] at hinge 6.

a) Install the bolt [70], washer [69], bushing [68], washer [79], and nut [80].

b) Tighten the nut [80] to 160 in-lb (18 N·m) - 240 in-lb (27 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

c) Tighten the nut [80] to the lower end of the torque range.

<1> Continue to tighten the nut until the next castellation aligns with the hole in the bolt [70].

d) Install the new pin [81].

(b) Align the aileron [1] with the aileron balance panels [5].

1) Make sure that the washer under the bolt is bonded to the hinge half.

a) If it is necessary, bond the washer to the hinge half with sealant, A00247.

2) Install the bolts [66], washers [65], and nuts [64].

3) Tighten the nuts [64] to 25 in-lb (3 N·m) - 35 in-lb (4 N·m).

4) Tighten the nuts [64] to the lower end of the torque range.

a) Continue to tighten the nut until the next castellation aligns with the hole in the bolts [66].

5) Make sure that the gap between the bushings and the washers [65] is 0.01 in. (0.25 mm) minimum.

6) Install the new pins [63].

(c) Attach the hinge seals [7] to the balance panels [5]:

1) Attach the hinge seals [7] to the balance panels [5].

a) Make sure that the correct number of balance weights [28] are installed on balance panels 3 and 4 (SRM PROCEDURE 51-60-03-0G-0).

2) Apply compound, C00528 to bolts [3], bolts [4], bolts [6], bolts [27], and bolts [88].

3) Install the balance weights [28] with bolts [3].

4) Install the balance weights [26] with the bolts [8] with collars [9], bolts [27], bolts [6], bolts [4], bolts [88], washers [89], and nuts [90].

(d) At hinge 4, connect the tab control rods [41] to the forward fittings.

1) Install the bolts [50], washers [49], bushings [48], washers [47], and nuts [46].

2) Tighten the nuts [46] to 50 in-lb (6 N·m) - 80 in-lb (9 N·m).

3) Tighten the nuts [46] to the lower end of the torque range.

a) Continue to tighten the nut until the next castellation aligns with the hole in the bolts [50].

4) Install the pins [45].

(e) At hinge 1, do these steps:

1) If removed, install the radial seal retainer [16], washers [14], and bolts [15].

2) Install the radial seal [25], radial seal retainer [24], washers [14], and bolts [23].

3) Connect the bonding jumper [13] with washer [12] and nut [11].

(f) At hinge 2, do these steps:

1) Install the radial seal [31], radial seal retainer [33], washers [14], and bolts [29].

2) Install the radial seal [39], radial seal retainer [37], washers [14], and bolts [35].

(g) At hinge 3, do these steps:

1) Install the radial seal [32], radial seal retainer [34], washers [14], and bolts [30].

2) Install the radial seal [40], radial seal retainer [38], washers [14], and bolts [36].

(h) At hinge 4, do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Install the radial seal [42], radial seal retainer [44], washers [14], and bolts [43].
2) Install the radial seal [87], radial seal retainer [85], washers [14], and bolts [86].

(i) At hinge 5, do theses steps:
1) Install the radial seal [54], radial seal retainer [53], washers [14], and bolts [52].
2) If removed, install the radial seal retainer [62], washers [14], and bolts [61].

SUBTASK 27-11-11-640-002

(9) Do this task: Aileron Hinge Lubrication, TASK 12-22-11-640-801.

SUBTASK 27-11-11-720-001

(10) Do the aileron surface friction and motion test.
(a) With a push/pull scale 0-25 pound (0-11 kilogram), STD-753, measure the force at 8.75 ±0.25 in. (222.25 ±6.35 mm) aft of the hinge centerline and perpendicular to the aileron chord plane.
(b) Write down the (positive) forces necessary to move each aileron through the neutral position.
(c) Write down the (negative) forces necessary to prevent movement of the aileron through the neutral position.
(d) Add these forces together.
(e) Make sure that the result is not more than 5.0 lbf (22.2 N).
1) If the result is more than 5.0 lbf (22.2 N), do these checks:
a) Make sure that all the hinge bolts are sufficiently lubricated.
b) Make sure that the torque values of the hinge bolts are as specified.
(f) Measure the force necessary to move the aileron through full travel in each direction, then back to the neutral position.

NOTE: The movement of the aileron must be free and smooth.

1) Apply the force perpendicular to the aileron chord plane 8.75 ±0.25 in. (222.25 ±6.35 mm) aft of the aileron hinge line.
2) Make sure that the maximum force is not more than 13 lbf (57.8 N) for aileron down and 3 lbf (13.3 N) for aileron up.

SUBTASK 27-11-11-420-004

(11) At hinge 6, connect the aileron control rod [67] to the aileron [1].
(a) Put the aileron control rod [67] in its position.
(b) Install the bolt [71], washer [72], bushing [75], washer [76], nut [78], and pin [77].

SUBTASK 27-11-11-420-005

(12) At hinge 6, install the removable fairing [74].
(a) Connect the bonding jumper [84] with washer [83] and nut [82].
(b) Put the removable fairing [74] in its position.
(c) Install the bolts [73] to attach the removable fairing [74] to the aileron [1].

SUBTASK 27-11-11-280-002

(13) Use the aileron control wheel to manually operate the aileron through a minimum of two full cycles, to full travel.
(a) Make sure that the aileron can move smoothly and freely.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-11-220-002

(14) Do a check of the aileron clearances and mismatch.

(a) Make sure that the clearances for the upper and lower surfaces of the aileron and the fixed trailing edge are not out of tolerance.

1) At the support beams for the aileron balance panel, make sure that the clearance is 0.350 in. (8.890 mm) - 0.500 in. (12.700 mm) (View B, Figure 403).

2) At the blade seals, make sure that the clearance is 0.010 in. (0.254 mm) - 0.050 in. (1.270 mm) (View C, Figure 403).

(b) Make sure that the mismatch for the upper and lower surfaces of the aileron and the fixed trailing edge are not out of tolerance (Rigging Tool Method).

1) Set the rigging tool, SPL-15013, on the outboard fixed trailing edge.

2) Make sure that the upper surface of the aileron is between the “GO” and “NO GO” limits.

(c) Make sure that the mismatch for the upper and lower surfaces of the aileron and the fixed trailing edge are not out of tolerance (Straight Edge Method).

1) For the aileron outside of the wing contour, make sure that the maximum mismatch is 0.1 in. (2.5 mm) (View B, Figure 403).

2) For the aileron inside of the wing contour, make sure that the maximum mismatch is 0.05 in. (1.27 mm) (View B, Figure 403).

(d) Make sure that the clearance at the inboard end of the aileron is 0.1 in. (2.5 mm) - 0.2 in. (5.1 mm) (View A, Figure 403).

(e) Make sure that the clearance at the outboard end of the aileron is 0.25 in. (6.4 mm) - 0.35 in. (8.9 mm) (View A, Figure 403).

(f) Make sure that the aileron balance tab [2] aligns with the aileron:

1) Measure the distance between the rig position of the aileron balance tab [2] to the aileron lower surface (dimension A) at these three positions (View A, Figure 405).

NOTE: You must measure from the lower aft most point of the aileron balance tab.

a) At the outboard end of the aileron balance tab [2], make sure that the dimension A is 0.06 ±0.07 in. (1.52 ±1.78 mm) or 0.82 ±0.25°arc (0.01 ±0.01 rad).

b) At the middle point along the aileron balance tab [2], make sure that the dimension A is 0.065 ±0.070 in. (1.65 ±1.78 mm) or 0.60 ±0.25°arc (0.01 ±0.00 rad).

c) At the inboard end of the aileron balance tab [2], make sure that the dimension A is 0.070 ±0.070 in. (1.778 ±1.778 mm) or 0.34 ±0.25°arc (0.01 ±0.01 rad).

2) If the aileron balance tab [2] does not align with the aileron, do this task: Aileron Balance Tab Adjustment (Recommended Method), TASK 27-11-00-820-803.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-11-410-001

(1) Install these aileron access panels found on the lower wing surface adjacent to the leading edge of the aileron:

(a) For the left wing, close these access panels:

Number	Name/Location
572AB	Lower Aileron, Hinge Cover - WBL 423.00

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Number	Name/Location
572CB	Lower Aileron, Hinge Cover - WBL 447.00
572DB	Lower Aileron, Hinge Cover - WBL 469.00
572EB	Lower Aileron, Hinge Cover - WBL 481.00
572FB	Lower Aileron, Hinge Cover - WBL 502.00
572GB	Lower Aileron, Hinge Cover - WBL 528.00
572HB	Lower Aileron, Hinge Cover - WBL 553.00

(b) For the right wing, close these access panels:

Number	Name/Location
672AB	Lower Aileron, Hinge Cover - WBL 423.00
672CB	Lower Aileron, Hinge Cover - WBL 447.00
672DB	Lower Aileron, Hinge Cover - WBL 469.00
672EB	Lower Aileron, Hinge Cover - WBL 481.00
672FB	Lower Aileron, Hinge Cover - WBL 502.00
672GB	Lower Aileron, Hinge Cover - WBL 528.00
672HB	Lower Aileron, Hinge Cover - WBL 553.00

SUBTASK 27-11-11-410-002

(2) Install these access panels found on the lower panel of the outboard fixed trailing edge.

(a) On the left wing, close these access panels:

Number	Name/Location
571BB	Lower Outboard Fixed Trailing Edge Access Panel
571CB	Lower Outboard Fixed Trailing Edge Access Panel
571DB	Lower Outboard Fixed Trailing Edge Access Panel

(b) On the right wing, close these access panels:

Number	Name/Location
671BB	Lower Outboard Fixed Trailing Edge Access Panel
671CB	Lower Outboard Fixed Trailing Edge Access Panel
671DB	Lower Outboard Fixed Trailing Edge Access Panel

SUBTASK 27-11-11-860-002

(3) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-11-710-001

(4) Do this task: Aileron Response (Operational) Test, TASK 27-11-00-710-801.

SUBTASK 27-11-11-720-002

(5) If it is necessary, do this task: Flight Test to Find and Correct Asymmetrical Flight Control Forces, TASK 27-11-00-750-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON - INSPECTION/CHECK

1. General

A. This procedure contains the task to do a check of the aileron hinge.

TASK 27-11-11-200-801

2. Aileron Inspection

(Figure 601)

A. General

(1) This task gives wear limits and repair data for the aileron hinge inspection.

B. References

E. Procedure

SUBTASK 27-11-11-020-004

(1) Do this task: Aileron Removal, TASK 27-11-11-000-801.

SUBTASK 27-11-11-020-005

(2) Use these tools to do a check for worn parts of the aileron hinge:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-11-11-020-006

(3) Examine the parts of the aileron PCU linkage for worn areas:

(a) Remove the parts you want to examine.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are out of tolerance, replace or repair the parts if it is necessary.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON POWER CONTROL UNIT LINKAGE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Aileron Power Control Unit Linkage Removal

(2) Aileron Power Control Unit Linkage Installation.

B. The Aileron Power Control Unit Linkage is referred to as the aileron power control unit linkage (A) [1] or aileron power control unit linkage (B) [2] in this procedure.

C. This procedure is applicable for system A and B linkages.

TASK 27-11-14-000-801

2. Aileron Power Control Unit Linkage Removal

(Figure 401)

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Prepare for the Removal

SUBTASK 27-11-14-480-001

WARNING MAKE SURE THAT YOU INSTALL THE DOWNLOCK PINS ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-11-14-020-001

(2) Do this task: Aileron Power Control Unit Removal, TASK 27-11-71-000-801.

D. Aileron Power Control Unit Linkage Removal

SUBTASK 27-11-14-020-002

(1) Do these steps to remove the aileron power control unit linkage (A) [1] or aileron power control unit linkage (B) [2]:

(a) Disconnect cable ABSA [22] and cable ABSB [19] at the turnbuckles [3].

(b) Remove the nuts [18], washers [17], washers [16] and bolts [15] to remove the retaining plates [14] from the aileron bus drum [20].

(c) Disengage cable ABSA [22] and cable ABSB [19] from the aileron bus drum [20].

(d) Safety the disconnected cable ABSA [22] and cable ABSB [19] to secure them.

(e) Remove the cotter pin [6] and washers [5] to remove the cable retention pins [4] between both support frame [7] and support frame [21].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Remove the nuts [23] and screws [25] to disconnect the System B upper quadrant assembly from the System A lower quadrant assembly.

(g) For system A, do these steps:

1) Remove the nuts [47], washers [46], washer [45], and bolt [44] to disconnect the diagonal support [39] from the structure.

2) Remove the nuts [34], washers [33], washer [32], and bolt [31] to remove the diagonal support [39] from the support frame [21].

3) Remove the nuts [49] to remove the hydraulic fittings.

4) Remove the nut [30], washer [29], washer [28], bolt [27], nut [38], washer [37], washer [36], and bolt [35] to remove the support frame [21] from the structure.

(h) For system B, do these steps:

1) Remove the nut [68], washer [69], bushing [70], taper shims [67], washer [72], and bolt [71] to disconnect the diagonal support [62] from the structure;

2) Remove the nut [55], washer [54], washer [53], and bolt [52] to remove the diagonal support [62] from the support assembly [56];

3) Remove the nut [30], washer [29], washer [28], bolt [27], nut [66], washer [65], washer [64], and bolt [63] to remove the support frame [7] from the structure.

(i) For system A, do these steps:

1) Remove the nuts [43], washers [42], washers [41], and bolts [40] to disconnect the support assembly [50] from the structure;

2) Remove the aileron power control unit linkage (A) [1] from the airplane.

(j) For system B, do these steps:

1) Remove the nuts [43], washers [42], washers [41], and bolts [40] to disconnect the support assemblies [56] from the structure.

2) Remove the aileron power control unit linkage (B) [2] from the airplane.

212	Flight Compartment - Right

F. Aileron Power Control Unit Linkage Installation

SUBTASK 27-11-14-420-001

(1) Install the aileron power control unit linkage (A) [1] or aileron power control unit linkage (B) [2].

(a) Put the aileron power control unit linkage (A) [1] or aileron power control unit linkage (B) [2] in its position.

(b) Apply sealant, A00247, to the bolts [40].

(c) Install the bolts [40], washers [41], washer [42], and nuts [43] to connect the support assembly [50] or support assembly [56] to the structure.

(d) For system A, do these steps:

1) Apply sealant, A00247, to bolt [31], bolt [44], bolts [27], and bolts [35].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Install the diagonal support [39] to the support frame [21] with bolt [31], washer [32], washer [33], and nut [34].

3) Connect the diagonal support [39] to the structure with bolt [44], washer [45], washer [46], and nut [47].

4) Install the hydraulic fittings with nuts [49].

5) Install the bolt [27], washer [28], washer [29], nut [30], bolt [35], washer [36], washer [37], and nut [38] to connect the support frame [21] to the structure.

(e) For system B, do these steps:

1) Apply sealant, A00247, to bolt [52], bolt [71], bolt [27], bolt [63], taper shims [67], and bushing [70].

2) Install the diagonal support [62] to the support assembly [56] with bolt [52], washer [53], washer [54], and nut [55].

3) Install the diagonal support [62] to the structure with bolt [71], washer [72], taper shims [67], bushing [70], washer [69], and nut [68].

a) Install or remove the taper shim [67] as necessary to decrease the gap to 0.003 in. (0.076 mm) or less, between the diagonal support [62] and bulkhead support structure that it is attached to.

4) Install the bolt [27], washer [28], washer [29], nut [30], bolt [63], washer [64], washer [65], nut [66] to connect the support frame [7] to the structure.

(f) Install the cable retention pins [4], washers [5], and cotter pins [6].

1) Apply a maximum preload of 35 in-lb (4 N·m) during installation.

SUBTASK 27-11-14-420-002

(2) Do this task: Aileron Power Control Unit Installation, TASK 27-11-71-400-801.

SUBTASK 27-11-14-420-003

(3) Install the screws [25] and nuts [23].

(a) Make sure that the gap between the screw [25] and aileron bus drum [20] is 0.04 in. (1.02 mm) - 0.06 in. (1.52 mm).

(b) Install MS20995NC40 lockwire, G02436, with one continuous twist on the two screws [25].

SUBTASK 27-11-14-480-002

(4) Install the rig pin A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drum [20].

SUBTASK 27-11-14-420-005

(5) Do these steps to connect the cable ABSA [22] and cable ABSB [19].

(a) Connect the cable ABSA [22] and cable ABSB [19] on the aileron bus drum [20].

1) Install the retaining plates [14] with bolts [15], washers [16], washers [17], and nuts [18] (TASK 20-10-93-400-801).

(b) Connect the cable ABSA [22] and cable ABSB [19] at the turnbuckles [3].

(c) Tighten the turnbuckles [3] but keep the cables tension at zero.

(d) Adjust the cable ABSA [22] and cable ABSB [19] (TASK 27-11-00-820-801).

(e) Install the turnbuckles clip locks.

SUBTASK 27-11-14-480-005

(6) Remove the rig pin A/S-4, from the rigging pin kit, SPL-1585, from the aileron bus drum [20].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-14-710-001

(7) Do this task: Aileron Travel Test, TASK 27-11-00-700-810.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON BALANCE TAB - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of an aileron balance tab

(2) An installation of an aileron balance tab.

B. This procedure is applicable for the left and right aileron balance tab.

TASK 27-11-21-000-801

2. Aileron Balance Tab Removal

A. References

Reference	Title
27-11-00-860-801	Pressure from the Aileron Hydraulic Systems A and B - Deactivation (P/B 201)

B. Location Zones

Zone	Area
572	Left Wing - Aileron
672	Right Wing - Aileron

C. Aileron Balance Tab Removal

SUBTASK 27-11-21-860-001

(1) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-11-21-020-001

(2) To remove an aileron balance tab [2], do these steps: (Figure 401):

(a) Remove the bolts [8] that attach the forward removable fairing [9] to the aileron [1].

1) Remove the forward removable fairing [9].

(b) Remove the bolts [6] that attach the aft removable fairing [7] to the aileron balance tab [2].

1) Remove the aft removable fairing [7].

(c) Remove the pins [12], nuts [11], washers [13], bushings [16], washers [15], and bolts [14] that attach the aileron tab control rods [10].

(d) Turn the trailing edge of the aileron balance tab [2] up until you can see the bolts [3] that attach the hinge covers [5].

(e) Remove the bolts [3] and washers [4].

(f) Remove the hinge covers [5].

(g) Disconnect the bonding jumpers [29] that are adjacent to the tab hinge 1 and 5.

1) Remove the nuts [32], washers [31], and bolts [30] to disconnect the bonding jumpers [29].

(h) To remove an aileron balance tab [2] from the aileron [1]:

1) Do these steps at tab hinge 2:

a) Remove the pin [22], nut [17], washer [21], bushing [18], washer [20], and bolt [19].

<1> Discard the pin [22].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Do these steps at hinge 3:

a) Remove the pin [23], nut [28], washer [27], washer [25], and bolt [24].

<1> Discard the pin [23].

3) Do these steps at tab hinge 1, 4, and 5:

a) Remove the pins [37], nuts [38], washers [39], bushings [36], bushings [35], washers [34], and bolts [33].

<1> Discard the pins [37].

(i) Carefully remove the aileron balance tab [2] from the hinge assemblies.

(j) Remove the aileron balance tab [2] from the aileron [1].

E. Aileron Balance Tab Installation

SUBTASK 27-11-21-220-001

(1) If you install used bearings, bushings, and bolts, do this task: Aileron Balance Tab Inspection, TASK 27-11-21-200-801.

SUBTASK 27-11-21-210-001

(2) Make sure that the balance panels have the correct number of the tab adjust weights (Figure 402).

(a) If it is necessary, add or remove tab adjust weights (SRM SUBJECT 51-60-03).

SUBTASK 27-11-21-640-001

(3) Lubricate the hinge bearings, bushing [18], bushing [26], bushing [35], bushing [36], bolt [19], bolt [24], and bolt [33] with grease, D00633, except on the threads (Figure 401).

SUBTASK 27-11-21-420-001

(4) To install an aileron balance tab [2] to the aileron [1], do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Put the aileron balance tab [2] in its position.

(b) Install the aileron balance tab [2] hinge fittings and aileron [1] fittings:

1) Do these steps at tab hinge 1, 4, and 5:

a) Install the bolts [33], washers [34], bushings [35], bushings [36], washers [39], and nuts [38].

b) Tighten the nuts [38] to 65 ±15 in-lb (7 ±2 N·m).

NOTE: Tighten the nuts [38] to the lower end of the torque range. Continue to tighten the nut until the first castellation aligns with the hole in the bolts [33].

c) Install the new pins [37].

2) Do these steps at tab hinge 3:

a) Install the bolt [24], washer [25], bushings [26], washer [27], and nut [28].

b) Tighten the nut [28] to 65 ±15 in-lb (7 ±2 N·m).

NOTE: Tighten the nut [28] to the lower end of the torque range. Continue to tighten the nut until the first castellation aligns with the hole in the bolt [24].

c) Install the new pin [23].

3) Do these steps at tab hinge 2:

a) Install the bolt [19], washer [20], bushing [18], washer [21], and nut [17].

b) Make sure that there is a minimum of 0.0150 in. (0.38 mm) gap between the washer [20] and bushing [18] (Figure 401)(View A-A).

c) Tighten the nut [17] to 65 ±15 in-lb (7 ±2 N·m).

NOTE: Tighten the nut [17] to the lower end of the torque range. Continue to tighten the nut until the first castellation aligns with the hole in the bolt [19].

d) Install the new pin [22].

(c) To install the bonding jumpers [29] at tab hinge 1 and 5, do these steps:

1) Put the bonding jumpers [29] in their positions.

2) Install bolts [30], washers [31], and nuts [32].

3) Fillet seal the bonding jumper joints with sealant, A00247 or sealant, A02315.

(d) To install the hinge covers [5] to close the hinge bolt access areas, do these steps:

1) Install the bolts [3] and washers [4].

2) Make sure that the washers [4] touch the aileron balance tab [2] on a minimum of two edges.

3) Tighten the bolts [3] to 25 ±3 in-lb (2.8 ±0.4 N·m).

(e) Connect the aileron tab control rods [10] to the aileron balance tab [2]:

1) Install the bolts [14], washers [15], bushings [16], washers [13], and nuts [11].

a) Make sure that there is a minimum of 0.0150 in. (0.38 mm) gap between the washers [15] and bushings [16] (Figure 401) (View A-A).

2) Tighten the nuts [11] to 65 ±15 in-lb (7 ±2 N·m).

3) Install the new pins [12].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-21-420-002

(5) Install the bolts [6] to attach the aft removable fairing [7] to the aileron balance tab [2].

SUBTASK 27-11-21-420-003

(6) Install the bolts [8] to attach the forward removable fairing [9] to the aileron [1].

(a) Apply sealant, A02315, to the upper edge of the forward removable fairing [9] to get aerodynamic smoothing.

SUBTASK 27-11-21-710-001

(7) Operate the aileron control wheel in a full cycle.

(a) Make sure that the aileron balance tab [2] moves freely in the opposite direction of the aileron [1].

SUBTASK 27-11-21-860-002

(8) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-21-820-001

(9) Do this task: Aileron Balance Tab Adjustment (Recommended Method), TASK 27-11-00-820-803.

SUBTASK 27-11-21-730-001

(10) Do this task: Aileron Balance Tab Position Test, TASK 27-11-00-700-809.

AILERON BALANCE TAB - INSPECTION/CHECK

1. General

A. This procedure contains the task to do a check of the aileron balance tab.

TASK 27-11-21-200-801

2. Aileron Balance Tab Inspection

(Figure 601)

A. General

(1) This task gives wear limits and repair data for the aileron balance tab inspection.

B. References

E. Procedure

SUBTASK 27-11-21-020-002

(1) Do this task: Aileron Balance Tab Removal, TASK 27-11-21-000-801 or Aileron Tab Control Rods Removal, TASK 27-11-34-000-801.

SUBTASK 27-11-21-020-003

(2) Use these tools to do a check for wear on the parts of the aileron balance tab:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-11-21-020-004

(3) Examine the parts of the aileron balance tab for worn areas:

(a) Remove the parts you want to do a check.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are out of tolerance, replace or repair the parts.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 601/27-11-21-993-802

AILERON WING QUADRANT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Aileron Wing Quadrant Removal

(2) Aileron Wing Quadrant Installation.

TASK 27-11-24-000-801

2. Aileron Wing Quadrant Removal

(Figure 401)

A. References

Reference	Title
27-11-00-860-801	Pressure from the Aileron Hydraulic Systems A and B - Deactivation (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1585	Kit - Rigging Pin Part #: F70207-151 Supplier: 81205

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
572	Left Wing - Aileron
672	Right Wing - Aileron

D. Access Panels

Number	Name/Location
571AT	Upper Outboard Fixed Trailing Edge, Quadrant Bolt Access Panel
571DB	Lower Outboard Fixed Trailing Edge Access Panel
671AT	Upper Outboard Fixed Trailing Edge, Quadrant Bolt Access Panel
671DB	Lower Outboard Fixed Trailing Edge Access Panel

E. Prepare for the Removal

SUBTASK 27-11-24-860-001

WARNING MAKE SURE THAT YOU INSTALL THE DOWNLOCK PINS ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-11-24-480-001

(2) Install the rig pin A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drum [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-24-010-001

(3) Remove the applicable panel:

(a) On the left wing, open this access panel:

Number	Name/Location
571DB	Lower Outboard Fixed Trailing Edge Access Panel

(b) On the right wing, open this access panel:

Number	Name/Location
671DB	Lower Outboard Fixed Trailing Edge Access Panel

F. Aileron Wing Quadrant Removal

SUBTASK 27-11-24-020-001

(1) Do these steps to remove the aileron wing quadrant [9]:

(a) Disconnect cable ABSA [2] and cable ABSB [4] at the turnbuckles [1].

(b) Safety the disconnected cable ABSA [2] and cable ABSB [4].

(c) Remove the nuts [39], washers [38], and bolts [37] to remove the cable guard [36].

(d) Remove the nuts [8], washers [7], washers [6], and bolts [5] to remove the cable retaining plates [19] from the aileron wing quadrant [9].

(e) Disengage cable ABSA [2] and cable ABSB [4] from the aileron wing quadrant [9].

(f) Open the applicable access panel to get access to the bolt [23]:

For the left wing, open this access panel:

Number	Name/Location
571AT	Upper Outboard Fixed Trailing Edge, Quadrant Bolt Access Panel

For the right wing, open this access panel:

Number	Name/Location
671AT	Upper Outboard Fixed Trailing Edge, Quadrant Bolt Access Panel

(g) Remove the bolt [31] and washer [32] to disconnect the aileron position transmitter rod [33] from the aileron wing quadrant [9].

(h) Remove the pin [13], nut [14], washer [15], bushing [12], washer [11], and bolt [10] to remove the aileron control rod [17] from the aileron [16]. Discard the pin [13].

(i) Disconnect the aileron wing aileron wing quadrant [9] from the aileron hinge support [18].

1) Remove pin [26], nut [27], washer [25], bushing [24], washer [35], and bolt [23] to disconnect the aileron wing quadrant [9] from the aileron hinge support [18]. Discard the pin [26].

(j) Remove the aileron wing quadrant [9].

(k) If it is necessary, do these steps to disassemble the aileron wing quadrant [9]:

1) Remove the bushing [41], and bearings [40].

NOTE: The top bearing [40] is swaged to the wing aileron wing quadrant [9].

2) Remove the pin [28], nut [29], washer [30], bushing [22], washer [21], and bolt [20] to disconnect the aileron control rod [17] from the aileron wing quadrant [9]. Discard the pin [28].

F. Aileron Wing Installation

SUBTASK 27-11-24-420-001

(1) Do these steps to install the aileron wing quadrant [9]:

(a) If it is necessary, do these steps to assemble the aileron wing quadrant [9]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Apply sealant, A00247, to the top bearing [40].
2) Roller swage the top bearing [40].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

3) Apply Cor-Ban 27L Compound, G50237, to the bottom bearing [40].
4) Install the bearings [40] and bushing [41] in the aileron wing quadrant [9].
5) Install the bolt [20], washer [21], bushing [22], washer [30], nut [29], and new pin [28] to connect the aileron wing quadrant [9] with the aileron control rod [17].

(b) Do this step to connect the aileron wing quadrant [9] to the aileron hinge support [18]:
1) Install the bolt [23], washer [35], bushing [24], washer [25], nut [27], and new pin [26].

(c) Install the bolt [10], washer [11], bushing [12], washer [15], nut [14], and new pin [13] to connect the aileron control rod [17] to the aileron [16].

(d) Install the bolt [31] and washer [32] to connect the aileron position transmitter rod [33] to the aileron wing quadrant [9].
1) Make sure that the aileron position transmitter rod [33] is 17.01 in. (432.05 mm) from bolt center to bolt center.
2) If it is necessary to adjust the aileron position transmitter rod [33], do this task: Aileron Position Transmitter Installation Test, TASK 31-31-31-700-801.

(e) Put cable ABSA [2] (for the left wing) and cable ABSB [4] (for the right wing) in the bottom groove of the aileron wing quadrant [9].

(f) Put cable ABSB [4] (for the left wing) and cable ABSA [2] (for the right wing) in the top groove of the aileron wing quadrant [9].

(g) Install the cable terminations through the cable retaining plates [19].

(h) Install the cable retaining plates [19] with the bolts [5], washers [6], washers [7], and nuts [8] (TASK 20-10-93-400-801).

(i) Install the cable guard [36] with bolts [37], washers [38], and nuts [39].
1) Adjust the cable guard [36] until the gap between the cable guard [36] and aileron wing quadrant [9] is 0.030 in. (0.762 mm) - 0.05 in. (1.27 mm).

(j) Connect cable ABSA [2] and cable ABSB [4] to the turnbuckles [1], but keep the cable tension at zero.

SUBTASK 27-11-24-820-001

(2) Adjust the tension of cable ABSA [2] and cable ABSB [4] (TASK 27-11-00-820-801).

SUBTASK 27-11-24-860-002

(3) Close these access panels:

(a) On the left wing, close these access panels:

Number	Name/Location
571AT	Upper Outboard Fixed Trailing Edge, Quadrant Bolt Access Panel
571DB	Lower Outboard Fixed Trailing Edge Access Panel

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) On the right wing, close these access panels:

Number	Name/Location
671AT	Upper Outboard Fixed Trailing Edge, Quadrant Bolt Access Panel
671DB	Lower Outboard Fixed Trailing Edge Access Panel

SUBTASK 27-11-24-860-003

(4) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-24-730-001

(5) Do this task: Aileron Travel Test, TASK 27-11-00-700-810.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON BALANCE PANELS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the aileron balance panel

(2) An installation of the aileron balance panel.

B. There are four aileron balance panels on each wing. This procedure is applicable for all the aileron balance panels.

TASK 27-11-31-000-801

2. Aileron Balance Panels Removal

(Figure 401)

A. References

Reference	Title

D. Prepare for the Removal

SUBTASK 27-11-31-860-001

WARNING MAKE SURE THAT YOU INSTALL THE DOWNLOCK PINS ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-11-31-010-001

(2) Remove the applicable access panels on the lower wing surface at the balance panel.

(a) For the left wing, open these access panels:

Number	Name/Location
571BB	Lower Outboard Fixed Trailing Edge Access Panel
571CB	Lower Outboard Fixed Trailing Edge Access Panel
571DB	Lower Outboard Fixed Trailing Edge Access Panel

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) For the right wing, open these access panels:

Number	Name/Location
671BB	Lower Outboard Fixed Trailing Edge Access Panel
671CB	Lower Outboard Fixed Trailing Edge Access Panel
671DB	Lower Outboard Fixed Trailing Edge Access Panel

E. Aileron Balance Panels Removal

SUBTASK 27-11-31-020-001

(1) Remove the balance panel 1 [22], balance panel 2 [23], balance panel 3 [24], or balance panel 4 [25].

(a) Remove the bolts [1] and bolts [14] to remove the seal retainers [27] and seal retainers [30] from the aerodynamic seals [15].

(b) Write down the location and number of balance weights [11] installed on the balance panel 3 [24] or balance panel 4 [25].

(c) Remove the bolts [32], washers [31], and nuts [33] from the hinge seal [29] and aerodynamic seals [15].

(d) Remove the bolts [12] to remove the balance weights [11] from the hinge seal [29].

(e) Remove bolts [4], bolts [5], bolts [21], and bolts [2] with collars [3] to remove the balance weights [19] and hinge seal [29] from the aileron balance panel 1 [22], balance panel 2 [23], balance panel 3 [24], or balance panel 4 [25].

(f) Remove the bolts [16] and washers [17] to remove the seal retainer [18] from the hinge seal [20].

(g) Remove the pins [10], nuts [9], washers [8], washers [7], and bolts [6] to remove the balance panel 1 [22], balance panel 2 [23], balance panel 3 [24], or balance panel 4 [25] from the aileron.

1) Discard the pin [10].

(h) Remove the pins [10], nuts [9], washers [8], washers [7], and bolts [26] to remove the balance panel 1 [22], balance panel 2 [23], balance panel 3 [24], or balance panel 4 [25] from the wing structure.

1) Discard the pin [10].

G. Aileron Balance Panels Installation

SUBTASK 27-11-31-220-001

(1) If you install used bolts, bushings, or other components that have worn areas, do this task: Aileron Balance Panel Seals Detailed - Inspection, TASK 27-11-31-210-801.

SUBTASK 27-11-31-420-001

(2) Install the balance panel 1 [22], balance panel 2 [23], balance panel 3 [24], or balance panel 4 [25].

(a) Install the bolts [26], washers [7], washers [8], and nuts [9] to attach the balance panel 1 [22], balance panel 2 [23], balance panel 3 [24], or balance panel 4 [25] to the wing structure.

(b) Tighten the nuts [9] to 25 in-lb (3 N·m) - 35 in-lb (4 N·m).

(c) Tighten the nut [9] to the lower end of the torque range.

1) Continue to tighten the nut [9] until the next castellation aligns with the hole in the bolt [26].

2) Make sure that the gap between the bushing face and the washer [8] under the nut [9] is 0.010 in. (0.254 mm) minimum after torque up.

(d) Install the pins [10].

(e) Make sure that the washers [7] is bonded to the hinge half.

1) If it is necessary, bond the washers [7] to the hinge half with sealant, A00247.

(f) Install the bolts [6], washers [7], washers [8], and nuts [9] to attach the aileron balance panel 1 [22], balance panel 2 [23], balance panel 3 [24], or balance panel 4 [25] to the aileron.

(g) Tighten the nuts [9] to 25 in-lb (3 N·m) - 35 in-lb (4 N·m).

(h) Tighten the nut [9] to the lower end of the torque range.

1) Continue to tighten the nut [9] until the next castellation aligns with the hole in the bolt [6].

2) Make sure that the gap between the bushing face and the washer [8] under the nut [9] is 0.010 in. (0.254 mm) minimum after torque up.

(i) Install the pins [10].

(j) Make sure that the aerodynamic seals [15], hinge seals [20], and hinge seals [29] are not damaged.

(k) Install the seal retainer [18] to the hinge seal [20] with the bolts [16] and washers [17].

(l) Attach the hinge seal [29] to the balance panel 1 [22], balance panel 2 [23], balance panel 3 [24], or balance panel 4 [25].

(m) Install the balance weights [19] to the balance panel assembly with the bolts [4], bolts [5], bolts [21], and bolts [2] with collars [3].

1) Apply primer, C00259, to the holes of the balance weights [19].

2) Apply compound, C00528, to the bolts [2], bolts [4], bolts [5], and bolts [21].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Tighten the bolts [2], bolts [4], bolts [5], and bolts [21] to 35 in-lb (4 N·m) - 45 in-lb (5 N·m).

(n) Make sure that there are the same number of balance weights [11] on the new balance panel assembly as on the removed balance panel 3 [24] or balance panel 4 [25].

(o) Install the balance weights [11] to the balance panel assembly with bolts [12].

1) Apply primer, C00259, to the holes of the balance weights [11].

2) Apply compound, C00528, to the bolts [12].

3) Tighten the bolt [12] to 35 in-lb (4 N·m) - 45 in-lb (5 N·m).

(p) Install the seal retainers [27] and seal retainer [30] on the aerodynamic seals [15] with the bolts [1] and bolts [14].

SUBTASK 27-11-31-860-004

(3) Apply compound, C00528, to the bolts [32].

SUBTASK 27-11-31-420-002

(4) Install the bolts [32], nuts [33], and washers [31] to attach the hinge seal [29] and aerodynamic seal [15].

NOTE: It is permitted to install the hinge seal below the aerodynamic seal or aerodynamic seal below the hinged seal.

(a) Make sure that one seal is on top of the other across the bolts [32], nuts [33], and washers [31].

SUBTASK 27-11-31-600-001

(5) Use a medium nylon bristle brush, STD-3911, to apply corrosion inhibiting compound, G00009, to all edges of the seal retainer [18], seal retainers [27], and interface between seal retainer [18], seal retainers [27], seal retainer [30], and aerodynamic seals [15], hinge seal [20], and hinge seal [29].

SUBTASK 27-11-31-410-001

(6) Install the applicable access panels on the lower wing surface at the aileron balance panel.

(a) For the left wing, close these access panels:

Number	Name/Location
571BB	Lower Outboard Fixed Trailing Edge Access Panel
571CB	Lower Outboard Fixed Trailing Edge Access Panel
571DB	Lower Outboard Fixed Trailing Edge Access Panel

(b) For the right wing, close these access panels:

Number	Name/Location
671BB	Lower Outboard Fixed Trailing Edge Access Panel
671CB	Lower Outboard Fixed Trailing Edge Access Panel
671DB	Lower Outboard Fixed Trailing Edge Access Panel

SUBTASK 27-11-31-860-002

(7) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-31-710-001

(8) Do this task: Aileron Travel Test, TASK 27-11-00-700-810.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON BALANCE PANEL - INSPECTION/CHECK

1. General

A. The procedure contains these tasks:

(1) Aileron Balance Panel Inspection

(2) Aileron Balance Panel Seals Detailed Inspection

TASK 27-11-31-220-801

2. Aileron Balance Panel - Inspection

(Figure 601)

A. General

(1) This task gives wear limits and repair data for the aileron balance panel inspection.

B. References

Reference	Title

672	Right Wing - Aileron

E. Aileron Balance Panel Inspection

SUBTASK 27-11-31-020-002

(1) Do this task: Aileron Balance Panels Removal, TASK 27-11-31-000-801.

SUBTASK 27-11-31-020-003

(2) Use these tools to do a check for wear on the parts of the aileron balance panel:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-11-31-020-004

(3) Examine the parts of the aileron balance panel for worn areas:

(a) Remove the parts you want to do a check.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are out of tolerance, replace or repair the part.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON TAB CONTROL RODS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of an aileron tab control rods

(2) An installation of the aileron tab control rods.

B. In this procedure the aileron tab control rods are referred to as the "control rods".

TASK 27-11-34-000-801

2. Aileron Tab Control Rods Removal

(Figure 401)

A. Location Zones

Zone	Area
572	Left Wing - Aileron
672	Right Wing - Aileron

B. Access Panels

Number	Name/Location
571CB	Lower Outboard Fixed Trailing Edge Access Panel
572DB	Lower Aileron, Hinge Cover - WBL 469.00
572EB	Lower Aileron, Hinge Cover - WBL 481.00
671CB	Lower Outboard Fixed Trailing Edge Access Panel
672DB	Lower Aileron, Hinge Cover - WBL 469.00
672EB	Lower Aileron, Hinge Cover - WBL 481.00

C. Prepare for the Removal

SUBTASK 27-11-34-010-001

(1) Remove these access panels:

(a) On the left wing, open these access panels:

Number	Name/Location
571CB	Lower Outboard Fixed Trailing Edge Access Panel
572DB	Lower Aileron, Hinge Cover - WBL 469.00
572EB	Lower Aileron, Hinge Cover - WBL 481.00

(b) On the right wing, open these access panels:

Number	Name/Location
671CB	Lower Outboard Fixed Trailing Edge Access Panel
672DB	Lower Aileron, Hinge Cover - WBL 469.00
672EB	Lower Aileron, Hinge Cover - WBL 481.00

D. Aileron Tab Control Rods Removal

SUBTASK 27-11-34-020-001

(1) Remove the bolts [6] that attach the forward removable fairing [2] to the aileron [1].

(a) Remove the forward removable fairing [2].

SUBTASK 27-11-34-020-002

(2) Remove the bolts [4] that attach the aft removable fairing [3] to the aileron balance tab [5].

(a) Remove the aft removable fairing [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-34-020-003

(3) Remove the aileron tab control rod [17]:

(a) Lift up the aileron trailing edge.

(b) Remove the bolts [13] and washers [14] that attach the radial seal [16] to the radial seal retainer [15] to the structure.

(c) Remove the radial seal [16] and radial seal retainer [15].

(d) Remove the pins [12], nuts [11], washers [10], bushings [9], washers [8] and bolts [7] that connect the aileron tab control rod [17] to the forward fittings. Discard the pins [12].

(e) Move the aileron trailing edge down.

(f) Remove the pins [12], nuts [11], washers [10], bushings [18], washers [8], and bolts [19] that connect the aileron tab control rod [17] to the tab mast. Discard the pins [12].

(g) Remove the aileron tab control rod [17] from the airplane.

SUBTASK 27-11-34-970-001

(4) Write down the length of the aileron tab control rod [17].

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Access Panels

Number	Name/Location
571CB	Lower Outboard Fixed Trailing Edge Access Panel
572DB	Lower Aileron, Hinge Cover - WBL 469.00
572EB	Lower Aileron, Hinge Cover - WBL 481.00
671CB	Lower Outboard Fixed Trailing Edge Access Panel
672DB	Lower Aileron, Hinge Cover - WBL 469.00
672EB	Lower Aileron, Hinge Cover - WBL 481.00

E. Prepare for installation

SUBTASK 27-11-34-220-001

(1) If you install used bolts, bushings, bearings or other components with worn areas, do this task: Aileron Tab Control Rods Inspection, TASK 27-11-34-200-801.

F. Aileron Tab Control Rods Installation

SUBTASK 27-11-34-420-001

(1) Install the aileron tab control rod [17]:

(a) Move the aileron trailing edge down.

(b) Put the two aileron tab control rods [17] in position, align the rod ends with the attach fittings.

NOTE: The length of the aileron tab control rod [17] must be the same as those written down after the removal.

(c) Connect the aileron tab control rod [17] to the tab mast with the bolts [19], washers [8], bushings [18], washers [10], and nuts [11].

1) Adjust the length of the aileron tab control rod [17] if it is necessary.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Tighten the nuts [11] to 50 in-lb (6 N·m)–80 in-lb (9 N·m).

3) Install the new pins [12].

(d) Lift up the aileron trailing edge.

(e) Install the bolts [7], washers [8], bushings [9], washers [10] and nuts [11] to connect the aileron tab control rod [17] to the forward fittings.

1) Tighten the nut [11] to 50 in-lb (6 N·m)–80 in-lb (9 N·m) until the next nut castellation aligns with the hole in the bolt.

2) Install the pins [12].

(f) Install the radial seal [16] and radial seal retainer [15] to the structure with the bolts [13] and washers [14].

SUBTASK 27-11-34-410-001

(2) Install these access panels:

(a) On the left wing, close these access panels:

Number	Name/Location
571CB	Lower Outboard Fixed Trailing Edge Access Panel
572DB	Lower Aileron, Hinge Cover - WBL 469.00
572EB	Lower Aileron, Hinge Cover - WBL 481.00

(b) On the right wing, close these access panels:

Number	Name/Location
671CB	Lower Outboard Fixed Trailing Edge Access Panel
672DB	Lower Aileron, Hinge Cover - WBL 469.00
672EB	Lower Aileron, Hinge Cover - WBL 481.00

SUBTASK 27-11-34-420-002

(3) Install the bolts [4] to attach the aft removable fairing [3] to the aileron balance tab [5].

SUBTASK 27-11-34-420-003

(4) Install the bolts [6] to attach the forward removable fairing [2] to the aileron [1].

SUBTASK 27-11-34-710-001

(5) Move the aileron control wheel through full travel.

(a) Make sure that the aileron tab moves freely.

SUBTASK 27-11-34-220-002

(6) Make sure the distance from the tab trailing edge to the extension of the aileron bottom surface is correct. To measure it, do this task: Aileron Balance Tab Adjustment (Recommended Method), TASK 27-11-00-820-803.

SUBTASK 27-11-34-820-001

(7) Do this task: Flight Test to Find and Correct Asymmetrical Flight Control Forces, TASK 27-11-00-750-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON TAB CONTROL RODS - INSPECTION/CHECK

1. General

A. This procedure contains the task to do an inspection of the aileron tab control rods.

TASK 27-11-34-200-801

2. Aileron Tab Control Rods Inspection

(Figure 601)

A. General

(1) This task gives wear limits and repair data for the aileron tab control rods inspection.

E. Procedure

SUBTASK 27-11-34-020-004

(1) Do this task: Aileron Balance Tab Removal, TASK 27-11-21-000-801 or Aileron Tab Control Rods Removal, TASK 27-11-34-000-801.

SUBTASK 27-11-34-020-005

(2) Use these tools to do a check for wear on the parts of the aileron tab control rods:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-11-34-020-006

(3) Examine the parts of the aileron tab control rods for worn areas:

(a) Remove the parts you want to do a check.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are out of tolerance, replace or repair the parts.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON CONTROL WHEEL - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Aileron Control Wheel Removal

(2) Aileron Control Wheel Installation

B. This procedure is applicable for the captain's and first officer's aileron control wheel [3].

TASK 27-11-41-000-801

2. Aileron Control Wheel Removal

A. References

Reference	Title
22-11-41-000-801	Autopilot Disengage Switch Removal (P/B 401)

212	Flight Compartment - Right

D. Prepare for the Removal

SUBTASK 27-11-41-860-001

WARNING MAKE SURE THAT YOU INSTALL THE DOWNLOCK PINS ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-11-41-860-004

(2) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	7	C01208	STALL WARN ASYM MODE

ECCN 9E991 BOEING PROPRIETARY - See title page for details

C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-11-41-860-002

(3) Make sure the aileron control wheels [3] are in the neutral position.

SUBTASK 27-11-41-480-002

(4) Install the rig pin A/S-15, from the rigging pin kit, SPL-1585, in the aileron feel and centering unit [21] (Figure 401).

E. Aileron Control Wheel Removal

SUBTASK 27-11-41-020-001

(1) Do these steps to remove the aileron control wheel [3] (Figure 402):

(a) Remove the screws [5] that attach the medallion [6] to the aileron control wheel [3].

(b) Remove the medallion [6] from the aileron control wheel [3].

(c) Remove the pin [10], nut [4], washer [8], washer [7], spacer [9], and bolt [11]. Discard the pin [10].

(d) Write down and make a mark of the Jiffy junction modules that are on top of the terminal cover [16].

(e) Disconnect the autopilot Jiffy junction modules (TASK 22-11-41-000-801).

(f) Disconnect the PTT Jiffy junction modules, similar to autopilot.

(g) Remove the screws [12] and washers [13] to remove the terminal cover [16].

(h) Remove the screws [19], washers [18], and washers [20] to disconnect the wires from the terminal block [17].

(i) Write down and make a mark of the configuration of the identified color wires.

(j) Remove the terminal block [17] from the hub of the wheel.

(k) Carefully remove the aileron control wheel [3] from the control column.

(l) Make a mark of the positions of the aileron control wheel [3], the gear, and the sleeve assembly [1].

(m) Make a mark on the wire bundle to identify the clamp [15] location in the control wheel hub.

(n) Remove the screw [14] to remove the clamp [15] from the aileron control wheel [3].

(o) Carefully disengage the wire bundle from the aileron control wheel [3].

SUBTASK 27-11-41-020-002

(2) If you want to remove the stabilizer trim control switch, do this task: Stabilizer Trim Control Switch Removal, TASK 27-41-97-000-801.

SUBTASK 27-11-41-020-003

(3) If you want to remove the autopilot disengage switch, do this task: Autopilot Disengage Switch Removal, TASK 22-11-41-000-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-41-020-004

(4) If you want to remove the control wheel PTT switch, do this task: Push-To-Talk (PTT) Control Wheel Switch Removal, TASK 23-51-04-000-801.

F. Aileron Control Wheel Installation

SUBTASK 27-11-41-020-005

(1) If you removed the stabilizer trim control switch, do this task: Stabilizer Trim Control Switch Installation, TASK 27-41-97-400-801.

SUBTASK 27-11-41-020-006

(2) If you removed the autopilot disengage switch, do this task: Autopilot Disengage Switch Installation, TASK 22-11-41-400-801.

SUBTASK 27-11-41-020-007

(3) If you removed the control wheel PTT switch, do this task: Push To Talk (PTT) Control Wheel Switch Installation, TASK 23-51-04-400-801.

SUBTASK 27-11-41-420-001

(4) Do these steps to install the aileron control wheel [3] (Figure 402):

(a) Install the terminal block [17] in the hub of the wheel.

(b) Install the screws [19], washers [18], and washers [20] to connect the terminals of the switch wires to the terminal block [17].

(c) Make sure the terminals of the switch wires are installed correctly.

(d) Attach the terminal cover [16] to the aileron control wheel [3] with washers [13] and screws [12].

(e) Reconnect the autopilot Jiffy junction modules (TASK 22-11-41-400-801).

(f) Reconnect the PTT Jiffy junction modules, similar to autopilot.

(g) Apply a small amount of the compound, G50550 to the wire bundle and the inside of the hub of the control wheel splines.

(h) Use a wire leader to put the electrical wires in the aileron control wheel [3].

(i) Put a clamp [15] at the mark on the wire bundle.

CAUTION

MAKE SURE THAT THE WIRE BUNDLE LENGTH IS CORRECT BETWEEN THE AILERON CONTROL COLUMN AND THE AILERON CONTROL WHEEL. THE AILERON CONTROL WHEEL CANNOT MOVE FREELY IF THE WIRE BUNDLE IS NOT CORRECT. THIS CAN CAUSE DAMAGE TO THE WIRE BUNDLE.

(j) Make sure the length of the wire bundle is approximately 27 in. (686 mm) between the clamp [15] in the aileron control wheel [3] and the hole in the housing.

(k) Make sure the aileron control wheel [3] moves an equal distance each direction from the neutral position.

(l) Install the clamp [15] with the screw [14] to hold the wire bundle to the aileron control wheel [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(m) Wind the wire bundle four times around the control wheel hub (Figure 402 (Sheet 2)).

1) As you look forward into the aileron control wheel [3] upper cavity do this step:

a) For the captain's aileron control wheel [3], wind the wire bundle counterclockwise.

b) For the first officer's aileron control wheel [3], wind the wire bundle clockwise .

(n) Engage the splines on the aileron control wheel [3] to the control column at the identified positions.

(o) Install the bolt [11], spacer [9], washer [7], washer [8], and nut [4].

(p) Tighten the nut [4] 85 in-lb (10 N·m)-140 in-lb (16 N·m) until the next nut castellation aligns with the hole in the bolt.

(q) Install the new pin [10].

SUBTASK 27-11-41-720-001

(5) Do these steps to check the operation of the aileron control wheel [3]:

(a) Make sure the captain's and the first officer's aileron control wheels [3] are in the neutral position.

(b) Put the straight edge, SPL-1671 across the top end of the aileron control wheels.

1) Make sure that one end of the first officer's aileron control wheel [3] is not farther than 0.20 in. (5.08 mm) from the straightedge.

(c) Remove the straight edge, SPL-1671 from the aileron control wheels [3].

(d) Install the adapter, SPL-1674 to the captain's aileron control wheel [3].

(e) Remove the map holder assembly from the first officer's control wheel.

(f) Install the mount, SPL-1670 and the protractor, SPL-1680 to the first officer's aileron control wheel [3].

(g) Remove the rig pin A/S-15, rigging pin kit, SPL-1585, from the aileron feel and centering unit (Figure 401).

CAUTION

DO NOT LET THE AILERON CONTROL WHEEL TURN MORE THAN 110 DEGREES IN EACH DIRECTION FROM NEUTRAL. IF THE AILERON CONTROL WHEEL TURNS MORE THAN 110 DEGREES DAMAGE TO THE WIRE BUNDLE CAN OCCUR.

(h) Make sure the aileron control wheel [3] can turn 108 degrees in each direction from the neutral position.

(i) Make slow and careful inputs to the aileron control wheel [3] one direction at a time.

(j) Make sure the aileron control wheel [3] moves freely and smoothly.

(k) Remove the adapter, SPL-1674 from the captain's aileron control wheel [3].

(l) Remove the mount, SPL-1670 and the protractor, SPL-1680 from the first officer's aileron control wheel [3].

(m) Install the map holder assembly to the first officer's control wheel.

SUBTASK 27-11-41-720-002

(6) Do a test of the electrical circuits for continuity changed during the replacement of the aileron control wheel [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-41-720-003

(7) Use the insulation resistance multimeter, COM-17798, to do a test of the terminal block [17] while you turn the aileron control wheel [3] from stop to stop.

(a) Do a test on the terminal block for resistance to ground, or wire to wire for a minimum insulation value of 100 Megaohms.

SUBTASK 27-11-41-420-002

(8) Do these steps to install the medallion [6].

(a) Install the medallion [6] on the aileron control wheel [3].

(b) Install the screws [5] that attach the medallion [6] to the aileron control wheel [3].

SUBTASK 27-11-41-860-005

(9) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	7	C01208	STALL WARN ASYM MODE

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-11-41-700-001

(10) Do the Installation Test of the autopilot switch (TASK 22-11-41-400-801).

SUBTASK 27-11-41-700-002

(11) Do the Installation Test of the PPT switch (TASK 23-51-04-400-801).

SUBTASK 27-11-41-700-003

(12) Do this task: Stabilizer Trim Control Switch Test, TASK 27-41-97-700-801.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-41-860-003

(1) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON CONTROL WHEEL DRUM - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the aileron control wheel drum

(2) An installation of the aileron control wheel drum.

B. The aileron control wheel drum is referred to as the "control wheel drum assembly" in this procedure.

C. The control wheel drum assembly is installed at the base of the captain's control column.

TASK 27-11-51-000-801

2. Aileron Control Wheel Drum Removal

(Figure 401)

A. References

Reference	Title
27-11-00-860-801	Pressure from the Aileron Hydraulic Systems A and B - Deactivation (P/B 201)
53-14-01-020-801	Nose Wheel Well Access Panels Removal (P/B 401)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1585	Kit - Rigging Pin Part #: F70207-151 Supplier: 81205

C. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
113	Area Above and Outboard of Nose Landing Gear Wheel Well - Left
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

212	Flight Compartment - Right

D. Access Panels

Number	Name/Location
112A	Forward Access Door
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

E. Prepare for the Removal

SUBTASK 27-11-51-010-001

(1) Open this access door:

Number	Name/Location
112A	Forward Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-51-010-002

(2) If necessary, remove these access panels to access the aileron control wheel drum (TASK 53-14-01-020-801).

(a) Remove these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

SUBTASK 27-11-51-860-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-11-51-860-002

(4) Put the captain's and first officer's control wheels in the neutral position.

SUBTASK 27-11-51-480-001

(5) Install the rig pin A/S-15, from the rigging pin kit, SPL-1585, in the aileron trim mechanism.

F. Aileron Control Wheel Drum Removal

SUBTASK 27-11-51-020-001

(1) Disconnect the cable ACBA1 [1], cable ACBA2 [21], cable ACBB1 [2], and cable ACBB2 [22] at the cable turnbuckles [3].

(a) Attach identification tags on the disconnected cables for easier assembly.

SUBTASK 27-11-51-020-002

(2) Disconnect the cable AA [4] and cable AB [6] at the cable turnbuckles [5].

(a) Attach identification tags on the disconnected cables for easier assembly.

SUBTASK 27-11-51-020-005

(3) Disconnect brake control cable LGB1A [39] and cable LGB1B [40] at the turnbuckles.

(a) Attach identification tags on the disconnected cables for easier assembly.

SUBTASK 27-11-51-020-004

(4) Remove the aileron control wheel drum assembly [19]:

(a) Remove the screw [35] and clamp [37] that attach the rudder pedal adjustment crank to the aileron control wheel drum assembly [19].

(b) Disconnect the electrical connector [15], electrical connector [30], and electrical connector [34].

(c) Remove the screws [31], washers [32], and nuts [33] to remove the wiring harness [38] from the bracket on the aileron control wheel drum assembly [19].

(d) Remove the screw [24] and clamp [26].

(e) Remove the nuts [14], washers [13], and bolts [12].

(f) Remove the nuts [11], washers [10], and bolts [9].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Move the aileron control wheel drum assembly [19] down while, at the same time, you put the cable ACBA1 [1], cable ACBA2 [21], cable ACBB1 [2], and cable ACBB2 [22] through the openings.

(h) Remove the control wheel drum assembly [19] from the airplane structure.

G. Aileron Control Wheel Drum Installation

SUBTASK 27-11-51-210-001

WARNING

MAKE SURE THAT IT IS THE SELF-LOCKING SHEAR NUT AND NOT THE TENSION TYPE SELF-LOCKING NUT THAT CONNECTS THE FORK TO THE CONTROL WHEEL DRUM. IF AN INCORRECT NUT IS INSTALLED, THE CAPTAIN'S CONTROL COLUMN CAN BECOME DISENGAGED FROM THE FORK. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) Make sure that the fork is connected to the control wheel drum with correct self-locking shear nut.

NOTE: You must see a completed bolt chamfer at the end of the nut.

SUBTASK 27-11-51-420-001

(2) Install the aileron control wheel drum assembly [19]:

SIA 001-005; AIRPLANES WITH CONTROL COLUMN PLATE ASSEMBLY, 251N1233-7

(a) Apply MS-122XD release agent, G50063 to the paddle and fork coupling assembly.

SIA ALL

(b) Put the bolts [9] and bolts [12] into position on the airplane structure.

(c) Make sure that the radius fillers [8] are bonded to the bracket [7].

(d) Lift the aileron control wheel drum assembly [19] into position while making sure that the fork and paddle engage.

(e) Install the washers [10] and nuts [11] on the bolts [9].

(f) Install the washers [13] and nuts [14] on the bolts [12].

(g) Put the ends of cable ACBA1 [1], cable ACBA2 [21], cable ACBB1 [2] and cable ACBB2 [22] through the openings.

(h) Install the screw [24] and clamp [26].

(i) Attach the wiring harness [38] to the aileron control wheel drum assembly [19] with screws [31], washers [32] and nuts [33].

(j) Connect the electrical connector [15], electrical connector [30] and electrical connector [34].

(k) Install the screw [35] and clamp [37] to attach the rudder pedal adjustment crank to the aileron control wheel drum assembly [19].

SUBTASK 27-11-51-420-003

(3) To connect the cable AA [4] and cable AB [6] at the cable turnbuckles [5], do these steps:

(a) Remove the identification tags from the disconnected cables.

(b) Connect the cable AA [4] and cable AB [6] at the cable turnbuckles [5].

(c) Tighten the cable turnbuckles [5] to remove slack but keep the cable tension at zero.

SUBTASK 27-11-51-420-004

(4) Connect the cable ACBA1 [1], cable ACBA2 [21], cable ACBB1 [2], and cable ACBB2 [22] at the cable turnbuckles [3]:

(a) Remove the identification tags from the disconnected cables.

(b) Connect the cable ACBA1 [1], cable ACBA2 [21], cable ACBB1 [2], and cable ACBB2 [22] at the cable turnbuckles [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Tighten the cable turnbuckles [3] to remove slack but keep the cable tension at zero.

SUBTASK 27-11-51-420-005

(5) To connect brake control cable LGB1A [39] and cable LGB1B [40] at the LG brake cable turnbuckles, do these steps:

(a) Remove the identification tags from the disconnected cables.

(b) Connect the cable LGB1A [39] and cable LGB1B [40] at the cable turnbuckles.

(c) Tighten the brake cable turnbuckles to remove slack but keep the cable tension at zero.

SUBTASK 27-11-51-800-001

(6) Make sure that the captain's and first officer's control wheels are in the neutral position.

SUBTASK 27-11-51-080-001

(7) Remove the rig pin A/S-15, from the rigging pin kit, SPL-1585, from the aileron trim mechanism.

SUBTASK 27-11-51-860-003

(8) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-51-820-001

(9) Adjust the cables ACBA and ACBB and cables AA and AB (TASK 27-11-00-820-801).

SUBTASK 27-11-51-820-002

(10) Adjust the brake control cables (Hydraulic Brake System Adjustment, TASK 32-41-00-820-801):

(a) Do the steps to adjust brake cables LGB1A and LGB1B.

(b) Adjust the right side brake control cables LGB2A and LGB2B at the same time.

(c) Brake system retest is not required after rigging.

H. Aileron Control Wheel Drum Installation Test

SUBTASK 27-11-51-730-001

(1) Do this task: Manual Reversion Control Friction Test, TASK 27-11-00-700-803.

SUBTASK 27-11-51-710-001

(2) Do this task: Aileron Response (Operational) Test, TASK 27-11-00-710-801.

SUBTASK 27-11-51-720-002

(3) Do this task: Control Wheel Centering Check, TASK 27-11-00-700-804.

SUBTASK 27-11-51-720-003

(4) Do this task: Aileron Control Wheel Force Test, TASK 27-11-00-700-805.

SUBTASK 27-11-51-720-004

(5) Do this task: Control Wheel Travel Stop Test, TASK 27-11-00-700-807.

SUBTASK 27-11-51-710-002

(6) Do this task: Roll Force Transducer Test, TASK 22-11-11-740-801.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-51-410-003

(1) Install these access panels if they were removed to gain access to the aileron control wheel drum (TASK 53-14-01-420-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Install these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

SUBTASK 27-11-51-410-001

(2) Close this access door:

Number	Name/Location
112A	Forward Access Door

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON TRIM ACTUATOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the aileron trim actuator

(2) An installation of the aileron trim actuator.

TASK 27-11-54-000-801

2. Aileron Trim Actuator Removal

(Figure 401)

A. References

Reference	Title
27-11-00-860-801	Pressure from the Aileron Hydraulic Systems A and B - Deactivation (P/B 201)
SWPM 20-60-03	Special Protection of Electrical Connectors

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1585	Kit - Rigging Pin Part #: F70207-151 Supplier: 81205

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Removal

SUBTASK 27-11-54-860-001

(1) Put the captain's and first officer's control wheels in the neutral position.

SUBTASK 27-11-54-860-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-11-54-480-001

(3) Install the rig pin A/S-15, from the rigging pin kit, SPL-1585, in the aileron trim mechanism.

E. Aileron Trim Actuator Removal

SUBTASK 27-11-54-020-001

(1) Disconnect the electrical connector from the aileron trim actuator [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-11-54-020-002

(2) Remove the aileron trim actuator [1] from the aileron trim mechanism:

(a) Remove the nut [11], washer [9], bushing [10], washer [8], and bolt [7].

(b) Remove the nut [2], washer [4], bushing [3], washer [5], and bolt [6].

(c) Remove the aileron trim actuator [1].

212	Flight Compartment - Right

F. Aileron Trim Actuator Installation

SUBTASK 27-11-54-420-001

(1) Install the aileron trim actuator [1]:

(a) Make sure that the rig pin A/S-15, from the rigging pin kit, SPL-1585, is installed in the aileron trim mechanism.

(b) Put the aileron trim actuator [1] in position.

(c) Install the bolt [6], washer [5], bushing [3], washer [4], and nut [2].

(d) Install the bolt [7], washer [8], bushing [10], washer [9], and nut [11].

SUBTASK 27-11-54-420-002

(2) Do the following steps to connect the electrical connector:

(a) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

2) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

(b) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

(c) Connect the electrical connector to the aileron trim actuator [1].

SUBTASK 27-11-54-860-003

(3) Make sure the captain's and first officer's control wheels are in the neutral position.

SUBTASK 27-11-54-080-001

(4) Remove the rig pin A/S-15, from the rigging pin kit, SPL-1585, from the aileron trim mechanism.

SUBTASK 27-11-54-860-004

(5) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-54-710-001

(6) Do this task: Aileron Trim Response Test, TASK 27-11-00-730-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON TRANSFER MECHANISM - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the aileron transfer mechanism.

(2) An installation of the aileron transfer mechanism.

B. The aileron transfer mechanism is installed at the base of the first officer's control column.

TASK 27-11-61-000-801

2. Aileron Transfer Mechanism Removal

(Figure 401)

NOTE: This procedure is a scheduled maintenance task.

A. References

Reference	Title

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Prepare for the Removal

SUBTASK 27-11-61-860-004

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

SUBTASK 27-11-61-010-001

(2) To get access to the aileron transfer mechanism, do this task:

(a) Open these access panels:

Number	Name/Location
112A	Forward Access Door
114AC	Fwd Nose Wheel Well Upper Access Panel

SUBTASK 27-11-61-480-003

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) If the downlock pins are not installed on all the landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-11-61-860-001

(4) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-11-61-860-002

(5) Put the aileron control wheels in the neutral position.

(a) Make sure that the aileron trim switches are at the zero trim position.

NOTE: The aileron trim switches are installed on the aft electronic control panel, P8 in the flight compartment.

SUBTASK 27-11-61-480-002

(6) Install the rig pins A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drums.

F. Aileron Transfer Mechanism Removal

SUBTASK 27-11-61-020-001

(1) Disconnect the cable ACBA1 [1], cable ACBA2 [2], cable ACBB1 [3] and cable ACBB2 [4] at the cable turnbuckles [5].

(a) Attach identification tags on the disconnected cables for easier assembly.

SUBTASK 27-11-61-020-005

(2) Disconnect the LG brake control cable LGB2A [25] and cable LGB2B [26] at the LG brake cable turnbuckles.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Attach identification tags on the disconnected cables for easier assembly.

SUBTASK 27-11-61-020-004

(3) To remove the aileron position transmitter [7] from the aileron transfer mechanism [13] do these steps:

(a) Disconnect the three electrical connectors [11].

(b) Remove the washers [9] and nuts [10].

(c) Remove the screw [28], screw [29], washers [30], clamps [27] and nuts [31].

(d) Remove the aileron position transmitter [7] from the aileron transfer mechanism [13].

SUBTASK 27-11-61-020-003

(4) Remove the aileron transfer mechanism [13]:

(a) Remove screw [17] and cable clamp [18] attached to the aileron transfer mechanism [13].

(b) Remove the nuts [24], washers [23], and bolts [22] that attach the aileron transfer mechanism [13] to the airplane structure.

(c) Move the aileron transfer mechanism [13] down while you put the cable ACBA1 [1], cable ACBA2 [2], cable ACBB1 [3] and cable ACBB2 [4] through the openings.

G. Aileron Transfer Mechanism Installation

SUBTASK 27-11-61-420-001

(1) Install the aileron transfer mechanism [13]:

SIA 001-005; AIRPLANES WITH CONTROL COLUMN PLATE ASSEMBLY, 251N1233-7

(a) Apply MS-122XD release agent, G50063 to the paddle and fork coupling assembly.

SIA ALL

(b) Put the bolts [22] into position on the airplane structure.

(c) Lift the aileron transfer mechanism [13] into position while you make sure that the fork and paddle engage.

(d) Install the washers [23] and nuts [24] on the bolts [22] to attach the aileron transfer mechanism [13] to the airplane structure.

(e) Put the ends of the cable ACBA1 [1], cable ACBA2 [2], cable ACBB1 [3] and cable ACBB2 [4] through the openings.

(f) Install the screw [17] and clamp [18] to connect the rudder pedal adjustment cable to the aileron transfer mechanism [13].

SUBTASK 27-11-61-420-002

(2) Install the aileron position transmitter [7] on the aileron transfer mechanism [13]:

(a) Put the aileron position transmitter [7] in position.

(b) Install the washers [9] and nuts [10].

(c) Install the screw [28], screw [29], washers [30], clamps [27] and nuts [31].

(d) Connect the three electrical connectors [11].

SUBTASK 27-11-61-420-003

(3) Connect the cable ACBA1 [1], cable ACBA2 [2], cable ACBB1 [3] and cable ACBB2 [4] to the cable turnbuckles [5].

(a) Remove the identification tags from the disconnected cables.

(b) Connect the cable ACBA1 [1], cable ACBA2 [2], cable ACBB1 [3] and cable ACBB2 [4] to the cable turnbuckles [5].

(c) Tighten the cable turnbuckles [5] to remove slack but keep the cable tension at zero.

SUBTASK 27-11-61-420-004

(4) To connect brake control cable LGB2A [25] and cable LGB2B [26] at the LG brake cable turnbuckles, do these steps:

(a) Remove the identification tags from the disconnected cables.

(b) Connect the cable LGB2A [25] and cable LGB2B [26] at the cable turnbuckles.

(c) Tighten the brake cable turnbuckles to remove slack but keep the cable tension at zero.

SUBTASK 27-11-61-080-002

(5) Remove the rig pins A/S-4, from the rigging pin kit, SPL-1585, from the aileron bus drums.

SUBTASK 27-11-61-820-001

(6) Adjust the cable ACBA and cable ACBB (TASK 27-11-00-820-801).

SUBTASK 27-11-61-820-002

(7) Adjust the brake control cables LGB2A and LGB2B (Hydraulic Brake System Adjustment, TASK 32-41-00-820-801):

(a) Do the steps to adjust brake cables LGB2A and LGB2B.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Adjust the left side brake control cables LGB1A and LGB1B at the same time.

(c) Brake system retest is not required after rigging.

H. Aileron Transfer Mechanism Installation Test

SUBTASK 27-11-61-860-003

(1) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-61-730-002

(2) Do this task: Manual Reversion Control Friction Test, TASK 27-11-00-700-803.

SUBTASK 27-11-61-710-001

(3) Do this task: Aileron Response (Operational) Test, TASK 27-11-00-710-801.

SUBTASK 27-11-61-720-001

(4) Do this task: Control Wheel Centering Check, TASK 27-11-00-700-804.

SUBTASK 27-11-61-730-003

(5) Do this task: Aileron Control Wheel Force Test, TASK 27-11-00-700-805.

SUBTASK 27-11-61-720-002

(6) Do this task: Transfer Mechanism Functional Test, TASK 27-11-00-700-806.

SUBTASK 27-11-61-730-004

(7) Do this task: Control Wheel Travel Stop Test, TASK 27-11-00-700-807.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-11-61-860-005

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

SUBTASK 27-11-61-410-001

(2) Close these access panels:

Number	Name/Location
112A	Forward Access Door
114AC	Fwd Nose Wheel Well Upper Access Panel

SUBTASK 27-11-61-080-003

(3) Remove the downlock pins from the landing gear (Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801).

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON TRANSFER MECHANISM - INSPECTION/CHECK

1. General

A. This procedure has this inspection task:

(1) Aileron Transfer Mechanism

TASK 27-11-61-210-801

2. Aileron Transfer Mechanism Inspection

(Figure 601)

NOTE: This procedure is a scheduled maintenance task.

A. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well

B. Access Panels

Number	Name/Location
112A	Forward Access Door

C. Aileron Transfer Mechanism Inspection

SUBTASK 27-11-61-010-002

(1) Get access to the aileron transfer mechanism:

(a) Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-11-61-210-001

(2) Do a general visual inspection of the aileron transfer mechanism.

SUBTASK 27-11-61-410-002

(3) Close this access panel:

Number	Name/Location
112A	Forward Access Door

AILERON POWER CONTROL UNIT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the aileron power control unit

(2) An installation of the aileron power control unit.

B. The aileron power control unit is referred to as the "power control unit" in this procedure.

C. The two power control units supply hydraulic power to the aileron. The power control unit at the bottom is connected to hydraulic system A. The power control unit at the top is connected to hydraulic system B.

D. This procedure is applicable for the power control units that are connected to hydraulic systems A and B.

TASK 27-11-71-000-801

2. Aileron Power Control Unit Removal

(Figure 401)

D. Prepare for the Removal

SUBTASK 27-11-71-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-11-71-860-001

(2) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

E. Aileron Power Control Unit Linkage Removal

SUBTASK 27-11-71-020-001

(1) Disconnect hydraulic lines [4] at the inlet ports and hydraulic lines [40] at the outlet ports of the power control unit [1]. Use a 1 U.S.-gal (3.81 l) oil resistant container, STD-203 to contain any hydraulic fluid leakage. Discard the packing [2] and packing [6].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Install the caps and plugs on hydraulic lines [4], hydraulic lines [40] and ports.

SUBTASK 27-11-71-020-002

(2) Remove the power control unit [1]:

(a) Remove the pins [13], nuts [12], washers [11], bushings [10], washers [9], and bolts [8] to disconnect the pogos [7] from the power control unit [1]. Discard the pins [13].

(b) Remove the bolts [30], washers [31], bolts [32] and washers [33] to disconnect the bracket assemblies from the power control unit [1].

(c) Remove the pin [23], nut [22], washer [21], nut [24], washers [25], bushings [26], washers [28], and bolt [14] to disconnect the power control unit [1] from the reaction support assembly [27]. Discard the pin [23].

(d) Remove the nut [20], washer [19], washers [17], spacer [16] and bolt [15] to disconnect the safety link [18] from the reaction support assembly [27].

(e) Move the reaction link [29] aft to get access to the power control unit [1].

(f) Remove the pin [37], nut [38], washer [39], washer [35], and bolt [34] to disconnect the power control unit [1] from the output lever assembly [36]. Discard the pin [37].

(g) Remove the power control unit [1].

F. Aileron Power Control Unit Installation

SUBTASK 27-11-71-420-001

(1) If they are not installed, install the union [3], union [5], new packing [2], and new packing [6].

(a) Apply hydraulic fluid, D00153, to the new packing [2] and new packing [6].

(b) Install the union [3], new packing [2], union [5], and new packing [6] in the ports on the power control unit [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Tighten the union [3] to 170 ±9 in-lb (19 ±1 N·m).

2) Tighten the union [5] to 110 ±6 in-lb (12 ±1 N·m).

SUBTASK 27-11-71-860-002

(2) Make sure the power control unit [1] is filled with hydraulic fluid, D00153.

SUBTASK 27-11-71-820-001

(3) Remove the 1 U.S.-gal (3.81 l) oil resistant container, STD-203.

SUBTASK 27-11-71-420-002

(4) Install the power control unit [1]:

(a) Put the power control unit [1] in its position.

(b) Install the bolt [34], washer [35], washer [39], and nut [38] to connect the power control unit [1] to the output lever assembly [36].

1) Coat the mating surfaces with grease, D00633, prior to assembly.

(c) Tighten the nut [38] to the lower end of the torque range 300 in-lb (33.9 N·m) - 410 in-lb (46.3 N·m).

1) Continue to tighten the nut [38] until the next castellation aligns with the hole in the bolt [34].

(d) Install the new pin [37].

(e) Move the reaction link [29] to put the power control unit [1] between the fork end of the reaction link [29].

(f) Connect the power control unit [1] to the reaction support assembly [27].

1) Install the bolt [14], washers [25], bushings [26], washers [28], and nut [24].

a) Coat the mating surfaces with grease, D00633, prior to assembly.

2) Tighten the nut [24] to 300 in-lb (33.9 N·m) - 350 in-lb (39.5 N·m).

3) Install the washer [21], nut [22] and new pin [23].

4) Tighten the nut [22] to the lower end of the torque range 170 in-lb (19.2 N·m) - 250 in-lb (28.2 N·m).

a) Continue to tighten the nut [22] until the next castellation aligns with the hole in the bolt [14].

(g) Apply sealant, A00247, to the bolt [15] and spacer [16] .

(h) Install the bolt [15], spacer [16], washers [17], washer [19], and nut [20] to connect the safety link [18] to the reaction support assembly [27].

(i) Connect the bracket assemblies to the power control unit [1] with bolts [30], washers [31], bolts [32], and washers [33].

(j) Apply grease, D00633, to the bolts [8] and nuts [12].

(k) Connect the pogos [7] to the power control unit [1] with bolts [8], washers [9], bushings [10], washers [11], nuts [12], and new pin [13].

1) Install the bolt [8] with the bolt head up.

(l) Tighten the nuts [12] to the lower end of the torque range 60 in-lb (6.8 N·m) - 90 in-lb (10.2 N·m).

1) Continue to tighten the nuts [12] until the next castellation aligns with the hole in the bolts [8].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-71-020-003

(5) Remove the caps and plugs from hydraulic lines [4], hydraulic lines [40], and the ports of the power control unit [1].

SUBTASK 27-11-71-420-003

(6) Connect hydraulic lines [4] to the inlet ports and hydraulic lines [40] to the outlet ports of the power control unit [1].

(a) Tighten the B-nuts on hydraulic lines [4] to 170 ±9 in-lb (19 ±1 N·m).

(b) Tighten the B-nuts on hydraulic lines [40] to 110 ±6 in-lb (12 ±1 N·m).

(c) Make sure that there is a minimum clearance of 0.75 in. (19.05 mm) between the flexible hose and the adjacent structure after you tighten the flexible hose.

SUBTASK 27-11-71-860-004

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(7) To pressurize hydraulic systems A and B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-11-71-860-005

(8) Operate the aileron control wheel to bleed the system.

SUBTASK 27-11-71-790-001

(9) Examine the connections of the power control unit [1] for leaks.

SUBTASK 27-11-71-860-006

(10) To remove power from hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-11-71-860-007

(11) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-71-820-002

(12) Do this task: Pogo and Power Control Unit (PCU) Adjustment, TASK 27-11-00-820-802.

SUBTASK 27-11-71-710-001

(13) Do this task: Aileron Response (Operational) Test, TASK 27-11-00-710-801.

SUBTASK 27-11-71-730-001

(14) Do this task: Aileron Travel Test, TASK 27-11-00-700-810.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AILERON FEEL AND CENTERING UNIT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the aileron feel and centering unit

(2) An installation of the aileron feel and centering unit.

(3) A removal of the aileron feel and centering unit cam follower bearing.

(4) An installation of the aileron feel and centering unit cam follower bearing.

B. The aileron feel and centering unit is referred to as the "centering unit" in this procedure.

E. Prepare for the Removal

SUBTASK 27-11-81-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-11-81-860-001

(2) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-11-81-480-002

(3) With a 8-9 Inch adjustable stainless steel clamp, STD-1112, install the straight edge, SPL-1671, across the top ends of the two control wheels to keep the control wheels in the neutral position.

SUBTASK 27-11-81-210-001

(4) Make sure that the aileron trim switches are at the zero trim position.

NOTE: The aileron trim switches are installed on the aft electronic control panel, P8, in the flight compartment.

SUBTASK 27-11-81-480-003

(5) Install the rig pin A/S-15, from the rigging pin kit, SPL-1585, in the aileron trim mechanism (Figure 401).

SUBTASK 27-11-81-480-004

(6) Install the rig pin A/S-4, from the rigging pin kit, SPL-1585, in the aileron bus drum (Figure 401).

SIA 001-014

SUBTASK 27-11-81-020-001

(7) Above the left main wheel well, do this task: Passenger Seat Removal, TASK 25-22-00-000-801.

SIA ALL

SUBTASK 27-11-81-020-002

(8) Above the left main wheel well, do this task: Carpet Removal, TASK 25-27-15-000-801.

SUBTASK 27-11-81-020-003

(9) Above the left main wheel well, do this task: Passenger Cabin Floor Panel Removal, TASK 53-21-00-000-801.

F. Aileron Feel and Centering Unit Removal

SUBTASK 27-11-81-020-004

(1) Remove the aileron feel and centering unit [11] (Figure 402).

(a) Remove the electrical connector from the aileron trim actuator [15].

(b) Loosen cable turnbuckle [3] for cable AB [1] and cable AA [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Remove the pin [32], nuts [61], washers [33], nuts [34], washers [35], bushings [36], washers [37], and bolt assembly [27] from the reaction links [29].

NOTE: The four bushings in the reaction support assemblies are free floating and concealed by the washers above and below them. They can be easily misplaced or lost during disassembly.

1) Discard the pin [32].

(d) Make sure that the four concealed bushings [36] are captured on the disassembly and retained for reassembly of the new support assembly [30] to the reaction link [29].

(e) Remove the nut [41], washer [42], washer [44], and bolt [45] to disconnect the autopilot actuator rod [43] from the aileron feel and centering unit [11].

(f) Record the position and orientation of the aileron position sensor rod [38] before removal as an aid for installation.

(g) Remove the bolt [46], washer [39], and nut [40] to remove the aileron position sensor rod [38] from the aileron feel and centering unit [11].

(h) Remove the pin [25], nuts [24], washers [23], bushings [21], washers [20], and bolts [19] to disconnect the pogos [22] from the lever assemblies [26].

1) Discard the pin [25].

(i) Disconnect the aileron feel and centering unit [11] from the airplane structure.

1) Remove the nut [4], washer [5], bushing [6], washer [7], and bolt [8].

2) Remove the nuts [16], washers [17], washers [31], bushings [28], washers [13] and bolts [14].

(j) Remove the aileron control quadrant [47] from the shaft:

1) Remove the cable AA [2] and cable AB [1] from the aileron control quadrant [47]:

a) Disconnect the left cable AA [2] and cable AB [1] at the cable turnbuckle [3].

b) Remove the nuts [59], washers [58], washers [62] (if applicable), and bolt [57] to remove retaining plates [60] from the aileron control quadrant [47].

c) Remove the cable AA [2] and cable AB [1] from the aileron control quadrant [47].

d) Secure the disconnected cable AA [2] and cable AB [1] with clamps.

e) Attach identification tags to the disconnected cables for easier assembly.

2) Remove the nut [51], washer [50], washer [49], and bolt [48] to disconnect the aileron control quadrant [47] from the shaft.

3) Remove the aileron control quadrant [47] from the shaft.

(k) Remove the nuts [56], washers [55], washer [53] and bolts [52] to disconnect the bearing housing [54] from the pressure deck.

(l) Carefully lower and remove the aileron feel and centering unit [11].

END OF TASK

F. Aileron Feel and Centering Unit Installation

SUBTASK 27-11-81-420-001

(1) Install the aileron feel and centering unit [11] (Figure 402).

(a) If the aileron control quadrant [47] is attached to the aileron feel and centering unit [11], remove the aileron control quadrant [47].

1) Remove and keep the nuts [51], washers [50], washers [49], and bolts [48].

(b) Make sure that the spherical race of the bearing housing [54] does not bind in the outer housing.

(c) Make sure that the maximum torque to turn the bearing housing [54] around the shaft is 3 in-lb (0.3 N·m) - 5 in-lb (0.6 N·m).

(d) Apply a fillet seal between the bearing housing [54] and pressure deck with sealant, A00247 (TASK 51-22-00-390-806).

(e) Put the aileron feel and centering unit [11] in position with the shaft through the pressure deck.

(f) Install the bolts [52], washers [53], washers [55], and nuts [56].

1) Tighten the nuts [56] to 20 in-lb (2.3 N·m) - 25 in-lb (2.8 N·m).

(g) Attach the reaction support assemblies [30] to the structure (View D, Figure 402).

1) Install the bolts [14], washers [13], bushings [28], washers [31], washers [17], and nuts [16].

a) Install the washers [31] between the lug and clevis.

NOTE: There must be a minimum of one washer on each side of the lug.

(h) Attach the aileron feel and centering unit [11] to the structure (View B, Figure 402).

1) Install the bolt [8], washer [7], bushing [6], washer [5], and nut [4].

2) Connect the electrical connector to the aileron trim actuator [15].

(i) Connect the reaction link [29] to the reaction support assembly [30].

1) Install the bolt assemblies [27], washers [35], bushings [36], washers [37], and nuts [34].

2) Tighten the nuts [34] to 300 in-lb (34 N·m) - 350 in-lb (40 N·m).

3) Install the washers [33], nuts [61], and new pin [32].

(j) Install the aileron control quadrant [47] on the shaft.

1) If it is necessary, apply sealant, A00247, on the disk of the aileron control quadrant [47].

2) Engage the aileron control quadrant [47] on the shaft.

a) Make sure that the tip of the aileron control quadrant [47] points in the outboard direction.

3) Install the bolts [48], washers [49], washers [50], and nuts [51].

(k) Connect the pogos [22] to the aileron feel and centering unit [11] with the bolts [19], washers [20], bushings [21], washers [23], nuts [24], and new pin [25].

1) Make sure that you install the bolts [19] and bushings [21] with the head up.

(l) Make sure that the top and bottom pogos [22] on each power control unit is at the center between the stops.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) If it is necessary to adjust the pogo [22], do this task: Pogo and Power Control Unit (PCU) Adjustment, TASK 27-11-00-820-802.

(m) Connect the autopilot actuator rod [43] with the bolt [45], washer [44], washer [42], and nut [41].

CAUTION

POSITION AND ORIENT AILERON POSITION SENSOR ROD AS RECORDED IN REMOVAL. UPON INSTALLATION OF THE AILERON POSITION SENSOR, PLACE THE AILERON POSITION SENSOR ROD AND CRANK SUCH THAT THEY ARE POINTED FORWARD RELATIVE TO THE FUSELAGE. AN INCORRECT INSTALLATION OF THE ROD CAN CAUSE DAMAGE TO EQUIPMENT WHEN AUTOPILOT IS ENGAGED.

(n) Connect the aileron position sensor rod [38] with bolt [46], washer [39], and nut [40] (Figure 402).

1) Adjust the aileron position sensor (TASK 22-11-29-820-801).

NOTE: Adjustment of the aileron position sensor is necessary for it to operate correctly.

SUBTASK 27-11-81-420-002

CAUTION

MAKE SURE THAT THE ROUTING OF CABLES AA AND AB IS CORRECT. IF THE ROUTING IS INCORRECT, IT CAN INCREASE FRICTION WHICH CAN CAUSE DAMAGE TO THE CABLES.

(2) Connect the cable AA [2] and cable AB [1] to the aileron control quadrant [47].

(a) Remove the identification tags from the cable AA [2] and cable AB [1] (Figure 402).

(b) Remove the clamps from the cable AA [2] and cable AB [1].

(c) Install the retaining plate [60] with bolts [57], washers [62] (if applicable), washers [58], and nuts [59] (TASK 20-10-93-400-801).

SUBTASK 27-11-81-420-003

(3) Connect the cable AA [2] and cable AB [1] to the cable turnbuckles [3].

(a) Tighten the cable turnbuckles [3] but keep the cable tension at zero.

SUBTASK 27-11-81-820-001

(4) Adjust the tension of cable AA [2] and cable AB [1], do this task: Aileron Cables Adjustment, TASK 27-11-00-820-801.

SUBTASK 27-11-81-080-001

(5) Remove the clamp and the straight edge, SPL-1671, from the two aileron control wheels.

SUBTASK 27-11-81-480-005

(6) Make sure that the rig pin A/S-15, from the rigging pin kit, SPL-1585, goes through the two walls of the aileron trim mechanism.

SUBTASK 27-11-81-080-002

(7) Remove the rig pin A/S-4, from the rigging pin kit, SPL-1585, from the aileron bus drum.

SUBTASK 27-11-81-400-001

(8) Do this task: Passenger Cabin Floor Panel Installation, TASK 53-21-00-400-801.

SUBTASK 27-11-81-400-002

(9) Do this task: Carpet - Installation, TASK 25-27-15-400-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SIA 001-014

SUBTASK 27-11-81-400-003

(10) Do this task: Passenger Seat Installation, TASK 25-22-00-400-801.

SIA ALL

SUBTASK 27-11-81-860-002

(11) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-81-820-002

(12) Do this task: Aileron Feel and Centering Unit Adjustment, TASK 27-11-00-820-805.

SUBTASK 27-11-81-820-003

(13) Do this task: Pogo and Power Control Unit (PCU) Adjustment, TASK 27-11-00-820-802.

SUBTASK 27-11-81-730-001

(14) Do this task: Aileron Control Wheel Force Test, TASK 27-11-00-700-805.

SUBTASK 27-11-81-730-002

(15) Do this task: Manual Reversion Control Friction Test, TASK 27-11-00-700-803.

SUBTASK 27-11-81-730-003

(16) Do this task: Aileron Travel Test, TASK 27-11-00-700-810.

SUBTASK 27-11-81-820-004

(17) Do this task: Autopilot Aileron Actuator Adjustment, TASK 22-11-25-820-801.

SUBTASK 27-11-81-820-005

(18) Do this task: Aileron Position Sensor Adjustment, TASK 22-11-29-820-801.

——— END OF TASK ———

TASK 27-11-81-000-802

4. Cam Follower Bearing Removal

(Figure 403)

A. References

Reference	Title

32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left

C. Prepare for Removal

SUBTASK 27-11-81-490-001

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED IN ALL OF THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-81-864-001

(2) Make sure hydraulic pressure is removed. If necessary, do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

D. Cam Follower Bearing Removal

SUBTASK 27-11-81-030-001

(1) Loosen the nuts [70] to relieve the tension on the springs [72].

NOTE: Record the number of times you turn the nuts [70]. This will make it easier to adjust the centering unit after installation.

SUBTASK 27-11-81-020-005

(2) Remove the cotter pins [75] from the pin [73].

(a) Discard the cotter pins [75].

SUBTASK 27-11-81-020-006

(3) Remove the pin [73] and washers [74] from the arm [85].

SUBTASK 27-11-81-030-002

(4) Disconnect the springs [72] from the eye bolts [71].

SUBTASK 27-11-81-020-007

(5) Remove the cotter pin [83], bolt [80], washer [81], washers [87], washer [88] (if installed), washer [89], and nut [82] from the arm [85] and support [86].

(a) Discard the cotter pin [83].

SUBTASK 27-11-81-020-008

(6) Remove the arm [85] from the support [86].

SUBTASK 27-11-81-020-009

(7) Remove the cotter pin [79], bolt [76], washer [77], and nut [78] from the arm [85].

(a) Discard the cotter pin [79].

SUBTASK 27-11-81-020-010

(8) Remove the bearing [84] from the arm [85].

D. Installation of the Cam Follower Bearing

SUBTASK 27-11-81-420-004

(1) Put the bearing [84] in place in the arm [85] and install the bolt [76], washer [77], nut [78], and new cotter pin [79].

SUBTASK 27-11-81-420-005

(2) Install the arm [85] in the support [86].

(a) Put the arm [85] in its position in the support [86].

(b) Put the washer [88], washer [81], and washers [87] between the arm [85] and support [86] as necessary to achieve the cam roller dimension of 0.1025 ±0.0300 in. (2.6 ±0.8 mm).

(c) Install the bolt [80], washer [89], and nut [82].

1) If necessary, install the unused washers [81], washers [87], and washers [88] under the head of the bolt [80] to align the cotter pin [83] with the hole in the end of the bolt [80].

(d) Install the new cotter pin [83].

SUBTASK 27-11-81-430-001

(3) Connect the springs [72] to the eye bolts [71].

SUBTASK 27-11-81-420-006

(4) With the springs [72] in place, install the pin [73], washers [74], and new cotter pins [75] on the arm [85] so that the springs [72] are connected to the pin [73].

SUBTASK 27-11-81-430-002

(5) Tighten the nuts [70] to the pre-removal tension.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-81-212-001

(6) Make sure that the bearing [84] is in the center of the cam in the support [86].

SUBTASK 27-11-81-863-001

(7) Do this task: Pressure to the Aileron Hydraulic Systems A and B - Activation, TASK 27-11-00-860-802.

SUBTASK 27-11-81-820-006

(8) Do this task: Aileron Feel and Centering Unit Adjustment, TASK 27-11-00-820-805.

SUBTASK 27-11-81-720-001

D. Trim Control Switches Installation

SUBTASK 27-11-94-420-002

(1) Do these steps to install the aileron trim switches [11]:

(a) Connect electrical wires on the aileron trim switches [11].

(b) Install locknuts [18] and washers [19] on the aileron trim switches [11].

(c) Put the aileron trim switches [11] up through the baseplate [6].

(d) Install the washers [20] and locknuts [21] on the aileron trim switches [11].

SUBTASK 27-11-94-420-003

(2) Do these steps to install the rudder trim switch [9]:

(a) Install the shims [16] on the rudder trim switch [9].

1) Use the necessary number of shims [16] to get a dimension of 1.156 in. (29.362 mm)-1.169 in. (29.693 mm) from the top of the baseplate [6] to the end of the rudder trim switch shaft [5].

(b) Put the rudder trim switch [9] up through the baseplate [6].

(c) Install the washer [17], washer [8], and locknut [7] on the rudder trim switch shaft [5].

(d) Tighten the locknut [7] to 36 in-lb (4 N·m)-40 in-lb (5 N·m).

(e) Bend the tab on the washer [8] over the flat of the locknut [7].

NOTE: Small deformation of the star washer [8] is permitted.

SUBTASK 27-11-94-420-004

(3) Install the lightplate [1] with fasteners [4].

SUBTASK 27-11-94-420-005

(4) Do these steps to install the rudder trim knob [2]:

(a) Make sure the surfaces between the rudder trim knob [2] and the lightplate [1] are free of contaminates.

(b) Put the rudder trim knob [2] fully down on the rudder trim switch shaft [5].

(c) Make sure the rudder trim knob [2] is 0.010 in. (0.254 mm)–0.050 in. (1.270 mm) from the top of the lightplate [1].

(d) Install the set screws [3] on the rudder trim knob [2].

(e) Tighten the set screws [3] on the rudder trim knob [2].

SUBTASK 27-11-94-420-006

(5) Do this task: Aileron and Rudder Trim Control Module Installation, TASK 27-11-94-400-801.

SUBTASK 27-11-94-730-002

(6) If you replaced the rudder trim switch [9], do this task: Rudder Trim System Test, TASK 27-21-00-700-807.

SUBTASK 27-11-94-730-003

(7) If you replaced the aileron trim switches [11], do this task: Aileron Trim Response Test, TASK 27-11-00-730-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-11-94-000-803

6. Rudder Trim Indicator Removal

(Figure 401)

A. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Prepare for the Removal

SUBTASK 27-11-94-860-003

(1) Make sure that the rudder is in the neutral position.

SUBTASK 27-11-94-860-004

(2) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	16	C00788	FLIGHT CONTROL TRIM IND RUD
D	19	C00787	FLIGHT CONTROL TRIM CONT RUD

C. Rudder Trim Indicator Removal

SUBTASK 27-11-94-020-007

(1) Do these tasks to remove the rudder trim indicator [14]:

(a) Remove the fasteners [13] that connect the rudder trim indicator [14] to the baseplate [6].

(b) Disconnect the electrical connector from the rudder trim indicator [14].

(c) Remove the rudder trim indicator [14] from the baseplate [6].

——— END OF TASK ———

TASK 27-11-94-400-803

7. Rudder Trim Indicator Installation

(Figure 401)

A. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
14	Rudder trim indicator	27-11-94-02-020	SIA ALL

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Rudder Trim Indicator Installation

SUBTASK 27-11-94-420-007

(1) Do these steps to install the rudder trim indicator [14]:

(a) Connect the electrical connector to the rudder trim indicator [14].

(b) Put the rudder trim indicator [14] on the baseplate [6].

(c) Install the fasteners [13] to attach the rudder trim indicator [14] to the baseplate [6].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-11-94-860-005

(2) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	16	C00788	FLIGHT CONTROL TRIM IND RUD
D	19	C00787	FLIGHT CONTROL TRIM CONT RUD

SUBTASK 27-11-94-280-001

(3) Do this check to make sure that the rudder trim indicator [14] is in the null position.

(a) With the rudder in the neutral position, make sure the rudder trim indicator [14] is at the zero position.

SUBTASK 27-11-94-820-001

(4) If the rudder trim indicator [14] is not at the null position, do these steps to adjust the rudder trim indicator [14]:

(a) Remove the fasteners [13] that attach the rudder trim indicator [14] to the baseplate [6].

NOTE: Do not disconnect the electrical connector.

(b) Turn the adjustment screw on the bottom of the rudder trim indicator [14] until the indicator is at 0.0 ±0.1 unit.

(c) Install the rudder trim indicator [14] to the baseplate [6] with the fasteners [13].

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

RUDDER AND RUDDER TRIM CONTROL SYSTEM - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Rudder Hydraulic System A, B, or Standby Pressurization

(a) Use this task to pressurize either hydraulic system A or B, both hydraulic systems A and B, or to pressurize the standby hydraulic system.

(2) Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization

(3) Pressure from the Rudder Hydraulic Systems A, B and Standby - Deactivation.

(4) Pressure to the Rudder Hydraulic Systems A, B, and Standby - Activation.

B. Hydraulic systems A, B, and standby must have pressure removed before maintenance is done on the rudder control system. This is to prevent injury to persons because of accidental operation of the control system while you do maintenance. You must be careful to put maintenance stands and equipment away from control surface travel.

C. Electric pump 1 pressurizes the hydraulic system B and electric pump 2 pressurizes the hydraulic system A. Electric pump 1 heat exchanger is installed in the fuel tank 2. Electric pump 2 heat exchanger is installed in the fuel tank 1.

D. This procedure operates the electric hydraulic system A or B pumps to pressurize the hydraulic systems A and B. Pressurization of the hydraulic systems with the engine-driven hydraulic pumps is not included in this procedure.

TASK 27-21-00-800-801

2. Rudder Hydraulic System A, B, or Standby Pressurization

(Figure 201)

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

C. Procedure

NOTE: This procedure supply the steps to pressurize either hydraulic system A or B, both systems A and B, or to pressurize the standby hydraulic system.

SUBTASK 27-21-00-860-001

(1) Do this task: Supply Electrical Power, TASK 24-22-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-860-002

CAUTION

DO NOT OPERATE SYSTEM A OR B HYDRAULIC PUMPS FOR MORE THAN TWO MINUTES WITHOUT FUEL IN THE FUEL TANKS. THE NO. 1 (FOR SYSTEM A) AND NO. 2 (FOR SYSTEM B) FUEL TANKS MUST HAVE A MINIMUM OF 250 GALLONS (1675 POUNDS/760 KILOGRAMS) OF FUEL IN THEM. IF THERE IS NOT SUFFICIENT FUEL IN THE FUEL TANKS, THE HYDRAULIC FLUID WILL BECOME TOO HOT.

(2) Make sure the No. 1 and No. 2 fuel tanks each have 250 gal (946 l) (1675 lb (760 kg)) of fuel in them.

SUBTASK 27-21-00-210-001

(3) Make sure the hydraulic reservoirs are full. To fill the reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-21-00-860-003

(4) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-21-00-860-004

(5) Set the parking brake.

SUBTASK 27-21-00-480-001

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-21-00-860-005

WARNING

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(7) Pressurize the rudder hydraulic system A, B or Standby (Figure 201):

(a) Set the ELEC 2, HYD PUMPS A or ELEC 1, HYD PUMPS B switch on the forward overhead panel to the ON position.

NOTE: Intermittent system A or B electric pump operation must be kept to a limit of five starts in a 5 minutes period. After the fifth start, operate the pump for more than 5 minutes or turn the pump off for a minimum of 5 minutes.

(b) For the hydraulic system A pressurization, set the FLT CONTROL A switch on the forward overhead panel to the ON position.

(c) For the hydraulic system B pressurization, set the FLT CONTROL B switch on the forward overhead panel to the ON position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) For the standby hydraulic system, set the FLT CONTROL A or B switch on the forward overhead panel to the STDBY RUD position.

TASK 27-21-00-840-801

3. Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization

(Figure 201)

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

B. Procedure

SUBTASK 27-21-00-860-006

(1) Set the ELEC 2, HYD PUMPS A and the ELEC 1, HYD PUMPS B switches on the forward overhead panel to the OFF position.

SUBTASK 27-21-00-860-007

(2) Set the FLT CONTROL A and B switches on the forward overhead panel to the OFF position.

——— END OF TASK ———

TASK 27-21-00-800-802

4. Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation

(Figure 201, Figure 202, Figure 203)

A. General

(1) This procedure removes pressure from the rudder hydraulic systems A, B, and Standby before you do maintenance on the rudder and rudder trim control system.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Procedure

SUBTASK 27-21-00-860-008

(1) Set the FLT CONTROL A and B switches on the forward overhead panel to the OFF position.

SUBTASK 27-21-00-860-009

(2) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-21-00-860-010

(3) Set the ELEC 2, HYD PUMPS A and the ELEC 1, HYD PUMPS B switches on the forward overhead panel to the OFF position.

SUBTASK 27-21-00-870-001

(4) Operate the rudder pedals or the control column to decrease the remaining hydraulic system pressure.

SUBTASK 27-21-00-860-011

(5) If it is necessary to open a hydraulic line, you must release pressure from the reservoir for the applicable hydraulic system. To release it, do this task: Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

SUBTASK 27-21-00-480-002

(6) Install the flight controls ground locks to the flight controls shutoff valves (Figure 202, Figure 203):

(a) Disconnect the electrical connector from the flight controls shutoff valve at the flight controls hydraulic modules A and B.

(b) Disconnect the electrical connector from the standby flight controls shutoff valve at the standby flight controls hydraulic module.

(c) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(d) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

(e) Put the manual override lever at the flight control A and B shutoff valves in the position 2 (OFF position). Leave the Standby valve in the position 1 (OFF position).

NOTE: In normal condition, the A and B valves are in position 1 (ON position) and the Standby valve is in position 1 (OFF position).

(f) Install the lock, SPL-1675 on the three flight controls shutoff valves.

1) Install the lockpins.

F. Rudder and Rudder Trim Control System - Tryout

NOTE: This tryout is to make sure the Rudder and Rudder Trim Control System is in a zero energy state.

SUBTASK 27-21-00-710-001

(1) In the flight deck, push the Captain's or First Officer's rudder pedals to their stops, left and right.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Make sure that the rudder control surface does not move when you continue to push the rudder pedals.

SUBTASK 27-21-00-710-002

(2) Operate the rudder trim knob on the control stand panel, P8, to simulate the rudder function.

(a) Make sure that the rudder control surface does not move.

F. Pressure to the Rudder Systems A, B, and Standby Activation

SUBTASK 27-21-00-080-002

(1) Remove the flight control ground locks from the flight control shutoff valves (Figure 202, Figure 203):

(a) Remove the lockpins.

(b) Remove the lock, SPL-1675, from the three flight controls shutoff valves.

(c) Put the manual override lever at the three flight controls shutoff valves A and B in the position 1 (ON position).

(d) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

1) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

2) If there was corrosion, correct the problem (SWPM 20-60-03).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Apply D5026NS or ZC-026 compound, G50171, to the connector (SWPM 20-60-03).

(f) Connect the electrical connector to the flight controls shutoff valve at the flight controls hydraulic modules A and B.

(g) Connect the electrical connector to the flight controls shutoff valve at the standby flight controls hydraulic module.

SUBTASK 27-21-00-860-110

(2) Set the ELEC 2, HYD PUMPS A and the ELEC 1, HYD PUMPS B switches on the forward overhead panel to the ON position.

SUBTASK 27-21-00-860-012

(3) Set the FLT CONTROL A and B switches on the forward overhead panel to the ON position.

SUBTASK 27-21-00-860-013

(4) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD

SUBTASK 27-21-00-860-014

(5) If it is necessary to service the hydraulic reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

RUDDER AND RUDDER TRIM CONTROL SYSTEM - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) Rudder Forward Quadrant Adjustment - Use this task to adjust the rudder forward quadrant.

(2) Rudder Pedals Adjustment - Use this task to adjust the rudder pedals.

(3) Rudder Control Cables RA and RB Adjustment - Use this task to adjust the rudder control cables. This task also includes steps to adjust the rudder forward quadrant and rudder pedals.

(4) Control Rod for Main Rudder Power Control Unit Adjustment - Use this task to adjust the control rod for the main rudder power control unit.

(5) Control Rod for Standby Rudder Power Control Unit Adjustment - Use this test to adjust the control rod for the standby rudder power control unit.

(6) Rudder Pedal Adjustment and Limit Travel Test - Use this test make sure the rudder pedals can move through their full travel and the pedal adjustment crank operates correctly.

(7) Rudder Hinge Bearing and PCU Freeplay - Use this task to do a check of the freeplay of the rudder control system.

(8) Rudder Centering Test - Use this test to make sure the rudder is in its center position.

(9) Rudder Pedal Forces Test - Use this test to make sure the rudder pedals operate with the correct force.

(10) Rudder Travel Test - Use this test to make sure the rudder operates correctly.

(11) Standby Rudder Power Control Unit Deadband Test - Use this test to make sure the standby rudder power control unit is in the correct rigged position.

(12) Rudder Trim System Test - Use this test to make sure the rudder system operates correctly.

(13) Wheel to Rudder Interconnect System Test - Use this test to make sure the wheel to rudder function of the standby rudder power control unit operates correctly.

(14) Rudder Hinge Friction Test - Use this task to do a check of the rudder hinge for excessive friction.

(15) Main Rudder PCU Internal Hydraulic Leakage Test - Use this task to do a check for excessive internal hydraulic leakage in the main rudder PCU.

(16) Rudder Override Operational Test - Use this task to verify that the override mechanisms on the torque tube are operational.

(17) Rudder Main PCU Force Fight Monitor Test - Use this task to verify that the STBY RUD ON light on the overhead panel P5-3 is functional.

TASK 27-21-00-820-801

2. Rudder Forward Quadrant Adjustment

(Figure 501, Figure 502)

A. General

(1) Use this test to make sure the rudder forward quadrant is adjusted correctly. After you adjust the rudder forward quadrant, you must re-adjust the rudder pedals and control cables.

(a) Do this task: Nose Wheel Well Access Panels Removal, TASK 53-14-01-020-801.

G. Rudder Forward Quadrant Adjustment

SUBTASK 27-21-00-710-003

(1) Do the rudder forward quadrant adjustment:

(a) Do these steps to set the jackshaft yoke to the middle position:

NOTE: The middle position of the jackshaft yoke is where the number of turns of the shaft from the full forward and full aft adjustment are the same.

1) Turn the rudder pedal adjustment crank to move the rudder pedals full forward.

2) Turn the rudder pedal adjustment crank to move the rudder pedals full aft.

a) Record the number of turns.

3) Turn the rudder pedal adjustment crank half the recorded number of turns forward.

(b) Install the rig pin R-3 from the rigging pin kit, SPL-1585, in the forward hole in the captain's rudder forward quadrant.

(c) Install the rig pin R-4 from the rigging pin kit, SPL-1585, in the forward hole in the first officer's rudder forward quadrant.

(d) If you can not install rig pins R-3 or R-4, adjust the bus rod [6]:

1) Turn the turnbuckles to release the tension of rudder control cables RA and RB.

2) Remove the pin [5], nut [4], washer [3], spacer [2], bolt [1] to disconnect the bus rod [6] from rudder forward quadrant.

a) Discard the pin [5].

3) Install the rig pin R-3 from the rigging pin kit, SPL-1585, in the forward hole in the captain's rudder forward quadrant.

4) Install the rig pin R-4 from the rigging pin kit, SPL-1585, in the forward hole in the first officer's rudder forward quadrant.

5) Adjust the bus rod [6] until you can install the bolt [1] through the rudder forward quadrant.

6) Install the spacer [2], washer [3], nut [4], and new pin [5].

7) If necessary, adjust the brake pushrod [12] to the nose wheel steering. To adjust them, do this task: Nose Wheel Steering System Adjustment, TASK 32-51-00-820-805.

8) Make sure that the control cables RA and RB are at the correct tension (TASK 27-09-14-860-802).

(e) Make sure that the clearance between the cable guard blocks and the rudder forward quadrants is 0.030 in. (0.76 mm) - 0.050 in. (1.27 mm) through full travel.

(f) Remove the rig pins R-3 and R-4.

(g) Remove the nut [45], washer [49], washer [48], and bolt assembly [47] to disconnect the standby rudder PCU standby rudder PCU control rod [34] from the rudder control torque tube [33] (Figure 502).

(h) For each main rudder PCU control rod do this task:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Remove the nut [45], washer [44], washer [43] and bolt assembly [42] to disconnect the two main rudder PCU control rod [36] from the rudder control torque tube [33] (Figure 502).

(i) Move the captain's rudder forward quadrant until you can install the rig pin R-3 in the aft rig pin hole.

(j) Make sure that there is no clearance between the captain's forward quadrant and quadrant stop. Add or subtract shims as needed to bring the clearance to zero.

(k) Remove the rig pin R-3.

(l) Move the first officer's rudder forward quadrant until you can install the rig pin R-4 in the aft rig pin hole.

(m) Make sure that there is no clearance between the first officer's forward quadrant and quadrant stop. Add or subtract shims as needed to bring the clearance to zero.

(n) Remove the rig pin R-4.

(o) Connect the main rudder PCU control rod [36] to the center crank [41].

1) Install the bolt assembly [42] with the bolt head end up and washer [43].

2) Tighten the outer bolt of the bolt assembly [42] to 70 in-lb (7.9 N·m) - 85 in-lb (9.6 N·m).

3) Install the washer [44] and nut [45].

CAUTION DO NOT TIGHTEN THE OUTER BOLT OF THE BOLT ASSEMBLY [42] AFTER YOU TIGHTEN THE NUT [45]. DAMAGE TO EQUIPMENT CAN OCCUR.

4) Tighten the nut [45] to 25 in-lb (2.8 N·m) - 30 in-lb (3.4 N·m).

(p) Install the bolt assembly [47] with the bolt head end up, washer [48] (under bolt), washer [49] (under nut), and nut [50] to connect the standby rudder PCU control rod [34] to the upper crank [46].

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-00-820-001

(1) Do this task: Rudder Pedals Adjustment, TASK 27-21-00-820-802.

SUBTASK 27-21-00-820-002

(2) Do this task: Control Rod for Main Rudder Power Control Unit Adjustment, TASK 27-21-00-820-804.

(a) Do this task: Nose Wheel Well Access Panels Removal, TASK 53-14-01-020-801.

G. Rudder Pedals Adjustment

SUBTASK 27-21-00-710-004

(1) Do the rudder pedals adjustment:

(a) Install the rig pin R-5 from the rigging pin kit, SPL-1585, in the rudder feel and centering unit (Figure 502).

(b) Install the rig pin R-3 from the rigging pin kit, SPL-1585, in the captain's rudder forward quadrant (Figure 501).

(c) Install the rig pin R-4 from the rigging pin kit, SPL-1585, in the first officer's rudder forward quadrant (Figure 501).

(d) Do these steps to set the jackshaft yoke to the middle position:

NOTE: The middle position of the jackshaft yoke is where the number of turns of the shaft from the full forward and full aft adjustment are the same.

1) Turn the rudder pedal adjustment crank to move the rudder pedals full forward.

2) Turn the rudder pedal adjustment crank to move the rudder pedals full aft.

a) Record the number of turns.

3) Turn the rudder pedal adjustment crank half the recorded number of turns forward.

(e) Make sure that you can install these rig pins from the rigging pin kit, SPL-1585:

1) Rig pin R-1 on the captain's rudder pedals.

2) Rig pin R-2 on the first officer's rudder pedals.

(f) If you can not install the rig pins R-1 and R-2 freely, then do these steps:

1) Determine which pedal arm is out-of-line with the rigging pin hole.

a) If you have problem with installing rig pin R-1, then adjust the captain's side.

b) If you have problem with installing rig pin R-2, then adjust the first officer's side.

c) If you have problem with installing both rig pins R-1 and R-2, then adjust both sides.

2) Loosen both jamnut [8] on the rudder pedal tension rod [7].

3) Remove the bolt [9], washer [10] and nut [11] to disconnect the rudder pedal tension rod [7] at the forward end.

4) Adjust the length of rudder pedal tension rod [7] until you can install rig pin R-1 or R-2 easily.

a) Turn the rod end or rod body of the rudder pedal tension rod [7] as necessary to adjust the length.

b) Keep the lube fitting on the rudder pedal tension rod [7] down.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

5) Install the bolt [9], washer [10] and nut [11] to connect the rudder pedal tension rod [7].

6) Tighten the jamnut [8].

7) Make sure you can see the threads through the holes on the rudder pedal tension rod [7].

(g) Remove the rig pins R-1, R-2, R-3, R-4, and R-5.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-00-410-002

(1) Close these access panels:

SUBTASK 27-21-00-860-018

(3) Do this task: Pressure to the Rudder Systems A, B, and Standby - Activation, TASK 27-21-00-840-802.

——— END OF TASK ———

TASK 27-21-00-820-803

4. Rudder Control Cables RA and RB Adjustment

(Figure 501 and Figure 502)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this task to adjust the rudder control cables RA and RB. This task includes steps to adjust the rudder forward quadrant and rudder pedals.

(2) Before you do cable adjustment, permit a minimum of one hour at a constant ambient temperature of ± 5 degrees F (± 2.8 degrees C) for the airframe temperature to become stable.

(a) It is recommended to do the cable adjustments in a controlled environment such as a hangar.

NOTE: Direct sunlight on the airframe will cause the cable readings to be inaccurate.

(b) All temperature readings will be taken as ambient outside but adjacent to the applicable area of the airframe.

(c) The cable tension values will not be correct when there are temperature differences along the cable run.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) It is recommended that airplanes supplied with the cables that contain higher zinc coating (Grade D or Grade K) be re-tensioned 3 to 4 months into service. This will bring the tension of the control cables within the desired range. After the cables are re-tensioned, the high zinc cables (Grade D or Grade K) will continue to relax at a rate that is equivalent to the Grade B cables. To identify the grade of the cable, refer to: Control Cable Grades and Diameters/Table 27-11-00-993-802.

(e) It is recommended that cable assemblies on each side of a cable loop be replaced at the same time using the same cable grade of material in order to minimize asymmetric relaxation.

G. Rudder Control Cables RA and RB Adjustment

SUBTASK 27-21-00-820-003

(1) If you install new rudder control cables RA and RB, do these steps to stretch the cables (Figure 502):

(a) Operate the rudder trim indicator until you can install the rig pin R-5 in the rudder feel and centering unit easily.

(b) Adjust the turnbuckles in the cables RA and RB to get a tension of 300 lbf (1334 N) ± 20 lbf (89 N) each.

1) Make sure that you can install the rig pin R-3 from the rigging pin kit, SPL-1585, freely in the captain's rudder forward quadrant.

(c) Remove the rig pins R-3 and R-5.

(d) Adjust the pressure seals at the aft pressure bulkhead with the control cables RA and RB, do this task: Location of the Flight Control Cables Air Pressure Seals, TASK 27-09-17-860-801.

(e) Make sure that the cables RA and RB do not touch the pulley or quadrant flanges for the total cable travel.

(f) Make sure that the cables RA and RB are in less than 2 degrees of the plane of the pulley or the quadrant.

(g) Make sure that you install the cables through the grommets in the structure.

(h) Make sure that the cables do not move from the neutral rig position.

(i) Make sure that the pulleys turn freely with sufficient clearance with the guards.

(j) Remove the nut [50], washer [49], washer [48], and bolt assembly [47] to disconnect the standby rudder PCU control rod [34] from the rudder control torque tube [33].

(k) Remove the nut [45], washer [44], washer [43], and bolt assembly [42] to disconnect the main rudder PCU control rod [36] from the rudder control torque tube [33].

(l) Move the rudder pedals 25 times through full travel.

(m) Connect the main rudder PCU control rod [36] to the center crank [41].

1) Install the bolt assembly [42] with the bolt head end up and washer [43].

2) Torque the outer bolt of the bolt assembly [42] to 70 in-lb (7.9 N·m) - 85 in-lb (9.6 N·m).

3) Install the washer [44] and nut [45].

CAUTION DO NOT TIGHTEN THE OUTER BOLT OF THE BOLT ASSEMBLY [42] AFTER YOU TIGHTEN THE NUT [45]. DAMAGE TO EQUIPMENT CAN OCCUR.

4) Torque the nut [45] to 25 in-lb (2.8 N·m) - 30 in-lb (3.4 N·m).

(n) Install the bolt assembly [47] with the bolt head end up, washer [48] (under bolt), washer [49] (under nut), and nut [50] to connect the standby rudder PCU control rod [34] to the upper crank [46].

SUBTASK 27-21-00-820-004

(2) Adjust the control cables RA and RB to their correct cable rigging tension.

(a) Use a low tension cable tensiometer, COM-1553, or high tension cable tensiometer, COM-1554, to measure the cable tension.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Install the rig pin R-5 from the rigging pin kit, SPL-1585, in the rudder feel and centering unit.

(c) Adjust the turnbuckles in the cables RA and RB to get the cable tensions (TASK 27-09-14-860-802).

NOTE: Adjust the tensions close to the maximum values in the table. The cables will stretch over a period of time.

(d) Make sure that you can install these rig pins from the rigging pin kit, SPL-1585 (Figure 501):

1) Rig pin R-3 in the captain's rudder forward quadrant.
2) Rig pin R-4 in the first officer's rudder forward quadrant.

(e) If you can not install the rig pins R-3 and R-4 freely, do these steps:

1) Turn the turnbuckles to release the tension of the control cables RA and RB.
2) Remove the pin [5], nut [4], washer [3], spacer [2], and bolt [1] to disconnect one end of the bus rod [6] from rudder forward quadrant.
   a) Discard the pin [5].
3) Install the rig pins R-3 in the captain's rudder forward quadrant.
4) Install the rig pin R-4 in the first officer's rudder forward quadrant.
5) Adjust the bus rod [6] until you can install the bolt [1] easily.
6) Install the bolt [1], spacer [2], washer [3], nut [4], and new pin [5] to connect the bus rod [6] to the rudder forward quadrant.
7) Adjust the turnbuckles on the control cables RA and RB to get the correct tensions (TASK 27-09-14-860-802).

(f) Do these steps to adjust the captain's and first officer's pedals to the neutral adjustment position:

NOTE: The middle position of the rudder pedals is where the number of turns of the shaft from the full forward and full aft adjustment are the same.

1) Turn the rudder pedal adjustment crank to move the rudder pedals full forward.
2) Turn the rudder pedal adjustment crank to move the rudder pedals full aft.
   a) Record the number of turns.
3) Turn the rudder pedal adjustment crank half the number of turns forward.

(g) Install these rig pins from the rigging pin kit, SPL-1585:

1) Rig pin R-1 on the captain's rudder pedals.
2) Rig pin R-2 on the first officer's rudder pedals.

(h) If you can not install the rig pin R-1 or R-2 freely, do these steps:

1) Loosen the jamnut [8] from the applicable rudder pedal tension rod [7].

   NOTE: If you can not install rig pin R-1, adjust the captain's rudder pedal tension rods. If you can not install the rig pin R-2, adjust the first officer's rudder pedal tension rods. You are only required to adjust the applicable rudder pedal tension rod that is out of rig.

2) Remove the nut [11], washer [10], bolt [9] from the forward end of the rudder pedal tension rod [7].
3) Adjust the rudder pedal tension rod [7] until you can install the applicable rig pin freely.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure that you keep the lube fitting on the rudder pedal tension rod [7] in the down direction.

4) Install the bolt [9], washer [10], and nut [11].

5) Tighten the jamnut [8].

(i) Do a check on the rudder forward quadrant bus rod [6] and rudder pedal tension rod [7].

1) Make sure that the rod ends cover at least 50 percent of the inspection holes at two end of the rods (10 locations).

(j) Remove the rig pins R-1, R-2, R-3, R-4, and R-5.

(k) Operate the rudder pedals through one full travel cycle.

1) Make sure that the control cables RA and RB are at the correct tensions (TASK 27-09-14-860-802).

(l) Install the locking clips on the turnbuckles.

H. Put the Airplane Back To Its Usual Condition

SUBTASK 27-21-00-010-008

(1) Close these access panels:

(2) To get access to the main PCU, do this step:

Open this access panel:

Number	Name/Location
324DL	Trailing Edge Access

SUBTASK 27-21-00-010-011

(3) To get access to the rudder feel and centering unit, do this step:

Open this access panel:

Number	Name/Location
324CL	Vertical Fin, Access

SUBTASK 27-21-00-820-005

(4) Manually hold the rudder in the neutral position over the index plate.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-840-002

(5) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	15	C01628	FORCE FIGHT MONITOR

SUBTASK 27-21-00-860-025

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Pressurize the rudder hydraulic systems A and B. To pressurize them, do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

(a) Move the rudder pedals to bleed the main rudder PCU until the movement of the rudder is smooth.

SUBTASK 27-21-00-980-001

(7) Make sure that the rudder pedals are in the neutral position.

(a) If it is necessary, tap on the rudder pedals lightly to put the rudder pedals to the neutral position.

SUBTASK 27-21-00-480-004

(8) Install rig pin R-5 from the rigging pin kit, SPL-1585, in the rudder feel and centering unit.

(a) Make sure that you can install the rig pin R-5 freely. If you cannot install the rig pin freely, adjust the rudder trim actuator:

1) Jiggle and release the feel and centering unit input arm to make sure that the system is centered.

2) Move the rudder trim knob until rig pin R-5 can be installed freely.

(9) Make sure that the rudder trim indicator is at 0.00 +/- 0.25 unit of trim.

(a) If indicator is not at 0.00 +/- 0.25 unit of trim, adjust the trim indicator per AILERON/RUDDER TRIM CONTROL MODULE, SUBJECT 27-11-94.

SUBTASK 27-21-00-860-026

(10) Set the FLT CONTROL A and B switches to OFF.

SUBTASK 27-21-00-480-005

(11) Install the rig pins R-3, and R-4 (Figure 501).

(a) If only one rig pin can be inserted freely, adjust the bus rod, do this task: Rudder Forward Quadrant Adjustment, TASK 27-21-00-820-801.

(b) If both rig pins cannot be installed freely, adjust the control cables RA and RB, do this task: Rudder Control Cables RA and RB Adjustment, TASK 27-21-00-820-803.

(12) Install the rig pins R-1 and R-2.

(a) If you cannot install the rig pins freely, adjust the pedal tension rods, do this task: Rudder Pedals Adjustment, TASK 27-21-00-820-802.

SUBTASK 27-21-00-080-003

(13) Remove the rig pins R-1, R-2, R-3, R-4, and R-5.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Control Rods for the Main PCU Adjustment

SUBTASK 27-21-00-860-027

> **WARNING** MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Set the FLT CONTROL B switch to ON.

SUBTASK 27-21-00-210-002

(2) Make sure that the YAW DAMPER switch on the forward overhead panel, P5-3, is in the OFF position and the YAW DAMPER light is illuminated.

SUBTASK 27-21-00-860-028

(3) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	19	C00787	FLIGHT CONTROL TRIM CONT RUD

Do not change the position of the rudder trim knob until the Main PCU control rods and the Standby PCU control rod have been adjusted.

SUBTASK 27-21-00-820-006

(4) Do these steps to put the rudder trailing edge to the left of the index plate:

NOTE: Always start the adjustment of the control rod with the rudder at this position.

(a) Loosen the clamp nut [35] on the lower main rudder PCU control rod [36] until you can rotate the sleeve [37].

(b) Rotate the sleeve [37] until the rudder trailing edge is between 0.30 in. (7.6 mm) to 0.50 in. (12.7 mm) to the left of the index plate.

NOTE: One full rotation of the sleeve will move the rudder trailing edge 0.18 degree (0.18 inch). Rotate the sleeve clockwise (looking aft) will move the rudder trailing edge left. Rotate the sleeve counter-clockwise (looking aft) will move the rudder trailing edge right.

SUBTASK 27-21-00-860-029

(5) Set the FLT CONTROL B switch to OFF and FLT CONTROL A switch to ON.

SUBTASK 27-21-00-820-007

(6) Do these steps to put the rudder trailing edge to the left of the index plate:

NOTE: Always start the adjustment of the control rod with the rudder at this position.

(a) Loosen the clamp nut [35] on the upper main rudder PCU control rod [36] until you can rotate the sleeve [37].

(b) Rotate the sleeve [37] until the rudder trailing edge is between 0.30 in. (7.6 mm) - 0.50 in. (12.7 mm) to the left of the index plate.

NOTE: One full rotation of the sleeve will move the rudder trailing edge 0.18 degree (0.18 inch). Rotate the sleeve clockwise (looking aft) will move the rudder trailing edge left. Rotate the sleeve counter-clockwise (looking aft) will move the rudder trailing edge right.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-860-030

(7) Set the FLT CONTROL A switch to OFF.

SUBTASK 27-21-00-080-004

(8) Install the rig pin R-5 in the rudder feel and centering unit.

SUBTASK 27-21-00-980-002

(9) Push the rudder trailing edge to the right of the index plate 10 in. (254 mm) or more to rotate the overrides out of the detent position then smoothly return the rudder back to the center position.

(10) Do not move the rudder surface again until both of the main rudder PCU control rod [36] have been adjusted.

SUBTASK 27-21-00-080-005

(11) Remove the rig pin R-5.

SUBTASK 27-21-00-860-031

(12) Set the FLT CONTROL A switch to ON.

SUBTASK 27-21-00-820-008

(13) Do this adjustment to the upper main rudder PCU control rod [36]:

(a) Loosen the clamp nut [35] on the upper main rudder PCU control rod [36] until you can rotate the sleeve [37].

(b) Rotate the sleeve [37] until the rudder trailing edge is within the center of the index plate.

1) Make sure that the rudder trailing edge does not go beyond the center of the index plate on to the right side. If this happens, start the adjustment again with the rudder trailing edge positioned to the left of the index plate.

(c) Tighten the clamp nut [35] on the upper main rudder PCU control rod [36].

(d) Do not torque the clamp nut [35] at this time.

(e) Make sure that the rudder trailing edge is still within the center of the index plate.

SUBTASK 27-21-00-860-032

(14) Set the FLT CONTROL A switch to OFF and set the FLT CONTROL B switch to ON.

SUBTASK 27-21-00-820-009

(15) Do this adjustment to the lower main rudder PCU control rod [36]:

(a) Loosen the clamp nut [35] on the lower main rudder PCU control rod [36] until you can rotate the sleeve [37].

(b) Rotate the sleeve [37] until the rudder trailing edge is within the center of the index plate.

1) Make sure that the rudder trailing edge does not go beyond the center of the index plate on to the right side. If this happens, start the adjustment again with the rudder trailing edge positioned to the left of the index plate.

(c) Tighten the clamp nut [35] on the lower main rudder PCU control rod [36].

(d) Do not torque the clamp nut [35] at this time.

(e) Make sure that the rudder trailing edge is still within the center of the index plate.

SUBTASK 27-21-00-820-010

(16) Set the FLT CONTROL A switch to ON.

(a) Make sure that the rudder trailing edge is still within the center of the index plate.

SUBTASK 27-21-00-820-011

(17) Set the FLT CONTROL B switch to OFF.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Make sure that the rudder trailing edge is still within the center of the index plate.

SUBTASK 27-21-00-820-012

(18) Set the FLT CONTROL A switch to OFF and FLT CONTROL B switch to ON.

(a) Make sure that the rudder trailing edge is still within the center of the index plate.

SUBTASK 27-21-00-860-033

(19) Set the FLT CONTROL A switch to ON.

SUBTASK 27-21-00-420-001

(20) Tighten the clamp nut [35] on the upper and lower main rudder PCU control rod [36] to 100 in-lb (11.3 N·m) - 150 in-lb (16.9 N·m).

SUBTASK 27-21-00-860-034

(21) Tap on the rudder pedals lightly to put the rudder pedals to the neutral position.

SUBTASK 27-21-00-860-035

(22) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	15	C01628	FORCE FIGHT MONITOR

SUBTASK 27-21-00-700-001

(23) Verify voltage between pin 18 and pin 20 of connector, D10064, on the E1-1 shelf is between 4.38 VDC to 5.62 VDC.

(a) If the voltage measured is not between 4.38 VDC to 5.62 VDC adjust the main rudder PCU control rod [36].

SUBTASK 27-21-00-820-013

(24) Make sure that you can install and remove rig pin R-5 freely.

H. Put the Airplane Back To Its Usual Condition

SUBTASK 27-21-00-820-014

(1) If it is necessary check the standby rudder PCU, do this task: Control Rod for Standby Rudder Power Control Unit Adjustment, TASK 27-21-00-820-805.

SUBTASK 27-21-00-860-036

(2) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-00-410-003

(3) Close these access panels:

324CL	Vertical Fin, Access

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-860-039

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Pressurize the standby rudder hydraulic system. To pressurize it, do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

SUBTASK 27-21-00-860-040

(4) Move the rudder pedals through ten cycles to flush and bleed the standby rudder PCU.

SUBTASK 27-21-00-860-041

(5) Set the FLT CONTROL A and B switches to the ON position.

SUBTASK 27-21-00-860-042

(6) Make sure that the rudder trim indicator is in the neutral position (Figure 501).

SUBTASK 27-21-00-480-006

(7) Make sure that you can install and remove the rig pin R-5 freely with no movement of the rudder feel and centering unit output crank (Figure 502).

SUBTASK 27-21-00-860-043

(8) Align the ADIRS. To align the ADIRS, do this task: Air Data Inertial Reference System - Alignment from the ISDU, TASK 34-21-00-820-802 or Air Data Inertial Reference System - Alignment from the FMC CDU, TASK 34-21-00-820-801 or Air Data Inertial Reference System - Automatic Alignment from the IRS MSU, TASK 34-21-00-820-803.

F. Control Rod of the Standby Rudder PCU Adjustment

SUBTASK 27-21-00-710-005

(1) Adjust the standby rudder PCU control rod [34] of the standby rudder PCU:

(a) Set FLT CONTROL A and B switches to the STBY RUD position.

(b) Set the YAW DAMPER switch on the forward overhead panel, P5-3, to the ON position.

1) Make sure that the YAW DAMPER light goes out after approximately 2 seconds.

(c) Move the control wheel approximately 30 degrees clockwise.

1) Make sure that the rudder moves to the right.

(d) Release the control wheel.

(e) Do these steps to initiate a zero yaw damper command output from the stall Management Yaw Damper No. 2 (SMYD No. 2), M1748:

NOTE: The SMYD No. 2 is installed on the E3-2 electrical equipment rack.

1) Push and release the ON/OFF button on the front BITE display of the SMYD No. 2.

2) Push and release the up arrow or down arrow button until the GROUND TEST shows on the display.

3) Push the YES button to get access to the ground test option.

4) Push and release the up arrow or down arrow button until the SERVO TEST? shows on the display.

5) Push the YES button to start the servo test.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE RUDDER. THE RUDDER CAN MOVE QUICKLY WHEN YOU PUSH THE "YES" BUTTON ON THE SMYD NO. 2. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

6) Push the YES button when the RUDDER CLEARED? shows on the display.

7) Push the YES button when the FLT CTRL A STBY? shows on the display.

8) Push the YES button when the FLT CTRL B STBY? shows on the display.

9) Push the YES button when YAW DMPR ENGAGED? shows on the display.

10) Push the YES button when the ZERO COMMAND? shows on the display.

NOTE: A yaw damper command value and LVDT position will show for 10 seconds each, then the END ZERO COMMAND? will show on the display. You can push the NO button to show these values again.

SUBTASK 27-21-00-820-015

(2) Do this adjustment to the standby rudder PCU control rod [34] (Figure 502):

(a) Loosen the clamp nut [31] on the standby rudder PCU control rod [34] until you can rotate the sleeve [32].

(b) Rotate the sleeve [32] until the rudder trailing edge is within the center of the index plate.

NOTE: One full rotation of the sleeve [32] will move the rudder trailing edge 0.18 degree (0.18 inch). Rotate the sleeve [32] clockwise (looking aft) will move the rudder trailing edge left. Rotate the sleeve [32] counter-clockwise (looking aft) will move the rudder trailing edge right.

(c) Tighten the clamp nut [31] on the standby rudder PCU control rod [34].

1) Do not torque the clamp nut [31] at this time.

(d) Make sure that the rudder trailing edge is still within the center of the index plate.

(e) Tighten the clamp nut [31] on the standby rudder PCU control rod [34] to 100 in-lb (11.3 N·m) - 150 in-lb (16.9 N·m).

SUBTASK 27-21-00-820-016

(3) Do this adjustment to the standby rudder PCU control rod [34] (Figure 502):

(a) If the rudder trailing edge is greater than 0.50 in. (12.7 mm) from the neutral position, then do this coarse adjustment to the standby rudder PCU control rod [34]:

WARNING MAKE SURE THAT YOU SET THESE SWITCHES TO THE OFF POSITION BEFORE YOU DISCONNECT THE CONTROL ROD FROM THE STANDBY RUDDER PCU. THE CONTROL ROD CAN MOVE QUICKLY AND CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

1) Set the FLT CONTROL A and B switches to OFF.

2) Loosen the two checknut [31] on the standby rudder PCU control rod [34].

3) Remove the nut [50], washer [49], washer [48], and bolt assembly [47] to disconnect the standby rudder PCU control rod [34] from the upper crank [46] of the rudder control torque tube [33].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Turn the control rod end for half a turn relative to the sleeve [32]; and turn the sleeve [32] and the control rod end together for half a turn.

NOTE: The sum of half turn of each is equal to 0.67 in. (17.0 mm) at the rudder trailing edge.

5) Keep number of threads that you can see in the two parts are approximately same.

6) Install the bolt assembly [47] with the bolt head end up, washer [48] (under bolt), washer [49] (under nut), and nut [50] to connect the standby rudder PCU control rod [34] to the upper crank [46].

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE RUDDER. THE RUDDER CAN MOVE QUICKLY WHEN YOU PUSH THE `YES` BUTTON ON THE SMYD NO. 2. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

7) Set the FLT CONTROL A and B switches to the STANDBY RUD position.

(b) If the rudder trailing edge is less than 0.50 in. (12.7 mm) from the neutral position, then do this fine adjustment to the standby rudder PCU control rod [34]:

1) Loosen the checknut [31] on the standby rudder PCU control rod [34].

2) Turn the adjustable sleeve [32] until the two sides of the rudder trailing edge are in the width of the rudder index tab.

3) Tighten the two checknut [31].

(c) Do a check for minimum thread engagement of the rod. Make sure that you can see the rod from the inspection hole in the tube.

SUBTASK 27-21-00-820-017

(4) Make sure that you can install and remove the rig pin R-5 freely.

SUBTASK 27-21-00-860-111

(5) Push and release the ON/OFF button to turn off the SMYD BITE display.

SUBTASK 27-21-00-860-112

(6) Set the YAW DAMPER switch, on the P5-3 overhead panel, to the OFF position.

SUBTASK 27-21-00-860-044

(7) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	19	C00787	FLIGHT CONTROL TRIM CONT RUD

SUBTASK 27-21-00-820-018

(8) Set the FLT CONTROL A and B switches to ON.

(a) Make sure that the STBY RUD ON light is not illuminated after 5 seconds.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-00-480-007

(1) Remove the rig pin R-5.

SUBTASK 27-21-00-860-045

(2) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-410-004

(3) Close these access panels:

Number	Name/Location
324CL	Vertical Fin, Access
324DL	Trailing Edge Access

END OF TASK

TASK 27-21-00-700-801

7. Rudder Pedal Adjustment and Limit Travel Test

(Figure 503)

A. General

(1) Use this test to make sure that the rudder pedals can move through their full travel and pedal adjustment crank operates correctly.

(2) It is recommended to measure pedal travel by projecting a line from the pivot point of the pedal normal to the heel rest wear plate at each pedal position and marking the pedal position on a piece of masking tape that applied to the heel rest. Measuring the distance between marks is the measured pedal travel.

SPL-1499	Pin - Lock, NLG Towing Lever Part #: A09003-2 Supplier: 81205 Opt Part #: A09003-1 Supplier: 81205

D. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

E. Rudder Pedal Adjustment and Limit Travel Test

SUBTASK 27-21-00-420-007

(1) Install the NLG towing lever pin, SPL-1499, in the nose wheel steering mechanism (TASK 32-00-01-480-801).

NOTE: The Nose Landing Gear (NLG) will move when the rudder pedals are moved. To prevent NLG movement, install a lockout pin in the nose wheel steering mechanism. The nose gear steering does not need to be disconnected if the airplane is jacked up such that the nose gear is fully extended.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-860-046

(2) Do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

SUBTASK 27-21-00-730-002

(3) Do these steps to set the jackshaft yokes to the middle positions:

NOTE: The middle positions of the jackshaft yokes is where the number of turns of the shaft from the full forward and full aft adjustment are the same.

(a) Turn the rudder pedal adjustment cranks for both the captain and first officer to move the rudder pedals full forward.

(b) Turn the rudder pedal adjustment cranks to move the rudder pedals full aft.

1) Keep a record of number of turns.

(c) Turn the rudder pedal adjustment cranks back half of the number of recorded turns to set the jackshaft yoke to the middle position.

(d) Make sure that you can install rig pins R-1 and R-2 easily.

(e) Remove the rig pins R-1 and R-2.

SUBTASK 27-21-00-730-003

(4) Do the captain's rudder pedal adjustment and the limit travel.

(a) Make sure that the rudder trim indicator is at the zero unit of trim.

NOTE: Rudder in neutral position.

(b) Turn the rudder pedal adjustment crank to move the captain's pedals full forward.

(c) Push the captain's left pedal forward until it touches the stop and hold.

1) Measure the forward travel of the captain's left pedal from the middle position of the pedal adjustment.

2) Make sure that the forward travel, which measured at the pedal pivot point is at a minimum of 6.04 in. (153.4 mm).

3) Release the captain's left pedal.

(d) Push the captain's right pedal forward until it touches the stop and hold.

1) Measure the forward travel of the captain's right pedal from the middle position of the pedal adjustment.

2) Make sure that the forward travel, which measured at the pedal pivot point is at a minimum of 6.04 in. (153.4 mm).

3) Release the captain's right pedal.

(e) Push forward on both the captain's left and right pedals at the same time.

1) Apply a light load of approximately 2.5 lb (1.1 kg) on each pedal equally and simultaneously.

(f) Turn the rudder pedal adjustment crank to move the captain's pedals to full aft position.

1) Turn the crank at a rate of one revolution (turn) per second.

(g) Make sure that the adjustment crank moves smooth and without any chatter.

(h) Push the captain's left pedal forward until it touches the stop and hold.

1) Measure the aft travel of the captain's right pedal from the middle position of the pedal adjustment.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure that the aft travel, which measured at the pedal pivot point is at a minimum of 6.04 in. (153.4 mm).

3) Release the captain's left pedal.

(i) Push the captain's right pedal forward until it touches the stop and hold.

1) Measure the aft travel of the captain's left pedal from the middle position of the pedal adjustment.

2) Make sure that the aft travel, which measured at the pedal pivot point is at a minimum of 6.04 in. (153.4 mm).

3) Release the captain's right pedal.

(j) Turn the rudder pedal adjustment crank to move the captain's pedals to full forward position.

NOTE: No load is applied to the rudder pedals during this step.

1) Turn the crank at a rate of one revolution (turn) per second.

(k) Make sure that the adjustment crank only chattered slightly and there is no binding when the crank is turned.

NOTE: The tendency to chatter will increase as the rate of adjustment increases.

SUBTASK 27-21-00-730-004

(5) Do the first officer's rudder pedal adjustment and the limit travel.

(a) Make sure that the rudder trim indicator is at the zero unit of trim.

NOTE: Rudder in neutral position.

(b) Turn the rudder pedal adjustment crank to move the first officer's pedals full forward.

(c) Push the first officer's left pedal forward until it touches the stop and hold.

1) Measure the forward travel of the first officer's left pedal from the middle position of the pedal adjustment.

2) Make sure that the forward travel, which measured at the pedal pivot point is at a minimum of 6.04 in. (153.4 mm).

3) Release the first officer's left pedal.

(d) Push the first officer's right pedal forward until it touches the stop and hold.

1) Measure the forward travel of the first officer's right pedal from the middle position of the pedal adjustment.

2) Make sure that the forward travel, which measured at the pedal pivot point is at a minimum of 6.04 in. (153.4 mm).

3) Release the first officer's right pedal.

(e) Push on both the first officer's left and right pedals at the same time.

1) Apply a light load of approximately 2.5 lb (1.1 kg) each pedal equally and simultaneously.

(f) Turn the rudder pedal adjustment crank to move the first officer's pedals to full aft position.

1) Turn the crank at a rate of one revolution (turn) per second.

(g) Make sure that the adjustment crank moves smooth and without any chatter.

(h) Turn the rudder pedal adjustment crank to move the first officer's pedals to full aft position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) Push the first officer's left pedal forward until it touches the stop and hold.

1) Measure the aft travel of the first officer's right pedal from the middle position of the pedal adjustment.

2) Make sure that the aft travel, which measured at the pedal pivot point is at a minimum of 6.04 in. (153.4 mm).

3) Release the first officer's left pedal.

(j) Push the first officer's right pedal forward until it touches the stop and hold.

1) Measure the aft travel of the first officer's left pedal from the middle position of the pedal adjustment.

2) Make sure that the aft travel, which measured at the pedal pivot point is at a minimum of 6.04 in. (153.4 mm).

3) Release the first officer's right pedal.

(k) Turn the rudder pedal adjustment crank to move the first officer's pedals to full forward position.

NOTE: No load is applied to the rudder pedals during this step.

1) Turn the crank at a rate of one revolution (turn) per second.

(l) Make sure that the adjustment crank only chatters slightly and there is no binding when the crank is turned.

NOTE: The tendency to chatter will increase as the rate of adjustment increases.

SUBTASK 27-21-00-860-047

(6) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-00-020-001

(7) Remove the NLG towing lever pin, SPL-1499, from the nose wheel steering mechanism (TASK 32-00-01-080-801).

TASK 27-21-00-700-802

8. Rudder Hinge Bearing and PCU Bearing Freeplay

(Figure 504)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this task to check the freeplay of the rudder control system.

(2) This test will have two rudder left position readings. This will verify that the indicator does not move during the test.

B. References

212	Flight Compartment - Right
324	Vertical Fin - Rear Spar To Trailing Edge

E. Rudder Hinge Bearing and PCU Bearing Freeplay

SUBTASK 27-21-00-420-002

(1) Install the, NLG towing lever pin, SPL-1499, in the nose wheel steering mechanism as given in: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

NOTE: Nose landing gear will move when the rudder pedals are moved. To prevent NLG movement, install a lockout pin in the nose wheel steering mechanism.

Nose gear steering does not need to be disconnected if the airplane is jacked up such that the nose gear is fully extended.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-860-048

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize the rudder hydraulic systems A and B. To pressurize them, do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

SUBTASK 27-21-00-730-005

(3) Do the rudder hinge bearing and Power Control Unit (PCU) bearing freeplay:

(a) Make sure that the rudder and rudder pedals are in the neutral position.

1) If it is necessary, move the rudder pedals lightly to set the rudder to the neutral position.

(b) Make sure that the rudder trim indicator is at zero units of trim.

(c) Make sure not to move rudder pedals during this test.

(d) Attach the dial indicator, STD-1238, with the mount, STD-1279, at the lower end of the rudder trailing edge.

CAUTION USE A LOADING BLOCK AND DO NOT PUT MORE THAN 50 LBF (222 N) ON THE RUDDER WHEN YOU MOVE THE RUDDER SURFACE BY AN EXTERNAL FORCE. APPLY THE EXTERNAL FORCE APPROXIMATELY BETWEEN 6 TO 8 INCHES (150 TO 200 MILLIMETERS) FROM THE BOTTOM OF THE TRAILING EDGE AND APPROXIMATELY 3 INCHES (80 MILLIMETERS) FORWARD OF THE TRAILING EDGE. IF YOU DO NOT APPLY FORCE AT THIS LOCATION, YOU CAN CAUSE DAMAGE TO THE RUDDER.

(e) Use a block, STD-1278 and push/pull scale 0-25 pound (0-11 kilogram), STD-753, to move the rudder to the left side with a force of 12 lbf (53.4 N) ± 4.0 lbf (17.8 N) and release slowly.

1) Make a record of the rudder position on the dial indicator.

(f) Use a block, STD-1278 and push/pull scale 0-25 pound (0-11 kilogram), STD-753, to move the rudder to the right side with a force of 12 lbf (53.4 N) ± 4.0 lbf (17.8 N) and release slowly.

1) Make a record of the rudder position on the dial indicator.

(g) Make sure that the total left and right freeplay between the left and right positions is not more than 0.05 in. (1.3 mm).

1) If the total left and right freeplay is more than 0.05 in. (1.3 mm), then replace the bearings on the rudder hinge or power control units and repeat this test.

(h) Use a block, STD-1278 and push/pull scale 0-25 pound (0-11 kilogram), STD-753, to move the rudder to the left side with a force of 12 lbf (53.4 N) ± 4.0 lbf (17.8 N) and release slowly.

NOTE: This check compares the two left positions to verify that the dial indicator did not move during the test. If the check shows that the dial indicator had moved, the test has to be repeated.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make a record of the rudder position on the dial indicator.

(i) Make sure that the difference between the two left positions is not more than 0.03 in. (0.8 mm).

1) If the difference is more than 0.03 in. (0.8 mm), then repeat the freeplay check.

(j) Remove the dial indicator, STD-1238, from the rudder.

SUBTASK 27-21-00-860-049

(4) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-00-860-050

(5) Remove the, NLG towing lever pin, SPL-1499, from the nose wheel steering mechanism as given in: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

D. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
325	Vertical Fin - Rudder

E. Rudder Centering Test

SUBTASK 27-21-00-420-003

(1) Install the NLG towing lever pin, SPL-1499, in the nose wheel steering mechanism (TASK 32-00-01-480-801).

NOTE: The nose landing gear (NLG) will move when the rudder pedals are moved. To prevent NLG movement, install a lockout pin in the nose wheel steering mechanism.

The nose gear steering does not need to be disconnected if the airplane is jacked up such that the nose gear is fully extended.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-860-052

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize the rudder hydraulic systems A and B (TASK 27-21-00-800-801).

SUBTASK 27-21-00-860-053

(3) Align the ADIRS (TASK 34-21-00-820-802 or TASK 34-21-00-820-801 or TASK 34-21-00-820-803).

SUBTASK 27-21-00-730-006

(4) Do the test of the rudder centering test:

(a) Make sure the rudder is in the neutral position.

1) If it is necessary, move the rudder pedals lightly to set the rudder to the neutral position.

(b) Make sure that the rudder trim indicator is at 0.0 ± 0.25 units of trim.

(c) Move the captain's left rudder pedal approximately 0.5 in. (12.7 mm) forward and release quickly.

1) Make sure the rudder goes back to the neutral position within 0.00 ±0.05 in. (0.00 ±1.27 mm).

(d) Move the captain's right rudder pedal approximately 0.5 in. (12.7 mm) forward and release quickly.

1) Make sure the rudder goes back to the neutral position within 0.00 ±0.05 in. (0.00 ±1.27 mm).

(e) Set FLT CONTROL A and B switches to the STBY RUD position.

1) Make sure that the STANDBY HYD LOW PRESSURE light on the forward overhead panel, P5-3, goes off.

(f) Set the YAW DAMPER switch on the forward overhead panel, P5-3, to the ON position.

(g) Do these steps to initiate a zero yaw damper command output from the stall Management Yaw Damper No. 2 (SMYD No. 2), M1748:

NOTE: The SMYD No. 2 is installed on the E3-2 electrical equipment rack.

1) Push and release the ON/OFF button on the front BITE display of the SMYD No. 2.

2) Push and release the up arrow or down arrow button until the GROUND TEST shows on the display.

3) Push the YES button to get access to the ground test option.

4) Push and release the up arrow or down arrow button until the SERVO TEST? shows on the display.

5) Push the YES button to start the servo test.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE RUDDER. THE RUDDER CAN MOVE QUICKLY WHEN YOU PUSH THE `YES` BUTTON ON THE SMYD NO. 2. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

6) Push the YES button when the RUDDER CLEARED? shows on the display.

7) Push the YES button when the FLT CTRL A STBY? shows on the display.

8) Push the YES button when the FLT CTRL B STBY? shows on the display.

9) Push the YES button when YAW DMPR ENGAGED? shows on the display.

10) Push the YES button when the ZERO COMMAND? shows on the display.

NOTE: A yaw damper command value and LVDT position will show for 10 seconds each, then the END ZERO COMMAND? will show on the display. You can push the NO button to show these values again.

(h) Move the captain's left rudder pedal approximately 0.5 in. (12.7 mm) forward and release quickly.

1) Make sure the rudder goes back to the neutral position within 0.00 ±0.05 in. (0.00 ±1.27 mm).

(i) Move the captain's right rudder pedal approximately 0.5 in. (12.7 mm) forward and release quickly.

1) Make sure the rudder goes back to the neutral position within 0.00 ±0.05 in. (0.00 ±1.27 mm).

(j) Push and release the ON/OFF button on the SMYD No. 2.

SUBTASK 27-21-00-860-054

(5) Set the YAW DAMPER switch on the forward overhead panel, P5-3, to the OFF position.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-00-860-055

(1) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-00-860-056

(2) Remove the NLG towing lever pin, SPL-1499, from the nose wheel steering mechanism (TASK 32-00-01-080-801).

END OF TASK

TASK 27-21-00-700-804

10. Rudder Pedal Forces Test

(Figure 505)

A. General

(1) Use this test to make sure the rudder pedals operate with the correct forces.

NOTE: To make the measurements, the forces must be applied with the pedal moving away from the neutral position. If the pedal moves more than the specified distances, the test must be repeated and started with the pedal at the neutral position.

(2) You may need two people to do the test. One person can sit in one of the seats and push on the tool. The other person can measure the rudder pedal movement and record the results.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(3) It may be useful to take three readings on each rudder pedal for better accuracy on the rudder pedal forces test.

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
325	Vertical Fin - Rudder

E. Rudder Pedal Forces Test

SUBTASK 27-21-00-420-004

(1) Install the NLG towing lever pin, SPL-1499, in the nose wheel steering mechanism (TASK 32-00-01-480-801).

NOTE: Nose landing gear will move when the rudder pedals are moved. To prevent NLG movement, install a lockout pin in the nose wheel steering mechanism.

Nose gear steering does not need to be disconnected if the airplane is jacked up such that the nose gear is fully extended.

SUBTASK 27-21-00-860-058

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize the rudder hydraulic systems A and B (TASK 27-21-00-800-801).

SUBTASK 27-21-00-730-007

(3) Do the test of the rudder pedal forces test:

(a) Set the captain's and first officer's rudder pedal adjustment cranks to the middle position (Figure 501).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Make sure that the rudder pedals are in the neutral position.

(c) Install adapter, SPL-1681, on the captain's left rudder pedal.

1) Push on the adapter, SPL-1681, until the rudder starts to move.

2) Multiply the compression gage value on the adapter, SPL-1681, by a multiplication factor given in (Table 501):

NOTE: The angle from the horizontal value is also shown on the adapter, SPL-1681.

Table 501/27-21-00-993-802

Angle from Horizontal	Multiplication Factor
0°	1.0
5°	1.0
10°	0.98
15°	0.97
20°	0.94
25°	0.91
30°	0.87
35°	0.82
40°	0.77
45°	0.71

3) Make sure the pedal force is 18.0 lbf (80.1 N) or less.

4) Push again on the adapter, SPL-1681, until the captain's left rudder pedal is 3.60 ±0.10 in. (91.4 ±2.6 mm) forward from the neutral position.

NOTE: When the rudder pedal reaches 3.60 ±0.10 in. (91.4 ±2.6 mm), DO NOT relax the force on the tool until measurement is taken, or the test will fail. If the 3.60 ±0.10 in. (91.4 ±2.6 mm) travel limit is exceeded, release the pedal to neutral and start again.

NOTE: You can use a ruler or straightedge that is put against the rudder pedal, to measure the rudder pedal movement. It may help to attach a pointer to the pedal, with tape.

5) Multiply the compression gage value on the adapter, SPL-1681 by a multiplication factor given in (Table 501).

NOTE: The angle from the horizontal value is also shown on the adapter, SPL-1681.

6) Make sure the pedal force is between 60.0 lbf (266.9 N) to 82.0 lbf (364.8 N).

7) Remove the adapter, SPL-1681, from the captain's left pedal.

(d) Install the adapter, SPL-1681, on the captain's right rudder pedal.

1) Push on the adapter, SPL-1681, until the rudder starts to move.

2) Multiply the compression gage value on the adapter, SPL-1681, by a multiplication factor given in (Table 501).

NOTE: The angle from the horizontal value is also shown on the adapter, SPL-1681.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Make sure that the pedal force is 18.0 lbf (80.1 N) or less.

4) Push again on the adapter, SPL-1681, until the captain's right rudder pedal is 3.60 ±0.10 in. (91.4 ±2.6 mm) forward from the neutral position.

NOTE: When the rudder pedal reaches 3.60 ±0.10 in. (91.4 ±2.6 mm), DO NOT relax the force on the tool until measurement is taken, or the test will fail. If the 3.60 ±0.10 in. (91.4 ±2.6 mm) travel limit is exceeded, release the pedal to neutral and start again.

5) Multiply the compression gage value on the adapter, SPL-1681, by a multiplication factor given in (Table 501).

NOTE: The angle from the horizontal value is also shown on the adapter, SPL-1681.

6) Make sure the pedal force is between 60.0 lbf (266.9 N) to 82.0 lbf (364.8 N).

7) Remove the adapter, SPL-1681, from the captain's right pedal.

(e) Install the adapter, SPL-1681, on the first officer's left rudder pedal.

1) Push on the adapter, SPL-1681, until the rudder starts to move.

2) Multiply the compression gage value on the adapter, SPL-1681, by a multiplication factor given in (Table 501).

NOTE: The angle from the horizontal value is also shown on the adapter, SPL-1681.

3) Make sure that the pedal force is 18.0 lbf (80.1 N) or less.

4) Push again on the adapter, SPL-1681, until the first officer's left rudder pedal is 3.60 ±0.10 in. (91.4 ±2.6 mm) forward from the neutral position.

NOTE: When the rudder pedal reaches 3.60 ±0.10 in. (91.4 ±2.6 mm), DO NOT relax the force on the tool until measurement is taken, or the test will fail. If the 3.60 ±0.10 in. (91.4 ±2.6 mm) travel limit is exceeded, release the pedal to neutral and start again.

5) Multiply the compression gage value on the adapter, SPL-1681, by a multiplication factor given in (Table 501).

NOTE: The angle from the horizontal value is also shown on the adapter, SPL-1681.

6) Make sure the pedal force is between 60.0 lbf (266.9 N) to 82.0 lbf (364.8 N).

7) Remove the adapter, SPL-1681, from the first officer's left pedal.

(f) Install the adapter, SPL-1681, on the first officer's right rudder pedal.

1) Push on the adapter, SPL-1681, until the rudder starts to move.

2) Multiply the compression gage value on the adapter, SPL-1681, by a multiplication factor given in (Table 501).

NOTE: The angle from the horizontal value is also shown on the adapter, SPL-1681.

3) Make sure the pedal force is 18.0 lbf (80.1 N) or less.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Push again on the adapter, SPL-1681, until the first officer's right rudder pedal is 3.60 ±0.10 in. (91.4 ±2.6 mm) forward from the neutral position.

NOTE: When the rudder pedal reaches 3.60 ±0.10 in. (91.4 ±2.6 mm), DO NOT relax the force on the tool until measurement is taken, or the test will fail. If the 3.60 ±0.10 in. (91.4 ±2.6 mm) travel limit is exceeded, release the pedal to neutral and start again.

5) Multiply the compression gage value on the adapter, SPL-1681, by a multiplication factor given in (Table 501).

NOTE: The angle from the horizontal value is also shown on the adapter, SPL-1681.

6) Make sure that the pedal force is between 60.0 lbf (266.9 N) to 82.0 lbf (364.8 N).

7) Remove the adapter, SPL-1681, from the first officer's right pedal.

SUBTASK 27-21-00-860-059

(4) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-00-860-060

(5) Remove the, NLG towing lever pin, SPL-1499, from the nose wheel steering mechanism (TASK 32-00-01-080-801).

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
325	Vertical Fin - Rudder

E. Rudder Travel Test

SUBTASK 27-21-00-420-005

(1) Install the NLG towing lever pin, SPL-1499, in the nose wheel steering mechanism as given in: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

NOTE: Nose landing gear will move when the rudder pedals are moved. To prevent NLG movement, lockout pin in the nose wheel steering mechanism should be installed.

Nose gear steering does not need to be disconnected if the airplane is jacked up such that the nose gear is fully extended.

SUBTASK 27-21-00-860-062

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize the rudder hydraulic systems A and B, do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

SUBTASK 27-21-00-730-008

(3) Do the test of the rudder travel test:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Set the FLT CONTROL A switch to the ON position and FLT CONTROL B switch to the OFF position.

(b) Set the captain's and first officer's rudder pedal adjustment cranks to the middle position (Figure 501).

(c) Make sure the rudder pedals are in the neutral position.

1) If it is necessary, move the rudder pedals lightly to set the rudder to the neutral position.

2) Make sure that the rudder trim indicator is at 0.0 ± 0.25 units of trim.

(d) Push and hold captain's left pedal until it touches the forward quadrant stop.

1) Measure the rudder travel.

2) Make sure that the dimension is 24.28 ±0.92 in. (616.71 ±23.37 mm) (26.00 +/- 1.00 degrees) rudder trailing edge left.

3) Release the captain's left pedal.

(e) Push and hold the captain's right pedal until it touches the forward quadrant stop.

1) Measure the rudder travel.

2) Make sure that the dimension is 24.28 ±0.92 in. (616.71 ±23.37 mm) (26.00 +/- 1.00 degrees) rudder trailing edge right.

3) Release the captain's right pedal.

(f) Make sure that the wire bundle W443 has a minimum clearance of 0.5 in. (12.700 mm) from left forward rudder quadrant full travel motion, while operating the rudder pedals (Figure 506).

(g) Set the FLT CONTROL B switch to the ON position and FLT CONTROL A switch to the OFF position.

(h) Push and hold captain's left pedal until it touches the forward quadrant stop.

1) Measure the rudder travel.

2) Make sure that the dimension is 24.28 ±0.92 in. (616.71 ±23.37 mm) (26.00 +/- 1.00 degrees) rudder trailing edge left.

3) Release the captain's left pedal.

(i) Push and hold the captain's right pedal until it touches the forward quadrant stop.

1) Measure the rudder travel.

2) Make sure that the dimension is 24.28 ±0.92 in. (616.71 ±23.37 mm) (26.00 +/- 1.00 degrees) rudder trailing edge right.

3) Release the captain's right pedal.

(j) Make sure that the wire bundle W443 has a minimum clearance of 0.5 in. (12.700 mm) from left forward rudder quadrant full travel motion, while operating the rudder pedals (Figure 506).

(k) Set the FLT CONTROL B switch to the STBY position.

(l) Push and hold captain's left pedal until it touches the forward quadrant stop.

1) Measure the rudder travel.

2) Make sure that the dimension is 22.62 +0.92 / -0.91 in. (574.55 +23.37 / -23.11 mm) (24.25 +/- 1.00 degrees) rudder trailing edge left.

3) Release the captain's left pedal.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(m) Push and hold the captain's right pedal until it touches the forward quadrant stop.

1) Measure the rudder travel.

2) Make sure that the dimension is 22.62 +0.92 / -0.91 in. (574.55 +23.37 / -23.11 mm) (24.25 +/- 1.00 degrees) rudder trailing edge right.

3) Release the captain's right pedal.

(n) Make sure that the wire bundle W443 has a minimum clearance of 0.5 in. (12.700 mm) from left forward rudder quadrant full travel motion, while operating the rudder pedals (Figure 506).

SUBTASK 27-21-00-860-063

(4) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-00-080-006

(5) Remove the NLG towing lever pin, SPL-1499, in the nose wheel steering mechanism as given in: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-21-00-700-806

12. Standby Rudder Power Control Unit Deadband Test

A. General

(1) Use this test to make sure the standby rudder power control unit (PCU) is in the correct rigged position.

(a) Make sure that the YAW DAMPER switch on the P5-3 overhead panel is in the OFF position.

B. References

Reference	Title
27-21-00-800-801	Rudder Hydraulic System A, B, or Standby Pressurization (P/B 201)
27-21-00-840-801	Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
325	Vertical Fin - Rudder

D. Standby Rudder Power Control Unit Deadband Test

SUBTASK 27-21-00-860-064

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize the standby rudder hydraulic system (TASK 27-21-00-800-801)..

SUBTASK 27-21-00-860-065

(2) Move the rudder pedals through ten cycles to flush and bleed the standby rudder PCU.

SUBTASK 27-21-00-860-066

(3) Set the FLT CONTROL A and B switches to the ON position.

SUBTASK 27-21-00-730-009

(4) Do the test of the standby rudder PCU deadband test:

(a) Make sure that the rudder is in the neutral position.

1) If necessary, move the rudder pedals lightly to put the rudder to the neutral position.

2) Make sure that the rudder trim indicator is at 0.00 ± 0.25 unit of trim.

(b) Set the FLT CONTROL A and B to the STANDBY RUD position.

(c) Use your hands to push the rudder to the right, then slowly remove the load.

1) Move your hands away from the rudder.

2) Measure the rudder right position from the center of the rudder trailing edge to the centerline of the index plate.

3) Record this measurement as A.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Push the rudder by hands to the left, then slowly remove the load.

1) Move your hands away from the rudder.

2) Measure the rudder left position from the center of the rudder trailing edge to the centerline of the index plate.

3) Record this measurement as B.

(e) Make sure that the difference between A and B is 0.2 in. (5 mm) or less.

1) If the difference is more than 0.2 in. (5 mm), do this task: Control Rod for Standby Rudder Power Control Unit Adjustment, TASK 27-21-00-820-805.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-00-860-067

(1) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

——— END OF TASK ———

TASK 27-21-00-700-807

13. Rudder Trim System Test

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this test to make sure the rudder trim system operates correctly.

B. References

Reference	Title
27-21-00-800-801	Rudder Hydraulic System A, B, or Standby Pressurization (P/B 201)

SPL-1499	Pin - Lock, NLG Towing Lever Part #: A09003-2 Supplier: 81205 Opt Part #: A09003-1 Supplier: 81205

D. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
325	Vertical Fin - Rudder

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Prepare for the System Test

SUBTASK 27-21-00-420-006

(1) Install the NLG towing lever pin, SPL-1499, in the nose wheel steering mechanism (TASK 32-00-01-480-801).

NOTE: The nose landing gear (NLG) will move when the rudder pedals are moved. To prevent NLG movement, install a lockout pin in the nose wheel steering mechanism.

The nose gear steering does not need to be disconnected if the airplane is jacked up such that the nose gear is fully extended.

SUBTASK 27-21-00-860-069

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize both rudder hydraulic systems A and B (TASK 27-21-00-800-801).

NOTE: It is necessary to pressurize both systems A and B for this task.

F. Rudder Trim System Test

SUBTASK 27-21-00-730-010

(1) Do the test of the rudder trim system:

(a) Make sure the rudder is in the neutral position.

1) If it is necessary, move the rudder pedals lightly to put the rudder to the neutral position.

2) Make sure the rudder trim indicator is at 0.00 ± 0.25 units of trim.

(b) Move the rudder trim knob to NOSE LEFT until the mark on the rudder trim knob is aligned with the indicator mark on the lightplate under the trim knob.

1) Make sure the rudder did not move.

(c) Move the rudder trim knob to NOSE RIGHT until the mark on the rudder trim knob is aligned with the indicator mark on the lightplate under the trim knob.

1) Make sure the rudder did not move.

(d) Move the rudder trim knob to NOSE RIGHT until the rudder trim indicator shows 10.0 ± 0.25 units of trim.

1) Make sure the rudder moves 10.12 ±1.26 in. (257.0 ±32.1 mm) (10.74 ± 1.35 degrees) to the right side.

(e) Move the rudder trim knob to NOSE RIGHT until the rudder stops.

1) Make sure the rudder moves 16.89 ±0.93 in. (429.0 ±23.6 mm) (18.03 ± 1.00 degrees) to the right side.

2) Make sure the rudder trim indicator is at least 15 units of trim.

(f) Move the rudder trim knob to NOSE LEFT until the rudder trim indicator shows 10.0 ± 0.25 units of trim.

1) Make sure the rudder moves 10.12 ±1.26 in. (257.0 ±32.1 mm) (10.74 ± 1.35 degrees) to the left side.

(g) Move the rudder trim knob to NOSE LEFT until the rudder stops.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure the rudder moves 16.89 ±0.93 in. (429.0 ±23.6 mm) (18.03 ± 1.00 degrees) to the left side.

2) Make sure the rudder trim indicator is at least 15 units of trim.

(h) Make sure the rudder trim knob operates smoothly and goes back to the center freely.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-00-860-070

(1) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-00-860-071

(2) Remove the NLG towing lever pin, SPL-1499, from the nose wheel steering mechanism (TASK 32-00-01-080-801).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

34-21-00-820-803	Air Data Inertial Reference System - Automatic Alignment from the IRS MSU (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right
325	Vertical Fin - Rudder

D. Prepare for the System Test

SUBTASK 27-21-00-860-072

(1) Make sure that these circuit breakers are closed:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
E	5	C01009	ADIRU LEFT DC
E	7	C01007	ADIRU LEFT AC

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	4	C01207	SMYD-2 SNSR EXC AC
B	5	C01206	SMYD-2 CMPTR DC
C	14	C01008	ADIRU RIGHT AC
C	17	C01010	ADIRU RIGHT DC

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-860-073

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize the rudder hydraulic systems A and B (TASK 27-21-00-800-801).

SUBTASK 27-21-00-860-074

(3) Move the flaps to a position other than up position (TASK 27-51-00-860-803).

E. Wheel to Rudder Interconnect System Test

SUBTASK 27-21-00-730-011

(1) Do the test of the wheel to rudder interconnect system:

NOTE: The rudder will move past the center position to the opposite direction when the control wheel returns to the neutral position. To return the rudder to the center position with the control wheel at neutral, you must set the YAW DAMPER switch on the overhead panel to the OFF position then back to the ON position.

(a) Make sure that the Air Data Inertial Reference System (ADIRS) is aligned. Do this task: Air Data Inertial Reference System - Alignment from the ISDU, TASK 34-21-00-820-802 or Air Data Inertial Reference System - Alignment from the FMC CDU, TASK 34-21-00-820-801 or Air Data Inertial Reference System - Automatic Alignment from the IRS MSU, TASK 34-21-00-820-803.

(b) Make sure the rudder is in the neutral position.

1) Make sure the rudder trim indicator is at 0.0 ± 0.25 unit of trim.

2) If it is necessary, move the rudder pedals lightly to put the rudder to the neutral position.

(c) Set the FLT CONTROL A and B switches, on the forward overhead panel, P5, to the STBY RUD position.

(d) Set the YAW DAMPER switch, on the forward overhead panel, P5, to the ON position.

(e) Slowly turn the Captain's wheel left to 2 units (12°) of wheel and hold. .

NOTE: Use aileron trim marker on control column to measure wheel travel.

1) Make sure the rudder moves 2.47 ±0.25 in. (62.74 ±6.35 mm) (2.4 ± 0.3 degrees) to the left side.

(f) Slowly turn the captain's wheel right to 2 units (12°) of wheel and hold.

1) Make sure the rudder moves from left to right.

2) Make sure the rudder moves2.47 ±0.25 in. (62.74 ±6.35 mm) (2.4 ± 0.3 degrees) to the right side.

(g) Slowly turn the captain's control wheel to the full right and hold.

1) Make sure the rudder moves 2.47 ±0.25 in. (62.74 ±6.35 mm) (2.4 ± 0.3 degrees) to the right side.

(h) Slowly turn the captain's control wheel to the full left and hold.

NOTE: The rudder should move left 2.47 ±0.25 in. (62.74 ±6.35 mm) before the wheel has reached neutral.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure the rudder moves 2.47 ±0.25 in. (62.74 ±6.35 mm) (2.4 ± 0.3 degrees) to the left side.

(i) Slowly turn the captain's control wheel back to the neutral position.

1) Make sure the rudder moves 2.47 ±0.25 in. (62.74 ±6.35 mm) (2.4 ± 0.3 degrees) and the rudder surface has moved to the right.

2) Put the YAW DAMPER switch, on the P5 panel, in the OFF position.

3) Put the YAW DAMPER switch, on the P5 panel, in the ON position.

NOTE: This will restore the rudder to neutral with the control wheel at neutral.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-00-860-075

(1) Put the YAW DAMPER switch, on the P5 panel, in the OFF position.

SUBTASK 27-21-00-860-076

(2) Return the flaps to the retracted position (TASK 27-51-00-860-804).

SUBTASK 27-21-00-860-077

(3) Set the FLT CONTROL A and B switches, on the forward overhead panel, P5, to the ON position.

SUBTASK 27-21-00-860-078

(4) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

——— END OF TASK ———

TASK 27-21-00-700-809

15. Rudder Hinge Friction Test

(Figure 504)

A. General

(1) Use this test to make sure that the rudder hinge friction is within limit.

B. References

Reference	Title

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Rudder Hinge Friction Test

SUBTASK 27-21-00-860-079

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU REMOVE OR INSTALL HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU REMOVE HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If hydraulic pressure is powered, do this step to turn off hydraulic power:

(a) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-21-00-730-012

CAUTION

MAKE SURE TO APPLY EXTERNAL FORCE THAT IS APPROXIMATELY AT BETWEEN 6 INCHES (152 MM) AND 18 INCHES (457MM) FROM THE BOTTOM OF THE TRAILING EDGE. IF YOU DO NOT APPLY FORCE AT THIS LOCATION, YOU CAN CAUSE DAMAGE TO THE RUDDER.

(2) Do the rudder hinge friction check:

NOTE: If the dial indicator is not available, you can use a ruler to measure the rudder trailing edge placement in this test.

(a) Make sure that the rudder and rudder pedals are in the neutral position.

(b) Make sure that the rudder trim indicator is at zero units of trim.

(c) Use a block, STD-1278, and push/pull scale 0-25 pound (0-11 kilogram), STD-753, to move the rudder fully to the left side.

1) Make sure that there is no sign of binding, rough spots, or excessive friction at any point of travel.

a) If binding or excessive friction exist, the bearings can be out of alignment, damaged, or improperly installed, correct this condition and repeat this check.

(d) Use a block, STD-1278, and push/pull scale 0-25 pound (0-11 kilogram), STD-753, to move the rudder fully to the right side.

1) Make sure that there is no sign of binding, rough spots, or excessive friction at any point of travel.

a) If binding or excessive friction exist, the bearings can be out of alignment, damaged, or improperly installed, correct this condition and repeat this check.

(e) Attach the mount, STD-1279, on the tail cone.

(f) Place the pointer of the dial indicator, STD-1238, at the lower aft corner of the rudder trailing edge.

(g) Use a block, STD-1278, and push/pull scale 0-25 pound (0-11 kilogram), STD-753, to move the rudder 2.25 in. (5.72 cm) ± 0.1 in. (0.25 cm) to the left side.

1) Make sure that the force to move the rudder is less than 16.3 lbf (72.5 N).

(h) Use a block, STD-1278, and push/pull scale 0-25 pound (0-11 kilogram), STD-753, to move the rudder 2.25 in. (5.72 cm) ± 0.1 in. (0.25 cm) to the right side.

1) Make sure that the force to move the rudder is less than 16.3 lbf (72.5 N).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) Remove the dial indicator, STD-1238, and block, STD-1278, from the rudder.

27-CMR-05

TASK 27-21-00-700-810

16. Main Rudder PCU Internal Hydraulic Leakage Test

(Figure 508)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this task to do a check for excessive internal hydraulic leakage for the main rudder Power Control Unit (PCU).

B. References

Reference	Title
27-21-00-800-801	Rudder Hydraulic System A, B, or Standby Pressurization (P/B 201)

SUBTASK 27-21-00-840-004

(2) If required, open this access panel:

Number	Name/Location
324DL	Trailing Edge Access

SUBTASK 27-21-00-860-081

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Pressurize the rudder hydraulic systems A and B, do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

SUBTASK 27-21-00-860-082

(4) Put the FLT CONTROL A and B switches, on the P5-3 panel, to the ON position.

SUBTASK 27-21-00-860-083

(5) Install the NLG towing lever pin, SPL-1499, in the nose wheel steering mechanism (TASK 32-00-01-480-801).

NOTE: Nose Landing Gear (NLG) will move when the rudder pedals are moved. To prevent NLG movement, install a lockout pin in the nose wheel steering mechanism.

SUBTASK 27-21-00-980-003

(6) Move the rudder pedals through 5 cycles of full travel.

SUBTASK 27-21-00-980-004

(7) Center the rudder pedals and remove feet from the pedals.

SUBTASK 27-21-00-010-014

(8) Get access to the main electronics equipment compartment, do this step:

Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-21-00-700-002

(9) Use a digital voltmeter to make sure that the 4.38 Vdc to 5.62 Vdc between pin 18 and pin 20 of connector D10064, on the E1-1 shelf in the EE bay.

(a) If the voltage is not 4.38 Vdc to 5.62 Vdc, adjust the control rod (TASK 27-21-00-820-804).

SUBTASK 27-21-00-210-003

(10) Make sure that the STBY RUD ON light, on the P5-3 overhead panel, is not illuminated.

SUBTASK 27-21-00-860-084

(11) Put the FLT CONTROL A switch, on the P5-3 panel, to the OFF position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Rudder Main PCU System B Internal Leakage Check in the Extend Direction

NOTE: You will need 3 persons to complete this task.

There is a time limit to complete some steps in this task.

SUBTASK 27-21-00-860-085

(1) Use the Flap/Slat Electronics Unit (FSEU), on the E1-1 shelf in the main equipment center, to command the Rudder Pressure Limiters (RPL) to the "LOW" pressure state.

NOTE: The command will remain active for only 75 seconds after it is set.

(a) Push the ON/OFF button on the front panel of the FSEU, on E1-1 shelf, to turn on the display.

1) The display will show EXISTING FAULTS?.

(b) Select OTHER FUNCTNS? from the MAIN MENU on the FSEU.

1) The display will show SET OUTPUTS?.

(c) Select SET OUTPUTS? from the OTHER FUNCTNS? menu.

1) The display will show RUD PRES LIMIT?.

(d) Select RUD PRES LIMIT? from the SET OUTPUTS? menu.

1) The display will show SET ON?.

(e) Select SET ON? from the RUD PRES LIMIT? menu.

1) The display will show CMD ON, SET OFF?.

NOTE: You only have 75 seconds to complete the next 3 tasks. If you do not finish in 75 seconds, you will have to repeat the test and start with the steps to use the FSEU to command the RPL to the "LOW" state.

SUBTASK 27-21-00-980-005

(2) Push the left rudder pedal until it touches the forward quadrant stop and hold.

SUBTASK 27-21-00-980-006

(3) Manually hold the main rudder PCU lower control rod at location B and pull forward with a force of approximately to 30 lbf (133 N) - 40 lbf (178 N) until it touches the stop and hold (Figure 508).

NOTE: If the control rods are not held against the stops, the voltage reading will differ from the limits in the following step.

SUBTASK 27-21-00-700-003

(4) Make sure that the voltage between pin 18 and pin 20 of connector D10064, on the E1-1 shelf, is between 1.87 VDC to 2.62 VDC.

SUBTASK 27-21-00-980-007

(5) Release the main rudder PCU control rod.

SUBTASK 27-21-00-980-008

(6) Release the rudder pedal.

SUBTASK 27-21-00-860-086

(7) The display screen on the FSEU should show CMD ON, SET OFF?.

(a) Select YES. The display will show CMD OFF, SET ON?.

SUBTASK 27-21-00-980-009

(8) Push the left rudder pedal until it touches the forward quadrant stop and hold.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-980-010

(9) Manually hold the main rudder PCU lower control rod at location B and pull forward with a force of approximately to 30 lbf (133 N) - 40 lbf (178 N) until it touches the stop and hold (Figure 508).

NOTE: If the control rods are not held against the stops, the voltage reading will differ from the limits in the following step.

SUBTASK 27-21-00-700-004

(10) Make sure that the voltage between pin 18 and pin 20 of connector D10064, on the E1-1 shelf, is less than 1.87 VDC.

SUBTASK 27-21-00-980-011

(11) Release the main rudder PCU lower control rod.

SUBTASK 27-21-00-980-012

(12) Release the left rudder pedal.

NOTE: The test of system B was completed in the extend direction.

H. Rudder Main PCU System B Internal Leakage Check in the Retract Direction

SUBTASK 27-21-00-860-087

(1) Use the FSEU, on the E1-1 shelf in the main equipment center, to command the RPL to the "LOW" pressure state.

NOTE: The command will remains active for only 75 seconds after it is set.

(a) Push the ON/OFF button on the front panel of the FSEU, on E1-1 shelf, to turn on the display.

1) The display will show EXISTING FAULTS?.

(b) Select OTHER FUNCTNS? from the MAIN MENU on the FSEU.

1) The display will show SET OUTPUTS?.

(c) Select SET OUTPUTS? from the OTHER FUNCTNS? menu.

1) The display will show RUD PRES LIMIT?.

(d) Select RUD PRES LIMIT? from the SET OUTPUTS? menu.

1) The display will show SET ON?.

(e) Select SET ON? from the RUD PRES LIMIT? menu.

1) The display will show CMD ON, SET OFF?.

NOTE: You only have 75 seconds to complete the next 3 tasks. If you do not finish in 75 seconds, you will have to repeat the test and start with the steps to use the FSEU to command the RPL to the "LOW" state.

SUBTASK 27-21-00-980-013

(2) Push the right rudder pedal until it touches the forward quadrant stop and hold.

SUBTASK 27-21-00-980-014

(3) Manually hold the main rudder PCU lower control rod at location B and pull aft with a force of approximately to 30 lbf (133 N) - 40 lbf (178 N) until it touches the stop and hold (Figure 508).

NOTE: If the control rods are not held against the stops, the voltage reading will differ from the limits in the following step.

SUBTASK 27-21-00-700-005

(4) Make sure that the voltage between pin 18 and pin 20 of connector D10064, on the E1-1 shelf, is between 7.37 VDC to 8.13 VDC.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-980-015

(5) Release the main rudder PCU control rod.

SUBTASK 27-21-00-980-016

(6) Release the rudder pedal.

SUBTASK 27-21-00-860-088

(7) The display screen on the FSEU should show CMD ON, SET OFF?.

(a) Select YES.

1) The display will show CMD OFF, SET ON?.

SUBTASK 27-21-00-980-017

(8) Push the right rudder pedal until it touches the forward quadrant stop and hold.

SUBTASK 27-21-00-980-018

(9) Manually hold the main rudder PCU lower control rod at location B and pull aft with a force of approximately to 30 lbf (133 N) - 40 lbf (178 N) until it touches the stop and hold (Figure 508).

NOTE: If the control rods are not held against the stops, the voltage reading will differ from the limits in the following step.

SUBTASK 27-21-00-700-006

(10) Make sure that the voltage between pin 18 and pin 20 of connector D10064, on the E1-1 shelf, is greater than 8.13 VDC.

SUBTASK 27-21-00-980-019

(11) Release the main rudder PCU lower control rod.

SUBTASK 27-21-00-980-020

(12) Release the right rudder pedal.

NOTE: The test of system B was completed in the retract direction.

I. Rudder Main PCU System A Internal Leakage Check in the Extend Direction

NOTE: You will need 3 persons to complete this task. There is a time limit to complete some steps in this task.

SUBTASK 27-21-00-860-089

(1) Put the FLT CONTROL A switch, on the P5-3 panel, to the ON position.

SUBTASK 27-21-00-860-090

(2) Put the FLT CONTROL B switch, on the P5-3 panel, to the OFF position.

SUBTASK 27-21-00-860-091

(3) Use the FSEU, on the E1-1 shelf in the main equipment center, to command the RPL to the "LOW" pressure state.

NOTE: The command will remains active for only 75 seconds after it is set.

(a) Push the ON/OFF button on the front panel of the FSEU, on E1-1 shelf, to turn on the display.

1) The display will show EXISTING FAULTS?.

(b) Select OTHER FUNCTNS? from the MAIN MENU on the FSEU.

1) The display will show SET OUTPUTS?.

(c) Select SET OUTPUTS? from the OTHER FUNCTNS? menu.

1) The display will show RUD PRES LIMIT?.

(d) Select RUD PRES LIMIT? from the SET OUTPUTS? menu.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) The display will show SET ON?.

(e) Select SET ON? from the RUD PRES LIMIT? menu.

1) The display will show CMD ON, SET OFF?.

NOTE: You only have 75 seconds to complete the next 3 tasks. If you do not finish in 75 seconds, you will have to repeat the test and start with the steps to use the FSEU to command the RPL to the "LOW" state.

SUBTASK 27-21-00-980-021

(4) Push the left rudder pedal until it touches the forward quadrant stop and hold.

SUBTASK 27-21-00-980-022

(5) Manually hold the main rudder PCU upper control rod at location A and pull forward with a force of approximately to 30 lbf (133 N) - 40 lbf (178 N) until it touches the stop and hold (Figure 508).

NOTE: If the control rods are not held against the stops, the voltage reading will differ from the limits in the following step.

SUBTASK 27-21-00-700-007

(6) Make sure that the voltage between pin 18 and pin 20 of connector D10064, on the E1-1 shelf, is between 7.37 VDC to 8.13 VDC.

SUBTASK 27-21-00-980-023

(7) Release the main rudder PCU control rod.

SUBTASK 27-21-00-980-024

(8) Release the rudder pedal.

SUBTASK 27-21-00-860-092

(9) The display screen on the FSEU should show CMD ON, SET OFF?.

(a) Select YES.

1) The display will show CMD OFF, SET ON?.

SUBTASK 27-21-00-980-025

(10) Push the left rudder pedal until it touches the forward quadrant stop and hold.

SUBTASK 27-21-00-980-026

(11) Manually hold the main rudder PCU upper control rod at location A and pull forward with a force of approximately to 30 lbf (133 N) - 40 lbf (178 N) until it touches the stop and hold (Figure 508).

NOTE: If the control rods are not held against the stops, the voltage reading will differ from the limits in the following step.

SUBTASK 27-21-00-700-008

(12) Make sure that the voltage between pin 18 and pin 20 of connector D10064, on the E1-1 shelf, is greater than 8.13 VDC.

SUBTASK 27-21-00-980-027

(13) Release the main rudder PCU upper control rod.

SUBTASK 27-21-00-980-028

(14) Release the left rudder pedal.

NOTE: The test of system A was completed in the extend direction.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

J. Rudder Main PCU System A Internal Leakage Check in the Retract Direction

NOTE: You will need 3 persons to complete this task. There is a time limit to complete some steps in this task.

SUBTASK 27-21-00-860-093

(1) Use the FSEU, on the E1-1 shelf in the main equipment center, to command the RPL to the "LOW" pressure state.

NOTE: The command will remains active for only 75 seconds after it is set.

(a) Push the ON/OFF button on the front panel of the FSEU, on E1-1 shelf, to turn on the display.

1) The display will show EXISTING FAULTS?.

(b) Select OTHER FUNCTNS? from the MAIN MENU on the FSEU.

1) The display will show SET OUTPUTS?.

(c) Select SET OUTPUTS? from the OTHER FUNCTNS? menu.

1) The display will show RUD PRES LIMIT?.

(d) Select RUD PRES LIMIT? from the SET OUTPUTS? menu.

1) The display will show SET ON?.

(e) Select SET ON? from the RUD PRES LIMIT? menu.

1) The display will show CMD ON, SET OFF?.

NOTE: You only have 75 seconds to complete the next 3 tasks. If you do not finish in 75 seconds, you will have to repeat the test and start with the steps to use the FSEU to command the RPL to the "LOW" state.

SUBTASK 27-21-00-980-029

(2) Push the right rudder pedal until it touches the forward quadrant stop and hold.

SUBTASK 27-21-00-980-030

(3) Manually hold the main rudder PCU upper control rod at location A and pull aft with a force of approximately to 30 lbf (133 N) - 40 lbf (178 N) until it touches the stop and hold (Figure 508).

NOTE: If the control rods are not held against the stops, the voltage reading will differ from the limits in the following step.

SUBTASK 27-21-00-700-009

(4) Make sure that the voltage between pin 18 and pin 20 of connector D10064, on the E1-1 shelf, is between 1.87 VDC to 2.62 VDC.

SUBTASK 27-21-00-980-031

(5) Release the main rudder PCU control rod.

SUBTASK 27-21-00-980-032

(6) Release the rudder pedal.

SUBTASK 27-21-00-860-094

(7) The display screen on the FSEU should show CMD ON, SET OFF?.

(a) Select YES.

1) The display will show CMD OFF, SET ON?.

SUBTASK 27-21-00-980-033

(8) Push the right rudder pedal until it touches the forward quadrant stop and hold.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-980-034

(9) Manually hold the main rudder PCU upper control rod at location A and pull aft with a force of approximately to 30 lbf (133 N) - 40 lbf (178 N) until it touches the stop and hold (Figure 508).

NOTE: If the control rods are not held against the stops, the voltage reading will differ from the limits in the following step.

SUBTASK 27-21-00-700-010

(10) Make sure that the voltage between pin 18 and pin 20 of connector D10064, on the E1-1 shelf, is less than 1.87 VDC.

SUBTASK 27-21-00-980-035

(11) Release the main rudder PCU upper control rod.

SUBTASK 27-21-00-980-036

(12) Release the right rudder pedal.

NOTE: The test of system A was completed in the retract direction.

SUBTASK 27-21-00-860-095

(13) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-00-480-008

(14) Remove the NLG towing lever pin, SPL-1499, from the nose wheel steering mechanism (TASK 32-00-01-080-801).

SUBTASK 27-21-00-410-005

(15) If required, close this access panel:

TASK 27-21-00-700-811

17. Rudder Override Operational Test

(Figure 509)

NOTE: This procedure is a scheduled maintenance task.

A. General

WARNING MAKE SURE THAT YOU FOLLOW THE TASK STEPS IN THE CORRECT SEQUENCE. IF YOU DO NOT, IT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Use this test to make sure that the override mechanisms installed on the torque tube are operational.

B. Location Zones

Zone	Area
324	Vertical Fin - Rear Spar To Trailing Edge

C. Access Panels

Number	Name/Location
324BL	Vertical Fin, Trailing Edge Access
324DL	Trailing Edge Access

D. Procedure

SUBTASK 27-21-00-840-005

(1) Put the FLT CONTROL A and B switches, on the P5 panel, to the OFF position.

SUBTASK 27-21-00-010-015

(2) To gain access to the torque tube, do this task:

Open these access panels:

Number	Name/Location
324BL	Vertical Fin, Trailing Edge Access
324DL	Trailing Edge Access

SUBTASK 27-21-00-730-013

(3) Do the rudder override operational test:

(a) Make sure that the rudder and rudder pedals are in the neutral position.

(b) Manually hold the rudder aft edge in the centered position.

(c) Observe the torque tube override assemblies and do these steps:

1) Slowly push on the captain's left rudder pedal forward full travel then return the pedal to the neutral position.

NOTE: It will require more force than normal operation for the override mechanism to breakout of the detent position.

2) Make sure that all 3 override assemblies breakout of their detent positions.

3) Make sure that there is no sign of binding or interferences at any point of travel on the three override assemblies.

a) If binding or excessive friction exist, the override assemblies may be damaged or improperly installed. Correct this condition and repeat this check.

(d) Observe the torque tube override assemblies and do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Slowly push on the captain's right rudder pedal forward full travel then return the pedal to the neutral position.

   NOTE: It will require more force than normal operation for the override mechanism to breakout of the detent position.

2) Make sure that all 3 override assemblies breakout of their detent positions.

3) Make sure that there is no sign of binding or interferences at any point of travel on the three override assemblies.

   a) If binding or excessive friction exist, the override assemblies may be damaged or improperly installed. Correct this condition and repeat this check.

SUBTASK 27-21-00-410-006

(4) Install these access panels:

Number	Name/Location
324BL	Vertical Fin, Trailing Edge Access
324DL	Trailing Edge Access

E. Rudder Main PCU Force Fight Monitor Test

SUBTASK 27-21-00-860-098

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(1) Pressurize the rudder hydraulic systems A and B (TASK 27-21-00-800-801).

SUBTASK 27-21-00-860-099

(2) Put the FLT CONTROL A and B switches, on the P5 panel, to the ON position.

SUBTASK 27-21-00-860-100

(3) Make sure that the airplane is in the air mode (TASK 32-09-00-860-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-010-017

(4) To get access to the P92 panel, open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-21-00-860-113

WARNING

WHEN YOU OPEN THE P91 AND P92 PANELS, MAKE SURE THAT THE OUTER DOOR STAYS AS OPEN AS POSSIBLE. IF THE OUTER DOOR TURNS IN, THE ATTACHED DOOR COMPONENTS COULD TOUCH THE INNER DOOR COMPONENTS. THIS CAN CAUSE AN ARC CONDITION WHEN YOU SUPPLY POWER. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT AND INJURY TO PERSONNEL CAN OCCUR.

WARNING

DO NOT TOUCH THE CONDUCTORS IN THE P91 AND P92 PANELS. BE CAREFUL WHEN YOU GET ACCESS TO THE CIRCUIT BREAKERS ON THE INNER SIDE OF THE P91 AND P92 PANELS (ROW F). IF IT IS POSSIBLE, REMOVE AIRPLANE ELECTRICAL POWER FIRST. THE P91 AND P92 PANELS HAVE HIGH VOLTAGES AND CURRENTS. ELECTRICAL VOLTAGE AND CURRENT CAN KILL YOU OR CAUSE INJURIES.

(5) Remove the safety tag and close this circuit breaker:

Power Distribution Panel Number 2, P92

Row	Col	Number	Name
F	2	C01449	STANDBY HYDRAULIC PUMP

SUBTASK 27-21-00-410-008

(6) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-21-00-860-101

(7) Move the rudder pedals through 5 cycles of full travel.

SUBTASK 27-21-00-210-004

(8) Make sure that the STBY RUD ON light on the overhead panel P5-3 is not on.

SUBTASK 27-21-00-860-102

(9) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-21-00-860-103

(10) Put the FLT CONTROL B switch, on the P5 panel, to the STBY RUD position.

SUBTASK 27-21-00-210-005

(11) Make sure that the STBY RUD ON light on the overhead panel P5-3 is on.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-860-104

(12) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-21-00-860-105

(13) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD

SUBTASK 27-21-00-010-016

(14) To get access to the rudder main PCU, do this step:

(a) Open these access panels:

Number	Name/Location
324CL	Vertical Fin, Access
324EL	Vertical Fin, Access

SUBTASK 27-21-00-860-106

(15) Put the FLT CONTROL B switch, on the P5 panel, to the ON position.

SUBTASK 27-21-00-730-014

WARNING MAKE SURE THAT YOU FOLLOW THE STEPS IN THIS TASK CORRECT SEQUENCE. IF YOU DO NOT OBEY, INJURY TO PERSONS AND DAMAGE TO EQUIPMENT CAN OCCUR.

(16) Do the Force Fight Monitor test:

(a) Make sure that the STBY RUD ON light and STANDBY HYD LOW PRESS light on the overhead panel P5-3 are off.

(b) Move the rudder pedals through 2 cycles of full travel.

NOTE: This will relieve any standby hydraulic system residual pressure.

1) If it is necessary, jiggle the rudder pedals to put the pedals to the neutral position.

(c) Manually hold the rudder main PCU upper control rod at location A (Figure 508) and pull aft with sufficient force to break out the input override (approximately 30 lbf (133 N)).

1) Hold the control rod in this position for at least 7 seconds, then release.

(d) Make sure that the STBY RUD ON light and STANDBY HYD LOW PRESS light on the overhead panel P5-3 are on.

NOTE: The standby hydraulic pumps will not activate.

(e) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD

(f) Make sure that the STANDBY HYD LOW PRESS light on the overhead panel P5-3 is off.

NOTE: The standby hydraulic pumps will activate.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Open this circuit breaker on the P6-2 panel for at least 2 seconds, then close:

1) Open and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	15	C01628	FORCE FIGHT MONITOR

(h) Make sure that the STBY RUD ON light on the overhead panel P5-3 is off.

(i) Put the FLT CONTROL B switch, on the P5 panel, to the STBY RUD position.

(j) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD

(k) Put the FLT CONTROL B switch, on the P5 panel, to the ON position.

(l) Move the rudder pedals through 2 cycles of full travel.

1) If it is necessary, jiggle the rudder pedals to put the pedals to the neutral position.

(m) Manually hold the rudder main PCU upper control rod at location A (Figure 508) and pull forward with sufficient force to break out the input override (approximately 30 lbf (133 N)).

1) Hold the control rod in this position for at least 7 seconds, then release.

(n) Make sure that the STBY RUD ON light and STANDBY HYD LOW PRESS light on the overhead panel P5-3 are on.

NOTE: STANDBY HYD LOW PRESS light will not come on until hydraulic pressure has bled off (approximately 5 minutes).

NOTE: The standby hydraulic pumps will not activate.

(o) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD

(p) Make sure that the STANDBY HYD LOW PRESS light on the overhead panel P5-3 is off.

NOTE: The standby hydraulic pumps will activate.

(q) Open this circuit breaker on the P6-2 panel for at least 2 seconds, then close:

1) Open and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	15	C01628	FORCE FIGHT MONITOR

(r) Make sure that the STBY RUD ON light on the overhead panel P5-3 is off.

SUBTASK 27-21-00-860-107

(17) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-00-860-108

(18) Put the airplane back to the ground mode (TASK 32-09-00-860-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-00-410-007

(19) Install these access panels:

Number	Name/Location
324CL	Vertical Fin, Access
324EL	Vertical Fin, Access

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

RUDDER - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the rudder

(2) An installation of the rudder.

TASK 27-21-11-000-801

2. Rudder Removal

(Figure 401, Figure 402)

A. References

Reference	Title

E. Prepare for the Removal

SUBTASK 27-21-11-860-001

(1) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-21-11-020-001

(2) Remove the seals and seal attachment plates from each side of the fin at the rudder balance weight.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-11-010-001

(3) Remove these covers:

Number	Name/Location
324ACL	Rudder Nose Cover/Rudder Hinge No. 8 At Rudder Station 276.24
324ADL	Rudder Nose Cover/Rudder Hinge No. 7 At Rudder Station 257.92
324AEL	Rudder Nose Cover/Rudder Hinge No. 6 At Rudder Station 239.61
324AFL	Rudder Nose Cover/Rudder Hinge No. 5 At Rudder Station 184.67
324AHL	Rudder Nose Fairing/Rudder Hinge No. 4 At Rudder Station 129.74.
324AJL	Rudder Nose Fairing/Rudder Hinge No. 3 At Rudder Station 70.65
324AKL	Rudder Nose Fairing/Rudder Hinge No. 2 At Rudder Station 53.48
324ALL	Rudder Nose Cover/Rudder Hinge No. 1 At Rudder Station 6.96

SUBTASK 27-21-11-860-002

(4) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	16	C00788	FLIGHT CONTROL TRIM IND RUD
D	19	C00787	FLIGHT CONTROL TRIM CONT RUD

F. Rudder Removal

SUBTASK 27-21-11-480-001

(1) Do these steps to install the rudder sling, SPL-2033 (Figure 401):

NOTE: If you use the crane, do this step when you have enough room for the crane.

(a) Install the hoist fittings on the rudder [1] with a ¼ in. (6.4 mm) drive socket.

(b) Install four ropes to make sure that the rudder does not rotate and hit the airplane.

(c) Attach the sling to the hoist fittings installed on the rudder [1].

SUBTASK 27-21-11-020-002

(2) Remove the nut [46], washers [45], and bolt [44] to disconnect the bonding jumper [47] from the vertical fin at hinge 9 (Figure 402).

SUBTASK 27-21-11-020-003

(3) Disconnect the control rod of the rudder position transmitter from the vertical fin:

(a) Remove the bolt [23], washer [24], and washer [25].

(b) Disconnect the control rod.

SUBTASK 27-21-11-020-004

CAUTION

REMOVE THE CONTROL ROD FROM THE PCU BEFORE YOU DISCONNECT THE PCU FROM THE RUDDER. IF YOU DO NOT REMOVE THE CONTROL ROD FIRST, DAMAGE TO THE CONTROL ROD CAN OCCUR DURING THE CHECK.

(4) Do these steps to disconnect the rudder main power control unit (PCU) from the rudder [1]:

(a) Disconnect and remove the control rods [51] from the main PCU (TASK 27-21-91-000-801).

(b) Remove nut [15], washer [14], nut [13], washer [12], bushing [11], bolt [10], and bolt [9].

SUBTASK 27-21-11-020-005

(5) Do these steps to disconnect the rudder standby power control unit (PCU) from the rudder [1]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Disconnect and remove the control rod [52] from the standby PCU (TASK 27-21-24-000-801).

(b) Remove nut [29], washer [28], bushing [50], washer [27], and bolt [26].

SUBTASK 27-21-11-020-006

(6) Move the rudder [1] to the neutral position.

SUBTASK 27-21-11-020-007

(7) Lift the rudder [1] until the load is removed from its hinges.

SUBTASK 27-21-11-020-008

WARNING MAKE SURE THAT THE CRANE WILL HOLD THE RUDDER IN A STABLE POSITION WHEN YOU REMOVE THE HINGE BOLTS. ACCIDENTAL RUDDER MOVEMENT WHEN YOU DISCONNECT IT FROM THE AIRPLANE CAN CAUSE INJURY TO PERSONS OR DAMAGE TO EQUIPMENT.

(8) Remove the hinge bolts from the hinges:

(a) At hinges 1, 4, 5, 6, and 8, remove the pins [35], nuts [34], washers [33], bushings [32], washers [31], and bolt [30] from the hinges.

1) Discard the pins [35].

(b) At hinge 7, remove the pin [43], nut [42], washer [41], washer [39], bushing [38], washer [37], and bolt [36] from the hinge.

1) Discard the pin [43].

(c) At hinge 2, remove the pin [2], nut [3], washer [4], spacer [5], bushing [6], washer [7], and bolt [8] from the hinge.

1) Discard the pin [2].

(d) At hinge 3, remove the pin [22], nut [21], washer [20], adjustment bushing [19], bushing [18], washer [17], and bolt [16] from the hinge.

1) Discard the pin [22].

(e) At hinge 9, remove the pin [35], nut [34], washer [33], bushing [32], washer [31], and bolt [30] from the hinge.

1) Discard the pin [35].

SUBTASK 27-21-11-020-009

CAUTION YOU MUST MOVE THE RUDDER UP BEFORE YOU REMOVE IT FROM THE VERTICAL FIN. IF YOU DO NOT MOVE THE RUDDER UP, YOU CAN CAUSE DAMAGE TO THE RUDDER TIP.

(9) Do this step to remove the rudder [1]:

(a) Move the rudder [1] up and aft from the vertical fin and lower to the ground.

END OF TASK

G. Rudder Installation

CAUTION

BE CAREFUL WHEN YOU MOVE THE RUDDER. IF THE CONTROL ROD HITS THE VERTICAL STABILIZER, DAMAGE CAN OCCUR.

SUBTASK 27-21-11-820-004

(1) Balance and stamp the rudder assembly with the new static balance hinge moment if you install a reworked, repaired, repainted, or new rudder assembly (SRM PROCEDURE 51-60-07-0G-0).

SUBTASK 27-21-11-860-003

(2) Loosen all the seals at the trailing edge of the fin and move them fully forward.

SUBTASK 27-21-11-080-001

(3) Connect the rudder sling, SPL-2033, to the rudder [1] (Figure 401).

SUBTASK 27-21-11-420-001

(4) Do these steps to put the rudder [1] in its position and connect the hinges:

NOTE: A maximum of two washers are allowed under the bolt head or two washers under the nut. No more than three washers are allowed on any individual bolt unless relief for the bolt is necessary. A maximum of four washers are allowed on an individual bolt if one each is used for fillet distortion compensation, fillet relief, finish protection, and grip adjustment or counterbore substitution.

(a) Apply a thin layer of grease, D00633, to the smooth surfaces of all the hinge bolts (outer diameter), bushings (inner diameter), and bearings before you install them.

(b) Put the rudder sling, SPL-2033, in its position and connect it to the rudder [1] (Figure 401).

(c) Lift the rudder [1] to its position on the vertical fin.

1) Use the ropes to make sure that the rudder does not hit the airplane.

(d) Install the bolts, washers, spacers, and bushings that follow:

1) At hinges 1, 4, 5, 6, 8, and 9, install the bushings [32], washers [31], and bolts [30] to the hinge fittings.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) At hinge 2, install the spacer [5] (under the fitting), bushing [6], washer [7], and bolt [8] to the hinge fitting.

3) At hinge 3, install the bushing [18], washer [17], and bolt [16] to the hinge fitting.

4) At hinge 7, install bushing [38], washer [37], and bolt [36] to the hinge fitting.

(e) Release the rudder [1] slowly until the load is on its hinges.

(f) Make sure that the torque required to rotate the bolts is less than 100 in-lb (11.3 N·m).

(g) Install the nuts, washers, and pins in the order that follow:

1) At hinge 2, install the washer [4] (above the fitting) and nut [3].

a) Tighten the nut [3] to the lower end of the torque range 150 in-lb (16.9 N·m) - 200 in-lb (22.6 N·m).

<1> Continue to tighten the nut until the next castellation aligns with the hole in the bolt [8].

b) Install the new pin [2].

2) At hinges 1, 4, 5, 6, 8, and 9, install the washers [33] and nuts [34].

a) Tighten the nuts [34] to the lower end of the torque range 150 in-lb (16.9 N·m) - 200 in-lb (22.6 N·m).

<1> Continue to tighten the nut until the next castellation aligns with the hole in the bolt [30].

b) Install the new pin [35].

3) At hinge 3, do these steps:

a) Install the adjustment bushing [19] at hinge 3.

b) Adjust the adjustment bushing [19] until it is against the fin bearing with finger tight pressure only.

c) Install the washer [20] and nut [21].

d) Tighten the nut [21] to the lower end of the torque range 150 in-lb (16.9 N·m) - 200 in-lb (22.6 N·m).

<1> Continue to tighten the nut until the next castellation aligns with the hole in the bolt [16].

e) Install the new pin [22].

f) Install the MS20995C32 lockwire, G01048, from the adjustment bushing [19] to hinge fitting.

g) Fill the holes of the MS20995C32 lockwire, G01048, with sealant, A00247.

4) At hinge 7, install the washer [39], washer [41], and nut [42].

a) Tighten the nut [42] to the lower end of the torque range 150 in-lb (16.9 N·m) - 200 in-lb (22.6 N·m).

<1> Continue to tighten the nut until the next castellation aligns with the hole in the bolt [36].

b) Install the new pin [43].

SUBTASK 27-21-11-620-001

(5) Apply sealant, A00247, to both ends of the bonding jumper [47] and their fasteners.

SUBTASK 27-21-11-420-002

(6) Connect the control rod for the rudder position transmitter to the vertical fin:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Install the washer [25], washer [24], and bolt [23].

SUBTASK 27-21-11-420-003

(7) Install the bolt [44], washers [45], and nut [46] to connect the bonding jumper [47] to the vertical fin at hinge 9.

(a) Measure the electrical bonding resistance between the vertical fin and rudder [1].

1) Use an intrinsically safe approved bonding meter, COM-1550.

2) Make sure that the electrical bonding resistance is 0.01 ohm (10 milliohm) or less.

SUBTASK 27-21-11-080-002

(8) Remove the rudder sling, SPL-2033.

SUBTASK 27-21-11-220-001

(9) Make sure that there is clearance between all the seals and the forward part of the rudder and the balance weight.

(a) Manually move the rudder approximately seven degrees in each direction to examine the clearance.

SUBTASK 27-21-11-710-001

(10) Move the rudder to the left and right from the neutral position.

(a) Make sure that rudder moves left and right a minimum of 30 degrees from the neutral position.

SUBTASK 27-21-11-420-004

(11) Do this step to connect the rudder standby power control unit (PCU) to the rudder [1]:

(a) Install bolt [26], washer [27], bushing [50], washer [28], and nut [29].

(b) Tighten the nut [29] to 350 in-lb (39.5 N·m) - 400 in-lb (45.2 N·m) .

(c) Install the rudder standby PCU control rod [52] (TASK 27-21-24-400-801).

SUBTASK 27-21-11-420-005

(12) Do these steps to connect the rudder main PCU to the rudder [1]:

(a) Install the bushing [11], bolt [10], bolt [9], washer [12], and nut [13].

1) Tighten the nut [13] to 900 in-lb (102 N·m) - 1050 in-lb (119 N·m).

CAUTION

DO NOT TIGHTEN THE NUT [13] AFTER YOU TIGHTEN THE NUT[15]. YOU CAN CAUSE DAMAGE TO EQUIPMENT.

(b) Install washer [14] and nut [15].

1) Tighten the nut [15] to 450 in-lb (51 N·m) - 550 in-lb (62 N·m).

(c) Install the control rods [51] that you removed between the torque tube and the main PCU (TASK 27-21-91-400-801).

SUBTASK 27-21-11-220-002

(13) Make sure that the mismatch between the rudder [1] and the vertical fin is correct at each of rib locations (View B-B, Figure 402).

SUBTASK 27-21-11-820-001

(14) Adjust the seals at the trailing edge of the vertical fin and tighten them (Views J and C-C, Figure 402).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-11-820-002

(15) Adjust the balance weight seals on the vertical fin and tighten the seal retainers (Views I and A-A, Figure 402).

SUBTASK 27-21-11-820-003

(16) Adjust the seal compression for the lower (rudder to body) seal (Views K, D-D, and E-E, Figure 402):

(a) Move the rudder [1] to its neutral position.

(b) Make sure that the seals contact and that the seal compression is 0.00 in. (0.00 mm) - -0.04 in. (-1.02 mm).

(c) If it is necessary, do these steps to adjust the seal:

1) Loosen the bolts [48] and bolts [49] from the seal.

2) Adjust the seal until they both contact and the seal compression is 0.00 in. (0.00 mm) - -0.04 in. (-1.02 mm).

3) Tighten the bolts [48] and bolts [49].

(d) Make sure that the seal does not cause a blockage at the left and right rudder drain holes.

SUBTASK 27-21-11-860-004

(17) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	16	C00788	FLIGHT CONTROL TRIM IND RUD
D	19	C00787	FLIGHT CONTROL TRIM CONT RUD

SUBTASK 27-21-11-220-003

(18) Do this task: Rudder Hinge Bearing and PCU Bearing Freeplay, TASK 27-21-00-700-802.

SUBTASK 27-21-11-220-004

(19) Do this task: Rudder Travel Test, TASK 27-21-00-700-805.

SUBTASK 27-21-11-220-005

(20) Do this task: Rudder Centering Test, TASK 27-21-00-700-803.

SUBTASK 27-21-11-220-006

(21) Do this task: Rudder Hinge Friction Test, TASK 27-21-00-700-809.

SUBTASK 27-21-11-220-007

(22) Do this task: Rudder Position Transmitter Installation Test, TASK 31-31-41-700-801.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-11-410-001

(1) Install these covers:

Number	Name/Location
324ACL	Rudder Nose Cover/Rudder Hinge No. 8 At Rudder Station 276.24
324ADL	Rudder Nose Cover/Rudder Hinge No. 7 At Rudder Station 257.92
324AEL	Rudder Nose Cover/Rudder Hinge No. 6 At Rudder Station 239.61
324AFL	Rudder Nose Cover/Rudder Hinge No. 5 At Rudder Station 184.67
324AHL	Rudder Nose Fairing/Rudder Hinge No. 4 At Rudder Station 129.74.
324AJL	Rudder Nose Fairing/Rudder Hinge No. 3 At Rudder Station 70.65
324AKL	Rudder Nose Fairing/Rudder Hinge No. 2 At Rudder Station 53.48

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Number	Name/Location
324ALL	Rudder Nose Cover/Rudder Hinge No. 1 At Rudder Station 6.96

END OF TASK

RUDDER INDEX PLATE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the rudder index plate.

(2) An installation of the rudder index plate.

TASK 27-21-17-000-801

2. Rudder Index Plate Removal

(Figure 401)

A. Location Zones

Zone	Area
317	Tail Cone Compartment - Left
318	Tail Cone Compartment - Right

B. Rudder Index Plate Removal

SUBTASK 27-21-17-930-001

(1) Put a tape on the airplane adjacent to the rudder index plate [1].

(a) Accurately make a mark of the position of the rudder index plate [1] on the tape.

SUBTASK 27-21-17-020-001

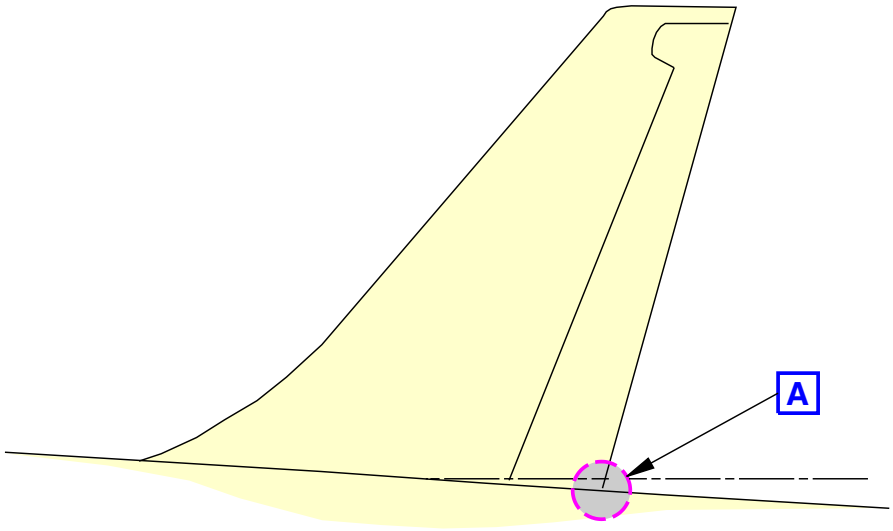
(2) Remove the screws [2] and washers [3] to remove the rudder index plate [1].

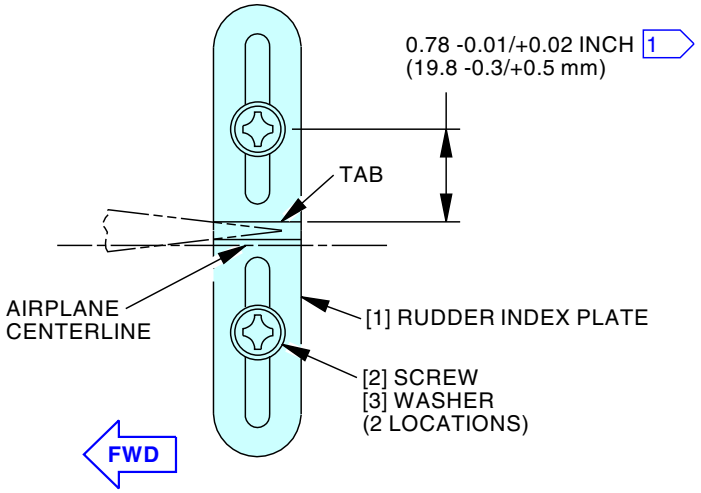
SUBTASK 27-21-17-020-002

(3) Remove the rudder index plate [1] from the airplane.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details





RUDDER INDEX PLATE

A

NOTE:

1 THIS DIMENSION MAY BE DIFFERENT IF THE INDEX PLATE HAS BEEN ADJUSTED FOR LATERAL TRIM.

TASK 27-21-17-400-801

3. Rudder Index Plate Installation

(Figure 401)

A. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
1	Rudder index plate	27-21-17-01-025	SIA ALL

B. Location Zones

Zone	Area
317	Tail Cone Compartment - Left
318	Tail Cone Compartment - Right

C. Rudder Index Plate Installation

SUBTASK 27-21-17-420-001

(1) If there is tape with a mark that shows the correct position, then do these steps to install the rudder index plate [1]:

(a) Put the rudder index plate [1] in its position and align it with the mark.

(b) Install the screws [2] and washers [3] to install the rudder index plate [1].

(c) Remove the tape (that has the mark on it) from the airplane.

SUBTASK 27-21-17-420-002

(2) If there is not a tape with a mark that shows the correct position, then do these steps to install the rudder index plate [1]:

(a) Put the rudder index plate [1] in its position (Figure 401).

(b) Install the screws [2] and washers [3] to install the rudder index plate [1].

(c) Make sure the rudder index plate [1] is set at 0.78 +0.02 / -0.01 in. (19.8 +0.5 / -0.3 mm) (Figure 401).

C. Location Zones

Zone	Area
324	Vertical Fin - Rear Spar To Trailing Edge

D. Access Panels

Number	Name/Location
324DL	Trailing Edge Access

E. Prepare for the Removal

SUBTASK 27-21-24-860-001

(1) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-21-24-860-002

(2) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
C	7	C00285	YAW DAMPER AC
D	6	C01354	YAW DAMPER 2 DC
D	7	C00286	YAW DAMPER 1 DC

SUBTASK 27-21-24-010-001

(3) Remove this access panel:

Number	Name/Location
324DL	Trailing Edge Access

F. Standby Rudder PCU Removal

SUBTASK 27-21-24-020-001

(1) Disconnect the hydraulic lines [12] from the power control unit [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

MAKE SURE THAT YOU CAREFULLY DRAIN HYDRAULIC FLUID INTO A SUITABLE CONTAINER. CAREFULLY CLEAN, DRY, AND DISPOSE OF ALL LEAKAGE. HYDRAULIC FLUID CAUSES DAMAGE TO RUBBER, COPPER, PLASTICS, PAINTS, AND MANY OTHER MATERIALS.

(a) Put a 1 U.S.-gal (3.81 l) oil resistant container, STD-203, below the hydraulic connections.

(b) Disconnect the hydraulic lines [12] from the power control unit [4].

(c) Install the plugs and caps to the hydraulic lines [12] and ports.

(d) Install a tag on the hydraulic lines [12] to make sure that you install them correctly.

1) Discard the packing [3] and packing [11].

SUBTASK 27-21-24-020-002

(2) Disconnect the electrical connector [1] from the power control unit [4].

SUBTASK 27-21-24-020-003

CAUTION

MAKE SURE THAT YOU REMOVE THE VERNIER CONTROL ROD FROM THE PCU BEFORE YOU DISCONNECT THE PCU FROM THE RUDDER. IF YOU DO NOT REMOVE THE VERNIER CONTROL ROD FIRST, IT CAN CAUSE DAMAGE TO THE VERNIER CONTROL ROD.

(3) Disconnect the vernier control rod [9] from the power control unit [4].

(a) Remove the nut [8], washer [7], washer [6], and bolt [5] to disconnect the control rod [9] from the power control unit [4].

(b) Remove the nut [28], washer [27], washer [26], and bolt [25] to disconnect the control rod [9] from the power control unit [4].

(c) Remove the control rod [9] from the airplane.

SUBTASK 27-21-24-020-004

CAUTION

MAKE SURE THAT YOU MOVE THE PCU CAREFULLY DURING THE REMOVAL OR INSTALLATION OF THE PCU. THE PCU CAN HIT THE BOLTS. THIS CAN CAUSE DAMAGE TO THE BOLTS.

(4) Remove the power control unit [4].

(a) Remove the nut [24], washers [23], bushing [22], washer [21], and bolt [20] to disconnect the power control unit [4] from the rudder.

CAUTION

MAKE SURE THAT YOU HOLD THE STANDBY RUDDER PCU DURING THE REMOVAL OF THE STANDBY RUDDER PCU. THE STANDBY RUDDER PCU CAN FALL AND CAUSE DAMAGE TO THE STANDBY RUDDER PCU.

(b) Remove the nut [19], washer [18], washer [17], bushing [16], bushing [15], washer [14], and bolt [13] that attach the power control unit [4] to the airplane structure.

(c) Remove the power control unit [4] from the airplane.

G. Standby Rudder PCU Installation

SUBTASK 27-21-24-220-001

(1) Examine the standby rudder PCU and all connections to the standby rudder PCU for worn areas, do this task: Standby Rudder Power Control Unit (with Hydraulic Power on) General Visual Inspection, TASK 27-21-24-210-801.

SUBTASK 27-21-24-420-001

(2) If it the unions and packings are not installed in the power control unit [4], do these steps:

(a) Lubricate the unions and packings with hydraulic fluid, D00153.

(b) Install the union [2] and new packing [3] in the power control unit [4].

(c) Install the union [10] and new packing [11] in the power control unit [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-24-420-002

CAUTION MAKE SURE THAT YOU MOVE THE PCU CAREFULLY DURING THE REMOVAL OR INSTALLATION OF THE PCU. THE PCU CAN HIT THE BOLTS. THIS CAN CAUSE DAMAGE TO THE BOLTS.

(3) Install the power control unit [4].

NOTE: Follow the instructions to install the PCU carefully and do the procedure in the specified sequence. Damage to the control rod [9] may occur if you do not follow the instructions correctly.

(a) Put the power control unit [4] in its position.

(b) Install the bolt [13], washers [14], bushing [15], bushing [16], washer [17], washer [18], and nut [19] to connect the power control unit [4] to the airplane structure.

1) Tighten the nut [19] to 450 ±50 in-lb (51 ±6 N·m) or tighten the bolt [13] to 525 ±50 in-lb (59 ±6 N·m).

(c) Install the bolt [20], washer [21], bushing [22], washer [23], and nut [24] to connect the power control unit [4] to the rudder.

1) Tighten the nut [24] to 350 ±25 in-lb (40 ±3 N·m) or tighten the bolt [20] to 413 ±25 in-lb (47 ±3 N·m).

SUBTASK 27-21-24-420-003

(4) Connect the vernier control rod [9] to the power control unit [4].

(a) Install the bolt [25], washer [26], washer [27], and nut [28] to connect the control rod [9] to the power control unit [4].

(b) Install the bolt [5], washer [6], washer [7], and nut [8] to connect the control rod [9] to the power control unit [4].

SUBTASK 27-21-24-020-005

CAUTION MAKE SURE THAT YOU CORRECTLY INSTALL THE HYDRAULIC LINES TO THE STANDBY RUDDER PCU. MAKE SURE THAT THE CORRECT UNIONS ARE INSTALLED IN THE HYDRAULIC PORTS. YOU CAN CAUSE DAMAGE TO THE STANDBY RUDDER PCU.

(5) Connect the hydraulic lines [12] to the power control unit [4].

CAUTION MAKE SURE THAT YOU CAREFULLY DRAIN HYDRAULIC FLUID INTO A SUITABLE CONTAINER. CAREFULLY CLEAN, DRY, AND DISPOSE OF ALL LEAKAGE. HYDRAULIC FLUID CAUSES DAMAGE TO RUBBER, COPPER, PLASTICS, PAINTS, AND MANY OTHER MATERIALS.

(a) Remove the caps and plugs from the hydraulic lines [12] and ports.

(b) Remove the identification tags from the hydraulic lines [12].

(c) Remove the 1 U.S.-gal (3.81 l) oil resistant container, STD-203, used to catch fluids from the hydraulic lines [12].

(d) Connect the hydraulic lines [12] to the power control unit [4].

(e) Tighten the B-nuts on the hydraulic lines [12] to 140 ±7 in-lb (16 ±1 N·m).

SUBTASK 27-21-24-020-006

(6) Connect the electrical connector [1] to the power control unit [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-24-860-003

(7) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
C	7	C00285	YAW DAMPER AC
D	6	C01354	YAW DAMPER 2 DC

SUBTASK 27-21-31-040-002

(2) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-21-31-040-003

(3) Do this task: Elevator and Tab Control System - Deactivation, TASK 27-31-00-000-801

SUBTASK 27-21-31-020-011

(4) If necessary, remove the Captain and First Officer's seats. Do this task: Captain and First Officer Seat Removal, TASK 25-11-01-000-801.

SUBTASK 27-21-31-010-002

(5) Open this access door:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-21-31-010-001

(6) Remove these access panels to get access to the captains's and first officer's rudder forward quadrant [31]. (TASK 53-14-01-020-801)

(a) Remove these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

SUBTASK 27-21-31-480-001

(7) Install the rig pin R-3 from the rigging pin kit, SPL-1585 in the forward rig pin hole of the captain's rudder forward quadrant [31] (Figure 401).

SUBTASK 27-21-31-480-002

(8) Install the rig pin R-4 from the rigging pin kit, SPL-1585 in the forward rig pin hole of the first officer's rudder forward quadrant [31] (Figure 401).

F. Rudder Pedals Removal

SIA 003 PRE SB 737-27A1313

SUBTASK 27-21-31-020-001

(1) Remove top cover and pedal shrouds. Do the following steps:

(a) Remove the screws [24], screws [29] and washers [25] that attach the top cover [23] to the lower cover [32].

(b) Remove the screws [26] that attach the outboard pedal shroud [21] and inboard pedal shroud [22] to the top cover [23].

(c) Remove the screws [27] that attach the outboard pedal shroud [21] and the inboard pedal shroud [22] to the stanchion walls.

(d) Remove the outboard pedal shroud [21] and the inboard pedal shroud [22] to gain access to the bolt [34] that attaches the pedal adjustment cable [35] to the top cover [23].

NOTE: Ensure that no ducting is attached to the pedal shrouds.

1) Remove the bolt [34] that attaches the pedal adjustment cable [35] to the cable standoff on the top cover [23].

(e) Remove the top cover [23].

1) If it is necessary, pull the control column aft, move the pedals, and turn the top cover [23] as it clears adjacent structure.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SIA 001, 002, 004-999; SIA 003 POST SB 737-27A1313

SUBTASK 27-21-31-020-010

(2) Remove top cover and pedal shrouds. Do the following steps:

(a) Remove the lighting module [33]:

1) Loosen the fasteners [36] on the front of the lighting module [33]. (Figure 33-11-00-990-801)

2) Pull the lighting module [33] aft and clear of the top cover [23].

NOTE: Do not disconnect the electrical connectors from the lighting module [33].

(b) Remove the screws [24], screws [29] and washers [25] that attach the top cover [23] to the lower cover [32].

(c) Remove the screws [27] that attach the outboard pedal shroud [21] and inboard pedal shroud [22] to the stanchion walls.

(d) Remove the screws [28] that attach the angle brackets [30] to the top cover [23].

NOTE: Ensure the angle brackets remain attached to the pedal shrouds.

(e) Remove the outboard pedal shroud [21] and the inboard pedal shroud [22] to gain access to the bolt [34] that attaches the pedal adjustment cable [35] to the top cover [23].

NOTE: Ensure that no ducting is attached to the pedal shrouds.

1) Remove the bolt [34] that attaches the pedal adjustment cable [35] to the cable standoff on the top cover [23].

(f) Remove the top cover [23].

1) If it is necessary, pull the control column aft, move the pedals, and turn the top cover [23] as it clears adjacent structure.

SIA ALL

SUBTASK 27-21-31-020-005

(3) Remove the nuts [10], washers [9], bushings [8], and bolts [7] to disconnect the two brake pushrods [11] from the bellcranks [6].

SUBTASK 27-21-31-020-006

(4) Remove the screws [19] and brackets [20] from the rudder pedals [12].

SUBTASK 27-21-31-020-007

(5) Remove the pin [3A], nuts [3], washers [2], and bolts [1] to disconnect the two rudder pedal tension rods [4]from the rudder pedals [12].

SUBTASK 27-21-31-020-009

(6) Remove the rudder pedals [12] from the support structure:

(a) Remove the nut [13] and washer [17].

(b) Hold the rudder pedals [12] and pull the support shaft [16] out.

NOTE: The bushings, bearings, and washers will be loosed as the support shaft [16] is removed.

(c) Pull each rudder pedal [12] through the floor beams, into the flight compartment.

(d) Remove the rudder pedals [12] from the airplane.

F. Rudder Pedals Installation

SUBTASK 27-21-31-480-003

(1) Make sure that the rig pin R-3 from the rigging pin kit, SPL-1585, is installed in the captain's rudder forward quadrant [31].

SUBTASK 27-21-31-480-004

(2) Make sure that the rig pin R-4 from the rigging pin kit, SPL-1585, is installed in the first officer's rudder forward quadrant [31].

SUBTASK 27-21-31-420-001

(3) Install the rudder pedals [12]:

(a) Put the spacers [15] and bearings [18] into the rudder pedals [12].

(b) Put the inboard rudder pedal [12] between the support structure and align the holes.

(c) Put the washer [17] on the support shaft [16].

(d) Install the support shaft [16] from the inboard side through the hole in the support structures and through the bushing [14] and rudder pedal [12].

(e) Install the bushing [14] on the support shaft [16].

(f) Install the washer [17] and nut [13] on the support shaft [16].

1) Tighten the nut [13] to 200 in-lb (22.6 N·m) - 500 in-lb (56.5 N·m).

(g) Make sure the support shaft [16] is not free to turn in the support structures.

SUBTASK 27-21-31-820-001

(4) Do these steps to adjust the rudder pedal position:

(a) Turn the rudder pedal adjustment crank in the full clockwise direction for the installed rudder pedals [12] until the jackshaft is in its full forward position.

(b) Turn the rudder pedal adjustment crank 4 turns in the counterclockwise direction.

(c) If you install the captain's rudder pedals [12], then install the rig pin R-1 from the test set rigging pin kit, SPL-1585, in the captain's rudder pedals [12].

(d) If you install the first officer's rudder pedals [12], then install the rig pin R-2 from the test set rigging pin kit, SPL-1585, in the first officer's rudder pedals [12].

SUBTASK 27-21-31-820-002

(5) Do these steps to adjust the two rudder pedal tension rods [4]:

(a) Loosen the jamnuts [5] on the two rudder pedal tension rods [4].

(b) Turn the rudder pedal tension rods [4] until you can attach them to the rudder pedals [12].

(c) Make sure you can see the rod end threads through the inspection holes at two ends of the rudder pedal tension rods [4] after the adjustment.

(d) Make sure that the threads show in at least one-half of the inspection hole.

(e) Tighten the jamnuts [5] on the rudder pedal tension rods [4].

SUBTASK 27-21-31-420-002

(6) Install the bolts [1], washers [2], nuts [3] and pin [3A] to connect the two rudder pedal tension rods [4]to the rudder pedals [12].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-31-420-003

(7) Install the brackets [20] and the screws [19] on the rudder pedals [12].

SUBTASK 27-21-31-420-004

(8) Install the bolts [7], bushings [8], washers [9], and nuts [10] to connect the two brake pushrods [11] to the bellcranks [6].

(a) Adjust the length of the brake pushrods [11], if it is necessary.

SIA 003 PRE SB 737-27A1313

SUBTASK 27-21-31-420-006

(9) Install top cover and pedal shrouds. Do the following steps:

(a) Put the top cover [23] on the lower cover [32].

(b) Attach the pedal adjustment cable [35] to the top cover [23].

1) Install bolt [34] through clamp on pedal adjustment cable [35] and into cable standoff on top cover [23].

(c) Install the screws [24], screws [29] and washers [25] to attach the top cover [23] to the lower cover [32].

WARNING MAKE SURE THE SCREWS THAT ATTACH THE PEDAL SHROUDS ARE INSTALLED, SEATED, AND TIGHTENED TO THE CORRECT TORQUE. IF THE SCREWS ARE NOT INSTALLED CORRECTLY, THEY CAN CAUSE INTERFERENCE WITH THE MOTION OF THE RUDDER PEDALS. THIS CAUSES A DANGEROUS FLIGHT CONDITION.

(d) Put the outboard pedal shroud [21] in its position.

NOTE: If necessary ensure that all ducting is properly attached and positioned.

WARNING MAKE SURE THE SCREWS THAT ATTACH THE PEDAL SHROUDS ARE INSTALLED, SEATED, AND TIGHTENED TO THE CORRECT TORQUE. IF THE SCREWS ARE NOT INSTALLED CORRECTLY, THEY CAN CAUSE INTERFERENCE WITH THE MOTION OF THE RUDDER PEDALS. THIS CAUSES A DANGEROUS FLIGHT CONDITION.

1) Install screws [26] to attach the outboard pedal shroud [21] to the top cover [23].

2) Tighten the screws [26] to a torque of 35 ±1 in-lb (4 ±0 N·m).

3) Make sure there is no gap between the outboard pedal shroud [21] and the top cover [23] at each screw [26] location.

NOTE: Pedal shroud is flexible and can push back from top cover during installation of fasteners.

WARNING MAKE SURE THE SCREWS THAT ATTACH THE PEDAL SHROUDS ARE INSTALLED, SEATED, AND TIGHTENED TO THE CORRECT TORQUE. IF THE SCREWS ARE NOT INSTALLED CORRECTLY, THEY CAN CAUSE INTERFERENCE WITH THE MOTION OF THE RUDDER PEDALS. THIS CAUSES A DANGEROUS FLIGHT CONDITION.

(e) Put the inboard pedal shroud [22] in its position.

NOTE: If necessary ensure that all ducting is properly attached and positioned.

1) Install screws [26] to attach the inboard pedal shroud [22] to the top cover [23].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SIA 003 PRE SB 737-27A1313 (Continued)

2) Tighten the screws [26] to a torque of 35 ±1 in-lb (4 ±0 N·m).

3) Make sure there is no gap between the inboard pedal shroud [22] and the top cover [23] at each screw [26] location.

NOTE: Pedal shroud is flexible and can push back from top cover during installation of fasteners.

(f) Install the screws [27] to attach the outboard pedal shroud [21] and inboard pedal shroud [22] to the stanchion walls.

SIA 001, 002, 004-999; SIA 003 POST SB 737-27A1313

SUBTASK 27-21-31-420-010

(10) Install top cover and shrouds. Do the following steps:

(a) Put the top cover [23] on the lower cover [32].

(b) Attach the pedal adjustment cable [35] to the top cover [23].

1) Install bolt [34] through clamp on pedal adjustment cable [35] and into cable standoff on top cover [23].

(c) Install the screws [24], screws [29] and washers [25] to attach the top cover [23] to the lower cover [32].

(d) Put the outboard pedal shroud [21] in its position.

NOTE: If necessary ensure that all ducting is properly attached and positioned.

1) Install screws [28] into the angle bracket [30].

2) Tighten the screws [28] to a torque of 20 in-lb (2 N·m).

(e) Put the inboard pedal shroud [22] in its position.

NOTE: If necessary ensure that all ducting is properly attached and positioned.

1) Install screws [28] into the angle bracket [30].

2) Tighten the screws [28] to a torque of 20 in-lb (2 N·m).

(f) Install the screws [27] to attach the outboard pedal shroud [21] and inboard pedal shroud [22] to the stanchion walls.

(g) Install the lighting module [33].

1) Put the lighting module [33] into its position. (Figure 33-11-00-990-801)

2) Align the pins on the back of the lighting module [33] with the holes in the bracket below the rudder pedal adjustment crank.

3) Tighten the fasteners [36].

SIA ALL

ECCN 9E991 BOEING PROPRIETARY - See title page for details

RUDDER PEDAL ADJUSTMENT CRANK - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of a rudder pedal adjustment crank

(2) An installation of a rudder pedal adjustment crank.

B. The rudder pedal adjustment crank is referred to as the "crank assembly" in this procedure.

C. The crank assembly includes the crank lever [14] and cable [1].

D. The procedure is applicable for the captain's and first officer's crank assembly.

E. It is not necessary to remove the cable to remove the crank lever.

TASK 27-21-41-000-801

2. Rudder Pedal Adjustment Crank Removal

(Figure 401)

A. Consumable Materials

Reference	Description	Specification
G01048	Lockwire - MS20995C32, Corrosion Resistant Steel - 0.032 Inch (0.8128 mm) Diameter	NASM20995

B. Location Zones

222	Passenger Compartment - Aft of Control Compartment to Forward Entry Door - Right

C. Access Panels

Number	Name/Location
112A	Forward Access Door

D. Prepare for the Removal

SUBTASK 27-21-41-010-001

(1) Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-21-41-010-002

(2) Open the main instrument panel shroud to get access to the rudder pedal adjustment cable [1].

SUBTASK 27-21-41-010-003

(3) Open the main instrument panel module assembly [14].

E. Crank Assembly Removal

SUBTASK 27-21-41-020-001

(1) Do these steps to remove the crank lever [10]:

(a) Remove the nut [8] and washer [9] from the crank lever [10].

(b) Remove the crank lever [10] from the bearing retainer [12].

(c) Remove the spacer [11].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-41-020-002

(2) Do these steps to remove the rudder pedal adjustment cable [1] from the crank lever [10]:

(a) Remove the MS20995C32 lockwire, G01048, from the cable retaining nut [13].

(b) Loosen the cable retaining nut [13].

(c) Pull the rudder pedal adjustment cable [1] forward until it disconnects from the crank support bracket [7].

SUBTASK 27-21-41-020-003

(3) Do these steps to disconnect the rudder pedal adjustment cable [1] from the rudder jackshaft [4]:

(a) Loosen the retaining nut [3] at the rudder jackshaft [4].

(b) Hold the retaining nut [3] and pull the rudder pedal adjustment cable [1] rudder jackshaft [4].

(c) Remove the retaining nut [3] and washer [2].

SUBTASK 27-21-41-020-004

(4) Do these steps to remove the rudder pedal adjustment cable [1]:

(a) Remove the bolts [5] from the cable clamps [6].

(b) Remove the cable clamp [6] and keep a record of their locations.

(c) Remove the elastic grommet.

(d) Pull the rudder pedal adjustment cable [1] through the grommet hole.

(e) Remove the rudder pedal adjustment cable [1].

G. Rudder Pedal Adjustment Crank Installation

SUBTASK 27-21-41-420-001

(1) Do these steps to install the rudder pedal adjustment cable [1]:

(a) Install the grommet on the rudder pedal adjustment cable [1].

(b) Push the rudder pedal adjustment cable [1] through the grommet hole.

NOTE: One end of the cable should reach the crank lever [10] and the other end should reach the rudder jackshaft [4].

(c) Install the cable clamps [6] and bolts [5] on the rudder pedal adjustment cable [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that the rudder pedal adjustment cable [1] radius is more than 5.0 inches (127 millimeters) for all the curves in the rudder pedal adjustment cable [1].

NOTE: If the rudder pedal adjustment cable [1] radius is less than 5.0 inches (127 millimeters), the rudder pedal adjustment cable [1] will not operate correctly.

SUBTASK 27-21-41-420-002

(2) Connect the rudder pedal adjustment cable [1] to the rudder jackshaft [4]:

(a) Put the washer [2] and retaining nut [3] on the rudder pedal adjustment cable [1].

(b) Put the rudder pedal adjustment cable [1] through the rudder jackshaft [4].

(c) Apply a thin layer of grease, D00013 to the outside diameter of the rudder pedal adjustment cable [1] before it is installed in the rudder jackshaft [4].

(d) Do these steps:

1) Install the alignment tool equipment (B27064-5), SPL-1689 through the hole in the bottom of the rudder jackshaft [4] to hold the jackshaft universal joint in its position.

2) Turn the rudder pedal adjustment cable [1] end until it engages the jackshaft pin.

3) Use the crowfoot wrench to hold the retaining nut [3].

4) Use the flare nut wrench to hold the sleeve of the rudder pedal adjustment cable [1].

(e) Tighten the retaining nut [3].

1) Tighten the retaining nut [3] to 90 +310 / -0 in-lb (10.2 +35.1 / -0.0 N·m) before it touches the jackshaft support.

2) Turn the retaining nut [3] 1/4 to 1/2 of a turn more when it touches the jackshaft support.

SUBTASK 27-21-41-420-003

(3) Do these steps to connect the rudder pedal adjustment cable [1] to the crank lever [10]:

(a) Put the cable retaining nut [13] on one end of the rudder pedal adjustment cable [1].

(b) Push the rudder pedal adjustment cable [1] through the crank support bracket [7] and bearing retainer [12].

(c) Tighten the cable retaining nut [13].

1) Tighten the cable retaining nut [13] finger tight plus one quarter turn.

(d) Install the MS20995C32 lockwire, G01048 on the retaining nut [13].

NOTE: To get the best MS20995C32 lockwire, G01048, angle, make sure that the aft cable assembly can turn easily and smoothly.

SUBTASK 27-21-41-420-004

(4) Do these steps to install the crank lever [10]:

(a) Install the spacer [11] on the rudder pedal adjustment cable [1].

(b) Install the crank lever [10], washer [9], and nut [8].

SUBTASK 27-21-41-410-001

(5) Close the main instrument panel module assembly [14].

SUBTASK 27-21-41-410-002

(6) Close the main instrument panel module shroud.

SUBTASK 27-21-41-710-001

(7) Do this task to test the rudder pedal adjustment cranks: Rudder Pedal Adjustment and Limit Travel Test, TASK 27-21-00-700-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-41-410-003

(8) Close this access panel:

RUDDER FORWARD QUADRANT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of a rudder forward quadrant

(2) An installation of the a rudder forward quadrant.

B. The rudder forward quadrant includes the quadrant and jackshaft.

C. This procedure is applicable for the captain's and first officer's rudder forward quadrants.

TASK 27-21-51-000-801

2. Rudder Forward Quadrant Removal

(Figure 401, Figure 402, Figure 403)

A. References

E. Prepare for the Removal

SUBTASK 27-21-51-480-005

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-21-51-860-001

(2) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-21-51-010-001

(3) To get access to the rudder feel and centering unit, do this task:

Open this access panel:

Number	Name/Location
324CL	Vertical Fin, Access

SUBTASK 27-21-51-080-001

(4) Install rig pin R-5 from the rigging pin kit, SPL-1585, in the rudder feel and centering unit (Figure 401).

SUBTASK 27-21-51-010-002

(5) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-21-51-010-003

(6) Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-21-51-010-004

(7) Remove these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

(a) Do this task: Nose Wheel Well Access Panels Removal, TASK 53-14-01-020-801.

SUBTASK 27-21-51-020-001

(8) For the first officer's rudder forward quadrant, remove the rudder pedal position sensor (TASK 31-31-42-000-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Rudder Forward Quadrant Removal

SUBTASK 27-21-51-010-005

WARNING YOU MUST LOOSEN AND DISCONNECT THE RUDDER CABLES FROM THE RUDDER FORWARD QUADRANTS BEFORE YOU DISCONNECT THE BUS ROD. RELIEVE TENSION UNIFORMLY IN THE TWO RUDDER CABLES. IF YOU DO NOT LOOSEN THE RUDDER CABLES EQUALLY, IT CAN CAUSE INJURY TO PERSONNEL OR DAMAGE TO EQUIPMENT.

(1) Loosen the turnbuckles [91] for the rudder cable RB [21] and rudder cable RA [22] (Figure 403).

SUBTASK 27-21-51-020-002

(2) Disconnect the applicable rudder cable from the rudder forward quadrant [39] that you will remove (Figure 402):

(a) Remove the bolt [30], washer [19], washer [31] (if applicable), and nut [20] from the cable retainer [32].

(b) Remove the rudder cable RB [21] or rudder cable RA [22] from the rudder forward quadrant [39].

SUBTASK 27-21-51-020-003

(3) Remove the pins [44], nuts [43], washers [42], and bolts [41] to disconnect the rudder pedal tension rods [40] from the rudder forward quadrant [39].

(a) Discard the pins [44].

SUBTASK 27-21-51-020-004

(4) Remove the pin [49], nut [48], washer [47], spacers [46], and bolt [45] to disconnect the bus rod [50] from the rudder forward quadrant [39].

(a) Discard the pin [49].

SUBTASK 27-21-51-020-005

(5) Remove the nuts [90], washers [89], and bolts [88] to remove the cover [87] from the floor beam structure.

SUBTASK 27-21-51-020-006

(6) Remove the nuts [73], washers [72], and bolts [71] to remove the adjustment shaft support bracket [74] from the structure.

SUBTASK 27-21-51-020-007

(7) Pull the adjustment shaft [75] and the adjustment shaft support bracket [74] forward to disengage the adjustment shaft [75] from the rudder forward quadrant [39].

SUBTASK 27-21-51-020-008

(8) Remove the nuts [54], washers [53], and screws [52] to remove the cable guard [51].

SUBTASK 27-21-51-020-009

(9) If you remove the captain's rudder forward quadrant [39], then do these steps:

(a) Remove the lockwire from the rudder pedal steering arm [24].

(b) Remove the screws [68] and washers [69] to disconnect the rudder pedal steering arm [24] from the rudder forward quadrant [39].

(c) Move the rudder pedal steering arm [24] out of the way.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Hold the rudder forward quadrant [39] and remove the jackshaft support channel [70]:

NOTE: The rudder forward quadrant is free to fall from the upper bearing housing after you remove the screws.

1) Remove the nuts [60], washers [59], and screws [58].
2) Remove the nut [63], washer [62], and screw [61].

(e) Remove the rudder forward quadrant [39] from the airplane:

1) Move the rudder forward quadrant [39] in an aft and outboard direction to clear the floor beam penetration, and remove it from the airplane.

(f) Do these steps to remove the lower bearing housing [67] from the jackshaft support channel [70]:

1) Remove the nuts [57], washers [56], and bolts [55].
2) Remove the nut [66], washer [65], and bolt [64].

SUBTASK 27-21-51-020-010

(10) If you remove the first officer's rudder forward quadrant [39], then do these steps:

(a) Remove the lockwire from the rudder pedal position sensor quadrant [23].

(b) Remove the screws [77] and washers [78] to disconnect the rudder pedal position sensor quadrant [23] from the rudder forward quadrant [39].

(c) Hold the rudder forward quadrant [39] and remove the jackshaft support channel [76]:

NOTE: The rudder forward quadrant is free to fall from the upper bearing housing after you remove the bolts and screws.

1) Remove the nuts [60], washers [59], and screws [58].
2) Remove the nuts [85], washers [84], and bolts [83].
3) Remove the support [86].
4) Remove the nut [63], washer [62], and screw [61].

(d) Remove the rudder forward quadrant [39] from the airplane:

1) Move the rudder forward quadrant [39] in an aft and outboard direction to clear the floor beam penetration, and remove it from the airplane.

(e) Do these steps to remove the lower bearing housing [67] from the rudder forward quadrant [39]:

1) Remove the nuts [57], washers [56], and bolts [55].
2) Remove the nut [66], washer [65], and bolt [64].

G. Rudder Forward Quadrant Installation

SUBTASK 27-21-51-420-001

(1) If you install the rudder forward quadrant [39], then do these steps (Figure 402):

(a) If it is necessary, Install the lower bearing housing [67] to the jackshaft support channel [70]:

1) Put the lower bearing housing [67] on the jackshaft support channel [70].

2) Install the bolts [55], washers [56], and nuts [57].

3) Install the bolt [64], washer [65], and nut [66].

(b) Put the rudder forward quadrant [39] in the upper bearing housing and the quadrant arm through the floor beam penetration.

(c) Attach the jackshaft support channel [70] to the airplane structure:

1) Install the screws [58], washers [59], and nuts [60].

2) Install the screw [61], washer [62], and nut [63].

(d) Install the screws [68] and washers [69] to connect the rudder pedal steering arm [24] to the rudder forward quadrant [39].

1) Install the MS20995NC32 lockwire, G01912.

(e) Install the screws [52], washers [53], and nuts [54] to attach the cable guard [51] to the jackshaft support channel [70].

SUBTASK 27-21-51-420-002

(2) If you install the first officer's rudder forward quadrant [39], then do these steps:

(a) If it is necessary, Install the lower bearing housing [67] to the jackshaft support channel [76]:

1) Put the lower bearing housing [67] on the jackshaft support channel [76].

2) Install the bolts [55], washers [56], and nuts [57].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Install the bolt [64], washer [65], and nut [66].

(b) Put the rudder forward quadrant [39] in the upper bearing housing and quadrant arm thru the floor beam penetration.

(c) Attach the jackshaft support channel [76] to the airplane structure:

1) Install the screws [58], washers [59], and nuts [60].

2) Install the screw [61], washer [62], and nut [63].

(d) Attach the support [86] to the jackshaft support channel [76]:

1) Install the bolts [83], washers [84], and nuts [85].

(e) Connect the rudder pedal position sensor quadrant [23] to the rudder forward quadrant [39].

1) Install screws [77] and washers [78].

2) Install the MS20995NC32 lockwire, G01912.

(f) Install the screws [52], washers [53], and nuts [54] to attach the cable guard [51] to the jackshaft support channel [76].

SUBTASK 27-21-51-480-001

(3) Install rig pin R-3 from the rigging pin kit, SPL-1585, in the forward rig pin hole of the captain's rudder forward quadrant [39].

SUBTASK 27-21-51-480-002

(4) Install rig pin R-4 from the rigging pin kit, SPL-1585, in the forward rig pin hole of the first officer's rudder forward quadrant [39].

SUBTASK 27-21-51-820-001

(5) Make sure that the clearance between the cable guard block [26] and the rudder forward quadrant [39] is 0.030 in. (0.762 mm) – 0.050 in. (1.270 mm).

(a) If it is necessary, add or remove the shims [27]:

1) Remove the nuts [29], washers [28], and bolts [25] from the cable guard block [26].

2) Add or remove the shims [27] laminations.

3) Install the bolts [25], washers [28], and nuts [29] to the cable guard block [26].

SUBTASK 27-21-51-420-003

(6) Temporarily install the bolt [45] to connect the bus rod [50] to the rudder forward quadrant [39].

(a) If it is necessary, adjust the bus rod [50] until rig pins R-3 and R-4 move freely.

SUBTASK 27-21-51-420-004

(7) Install the bolts [41], washers [42], nuts [43], and pins [44] to connect the rudder pedal tension rods [40] to the rudder forward quadrant [39].

(a) If it is necessary, adjust the length of the rudder pedal tension rods [40].

SUBTASK 27-21-51-080-002

(8) Remove rig pins R-3, R-4.

SUBTASK 27-21-51-420-005

(9) If you install the captain's rudder forward quadrant, then do these steps:

(a) Move the captain's rudder forward quadrant [39] until it touches the quadrant stop [35].

(b) Make sure that you can install rig pin R-3 easily in the aft rig pin hole.

1) If it is necessary, add or remove the shims [34]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Remove the nuts [38], washers [37], bolts [36], and fillers [33] from the quadrant stops [35].

b) Add or remove the shims [34] laminations.

c) Install the fillers [33], bolts [36], washers [37], and nuts [38] to the quadrant stops [35].

(c) Remove rig pin R-3.

SUBTASK 27-21-51-420-006

(10) If you install the first officer's rudder forward quadrant, then do these steps:

(a) Move the first officer's rudder forward quadrant [39] until it touches the quadrant stop [35].

(b) Make sure that you can install rig pin R-4 easily in the aft rig pin hole.

1) If it is necessary, add or remove the shims [34]:

a) Remove the nuts [38], washers [37], bolts [36], and fillers [33] from the quadrant stops [35].

b) Add or remove the shims [34] laminations.

c) Install the fillers [33], bolts [36], washers [37], and nuts [38] to the quadrant stops [35].

(c) Remove rig pin R-4.

SUBTASK 27-21-51-480-003

(11) Install rig pin R-3 in the forward rig pin hole of the captain's rudder forward quadrant.

SUBTASK 27-21-51-480-004

(12) Install rig pin R-4 in the forward rig pin hole of the first officer's rudder forward quadrant.

SUBTASK 27-21-51-420-007

(13) Connect the adjustment shaft [75] to the rudder forward quadrant [39]:

(a) Put the adjustment shaft [75] into the universal joint of the rudder forward quadrant [39], so that the slot in the adjustment shaft [75] engages with the pin in the hole.

SUBTASK 27-21-51-420-008

(14) Install the bolts [71], washers [72], and nuts [73] to attach the adjustment shaft support bracket [74] to the structure.

SUBTASK 27-21-51-420-009

(15) Install the bolts [88], washers [89], and nuts [90] to attach the cover [87] to the floor beam structure.

SUBTASK 27-21-51-860-002

(16) Do these steps to put the rudder pedals to the neutral position:

(a) Turn the adjustment crank clockwise for the rudder pedals to the full forward position.

(b) Turn the adjustment crank back four turns from the full forward position, to get to the neutral position.

SUBTASK 27-21-51-820-002

(17) Do this task: Rudder Pedals Adjustment, TASK 27-21-00-820-802.

SUBTASK 27-21-51-420-010

(18) Connect the bus rod [50] to the rudder forward quadrant [39]:

(a) Remove the bolt [45] from the bus rod [50].

(b) Turn the bus rod two full turns to make it shorter.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Make sure that you can see the threads of the two bus rod ends through the holes in the bus rod.

(d) Install the bolt [45], spacers [46], washer [47], nut [48], and new pin [49] to connect the bus rod [50] to the rudder forward quadrant [39].

SUBTASK 27-21-51-420-011

(19) Install the bolt [30], washer [19], washer [31] (if applicable), nut [20], and cable retainer [32] to connect the applicable rudder cable to the rudder forward quadrant [39] (TASK 20-10-93-400-801).

SUBTASK 27-21-51-420-012

(20) Tighten the turnbuckle [91] until rudder cable RB [21] or rudder cable RA [22] are not loose. (Figure 403)

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-51-420-013

(1) For the first officer's rudder forward quadrant, install the rudder pedal position sensor, do this task: Rudder Pedal Position Sensor Installation, TASK 31-31-42-400-801.

SUBTASK 27-21-51-080-003

(2) Remove the rig pins R-5 from the rudder feel and centering unit (Figure 401).

SUBTASK 27-21-51-080-004

(3) Remove the rig pins R-3 and R-4.

SUBTASK 27-21-51-820-003

(4) Adjust the rudder control cables RA and RB, do this task: Rudder Control Cables RA and RB Adjustment, TASK 27-21-00-820-803.

SUBTASK 27-21-51-860-003

(5) Do this task: Pressure to the Rudder Systems A, B, and Standby - Activation, TASK 27-21-00-840-802.

SUBTASK 27-21-51-730-001

(6) Do this task: Rudder Trim System Test, TASK 27-21-00-700-807.

SUBTASK 27-21-51-010-006

(7) Close this access panel:

Number	Name/Location
324CL	Vertical Fin, Access

SUBTASK 27-21-51-410-001

(8) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-21-51-410-002

(9) Close this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-21-51-010-007

(10) Install these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Number	Name/Location
114AC	Fwd Nose Wheel Well Upper Access Panel

(a) Do this task: Nose Wheel Well Access Panels Installation, TASK 53-14-01-420-801.

(b) Do this task: Cabin Pressure Leak Test, TASK 05-51-91-790-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

RUDDER FORWARD QUADRANT - INSPECTION/CHECK

1. General

A. This procedure has this inspection task:

(1) Rudder Mechanical Control Path

TASK 27-21-51-210-801

2. Rudder Mechanical Control Path Inspection

(Figure 601)

NOTE: This procedure is a scheduled maintenance task.

A. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well

B. Access Panels

Number	Name/Location
112A	Forward Access Door

C. Rudder Mechanical Control Path Inspection

SUBTASK 27-21-51-010-008

(1) To get access to the rudder mechanical control path, do this task:

Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-21-51-210-001

(2) Do a detailed inspection of the rudder mechanical control path.

SUBTASK 27-21-51-010-009

(3) Close this access panel:

Number	Name/Location
112A	Forward Access Door

323GL	Vertical Fin, Access
324CL	Vertical Fin, Access

E. Prepare for the Removal

SUBTASK 27-21-61-860-001

(1) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-61-010-001

(2) Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-21-61-010-002

(3) Remove these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

(a) Do this task: Nose Wheel Well Access Panels Removal, TASK 53-14-01-020-801.

SUBTASK 27-21-61-480-001

(4) Install the rig pin R-3 or R-4 from the rigging pin kit, SPL-1585, in the forward rig pin hole of the captain's or first officer's rudder forward quadrant (Figure 401).

SUBTASK 27-21-61-010-003

(5) Do these steps to get access to the rudder aft quadrant [20]:

Remove these access panels:

Number	Name/Location
323FL	Vertical Fin, Access
323GL	Vertical Fin, Access

SUBTASK 27-21-61-010-004

(6) Do these steps to get access to the cable turnbuckles [3]:

Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-21-61-010-005

(7) Open this access panel:

Number	Name/Location
324CL	Vertical Fin, Access

F. Rudder Aft Quadrant Removal

(Figure 402)

SUBTASK 27-21-61-020-001

(1) Loosen the cable RA [2] and cable RB [1] at the turnbuckles [3].

SUBTASK 27-21-61-020-002

(2) Remove the bolts [9], washer [28] (if applicable), washers [11], and nuts [12] to remove the cable retainer [10] from the rudder aft quadrant [20].

SUBTASK 27-21-61-020-003

(3) Disconnect the cable RA [2] and cable RB [1] from the rudder aft quadrant [20].

SUBTASK 27-21-61-020-004

(4) Remove the nut [15], washer [14], and bolt [13] which connect the control rod [16] to the rudder aft quadrant [20].

SUBTASK 27-21-61-020-005

(5) Do these steps to remove the rudder aft quadrant [20]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the bolts [25] and washers [26] which attach the left bearing housing [19] to the airplane structure.

(b) Slide the quadrant shaft [17] towards the left until the end of the quadrant shaft [17] is clear of the hole in the right side mounting surface.

(c) Remove the left bearing housing [19] and plate [18] from the quadrant shaft [17].

(d) Remove the nuts [7], washers [6], washers [5], bolts [4], and spacers [8] which attach the rudder aft quadrant [20] to the quadrant shaft [17].

(e) Remove the rudder aft quadrant [20] from the quadrant shaft [17].

(f) Remove the rudder aft quadrant [20], quadrant shaft [17], right bearing housing [27], and plate [18] from the airplane.

G. Rudder Aft Quadrant Installation

(Figure 402)

SUBTASK 27-21-61-860-002

(1) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-21-61-420-001

(2) Do these steps to install the rudder aft quadrant [20]:

(a) Put the washer [21], plate [18], and the right bearing housing [27] on the right side of the quadrant shaft [17].

1) Make sure the countersunk side of the washer [21] is toward the center of the quadrant shaft [17].

(b) Install the washer [22] and nut [23] on the right side of the quadrant shaft [17].

1) Tighten the nut [23] to 190 in-lb (21 N·m) - 280 in-lb (32 N·m).

(c) Install a new cotter pin [24].

(d) Put all the parts through the access hole.

(e) Slide the rudder aft quadrant [20] onto the quadrant shaft [17].

(f) Install the bolts [4], spacers [8], washers [5], washers [6], and nuts [7] to attach the rudder aft quadrant [20] to the quadrant shaft [17].

(g) Put the left bearing housing [19] on the left side of the quadrant shaft [17].

(h) Put the quadrant shaft [17] and plate [18] in its position.

(i) Install the bolts [25] and washers [26] to attach the left bearing housing [19] and right bearing housing [27] to the airplane structure.

SUBTASK 27-21-61-420-002

(3) Turn the quadrant shaft [17].

(a) Make sure that the quadrant shaft [17] moves freely in the left bearing housing [19] and right bearing housing [27].

SUBTASK 27-21-61-420-003

(4) Connect the cable RA [2] and cable RB [1] to the rudder aft quadrant [20].

(a) Install the cable retainer [10], bolts [9], washer [28] (if applicable), washers [11], and nuts [12] (TASK 20-10-93-400-801).

SUBTASK 27-21-61-420-004

(5) Tighten the turnbuckles [3] until the cable RA [2] and cable RB [1] are not loose.

SUBTASK 27-21-61-420-005

(6) Install the bolt [13], washer [14], and nut [15] to connect the control rod [16] to the rudder aft quadrant [20].

SUBTASK 27-21-61-480-002

(7) Install the rig pin R-5 from the rigging pin kit, SPL-1585, to the rudder feel and centering unit (Figure 402).

SUBTASK 27-21-61-820-001

(8) Adjust the cable RA [2] and cable RB [1] (TASK 27-21-00-820-803).

SUBTASK 27-21-61-080-001

(9) Remove the rig pins R-3 and R-4 from the rudder forward quadrants (Figure 401).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-61-080-002

(10) Remove the rig pins R-5 from the rudder feel and centering unit.

SUBTASK 27-21-61-710-001

(11) Do this task: Rudder Travel Test, TASK 27-21-00-700-805.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-61-410-001

(1) Close this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-21-61-940-001

(2) Install these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

(a) Do this task: Nose Wheel Well Access Panels Installation, TASK 53-14-01-420-801.

(b) Do this task: Cabin Pressure Leak Test, TASK 05-51-91-790-801.

SUBTASK 27-21-61-410-002

(3) Close this access panel:

Number	Name/Location
324CL	Vertical Fin, Access

SUBTASK 27-21-61-410-003

(4) Close this access panel:

Number	Name/Location

SUBTASK 27-21-61-410-004

(5) Install these access panels:

Number	Name/Location
323FL	Vertical Fin, Access
323GL	Vertical Fin, Access

SUBTASK 27-21-61-390-001

(6) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

RUDDER AFT QUADRANT - INSPECTION/CHECK

1. General

A. This procedure has these tasks:

(1) Detail Visual Inspection of the Rudder Aft Quadrant components

(2) General Visual Inspection of the Rudder Aft Quadrant components.

TASK 27-21-61-210-801

2. Rudder Aft Quadrant Detail Visual Inspection

(Figure 601, Figure 602)

NOTE: This procedure is a scheduled maintenance task.

(Figure 401)

SUBTASK 27-21-71-020-001

(1) Remove the nut [33], washer [32], washer [31], and bolt [30] to disconnect the standby rudder PCU control rod [2] from the upper crank [34].

SUBTASK 27-21-71-020-002

(2) Remove the nuts [33], washers [32], washers [31], and bolts [30] to disconnect the main rudder PCU control rod [3] from the center cranks [29].

SUBTASK 27-21-71-020-003

(3) Remove the nut [11], washer [10], and bolt [9] to disconnect the aft quadrant control rod [12] from the lower crank [20].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-71-020-004

(4) Remove the nut [7], nut [6], washer [5], and bolt [4] to disconnect the control rod [8] from the lower crank [20].

SUBTASK 27-21-71-020-005

(5) Remove the rudder trim actuator [18] (TASK 27-21-87-000-801).

SUBTASK 27-21-71-020-006

(6) Do these steps to remove the rudder control torque tube [1]:

(a) Use a marker or pen to make marks to identify the installed positions of the center cranks [29] and upper crank [34].

(b) Remove the nuts [27], washers [26], washers [25], bolt [24], and bolt [28] that attach the upper crank [34] to the rudder control torque tube [1].

(c) Remove the nuts [27], washers [26], washers [25], bolts [24], and bolts [28] that attach the center cranks [29] to the rudder control torque tube [1].

(d) Remove the nuts [39], washers [38], and bolts [37] that attach the lower bearing housing [21] to the airplane structure.

NOTE: Do not remove the lower crank [22] from the rudder control torque tube [1].

(e) Pull the rudder control torque tube [1] down through the upper bearing housing [35], upper crank [34], and center crank [29].

(f) Remove the rudder control torque tube [1], upper crank [34], and center cranks [29] from the airplane.

E. Access Panels

Number	Name/Location
324BL	Vertical Fin, Trailing Edge Access
324DL	Trailing Edge Access

F. Rudder Control Torque Tube Installation

SUBTASK 27-21-71-420-001

(1) Do these steps to install the rudder control torque tube [1]:

(a) Make sure that the plate [40], lower bearing housing [21], retainer [41], and plate [42] are in their positions on the rudder control torque tube [1].

(b) Put the rudder control torque tube [1] through the structural cutouts, center cranks [29], upper crank [34], and upper bearing housing [35].

NOTE: Put the center cranks [29] and upper crank [34] in their original position before you put the rudder control torque tube [1] through the structural cutouts.

(c) Install the bolts [37], washers [38], and nuts [39] to attach the lower bearing housing [21] to the airplane structure.

(d) Do these steps to install the center crank [29] on the rudder control torque tube [1]:

1) Install the bolts [24], bolts [28], washers [25], washers [26], and nuts [27] to attach the center cranks [29] to the rudder control torque tube [1].

2) Tighten the nuts [27] to 15 in-lb (2 N·m)-25 in-lb (3 N·m) above the run-on torque.

(e) Do these steps to install the upper crank [34] to the rudder control torque tube [1]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Install the bolt [24], bolt [28], washers [25], washers [26], and nuts [27] to attach the upper cranks [34] to the rudder control torque tube [1].

2) Tighten the nuts [27] to 15 in-lb (2 N·m)-25 in-lb (3 N·m) above the run-on torque.

SUBTASK 27-21-71-710-001

(2) Make sure that the rudder control torque tube [1] turns freely and that there is no play in the horizontal and vertical directions.

(a) If the rudder control torque tube [1] does not turn freely, do a check of the lower bearing housing [21] and upper bearing housing [35] installation.

SUBTASK 27-21-71-420-002

(3) Install the bolt [30], washer [31] (under the bolt), washer [32] (under the nut), and nut [33] to connect the standby rudder PCU control rod [2] to the upper crank [34].

SUBTASK 27-21-71-420-003

(4) Install the bolts [30], washers [31] (under the bolt), washers [32] (under the nut), and nuts [33] to connect the main rudder PCU control rods [3] to the center crank [29].

SUBTASK 27-21-71-420-004

(5) Install the rudder trim actuator [18] (TASK 27-21-87-400-801).

SUBTASK 27-21-71-420-005

(6) Install the bolt [9], washer [10], and nut [11] to connect the aft quadrant control rod [12] to the lower crank [20].

SUBTASK 27-21-71-420-006

(7) Do these steps to connect the control rod [8] to the lower crank [20]:

(a) Install the bolt [4], washer [5], and nut [6].

1) Tighten the nut [6] to 45 in-lb (5 N·m)-60 in-lb (7 N·m).

CAUTION

DO NOT TRY TO TIGHTEN THE NUT [6] AGAIN AFTER YOU TIGHTEN THE NUT [7]. YOU CAN CAUSE DAMAGE TO THE EQUIPMENT.

(b) Install the nut [7].

1) Tighten the nut [7] to 12.0 in-lb (1.4 N·m)-15.0 in-lb (1.7 N·m).

SUBTASK 27-21-71-640-001

(8) Apply grease, D00633 to the upper bearing housing [35] and lower bearing housing [21].

(a) Fill the upper bearing housing [35] and lower bearing housing [21] with grease, D00633 until the grease is level with the surrounding structure.

SUBTASK 27-21-71-860-002

(9) Do this task: Pressure to the Rudder Systems A, B, and Standby - Activation, TASK 27-21-00-840-802.

G. Rudder Control Torque Tube Installation Test

SUBTASK 27-21-71-820-001

(1) Do this task: Control Rod for Main Rudder Power Control Unit Adjustment, TASK 27-21-00-820-804.

SUBTASK 27-21-71-820-002

(2) Do this task: Control Rod for Standby Rudder Power Control Unit Adjustment, TASK 27-21-00-820-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-71-710-002

(3) Do this task: Rudder Travel Test, TASK 27-21-00-700-805.

SUBTASK 27-21-71-410-001

(4) Install these access panels:

Number	Name/Location
324BL	Vertical Fin, Trailing Edge Access
324DL	Trailing Edge Access

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

RUDDER FEEL AND CENTERING UNIT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the rudder feel and centering unit.

(2) An installation of the rudder feel and centering unit.

(3) A removal of the rudder feel and centering unit spring assembly.

(4) An installation of the rudder feel and centering unit spring assembly.

TASK 27-21-82-000-801

2. Rudder Feel and Centering Unit Removal

(Figure 401, Figure 402)

A. References

Reference	Title
27-21-00-800-802	Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation (P/B 201)

324DL	Trailing Edge Access
324DR	Vertical Fin, Trailing Edge Access

E. Prepare for the Removal

SUBTASK 27-21-82-860-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-82-010-001

(2) Open these access panels:

Number	Name/Location
112A	Forward Access Door
324BL	Vertical Fin, Trailing Edge Access
324DL	Trailing Edge Access
324DR	Vertical Fin, Trailing Edge Access

SUBTASK 27-21-82-010-002

(3) Remove these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

(a) Do this task: Nose Wheel Well Access Panels Removal, TASK 53-14-01-020-801.

SUBTASK 27-21-82-480-001

(4) Install the rig pin R-3 or R-4 from the rigging pin kit, SPL-1585 in the forward rig pin hole of the captain's or first officer's rudder forward quadrants (Figure 401).

F. Rudder Feel and Centering Unit Removal

(Figure 402)

SUBTASK 27-21-82-020-001

(1) Remove the rudder feel and centering unit [7]:

(a) Remove the nut [27], washer [26], nut [25], washer [24], and bolt assembly [23] to disconnect the feel and rudder feel and centering unit [7] from the rudder trim actuator [1].

(b) Remove the nut [33], nut [32], washer [31], washer [30], bushing [29], and bolt assembly [28] to disconnect the rudder feel and centering unit crank [8] from the rudder feel output rod [9].

(c) Remove the nuts [6], washers [5], and bolts [4] which attach the upper bearing housing [2] and the plate [3] to the airplane structure.

(d) Hold the rudder feel and rudder feel and centering unit [7], and remove these parts from the support bracket [18]:

1) Remove the nuts [22], washers [21], washers [20], and bolts [19].

2) Remove the nuts [17], washers [16], washers [15], and bolts [14].

(e) Remove the nuts [13], washers [12], and bolts [11] from the lower bearing housing [10].

NOTE: If it is necessary, turn the rudder feel and centering unit [7] to get access to the bolts.

(f) Remove the rudder feel and centering unit [7] and support bracket [18].

324DR	Vertical Fin, Trailing Edge Access

F. Rudder Feel and Centering Unit Installation

SUBTASK 27-21-82-640-001

(1) Lubricate the spring slider shaft (Spring Slider Shaft Lubrication, TASK 12-22-21-600-802).

SUBTASK 27-21-82-420-001

(2) Install the rudder feel and centering unit [7]:

(a) Install the bolts [11], washers [12], and nuts [13] to attach the lower bearing housing [10] to the support bracket [18].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Put the rudder feel and centering unit [7] and the support bracket [18] in their positions.

(c) Install the support bracket [18]:

1) Install the bolts [19], washers [20] (under the bolt), washers [21] (under the nut), and nuts [22].

2) Install the bolts [14], washers [15] (under the bolt), washers [16] (under the nut), and nuts [17].

(d) Install the bolts [4], washers [5], and nuts [6] to attach the upper bearing housing [2] and the plate [3] to the airplane structure.

SUBTASK 27-21-82-210-001

(3) Examine the rudder feel output rod [9] for damage.

NOTE: The feel output rod has two load paths.

SUBTASK 27-21-82-420-002

(4) Connect the rudder feel and centering unit crank [8] to the rudder feel output rod [9]:

(a) Install the bolt assembly [28], bushing [29], washer [30], washer [31], and nut [32].

1) Tighten the nut [32] 45 in-lb (5.1 N·m) to 60 in-lb (6.8 N·m).

CAUTION

DO NOT TRY TO TIGHTEN THE NUT [32] AGAIN AFTER YOU TIGHTEN THE NUT [33]. IF YOU DO, YOU CAN CAUSE DAMAGE TO EQUIPMENT.

(b) Install the nut [33].

1) Tighten the nut [33] 12 in-lb (1.4 N·m) to 15 in-lb (1.7 N·m).

SUBTASK 27-21-82-480-002

(5) Install the rig pin R-5 of the rigging pin kit, SPL-1585 from the rudder feel and centering unit [7].

SUBTASK 27-21-82-420-003

(6) Connect the rudder trim actuator [1] to the rudder feel and centering unit [7]:

(a) Install the bolt assembly [23], washer [24], and nut [25].

1) Tighten the nut [25] 85 in-lb (9.6 N·m) to 100 in-lb (11.3 N·m).

CAUTION

DO NOT TRY TO TIGHTEN THE NUT [26] AGAIN AFTER YOU TIGHTEN THE NUT [27]. IF YOU DO NOT OBEY, DAMAGE TO THE EQUIPMENT CAN OCCUR.

(b) Install the washer [26] and nut [27].

(c) Tighten the nut [27] 30 in-lb (3.4 N·m) to 35 in-lb (4.0 N·m).

SUBTASK 27-21-82-080-001

(7) Remove the rig pins R-3 or R-4 of the rigging pin kit, SPL-1585 from the rudder forward quadrants.

SUBTASK 27-21-82-080-002

(8) Remove the rig pin R-5 of the rigging pin kit, SPL-1585 from the rudder feel and centering unit [7].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Rudder Feel and Centering Unit Test

SUBTASK 27-21-82-020-002

(1) Disconnect the nose gear steering from the rudder system by rotating the towing handle, located on the left-hand side of the nose gear, to the TOW Position (NOSE WHEEL STEERING SYSTEM - ADJUSTMENT/TEST, PAGEBLOCK 32-51-00/501).

NOTE: It is not necessary to disconnect the steering if the airplane is on jacks and the nose landing gear is fully extended.

SUBTASK 27-21-82-860-002

(2) Do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

SUBTASK 27-21-82-700-001

(3) Test the Feel and Centering System:

(a) Operate the rudder pedals through their full travel range three times.

(b) Make sure that the rudder trim indicator shows zero units of trim.

(c) Push the captain's left rudder pedal forward approximately 0.5 in. (13 mm) and release it.

1) Make sure that each side of the rudder trailing edge aligns with the tab on the rudder index plate.

(d) Push the captain's right rudder pedal forward approximately 0.5 in. (13 mm) and release it.

1) Make sure that each side of the rudder trailing edge aligns with the tab on the rudder index plate.

SUBTASK 27-21-82-730-001

(4) Do this task: Rudder Pedal Forces Test, TASK 27-21-00-700-804.

SUBTASK 27-21-82-730-002

(5) Do this task: Rudder Travel Test, TASK 27-21-00-700-805.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-82-860-003

(1) Do this task: Pressure to the Rudder Systems A, B, and Standby - Activation, TASK 27-21-00-840-802.

SUBTASK 27-21-82-410-001

(2) Close these access panels:

Number	Name/Location
112A	Forward Access Door
324BL	Vertical Fin, Trailing Edge Access
324DL	Trailing Edge Access
324DR	Vertical Fin, Trailing Edge Access

SUBTASK 27-21-82-410-002

(3) Install these access panels:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel
114AC	Fwd Nose Wheel Well Upper Access Panel

(a) Do this task: Nose Wheel Well Access Panels Installation, TASK 53-14-01-420-801.

(b) Do this task: Cabin Pressure Leak Test, TASK 05-51-91-790-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-82-420-004

(4) Connect steering to the rudder system by rotating the towing handle located on the left-hand side of the nose gear to the NORMAL position, if necessary.

——— END OF TASK ———

TASK 27-21-82-000-802

4. Rudder Feel and Centering Unit Spring Assembly Removal

(Figure 403)

A. References

Reference	Title
27-21-00-800-802	Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation (P/B 201)

B. Location Zones

Zone	Area

212	Flight Compartment - Right
324	Vertical Fin - Rear Spar To Trailing Edge

C. Access Panels

Number	Name/Location
324BR	Vertical Fin, Trailing Edge Access

D. Prepare for the Removal

SUBTASK 27-21-82-860-004

(1) Open this access panel:

Number	Name/Location
324BR	Vertical Fin, Trailing Edge Access

SUBTASK 27-21-82-860-005

(2) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-21-82-860-006

(3) Move the rudder trim knob 5 to 7 degrees NOSE LEFT, and wait until the rudder trim indicator stops.

E. Spring Assembly Removal

SUBTASK 27-21-82-860-007

(1) Do the steps to decrease the preload on the spring assembly [50]:

(a) Make sure that the roller that is in the arm assembly of the rudder feel and centering unit [7] is centered within the detent of the cam.

NOTE: The cam is attached to the primary shaft of the rudder feel and centering unit [7].

(b) If necessary, move the rudder in the LEFT direction to center the roller in the cam.

SUBTASK 27-21-82-020-003

(2) Remove the spring assembly [50] as follows:

(a) Remove the nut [57], washer [56], nut [55], and washer [54].

1) Keep the washer [54] and the washer [56] for installation if they are not damaged.

2) Discard the nut [55] and the nut [57].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the bolt [53].

1) If necessary to remove the load on the bolt [53], use hand pressure to compress the spring assembly [50].

(c) Remove the spring assembly [50].

END OF TASK

D. Access Panels

Number	Name/Location
324BR	Vertical Fin, Trailing Edge Access

E. Spring Assembly Installation

SUBTASK 27-21-82-420-005

(1) Do these steps to install the spring assembly [50]:

(a) Lubricate the bearing [59] with grease, D00633.

1) Make sure to apply grease, D00633 on the bearing [59] surface that touches the bearing seat [58].

(b) Lubricate the spring slider shaft [60]. To lubricate it, do this task: Spring Slider Shaft Lubrication, TASK 12-22-21-600-802.

(c) Insert the spring assembly [50] through the bearing seat [58].

(d) Install the bolt [53], washer [54], and nut [55].

1) Tighten the nut [55] to 55 ±5 in-lb (6 ±1 N·m).

(e) Install the washer [56] and nut [57].

CAUTION DO NOT TRY TO TIGHTEN THE NUT [55] AGAIN AFTER YOU TIGHTEN THE NUT [57], YOU CAN CAUSE DAMAGE TO THE EQUIPMENT.

1) Tighten the nut [57] to 13.5 ±1.5 in-lb (1.5 ±0.2 N·m).

(f) On the rudder feel and centering unit, use a black marker or rubber stamp to mark the R after the serial number.

NOTE: The suffix R indicates the springs have been changed out.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Apply protective coating, C00032 or equivalent that is resistant to hydraulic fluid.

(g) Move the rudder trim knob until the rudder trim indicator returns to 0.00 +/-0.25 units of trim.

F. Spring Assembly Post-Installation Test

SUBTASK 27-21-82-730-003

(1) Test the Feel and Centering System:

(a) Operate the rudder pedals through their full travel range three times.

(b) Make sure the rudder trim indicator shows zero units of trim.

(c) Push the captain's left rudder pedal forward approximately 0.5 inch and release it.

1) Make sure each side of the rudder trailing edge aligns with the tab on the rudder index plate.

(d) Push the captain's right rudder pedal forward approximately 0.5 inch and release it.

1) Make sure that each side of the rudder trailing edge aligns with the tab on the rudder index plate.

SUBTASK 27-21-82-420-006

(2) Connect the steering for the nose landing gear to the rudder system if it disconnected.

SUBTASK 27-21-82-730-004

(3) Do this task: Rudder Pedal Forces Test, TASK 27-21-00-700-804.

SUBTASK 27-21-82-730-005

(4) Do this task: Rudder Travel Test, TASK 27-21-00-700-805.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-82-860-008

(1) Do this task: Pressure to the Rudder Systems A, B, and Standby - Activation, TASK 27-21-00-840-802.

SUBTASK 27-21-82-860-009

(2) Close this access panel:

Number	Name/Location
324BR	Vertical Fin, Trailing Edge Access

RUDDER FEEL AND CENTERING UNIT SPRING ASSEMBLY - INSPECTION/CHECK

1. General

A. This procedure has this task:

(1) Inspection of the rudder feel and centering unit inner spring.

TASK 27-21-82-211-801

2. Rudder Feel and Centering Unit Inner Spring - Inspection

Figure 27-21-82-990-803

A. General

(1) This task does a detailed visual inspection of the inner spring in the rudder feel and centering unit spring assembly.

B. References

F. Rudder Feel and Centering Unit Inner Spring Inspection

SUBTASK 27-21-82-211-001

(1) Do the inspection of the inner spring as follows:

(a) Do a close visual inspection of the inner spring.

(b) Use a soft tool to push on the side of the inner spring, make sure that it is not loose or broken.

(c) If the inner spring is loose or broken, replace the spring assembly. (RUDDER FEEL AND CENTERING UNIT - REMOVAL/INSTALLATION, PAGEBLOCK 27-21-82/401)

E. Rudder Trim Actuator Removal

SUBTASK 27-21-87-020-001

(1) Use these steps to remove the rudder trim actuator [1]:

(a) Disconnect the electrical connector [9] from the rudder trim actuator [1].

(b) Remove the nut [4], washer [5], self locking nut [6], washer [7], and bolt assembly [3] to disconnect the rudder feel and centering unit [2] from the rudder trim actuator [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Remove the nut [10], washer [11], self locking nut [12], washer [13], bushing [14], and bolt [8] that attach the rudder trim actuator [1] to the airplane structure.

(d) Remove the rudder trim actuator [1] from the airplane.

E. Rudder Trim Actuator Installation

(Figure 401)

SUBTASK 27-21-87-860-003

(1) Make sure that these circuit breakers are open:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	16	C00788	FLIGHT CONTROL TRIM IND RUD
D	19	C00787	FLIGHT CONTROL TRIM CONT RUD

SUBTASK 27-21-87-860-004

(2) Make sure that you remove pressure from the rudder hydraulic systems A and B (TASK 27-21-00-800-802).

SUBTASK 27-21-87-420-001

(3) Use these steps to install the rudder trim actuator [1]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Install the bolt [8], bushing [14], washer [13], and self locking nut [12] to connect the rudder trim actuator [1] to the airplane structure.

1) Tighten the self locking nut [12] to 85 in-lb (10 N·m)-100 in-lb (11 N·m).

CAUTION DO NOT TRY TO TIGHTEN THE SELF LOCKING NUT AFTER YOU TIGHTEN THE OUTER NUT. YOU CAN CAUSE DAMAGE TO THE EQUIPMENT.

(b) Install the washer [11] and nut [10].

1) Tighten the nut [10] to 30 in-lb (3 N·m)-35 in-lb (4 N·m).

(c) Install the bolt assembly [3], washer [7], and self locking nut [6] to connect the rudder trim actuator [1] to the rudder feel and centering unit [2].

1) Tighten the self locking nut [6] to 85 in-lb (10 N·m)-100 in-lb (11 N·m).

CAUTION DO NOT TRY TO TIGHTEN THE SELF LOCKING NUT AFTER YOU TIGHTEN THE OUTER NUT. YOU CAN CAUSE DAMAGE TO THE EQUIPMENT.

(d) Install the washer [7] and nut [4].

1) Tighten the nut [4] to 30 in-lb (3 N·m)-35 in-lb (4 N·m).

(e) Connect the electrical connector [9] to the rudder trim actuator [1].

SUBTASK 27-21-87-860-005

(4) Do this task: Pressure to the Rudder Systems A, B, and Standby - Activation, TASK 27-21-00-840-802.

SUBTASK 27-21-87-860-006

(5) Do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

SUBTASK 27-21-87-860-007

(6) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	16	C00788	FLIGHT CONTROL TRIM IND RUD
D	19	C00787	FLIGHT CONTROL TRIM CONT RUD

SUBTASK 27-21-87-820-001

(7) Operate the rudder trim knob until you can install the rig pin R-5 from the rigging pin kit, SPL-1585 to the rudder feel and centering unit [2].

SUBTASK 27-21-87-820-002

(8) If the rudder trim indicator reading is not 0.0 +/- 0.1 unit, turn the adjustment screw on the bottom of the rudder trim indicator until the pointer reads 0.0 +/- 0.1 unit (Figure 27-11-94-990-801).

SUBTASK 27-21-87-480-001

(9) Remove the rig pin R-5 from the rudder feel and centering unit [2].

SUBTASK 27-21-87-730-001

(10) Do this task: Rudder Travel Test, TASK 27-21-00-700-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-87-730-002

(11) Do this task: Rudder Trim System Test, TASK 27-21-00-700-807.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-87-860-008

(1) If it is necessary, do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-87-410-001

(2) Install this access panel:

Number	Name/Location
324BL	Vertical Fin, Trailing Edge Access

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

MAIN RUDDER POWER CONTROL UNIT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the main rudder power control unit (PCU)

(2) An installation of the main rudder PCU

(3) A removal of the main rudder PCU load limiter solenoid valve

(4) An installation of the main rudder PCU load limiter solenoid valve

TASK 27-21-91-000-801

2. Main Rudder Power Control Unit Removal

(Figure 401, Figure 402)

A. References

Reference	Title

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Prepare for the Removal

SUBTASK 27-21-91-210-001

CAUTION

CARE MUST BE TAKEN TO PROPERLY SUPPORT THE PCU DURING REMOVAL, STORAGE, AND INSTALLATION TO PREVENT CONTACT WITH THE SUMMING LEVER BOLTS, WHICH COULD BEND OR BREAK THE PROTRUDING END OF THE INNER BOLT. HANDLING DAMAGE TO THE THREADED END OF THE SUMMING LEVER INNER BOLT WILL LIKELY CAUSE DAMAGE TO THE THREADS OF THE SUMMING LEVER OUTER BOLT.

(1) Do the visual inspection of the external summing levers [3] inner bolt (View C-C, Figure 401).

NOTE: You can see the bolt through the space between the rudder fairings and the vertical fin blade seal from the right side when the rudder turned to the left with hydraulic power OFF.

(a) Make sure that the bolt have the nut and collar.

(b) If the bolt has damage, then replace the bolt.

SUBTASK 27-21-91-860-001

(2) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-21-91-860-002

(3) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
C	7	C00285	YAW DAMPER AC
D	6	C01354	YAW DAMPER 2 DC
D	7	C00286	YAW DAMPER 1 DC

SUBTASK 27-21-91-860-003

(4) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	15	C01628	FORCE FIGHT MONITOR

SUBTASK 27-21-91-010-001

(5) To get access to the main rudder Power Control Unit (PCU), do this step:

(a) Remove this access panel:

Number	Name/Location
324DL	Trailing Edge Access

F. Main Rudder PCU Removal

SUBTASK 27-21-91-020-001

CAUTION

REMOVE THE CONTROL ROD FROM THE PCU BEFORE YOU DISCONNECT THE PCU FROM THE RUDDER. IF YOU DO NOT REMOVE THE CONTROL ROD FIRST, DAMAGE TO THE CONTROL ROD CAN OCCUR DURING THE CHECK.

(1) Remove the control rods [8]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the nuts [7], washers [6], washers [5], and bolts [4] to disconnect the control rods [8] from the external summing levers [3].

(b) Remove the nuts [44], washers [43], washers [42], and bolts [41] to disconnect the control rods [8] from the input cranks [10].

(c) Remove the control rods [8] from the airplane.

SUBTASK 27-21-91-480-001

(2) Install the equipment, SPL-1732 (Figure 402):

(a) Install the bracket assembly [56] with screws [51] and washers [52] to the vertical fin.

1) Tighten the screws [51] to 18 in-lb (2.0 N·m) - 25 in-lb (2.8 N·m).

(b) Install the beam assembly [55] with screws [53] and washers [54] to the main rudder power control unit [1].

1) Tighten the screws [53] to 45 in-lb (5.1 N·m) - 60 in-lb (6.8 N·m)..

(c) Install the arm assembly [57] to the bracket assembly [56].

SUBTASK 27-21-91-020-002

(3) Remove the nut [32], washer [31], nut [30], washer [29], and bolt assembly [28] to disconnect the rod assembly [2] from the rudder.

SUBTASK 27-21-91-020-003

CAUTION

MAKE SURE THAT YOU HOLD THE MAIN RUDDER PCU DURING THE REMOVAL OF THE FORWARD MANIFOLD. IF THE MAIN RUDDER PCU FALLS, IT CAN CAUSE DAMAGE.

(4) Remove the nut [27], washer [26], nut [25], washer [24], washer [33], bushing [23], and bolt assembly [22] to disconnect the forward manifold [11] from the vertical fin structure.

SUBTASK 27-21-91-020-004

(5) Disconnect the electrical connectors [9] from the main rudder power control unit [1].

SUBTASK 27-21-91-020-005

(6) Disconnect the hydraulic lines from the main rudder power control unit [1].

CAUTION

MAKE SURE THAT YOU CAREFULLY DRAIN HYDRAULIC FLUID INTO A SUITABLE CONTAINER. CAREFULLY CLEAN, DRY, AND DISPOSE OF ALL LEAKAGE. HYDRAULIC FLUID CAUSES DAMAGE TO RUBBER, COPPER, PLASTICS, PAINTS, AND MANY OTHER MATERIALS.

(a) Put a 1 U.S.-gal (3.81 l) oil resistant container, STD-203, below the hydraulic connections.

(b) Disconnect the hydraulic system A return line [12] from the main rudder power control unit [1].

(c) Disconnect the hydraulic system A pressure line [21] from the main rudder power control unit [1].

(d) Disconnect the hydraulic system B return line [14] from the main rudder power control unit [1].

(e) Disconnect the hydraulic system B pressure line [13] from the main rudder power control unit [1].

(f) Install the caps/plugs, STD-14686, to the hydraulic lines and ports.

(g) Install a tag on the hydraulic lines to make sure you install them correctly.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-91-020-006

CAUTION

MAKE SURE THAT YOU MOVE THE PCU CAREFULLY DURING THE REMOVAL OR INSTALLATION OF THE PCU. THE PCU CAN HIT THE BOLTS. THIS CAN CAUSE DAMAGE TO THE BOLTS.

CAUTION

THE PCU SHOULD NEVER BE SET DIRECTLY ON A HARD SURFACE WITHOUT SUPPORTS OR OTHER METHODS TO PREVENT CONTACT WITH THE SUMMING LEVER BOLTS. IF NOT, IT CAN CAUSE DAMAGE.

(7) Use a fishpole hoist, COM-1563, to remove the main rudder power control unit [1] from the airplane.

SUBTASK 27-21-91-480-002

(8) Install the lock, SPL-1727, to hold the rudder in its position.

END OF TASK

G. Main Rudder PCU Installation

SUBTASK 27-21-91-080-001

(1) Remove the lock, SPL-1727.

SUBTASK 27-21-91-480-003

(2) Install the equipment, SPL-1732, to the main rudder power control unit [1] (Figure 402).

SUBTASK 27-21-91-420-001

CAUTION

MAKE SURE THAT YOU FOLLOW THE INSTRUCTIONS TO INSTALL THE MAIN RUDDER CAREFULLY AND DO THE PROCEDURE IN THE SPECIFIED SEQUENCE. DAMAGE TO THE VERNIER CONTROL ROD [9] MAY OCCUR IF YOU DO NOT FOLLOW THE INSTRUCTIONS CORRECTLY.

CAUTION

MAKE SURE THAT YOU MOVE THE PCU CAREFULLY DURING THE REMOVAL OR INSTALLATION OF THE PCU. THE PCU CAN HIT THE BOLTS. THIS CAN CAUSE DAMAGE TO THE BOLTS.

CAUTION

MAKE SURE THE SUMMING LEVER BOLTS WERE NOT DAMAGED OR BENT DURING REMOVAL, STORAGE OR INSTALLATION OF THE PCU.

(3) Install the main rudder power control unit [1] (Figure 401):

(a) Use a fishpole hoist, COM-1563, to put the main rudder power control unit [1] in its position with the forward manifold [11] in the forward direction.

(b) Connect the forward manifold [11] to the vertical fin structure:

1) Install the washer [33], bushing [23], bolt assembly [22], washer [24], and nut [25].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Use the equipment, SPL-1731, to tighten the nut [25] to 1000 in-lb (113.0 N·m) - 1200 in-lb (135.6 N·m).

3) Install the washer [26] and nut [27].

CAUTION DO NOT TIGHTEN THE NUT [25] AFTER YOU TIGHTEN THE NUT [27]. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

4) Tighten the nut [27] to 650 in-lb (73.4 N·m) - 800 in-lb (90.4 N·m)..

(c) Connect the rod assembly [2] to the rudder:

1) Install the bolt assembly [28], washer [29], and nut [30].

2) Tighten the nut [30] to 900 in-lb (101.7 N·m) - 1050 in-lb (118.6 N·m).

3) Install the washer [31] and nut [32].

CAUTION DO NOT TIGHTEN THE NUT [30] AFTER YOU TIGHTEN THE NUT [32]. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

4) Tighten the nut [32] 450 in-lb (50.8 N·m) - 550 in-lb (62.1 N·m).

SUBTASK 27-21-91-080-002

(4) Remove the equipment, SPL-1732, from the main rudder power control unit [1]:

(a) Remove the screws [53] and washers [54] from the beam assembly [55].

(b) Remove the screws [51] and washers [52] from the bracket assembly [56].

(c) Remove the bracket assembly [56] and beam assembly [55].

SUBTASK 27-21-91-020-007

CAUTION MAKE SURE THAT YOU CORRECTLY INSTALL THE HYDRAULIC LINES TO THE MAIN RUDDER PCU. MAKE SURE THAT YOU INSTALL THE CORRECT UNIONS IN THE HYDRAULIC PORTS. YOU CAN CAUSE DAMAGE TO THE MAIN RUDDER PCU.

(5) Connect the hydraulic lines to the main rudder power control unit [1]:

CAUTION MAKE SURE THAT YOU CAREFULLY DRAIN HYDRAULIC FLUID INTO A SUITABLE CONTAINER. CAREFULLY CLEAN, DRY, AND DISPOSE OF ALL LEAKAGE. HYDRAULIC FLUID CAUSES DAMAGE TO RUBBER, COPPER, PLASTICS, PAINTS, AND MANY OTHER MATERIALS.

(a) Remove the caps/plugs, STD-14686, from the hydraulic lines and ports (TASK 20-10-20-800-801).

(b) If the main rudder power control unit [1] does not have the unions and packings installed, do these steps:

1) Apply hydraulic fluid, D00153, to the unions, reducer and packings.

2) Install the union [15] and packing [16].

3) Install the union [17] and packing [18].

4) Install the union [19] and packing [18].

5) Install the reducer [20] and packing [16].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Connect the hydraulic system A return line [12] to the main rudder power control unit [1].

1) Tighten the B-nut on hydraulic system A return line [12] to 110 ±6 in-lb (12 ±1 N·m).

(d) Connect the hydraulic system A pressure line [21] to the main rudder power control unit [1].

1) Tighten the B-nut on hydraulic system A pressure line [21] to 110 ±6 in-lb (12 ±1 N·m).

(e) Connect the hydraulic system B return line [14] to the main rudder power control unit [1].

1) Tighten the B-nut on hydraulic system B return line [14] to 110 ±6 in-lb (12 ±1 N·m).

(f) Connect the hydraulic system B pressure line [13] to the main rudder power control unit [1].

1) Tighten the B-nut on hydraulic system B pressure line [13] to 170 ±9 in-lb (19 ±1 N·m).

(g) Remove the 1 U.S.-gal (3.81 l) oil resistant container, STD-203, put below the hydraulic connections.

SUBTASK 27-21-91-420-002

(6) Install the control rods [8]:

(a) Put the control rods [8] in its position with the adjustment end in the forward direction.

(b) Connect the control rods [8] to the external summing lever [3]:

1) Install the bolts [4], washers [5], washers [6], and nuts [7].

(c) Connect the control rods [8] to the input cranks [10]:

1) Install the bolts [41], washers [42], washers [43], and nuts [44].

SUBTASK 27-21-91-020-008

(7) Connect the electrical connectors [9] to the main rudder power control unit [1].

SUBTASK 27-21-91-860-004

(8) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
C	7	C00285	YAW DAMPER AC
D	6	C01354	YAW DAMPER 2 DC
D	7	C00286	YAW DAMPER 1 DC

SUBTASK 27-21-91-860-005

(9) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	15	C01628	FORCE FIGHT MONITOR

SUBTASK 27-21-91-860-006

(10) Do this task: Pressure to the Rudder Systems A, B, and Standby - Activation, TASK 27-21-00-840-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-91-860-007

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(11) Do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

SUBTASK 27-21-91-870-001

(12) Move the rudder pedals to bleed the main rudder Power Control Unit (PCU) until the movement of the rudder is smooth.

SUBTASK 27-21-91-790-001

(13) Examine the hydraulic connections for leakage.

SUBTASK 27-21-91-860-008

(14) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-91-820-001

(15) Do this task: Control Rod for Main Rudder Power Control Unit Adjustment, TASK 27-21-00-820-804.

SUBTASK 27-21-91-820-002

(16) Do this task: Rudder Main PCU Force Fight Monitor Test, TASK 27-21-00-700-812.

SUBTASK 27-21-91-820-003

(17) Do this task: Main Rudder PCU Internal Hydraulic Leakage Test, TASK 27-21-00-700-810.

SUBTASK 27-21-91-730-001

(18) Do this task: Rudder Pedal Forces Test, TASK 27-21-00-700-804.

SUBTASK 27-21-91-730-002

(19) Do this task: Rudder Hinge Friction Test, TASK 27-21-00-700-809.

SUBTASK 27-21-91-730-003

(20) Do this task: Rudder Hinge Bearing and PCU Bearing Freeplay, TASK 27-21-00-700-802.

SUBTASK 27-21-91-730-004

(21) Do this task: Rudder Centering Test, TASK 27-21-00-700-803.

SUBTASK 27-21-91-730-005

(22) Do this task: Rudder Travel Test, TASK 27-21-00-700-805.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-91-410-001

(1) Install this access panel:

Number	Name/Location
324DL	Trailing Edge Access

SUBTASK 27-21-91-410-002

(2) If it is necessary, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-21-91-000-802

4. Main Rudder PCU Load Limiter Solenoid Valve Removal

(Figure 403)

A. General

(1) There is two load limiter solenoid valves, one yaw damper solenoid valve, and one transfer valve installed on the main rudder PCU. For the transfer valve and yaw damper solenoid, refer to PAGEBLOCK 22-23-21/401.

(2) Each of the two main rudder PCU load limiter solenoid valves is referred to as the "solenoid valve [71]" in this procedure. This procedure is applicable to both solenoid valves.

D	6	C01354	YAW DAMPER 2 DC
D	7	C00286	YAW DAMPER 1 DC

SUBTASK 27-21-91-010-002

(3) To get access to the main rudder power control unit [1], do this step:

Remove this access panel:

Number	Name/Location
324DL	Trailing Edge Access

F. Solenoid Valve Removal

SUBTASK 27-21-91-020-009

(1) Do these steps to remove the solenoid valve [71]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the bolts [72]] that attach the solenoid valve [71] to the main rudder power control unit [1].

(b) Remove the seal plate [73].

(c) Remove the o-ring [74]. Discard the o-ring [74].

(d) Remove the solenoid valve [71].

(e) Put plugs on the main rudder power control unit [1] ports.

SUBTASK 27-21-91-860-011

(1) Make sure you remove pressure from the rudder hydraulic systems A and B. To remove it, do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

G. Solenoid Valve Installation

SUBTASK 27-21-91-020-010

(1) Do these steps to install the solenoid valve [71]:

(a) Remove the plugs on the main rudder power control unit [1] ports.

(b) Clean the seal plate [73].

(c) Lubricate the new o-ring [74] with hydraulic fluid, D00153.

(d) Install the new o-ring [74].

(e) Install the seal plate [73].

(f) Install the solenoid valve [71].

(g) Install the bolts [72] that attach the solenoid valve [71] to the seal plate [73].

(h) Tighten the bolts [72] to 50 in-lb (5.6 N·m) – 70 in-lb (7.9 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-91-860-012

(2) Do this task: Pressure to the Rudder Systems A, B, and Standby - Activation, TASK 27-21-00-840-802.

SUBTASK 27-21-91-860-013

(3) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-1

SUBTASK 27-21-91-410-003

(4) Install this access panel:

Number	Name/Location
324DL	Trailing Edge Access

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STANDBY RUDDER POWER CONTROL UNIT SHUTOFF VALVE - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) A removal of the rudder valve motor from the standby rudder power control unit (PCU) shutoff valve

(2) An installation of the rudder valve motor to the standby rudder PCU shutoff valve

(3) A removal of the standby rudder power control unit (PCU) shutoff valve

(4) An installation of the standby rudder PCU shutoff valve

(5) An installation test of the standby rudder PCU shutoff valve.

B. The standby rudder PCU shutoff valve is referred to as the "shutoff valve" in this procedure.

C. You do not have to remove the shutoff valve from the modular package assembly to remove the rudder valve motor.

TASK 27-21-94-000-801

2. Rudder Valve Motor Removal

(Figure 201, Figure 202)

A. General

(1) This task includes the steps to remove the rudder valve motor.

B. References

Reference	Title
27-21-00-800-802	Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation (P/B 201)

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left

D. Prepare for the Removal

SUBTASK 27-21-94-860-001

(1) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-21-94-860-002

(2) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

E. Rudder Valve Motor Removal

SUBTASK 27-21-94-020-001

(1) Disconnect the electrical connector [5] from the rudder valve motor [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(b) If you find corrosion, correct the problem (SWPM 20-60-03).

SUBTASK 27-21-94-020-002

(2) Move the manual override lever [2] on the rudder valve motor [4] to position 2.

SUBTASK 27-21-94-020-003

(3) Remove the lockwire and screws [6] from the rudder valve motor [4].

SUBTASK 27-21-94-020-004

(4) Remove the rudder valve motor [4] from the standby rudder PCU shutoff valve [1].

SUBTASK 27-21-94-020-013

(5) If you will install new rudder valve motor [4], remove the rudder valve motor name plate [14] (Figure 202).

(a) Keep the rudder valve motor name plate [14] for the subsequent installation.

NOTE: Name plate is for rudder valve motor accountability/traceability and will be installed on new rudder valve motor.

SUBTASK 27-21-94-020-014

(6) If you will replace the standby rudder PCU shutoff valve [1], make sure that the rudder valve motor name plate [14] is maintained with the removed standby rudder PCU shutoff valve [1].

F. Rudder Valve Motor Installation

SUBTASK 27-21-94-420-009

(1) If you install new rudder valve motor [4], install the removed rudder valve motor name plate [14] (Figure 202).

SUBTASK 27-21-94-420-010

(2) If you install new standby rudder PCU shutoff valve [1], install the new rudder valve motor name plate [14] on the rudder valve motor [4] (Figure 202).

NOTE: If you do not install new standby rudder PCU shutoff valve, use the rudder valve motor name plate that is maintained with the removed standby rudder PCU shutoff valve.

SUBTASK 27-21-94-020-005

(3) Make sure that the manual override lever [2] on the rudder valve motor [4] is in position 2.

SUBTASK 27-21-94-420-001

(4) Put the rudder valve motor [4] on the standby rudder PCU shutoff valve [1].

(a) Make sure that the rudder valve motor [4] is engaged with the valve cam [3].

SUBTASK 27-21-94-420-002

(5) Install the screws [6] that attach the rudder valve motor [4] to the standby rudder PCU shutoff valve [1].

(a) Tighten the screws [6] to 17 in-lb (1.92 N·m) - 20 in-lb (2.26 N·m).

(b) Install MS20995C20 lockwire, G50225, on the screws [6].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-94-210-001

(6) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: You can inspect the electrical connector(s) after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(a) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS WHERE DEICING FLUID THAT CONTAIN POTASSIUM FORMATE IS USED. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(b) If you find corrosion, correct the problem (SWPM 20-60-03).

SUBTASK 27-21-94-800-001

(7) Apply D5026NS or ZC-026 compound, G50171, to the electrical connector [5] (SWPM 20-60-03).

SUBTASK 27-21-94-420-003

(8) Connect the electrical connector [5] to the rudder valve motor [4].

SUBTASK 27-21-94-860-003

(9) Do this task: Pressure to the Rudder Systems A, B, and Standby - Activation, TASK 27-21-00-840-802.

SUBTASK 27-21-94-860-004

(10) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-21-94-730-001

(11) Do this task: Standby Rudder PCU Shutoff Valve Installation Test, TASK 27-21-94-710-801.

END OF TASK

TASK 27-21-94-000-802

4. Standby Rudder PCU Shutoff Valve Removal

(Figure 201)

A. General

(1) This task provides instructions to remove the shutoff valve (with the rudder valve motor attached) from the standby flight controls hydraulic module.

E. Shutoff Valve Removal

SUBTASK 27-21-94-020-006

(1) Disconnect the electrical connector [5] from the rudder valve motor [4].

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-21-94-020-007

(2) Remove the lockwires from the screws [13].

SUBTASK 27-21-94-020-008

(3) Remove the screws [13] and washers [12] which attach the standby rudder PCU shutoff valve [1] to the standby flight controls hydraulic module [9].

SUBTASK 27-21-94-020-009

CAUTION

DO NOT LET HYDRAULIC FLUID GET ON EQUIPMENT. IF HYDRAULIC FLUID GETS ON EQUIPMENT, IMMEDIATELY CLEAN IT FROM THE EQUIPMENT. HYDRAULIC FLUID CAN CAUSE DAMAGE TO EQUIPMENT.

(4) Put a container below the standby rudder PCU shutoff valve [1] to catch hydraulic fluid.

SUBTASK 27-21-94-020-010

(5) Carefully turn and pull directly up on the standby rudder PCU shutoff valve [1] to remove it from the standby flight controls hydraulic module [9].

SUBTASK 27-21-94-020-011

(6) Put a cover on the standby flight controls hydraulic module [9] to keep dirt out.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-21-94-400-802

5. Standby Rudder PCU Shutoff Valve Installation

(Figure 201)

A. General

(1) This task provides instructions to install the shutoff valve (with the rudder valve motor attached) to the standby flight controls hydraulic module.

F. Standby Rudder PCU Shutoff Valve Installation

SUBTASK 27-21-94-020-012

(1) Remove the cover from the standby flight controls hydraulic module [9].

SUBTASK 27-21-94-420-004

(2) If the shutoff valve does not have the packings [8], packing [10], backup rings [7], and backup rings [11] installed, do these steps:

(a) Lubricate the packings [8], packing [10], backup rings [7], and backup rings [11] with hydraulic fluid, D00153.

(b) Install the packings [8], packing [10], backup rings [7], and backup rings [11] to the standby rudder PCU shutoff valve [1].

SUBTASK 27-21-94-420-005

(3) Carefully install the standby rudder PCU shutoff valve [1] in the standby flight controls hydraulic module [9].

SUBTASK 27-21-94-420-006

(4) Install the washers [12] and screws [13] which attach the standby rudder PCU shutoff valve [1] to the standby flight controls hydraulic module [9].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Tighten the screws [13] to 78 in-lb (8.8 N·m) – 82 in-lb (9.3 N·m).

SUBTASK 27-21-94-420-007

(5) Install the MS20995C32 lockwire, G01048, on the screws [13].

SUBTASK 27-21-94-210-002

(6) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(a) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-21-94-800-002

(7) Apply the D5026NS or ZC-026 compound, G50171, to the electrical connector [5] (SWPM 20-60-03).

SUBTASK 27-21-94-420-008

(8) Connect the electrical connector [5] to the rudder valve motor [4].

SUBTASK 27-21-94-860-007

(9) Do this task: Pressure to the Rudder Systems A, B, and Standby - Activation, TASK 27-21-00-840-802.

SUBTASK 27-21-94-860-008

(10) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

C. Procedure

SUBTASK 27-21-94-860-011

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Rudder Hydraulic System A, B, or Standby Pressurization, TASK 27-21-00-800-801.

SUBTASK 27-21-94-860-012

(2) Make sure the FLIGHT CONTROL A and B switches are in the ON position.

NOTE: The FLIGHT CONTROL A and B switches are on the upper left corner of the pilot's overhead panel.

SUBTASK 27-21-94-860-013

(3) Make sure the manual override lever on the rudder valve motor is in position 1.

SUBTASK 27-21-94-860-014

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Put the FLIGHT CONTROL A or B switch to the STDBY RUD position.

SUBTASK 27-21-94-860-015

(5) Make sure the manual override lever on the rudder valve motor is in position 2.

SUBTASK 27-21-94-860-016

(6) Do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

NOTE: Nose landing gear will move when the rudder pedals are moved. To prevent NLG movement, install a lockout pin in the nose wheel steering mechanism.

SUBTASK 27-21-94-710-002

(7) Push the rudder pedals until they touches the forward quadrant stops.

(a) Have a second maintenance personnel visually make sure that the rudder moves correctly.

SUBTASK 27-21-94-790-001

(8) Make sure there is no hydraulic fluid leakage from the shutoff valve.

SUBTASK 27-21-94-860-017

(9) Put the FLIGHT CONTROL A or B switch to the ON position.

SUBTASK 27-21-94-860-018

(10) Make sure the manual override lever on the rudder valve motor is in position 1.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-94-860-019

(11) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-94-860-020

(12) Do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

RUDDER HYDRAULIC FUSE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the rudder hydraulic fuse

(2) An installation of the rudder hydraulic fuse.

TASK 27-21-95-000-801

2. Rudder Hydraulic Fuse Removal

(Figure 401)

NOTE: This procedure is a scheduled maintenance task.

A. References

Reference	Title

D. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

E. Prepare for the Removal

SUBTASK 27-21-95-040-001

(1) Do this task: Horizontal Stabilizer Trim Control System - Deactivation, TASK 27-41-00-800-801.

(a) If the lock, SPL-1672, is not available, install the DO NOT OPERATE tag, STD-858, on the stabilizer trim wheel.

SUBTASK 27-21-95-860-001

(2) Do this task: Pressure from the Rudder Hydraulic Systems A, B, and Standby - Deactivation, TASK 27-21-00-800-802.

SUBTASK 27-21-95-860-002

(3) Do this task: Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-95-010-001

(4) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Rudder Hydraulic Fuse Removal

SUBTASK 27-21-95-020-003

(1) Remove the bolt [1], washer [2], and nut [3].

SUBTASK 27-21-95-020-002

(2) Remove the bolt [8], washer [9], nut [10], and clamp [4].

(a) Leave the clamp [11] around the hydraulic line [12].

SUBTASK 27-21-95-020-001

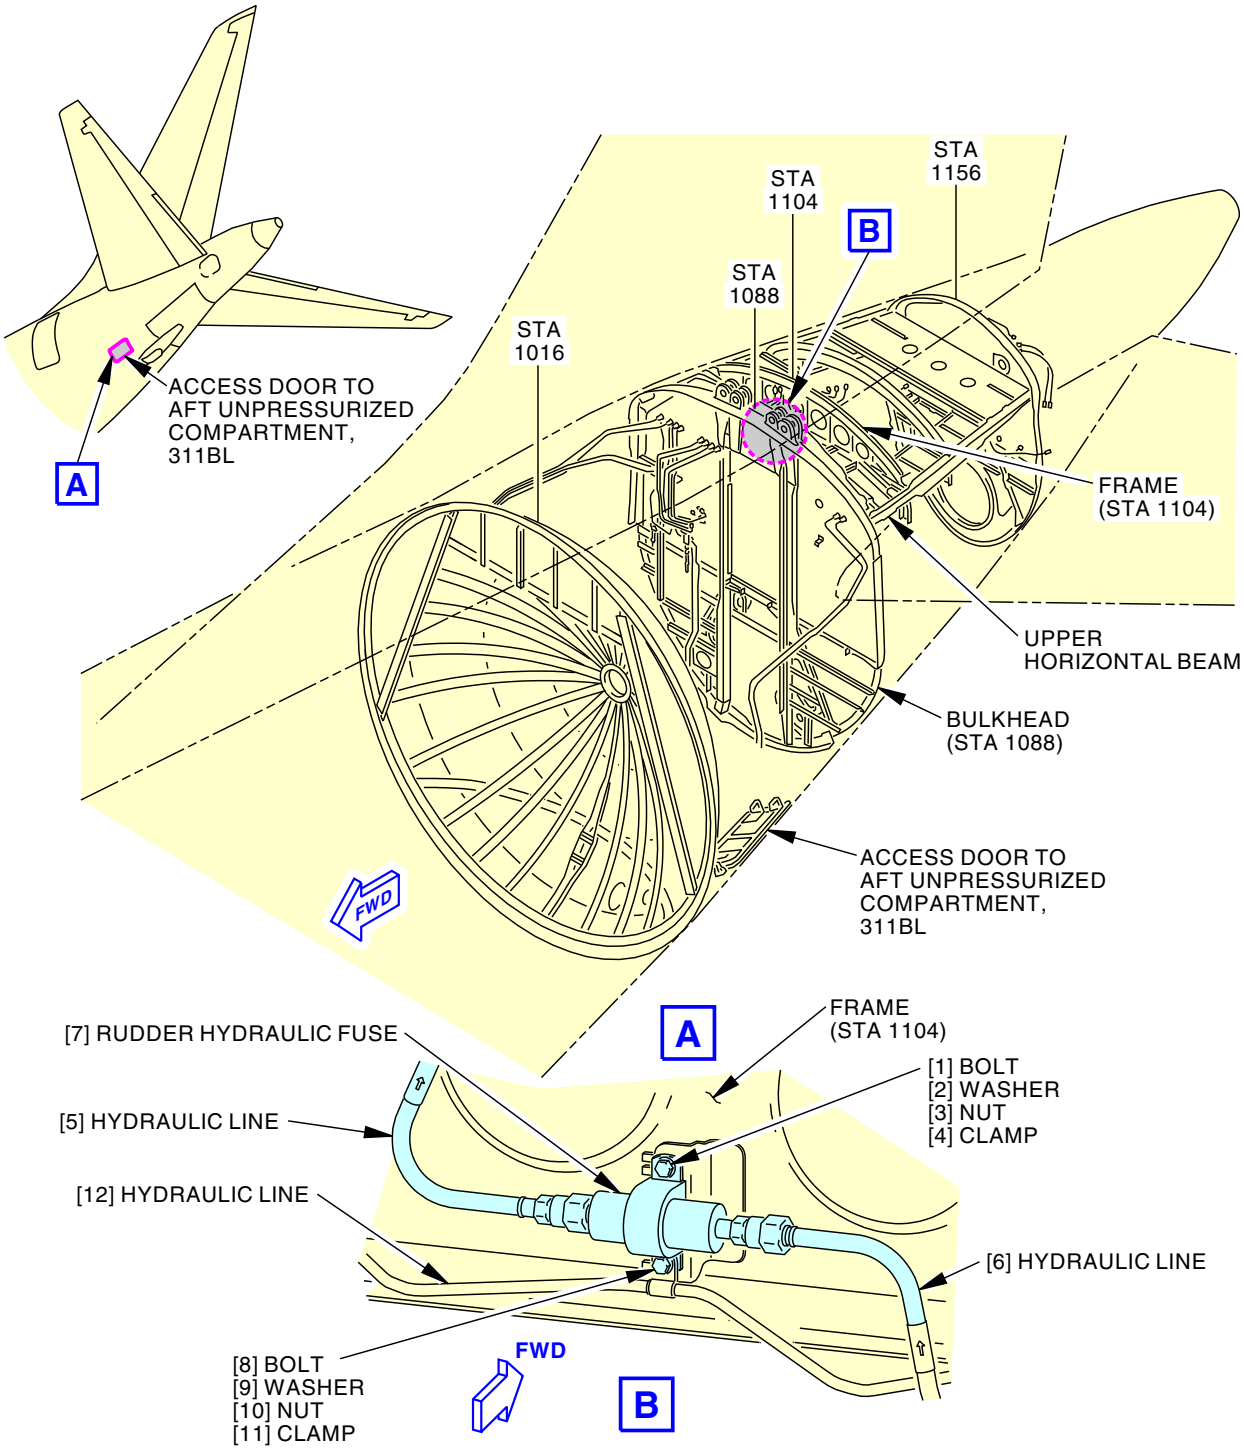
(3) Do these steps to remove the rudder hydraulic fuse [7]:

(a) Disconnect the hydraulic line [5] and hydraulic line [6] from the rudder hydraulic fuse [7].

(b) Remove the rudder hydraulic fuse [7].

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details



Rudder Hydraulic Fuse Installation

311BL	Stabilizer Trim Access Door

E. Rudder Hydraulic Fuse Installation

SUBTASK 27-21-95-420-001

(1) Do these steps to install the rudder hydraulic fuse [7]:

(a) Put the rudder hydraulic fuse [7] in its position.

NOTE: The flow direction arrow on the rudder hydraulic fuse [7] must agree with the arrow on the airplane.

(b) Connect the hydraulic line [5] and hydraulic line [6] to the rudder hydraulic fuse [7].

(c) Tighten the B-nuts on hydraulic line [5] and hydraulic line [6] to 270 ±14 in-lb (31 ±2 N·m).

SUBTASK 27-21-95-420-002

(2) Install the clamp [4] with the bolt [1], washer [2], and nut [3].

SUBTASK 27-21-95-420-003

(3) Install the clamp [11] with the bolt [8], washer [9], and nut [10].

SUBTASK 27-21-95-860-005

(4) Do these steps to do a test of the rudder hydraulic fuse [7]:

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize the rudder hydraulic system B (TASK 27-21-00-800-801).

(b) Move the rudder pedals through their full travel three times.

(c) Make sure that the rudder moves correctly.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-21-95-210-001

(5) Visually examine the rudder hydraulic fuse [7] for hydraulic leaks.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-21-95-440-001

(1) Do this task: Horizontal Stabilizer Trim Control System - Activation, TASK 27-41-00-800-802.

(a) If installed, remove the DO NOT OPERATE tag from the stabilizer trim wheel.

SUBTASK 27-21-95-860-006

(2) Do this task: Put the Rudder Hydraulic Systems A, B, and Standby Back to the Condition Before the Pressurization, TASK 27-21-00-840-801.

SUBTASK 27-21-95-410-001

(3) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

G. Test the LE Hydraulic Fuses

SUBTASK 27-21-95-720-001

(1) Do the functional test of the LE hydraulic fuses with the suppliers recommended component maintenance test instructions and test equipment.

NOTE: The suppliers instructions give a reverse flow test, internal leakage test, pressure drop test, volumetric capacity test and reset test for the fuses. This is an off-airplane bench test.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR AND TAB CONTROL SYSTEM - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Elevator Hydraulic System A and B - Pressurization

(2) Put the Elevator Hydraulic Systems A and B Back to the Condition before the Pressurization

(3) Remove Pressure from the Elevator Hydraulic Systems A and B

(4) Put the Elevator Hydraulic Systems A and B Back to the Condition before the Pressure Removal

(5) Null Procedure - Mach Trim Actuator

(6) Elevator Control Pushrod - Visual Inspection

(7) Elevator Feel and Centering Unit - Detailed Inspection

(8) Elevator Feel and Centering Unit Output Rod - Detailed Visual Inspection

(9) Elevator Tab and Tab Mechanism - Detailed Visual Inspection

(10) Elevator and Tab Control System - Deactivation

(11) Elevator and Tab Control System - Activation.

B. Hydraulic systems A, B must have pressure removed before maintenance is done on the elevator control system. This is to prevent injury to persons because of accidental operation of the control system while you do maintenance. You must be careful to put maintenance stands and equipment away from control surface travel.

C. Electric pump 1 pressurizes the hydraulic system B and electric pump 2 pressurizes the hydraulic system A. Electric pump 1 heat exchanger is installed in the fuel tank 2. Electric pump 2 heat exchanger is installed in the fuel tank 1.

D. This procedure operates the electric hydraulic system A or B pumps to pressurize the hydraulic systems A and B. Pressurization of the hydraulic systems with the engine-driven hydraulic pumps is not included in this procedure.

TASK 27-31-00-800-801

2. Elevator Hydraulic System A and B - Pressurization

(Figure 201)

A. References

Reference	Title
12-12-00-610-801	Hydraulic Reservoir Servicing (P/B 301)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

C. Pressurization of the Elevator Hydraulic System A and B

SUBTASK 27-31-00-860-002

CAUTION

DO NOT OPERATE SYSTEM A OR B HYDRAULIC PUMPS FOR MORE THAN TWO MINUTES WITHOUT FUEL IN THE FUEL TANKS. THE NO. 1 (FOR SYSTEM A) AND NO. 2 (FOR SYSTEM B) FUEL TANKS MUST HAVE A MINIMUM OF 250 GALLONS (1675 POUNDS/760 KILOGRAMS) OF FUEL IN THEM. IF THERE IS NOT SUFFICIENT FUEL IN THE FUEL TANKS, THE HYDRAULIC FLUID WILL BECOME TOO HOT.

(1) Make sure that the No. 1 and No. 2 fuel tanks each have 250 gallons (1675 pounds/760 kilograms) of fuel in them.

SUBTASK 27-31-00-210-001

(2) Make sure that the hydraulic reservoirs are full.

(a) To fill the hydraulic reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-31-00-860-003

(3) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-31-00-860-004

(4) Set the parking brake.

SUBTASK 27-31-00-480-001

WARNING

MAKE SURE THAT THE GROUND LOCKS ARE INSTALLED IN ALL THE LANDING GEARS BEFORE YOU PRESSURIZE THE HYDRAULIC SYSTEM. WITHOUT THE GROUND LOCKS, THE LANDING GEARS CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-31-00-860-005

WARNING

KEEP PERSONNEL AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Pressurize the elevator hydraulic system A:

(a) Set the ELEC 2, HYD PUMPS A switch on the forward overhead panel to the ON position.

(b) To pressurize the hydraulic system A, set the FLT CONTROL A switch on the forward overhead panel to the ON position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-780-001

WARNING KEEP PERSONNEL AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(7) Pressurize the elevator hydraulic system B:

(a) Set the ELEC 1, HYD PUMPS B switch on the forward overhead panel to the ON position.

(b) To pressurize the hydraulic system B, set the FLT CONTROL B switch on the forward overhead panel to the ON position.

END OF TASK

SPL-1675	Assembly - Lock, Flight Controls (used on valve p/n 10-60581-2 and 10-60581-3) Part #: F80049-65 Supplier: 81205 Opt Part #: F80049-56 Supplier: 81205

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

D. Pressure from the Elevator Hydraulic Systems A and B Removal

SUBTASK 27-31-00-860-008

(1) Set the FLT CONTROL A and B switches on the forward overhead panel to the OFF position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-860-009

(2) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-31-00-860-010

(3) Set the ELEC 2, HYD PUMPS A and the ELEC 1, HYD PUMPS B switches on the forward overhead panel to the OFF position.

SUBTASK 27-31-00-870-001

(4) Operate the rudder pedals to decrease the remaining hydraulic system pressure.

SUBTASK 27-31-00-860-011

(5) If it is necessary to open a hydraulic line, you must release pressure from the reservoir for the applicable hydraulic system (TASK 29-09-00-860-802).

SUBTASK 27-31-00-480-002

(6) Install the flight controls hydraulic module locks (Figure 202):

(a) Disconnect the electrical connectors from the flight controls shutoff valve at the flight controls hydraulic modules A and B.

(b) Examine the connectors for corrosion.

1) If corrosion is found, refer to SWPM 20-60-03 to correct the problem.

(c) Put the manual override lever at the two flight controls shutoff valves in the position 2 (OFF position).

(d) Install the lock, SPL-1675, on the two flight controls shutoff valves.

1) Install the lockpins.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-31-00-840-802

5. Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal

(Figure 201, Figure 202)

A. References

Reference	Title
12-12-00-610-801	Hydraulic Reservoir Servicing (P/B 301)
27-09-31-710-801	Flight Controls Shutoff Valve Test (P/B 501)
SWPM 20-60-03	Special Protection of Electrical Connectors

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1675	Assembly - Lock, Flight Controls (used on valve p/n 10-60581-2 and 10-60581-3) Part #: F80049-65 Supplier: 81205 Opt Part #: F80049-56 Supplier: 81205

C. Consumable Materials

Reference	Description	Specification
G50171	Compound - Corrosion Inhibiting Compound, Interior Application - D5026NS or ZC-026	

D. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

E. Put the Elevator Systems A and B Back to the Condition Before the Pressure Removal

SUBTASK 27-31-00-080-002

(1) Remove the flight controls hydraulic module locks from the flight controls shutoff valves.

(a) Remove the lockpins.

(b) Remove the lock, SPL-1675, from the two flight controls shutoff valves.

(c) Put the manual override lever at the two flight controls shutoff valves in the position 1 (ON position).

(d) Examine the connectors for corrosion.

1) If there is corrosion, refer to SWPM 20-60-03 to correct the problem.

(e) Apply the D5026NS or ZC-026 compound, G50171, to the connectors (SWPM 20-60-03).

(f) Connect the electrical connectors to the flight controls shutoff valve at the flight controls hydraulic modules A and B.

SUBTASK 27-31-00-860-012

(2) Set the FLT CONTROL A and B switches on the forward overhead panel to the ON position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-860-013

(3) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-31-00-860-157

(4) Set the ELEC 2, HYD PUMPS A and the ELEC 1, HYD PUMPS B switches on the forward overhead panel, P5, to the ON position.

SUBTASK 27-31-00-700-006

(5) Do a test of the flight controls shutoff valve (TASK 27-09-31-710-801).

SUBTASK 27-31-00-860-014

(6) If it is necessary, fill the hydraulic reservoirs (TASK 12-12-00-610-801).

——— END OF TASK ———

TASK 27-31-00-700-801

6. Null Procedure - Mach Trim Actuator

A. References

Reference	Title
22-11-00-993-825	Table: (P/B 501)
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1677	Assembly - Trammel Bar, Stabilizer Trim Actuator Part #: F80055-36 Supplier: 81205 Opt Part #: F80055-1 Supplier: 81205

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

E. Prepare for the Test

SUBTASK 27-31-00-860-016

(1) Set the STAB TRIM PRI switch, S272, on the aft area of the control stand, to the CUTOUT position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-860-017

(2) Make sure that the VHF NAV and IRS switches, on the P5 forward overhead panel, are in the NORMAL positions.

SUBTASK 27-31-00-860-018

(3) Set the left and right IRS select switches, on the P5 aft overhead panel, to the ALIGN or NAV position.

SUBTASK 27-31-00-860-019

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Supply hydraulic power to hydraulic systems A and B (TASK 29-11-00-860-801).

SUBTASK 27-31-00-010-001

(5) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-980-001

(6) Do these steps to set the B dimension:

NOTE: The B dimension is measured between the center of the upper and lower Gimbal pins on the stabilizer trim jackscrew. To do this, one person must be in the tail of the airplane with a headset and the other person in the flight compartment.

(a) Turn the stab trim wheel handle on the control stand to set the B dimension.

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(b) Use the trammel bar, SPL-1677, to measure the B dimension.

(c) Make sure that the B dimension is 39.17 ±0.01 in. (994.92 ±0.26 mm).

F. Null Procedure for Mach Trim Actuator

SUBTASK 27-31-00-740-001

(1) Push the INIT REF key on the Control Display Unit (CDU) keyboard.

NOTE: It is necessary to follow all the on-screen instructions for this test.

(a) Push the Line Select Key (LSK) that is adjacent to each selection:

1) INDEX
2) MAINT
3) DFCS

NOTE: Whenever the DFCS LSK is selected the DFCS BITE test will run.

4) EXTENDED MAINTENANCE
5) RIGGING

SUBTASK 27-31-00-740-002

(2) Push the LSK adjacent to <ELEVATOR on the CDU.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-740-003

(3) Push the LSK adjacent to <ELEV RIG on the CDU.

SUBTASK 27-31-00-740-012

(4) Push CONTINUE.

SUBTASK 27-31-00-740-004

(5) Follow the instructions on the CDU and push the LSK adjacent to <CONTINUE until Test 51.02 MT ACT POS menu shows on the CDU.

NOTE: The DFCS BITE Rigging Test will move the mach trim actuator to the fully extended position.

SUBTASK 27-31-00-740-005

(6) Use Test 51.02 and 51.03 to make sure that the MT ACT POS for FCC channel A is within limits (Table 22-11-00-993-825).

NOTE: For Tests 51.02 and 51.03, there is no value for the B side; N/A.

SUBTASK 27-31-00-740-006

(7) Continue with test 51.02 until test 51.03 is displayed.

(a) Make sure that the value limits are within an acceptable range (Table 22-11-00-993-825).

(b) Look for “A” adjacent to the applicable LSK and make sure that the Z value shown is between the upper and lower limit.

NOTE: The null procedure for the mach trim actuator is complete.

SUBTASK 27-31-00-860-020

(8) Select PREV MENU (LSK 6R) on the CDU, and do the steps that follow:

(a) Select EXIT (LSK 6L) on the RIGGING INDEX screen.

(b) Complete the instructions on the END OF BITE RIGGING screen.

(c) Select CONTINUE (LSK 6L).

(d) Select EXIT (LSK 6L) on the TEST COMPLETE screen.

(e) Complete the instructions on the END OF DFCS screen.

(f) Select EXIT (LSK 6L).

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-410-033

(1) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-840-004

(2) Remove hydraulic power from hydraulic systems A and B (TASK 29-11-00-860-805).

SUBTASK 27-31-00-860-165

(3) Set the STAB TRIM PRI switch, S272, on the control stand, to the NORMAL position.

SUBTASK 27-31-00-860-166

(4) Set the left and right IRS select switches, on the P5 aft overhead panel, to the OFF position.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-31-00-200-801

7. Elevator Control Pushrod - Detailed Visual Inspection

(Figure 203)

NOTE: This procedure is a scheduled maintenance task.

A. References

Reference	Title
51-22-00-390-809	Aerodynamic Smoother Application (P/B 201)
SRM 51-10-01	AERODYNAMIC SMOOTHNESS

344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09

E. Elevator Control Pushrod Detailed Visual Inspection

SUBTASK 27-31-00-010-002

(1) Open these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door
334AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334GB	Horizontal Stabilizer, Elevator Hinge Cover
344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09

SUBTASK 27-31-00-860-021

(2) If hydraulic systems A and B have pressure, do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-00-200-001

(3) Do a detailed visual inspection of the elevator control pushrods (on both elevators) (Figure 203).

(a) Make sure that all hardware is installed and secure.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Check for unusual wear and loose parts at the two connection points of the elevator control pushrod.

NOTE: Try to wiggle or move connection bolts with hand pressure only.

SUBTASK 27-31-00-420-001

(4) Tighten and properly secure any loose items.

SUBTASK 27-31-00-960-001

(5) If replacement is necessary, replace any worn or loose parts with new hardware.

SUBTASK 27-31-00-410-001

(6) Close these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door
334AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334GB	Horizontal Stabilizer, Elevator Hinge Cover
344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09

SUBTASK 27-31-00-390-002

(7) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

SUBTASK 27-31-00-741-001

(8) If hydraulic pressure in systems A and B is necessary, do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

——— END OF TASK ———

TASK 27-31-00-200-802

8. Elevator Feel and Centering Unit Detailed Inspection

(Figure 203)

NOTE: This procedure is a scheduled maintenance task.

A. Location Zones

Zone	Area
317	Tail Cone Compartment - Left
318	Tail Cone Compartment - Right
334	Left Horizontal Stabilizer - Elevator
344	Right Horizontal Stabilizer - Elevator

B. Access Panels

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

C. Detailed Inspection of the Elevator Feel and Centering Unit

SUBTASK 27-31-00-780-002

(1) If hydraulic systems A and B have pressure, remove pressure from the elevator hydraulic systems A and B (TASK 27-31-00-800-802).

SUBTASK 27-31-00-010-003

(2) Open these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-00-200-002

(3) Do a detailed inspection of the Elevator Feel and Centering Unit.

(a) Check for any hydraulic leaks at the actuator seals and hydraulic line connections.

(b) Check for unusual wear or loose parts at the Feel and Centering Unit connection points.

1) Make sure that all of the hardware is installed and secure.

a) Tighten and properly secure any loose items.

2) If replacement is necessary, replace any loose or worn hardware with new hardware.

SUBTASK 27-31-00-410-002

(4) Close these access panels:

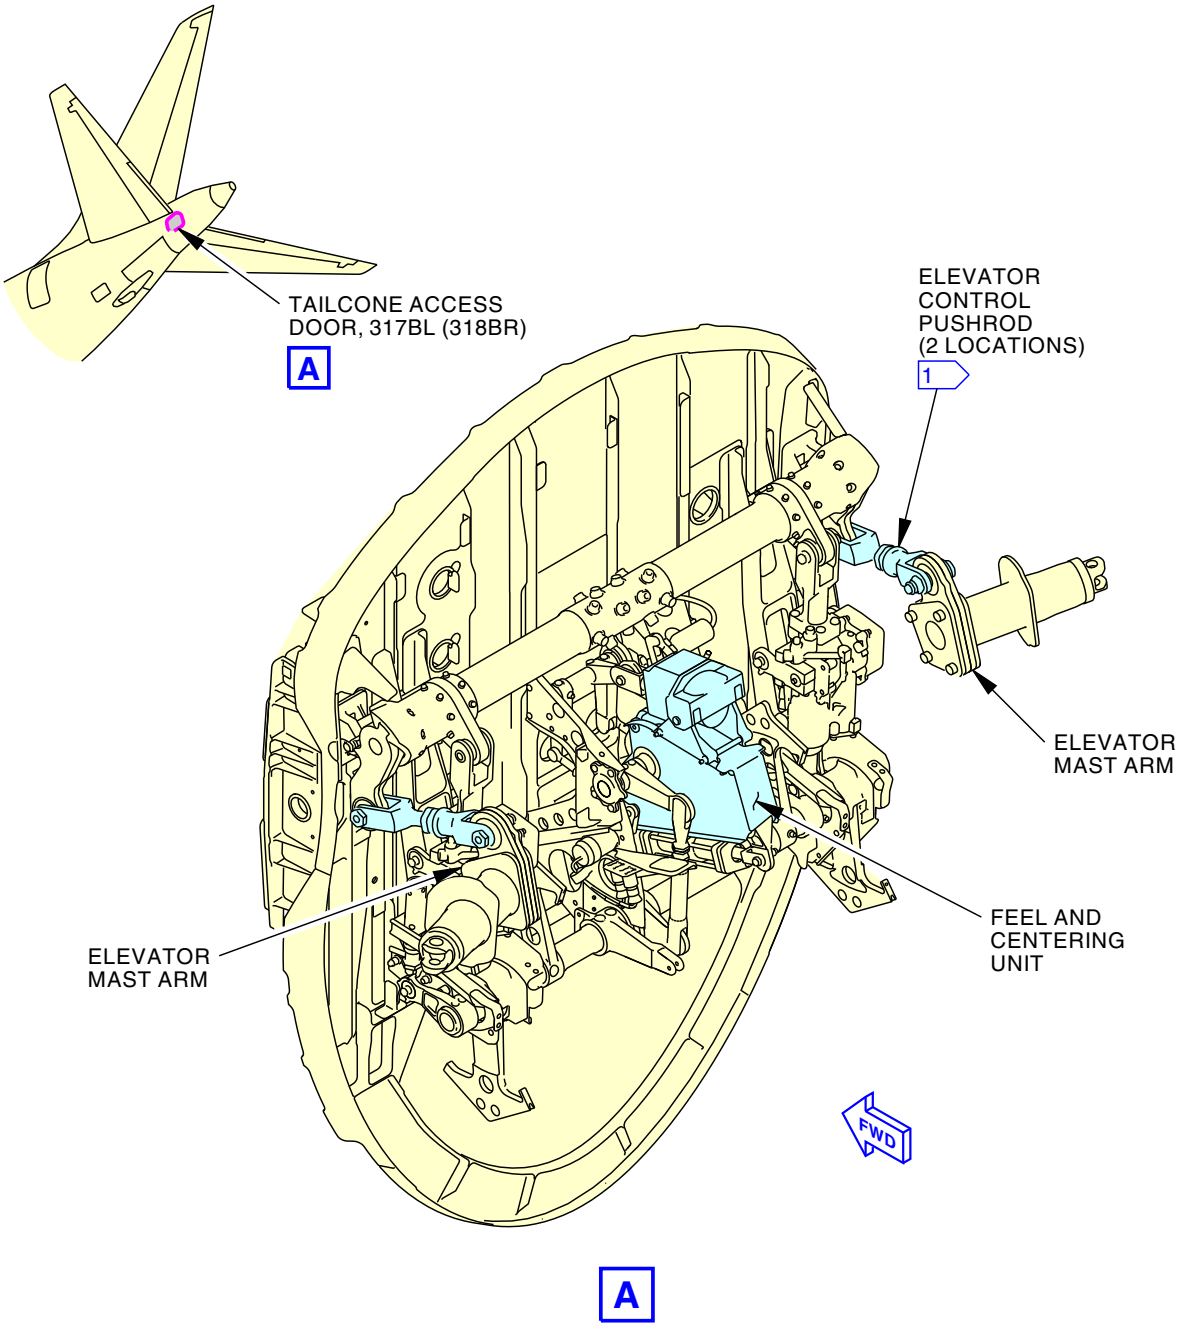
Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-00-840-001

(5) If you need hydraulic pressure in systems A and B, do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details



1 ACCESS TO THE FORWARD ELEVATOR CONTROL PUSHROD CONNECTION POINT IS THROUGH THE TAILCONE ACCESS DOOR 317BL AND 318BR. ACCESS TO THE ELEVATOR CONTROL PUSHROD AFT CONNECTION POINT IS AT THE TOP OF THE ELEVATOR AT THE ELEVATOR MAST ARM.

317BL	Tailcone Access Door
318BR	Tailcone Access Door

D. Detailed Visual Inspection of the Elevator Feel and Centering Unit Output Rod

SUBTASK 27-31-00-780-003

(1) If hydraulic systems A and B have pressure, remove pressure from the elevator hydraulic systems A and B (TASK 27-31-00-800-802).

SUBTASK 27-31-00-010-004

(2) Open these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-00-211-001

(3) Do a detailed visual inspection of the Elevator Feel and Centering Unit Output Rod:

(a) Check for unusual wear or loose parts at the Output Rod connection points.

1) Make sure that all of the hardware is installed and secure.

a) Tighten and properly secure any loose items.

2) If replacement is necessary, replace any loose or worn hardware with new hardware.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-410-003

(1) Close these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-00-840-002

(2) If necessary, apply hydraulic pressure in systems A and B (TASK 27-31-00-840-802).

END OF TASK

344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-00-200-003

(3) Do a detailed visual inspection of the elevator tab hinges (Figure 205).

(a) Make sure that all hardware is installed and secure (TASK 27-31-31-400-801).

(b) Check for unusual wear and loose parts.

NOTE: Try to wiggle or move hinge bolts with hand pressure only.

(c) Inspect the lug assembly bearings to ensure the bearings are lubricated and in good condition.

SUBTASK 27-31-00-420-002

(4) Tighten and properly secure any loose items.

SUBTASK 27-31-00-960-002

(5) Replace, as necessary, with any new hardware.

SUBTASK 27-31-00-200-004

(6) Do a detailed inspection for security and condition of the elevator tab control mechanism and elevator tab pushrod attachment (Figure 206).

(a) Make sure that all hardware is installed and secure (TASK 27-31-34-400-801).

(b) Check for unusual wear or loose parts by lightly wiggling the pushrods.

SUBTASK 27-31-00-200-005

(7) Do a detailed visual inspection for security and condition of the elevator tab pushrod and elevator tab mast fitting to pushrod attachment (Figure 207).

(a) Turn the tab assembly trailing edge down so that the installation of the tab pushrods to the tab mast fittings are visible (TASK 27-31-34-400-801).

NOTE: This can also be done in the balanced mode with the trailing edge down.

SUBTASK 27-31-00-420-003

(8) Tighten and properly secure any loose items.

SUBTASK 27-31-00-960-003

(9) Replace, as necessary, with any new hardware.

SUBTASK 27-31-00-860-023

(10) Put the Elevator Hydraulic Systems A and B back to the condition before the pressure removal (TASK 27-31-00-840-802).

SUBTASK 27-31-00-410-004

(11) Close these access panels:

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
334AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334GB	Horizontal Stabilizer, Elevator Hinge Cover
334PT	Horizontal Stabilizer, Tab Control Rod Fairing
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Number	Name/Location
344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-00-390-004

(12) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

SUBTASK 27-31-00-840-003

(13) Put the airplane back to its normal condition.

TASK 27-31-00-000-801

11. Elevator and Tab Control System - Deactivation

(Figure 208)

A. General

(1) Use this task to deactivate the elevator and tab control system.

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1675	Assembly - Lock, Flight Controls (used on valve p/n 10-60581-2 and 10-60581-3) Part #: F80049-65 Supplier: 81205 Opt Part #: F80049-56 Supplier: 81205

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Deactivation of the Elevator and Tab Control System

SUBTASK 27-31-00-860-025

(1) Set the FLT CONTROL A and B switches on the forward overhead panel to the OFF position.

SUBTASK 27-31-00-860-026

(2) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT

SUBTASK 27-31-00-860-027

(3) Open this circuit breaker and install safety tag:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
C	4	C00456	AFCS SYS A MACH TRIM AC

SUBTASK 27-31-00-040-001

(4) Install the flight controls lock assembly:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Disconnect the electrical connector from the flight controls shutoff valve at the flight controls hydraulic modules A and B.

NOTE: For hydraulic system A, the flight control shut off valve is mounted on the inboard side of the hydraulic module A in the left main wheel well. For hydraulic system B, the flight control shutoff valve is mounted on the outboard side of the hydraulic module B in the right main wheel well.

(b) Put the manual override lever at the two flight controls shutoff valves in the position 2 (OFF position).

(c) Install the lock, SPL-1675, on the two flight control shut off valves.

1) Install the lockpins.

SUBTASK 27-31-00-780-004

(5) Move the control column forward and aft to decrease the remaining hydraulic system pressure until the display unit shows less than 60 psi (414 kPa) for System Hydraulics A and B.

NOTE: You can view the hydraulic pressure, for the applicable system, on the display unit for the engine display.

SUBTASK 27-31-00-210-002

WARNING

MAKE SURE THAT THERE IS NO PRESSURE IN THE HYDRAULIC SYSTEM. PRESSURE IN THE HYDRAULIC SYSTEM CAN MOVE THE CONTROL SURFACES, CABLES, LANDING GEARS, AND LANDING GEAR DOORS QUICKLY. THEIR MOVEMENT CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(6) Do the elevator and tab control system tryout.

NOTE: This tryout is to make sure that the elevator and tab control system is in a zero energy state.

(a) Move the captain's control column forward and aft.

1) Make sure that the column forces are much higher than usual and that a small dead band condition exist when the direction is changed.

(b) Install a DO NOT OPERATE tag on the captain's and first officer's control wheel.

F. Activation of the Elevator and Tab Control System

SUBTASK 27-31-00-860-028

(1) Remove the flight controls lock assembly from the flight controls shutoff valves:

(a) Remove the lockpins.

(b) Remove the lock, SPL-1675, from the two flight controls shutoff valves.

(c) Put the manual override lever at the two flight controls shutoff valves in the position 1 (ON position).

(d) Examine the electrical connectors for corrosion.

1) If there is corrosion, refer to SWPM 20-60-03 to correct the problem.

(e) Apply D5026NS or ZC-026 compound, G50171 to the connectors (SWPM 20-60-03).

(f) Connect the electrical connector to the flight controls shutoff valve at the flight controls hydraulic modules A and B.

SUBTASK 27-31-00-440-001

(2) Set the FLT CONTROL A and B switches on the P5 forward overhead panel to the ON position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-410-005

(3) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	11	C00362	FLIGHT CONT SHUTOFF VALVES STBY RUD

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
C	4	C00456	AFCS SYS A MACH TRIM AC

SUBTASK 27-31-00-080-003

(5) Remove the DO NOT OPERATE tag on the captain's and first officer's control wheel.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR AND ELEVATOR TRIM CONTROL SYSTEM - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) Operational Test - Elevator and Elevator Trim Control System - Use this task to do a quick check of the elevator control system.1

(2) Operational Test - Elevator Tab Control System - Use this task to do a quick check of the elevator tab control system.

(3) Operational Test - Elevator Control Column Override - Use this task to do a quick check of the control column override assembly.

(4) Functional Test - Elevator Control Column Override - Use this task to do a functional check of the control column override assembly.

(5) Elevator Control Cables EA and EB and Pitch Force Transducers Adjustment - Use this task to adjust the elevator control cable and pitch force transducers.

(6) Pitch Force Transducer Operational Test - Use this task to do an operational test of the pitch control wheel steering force transducers.

(7) Elevator Control Pushrods Adjustment - Use this task to adjust the control pushrods which connect the elevator to the output torque tube.

(8) Input Rods of the Elevator Power Control Unit - Use this task to adjust the two input rods (primary and secondary) of the right and left elevator power control units (PCUs).

(9) Input Rods of the Elevator Neutral Shift Mechanism and Output Rod of the Feel and Centering Unit Adjustment - Use this task to adjust the input rods which connect the neutral shift mechanism to the stabilizer. It also includes steps to adjust the output rod which connect the feel and centering unit to the input torque tube.

(10) Elevator Tab Pushrods Adjustment - Use this task to adjust the elevator tab pushrods.

(11) Input Rod of the Elevator Feel Computer Adjustment - Use this test to adjust the input rod (stabilizer pushrod) of the elevator feel computer.

(12) Elevator Surface Friction and Balance Test - Use this task to make sure the elevators are balanced.

(13) Elevator Balance Panels Test - Use this test to make sure the elevator balance panels are installed properly.

(14) Elevator Limit Travel Test - Use this test to make sure the elevator operates correctly.

(15) Elevator Output Torque Tube Linkage Test - Use this task to do a check of the elevator output torque tube bus linkage.

(16) Elevator Tab Linkage Test - Use this task to do a check of the elevator tab control system.

(17) Manual Mode Test - Use this task to make sure the control columns and control wheels operate freely.

(18) Control Column Travel and Centering Test - Use this test to make sure the control columns can move through their full travel. This test also includes the centering test of the control columns.

(19) Control Column Power Force Test - Use this test to make sure the control columns move with a correct force.

(20) Neutral Shift Test - Use this test to make sure the neutral shift mechanism moves the elevator correctly when the stabilizer moves. When the stabilizer moves, it provides input to the elevator PCUs.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(21) Feel Differential Pressure Light Test - Use this test to make sure the FEEL DIFF PRESS light and the trailing edge flaps switch, S1051 operate correctly.

(22) Feel Differential Pressure Light Test - Use this test to make sure the FEEL DIFF PRESS light operates correctly.

(23) Pitot Probe Leak Test - Use this test to make sure there is no leakage at the pitot probes.

(24) Feel Force System Test - Use this test to make sure the elevator feel computer operates correctly. The elevator feel computer changes the control columns forces as the airspeed changes.

(25) Sensor Null Test - Use this test to make sure the elevator is in the correct rig position with DFCS Computer BITE.

(26) Elevator PCU Input Rod (Pogo) Functional Test - Use this task to do a check of force required to compress and extend each input rod (pogo) of the elevator power control unit (PCU).

(27) Elevator Power Off Flight Test

(28) Elevator Tab Pushrod Adjustment after the Elevator Power Off Flight Test

(29) Elevator Jam Landing Assist Test

TASK 27-31-00-710-801

2. Elevator and Elevator Trim Control System - Operational Test

A. General

(1) Use this task to do a quick check of the elevator control system.

B. References

Reference	Title

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

D. Elevator and Elevator Trim Control System Operational Test

SUBTASK 27-31-00-860-029

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-31-00-710-001

(2) Operate the control column with the systems A and B hydraulic power:

(a) Set the FLT CONTROL A and B switches, on the forward overhead panel, P5, to the ON position.

(b) Move the control column full aft.

1) Make sure that the elevators move full up and the system operates smoothly.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Move the control column full forward.

1) Make sure that the elevators move full down and the system operates smoothly.

SUBTASK 27-31-00-710-002

(3) Operate the control column with the system B hydraulic power:

(a) Set the FLT CONTROL A switch, on the forward overhead panel, P5, to the OFF position.

(b) Move the control column full aft.

1) Make sure that the elevators move full up and the system operates smoothly.

(c) Move the control column full forward.

1) Make sure that the elevators move full down and the system operates smoothly.

SUBTASK 27-31-00-710-003

(4) Operate the control column with the system A hydraulic power:

(a) Set the FLT CONTROL A switch, on the forward overhead panel, P5, to the ON position.

(b) Set the FLT CONTROL B switch, on the forward overhead panel, P5, to the OFF position.

(c) Move the control column full aft.

1) Make sure that the elevators move full up and the system operates smoothly.

(d) Move the control column full forward.

1) Make sure that the elevators move full down and the system operates smoothly.

SUBTASK 27-31-00-860-030

(5) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

——— END OF TASK ———

TASK 27-31-00-700-802

3. Elevator Tab Control System - Operational Test

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this test to do a quick check of the elevator tab control system.

B. References

Reference	Title

D. Prepare for the Test

SUBTASK 27-31-00-860-031

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize elevator hydraulic systems A and B (TASK 27-31-00-800-801).

SUBTASK 27-31-00-860-032

(2) Make sure that the flaps are in the full up position.

SUBTASK 27-31-00-860-033

(3) Make sure that the control column is in the neutral position.

SUBTASK 27-31-00-760-001

(4) Make sure that these circuit breakers are closed:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
D	2	C01045	AFCS SYS A FCC DC
E	5	C01009	ADIRU LEFT DC
E	7	C01007	ADIRU LEFT AC

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	5	C01204	SMYD-1 CMPTR DC
E	6	C01205	SMYD-1 SNSR EXC AC

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	4	C01207	SMYD-2 SNSR EXC AC
B	5	C01206	SMYD-2 CMPTR DC
C	14	C01008	ADIRU RIGHT AC
C	17	C01010	ADIRU RIGHT DC

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	3	C01046	AFCS SYS B FCC DC

E. Operational Test - Elevator Tab Control System

SUBTASK 27-31-00-730-001

(1) Do the operational test of the elevator tab control system:

(a) Move and hold the control column full aft.

1) Make sure that the elevator tabs move down.

(b) Move and hold the control column full forward.

1) Make sure that the elevator tabs move up.

(c) Release the control column.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Cycle the control column and return it to neutral.

(e) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	8	C01464	FLIGHT CONTROL ELEV TAB VLV RIGHT

(f) Set the flaps to the 5 degree position.

(g) Move and hold the control column full forward.

1) Make sure that the left elevator tab is below the elevator and the right elevator tab is above the elevator.

(h) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	8	C01464	FLIGHT CONTROL ELEV TAB VLV RIGHT

1) Make sure that there is an 8-12 second time delay before the right elevator tab begins to move.

(i) Cycle the control column full forward and full aft.

1) Make sure that both elevator tabs move in the same direction as the elevators.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-034

(1) Set the flaps to the full up position.

SUBTASK 27-31-00-860-035

(2) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

——— END OF TASK ———

TASK 27-31-00-710-802

4. Elevator Control Column Override - Operational Test

A. General

(1) Use this task to do a quick check of the elevator control column override assembly.

B. References

Reference	Title
27-31-00-800-801	Elevator Hydraulic System A and B - Pressurization (P/B 201)
27-31-00-840-801	Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization (P/B 201)

C. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Elevator Control Column Override - Operational Test

SUBTASK 27-31-00-860-036

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-31-00-710-004

(2) Do an operational test of the elevator control column override:

(a) Override Test of the First Officer's Control Column:

1) Push the captain's and first officer's control columns forward.
2) Hold the captain's control column forward (against the forward stop).
3) Pull the first officer's control column aft.
4) Make sure that you can pull the first officer's control column aft.
5) Release the captain's and first officer's control columns go to the neutral position.

(b) Override Test of the Captain's Control Column:

1) Push the captain's and first officer's control columns forward.
2) Hold the first officer's control column forward (against the forward stop).
3) Pull the captain's control column aft.
4) Make sure that you can pull the captain's control column aft.
5) Release the captain's and first officer's control columns go to the neutral position.

SUBTASK 27-31-00-860-037

(3) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

——— END OF TASK ———

TASK 27-31-00-720-801

5. Elevator Control Column Override - Functional Test

(Figure 501)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this task to do a functional check of the elevator control column override.

B. References

Reference	Title

318	Tail Cone Compartment - Right

E. Elevator Control Column Override - Functional Test

SUBTASK 27-31-00-860-038

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-31-00-710-005

(2) Do the functional test of the elevator control column override:

(a) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

1) Put a 6 in. (152 mm) strip of adhesive tape vertically on the right elevator index plate (View A,Figure 501, Sheet 2).

2) Make a mark on the tape where the upper surface of the right elevator trailing edge would extend to the tape.

3) Attach the spring scale, STD-755, and adapter, SPL-1674, to the captain's control column.

NOTE: The force gage is a push pull scale for measuring control column loads.

4) Block the first officer's control wheel in the neutral position.

NOTE: One mechanic can hold the first officer's control wheel steady in the neutral position.

5) Slowly pull the captain's control column aft and hold at a minimum right elevator position of 1.95 ±0.05 in. (50 ±2 mm) (Figure 501, Sheet 1).

6) Make sure that the captain's control column force is 40 lbf (178 N) - 100 lbf (445 N).

7) Release the captain's control column slowly to center the system.

(b) Push the captains's control column slowly forward and hold at a minimum right elevator position of 1.95 ±0.05 in. (50 ±2 mm)(Figure 501, Sheet 1).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Make sure that the captain's control column force is 32 lbf (142 N) - 102 lbf (454 N).

(d) Remove the spring scale, STD-755, and adapter, SPL-1674, from the captain's control column.

F. Put the Airplane Back to its Usual Condition

SUBTASK 27-31-00-860-039

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

——— END OF TASK ———

TASK 27-31-00-820-801

6. Elevator Control Cables EA and EB and Pitch Force Transducers - Adjustment

(Figure 502, Figure 503, Figure 504)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this task to adjust the elevator control cables and pitch force transducers.

(2) Before you do cable adjustment, permit a minimum of one hour at a constant ambient temperature of ± 5 degrees F (± 2.8 degrees C) for the airframe temperature to become stable.

(a) It is recommended to do the cable adjustments in a controlled environment such as a hangar.

NOTE: Direct sunlight on the airframe will cause the cable readings to be inaccurate.

(b) All temperature readings will be taken as ambient outside but adjacent to the applicable area of the airframe.

(c) The cable tension values will not be correct when there are temperature differences along the cable run.

(d) It is recommended that airplanes supplied with the cables that contain higher zinc coating (Grade D or Grade K) be re-tensioned 3 to 4 months into service. This will bring the tension of the control cables within the desired range. After the cables are re-tensioned, the high zinc cables (Grade D or Grade K) will continue to relax at a rate that is equivalent to the Grade B cables. To identify the grade of the cable, refer to: Control Cable Grades and Diameters/Table 27-11-00-993-802.

(e) It is recommended that cable assemblies on each side of a cable loop be replaced at the same time using the same cable grade material in order to minimize asymmetric relaxation.

F. Prepare for the Adjustment

SUBTASK 27-31-00-860-041

(1) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-00-860-040

(2) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-00-010-006

(3) Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-31-00-010-007

(4) Open these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-860-042

CAUTION: MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(5) Use the bar, SPL-1677, to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)) (Figure 503).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

SUBTASK 27-31-00-480-003

(6) Use a low tension cable tensiometer, COM-1553, or high tension cable tensiometer, COM-1554, to measure the cable tension (TASK 27-09-14-860-802).

NOTE: This step measures the cable tension to make sure that the cable adjustment is necessary.

G. Elevator Control Cables EA and EB and Pitch Force Transducers Adjustment

SUBTASK 27-31-00-020-001

(1) Remove the nuts [3], washers [2], and bolts [1] from the adjustable end of the two pitch force transducers (Figure 502).

NOTE: The bolts [1] will be installed when you complete the adjustment of the pitch force transducers.

SUBTASK 27-31-00-710-006

(2) Adjust the elevator control cables EA and EB and the pitch force transducers:

(a) Install the rig pin E-5 from the rigging pin kit, SPL-1585, in the elevator aft quadrant (Figure 504).

1) Make sure that you can move the rig pin freely.

2) If it is necessary, move the elevator by hand until you can install the rig pin E-5.

(b) Install the rig pin E-1 from the rigging pin kit, SPL-1585, in the elevator left forward quadrant (Figure 502).

1) Make sure that you can move the rig pin E-1 freely.

(c) Remove the nuts [6], washers [5], and bolts [4] from the two elevator forward quadrants.

NOTE: The bolts [4] will be installed when you complete the adjustment of the pitch force transducers.

(d) Install the rig pins E-2 and E-3 from the rigging pin kit, SPL-1585, through the installation holes of the bolts [4] (Figure 502).

1) Make sure that you can move the rig pins E-2 and E-3 freely.

(e) Use a low tension cable tensiometer, COM-1553, or high tension cable tensiometer, COM-1554, to measure the cable tension (TASK 27-09-14-860-802).

(f) If you install new elevator control cables EA and EB, then do these steps to stretch the cables:

1) Adjust the turnbuckles on the EAL, EAR, EBL, and EBR cables to 300 ±20 lbf (1334 ±89 N) or 300 ±20 lb (136 ±9 kg).

2) Adjust the seals in the pressure bulkhead, if it is necessary, to keep the cables straight.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Remove the rig pin E-1 from the elevator left forward quadrant.
4) Remove the rig pin E-5 from the elevator aft quadrant.
5) Move the control column 25 times through full travel.
6) Install the rig pin E-5 to the elevator aft quadrant.
   a) Make sure that you can move the rig pin E-5 freely.
   b) If it is necessary, move the elevator by hand until the rig pin holes align.
7) Install the rig pin E-1 to the elevator left forward quadrant.
   a) Make sure that you can move the rig pin E-1 freely.
8) Make sure that the rig pins E-2 and E-3 move freely through the installation holes of the bolts [4].

(g) Adjust the control cables EA and EB to their correct cable rigging tension:
1) Adjust the turnbuckles to get the cable tension (TASK 27-09-14-860-802):

NOTE: Adjust the tensions close to the maximum values in the table. The cables will stretch over a period of time.

(h) Adjust the pitch force transducers (TASK 22-11-92-820-801).
(i) Make sure that the tension of control cables EA and EB are at the correct tension (TASK 27-09-14-860-802).
(j) Make sure that you can move the rig pins E-1, E-2, E-3, and E-5 freely.
(k) Remove the rig pins E-2 and E-3.
(l) Install the bolts [1], washers [2], and nuts [3].
(m) Install the bolts [4], washers [5], and nuts [6].
1) Torque the nuts [6] to 200 ±40 in-lb (23 ±5 N·m).
(n) Install the locking clips on the turnbuckles.
(o) Remove the rig pins E-1 and E-5.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-940-001

(1) Close these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-00-940-002

(2) Close this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-31-00-860-043

(3) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

END OF TASK

E. Prepare For the Operational Test

SUBTASK 27-31-00-860-142

WARNING

KEEP PERSONS AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES. THE AILERONS, ELEVATORS, RUDDER, FLAPS, SLATS, SPOILERS, STABILIZER, AND NOSE GEAR CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task to supply hydraulic power to Hydraulic Systems A and B: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

F. Pitch Force Transducer Test - DFCS BITE

SUBTASK 27-31-00-980-004

(1) Do these steps to put the control wheel to the center:

NOTE: The power control units must be serviceable for the correct adjustment of the cables in relation to the roll force transducer.

(a) Turn the control wheel in the clockwise direction 30 degrees.

(b) Turn the control wheel in the counterclockwise direction 30 degrees.

(c) Slowly turn the control wheel to the center.

SUBTASK 27-31-00-860-139

(2) Attach the DO NOT OPERATE tags, STD-858, to the control columns.

SUBTASK 27-31-00-860-140

(3) Set the aileron trim to 0.0 unit.

SUBTASK 27-31-00-860-141

(4) Set the STAB TRIM PRI switch, S272, on the aft area of the control stand to the CUTOUT position.

SUBTASK 27-31-00-860-143

(5) Make sure that the VHF NAV and IRS switches, on the forward overhead panel, P5, are in the NORMAL positions.

SUBTASK 27-31-00-860-144

(6) Set the left and right IRS select switches, on the aft overhead panel, P5, to the ALIGN or NAV position.

SUBTASK 27-31-00-740-010

(7) Make these selections to get access to the PITCH CWS test:

(a) Push the INIT REF key on the CDU keyboard.

(b) <INDEX

(c) MAINT>

(d) <DFCS

(e) <EXTENDED MAINTENANCE

(f) <RIGGING

(g) <CWS

(h) Do the preparation steps as shown on the CDU display.

(i) <PITCH CWS

(j) <CONTINUE

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Pitch Force Transducer - Manual Test

SUBTASK 27-31-00-480-014

(1) Connect the force gauge, COM-1557, to the center hub of the captains control column.

SUBTASK 27-31-00-730-015

(2) Do the steps shown on the CDU to complete the test:

(a) Make sure that the values for the A side and B side are between the limits that show on the CDU display.

SUBTASK 27-31-00-080-011

(3) Remove the force gauge, COM-1557, from the control wheels.

H. Pitch Force Transducer Interface Test - DFCS BITE

SUBTASK 27-31-00-740-011

(1) Make these selections on the CDU to do a transducer interface test:

(a) Push the INIT REF key on the CDU keyboard.

(b) <INDEX

(c) MAINT>

(d) <DFCS

(e) <LRU REPLACEMENT TESTS

(f) <CHANNEL A AND B

(g) Push the NEXT PAGE key on the CDU keyboard.

(h) <PITCH SENS

(i) Do the preparation steps as shown on the CDU.

(j) <CONTINUE

(k) Make sure that the test is completed with no failure.

(l) Push the INIT REF key on the CDU keyboard to get out of the BITE.

I. Existing Faults Check

SUBTASK 27-31-00-480-015

(1) Do these steps if you use the universal maintenance device, SPL-11321 (ML), to get access to the Existing Faults function:

(a) Connect the maintenance laptop (TASK 46-13-00-480-801).

(b) Use the universal maintenance device, SPL-11321, to get access to the Onboard Network System (ONS) maintenance browser.

SUBTASK 27-31-00-860-145

(2) Or, do these steps if you use the MAX Display System (MDS) Multi Function Display (MFD) to get access to the Existing Faults function:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) If the MAINT or ONBD MAINT button does not show on the MFD, push the SYS key on the Multi-Function Panel (P9–82)

NOTE: To navigate/tab through the selectable elements on the Multi-Function Display (MFD), turn the Rotary Selector knob on the P9-82 panel or the MAINT SELECTOR knob on the P61-4 panel in the clockwise or counterclockwise direction until the desired element is highlighted.

NOTE: To make a selection on the MFD, push the center selection button SEL of the Rotary Selector knob on the P9-82 panel or the MAINT SELECTOR knob on the P61-4 panel.

(b) When the MAINT button shows, select it.

(c) Select the ONBD MAINT button from the Maintenance Menu bar.

SUBTASK 27-31-00-700-005

(3) From the ONS maintenance browser main menu, go to the 27 Flight Controls display in the EXTENDED MAINT>EXISTING FAULTS (TASK 31-65-00-970-801).

(a) Make sure that these Flight Control Computer (FCC) or Spoiler Control Electronics (SCE) maintenance messages do not show:

1) 27-02320

2) 27-02330

3) 27-02060

4) 27-02070

J. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-710-014

(1) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-31-00-860-155

(2) Set the STAB TRIM PRI switch, S272, on the aft area of the control stand to the NORMAL position.

——— END OF TASK ———

TASK 27-31-00-820-802

8. Elevator Control Pushrods - Adjustment

(Figure 503, Figure 505, Figure 506, Figure 519)

A. General

(1) Use this test to adjust the elevator control pushrods that connect the output torque tube to the elevators.

(2) The elevator power-off flight test is required after adjustment of an elevator control pushrod.

B. References

Reference	Title

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-860-046

CAUTION: MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677, to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)) (Figure 503).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677, and not the stabilizer indicator in the flight deck.

H. Elevator Control Pushrods Adjustment

SUBTASK 27-31-00-860-047

(1) Push down on the trailing edge of the right elevator [30], to bottom out the elevator PCU [31] in the extended position.

SUBTASK 27-31-00-710-007

(2) Make sure that the right elevator [30] is in the full down position with the inboard end of the elevator trailing edge 10.43 +0.09 / -0.32 in. (264.92 +2.29 / -8.13 mm) below the index mark (Figure 519).

(a) Remove the nut [27], nut [26], washer [25], bushing [24], and bolt [23] to disconnect the right elevator control pushrod [28] from the elevator buss crank [22].

SIA 015

1) If installed, remove the washer, BACW10EG24CK, under the head of the bolt [23].

SIA ALL

(b) Loosen the checknut [29] on the right elevator control pushrod [28].

(c) Adjust the elevator control pushrod [28] until the elevator [30] is in the full down position with the inboard end of the elevator trailing edge at 10.43 +0.09 / -0.32 in. (264.92 +2.29 / -8.13 mm) below the index mark (Figure 506).

NOTE: One half turn of the elevator control pushrod is equal to 0.20 in. (5.1 mm) at the elevator trailing edge.

(d) Lubricate the bolt [23] and bushing [24] with grease, D00633.

1) Wipe off the excess of grease, D00633.

(e) Install the bolt [23], bushing [24], washer [25], and nut [26] (Figure 505).

SIA 015

1) If removed, install the washer, BACW10EG24CK, under the head of the bolt [23].

SIA ALL

2) Tighten the nut [26] by hand.

SUBTASK 27-31-00-980-002

(3) Push down on the trailing edge of the left elevator [30], to bottom out of the elevator PCU [31] in the extended position.

SUBTASK 27-31-00-820-001

(4) Make sure that the left elevator [30] is in the full down position with the inboard end of the elevator trailing edge 10.43 +0.09 / -0.32 in. (264.92 +2.29 / -8.13 mm) from the elevator neutral index mark (Figure 519).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the nut [27], nut [26], washer [25], bushing [24], and bolt [23] to disconnect the left elevator control pushrod [28] from the elevator buss crank [22].

SIA 015

1) If installed, remove the washer, BACW10EG24CK, under the head of the bolt [23].

SIA ALL

(b) Loosen the checknut [29] on the left elevator control pushrod [28].

(c) Adjust the elevator control pushrod [28] until the elevator [30] is in the full down position with the inboard end of the elevator trailing edge at 10.43 +0.09 / -0.32 in. (264.92 +2.29 / -8.13 mm) from the elevator neutral index mark (Figure 506).

NOTE: One half turn of the elevator control pushrod is equal to 0.20 in. (5.1 mm) at the elevator trailing edge.

(d) Lubricate the bolt [23] and bushing [24] with grease, D00633.

1) Wipe off the excess of grease, D00633.

(e) Install the bolt [23], bushing [24], washer [25], and nut [26] (Figure 505).

SIA 015

1) If removed, install the washer, BACW10EG24CK, under the head of the bolt [23].

SIA ALL

2) Tighten the nut [26] by hand.

SUBTASK 27-31-00-970-001

(5) Make sure that the final dimension in the full down position of the left elevator [30] is 0.00 ±0.12 in. (0.0 ±3.0 mm) of the final dimension in the full down position of the right elevator [30].

(a) If it is necessary, re-adjust the right elevator [30] to 10.43 +0.09 / -0.32 in. (264.92 +2.29 / -8.13 mm) from the index plate (Figure 519).

SUBTASK 27-31-00-420-004

(6) Tighten the checknuts [29] on the left and right elevator control pushrods [28] to 750 in-lb (85 N·m) - 900 in-lb (102 N·m).

(a) Install MS20995NC32 lockwire, G01912, on the checknuts [29].

SUBTASK 27-31-00-420-005

(7) Tighten the nuts [26] to 600 in-lb (67.8 N·m) - 700 in-lb (79.1 N·m).

SUBTASK 27-31-00-420-006

CAUTION

DO NOT TRY TO TIGHTEN THE NUT [26] AGAIN AFTER YOU TIGHTEN THE NUT [27]. IF YOU DO NOT OBEY, DAMAGE TO THE EQUIPMENT CAN OCCUR.

(8) Install the nuts [27].

(a) Tighten the nuts [27] to 170 in-lb (19.2 N·m) - 240 in-lb (27.1 N·m).

NOTE: Bolts protrusion through the nuts can be 0.01 in. (0.25 mm) minimum.

SUBTASK 27-31-00-860-048

(9) Release the elevator PCUs [31] from their extended position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-940-003

(1) Close these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-00-750-001

(2) Do this task: Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

TASK 27-31-00-820-803

9. Input Rods of the Elevator Power Control Unit - Adjustment

(Figure 503, Figure 504, Figure 506, Figure 507)

A. General

(1) Use this test to adjust the two input rods (primary and secondary) of the right and left elevator power control units (PCUs).

NOTE: For this procedure, the primary input rod is on the left side of the PCUs and the secondary input rod is on the right side of the PCUs when looking forward. This applies to both left and right elevator PCUs.

311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

F. Prepare for the Adjustment

SUBTASK 27-31-00-860-050

(1) Make sure the adjustment of elevator control pushrods is satisfactory. To adjust them, do this task: Elevator Control Pushrods - Adjustment, TASK 27-31-00-820-802.

SUBTASK 27-31-00-860-051

(2) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-010-011

(3) Open these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-00-860-052

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677 to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)). (Figure 503)

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

SUBTASK 27-31-00-860-053

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Pressurize the elevator hydraulic systems A and B. To pressurize them, do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-31-00-480-004

(6) Install the rig pin E-5 from the rigging pin kit, SPL-1585 to the elevator aft quadrant (Figure 507).

NOTE: Make sure the rig pin E-5 fits freely in the rig pin hole.

G. Input Rods for the Elevator PCU Adjustment

SUBTASK 27-31-00-820-002

(1) Adjust the input rods for the elevator PCU (Figure 507):

NOTE: This procedure adjusts both the right and left elevator PCU input rods.

(a) If adjusting the right elevator PCU, do the following:

1) Set the FLT CONTROL A switch to the off position and FLT CONTROL B switch to the on position.

(b) If adjusting the left elevator PCU, do the following:

1) Set the FLT CONTROL B switch to the off position and FLT CONTROL A switch to the on position.

(c) Measure the distance from the upper trailing edge surface of the right elevator to the neutral index mark of the index plate (Figure 506).

(d) If the distance is greater than 0.06 in. (1.5 mm), do the following adjustment:

1) Remove the nut [55], washer [54], washer [53], and bolt [52] to disconnect the secondary input rod [58] from the upper attach point (Figure 507).

2) Loosen the checknut [57] on the primary input rod [59].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Rotate the primary input rod [59] tube until the distance from the trailing edge of the elevator to the index plate is no more than 0.06 in. (1.5 mm) (Figure 506).

4) Tighten the checknut [57] to 195 in-lb (22 N·m) - 235 in-lb (27 N·m). (Figure 507)

   a) Check the elevator trailing edge to index plate dimension after torquing the checknut [57].

      NOTE: The dimension can change after the checknut has been tightened.

5) Loosen the checknut [57] on the secondary input rod [58].

6) Rotate the secondary input rod [58] tube until the upper attach bolt [52] can be freely installed through the clevis and the PCU crank arm.

7) Install the bolt [52], washer [53], washer [54], and nut [55].

8) Tighten the nut [55].

9) Tighten the checknut [57] to 195 in-lb (22 N·m) - 235 in-lb (27 N·m).

   a) After torquing the checknut [57], check the elevator trailing edge to index plate dimension with FLT CONTROL A and FLT CONTROL B switch on.

      NOTE: The dimension can change after the checknut has been tightened.

10) Install lockwire on the checknuts [57] of the input rods.

    NOTE: Install lockwire from the checknut [57] to the input rod tube, and then to the small hole in the upper clevis.

11) If the right elevator PCU input rods have been adjusted, set the FLT CONTROL B switch to the off position.

12) If the left elevator PCU input rods have been adjusted, set the FLT CONTROL A switch to the off position.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-080-004

(1) Remove the rig pin E-5 from the elevator aft quadrant.

SUBTASK 27-31-00-940-004

(2) Close these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-00-860-054

(3) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

G. Prepare for the Adjustment

SUBTASK 27-31-00-860-056

(1) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-00-860-055

(2) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-00-010-013

(3) Open these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-00-860-057

CAUTION MAKE SURE TO PREVENT DAMAGE TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CHAF OR CAN CAUSE DAMAGE TO THE WIRES OR BUNDLE INSULATION.

(4) Use the bar, SPL-1677, to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)), (View B, Figure 503).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677, and not the stabilizer indicator in the flight deck.

SUBTASK 27-31-00-480-005

(5) Install the rig pin E-5 from the rigging pin kit, SPL-1585, to the elevator aft quadrant (Figure 508).

H. Input Rods of the Elevator Neutral Shift Mechanism and Output Rod of the Elevator Feel and Centering Unit Adjustment

SUBTASK 27-31-00-220-001

(1) Measure the distance "Z" between the centerline of the left neutral shift crank bolt [82] and the aft side of the vertical bulkhead (View D, Figure 508).

(a) Make sure that the distance is 1.057 ±0.030 in. (26.85 ±0.76 mm).

(b) If the distance is not 1.057 ±0.030 in. (26.85 ±0.76 mm), adjust the neutral shift input rods [84] of the elevator elevator neutral shift mechanism bellcrank [87]:

1) Remove the nut [79], washer [78], washer [77], and bolt [76] to disconnect the output rod of the elevator feel and centering unit [71] from the input crank [75].

2) Loosen the checknuts on the neutral shift input rods [84].

3) Remove the nuts [85], washers [86], washers [83], washers [81], and bolts [82] to disconnect the neutral shift input rods [84] from the elevator neutral shift mechanism bellcrank [87].

4) Adjust the neutral shift input rods [84] until you get a "Z" dimension of 1.057 ±0.030 in. (26.85 ±0.76 mm) at the left neutral shift input rod [84].

5) Install the bolts [82], washers [81], washers [83], washers [86], and nuts [85] to connect the stabilizer position sensor input rods [80] and neutral shift input rods [84] to the elevator neutral shift mechanism bellcrank [87].

a) Install the MS20995NC32 lockwire, G01912.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-820-004

(2) Adjust the output rod of the elevator feel and centering unit [71] (View B, Figure 508):

(a) If it is not disconnected, remove the nut [79], washer [78], washer [77], and bolt [76] to disconnect the output rod [74] of the elevator feel and centering unit [71] from the input crank [75].

(b) Measure the distance between the bolt hole in the output rod [74] and the bolt hole in the input crank [75]:

(c) If the distance is greater than 0.06 in. (1.52 mm), then do these steps:

1) Turn the clevis [131] in the sleeve [73] half turn and/or sleeve [73] in the output rod [74] end half turn.

NOTE: Use a combination of clevis/sleeve rotations in order to keep the number of threads exposed approximately equal in both parts.

2) Make sure that the distance of the two bolt holes is less than 0.06 in. (1.52 mm).

3) Keep the number of threads that you can see in the two parts approximately the same.

(d) If the distance is less than 0.06 in. (1.52 mm), then do these steps:

1) Turn the sleeve [73] until you can install the bolt [76] easily.

a) Turn the output rod [74] end and sleeve [73] in the same direction.

2) Keep the number of threads that you can see in the two parts are approximately same.

CAUTION

DO NOT TRY TO TIGHTEN THE BOLT AGAIN AFTER YOU TIGHTEN THE NUT. YOU CAN CAUSE DAMAGE TO EQUIPMENT.

3) Install the bolt [76], washer [77], washer [78], and nut [79] to connect the output rod [74] to the input crank [75].

a) Tighten the bolt [76] to 75 in-lb (8 N·m) - 85 in-lb (10 N·m).

b) Tighten the nut [79] to 15 in-lb (2 N·m) - 20 in-lb (2 N·m).

SUBTASK 27-31-00-820-005

(3) If it is necessary, do this task: Elevator Neutral Shift Sensor Adjustment and Test, TASK 22-11-14-820-801.

SUBTASK 27-31-00-820-006

(4) If it is necessary, do this task: Stabilizer Position Sensor Adjustment and Test, TASK 22-11-31-820-801.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-080-005

(1) Remove the rig pin E-5 from the elevator aft quadrant.

SUBTASK 27-31-00-940-005

(2) Close these access panels:

Number	Name/Location

TASK 27-31-00-820-805

11. Elevator Tab Pushrods - Adjustment

(Figure 503, Figure 506, Figure 509, Figure 510)

NOTE: A flight test is required if either or both of the elevator tab pushrods are adjusted Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

A. General

(1) Use this test to adjust the elevator tab pushrods. This task is applicable for the left and right elevator tab pushrods.

NOTE: Adjustment of the elevator tab pushrods to a dimension recorded subsequent to the last successful flight test will reduce the probability that a second flight test will be required.

344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-00-860-061

CAUTION

MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(8) Use the bar, SPL-1677, to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)) (Figure 503).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677, and not the stabilizer indicator in the flight deck.

H. Elevator Tab Pushrods Adjustment

SUBTASK 27-31-00-820-007

(1) Make sure to perform the adjustment of the pushrods on one elevator at a time, starting with the right elevator.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-020-002

(2) Loosen the four checknut [103] and checknut [105] from the tab pushrods [110].

SUBTASK 27-31-00-860-062

(3) Push the elevator trailing edge full up by hand.

SUBTASK 27-31-00-860-063

(4) While you move the elevator trailing edge down, align the center of the elevator trailing edge with the index mark in ±0.04 in. (1.0 mm), or less (Figure 506).

(a) Keep the elevators at this position while you measure and adjust the tab pushrods.

(b) If the elevator position is changed, you must put the elevator trailing edge at the full up position and do this step again before you continue.

SUBTASK 27-31-00-480-006

(5) Install the elevator tab rigging bar, SPL-10345 (Figure 510).

(a) Install the elevator tab rigging bar, SPL-10345, below the elevator and elevator tab at the third elevator tab hinge (from inboard).

1) Make sure that the stand offs for the elevator tab rigging bar, SPL-10345, rest on the skin fastener heads to prevent skin variation.

(b) Make sure that the cross bar on the elevator tab rigging bar, SPL-10345, touches the lower surface of the elevator trailing edge.

(c) Push the elevator tab rigging bar, SPL-10345, FWD until elevator stop indexes on the AFT edge of elevator near elevator rear spar.

(d) Slide step gage FWD under elevator tab to obtain reading.

SUBTASK 27-31-00-820-008

(6) Adjust the tab pushrods [110] until the gap measured from the elevator tab faired position to the elevator tab rigged up position with the elevator tab rigging bar, SPL-10345, (dimension X) is the same dimension that you measured and recorded prior to the last successful flight test and before any pushrod adjustment.

NOTE: Adjustment of the elevator tab pushrods to a dimension recorded subsequent to the last successful flight test will reduce the probability that a second flight test will be required.

NOTE: You may need to do a coarse adjustment of the elevator tab pushrods if the gap between the elevator tab trailing edge and the fixture is too much.

You must always do a fine adjustment of the elevator tab pushrods if dimension X is not in the tolerance.

NOTE: While adjusting the elevator tab pushrods, the number of threads showing on the elevator tab pushrod ends should be approximately equal to the number of threads showing on the bushing [104].

(a) After tab pushrod adjustment, make sure the distance between the left elevator tab and the elevator tab rigging bar, SPL-10345, is within 0.20 in. (5.08 mm) - 0.50 in. (12.70 mm) (Figure 510).

(b) After tab pushrod adjustment, make sure the distance between the right elevator tab and the elevator tab rigging bar, SPL-10345, is within 0.20 in. (5.08 mm) - 0.50 in. (12.70 mm) (Figure 510).

(c) If the distance between the left elevator tab and the elevator tab rigging bar, SPL-10345, is not within 0.20 in. (5.08 mm) - 0.50 in. (12.70 mm), then adjust to 0.36 ±0.01 in. (9.14 ±0.26 mm) (Figure 510).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) If the distance between the right elevator tab and the elevator tab rigging bar, SPL-10345, is not within 0.20 in. (5.08 mm) - 0.50 in. (12.70 mm), then adjust to 0.36 ±0.01 in. (9.14 ±0.26 mm) (Figure 510).

SUBTASK 27-31-00-820-009

(7) If the prior tab location was not measured or recorded, then adjust to 0.36 ±0.01 in. (9.14 ±0.26 mm) (Figure 510).

(a) After adjustment, make sure the distance between the left elevator tab and the elevator tab rigging bar, SPL-10345, is within 0.20 in. (5.08 mm) - 0.50 in. (12.70 mm) (Figure 510).

(b) After adjustment, make sure the distance between the right elevator tab and the elevator tab rigging bar, SPL-10345, is within 0.20 in. (5.08 mm) - 0.50 in. (12.70 mm) (Figure 510).

SUBTASK 27-31-00-820-010

(8) If it is necessary, do this coarse adjustment of the elevator tab pushrods by turning the tab rod ends (Figure 509):

(a) Remove the pins [111], nuts [109], washers [108], bolts [106], and bushings [107] from the tab pushrods [110].

(b) Turn the tab pushrod ends until the distance between the elevator tab trailing edge and the elevator tab rigging bar, SPL-10345, (dimension X) is the same dimension that you measured and recorded subsequent to the last successful flight test and before any pushrod adjustment. If the prior tab location was not measured or recorded, then adjust to 0.36 ±0.01 in. (9.14 ±0.26 mm).

NOTE: One half turn of the tab pushrod end is equal to 0.10 in. (2.54 mm) at the elevator tab trailing edge.

(c) Apply compound, D50004, on the threads of the nuts [109].

(d) Install the bushings [107], bolts [106], washers [108], and nuts [109] to connect the tab pushrods [110] to the elevator tab [102].

NOTE: The inboard bolt is installed with the head inboard and the outboard bolt is installed with the head outboard

1) If you loosened or removed the nuts [109], they need to be replaced and not re-installed.

a) Using new nuts with compound, D50004, will ensure that they have the required run-on torque of 3.5 in-lb (0.4 N·m).

SUBTASK 27-31-00-820-011

(9) Do this fine adjustment of the elevator tab pushrods (Figure 509):

(a) Turn the bushing [104] to adjust the length of the tab pushrods [110].

NOTE: One half turn of the bushing [104] is equal to 0.01 in. (0.3 mm) at the elevator tab trailing edge.

(b) Loosen the nuts [109] that attach the tab pushrods [110] to the elevator tabs [102].

(c) Remove the pins [111] from in front of the head of the bolts [106].

(d) Move the rectangle bolt heads out of the anti-rotation bolt bosses and make sure that you can easily turn the bolts [106] by hand.

1) If it is necessary, adjust the bushing [104] on the tab pushrods [110].

NOTE: One half turn of the bushing/rod end assembly is equal to 0.11 in. (2.79 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Apply compound, D50004, on the threads of the nuts [109].

CAUTION

TIGHTEN THE NUTS [109] CORRECTLY. IF YOU TIGHTEN THEM INCORRECTLY THEN THE PUSHRODS CAN BECOME DISCONNECTED. THIS CAN CAUSE DAMAGE TO THE ELEVATOR, AND STABILIZER.

(f) Tighten the nuts [109] to 70 in-lb (8 N·m) - 80 in-lb (9 N·m) and install pins [111].

1) If you loosened or removed the old nuts [109], they need to be replaced with compound, D50004, and not re-installed.

a) Using new nuts [109] with compound, D50004, will ensure that they have the required run-on torque of 3.5 in-lb (0.4 N·m).

(g) Tighten the checknuts [103] and checknuts [105] on the tab pushrods [110] to 150 in-lb (17 N·m) - 200 in-lb (23 N·m).

(h) Install lockwire on the checknut [103] and between the bushing [104] and checknut [105].

SUBTASK 27-31-00-220-002

(10) Make sure that the gap measured from the elevator tab faired position to the elevator tab rigged up position with the elevator tab rigging bar, SPL-10345, (dimension X) is the same dimension that you measured and recorded subsequent to the last successful flight test and before any pushrod adjustment.

(a) If the prior tab location was not measured or recorded, then adjust to 0.36 ±0.01 in. (9.14 ±0.26 mm).

SUBTASK 27-31-00-220-003

(11) Do a check of the thread engagement of the tab pushrod [110] ends and bushings [104]:

(a) Make sure that the end of the bushing [104] covers the inspection hole on each tab pushrod [110].

(b) Make sure that the inspection hole of each tab pushrod end bearing is not shown.

(c) If the thread engagement is not correct, you must do the coarse adjustment again.

SUBTASK 27-31-00-200-006

(12) Verify that the forward and aft tab rod end bearings are aligned in the correct alignment (Figure 509):

(a) Rotate each tab rod counterclockwise (when facing forward) until contact is made between the tab rod end and surrounding structure.

1) This initial contact point is the start of the measurement of the rod end bearing alignment.

(b) Rotate each tab rod clockwise (when facing forward) until contact is made between the tab rod end and surrounding structure.

1) Measure the distance travelled between the contact points as the tab rod was rotated clockwise from contact point to contact point.

(c) There should be a minimum of 0.040 in. (1.016 mm) travel from contact point to contact point.

1) If there is less than 0.040 in. (1.016 mm) of travel from contact point to contact point, adjust the tab rod end until a minimum travel of 0.040 in. (1.016 mm) is achieved.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) If it was necessary to adjust the tab rods, make sure you torque the check nuts to the proper torque and do a check of the rod end rotation from contact point to contact point.

SUBTASK 27-31-00-420-007

(13) Install lockwire on the checknut [103] and checknut [105] (Figure 509).

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-149

(1) Do this task: APU System - Activation, TASK 49-11-00-440-801.

SUBTASK 27-31-00-860-150

(2) Do this task: Tailcone Anti-Collision Light Activation, TASK 33-44-04-440-801.

SUBTASK 27-31-00-410-011

NOTE: Depending on which systems have been disturbed, you may not have to do a power-off flight test. To see if you need to do a power-off flight test, check the requirements in the ''General'' section at the beginning of the power-off flight test task Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

(3) Install these access panels:

Number	Name/Location
334PT	Horizontal Stabilizer, Tab Control Rod Fairing
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-00-390-003

(4) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

SUBTASK 27-31-00-940-006

(5) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-064

(6) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-00-860-068

CAUTION: MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677 to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)). (Figure 503)

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

G. Input Rod of the Elevator Feel Computer Adjustment

SUBTASK 27-31-00-410-012

(1) Make sure you can install the rig pin E-4 from the rigging pin kit, SPL-1585 in the rig pin holes in the input arm [122] and elevator feel computer [127].

SUBTASK 27-31-00-820-012

(2) If you can not install the rig pin E-4 easily, adjust the input rod [121] of the elevator feel computer [127] (Figure 512):

(a) Remove the nut [125], washer [124], washer [128], and bolt [123] to disconnect the input rod [121] from the input arm [122].

(b) Install the rig pin E-4 in the rig pin holes in the input arm [122] and elevator feel computer [127].

(c) Loosen the checknut [126].

(d) Adjust the input rod [121] until you can install the bolt [123] easily through the input arm [122] and input rod [121].

(e) Install the bolt [123], washer [128], washer [124] and nut [125].

1) Make sure that the recessed side of the washer [128] is oriented towards the head of the bolt [123].

2) Tighten the nut [125] to 63 in-lb (7.1 N·m) to 67 in-lb (7.6 N·m).

(f) Tighten the checknut [126].

1) Tighten the checknut [126] to 63 in-lb (7.1 N·m) to 67 in-lb (7.6 N·m).

(g) Remove the rig pin E-4.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-820-013

(1) Do this task: Stabilizer Position Sensor Test, TASK 22-11-31-710-801.

SUBTASK 27-31-00-410-013

(2) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-070

(3) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

311BL	Stabilizer Trim Access Door

F. Prepare for the Test

SUBTASK 27-31-00-860-072

(1) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-00-860-071

(2) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-00-010-019

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-073

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677 to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)). (Figure 503)

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

SUBTASK 27-31-00-860-146

(5) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-31-00-860-074

(6) Move the control columns in a longitudinal (forward to aft) direction through full travel 20 times.

G. Elevator Surface Friction and Balance Test

SUBTASK 27-31-00-730-002

CAUTION DO NOT PUT A LOAD OF MORE THAN 65 POUNDS (290 NEWTONS) ON THE ELEVATORS AT ONE TIME. IF THE LOAD IS TOO HEAVY, IT CAN CAUSE DAMAGE TO THE ELEVATORS.

(1) Do the elevator surface friction and balance test:

(a) Hold the captain's control column at the neutral position.

(b) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

(c) Move the elevator with your hand until the right elevator trailing edge aligns with the elevator neutral index mark (Figure 506).

1) Release the elevator trailing edge.

(d) If the right elevator trailing edge moves down from the index mark, then do the elevator balance adjustment (Elevator Balance Procedure/SRM PROCEDURE 51-60-04-0G-0).

(e) If the right elevator trailing edge moves up from the index mark, then do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

1) Turn on the A and B hydraulic systems to center the elevator, do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.
2) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.
3) Hold the captain's control column in the neutral position.
4) Use the block, STD-1278 and force gauge, COM-1557 to measure the minimum force required to move the elevator trailing edge down 0.75 ±0.15 in. (19.05 ±3.81 mm) (1.25 ±0.24 degrees) from the neutral index mark (this force is referred to as the "down force").
   a) Make a record of this down force.
5) Hold the captain' control column in the neutral position.
6) Use the block, STD-1278 and force gauge, COM-1557 to measure the minimum force required to hold the elevator trailing edge at the index mark (which is referred to as the "up force").
   a) Make a record of this up force.
7) Make sure the difference between the down force and up force is equal or less than 20 lbf (89 N).
8) If the difference between the down force and up force is greater than 20 lbf (89 N), then see IFIM and do the applicable procedure(s).

(f) If the right elevator trailing edge stays at the index mark, then do these steps:

1) Hold the captain's control column in the neutral position.

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

2) Turn on the A and B hydraulic systems to center the elevator, do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.
3) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.
4) Use the force gauge, COM-1557 to measure the force required to move the elevator trailing edge down 0.75 ±0.15 in. (19.05 ±3.81 mm) (1.25 ±0.24 degrees) from the index mark (which is referred to as the "down force").
   a) Make a record of this down force.
5) Use the force gauge, COM-1557 to measure the force required to move the elevator trailing edge up 0.75 ±0.15 in. (19.05 ±3.81 mm) (1.25 ±0.24 degrees) from the index mark (which is referred to as the "up force").
   a) Make a record of this up force.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

6) If the down force is less than the up force, then do a check of the elevator balance adjustment (Elevator Balance Procedure/SRM PROCEDURE 51-60-04-0G-0).

7) Calculate the sum of the down force and the up force.

8) Make sure the sum of the down force and the up force is equal or less than 32 lbf (142 N).

9) If the sum of the down force and the up force is greater than 32 lbf (142 N), then see IFIM and do the applicable procedure(s).

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-075

(1) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-00-410-014

(2) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

——— END OF TASK ———

TASK 27-31-00-700-804

14. Elevator Balance Panels - Test

(Figure 503)

A. General

(1) Use this test to make sure that the elevator balance panels are installed properly. This task is applicable for the left and right elevator balance panels.

B. References

Reference	Title
27-31-00-700-801	Null Procedure - Mach Trim Actuator (P/B 201)

311BL	Stabilizer Trim Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Prepare for the Test

SUBTASK 27-31-00-860-077

(1) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-00-860-076

(2) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-00-010-020

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-078

(4) Use the stab trim switches on the control wheel to set the stabilizer at approximately 4 units of trim.

SUBTASK 27-31-00-860-079

(5) Move the control columns in a longitudinal direction (forward and aft) through full travel one time.

F. Elevator Balance Panels Test

SUBTASK 27-31-00-200-007

(1) Make sure that the bulb seal gaps in the balance panel bay are 0.02 ±0.01 in. (0.51 ±0.26 mm) (TASK 27-31-41-400-801).

SUBTASK 27-31-00-200-008

(2) Move each elevator (left and right side) by hand through the full travel to make sure that the elevator moves smoothly and freely.

(a) Visually make sure that each of the bulb seals do not bind as the elevator moves through the full travel.

(b) Make sure that the forward hinge seal cloth is not tight at all elevator positions.

SUBTASK 27-31-00-410-015

(3) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-700-001

(4) Do this task: Manual Mode - Test, TASK 27-31-00-700-808.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-080

(1) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

——— END OF TASK ———

TASK 27-31-00-700-805

15. Elevator Travel Limit - Test

(Figure 503, Figure 519)

A. General

(1) Use this test to make sure that the elevator operates correctly through the full travel.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-860-083

CAUTION: MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677 to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (995 ±0 mm)) (Figure 503).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677, and not the stabilizer indicator in the flight deck.

G. Elevator Travel Limit Test

SUBTASK 27-31-00-730-003

CAUTION: DO NOT PUT A LOAD OF MORE THAN 65 POUNDS (290 NEWTONS) ON THE ELEVATORS AT ONE TIME. IF THE LOAD IS TOO HEAVY, IT CAN CAUSE DAMAGE TO THE ELEVATORS.

(1) Do the elevator travel limit test with hydraulics off.

(a) Check for binding at the left and right elevators:

1) Use your hand to move the right elevator through the full travel.

a) Make sure that there is no binding through the full travel.

2) Use your hand to move the left elevator through the full travel.

a) Make sure that there is no binding through the full travel.

(b) Move and hold the captain's control column aft until it touches the stops.

1) Make sure that the right elevator moves 11.82 in. (300 mm) - 13.83 in. (351 mm) up from the index mark (Figure 519).

(c) Move and hold the captain's control column forward until it touches the stops.

1) Make sure that the right elevator moves 9.15 in. (232 mm) - 10.44 in. (265 mm) down from the index mark.

(d) Move and hold the captain's control column aft until it touches the stops.

1) Make sure that the left elevator moves 11.82 in. (300 mm) - 13.83 in. (351 mm) up from the index mark (Figure 519).

(e) Move and hold the captain's control column forward until it touches the stops.

1) Make sure that the left elevator moves 9.15 in. (232 mm) - 10.44 in. (265 mm) down from the index mark (Figure 519).

(f) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-00-730-004

(2) Do the elevator travel limit test with hydraulics on.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

(b) Move and hold the captain's control column aft until it touches the stops.

1) Make sure that the right elevator moves up 12.94 in. (329 mm) - 14.06 in. (357 mm) from the index mark (Figure 519).

(c) Move and hold the captain's control column forward until it touches the stops.

1) Make sure that the right elevator moves down 9.69 in. (246 mm) - 10.56 in. (268 mm) from the index mark (Figure 519).

(d) Set the FLT CONTROL A switch on the forward overhead panel, P5, to the OFF position.

(e) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

(f) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

(g) Move and hold the captain's control column aft until it touches the stops.

1) Make sure that the right elevator moves up 12.94 in. (329 mm) - 14.06 in. (357 mm) from the index mark (Figure 519).

(h) Move and hold the captain's control column forward until it touches the stops.

1) Make sure that the right elevator moves down 9.69 in. (246 mm) - 10.56 in. (268 mm) from the index mark (Figure 519).

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-084

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-00-410-016

(2) Close this access panel:

G. Prepare for the Test

SUBTASK 27-31-00-860-167

(1) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-860-085

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize the elevator hydraulic systems A and B (TASK 27-31-00-800-801).

SUBTASK 27-31-00-010-022

(3) Open this access door:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-087

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677, to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)) (Figure 503).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677, and not the stabilizer indicator in the flight deck.

SUBTASK 27-31-00-860-088

(5) Operate the elevator in the full travel 6 times.

SUBTASK 27-31-00-860-089

(6) Make sure that the control column is in the neutral position.

H. Elevator Output Torque Tube Buss Linkage Test

SUBTASK 27-31-00-730-005

CAUTION DO NOT PUT A LOAD OF MORE THAN 65 POUNDS (290 NEWTONS) ON THE ELEVATORS AT ONE TIME. IF THE LOAD IS TOO HEAVY, IT CAN CAUSE DAMAGE TO THE ELEVATORS.

(1) Do a test of the elevator output torque tube:

(a) Set the FLT CONTROL A switch on the forward overhead panel, P5, to the OFF position.

(b) Make sure that the FLT CONTROL B switch on the forward overhead panel, P5, is in the ON position.

(c) Use a block, STD-1278, and force gauge, COM-1557, on the top side of the right elevator trailing edge, to apply a downward force of 17.5 ±2.5 lbf (77.84 ±11.12 N) to the right elevator trailing edge.

1) Slowly release the force.

2) Make a mark of the elevator position on the tailcone after you remove the force.

NOTE: You can use masking tape, G50314, to make the mark.

(d) Use a block, STD-1278, and force gauge, COM-1557, on the bottom side of the right elevator trailing edge, to apply an upward force of 10 ±1 lbf (44 ±5 N) to the right elevator trailing edge.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Hold the elevator in this position with the force you have applied.
2) Make a mark of the elevator position on the tailcone before you remove the force.

   NOTE: You can use masking tape, G50314, to make the mark.
3) Slowly remove the force.
   a) Make sure that the distance between the up and down position of the right elevator is 0.21 in. (5.33 mm) or less.
   b) Remove the mark on the tailcone.

(e) Set the FLT CONTROL A switch on the forward overhead panel, P5, to the ON position.

(f) Set the FLT CONTROL B switch on the forward overhead panel, P5, to the OFF position.

(g) Use a block, STD-1278, and force gauge, COM-1557, on the top side of the left elevator trailing edge, to apply a downward force of 17.5 ±2.5 lbf (77.84 ±11.12 N) to the left elevator trailing edge.
1) Slowly release the force.
2) Make a mark of the elevator position on the tailcone after you remove the force.

   NOTE: You can use masking tape, G50314, to make the mark.

(h) Use a block, STD-1278, and force gauge, COM-1557, on the bottom side of the left elevator trailing edge, to apply an upward force of 10 ±1 lbf (44 ±5 N) to the left elevator trailing edge.
1) Hold the elevator in this position with the force you have applied.
2) Make a mark of the elevator position on the tailcone before you remove the force.

   NOTE: You can use masking tape, G50314, to make the mark.
3) Slowly remove the force.
   a) Make sure that the distance between the up and down position of the left elevator is 0.21 in. (5.33 mm) or less.
   b) Remove the mark on the tailcone.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-090

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-00-410-017

(2) Close this access door:

Number	Name/Location
311BL	Stabilizer Trim Access Door

——— END OF TASK ———

TASK 27-31-00-700-807

17. Elevator Tab Linkage - Test

(Figure 503, Figure 506, Figure 510, Figure 519)

A. General

(1) Use this test to do a check of the elevator tab control system.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

B. References

Reference	Title

SUBTASK 27-31-00-010-023

(4) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-093

CAUTION

MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(5) Use the bar, SPL-1677 to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)). (Figure 503)

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

SUBTASK 27-31-00-860-094

(6) Make sure the control column is in the neutral position.

G. Elevator Tab Linkage Test

SUBTASK 27-31-00-730-006

CAUTION

DO NOT PUT A LOAD OF MORE THAN 65 POUNDS (290 NEWTONS) ON THE ELEVATORS AT ONE TIME. IF THE LOAD IS TOO HEAVY, IT CAN CAUSE DAMAGE TO THE ELEVATORS.

(1) Do the elevator tab linkage test:

(a) Cycle the control column forward and aft to center the system.

(b) Make sure that the flaps are fully retracted.

1) If necessary, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

(c) Move the left elevator tab up and down by hand to determine if the elevator tab is loose.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure the looseness is not greater than 0.03 in. (0.76 mm) total movement at the trailing edge of the left elevator tab.

(d) Move the right elevator tab up and down by hand to determine if the elevator tab is loose.

1) Make sure the looseness is not greater than 0.03 in. (0.76 mm) total movement at the trailing edge of the right elevator tab.

(e) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

(f) Move the right elevator by hand to align it with the index mark in ±0.06 in. (1.52 mm) (Figure 506).

(g) Install the elevator tab rigging bar, SPL-10345, below the elevator and elevator tab at the third elevator tab hinge of the right elevator (from inboard) (Figure 510).

1) Make sure that the stand offs for the elevator tab rigging bar, SPL-10345, rest on the skin fastener heads to prevent skin variation.

2) Make sure that the cross bar on the elevator tab rigging bar, SPL-10345, touches the lower surface of the elevator trailing edge.

3) Push the elevator tab rigging bar, SPL-10345, FWD until elevator stop indexes on the AFT edge of elevator near elevator rear spar.

(h) Make sure that the distance measured from the right elevator tab faired/neutral position to the rigged up position is in 0.20 in. (5.08 mm) - 0.42 in. (10.67 mm).

(i) Move the left elevator by hand to align it with the index mark in ±0.06 in. (1.52 mm).

(j) Install the elevator tab rigging bar, SPL-10345, below the elevator and elevator tab at the third elevator tab hinge of the left elevator (from inboard)(Figure 510).

1) Make sure that the stand offs for the elevator tab rigging bar, SPL-10345, rest on the skin fastener heads to prevent skin variation.

2) Make sure that the cross bar on the elevator tab rigging bar, SPL-10345, touches the lower surface of the elevator trailing edge.

3) Push the elevator tab rigging bar, SPL-10345, FWD until elevator stop indexes on the AFT edge of elevator near elevator rear spar.

(k) Make sure that the distance measured from the left elevator tab faired/neutral position to the rigged up position is in 0.20 in. (5.08 mm) - 0.42 in. (10.67 mm).

(l) Remove the elevator tab rigging bar, SPL-10345.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(m) Pressurize elevator hydraulic systems A and B. To pressurize them, do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

(n) Lightly move the control column forward and aft a small amount to make sure that the system is in the neutral position.

(o) Verify that the right elevator is aligned with the index mark in ±0.06 in. (1.52 mm).

(p) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the right elevator to the bottom edge of the elevator tab (this is referred to as the "neutral tab position").

1) Make a record of this neutral tab position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(q) Move and hold the control column full aft.

1) Use a scale to make sure the trailing edge of the right elevator is in 13.39 in. (340.11 mm) - 14.53 in. (369.06 mm) of the index mark (Figure 519).

2) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the right elevator to the bottom edge of the elevator tab (this is referred to as the "down tab position").

a) Make a record of this down tab position.

b) Release the control column.

(r) Move and hold the control column full forward.

1) Use a scale to make sure the trailing edge of the right elevator is in 9.98 in. (253.49 mm) - 10.88 in. (276.35 mm) of the index mark.

2) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the right elevator to the bottom edge of the elevator tab (this is referred to as the "up tab position").

a) Make a record of this up tab position.

b) Release the control column.

(s) Add the neutral tab position to the down tab position.

1) Make sure the sum is 1.06 in. (26.92 mm) - 1.40 in. (35.56 mm).

(t) Subtract the neutral tab position from up tab position.

1) Make sure the difference is between 0.80 in. (20.32 mm) and 1.08 in. (27.43 mm).

(u) Lightly move the control column forward and aft a small amount to make sure that the system is in the neutral position.

(v) Verify that the left elevator is aligned with the index mark in ±0.06 in. (1.52 mm).

(w) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the left elevator to the bottom edge of the elevator tab (this is referred to as the "neutral tab position").

1) Make a record of this neutral tab position.

(x) Move and hold the control column full aft.

1) Use a scale to make sure the trailing edge of the left elevator is in 13.39 in. (340.11 mm) - 14.53 in. (369.06 mm) of the index mark.

2) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the left elevator to the bottom edge of the elevator tab (this is referred to as the "down tab position").

a) Make a record of this down tab position.

b) Release the control column.

(y) Move and hold the control column full forward.

1) Use a scale to make sure the trailing edge of the left elevator is in 9.98 in. (253.49 mm) - 10.88 in. (276.35 mm) of the index mark.

2) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the left elevator to the bottom edge of the elevator tab (this is referred to as the "up tab position").

a) Make a record of this up tab position.

b) Release the control column.

(z) Add the neutral tab position to the down tab position.

1) Make sure the sum is 1.06 in. (26.92 mm) - 1.40 in. (35.56 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(aa) Subtract the neutral tab position from the up tab position.

1) Make sure the difference is 0.80 in. (20.32 mm) - 1.08 in. (27.43 mm).

(ab) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	8	C01464	FLIGHT CONTROL ELEV TAB VLV RIGHT

(ac) Move the flap control lever to the 5-unit position.

(ad) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	8	C01464	FLIGHT CONTROL ELEV TAB VLV RIGHT

1) Make sure that the right tab begins to move in 10 ±2 seconds.

(ae) Lightly move the control column forward and aft a small amount to make sure that the system is in the neutral position.

(af) Verify that the right elevator is aligned with the index mark in ±0.06 in. (1.52 mm).

1) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the right elevator to the bottom edge of the elevator tab (this is referred to as the "neutral tab position).

a) Make a record of this neutral tab position.

(ag) Move and hold the control column full aft.

1) Use a scale to make sure the trailing edge of the right elevator is in 13.39 in. (340.11 mm) - 14.53 in. (369.06 mm) of the index mark.

2) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the right elevator to the bottom edge of the elevator tab (this is referred to as the "up tab position").

a) Make a record of this up tab position.

b) Release the control column.

(ah) Move and hold the control column full forward.

1) Use a scale to make sure the trailing edge of the right elevator is in 9.98 in. (253.49 mm) - 10.88 in. (276.35 mm) of the index mark.

2) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the right elevator to the bottom edge of the elevator tab (this is referred to as the "down tab position").

a) Make a record of this down tab position.

b) Release the control column.

(ai) Add the neutral tab position to the up tab position.

1) Make sure the sum is between 0.8 in. (20.32 mm) - 1.2 in. (30.48 mm).

(aj) Subtract the neutral tab position from the down tab position.

1) Make sure the difference is between 0.6 in. (15.24 mm) - 0.9 in. (22.86 mm).

(ak) Move the left elevator by hand to align it with the index mark in ±0.06 in. (1.52 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the left elevator to the bottom edge of the elevator tab (this is referred to as the "neutral tab position").
   a) Make a record of this neutral tab position.

(al) Move and hold the control column full aft.
   1) Use a scale to make sure the left elevator is in 13.39 in. (340.11 mm) - 14.53 in. (369.06 mm) of the index mark.

(am) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the left elevator to the bottom edge of the elevator tab (this is referred to as the "up tab position").
   1) Make a record of this up tab position.

(an) Move and hold the control column full forward.
   1) Use a scale to make sure the trailing edge of the left elevator is in 9.98 in. (253.49 mm) - 10.88 in. (276.35 mm) of the index mark.
   2) Use a 6 in. (152.40 mm) scale to measure from the bottom edge of the left elevator to the bottom edge of the elevator tab (this is referred to as the "down tab position").
      a) Make a record of this down tab position.
      b) Release the control column.

(ao) Add the neutral tab position to the up tab position.
   1) Make sure the sum is between 0.8 in. (20.32 mm) - 1.2 in. (30.48 mm).

(ap) Subtract the neutral tab position from the down tab position.
   1) Make sure the difference is between 0.6 in. (15.24 mm) - 0.9 in. (22.86 mm).

(aq) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-095

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-00-410-018

(2) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

——— END OF TASK ———

TASK 27-31-00-700-808

18. Manual Mode - Test

(Figure 503)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this test to make sure the control columns and control wheels operate freely.

B. References

Reference	Title
27-31-00-800-802	Pressure from the Elevator Hydraulic Systems A and B Removal (P/B 201)

311BL	Stabilizer Trim Access Door

F. Prepare for the Test

SUBTASK 27-31-00-860-096

(1) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-00-040-002

(2) Do the following to isolate the spoilers to keep them from moving when you turn the control wheel:

(a) Turn the A and B Spoiler Shutoff Switches on the P5-3 panel to the OFF position.

SUBTASK 27-31-00-010-024

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-097

CAUTION

MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677 to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)). (Figure 503)

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Manual Mode Test

SUBTASK 27-31-00-730-007

(1) Do the manual mode test:

(a) Make sure the control columns and control wheels move freely:

1) Move the control column in a longitudinal direction (forward and aft), and while moving the control column forward and aft, rotate the control wheel between the left and right stops.

a) Repeat this step nine more times.

2) Rotate and hold the control wheel against the left stop and move the control column in a longitudinal direction (forward and aft) between the stops.

3) Rotate and hold the control wheel against the right stop and move the control column in a longitudinal direction (forward and aft) between the stops.

4) Hold the control column full forward and rotate the control wheel left and right between the stops.

5) Hold the control column full aft and rotate the control wheel left and right between the stops.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-098

(1) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-00-040-003

(2) If necessary, turn the A and B Spoiler Shutoff Switches on the P5-3 panel to the ON position.

SUBTASK 27-31-00-410-019

(3) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

——— END OF TASK ———

TASK 27-31-00-700-809

19. Control Column Travel and Centering - Test

(Figure 503, Figure 506, Figure 513, and Figure 519)

A. General

(1) Use this test to make sure that the control columns can move through their full travel. This also includes a centering test of the control columns.

(2) Use this test to verify two separate requirements:

(a) Minimum forward and aft travel.

(b) Total stop to stop travel.

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Prepare for the Test

SUBTASK 27-31-00-860-100

(1) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-00-860-099

(2) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-010-025

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-101

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677, to set the "B" dimension at 4 units of trim to 39.17 ±0.01 in. (994.92 ±0.26 mm) (Figure 503).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677, and not the stabilizer indicator in the flight deck.

G. Control Column Travel and Centering Test

SUBTASK 27-31-00-730-008

(1) Do the control column travel test (Figure 513).

(a) Attach the adapter, SPL-1674, and protractor, SPL-1680, to the captain's control column (Figure 513).

(b) Move the captain's control column full aft until it touches the stop and hold it in that position.

NOTE: This measures the minimum aft travel.

1) Make sure that the right elevator trailing edge moves to 11.82 in. (300.23 mm) - 13.83 in. (351.28 mm) up from the index mark (Figure 519).

a) Make sure that the position of the captain's control column is at a minimum of 14 degrees aft of the column neutral rig position (Figure 513).

(c) Move the captain's control column full forward until it touches the stop and hold it in that position.

NOTE: This measures the minimum forward travel.

1) Make sure that the right elevator trailing edge moves to 9.15 in. (232.41 mm) - 10.44 in. (265.18 mm) down from the index mark (Figure 519).

2) Make sure that the position of the captain's control column is at a minimum of 12.8 degrees forward of the column neutral rig position.

a) Release the control column.

(d) Move the captain's control column full forward and note the degree forward measurement.

NOTE: Enough force is required to stretch the control cables allowing the column to hit the forward stop.

(e) Move the captain's control column full aft and note the degree aft measurement.

NOTE: Enough force is required to stretch the control cables allowing the column to hit the aft stop.

1) Release the control column.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure that the total stop to stop travel of the captain's control column is a minimum of 28.4 degrees (Figure 513).

NOTE: This measures the total stop to stop travel.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(f) Do this task : Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

(g) Move the captain's control column lightly forward and aft to make sure that it is in the neutral position.

1) Make sure that the position of the captain's control column is in 6.1 - 7.7 degrees of the vertical position (90 degrees).

(h) Remove the adapter, SPL-1674, and protractor, SPL-1680, from the captain's control column.

(i) Attach the adapter, SPL-1674, and protractor, SPL-1680, to the first officer's control column (Figure 513).

(j) Move the first officer's control column lightly forward and aft to make sure that it is in the neutral position.

1) Make sure that the position of the first officer's control column is in 6.1 - 7.7 degrees of the vertical position.

(k) Remove the adapter, SPL-1674, and protractor, SPL-1680, from the first officer's control column.

SUBTASK 27-31-00-730-009

(2) Do the elevator centering test.

(a) Set the FLT CONTROL B switch, on the P5 forward overhead panel, to the OFF position.

(b) Make sure that the FLT CONTROL A switch, on the P5 forward overhead panel, is in the ON position.

(c) Make sure that the captain's control column is at the neutral position.

1) Make sure that the right elevator aligns with the index mark in ±0.06 in. (1.52 mm) (Figure 506).

(d) Set the FLT CONTROL B switch to the ON position.

1) Make sure that the right elevator aligns with the index mark in ±0.06 in. (1.52 mm).

(e) Set the FLT CONTROL A switch to the OFF position.

(f) Make sure that the FLT CONTROL B switch is in the ON position.

1) Make sure that the right elevator aligns with the index mark in ±0.06 in. (1.52 mm).

(g) Set the FLT CONTROL A switch to the ON then to the OFF position.

1) Make sure that there is less than 0.02 in. (0.51 mm) movement at the right elevator trailing edge.

(h) Set the FLT CONTROL B switch to the OFF then to the ON then to the OFF position.

1) Make sure that there is less than 0.02 in. (0.51 mm) movement at the right elevator trailing edge.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) Set the FLT CONTROL A and B switches to the ON position.

(j) Make sure that the captain's control column is at the neutral position.

1) Make sure that the right elevator aligns with the index mark in ±0.06 in. (1.52 mm).

(k) Move the captain's control column forward approximately 2 degrees and release.

1) Make sure that the right elevator trailing edge aligns with the index mark in 0.00 ±0.12 in. (0.0 ±3.0 mm).

(l) Move the captain's control column aft approximately 2 degrees and release.

1) Make sure that the right elevator trailing edge aligns with the index mark in 0.00 ±0.12 in. (0.0 ±3.0 mm).

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-102

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-00-410-020

SUBTASK 27-31-00-860-104

(1) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-00-860-103

(2) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-00-010-026

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-105

CAUTION

MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677 to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)). (Figure 503)

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

G. Control Column Power Force Test

SUBTASK 27-31-00-730-010

(1) Do the control column force test (with hydraulics unpressurized):

(a) Move the captain's control column slowly aft and hold at the elevator trailing edge up position of 3.59 in. (91.19 mm) -3.69 in. (93.73 mm) (Figure 519).

1) Use the force gauge, COM-1557 to make sure the force to hold the control column is between11 lbf (48.93 N) -53 lbf (235.76 N) (Figure 513).

2) Center the control column.

(b) Move the captain's control column slowly forward and hold at the elevator trailing edge down position of3.64 in. (92.46 mm) -3.74 in. (95.00 mm) (Figure 519).

1) Use the force gauge, COM-1557 to make sure the force to hold the control column is between19 lbf (84.52 N) -63 lbf (280.24 N) (Figure 513).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-730-011

(2) Do the control column force test (with hydraulics pressurized):

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize elevator hydraulic systems A and B. To pressurize them, do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

(b) Move the captain's control column lightly forward and aft to put the system in the neutral position.

1) Make sure the position of the captain’s control column is in 6.1 - 7.7 degrees of the vertical position (90 degrees). (Figure 515), (Figure 513)

2) Attach "DO-NOT-MOVE" tags on the control columns.

(c) Attach approximately 36 in. (914.40 mm) of masking tape to the tailcone, forward of the right elevator index plate (Figure 519).

NOTE: Make sure there are approximately 18 in. (457.20 mm) of masking tape above the index plate and approximately 18 in. (457.20 mm) of masking tape below the index plate.

(d) Make a mark of the neutral position of the elevator trailing edge on the masking tape.

1) Use this mark of the neutral position as reference.

(e) Make marks of the right elevator positions on the masking tape (from the two tables below).

(f) Move the captain's control column slowly aft with the force gauge, COM-1557.

1) Hold the captain's control column at these elevator positions (that have been marked on the masking tape of the right elevator) and make sure the forces to move the control column are in these limits:

NOTE: Put a straight edge on the top of the trailing edge surface of the elevator surface to measure the elevator position at the surface of the tailcone.

NOTE: The "breakout" is when the elevator starts to move.

Table 501/27-31-00-993-802

RIGHT ELEVATOR POSITION (T.E. UP)	REQUIRED COLUMN FORCE (AFT)
BREAKOUT	3 lbf (13.34 N) -7 lbf (31.14 N)
1.9 in. (48.26 mm) - 2 in. (50.80 mm)	14.5 lbf (64.50 N) - 21.5 lbf (95.64 N)
5.05 in. (128.27 mm) - 5.15 in. (130.81 mm)	21 lbf (93.41 N) - 27 lbf (120.10 N)
9.4 in. (238.76 mm) -9.5 in. (241.30 mm)	29.5 lbf (131.22 N) -36.5 lbf (162.36 N)

(g) Move the captain's control column slowly forward with the force gauge, COM-1557.

1) Hold the captain's control column at these elevator positions and make sure the forces to move the control column are in these limits:

NOTE: The "breakout" is when the elevator starts to move.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 502/27-31-00-993-803

RIGHT ELEVATOR POSITION (T.E. DOWN)	REQUIRED COLUMN FORCE (FORWARD)
BREAKOUT	3.5 lbf (15.57 N) - 7.5 lbf (33.36 N)
1.9 in. (48.26 mm) - 2 in. (50.80 mm)	17.5 lbf (77.84 N) - 21.5 lbf (95.64 N)
5.05 in. (128.27 mm) - 5.15 in. (130.81 mm)	28.5 lbf (126.77 N) - 35.5 lbf (157.91 N)
9.4 in. (238.76 mm) -9.5 in. (241.30 mm)	34.8 lbf (154.80 N) - 42.8 lbf (190.38 N)

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-080-006

(1) Remove the adapter, SPL-1674 and protractor, SPL-1680 from the captain's control column.

SUBTASK 27-31-00-860-106

(2) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-00-410-021

(3) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

——— END OF TASK ———

TASK 27-31-00-700-811

21. Neutral Shift - Test

(Figure 503, Figure 506, Figure 519)

A. General

(1) Use this test to make sure the elevator neutral shift mechanism moves the elevator when the stabilizer moves. When the stabilizer moves, it gives a mechanical input to the elevator PCUs.

B. References

Reference	Title

E. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Prepare for the Test

SUBTASK 27-31-00-860-107

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize elevator hydraulic systems A and B. To pressurize them, do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-31-00-860-108

(2) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-00-010-027

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-109

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677, to set the "B" dimension at 21.32 ±0.10 in. (541.53 ±2.54 mm) (Figure 503).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

G. Neutral Shift Test

SUBTASK 27-31-00-730-012

(1) Do the neutral shift test:

(a) Make sure the right elevator trailing edge moves up 13.9 in. (353.1 mm) - 14.9 in. (378.5 mm) from the index mark (Figure 519).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(b) Use the bar, SPL-1677 to set the "B" dimension at 45.84 ±0.10 in. (1164.34 ±2.54 mm).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

(c) Move the captain's control column aft and forward lightly to make sure it is in the neutral position.

(d) Make sure the right elevator trailing edge moves down 3.2 in. (81.3 mm) - 3.8 in. (96.5 mm) from the index mark.

SUBTASK 27-31-00-700-002

(2) Do the following steps to check the elevator system:

NOTE: You use the Flight Management Computer Control Display Unit (FMC CDU) to do the following Built-In-Test Equipment (BITE) test.

(a) Push the INIT REF key on the CDU keyboard.

1) Push the Line Select Key (LSK) that is adjacent to each selection:

a) INDEX

b) MAINT

c) DFCS

d) EXTENDED MAINTENANCE

e) RIGGING

f) ELEVATOR

NOTE: After you make this selection, the CONTINUE will show. Do the instructions that show on the CDU display before you push the LSK that is adjacent to CONTINUE.

g) COMPLETE ELEV RIG

NOTE: This selection contains the ELEV RIG test.

h) During this test, do the instructions that show on the CDU display.

i) After you do the instructions that show on the CDU display, push the LSK that is adjacent to CONTINUE.

2) Do the Elevator Rigging Check:

a) Make sure that the values for the A and B sides are between the limits that show on the CDU display or in this task.

Table 503/27-31-00-993-804

Test		Limits:
51.01	STAB POS (VAC)	-0.07 to 0.07

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

b) Use the trammel bar, SPL-1677, to measure the B dimension.

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

c) Make sure that the B dimension is 39.17 ±0.01 in. (994.92 ±0.26 mm).

Table 504/27-31-00-993-805

Test		Limits
51.02	MT ACT POS (VAC)	-8.70 to -6.35
Note: No value for B side; N/A		
51.03	MT ACT POS (VAC)	-0.20 TO 0.20
Note: No value for B side; N/A		
51.04	NSS POS (VAC)	-1.77 to -1.67

d) Make sure that the elevator trailing edge aligns with the elevator index on the tail cone at 0.00 ±0.06 in. (0.00 ±1.52 mm).

Table 505/27-31-00-993-806

Test		Limits
51.05	ELEV POS (VAC)	-0.55 to -0.45
51.06	ELEV LVDT (VAC)	-2.05 to -1.95
51.07	ELEV POS (VAC)	-0.55 TO -0.45

e) Make sure that the elevator trailing edge aligns with the elevator index on the tail cone at 0.00 ±0.06 in. (0.00 ±1.52 mm).

Table 506/27-31-00-993-807

Test		Limits
51.08	ELEV POS (VAC)	-0.55 to -0.45
51.09	ELEV POS (VAC)	-0.55 to -0.45
51.10	ELEV POS (VAC)	-0.55 to -0.45
51.11	ELEV POS (VAC)	-0.55 to -0.45

f) Set the B dimension to 28.27 ±0.01 in. (71.81 ±0.03 cm).

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

g) Use the trammel bar, SPL-1677, to measure the B dimension.

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

h) Make sure that the B dimension is at 28.27 ±0.01 in. (71.81 ±0.03 cm).

Table 507/27-31-00-993-808

Test		Limits
51.12	STAB POS (VAC)	4.47 to 5.29
51.13	ELEV LVDT (VAC)	-0.06 to 0.06
51.14	ELEV POS (VAC)	-0.10 to 0.10
51.15	NSS POS (VAC)	-0.20 to 0.20

3) Do these steps to get out of the BITE test:

NOTE: If there are instructions on the CDU display, it is necessary to do the instructions that show on the CDU display.

a) Push the LSK adjacent to PREV MENU on test 51.16 screen.

b) Push the LSK adjacent to PREV MENU on the ELEVATOR RIGGING screen.

c) Push the LSK adjacent to CONTINUE on the RIGGING INDEX screen.

d) Push the LSK adjacent to EXIT on the RIGGING INDEX screen.

e) Push the LSK adjacent to CONTINUE on the END OF BITE RIGGING screen.

f) Push the LSK adjacent to EXIT until you get out of the BITE test.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-110

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-00-410-022

(2) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

——— END OF TASK ———

TASK 27-31-00-700-812

22. Feel Differential Pressure Light - Test

A. General

(1) Use this test to make sure the FEEL DIFF PRESS light operates correctly.

B. References

Reference	Title
27-31-00-800-801	Elevator Hydraulic System A and B - Pressurization (P/B 201)

334	Left Horizontal Stabilizer - Elevator
344	Right Horizontal Stabilizer - Elevator

D. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

E. Prepare for the Test

SUBTASK 27-31-00-860-111

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT

(1) Pressurize elevator hydraulic systems A and B. To pressurize them, do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-31-00-010-028

(2) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Feel Differential Pressure Light Test

SUBTASK 27-31-00-860-112

(1) Set the FLT CONTROL B switch on the forward overhead panel, P5, to the OFF position.

(a) Make sure the FEEL DIFF PRESS light on the forward overhead panel, P5, illuminates after a minimum of 35 seconds.

NOTE: The time required for the system to bleed down will vary. It may take up to 120 seconds for the FEEL DIFF PRESS light to illuminate.

SUBTASK 27-31-00-860-113

(2) Set the FLT CONTROL A switch to the OFF position.

(a) Make sure the FEEL DIFF PRESS light goes off.

SUBTASK 27-31-00-860-114

(3) Set the FLT CONTROL B switch to the ON position.

(a) Wait for a minimum of 35 seconds.

(b) Make sure the FEEL DIFF PRESS light comes on.

NOTE: The time required for the system to bleed down will vary. It may take up to 120 seconds for the FEEL DIFF PRESS light to illuminate.

SUBTASK 27-31-00-860-115

(4) Set the FLT CONTROL A switch to the ON position.

(a) Make sure the FEEL DIFF PRESS light goes off.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-116

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-00-410-023

(2) Close this access panel:

(1) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-160

(2) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

F. Pitot System Leak Test

SUBTASK 27-31-00-390-001

(1) Seal the drain hole in each pitot probe on the vertical fin.

NOTE: The pitot drain hole must be sealed to hold pressure during the test.

SUBTASK 27-31-00-480-008

CAUTION

MAKE SURE THAT THE PITOT PROBE HAS NO ADDED WEIGHT ON IT FROM THE TEST HOSE. THE WEIGHT OF THE TEST HOSE CAN BEND OR TWIST THE PITOT PROBE OUT OF TOLERANCE.

(2) At the two elevator pitot probes on the vertical fin, do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Install the pitot test adapter, COM-1916, to the pitot probes.

(b) Connect the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, to the pitot test adapter, COM-1916.

SUBTASK 27-31-00-480-007

(3) Inside the aft unpressurized compartment, below the elevator feel computer, do these steps:

(a) Remove the drain plugs from the pitot lines.

(b) If the regulator, SPL-1742, is used for the leak test, do these steps:

1) Connect the pressure gage lines from the regulator, SPL-1742, to the drain holes of the pitot lines.

(c) If the air data model test set, COM-1914, is used for the leak test, do these steps:

1) Install the pitot plugs, COM-16577, on the ends of the pitot lines.

2) Install a streamer on the opening of the aft unpressurized compartment.

a) Make sure that you can easily see the streamer from the ground.

NOTE: This is to remind you to remove the pitot plugs and install the drain plugs again when the test is completed.

SUBTASK 27-31-00-790-001

(4) Do a pitot system leak test:

CAUTION

DO NOT INCREASE THE PRESSURE TO MORE THAN 5 PSIG (34.5 KPA) (437 KNOTS OF COMPUTED AIRSPEED (KCAS)), DURING THE TEST. IF THE PRESSURE IS MORE THAN 5 PSIG (34.5 KPA) (437 KCAS), IT CAN CAUSE DAMAGE TO THE ELEVATOR FEEL COMPUTER.

(a) Operate the air data model test set, COM-1914, or regulator, SPL-1742, to apply pressure 0.90 +0.07 / -0.00 psig (6.21 +0.48 / -0.00 kPa) to simulate 194 to 201 kcas.

(b) Set the shutoff valve in the air data model test set, COM-1914, or regulator, SPL-1742, to the OFF position.

(c) Make sure that the pressure does not decrease more than 0.2 psig (1.4 kPa) (8 kcas) during a 2-minute time.

NOTE: The low pressure pressurization steps above ensure that there is no significant system leak before you apply full pressure in the following steps.

1) Fix any pitot system or pressurization equipment leaks, as necessary, before proceeding.

(d) Operate the air data model test set, COM-1914, or regulator, SPL-1742, to apply pressure 4.8 ±0.1 psig (33.1 ±0.7 kPa) to simulate 425 to 433 kcas.

(e) Set the shutoff valve in the air data model test set, COM-1914, or regulator, SPL-1742, to the OFF position.

(f) Make sure that the pressure does not decrease more than 0.3 psig (2.1 kPa) (12 kcas) during a 2-minute time.

(g) Operate the air data model test set, COM-1914, or regulator, SPL-1742, to decrease the pressure to zero.

SUBTASK 27-31-00-160-001

(5) Remove the seal from the drain hole in each pitot probe.

SUBTASK 27-31-00-080-007

(6) At the two elevator pitot probes on the vertical fin, do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, and pitot test adapter, COM-1916.

(b) Remove the pitot test adapter, COM-1916, from the pitot probes.

SUBTASK 27-31-00-080-008

(7) In the aft unpressurized compartment, below the elevator feel computer, do these steps:

(a) If the regulator, SPL-1742, is used for the leak test, do these steps:

1) Disconnect the pressure gage lines of the regulator, SPL-1742, from the drain holes of the pitot lines.

(b) If the air data model test set, COM-1914, is used for the leak test, do these steps:

1) Remove the pitot plug, COM-16577, that were installed on the ends of the pitot lines.

2) Remove the streamer on the opening of the aft unpressurized compartment.

(c) Install the drain plugs on the pitot lines.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-161

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Prepare for the Test

SUBTASK 27-31-00-860-153

(1) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

SUBTASK 27-31-00-860-117

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize the elevator hydraulic systems A and B, do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-31-00-860-118

(3) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-00-860-164

(4) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

SUBTASK 27-31-00-480-009

(5) At the two pitot probes on the vertical fin, do these steps:

(a) Seal the drain hole on each pitot probe.

CAUTION MAKE SURE THAT THE PITOT PROBE HAS NO ADDED WEIGHT ON IT FROM THE TEST HOSE. THE WEIGHT OF THE TEST HOSE CAN BEND OR TWIST THE PITOT PROBE OUT OF TOLERANCE.

(b) Connect the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, to the two pitot probes on the vertical fin.

SUBTASK 27-31-00-010-030

(6) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-480-010

(7) Inside the aft unpressurized compartment, below the elevator feel computer, do these steps:

(a) Remove the restrictor valves from the bottom of the pitot lines.

(b) If the regulator, SPL-1742, or equivalent is used, do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Connect the pressure gage lines from the regulator, SPL-1742, or equivalent, to the drain holes of the pitot lines.

(c) If the air data model test set, COM-1914, is used, do these steps:

1) Install plugs over the ends of the pitot lines.

2) Install a highly visible streamer on the opening of the aft unpressurized compartment.

a) Make sure that the streamer can be easily seen from the ground.

NOTE: This is to remind to remove the plugs and install the restrictor valves again when the test is completed.

SUBTASK 27-31-00-860-119

CAUTION

MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(8) Use the bar, SPL-1677, to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)) (Figure 503).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677, and not the stabilizer indicator in the flight deck.

G. Feel Force System Test

SUBTASK 27-31-00-730-013

(1) Do the feel force system test:

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Make sure that elevator hydraulic systems A and B is pressurize: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

(b) Make sure that FLT CONTROL A and FLT CONTROL B switches are in the ON position.

CAUTION

DO NOT INCREASE THE PRESSURE TO MORE THAN 5 PSIG (437 KCAS) DURING THE TEST. IF THE PRESSURE IS MORE THAN 5 PSIG, IT CAN CAUSE DAMAGE TO THE ELEVATOR FEEL COMPUTER.

(c) Operate the regulator, SPL-1742, or air data model test set, COM-1914, to increase the pressure 0.77 psig (5.3 kPa) - 0.87 psig (6.0 kPa) (185 knots).

(d) Apply masking tape on the tail cone along direction of the travel of the elevator trailing edge.

(e) Move the captain's control column lightly to put the system in the neutral position, then release.

1) Make a mark of the neutral position of the elevator trailing edge on the masking tape.

(f) Move the captain's control column slowly aft until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold (Figure 519).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 17 lbf (76 N) - 28 lbf (125 N).

(g) Move the captain's control column slowly aft until the elevator trailing edge is at 4.75 in. (120.65 mm) - 4.85 in. (123.19 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 36 lbf (160 N) - 45 lbf (200 N).

(h) Move the captain's control column slowly forward until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 17 lbf (76 N) - 27.5 lbf (122 N).

(i) Move the captain's control column slowly forward until the elevator trailing edge is at 4.75 in. (120.65 mm) - 4.85 in. (123.19 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 44 lbf (196 N) - 53 lbf (236 N).

(j) Set the FLT CONTROL B switch, on the P5 forward overhead panel, to the OFF position.

(k) Move the captain's control column slowly aft until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 17 lbf (76 N) - 28 lbf (125 N).

(l) Move the captain's control column slowly aft until the elevator trailing edge is at 4.75 in. (120.65 mm) - 4.85 in. (123.19 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 36 lbf (160 N) - 45 lbf (200 N).

(m) Move the captain's control column slowly forward until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 17 lbf (76 N) - 27.5 lbf (122 N).

(n) Move the captain's control column slowly forward until the elevator trailing edge is at 4.75 in. (120.65 mm) - 4.85 in. (123.19 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 44 lbf (196 N) - 53 lbf (236 N).

(o) Set the FLT CONTROL A switch, on the P5 forward overhead panel, to the OFF position.

(p) Set the FLT CONTROL B switch to the ON position.

(q) Move the captain's control column slowly aft until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 17 lbf (76 N) - 28 lbf (125 N).

(r) Move the captain's control column slowly aft until the elevator trailing edge is at 4.75 in. (120.65 mm) - 4.85 in. (123.19 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 36 lbf (160 N) - 45 lbf (200 N).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(s) Move the captain's control column slowly forward until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 17 lbf (76 N) - 27.5 lbf (122 N).

(t) Move the captain's control column slowly forward until the elevator trailing edge is at 4.75 in. (120.65 mm) - 4.85 in. (123.19 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 44 lbf (196 N) - 53 lbf (236 N).

(u) Set the FLT CONTROL A switch to the ON position.

CAUTION DO NOT INCREASE THE PRESSURE TO MORE THAN 5 PSIG (437 KCAS) DURING THE TEST. IF THE PRESSURE IS MORE THAN 5 PSIG, IT CAN CAUSE DAMAGE TO THE ELEVATOR FEEL COMPUTER.

(v) Operate the regulator, SPL-1742, or air data model test set, COM-1914, to increase the pressure 2.42 psig (16.7 kPa) - 2.52 psig (17.4 kPa) (315 knots).

(w) Move the captain's control column slowly aft until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold (Figure 519).

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 28 lbf (125 N) - 44 lbf (196 N).

(x) Move the captain's control column slowly forward until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold.

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 30 lbf (133 N) - 46 lbf (205 N).

(y) Set the FLT CONTROL B switch to the OFF position.

(z) Move the captain's control column slowly aft until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold.

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 28 lbf (125 N) - 44 lbf (196 N).

(aa) Move the captain's control column slowly forward until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold.

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 30 lbf (133 N) - 46 lbf (205 N).

(ab) Set the FLT CONTROL B switch to the ON position.

(ac) Set the FLT CONTROL A switch, on the P5 forward overhead panel, to the OFF position.

(ad) Move the captain's control column slowly aft until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold.

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 28 lbf (125 N) - 44 lbf (196 N).

(ae) Move the captain's control column slowly forward until the elevator trailing edge is at 1.15 in. (29.21 mm) - 1.25 in. (31.75 mm) from the neutral position, and hold.

1) Use the force gauge, COM-1557, to make sure that the force required to keep the control column at this position is 30 lbf (133 N) - 46 lbf (205 N).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(af) Move the captain's control column slowly to the neutral position.

(ag) Set the FLT CONTROL A switch to the ON position.

(ah) Make sure that the FLT CONTROL B switch is in the ON position.

(ai) Operate the regulator, SPL-1742, or air data model test set, COM-1914, to decrease the pressure to 0.0 psig (0.0 kPa) (0 knots).

SUBTASK 27-31-00-730-014

(2) Do a test of the autopilot authority in the elevator rigging test, do this task: Elevator Rigging Test, TASK 22-11-00-820-802.

SUBTASK 27-31-00-080-009

(3) At the two pitot probes on the vertical fin, do these steps:

(a) Remove the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, from the pitot probes.

(b) Remove the seal from the drain hole in each pitot probe.

SUBTASK 27-31-00-430-002

(4) Inside the aft unpressurized compartment, do these steps:

(a) If the regulator, SPL-1742, or equivalent is used for the test, do these steps:

1) Disconnect the pressure gage lines of the regulator, SPL-1742, or equivalent, from the drain holes of the pitot lines.

(b) If the air data model test set, COM-1914, is used for the test, do these steps:

1) Remove the plugs that were installed over the ends of the pitot lines.

2) Remove the highly visible streamer that is installed on the opening of the aft unpressurized compartment.

(c) Install the restrictor valves on the bottom of the pitot lines.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-163

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

SUBTASK 27-31-00-410-025

(2) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-120

(3) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-00-860-154

(4) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

ECCN 9E991 BOEING PROPRIETARY - See title page for details

END OF TASK

TASK 27-31-00-700-814

25. Sensor Null - Test

(Figure 503)

A. General

(1) Use this test to do the elevator rigging test with the DFCS computer BITE. The control display unit (CDU) is necessary for this procedure.

B. References

Reference	Title
27-31-00-800-801	Elevator Hydraulic System A and B - Pressurization (P/B 201)
27-31-00-840-801	Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization (P/B 201)

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description

F. Prepare for the Test

SUBTASK 27-31-00-860-121

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize elevator hydraulic systems A and B. To pressurize them, do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-010-031

(2) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-00-860-122

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(3) Use the bar, SPL-1677 to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)). (Figure 503)

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

G. Sensor Null Test

SUBTASK 27-31-00-740-008

(1) Do the sensor null test:

(a) Do this BITE test on the control display unit (CDU):

1) Push the INIT REF key on the CDU keyboard.

2) Push the Line Select Key (LSK) that is adjacent to these selections:

NOTE: Use the NEXT PAGE or PREV PAGE key to change page if it is necessary. During the BITE test, if the "CONTINUE" shows, then push the LSK that is adjacent to "CONTINUE" after you do the instructions that show on the CDU display.

a) INDEX

b) MAINT

c) DFCS

d) EXTENDED MAINTENANCE

e) RIGGING

f) ELEVATOR

g) CONTINUE

3) Do the instructions that show on the CDU and push the LSK adjacent to these selections:

a) CONTINUE

b) ELEV RIG

4) Make sure the BITE display values on the A and B sides are in the limit as shown below:

NOTE: During the BITE test, if the "CONTINUE" shows, then push the LSK that is adjacent to "CONTINUE" after you do the instructions that show on the CDU display.

Table 508/27-31-00-993-809

Test 51.01	STAB POS (VAC)	Limits: -0.07 TO 0.07

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 508/27-31-00-993-809 (Continued)

Use the bar, SPL-1677 to set the "B" dimension as on the CDU. Test 51.02		
Test 51.02	MT ACT POS (VAC)	Limits: -8.70 to -6.35
51.03	MT ACT POS (VAC)	Limits: -0.20 to 0.20
Test 51.04	NSS POS (VAC)	Limits: -1.77 to -1.67
Make sure the elevator trailing edge aligns with the index mark +/- 0.06 inch (1.5 millimeters).		
Test 51.05	ELEV POS (VAC)	Limits: -0.55 to -0.45
Test 51.06	ELEV LVDT (VAC)	Limits: -2.05 to -1.95
Test 51.07	ELEV POS (VAC)	Limits: -0.55 to -0.45
Make sure the elevator trailing edge aligns with the index mark +/- 0.06 inch (1.5 millimeters).		
Test 51.08	ELEV POS (VAC)	Limits: -0.55 to -0.45
Test 51.09	ELEV POS (VAC)	Limits: -0.55 to -0.45
Test 51.10	ELEV POS (VAC)	Limits: -0.55 to -0.45
Test 51.11	ELEV POS (VAC)	Limits: -0.55 to -0.45
Test 51.12	STAB POS (VAC)	Limits: 4.47 to 5.29
Test 51.13	ELEVATOR LVDT	Limits: -0.06 to -0.06
Test 51.14	ELEVATOR POS	Limits: -0.20 to 0.20
Test 51.15	NSS POS	Limits: -0.20 to 0.20

5) Push the INIT/REF key.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-123

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-00-410-026

(2) Close this access panel:

SUBTASK 27-31-00-860-124

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize the elevator hydraulic systems A and B (TASK 27-31-00-800-801).

SUBTASK 27-31-00-010-032

(2) Open these access doors:

Number	Name/Location
311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-860-125

CAUTION

MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(3) Use the bar, SPL-1677, to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)) (Figure 503).

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

G. Elevator Power Control Unit (PCU) Input Rod (Pogo) Functional Test

SUBTASK 27-31-00-740-009

(1) Do this BITE test on the control display unit (CDU):

(a) Push the INT REF key on the CDU keyboard.

(b) Null the mach trim actuator (TASK 27-31-00-700-801).

(c) Push the Line Select Key (LSK) that is adjacent to these selections:

NOTE: Use the NEXT PAGE or PREV PAGE key to change page if it is necessary. During the BITE test, if the CONTINUE shows, then push the LSK that is adjacent to CONTINUE after you do the instructions that show on the CDU display.

1) INDEX
2) MAINT
3) DFCS
4) EXTENDED MAINTENANCE
5) RIGGING
6) ELEVATOR
7) CONTINUE

(d) Do the instructions that show on the CDU and push the LSK adjacent to these selections:

1) CONTINUE
2) ELEV RIG

(e) Make sure the BITE display values on the A and B sides are in the limit as shown below:

NOTE: During the BITE test, if the "CONTINUE" shows, then push the LSK that is adjacent to "CONTINUE" after you do the instructions that show on the CDU display.

(f) Make sure that the mach trim actuator voltage is 0.00 ± 0.20 VAC.

(g) Make sure that the flaps are in the full up position.

(h) Make sure that the values for the A side are between the limits that show on the CDU display.

1) Test 51.03 MT ACT POS (VAC) limits: -0.20 to 0.20

(i) Push the INIT/REF key.

(j) Cycle the pilot control column (full forward, full aft) to make sure the elevator has full travel.

(k) Make sure the captain's control column is at the neutral position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(l) Make sure the right elevator trailing edge position is ±0.06 in. (1.5 mm) (±0.10 degree) with index plate.

NOTE: Use a straight edge on top of the elevator to make a line to the index plate.

SUBTASK 27-31-00-860-126

(2) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-00-480-011

(3) Install the tool, SPL-1749, on both elevator PCU pistons.

(a) Make sure that the tool, SPL-1749, is installed correctly to prevent damage to the lockwire.

SUBTASK 27-31-00-970-002

(4) Measure the distance that the PCU pogo clevis moves away from the end of the tube when you do a check for extension.

SUBTASK 27-31-00-860-127

(5) Move the captain and first officer's control column aft until all four elevator PCU pogos extend approximately 0.3 in. (7.6 mm).

NOTE: Total column force will be approximately 140 lbf (623 N).

SUBTASK 27-31-00-860-128

(6) Remove the force on the control columns slowly.

SUBTASK 27-31-00-080-010

(7) Remove the tool, SPL-1749, from the two elevator PCU pistons.

SUBTASK 27-31-00-860-129

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(8) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-31-00-860-130

(9) Cycle the pilot control column (full forward, full aft) to make sure the elevator has full travel.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-00-860-131

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

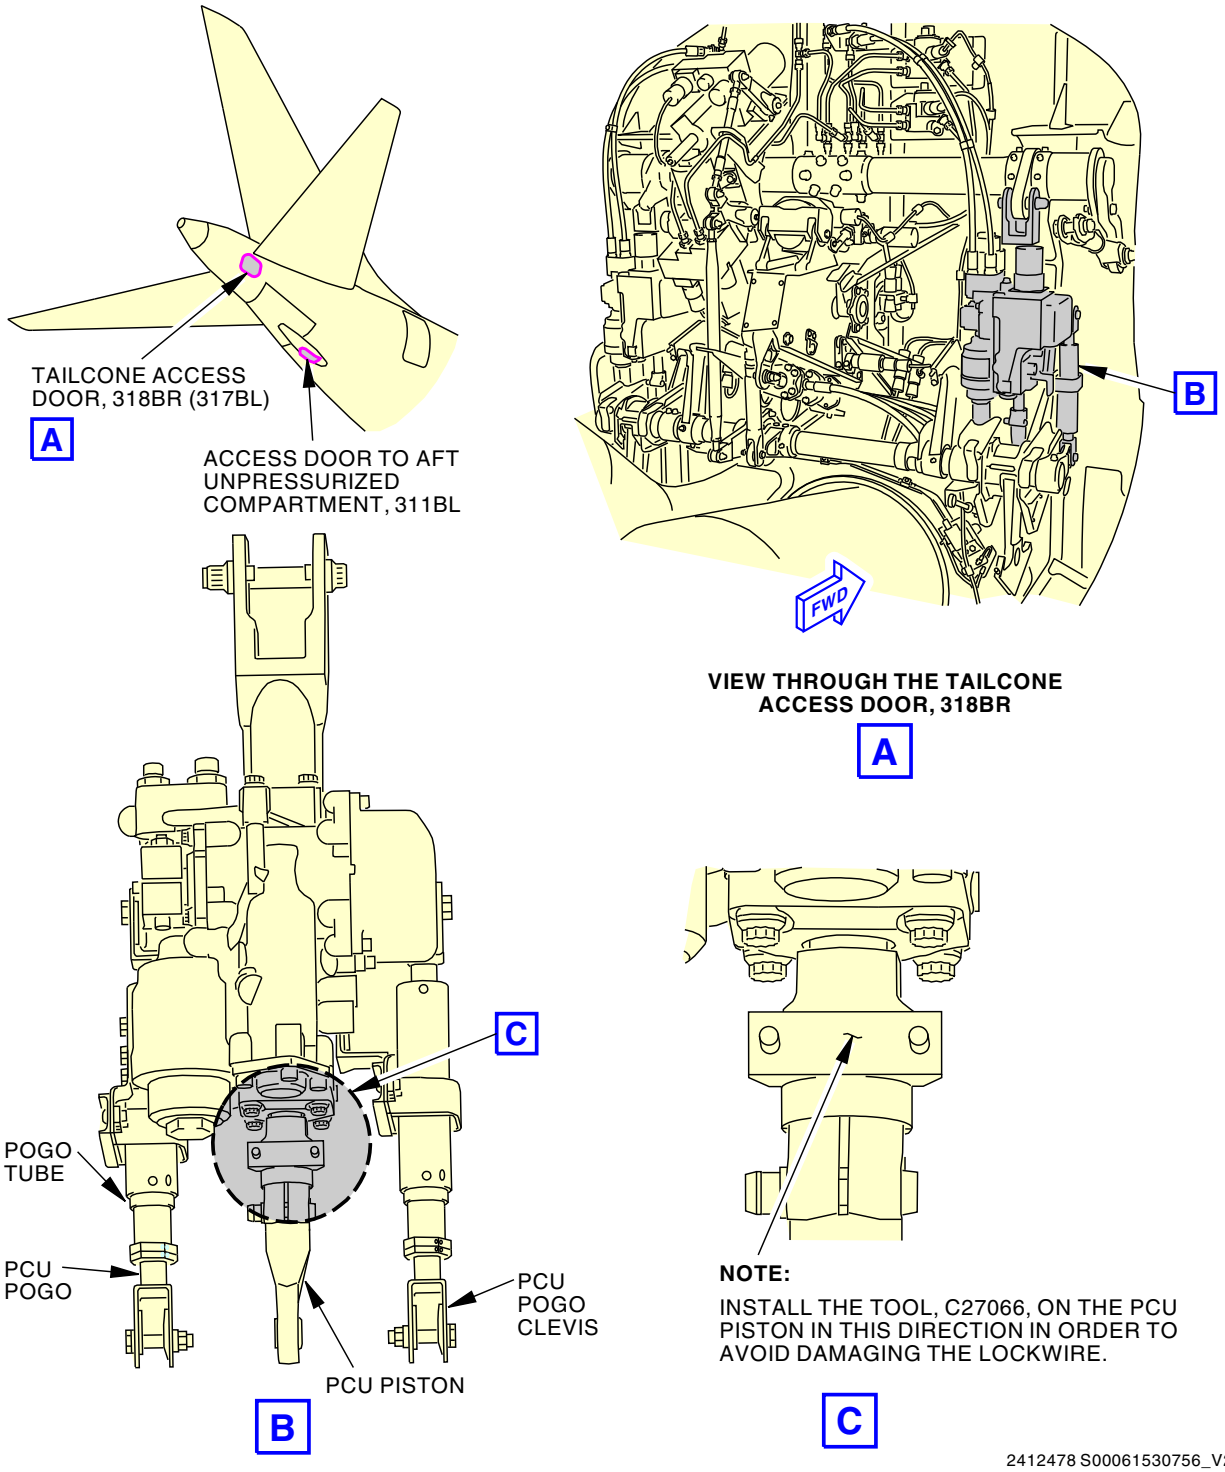
SUBTASK 27-31-00-410-027

(2) Close these access doors:

Number	Name/Location
311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details



Aileron/Elevator Power Control Unit (PCU) Input Rod Functional Test Tool

TASK 27-31-00-710-803

27. Elevator Power-Off Flight Test

(Figure 516, Figure 517)

A. General

(1) The flight test is necessary because the maintenance action can affect the flight characteristics of the airplane and incorrect adjustment can cause a pitch and attitude upset in the event of a dual simultaneous hydraulic system loss. Since the magnitude and attitude of this pitch upset cannot be predicted to sufficient accuracy or verified on the ground, a flight test is necessary to determine the unbalanced moment. The unbalanced moment is reflected in terms of the number and direction the pilot must turn the stabilizer trim wheel to return the airplane to level flight after initiating manual reversion. If the number and direction of stabilizer trim wheel turns are not within limits, then the elevator tab pushrods need to be re-adjusted and a subsequent flight test performed. The number and direction of stabilizer trim wheel turns should be recorded during the manual reversion flight test since this information is needed to correctly re-adjust the pushrods.

(2) This flight test is necessary after you have completed one of the following maintenance tasks:

(a) For the elevator:

1) After a replacement of an elevator.

NOTE: Replacement of an elevator with a new elevator, or with one that is not the same as the one that was originally on the airplane, requires a flight test.

NOTE: If the elevator which was removed from the airplane is reinstalled without repair, adjustment, or modification, a flight test is not required.

2) After a replacement or adjustment of an elevator control pushrod.

NOTE: Replacement of the elevator output torque tube crank arm bearing does not require a flight test.

NOTE: Replacement of the elevator mast arm bearing does not require a flight test.

3) After a replacement of an elevator hinge bearing plate (Figure 517).

NOTE: Flight test is not required if all of the following conditions are met:

- The elevator is not removed from the airplane during replacement of the elevator bearing plate(s).

- Adjacent elevator bearing plates are not removed at the same time.

- No more than two elevator bearing plates are removed at the same time on the same side.

NOTE: Flight test is not required if only the bearing is replaced and the original elevator bearing plate is reinstalled in its original location.

4) After a replacement of an elevator hinge fitting plate (Figure 517).

5) After a maintenance where re-balance of the elevator is necessary regardless of procedure used, either on-jig or by calculation (SRM SUBJECT 51-60-04).

NOTE: A flight test is not necessary following repair and/or repainting of the elevator if the re-balance method used does not result in adjustment of the balance weights.

(b) For the elevator tab:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) After a replacement of an elevator tab.

NOTE: A flight test is not necessary if the same elevator tab is removed and reinstalled after it was repaired, repainted, and rebalanced and the following conditions are met:

- The elevator tab stays within the balance limits for Center of Gravity (CG) and weight after it was repaired, repainted, and rebalanced (SRM PROCEDURE 51-60-00-0G-0) and no adjustment of the elevator tab adjust weights is necessary following repair and/or repaint.

- Any repair and/or paint application to the elevator tab provides a smooth continuous finish to all edges.

2) After a replacement or adjustment of one or both of the elevator tab pushrods.

NOTE: If only one pushrod is replaced or adjusted and you can verify that the remaining pushrod was not replaced or adjusted since the last flight test, then a flight test is not necessary.

NOTE: If only one pushrod is replaced or adjusted and you cannot verify that the remaining pushrod was not replaced or adjusted since the last flight test, then a flight test is necessary.

NOTE: If the same elevator tab pushrods are removed and re-installed without adjustment in the same left and right locations on the same elevator tab, a flight test is not required.

3) After a replacement of an elevator tab hinge bearing (Figure 518).

NOTE: It is not necessary to do a flight test if you do not remove the elevator tab hinge fitting assemblies from the elevator when you replace the bearing.

4) After replacement of an elevator tab hinge fitting (Figure 518).

5) After a replacement of the inboard elevator tab hinge bushing (Figure 518).

NOTE: It is not necessary to do a flight test if you replace bolts at any elevator tab hinge location, or if you replace bushings at any other tab hinge location.

6) After the replacement of a new or repaired elevator tab control mechanism.

(c) For the stabilizer:

1) After a replacement of the horizontal stabilizer.

NOTE: A power-off flight test is not necessary if the horizontal stabilizer is removed and the same stabilizer, elevator, and elevator tab are re-installed (without elevator or elevator tab rework or adjustment).

(d) For the tailcone:

1) After a replacement of the tailcone.

NOTE: A power-off flight test is not required if the following conditions are met:

- The same tailcone is removed and re-installed (without elevator or elevator tab rework or adjustment).

- The elevator and rudder position is recorded prior to removal (relative to the respective index plates).

- The elevator and rudder position remains the same after re-installation.

(3) Dual Hydraulics Failure: Please read the subsequent instructions before you do the flight test.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Sudden dual hydraulic failure or selection of both flight control switches to off or standby will put the airplane in manual reversion and cause elevator movement to a deflection that balances the air load. The intent of the airplane design and Aircraft Maintenance Manual procedures is to have the resultant pitch upset be easily manageable, but if an out of tolerance elevator tab rigging exists on the airplane, the pitch upset could be significant. Flight Crews, especially for check flights after elevator tab maintenance, should be prepared in the event of a large upset.

(b) Upset recovery techniques are discussed in the maneuvers section of the Flight Crew Training Maneuvers. These techniques provide good guidance in the case of a large upset. Additional items to consider for a dual hydraulic failure are:

1) Elevator forces will be high and elevator control authority reduced in manual reversion hydraulics should not be restored with large column inputs present.

(c) If the pitch upset is significant, immediately accomplish the Upset Recovery maneuver found in the non-normal maneuvers section in the Quick Reference Handbook. For example, the use of bank angle in the event of large nose up pitch rate, described in this section, may be beneficial.

(d) If performing a maintenance check (where hydraulics are available to be restored), the pilot's should coordinate the restoration of hydraulics to ensure that column input is small at time hydraulics are restored. Restoring hydraulics with large column input will result in a large sudden elevator command that may generate a pitch upset in the opposite direction. The pilot flying should reduce column input at the time hydraulics are restored by using stabilizer trim or by momentarily allowing the airplane to maneuver. At the time hydraulics are restored, the pilot flying should be prepared to apply column inputs to maintain control as normal column feel forces return.

D. Prepare for Flight Test

SUBTASK 27-31-00-860-132

(1) Before doing a flight test to verify the elevator tab pushrod adjustment, make sure that you adjust the appropriate system if either of these conditions exist:

(a) Aileron trim requirement is more than 3/4 unit.

NOTE: If the aileron trim requirement is more than 3/4 unit, you need to adjust the aileron trim per the applicable section of PAGEBLOCK 27-09-71/501 before doing an elevator tab adjustment power-off flight test.

(b) Rudder trim requirement is more than 3/4 unit.

NOTE: If the rudder trim requirement is more than 3/4 unit, you need to adjust the rudder trim per the applicable section of PAGEBLOCK 27-09-71/501 before doing an elevator tab adjustment power-off flight test.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-820-014

(2) Adjust the elevator tab pushrods before the flight test, do this task: Elevator Tab Pushrods - Adjustment, TASK 27-31-00-820-805.

E. Flight Test Procedure

SUBTASK 27-31-00-710-008

(1) Make sure that you satisfy these flight conditions:

(a) Indicated Airspeed: 250 kcas

(b) Altitude: Flight Level 15,000 ft (4572 m).

NOTE: The altitude should be within 500 ft (152 m) of the 15,000 ft (4572 m) level to get good flight results. Altitude variation more than 500 ft (152 m) is large enough to cause misleading test results.

(c) Weight requirement:

1) less than 135,000 lb (61,235 kg)

(d) Percentage of MAC center of gravity

NOTE: See Figure 516.

NOTE: The Center of Gravity (CG) percentage Mean Aerodynamic Chord (MAC) is calculated by dispatch based on fuel loads, cargo loading, and passenger loading. This information is calculated for the pilot to enter into the Flight Management Computer (FMC) to get the recommended stabilizer setting for takeoff.

Because the percent MAC center of gravity (for this test) is being used for a flight test with minimal flight crew, no cargo, and a normal fuel burn is anticipated; recording the CG in percent of MAC at takeoff is sufficient for proper adjustment of the tabs.

(e) N1 equal for both engines

(f) Wing fuel loads equal

(g) Flaps up

SUBTASK 27-31-00-860-133

(2) Set the STAB TRIM PRI switch, S272, on the aft area of the control stand, to the CUTOUT position.

NOTE: A speed trim fail master caution annunciation may occur if thresholds are exceeded.

NOTE: As soon as you complete the power off flight test, you must move the STAB TRIM PRI switch to the NORMAL position.

SUBTASK 27-31-00-710-009

(3) Set the SPOILER A and B switches, on the P5 forward overhead panel, to the OFF position.

NOTE: Hold control wheel firmly when you turn the SPOILER A and B switches OFF to control any upset which might occur in pitch or roll direction. If wheel input required to maintain steady flight increases when SPOILER A and B switches are turned off, this could indicate unusual spoiler movement. If the required wheel input increases more than approximately 2 units, higher than normal wheel forces may occur when the FLT CONTROL A and B are turned to STBY RUD.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-860-134

(4) Set the FLT CONTROL A and B switches, on the P5 forward overhead panel, to the STDBY RUD position.

NOTE: To successfully complete the test, the airplane must be re-trimmed to the same airspeed. To provide a greater precision for the maneuver, someone other than the pilot in command should set the switches.

SUBTASK 27-31-00-860-135

(5) If the airplane pitches, use the elevator to re-trim the airplane to the same airspeed:

(a) Manually turn the stabilizer trim wheel to reduce column force to zero.

(b) Keep a record of the number of turns required to re-trim the airplane.

NOTE: During the initial rotation of the stabilizer trim wheel, there might be some freeplay. Do not count the turns until you remove the freeplay.

(c) Keep a record of the center of gravity of the airplane.

SUBTASK 27-31-00-860-136

(6) After completing the elevator power-off flight test portion of the flight, return the switches to their normal flight positions as follows:

NOTE: These are the switches that were moved for the power-off flight test

(a) Set the STAB TRIM PRI switch, S272, on the aft area of the control stand, to the NORMAL position.

(b) Set the FLT CONTROL A and B switches, on the P5 forward overhead panel, to the ON position.

(c) Set the SPOILER A and B switches, on the P5 forward overhead panel, to the ON position.

SUBTASK 27-31-00-700-003

(7) Make sure that the number of turns of the stabilizer trim wheel in the airplane Nose Up or Nose Down direction, are within the limits of the corresponding region in the referenced chart (Figure 516).

NOTE: An example on how to use the Elevator Tab Rig Adjustment Chart is provided in TASK 27-31-00-820-808 in the section Elevator Tab Pushrod Adjustment.

SUBTASK 27-31-00-700-004

(8) If the number of turns of the stabilizer trim wheel in the airplane Nose Up or Nose Down direction, are more than the limits, do the steps that follow:

(a) Make sure that the rigging of the elevator control pushrods, input rod of the Power Control Unit (PCU), and output rod of the elevator feel and centering unit is correct.

(b) If the rigging of the elevator control pushrods, input rod of the elevator PCU, and output rod of the elevator feel and centering unit is satisfactory, do this task: Elevator Tab Pushrod - Adjustment after the Elevator Power-Off Flight Test, TASK 27-31-00-820-808.

(c) If the rigging of the elevator control pushrods, input rod of the elevator PCU, or output rod of the elevator feel and centering unit is not correct, do these tasks:

1) Elevator Control Pushrods - Adjustment, TASK 27-31-00-820-802.

2) Input Rods of the Elevator Power Control Unit - Adjustment, TASK 27-31-00-820-803.

3) Input Rods of the Elevator Neutral Shift Mechanism and Output Rod of the Feel and Centering Unit - Adjustment, TASK 27-31-00-820-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Elevator Tab Pushrod - Adjustment after the Elevator Power-Off Flight Test, TASK 27-31-00-820-808.

TASK 27-31-00-820-808

28. Elevator Tab Pushrod - Adjustment after the Elevator Power-Off Flight Test

(Figure 503, Figure 506, Figure 509, Figure 510, Figure 516)

NOTE: For each elevator tab, if both pushrods are adjusted, then the Elevator Power-Off Flight Test, TASK 27-31-00-710-803 is necessary. If only one pushrod is adjusted and you can verify that the remaining rod has not been replaced or adjusted since the last flight test, then this flight test is not necessary. If only one pushrod is adjusted and you cannot verify that the remaining pushrod has not been replaced or adjusted since the last flight test, then the Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

A. General

(1) Use this procedure to adjust the elevator tab if the number of turns of the stabilizer trim wheel during the elevator power off flight test are more than the allowable limits. (Figure 509, Figure 516)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

E. Elevator Tab Pushrod Adjustment

SUBTASK 27-31-00-970-003

(1) Get the number and direction (airplane nose up or airplane nose down) of stabilizer wheel turns necessary to trim the airplane during the power-off flight test.

SUBTASK 27-31-00-970-004

(2) Get the record of the Center of Gravity that was made during the power-off flight test.

SUBTASK 27-31-00-010-035

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-010-036

(4) For the left elevator tab pushrods, remove this access panel:

Number	Name/Location
334PT	Horizontal Stabilizer, Tab Control Rod Fairing

SUBTASK 27-31-00-010-037

(5) For the right elevator tab pushrods, remove this access panel:

Number	Name/Location
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-00-480-012

CAUTION

MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(6) Use the bar, SPL-1677, to set the "B" dimension to 39.17 ±0.01 in. (994.92 ±0.26 mm). (Figure 503)

NOTE: The “B” dimension must be set with the trammel bar, SPL-1677 and not the stabilizer indicator in the flight deck.

SUBTASK 27-31-00-980-003

(7) Push the elevator trailing edge full up by hand.

SUBTASK 27-31-00-820-015

(8) Then, while you move the elevator down from the trailing edge up position, align the elevator with the index mark in ±0.04 in. (1.0 mm), or less (Figure 506).

NOTE: Keep the elevators at this position while you adjust the tab pushrods. If the elevator position is changed, you must put the elevator trailing edge at full up position and do this step again before you continue.

SUBTASK 27-31-00-480-013

(9) Install the elevator tab rigging bar, SPL-10345 (Figure 510).

(a) Install the elevator tab rigging bar, SPL-10345, below the elevator and elevator tab at the inboard side of the third elevator tab hinge.

1) Make sure that the stand offs for the elevator tab rigging bar, SPL-10345, rest on the skin fastener heads to prevent skin variation.

(b) Make sure that the cross bar on the elevator tab rigging bar, SPL-10345, touches the lower surface of the elevator trailing edge.

(c) Push the elevator tab rigging bar, SPL-10345, FWD until elevator stop indexes on the AFT edge of elevator near elevator rear spar.

SUBTASK 27-31-00-820-016

(10) Adjust the tab pushrods [110] using the Elevator Tab Rig Adjustment Chart. (Figure 516)

NOTE: If necessary, the example below shows how to use the Elevator Tab Rig Adjustment Chart.

NOTE: An example of how to use the Elevator Tab Rig Adjustment Chart is shown with the dashed lines with arrows.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

The example assumes 10.5 airplane nose down handwheel turns are needed to retrim the airplane with a center of gravity of 20 percent MAC on the left chart. Follow the diagonal lines to the left side of the right chart. Make a horizontal line across the chart. Draw a line down from the point where the horizontal line intersects the thick diagonal line on the right chart.

The example shows that you will need to adjust the elevator tab to 0.11 in. (2.8 mm) trailing edge up from the current position to bring the airplane to a neutral elevator tab trim.

NOTE: For coarse adjustment, a half turn of the tab rod end results in approximately 0.10 in. (2.5 mm) at the tab trailing edge Figure 509.

For finer adjustment, one full turn of the bushing [104] (vernier collar) results in approximately0.02 in. (0.5 mm) at the elevator tab trailing edge.

The number of threads showing on the pushrod ends should be approximately equal to the number of threads showing on the bushing [104].

The elevator tab should be adjusted to the nearest 0.01 in. (0.3 mm) shown on the scale at the bottom of the right chart of the Elevator Tab Rig Adjustment Chart.

SUBTASK 27-31-00-820-017

(11) If it is necessary, do this coarse adjustment of the elevator tab pushrods: (Figure 509, Figure 516)

(a) Remove the pins [111], nuts [109], washers [108], bolts [106], and bushings [107] from the tab pushrods [110].

(b) Turn the tab pushrod ends until the adjustment dimension is within 0.1 in. (3 mm).

NOTE: One half turn of the tab pushrod end is equal to 0.10 in. (2.5 mm) at the elevator tab trailing edge.

(c) Install the bushings [107], bolts [106], washers [108], and new nuts [109] to connect the tab pushrods [110] to the elevator tab [102].

NOTE: If you loosened or removed the nuts [109], they need to be replaced and not re-installed. Using new nuts will ensure that they have the required run-on torque of 3.5 in-lb (0.40 N·m).

NOTE: The inboard bolt is installed with the head inboard and the outboard bolt is installed with the head outboard.

(d) Install the elevator tab rigging bar, SPL-10345 (Figure 510).

1) Install the elevator tab rigging bar, SPL-10345, below the elevator and elevator tab at the third elevator tab hinge (from inboard).

a) Make sure that the stand offs for the elevator tab rigging bar, SPL-10345, rest on the skin fastener heads to prevent skin variation.

2) Make sure that the cross bar on the elevator tab rigging bar, SPL-10345, touches the lower surface of the elevator trailing edge.

3) Push the elevator tab rigging bar, SPL-10345, FWD until elevator stop indexes on the AFT edge of elevator near elevator rear spar.

4) Slide step gage FWD under elevator tab to obtain reading.

(e) Make sure that the adjustment measurement is within 0.1 in. (3 mm).

(f) Tighten the new nuts [109] to 70 in-lb (7.9 N·m) - 80 in-lb (9.0 N·m).

SUBTASK 27-31-00-820-018

(12) Do this fine adjustment of the elevator tab pushrods Figure 509:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Turn the bushing [104] to adjust the length of the tab pushrods [110].

NOTE: One half turn of the bushing [104] is equal to 0.01 in. (0.3 mm) at the elevator tab trailing edge.

(b) Loosen the nuts [109] that attach the tab pushrods [110] to the elevator tab [102].

(c) Remove the pins [111] from in front of the head of the bolts [106].

(d) Move the rectangle bolt heads out of the anti-rotation bolt bosses and make sure that you can easily turn the bolts [106] by hand.

1) If it is necessary, adjust the bushing [104] on the tab tab pushrods [110].

NOTE: One half turn of the bushing/rod end assembly is equal to 0.11 in. (2.8 mm).

CAUTION

TIGHTEN THE NUTS [109] CORRECTLY. IF YOU TIGHTEN THEM INCORRECTLY THEN THE PUSHRODS CAN BECOME DISCONNECTED. THIS CAN CAUSE DAMAGE TO THE ELEVATOR, AND STABILIZER.

(e) Tighten the new nuts [109] to 70 in-lb (7.9 N·m) - 80 in-lb (9.0 N·m) and install pins [111].

NOTE: If you loosened or removed the nut [109], they need to be replaced and not re-installed. Using new nuts will ensure that they have the required run-on torque of 3.5 in-lb (0.40 N·m).

(f) Tighten the checknuts [103] and checknuts [105] on the tab pushrods [110] to 150 in-lb (16.9 N·m) - 200 in-lb (22.6 N·m).

SUBTASK 27-31-00-220-004

(13) Make sure that the adjustment measurement is the same.

(a) Install the elevator tab rigging bar, SPL-10345 (Figure 510).

1) Install the elevator tab rigging bar, SPL-10345, below the elevator and elevator tab at the third elevator tab hinge (from inboard).

a) Make sure that the stand offs for the elevator tab rigging bar, SPL-10345, rest on the skin fastener heads to prevent skin variation.

2) Make sure that the cross bar on the elevator tab rigging bar, SPL-10345, touches the lower surface of the elevator trailing edge.

3) Push the elevator tab rigging bar, SPL-10345, FWD until elevator stop indexes on the AFT edge of elevator near elevator rear spar.

4) Slide step gage FWD under elevator tab to obtain reading.

(b) Make sure that the adjustment measurement is the same.

SUBTASK 27-31-00-220-005

(14) Do a check of the thread engagement of the tab pushrod ends and bushings [104]:

NOTE: See Figure 509.

(a) Make sure that the end of the bushing [104] covers the inspection hole on each tab pushrod [110].

(b) Make sure that the inspection hole of each tab pushrod end bearing is not shown.

(c) If the thread engagement is not correct, you must do the coarse adjustment again.

NOTE: See Figure 516.

SUBTASK 27-31-00-430-003

(15) Install lockwire on the checknuts [103] and checknuts [105] Figure 509.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-00-410-028

TASK 27-31-00-710-804

29. Elevator Jam Landing Assist - Test

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this test to do the operational tests on the Elevator Jam Switch, S1214, and ASSIST ON light, L1383.

B. References

Reference	Title
27-61-45-730-801	Spoiler Control Electronics Self Test (P/B 501)
31-65-00-970-801	System Maintenance Data Pages Function (P/B 201)
46-13-02-700-805	Existing Faults Check (P/B 201)
SWPM 20-83-11	ASSEMBLY AND INSTALLATION OF PUSH BUTTON, ROCKER, AND TOGGLE SWITCHES
IFIM and do the applicable procedure(s)	Interactive Fault Isolation Manual

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Test

SUBTASK 27-31-00-710-010

(1) On the MAX Display System (MDS), go to the 27 FLIGHT CONTROLS display in the MAINT DATA PGS (TASK 31-65-00-970-801).

(a) Make sure that all four GEAR ON GRND values read “NEAR”.

SUBTASK 27-31-00-710-011

(2) On the Onboard Maintenance Function (OMF), go to the EXISTING FAULTS page for Chapter 27, Spoiler Control (TASK 46-13-02-700-805).

(a) Make sure that 27-0266X RADIO ALT DATA INVALID is NOT set.

1) If 27-0266X RADIO ALT DATA INVALID is SET, run the SCE TEST to clear the fault (TASK 27-61-45-730-801).

a) Do the steps in the Prepare for the Test again.

b) Do not proceed until the fault has been cleared.

E. Elevator Jam Landing Assist Test

SUBTASK 27-31-00-860-156

(1) Do these steps to check configuration of ELEVATOR JAM LANDING ASSIST switch:

(a) On the aft P5 panel, lift the ELEVATOR JAM LANDING ASSIST switch guard and attempt to put the switch to the middle detent.

NOTE: The ELEVATOR JAM SWITCH can have a middle detent position that does not activate the elevator jam landing assist function.

(b) If the switch has a middle detent position, replace this switch with a two position switch PN 64AT34-3 (SWPM 20-83-11).

SUBTASK 27-31-00-720-001

(2) Do these steps to test the ASSIST ON, L1383, light indicator:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) On the P5 panel, push and hold the ASSIST ON, L1383, light indicator.

1) Make sure that the light comes on.

(b) Release the ASSIST ON light indicator.

1) Make sure that the light turns off.

(c) If the light does not come on, refer to the IFIM and do the applicable procedure(s).

(d) Re-test per initial test procedures.

1) Do the test of the ASSIST ON, L1383, light indicator again.

SUBTASK 27-31-00-710-012

(3) Do these steps to test the ELEVATOR JAM LANDING ASSIST switch:

(a) Put the ELEVATOR JAM LANDING ASSIST switch to the ON position (full forward).

(b) Make sure that the ASSIST ON light comes on.

SUBTASK 27-31-00-710-013

(4) While the switch is in the ON position, do these steps:

(a) Open the EXISTING FAULTS for Chapter 27, Spoiler Control, using the OMF (TASK 46-13-02-700-805).

(b) Make sure that the ELEV JAM SW FAULT, 27-0016X does not show.

SUBTASK 27-31-00-860-137

(5) Put the ELEVATOR JAM LANDING ASSIST switch to the OFF position.

(a) Make sure that the ASSIST ON light turns off.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the elevator

(2) An installation of the elevator

(3) A removal of the elevator control pushrod

(4) An installation of the elevator control pushrod.

B. When it is necessary to balance the elevator, make sure you do a check of the elevator and the elevator tab part numbers. Refer to Chapter 51 of the Structural Repair Manual when you balance the elevator-elevator tab combination after the structural repairs or after you put on new paint.

C. If you install a tab on the elevator during the elevator installation, make sure the number of the elevator control tab adjust weights agree with the tab data plate.

TASK 27-31-11-000-801

2. Elevator - Removal

(Figure 401, Figure 402, Figure 403, Figure 404, Figure 405, Figure 406)

E. Prepare for the Removal

SUBTASK 27-31-11-860-001

(1) Make sure that pressure is removed from the elevator hydraulic systems A and B, do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-11-000-001

(2) Do this task: Tailcone Removal, TASK 53-53-00-000-801.

SUBTASK 27-31-11-010-001

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-11-010-003

(4) For the left elevator, remove these access panels:

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
333CB	Horizontal Stabilizer, Access Panel, Trailing Edge
333DB	Horizontal Stabilizer, Access Panel, Trailing Edge

SUBTASK 27-31-11-010-004

(5) For the right elevator, remove these access panels:

Number	Name/Location
343BB	Horizontal Stabilizer, Access Panel - T.E. Area
343CB	Horizontal Stabilizer, Access Panel - T.E. Area
343DB	Horizontal Stabilizer, Access Panel - T.E. Area

SUBTASK 27-31-11-010-005

(6) For the left elevator, open these access panels:

Number	Name/Location
334AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334BB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334DB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334EB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334FB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334GB	Horizontal Stabilizer, Elevator Hinge Cover
334HB	Horizontal Stabilizer, Elevator Hinge Cover
334JB	Horizontal Stabilizer, Elevator Hinge Cover
334KB	Horizontal Stabilizer, Elevator Hinge Cover
334LB	Horizontal Stabilizer, Elevator Hinge Cover
334MB	Horizontal Stabilizer, Elevator Hinge Cover
334NB	Horizontal Stabilizer, Elevator Hinge Cover

SUBTASK 27-31-11-010-006

(7) For the right elevator, open these access panels:

Number	Name/Location
344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344BB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344DB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344EB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344FB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09
344HB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 66.54
344JB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 121.59
344KB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 176.64
344LB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 213.32
344MB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 250.04
344NB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 265.45

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-11-860-002

(8) Open this circuit breaker and install safety tag:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	8	C00544	FLIGHT RECORDER POSITION SENSOR

SUBTASK 27-31-11-860-003

CAUTION MAKE SURE TO PREVENT DAMAGE TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CHAF OR CAN CAUSE DAMAGE TO THE WIRES OR BUNDLE INSULATION.

(9) Use the bar, SPL-1677, to set “B” dimension at 4 units of trim 39.17 ±0.01 in. (994.92 ±0.26 mm) (Figure 401).

SUBTASK 27-31-11-820-001

(10) Measure and record the elevator tab position.

NOTE: Measuring and recording the elevator tab position before you remove the tab may improve the manual reversion success rate if the tab needs to be adjusted after installation.

(a) If the same tab will be re-installed, then do the following before removing the tab:

1) Make sure that the elevator tab meets the freeplay limits, do this task: Elevator Tab Freeplay - Check, TASK 27-31-32-200-802.

(b) While you move the elevator trailing edge down, align the projected center of the elevator trailing edge with the index mark within ±0.04 in. (1 mm), or less.

1) Measure and record the elevator tab position.

SUBTASK 27-31-11-480-005

(11) Install the rig pin E-5 from rigging pin kit, SPL-1585, in the elevator aft quadrant (Figure 402).

F. Elevator Removal

SUBTASK 27-31-11-020-001

(1) Put the elevator tab control mechanism [22] in a neutral position.

(2) Attach the elevator tab control mechanism [22] to the elevator with clamps.

NOTE: This step prevents the rods from scraping the elevator surface.

(3) Remove the elevator connections to the elevator tab control mechanism [22] (Figure 404).

(a) Remove the screws [17] and washers [25] from the pin retainer [18] and rotate the pin retainer [18] arms away from the bolt [12] heads.

(b) Remove the nut [19], washer [20], bushing [21], and pin assembly [26] that attach the outboard aft attach lug to the elevator [1].

(c) Remove the nut [24], washers [23], and pin assembly [11] that attach the inboard aft attach lug to the elevator [1].

(d) Remove the nuts [16], washers [15], bolts [12], and spacers [13] that attach the tab pushrods [14] to the elevator tab control mechanism [22].

(e) Do not remove the elevator mast arms [91] from the aft attach lugs.

SUBTASK 27-31-11-480-002

(4) If you do not use the sling, SPL-2034, to remove the elevator, you must properly support the elevator while removing the hinge bolts.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(5) Do the following to install the sling, SPL-2034, to the elevator [1] (Figure 403):

(a) Find the bolts [3] on the elevator [1] to attach the sling, SPL-2034.

1) The bolts [3] are on the upper panel next to elevator hinge 3 and hinge 5 (Figure 403).

(b) Remove the bolts [3] from the elevator [1].

(c) Install the forward sling fittings on the elevator [1].

1) Install the bolts [3] to attach each sling fitting to the elevator [1].

(d) Install the aft sling fitting on the elevator [1].

(e) Attach the straps from the forward sling fittings to the aft sling fitting.

(f) Attach the sling, SPL-2034, to the forward sling fittings and aft sling fitting.

(g) Connect an overhead crane to the primary support sling on the sling, SPL-2034.

(h) Connect a tether line to the aft sling fitting.

(i) Use the sling, SPL-2034, to hold the elevator [1].

SUBTASK 27-31-11-020-002

(6) Disconnect the pushrod [38] of the elevator position transmitter [37] from the elevator [1] (Figure 405).

(a) Disconnect the electrical connector [39] from the elevator position transmitter [37].

(b) Remove the bolt [42], washer [41] and spacer [40] from the pushrod [38].

SUBTASK 27-31-11-020-003

(7) Remove the nut [31], nut [32], washer [33], bushing [34], and bolt assembly [35] to disconnect the elevator control pushrod [36] from the elevator [1].

SUBTASK 27-31-11-020-004

(8) Disconnect the balance panels from the elevator [1] (Figure 405).

(a) The bulb seal of the balance panel can be removed for easier removal of the elevator.

SUBTASK 27-31-11-000-002

(9) If necessary, remove the applicable bulb seal (Figure 406).

(a) Remove the bolts [84] and washers [85].

SUBTASK 27-31-11-020-005

(10) Remove the elevator [1] in the following order (Figure 405):

(a) At elevator hinge 1, remove the pin [50], nut [49], washer [48], and bolt [47].

1) Discard the pin [50].

(b) At elevator hinge 2, remove the pin [55], nut [54], washer [53], bolt [51], and bushing [52].

1) Discard the pin [55].

(c) At elevator hinge 4, remove the pin [68], nut [67], washer [66], bolt [63], washer [64], and bushing [65].

1) Discard the pin [68].

(d) At elevator hinge 5, remove pin [73], nut [74], washer [72], bolt [69], washer [70], and bushing [71].

1) Discard the pin [73].

(e) Remove the nuts [82] and washers [83] to disconnect the bonding jumpers [81] from the horizontal stabilizer [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) At elevator hinges 6, 7, and 8, remove the pins [80], nuts [79], washers [78], bolts [75], washers [76], and bushings [77].

1) If it is necessary, pull on the tether line to remove the bolts [75].

2) Discard the pins [80].

(g) At elevator hinge 3, remove the lockwire, pin [62], nut [61], washer [60], bushing [59], bolt [56], and washer [57].

1) Discard the pin [62].

(h) Remove the lockwire from the bushing [58] at hinge 3 and remove the bushing [58].

(i) Remove the elevator [1] from the airplane.

G. Elevator Installation

SUBTASK 27-31-11-820-006

(1) Balance and stamp the elevator assembly with the new static balance hinge moment if you install a reworked, repaired, repainted, or new elevator assembly (SRM PROCEDURE 51-60-04-0G-0).

SUBTASK 27-31-11-640-001

(2) Lubricate the bolts, bushings with grease, D00633.

SUBTASK 27-31-11-420-001

(3) Install the elevator [1] in the order as shown (Figure 405):

(a) Put the elevator [1] at the stabilizer trailing edge using the sling, SPL-2034.

1) If you do not use the sling, SPL-2034, to install the elevator, you must properly support the elevator while installing the hinge bolts.

(b) At elevator hinge 3, do these steps:

1) If necessary, install the secondary bushing at hinge 3.

2) Loosely install the bushing [58]. Do not tighten the bushing [58] until it seats against the horizontal stabilizer bearing.

3) Install the washer [57] and bolt [56] with the bolt head inboard.

4) Loosely install the bushing [59], washer [60], and nut [61].

a) Make sure that the clearance between the washer [60] and the flanged bushing on the elevator hinge is not less than 0.015 in. (0.381 mm).

(c) At elevator hinge 1, do these steps:

1) Install the bolt [47] with the bolt head outboard.

a) Do not install the washer [48], nut [49], or pin [50] at this time.

(d) At elevator hinge 2, do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Install the bolt [51] and bushing [52] with the bolt head inboard.
   a) Do not install the washer [53], nut [54], or new pin [55] at this time.

(e) At elevator hinges 8, 7, and 6, do the following steps starting at hinge 8, then hinge 7, and then hinge 6:
1) Install the bushings [77], washers [76], and bolts [75] with the bolt head outboard.
   a) Make sure that the clearance between the washer [76] and the bushing on the elevator hinge is not less than 0.015 in. (0.381 mm).
2) Install the washers [78] and nuts [79].
   a) Tighten the nuts [79] to 50 in-lb (5.6 N·m) - 75 in-lb (8.5 N·m).
3) Install the new pins [80].

(f) At elevator hinge 4, do these steps:
1) Install the bushing [65], washer [64], and bolt [63] with the bolt heads outboard.
   a) Make sure that the clearance between the washer [64] and the bushing on the elevator hinge is not less than 0.015 in. (0.381 mm).
2) Install washer [66] and nut [67].
   a) Tighten the nut [67] to 90 in-lb (10.2 N·m) - 125 in-lb (14.1 N·m).
3) Install the new pin [68].

(g) At elevator hinge 5, do these steps:
1) Install the bushing [71], washer [70], and bolt [69] with the bolt head outboard.
   a) Make sure the clearance between the washer [70] and the bushing on the elevator hinge is not less than 0.015 in. (0.381 mm).
2) Install the washer [72] and nut [74].
   a) Tighten the nut [74] to 90 in-lb (10.2 N·m) – 125 in-lb (14.1 N·m).
3) Install the new pin [73].

(h) Connect the bonding jumpers [81] to the horizontal stabilizer [2]:
1) Clean the fay surfaces of the elevator [1], horizontal stabilizer [2], and bonding jumpers [81] (SWPM 20-20-00, Paragraph 2)
2) Install the washers [83] and nuts [82] to attach the bonding jumpers [81] to the horizontal stabilizer [2].
3) Use the intrinsically safe approved bonding meter, COM-1550 to make sure there is a maximum of 0.010 ohm (10 milliohms) between the horizontal stabilizer [2] and elevator [1] (SWPM 20-20-10, Paragraph 5).
   a) Make sure that the bonding resistance is 0.010 ohm (10 milliohms) or less.
   b) Make sure that the measured resistance is less than the maximum bonding resistance as specified in SWPM 20-20-10, Paragraph 5.
4) Seal the bonding jumper ends and fasteners with sealant, A00247.

SUBTASK 27-31-11-080-001

(4) If the sling, SPL-2034 was used for installation of the elevator, do the following to remove it from the elevator [1] (Figure 403):
(a) Remove the fasteners to disconnect the forward sling fittings from the elevator [1].
(b) Remove the forward sling fittings from the elevator [1].
(c) Install the bolts [3] on the elevator [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Remove the aft sling fitting from the elevator [1].

SUBTASK 27-31-11-080-002

(5) Remove the rig pin E-5 of the rigging pin kit, SPL-1585, from the elevator aft quadrant.

SUBTASK 27-31-11-710-001

(6) Do an initial check of the elevator full travel by turning the elevator [1] full up and full down by hand.

(a) Make sure that the elevator [1] moves a minimum of 25.87 degrees trailing edge up from the neutral index mark and a minimum of 19.53 degrees trailing edge down from the neutral index mark. Use the digital protractor, STD-1232, to measure the angle.

1) If you do not get one or both of the required angles, disconnect the elevator control pushrod [36] from the mast arm fitting (Figure 405), and measure the angles again.

SUBTASK 27-31-11-400-002

(7) If removed, install the applicable bulb seal (Figure 406).

(a) Apply Cor-Ban 27L Compound, G50237, (preferred) or corrosion preventive compound, C00308, (alternate) to all areas of the holes for the bolts [84].

(b) Install the bolts [84] and washers [85].

(c) Tighten the bolts [84] to 25 in-lb (3 N·m).

SUBTASK 27-31-11-480-003

(8) Install the rig pin E-5 of the rigging pin kit, SPL-1585, to the elevator aft quadrant.

SUBTASK 27-31-11-420-002

CAUTION

MAKE SURE THAT THE IDLER HINGE MOVES DOWN FROM THE STABILIZER SUPPORT BEAM WHEN YOU ATTACH THE BALANCE PANELS TO THE ELEVATOR. IF YOU DO NOT INSTALL THE BALANCE PANELS CORRECTLY, IT CAN CAUSE DAMAGE TO EQUIPMENT.

(9) Connect the balance panels to the elevator [1] (Figure 405):

(a) Install the washers [46] and bolts [45].

(b) Install the washer [44] and bolt [43].

(c) Check the elevator balance panel seal gap Elevator Balance Panel - Installation, TASK 27-31-41-400-801.

(d) Make sure that you install the hinge seals correctly before you tighten the bolts [45] and bolt [43].

SUBTASK 27-31-11-020-006

(10) Connect the elevator tab control mechanism [22] to the elevator [1] and tab pushrods [14] (Figure 404):

(a) Install the bushings [21], pin assemblies [26], washers [20], and nuts [19] that attach the outboard aft attach lug to the elevator [1].

(b) Install the nut [24], washers [23], and pin assembly [11] that attach the inboard aft attach lug to the elevator [1].

(c) Tighten the mechanism nuts [19] to 30 in-lb (3.4 N·m) - 40 in-lb (4.5 N·m).

(d) Install the spacers [13], bolts [12], washers [15], and new nuts [16] to attach the tab pushrods [14] to the elevator tab control mechanism [22].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) If you loosened or removed the nuts [16], they need to be replaced with new nuts. Using new nuts will ensure that they have the required run-on torque. Make sure that new nuts are installed.

(e) Tighten the nuts [16] to 70 in-lb (7.9 N·m) - 80 in-lb (9.0 N·m).

(f) Install the pin retainers [18] with the washers [25] and screws [17].

(g) Remove the clamps that prevent movement of the elevator tab control mechanism [22].

SUBTASK 27-31-11-420-008

(11) At elevator hinge 1, do these steps:

(a) Install washer [48] and nut [49].

1) Tighten the hinge 1 nut [49] to 95 in-lb (10.7 N·m) - 160 in-lb (18.1 N·m).

(b) Install the new pin [50].

SUBTASK 27-31-11-420-003

(12) At elevator hinge 2, do these steps:

(a) Install washer [53] and nut [54].

1) Tighten the hinge 2 nut [54] to 95 in-lb (10.7 N·m) - 160 in-lb (18.1 N·m).

(b) Install the new pin [55].

SIA 001-006

SUBTASK 27-31-11-420-004

(13) At elevator hinge 3, do one of the following steps:

(a) Safety the hinge 3 bushing and nut (Method 1):

1) Tighten the hinge 3 bushing [58] using only hand pressure until it seats against the horizontal stabilizer bearing.

2) Tighten the hinge 3 nut [61] to 90 in-lb (10.2 N·m) - 125 in-lb (14.1 N·m).

3) Install the new pin [62].

NOTE: It is recommended to install the cotter pin part number BACP18BC02A06P at the elevator hinge 3 location. Operators whose expendable/parts AIPC references cotter pin part number BACP18BC02A06P for the elevator hinge 3 location may disregard this note.

4) Install the MS20995C32 lockwire, G01048, from the bushing [58] to the elevator [1] hinge 3 fitting to the nut [86] to prevent clockwise and counterclockwise rotation (TASK 20-10-44-400-801).

5) Apply sealant, A00247, to the lockwire hole on the hinge 3 fitting of the elevator [1].

(b) Safety the hinge 3 bushing and nut (Method 2):

1) Tighten the hinge 3 bushing [58] using only hand pressure until it seats against the horizontal stabilizer bearing.

2) Align the lockwire holes of the hinge 3 bushing [58] with the hinge 3 nut [86] by loosening or tightening the bushing [58] no more than a quarter turn.

3) Make sure that the clearance between the washer [60] and the flanged bushing on the elevator hinge is not less than 0.015 in. (0.381 mm).

4) Tighten the hinge 3 nut [61] to 90 in-lb (10.2 N·m) - 125 in-lb (14.1 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SIA 001-006 (Continued)

5) Install the new pin [62].

NOTE: It is recommended to install the cotter pin part number BACP18BC02A06P at the elevator hinge 3 location. Operators whose expendable/parts AIPC references cotter pin part number BACP18BC02A06P for the elevator hinge 3 location may disregard this note.

6) Install the MS20995C32 lockwire, G01048, from the nut [86] to the elevator [1] hinge 3 fitting (TASK 20-10-44-400-801).

7) Install the MS20995C32 lockwire, G01048, from the bushing [58] to the nut [86] (TASK 20-10-44-400-801).

8) Apply Cor-Ban 27L Compound, G50237, to the lockwire hole on the hinge 3 of the elevator [1].

SIA 007-999

SUBTASK 27-31-11-420-009

(14) At elevator hinge 3, do the following steps:

(a) Tighten the hinge 3 bushing [58] using only hand pressure until it seats against the horizontal stabilizer bearing.

(b) Align the lockwire holes of the hinge 3 bushing [58] with the hinge 3 nut [86] by loosening or tightening the bushing [58] no more than a quarter turn.

(c) Make sure that the clearance between the washer [60] and the flanged bushing on the elevator hinge is not less than 0.015 in. (0.381 mm).

(d) Tighten the hinge 3 nut [61] to 90 in-lb (10.2 N·m) - 125 in-lb (14.1 N·m).

(e) Install the new pin [62].

NOTE: It is recommended to install the cotter pin part number BACP18BC02A06P at the elevator hinge 3 location. Operators whose expendable/parts AIPC references cotter pin part number BACP18BC02A06P for the elevator hinge 3 location may disregard this note.

(f) Install the MS20995C32 lockwire, G01048, from the nut [86] to the elevator [1] hinge 3 fitting (TASK 20-10-44-400-801).

(g) Install the MS20995C32 lockwire, G01048, from the bushing [58] to the nut [86] (TASK 20-10-44-400-801).

(h) Apply Cor-Ban 27L Compound, G50237, to the lockwire hole on the hinge 3 of the elevator [1].

SIA ALL

SUBTASK 27-31-11-710-002

(15) Do a final check of the elevator full travel by turning the elevator [1] full up and full down by hand.

(a) Make sure that the elevator [1] moves a minimum of 25.87 degrees trailing edge up from the neutral index mark and a minimum of 19.53 degrees trailing edge down from the neutral index mark. Use the digital protractor, STD-1232, to measure the angle.

1) If you do not get one or both of the required angles, disconnect the elevator control pushrod [36] from the mast arm fitting (Figure 405), and measure the angles again.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-11-420-005

(16) Connect the pushrod [38] of the elevator position transmitter [37] to the elevator [1] (Figure 405):

(a) Install the bolt [42], washer [41], and spacer [40] to the pushrod [38].

(b) Connect the electrical connector [39] to the elevator position transmitter [37].

SUBTASK 27-31-11-420-006

(17) Connect the elevator control pushrod [36] to the elevator [1] (Figure 405):

(a) Move the elevator [1] to the neutral position.

(b) Install the bolt assembly [35] (with the pin head outboard), bushing [34], washer [33], and nut [32].

1) Tighten the nut [32] to 600 in-lb (67.8 N·m) - 700 in-lb (79.1 N·m).

CAUTION

DO NOT TIGHTEN NUT [32] AFTER YOU TIGHTEN NUT [31]. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(c) Install the nut [31].

1) Tighten the nut [31] to 170 in-lb (19.2 N·m) - 240 in-lb (27.1 N·m).

SUBTASK 27-31-11-080-003

(18) Remove the rig pin E-5 of the rigging pin kit, SPL-1585 from the elevator aft quadrant.

SUBTASK 27-31-11-700-001

(19) Check the adjustment of the elevator blade seal gaps:

(a) Make sure that the stabilizer and elevator are at their neutral positions.

(b) Make sure that the elevator blade seal gap is within the tolerance of 0.020 +0.030 / -0.010 in. (0.51 +0.76 / -0.26 mm) (Figure 407).

SUBTASK 27-31-11-640-002

(20) Do this task: Elevator Buss Crank and Master Arm Fitting - Lubrication, TASK 12-22-31-600-801.

SUBTASK 27-31-11-860-004

(21) Remove the safety tag and close this circuit breaker:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	8	C00544	FLIGHT RECORDER POSITION SENSOR

SUBTASK 27-31-11-860-005

(22) Adjust and test the elevator system by doing the following:

NOTE: If you install the same elevator that you removed from the airplane, and no repairs or modifications to the elevator or adjustments to the elevator system have been made, then it is not necessary to do the adjustment steps of the elevator system below. Continue to the elevator tab pushrod adjustment section of this procedure.

(a) Do this task: Elevator Control Pushrods - Adjustment, TASK 27-31-00-820-802.

(b) Do this task: Input Rods of the Elevator Power Control Unit - Adjustment, TASK 27-31-00-820-803.

(c) Do the following test for elevator centering:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Set the FLT CONTROL B switch on the forward overhead panel, P5, to the OFF position.
2) Make sure that the FLT CONTROL A switch on the forward overhead panel, P5, is in the ON position.
3) Make sure that the captain's control column is at the neutral position.
   a) Make sure that the right elevator aligns with the index mark in ± 0.06 in. (1.5 mm) (Figure 27-31-00-990-813).
4) Set the FLT CONTROL B switch to the ON position.
   a) Make sure that the right elevator aligns with the index mark in ± 0.06 in. (1.5 mm).
5) Set the FLT CONTROL A switch to the OFF position.
6) Make sure that the FLT CONTROL B switch is in the ON position.
7) Set the FLT CONTROL A switch to the ON then to the OFF position.
   a) Make sure that there is less than 0.02 in. (0.5 mm) movement at the right elevator trailing edge.
8) Set the FLT CONTROL B switch to the OFF then to the ON then to the OFF position.
   a) Make sure that there is less than 0.02 in. (0.5 mm) movement at the right elevator trailing edge.
9) Set the FLT CONTROL A and B switches to the ON position.
10) Make sure that the captain's control column is at the neutral position.
    a) Make sure that the right elevator aligns with the index mark in ± 0.06 in. (1.5 mm).
11) Move the captain's control column forward approximately 2 degrees and release.
    a) Make sure that the right elevator trailing edge aligns with the index mark in 0.00 ±0.12 in. (0.0 ±3.0 mm).
12) Move the captain's control column aft approximately 2 degrees and release.
    a) Make sure that the right elevator trailing edge aligns with the index mark in 0.00 ±0.12 in. (0.0 ±3.0 mm).

SUBTASK 27-31-11-820-002

(23) Adjust the elevator tab pushrods by doing the following:

NOTE: If the elevator tabs, tab control mechanism, or tab rods have not been replaced, repaired or modified, and no adjustments to the tab pushrods have been made, then it is not necessary to do the adjustment of the elevator tab pushrods in the following step. Do the elevator position transmitter installation test.

(a) Do this task: Elevator Tab Pushrods - Adjustment, TASK 27-31-00-820-805.

NOTE: If the elevator tab position measurements were recorded in the elevator removal steps, then adjust the elevator and tab control system to the position measured prior to removal.

(b) Do this task: Elevator Position Transmitter Installation Test, TASK 31-31-51-700-801.

(c) Do this task: Manual Mode - Test, TASK 27-31-00-700-808.

(d) Do this task: Elevator Surface Friction and Balance - Test, TASK 27-31-00-700-803.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) For the left elevator, install this access panel: (Elevator Balance Panel - Installation, TASK 27-31-41-400-801)

Left elevator:

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge

(f) For the left elevator, install these access panels:

Number	Name/Location
334GB	Horizontal Stabilizer, Elevator Hinge Cover
334HB	Horizontal Stabilizer, Elevator Hinge Cover
334JB	Horizontal Stabilizer, Elevator Hinge Cover
334KB	Horizontal Stabilizer, Elevator Hinge Cover
334LB	Horizontal Stabilizer, Elevator Hinge Cover
334MB	Horizontal Stabilizer, Elevator Hinge Cover
334NB	Horizontal Stabilizer, Elevator Hinge Cover

(g) For the right elevator, install this access panel: (Elevator Balance Panel - Installation, TASK 27-31-41-400-801)

Right elevator:

Number	Name/Location
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

(h) For the right elevator, install these access panels:

Number	Name/Location
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09
344HB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 66.54
344JB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 121.59
344KB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 176.64
344LB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 213.32
344MB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 250.04
344NB	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 265.45

(i) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

1) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

(j) Do this task: Elevator Travel Limit - Test, TASK 27-31-00-700-805.

(k) Do this task: Elevator Output Torque Tube Buss Linkage Test, TASK 27-31-00-700-806.

(l) Do this task: Elevator Tab Linkage - Test, TASK 27-31-00-700-807.

(m) Do this task: Control Column Travel and Centering - Test, TASK 27-31-00-700-809.

(n) Do this task: Control Column Power Force - Test, TASK 27-31-00-700-810.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-11-400-001

(1) Do this task: Tailcone Installation, TASK 53-53-00-400-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-11-410-002

(2) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-11-710-003

(3) Do this task: Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

NOTE: Depending on which systems have been disturbed, you may not have to do a power-off flight test. To see if you need to do a power-off flight test, check the requirements in the “General” section at the beginning of the power-off flight test task.

——— END OF TASK ———

TASK 27-31-11-000-802

4. Elevator Control Pushrod - Removal

(Figure 403, Figure 408 and Figure 409)

A. General

(1) This task is for the removal of an elevator control pushrod.

B. References

Number	Name/Location
334GB	Horizontal Stabilizer, Elevator Hinge Cover
343AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09

F. Prepare for the Removal

SUBTASK 27-31-11-970-001

(1) Measure and record the elevator tab trailing edge position.

SUBTASK 27-31-11-860-006

(2) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-11-010-013

(3) Gain access to the bolt assembly [35] as follows:

(a) For the left horizontal stabilizer, open these access panels:

Number	Name/Location
333AB	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer to Body
334AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334GB	Horizontal Stabilizer, Elevator Hinge Cover

(b) For the right horizontal stabilizer, open these access panels:

Number	Name/Location
343AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09

(c) Remove the bolts [100], washers [101], and the front sliding seal rail [102].

(d) Remove the bolts [103], washers [104], and the aft sliding seal rail [105].

(e) Remove the bolts [106], washers [107], and nuts [108] that hold the sliding seal [109] to the bracket [110].

(f) Remove the sliding seal [109] to gain access to the bolt assembly [35].

SUBTASK 27-31-11-010-007

(4) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-11-860-007

(5) Open this circuit breaker and install safety tag:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	8	C00544	FLIGHT RECORDER POSITION SENSOR

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-11-860-008

CAUTION: MAKE SURE TO PREVENT DAMAGE TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CHAF OR CAN CAUSE DAMAGE TO THE WIRES OR BUNDLE INSULATION.

(6) Use the bar, SPL-1677 to set “B” dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)). (Figure 401)

SUBTASK 27-31-11-820-003

(7) Install the rig pin E-5 from rigging pin kit, SPL-1585 in the elevator aft quadrant (Figure 402).

SUBTASK 27-31-11-480-004

(8) If the sling, SPL-2034 is used to support the elevator assembly while the elevator control pushrod [36] is removed, do the following (Figure 403):

(a) Find the bolts [3] on the elevator [1] to attach the sling, SPL-2034 (Figure 405).

NOTE: The bolts [3] are on the upper panel next to elevator hinge 3 and hinge 5.

(b) Remove the bolts [3] from the elevator [1].

(c) Install the forward sling fittings on the elevator [1].

1) Install the fasteners to attach each sling fitting to the elevator [1].

(d) Install the aft sling fitting on the elevator [1].

(e) Attach the straps from the forward sling fittings to the aft sling fitting.

(f) Attach the sling, SPL-2034 to the forward sling fittings and aft sling fitting.

(g) Connect an overhead crane to the primary support sling on the sling, SPL-2034.

(h) Connect a tether line to the aft sling fitting.

(i) Use the sling, SPL-2034 to hold the elevator [1].

G. Pushrod Removal

(Figure 408)

SUBTASK 27-31-11-020-007

(1) Remove the nut [31], nut [32], washer [33], bushing [34], and bolt assembly [35] to disconnect the elevator control pushrod [36] from the elevator mast arm [91].

SIA 015

(a) If installed, remove the washer, BACW10EG24CK, under the head of the bolt assembly [35].

SIA ALL

SUBTASK 27-31-11-020-008

(2) Remove thenut [92], nut [93], washer [94], bushing [95], and bolt assembly [96] to disconnect the elevator control pushrod [36] from the elevator buss crank [97].

SIA 015

(a) If installed, remove the washer, BACW10EG24CK, under the head of the bolt assembly [96].

SIA ALL

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-11-020-009

(3) Remove the elevator control pushrod [36].

H. Elevator Control Pushrod Installation

SUBTASK 27-31-11-640-003

(1) Lubricate the bolts and bushings with grease, D00633.

SUBTASK 27-31-11-420-007

(2) Install the bolt assembly [96]:

(a) Make sure that the elevator [1] is in the neutral position.

(b) Connect the end of the elevator control pushrod [36] labeled FWD to the elevator buss crank [97] (Figure 408)

1) Install the bolt assembly [96] (with the bolt head outboard) bushing [95], washer [94], and nut [93].

SIA 015

a) If removed, install the washer, BACW10EG24CK, under the head of the bolt assembly [96].

SIA ALL

2) Tighten the nut [93] to 600 in-lb (67.8 N·m) – 700 in-lb (79.1 N·m).

CAUTION

DO NOT TIGHTEN NUT [93] AFTER YOU TIGHTEN NUT [92]. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

3) Install the nut [92].

4) Tighten the nut [92] to 170 in-lb (19.2 N·m) – 240 in-lb (27.1 N·m).

(c) Connect the elevator control pushrod [36] to the elevator mast arm [91]:

1) Install the bolt assembly [35] (with the bolt head outboard), bushing [34], washer [33], and nut [32].

SIA 015

a) If removed, install the washer, BACW10EG24CK, under the head of the bolt assembly [35].

SIA ALL

2) Tighten the nut [32] to 600 in-lb (67.8 N·m) – 700 in-lb (79.1 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

DO NOT TIGHTEN NUT [32] AFTER YOU TIGHTEN NUT [31]. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

3) Install the nut [31].

4) Tighten the nut [31] to 170 in-lb (19.2 N·m) – 240 in-lb (27.1 N·m).

SUBTASK 27-31-11-080-004

(3) If you used the sling, SPL-2034 to support the elevator assembly, do these steps to remove the sling, SPL-2034 from the elevator [1]:

(a) Remove the fasteners to disconnect the forward sling fittings from the elevator [1].

(b) Remove the forward sling fittings from the elevator [1].

(c) Install the bolts [3] on the elevator [1].

(d) Remove the aft sling fitting from the elevator [1].

SUBTASK 27-31-11-860-009

(4) Remove the safety tag and close this circuit breaker:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	8	C00544	FLIGHT RECORDER POSITION SENSOR

SUBTASK 27-31-11-820-004

(5) Do this task: Elevator Control Pushrods - Adjustment, TASK 27-31-00-820-802.

SUBTASK 27-31-11-700-002

(6) Do this task: Input Rods of the Elevator Power Control Unit - Adjustment, TASK 27-31-00-820-803.

SUBTASK 27-31-11-700-003

(7) Do this task: Elevator Tab Pushrods - Adjustment, TASK 27-31-00-820-805.

SUBTASK 27-31-11-820-005

(8) Do this task: Elevator Position Transmitter Installation Test, TASK 31-31-51-700-801.

SUBTASK 27-31-11-710-004

(9) Do this task: Manual Mode - Test, TASK 27-31-00-700-808.

NOTE: Keep the hydraulic system pressurized after the test.

SUBTASK 27-31-11-790-001

(10) Do a check of the hydraulic connection on the elevator tab mechanism actuator for hydraulic fluid leaks.

SUBTASK 27-31-11-710-005

(11) Do this task: Elevator Surface Friction and Balance - Test, TASK 27-31-00-700-803.

SUBTASK 27-31-11-710-006

(12) Do this task: Elevator Travel Limit - Test, TASK 27-31-00-700-805.

SUBTASK 27-31-11-710-007

(13) Do this task: Elevator Output Torque Tube Buss Linkage Test, TASK 27-31-00-700-806.

SUBTASK 27-31-11-710-008

(14) Do this task: Elevator Tab Linkage - Test, TASK 27-31-00-700-807.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-11-710-009

(15) Do this task: Control Column Travel and Centering - Test, TASK 27-31-00-700-809.

SUBTASK 27-31-11-700-004

(16) Do this task: Control Column Power Force - Test, TASK 27-31-00-700-810.

SUBTASK 27-31-11-700-005

(17) Do this task: Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-11-410-008

(1) Install the sliding seal [109] as follows:

(a) Move the sliding seal [109] back to its usual position.

(b) Install the bolts [106], washers [107], and nuts [108] that hold the sliding seal [109] to the bracket [110].

1) Install the bolts [106] with the bolt heads facing inboard.

2) Fay seal entire mating surface with polysulfide sealant, A50473.

(c) Install the bolts [103], washers [104] and the aft sliding seal rail [105].

1) Install the bolts [103] with polysulfide sealant, A50473.

(d) Install the bolts [100], washer [101] and the front sliding seal rail [102].

1) Install the bolts [100] with polysulfide sealant, A50473.

(e) For the left horizontal stabilizer, close these access panels:

Number	Name/Location
333AB	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer to Body
334AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334GB	Horizontal Stabilizer, Elevator Hinge Cover

(f) For the right horizontal stabilizer, close these access panels:

Number	Name/Location
343AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09

SUBTASK 27-31-11-410-004

(2) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-11-710-010

(3) Do this task: Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR POWER CONTROL UNIT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of an elevator power control unit (PCU)

(2) An installation of an elevator PCU.

B. This procedure is applicable for the left and right elevator PCUs.

TASK 27-31-14-000-801

2. Elevator Power Control Unit - Removal

(Figure 401, Figure 402, Figure 403)

(Continued)

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-14-860-001

(2) Use the bar, SPL-1677 to set the B dimension at 39.16 in. (994.66 mm) - 39.18 in. (995.17 mm) (Figure 401).

NOTE: Make sure to protect wire bundles when using the trammel bar, SPL-1677. The sharp edges on the trammel bar, SPL-1677 can cause chafing or damage to the wires.

SUBTASK 27-31-14-860-002

(3) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

F. Elevator PCU Removal

(Figure 402)

SUBTASK 27-31-14-020-001

(1) Remove the nuts [22], washers [21], washer [20], and bolts [19] to disconnect the four input rods [23] from the four input cranks [18] (two on each elevator Power Control Unit (PCU)).

NOTE: Move the control column to move the quadrant out of the way when there are clearance problems with the lower input rod attach bolt.

SUBTASK 27-31-14-020-002

(2) Move the four input cranks [18] forward.

SUBTASK 27-31-14-480-001

(3) Install the rig pin E-5 from the rigging pin kit, SPL-1585 in the elevator aft control quadrant (Figure 402).

NOTE: To easily get access to the lower connection, set the input cranks on the rig pin E-5.

(a) If necessary, disconnect the vernier control rod [30] and vernier control rod [31] so that the torque tube can be rotated to gain access to the PCU attach bolt (Fig. 402).

SUBTASK 27-31-14-020-003

(4) Remove the elevator PCU [6]:

(a) Remove the nut [17], washer [16], nut [15], washer [14], bolt [12], and bushing [13] that attach the elevator PCU [6] to the mounting brackets.

NOTE: If necessary, move the control quadrant to rotate the input cranks out of the way of the PCU attachment bolt head.

WARNING

RELEASE THE HYDRAULIC CONNECTION SLOWLY AND LET THE PRESSURE DECREASE BEFORE YOU FULLY REMOVE THE HYDRAULIC LINES. IF YOU DISCONNECT THE HYDRAULIC LINE WHEN IT HAS PRESSURE, A SPRAY OF HYDRAULIC FLUID CAN CAUSE INJURY TO PERSONS.

(b) Disconnect the hydraulic line [3] an hydraulic line [24] from the applicable elevator PCU [6].

1) Install caps and plugs on the hydraulic lines and ports.

(c) Remove the nut [11], washer [10], washer [9], and bolt [8] that attach the elevator PCU [6] to the output torque tube [7].

(d) Remove the elevator PCU [6] from the airplane.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-14-480-002

(5) If you remove the two elevator PCUs at the same time, then install the fixture, SPL-1683 in the position of the right elevator PCU [6] (Figure 403).

(a) Put the fixture, SPL-1683 between the output torque tube and input crank.

(b) Install the pins of fixture, SPL-1683 to hold the fixture, SPL-1683 in position.

F. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

G. Prepare for the Installation

SUBTASK 27-31-14-860-003

(1) Make sure that the pressure to the elevator hydraulic systems A and B is removed (TASK 27-31-00-800-802).

SUBTASK 27-31-14-080-001

(2) Remove the fixture, SPL-1683 if it is applicable.

H. Elevator PCU Installation

SUBTASK 27-31-14-420-001

(1) If the packings and unions are not installed in the elevator PCU [6], then do these steps:

(a) Lubricate the new packing [1] and the new packing [5] with hydraulic fluid, D00153.

(b) Install the packing [1], union [2], packing [5], and union [4] in the elevator PCU [6].

SUBTASK 27-31-14-420-002

(2) Install the elevator PCU [6]:

(a) Apply grease, D00633 to the bolt [8] and bolt [12].

(b) Put the elevator PCU [6] in its position.

(c) Install the bolt [8] with the bolt head inboard, washer [9], washer [10], and nut [11] to attach the elevator PCU [6] to the output torque tube [7].

1) Tighten the nut [11] to 558 in-lb (63.05 N·m) - 592 in-lb (66.89 N·m).

(d) Install the bushing [13], bolt [12], washer [14], and nut [15] to attach the elevator PCU [6] to the mounting bracket.

NOTE: For the right elevator Power Control Unit (PCU), install the bolt [12] with the bolt head inboard. For the left elevator PCU, install the bolt [12] with the bolt head inboard.

1) Tighten the nut [15] to 550 in-lb (62.1 N·m) - 600 in-lb (67.8 N·m).

CAUTION

DO NOT TIGHTEN THE NUT [15] AGAIN AFTER YOU TIGHTEN THE NUT [17]. YOU CAN CAUSE DAMAGE TO THE EQUIPMENT.

(e) Install the washer [16] and nut [17].

1) Tighten the nut [17] to 225 in-lb (25.4 N·m) - 250 in-lb (28.2 N·m).

SUBTASK 27-31-14-080-002

(3) Remove the rig pin E-5 of the rigging pin kit, SPL-1585 from the elevator aft control quadrant.

(a) If necessary, connect the vernier control rod [30] and vernier control rod [31] if they were disconnected to give access to the PCU attach bolt.

SUBTASK 27-31-14-860-004

(4) Move the elevator PCU [6] to the fully retracted position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-14-420-003

(5) Connect the four input rods [23] to the four input cranks [18] (two on each PCU):

NOTE: Move the control column to move the quadrant out of the way when there are clearance problems with the lower input rod attach bolt.

(a) Apply grease, D00633 to the bolts [19].

(b) Install the bolts [19], washers [20], washers [21], and nuts [22].

NOTE: For the outboard bolt, install the bolt [19] with the bolt head outboard. For the inboard bolt, install the bolt [19] with the bolt head inboard.

SUBTASK 27-31-14-420-004

(6) Remove the caps and the plugs from the and hydraulic lines and ports.

(a) Remove hydraulic fluid that falls on the floor.

SUBTASK 27-31-14-420-005

(7) For the right elevator PCU [6], do these steps:

(a) Connect the hydraulic line [3] and hydraulic line [24] to the right elevator PCU [6].

(b) Tighten the B-nut on the RETURN port hydraulic line [3] to 161 in-lb (18.2 N·m) - 179 in-lb (20.2 N·m).

(c) Tighten the B-nut on the PRESSURE port hydraulic line [24] to 104 in-lb (11.8 N·m) - 116 in-lb (13.1 N·m).

SUBTASK 27-31-14-420-006

(8) For the left elevator PCU [6], do these steps:

(a) Connect the hydraulic line [3] and hydraulic line [24] to the right elevator PCU [6].

(b) Tighten the B-nut on the RETURN port hydraulic line [3] to 161 in-lb (18.2 N·m) - 179 in-lb (20.2 N·m).

(c) Tighten the B-nut on the PRESSURE port hydraulic line [24] to 104 in-lb (11.8 N·m) - 116 in-lb (13.1 N·m).

SUBTASK 27-31-14-860-005

(9) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-14-820-001

(10) Do this task: Input Rods of the Elevator Power Control Unit - Adjustment, TASK 27-31-00-820-803.

SUBTASK 27-31-14-820-002

(11) Do this task: Elevator Surface Friction and Balance - Test, TASK 27-31-00-700-803.

SUBTASK 27-31-14-820-003

(12) Do this task: Elevator Travel Limit - Test, TASK 27-31-00-700-805.

SUBTASK 27-31-14-820-004

(13) Do this task: Manual Mode - Test, TASK 27-31-00-700-808.

SUBTASK 27-31-14-820-005

(14) Do this task: Control Column Travel and Centering - Test, TASK 27-31-00-700-809.

SUBTASK 27-31-14-820-006

(15) Do this task: Control Column Power Force - Test, TASK 27-31-00-700-810.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-14-410-001

(1) Close these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
317BL	Tailcone Access Door
318BR	Tailcone Access Door

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR POWER CONTROL UNIT - INSPECTION/CHECK

1. General

A. This procedure has these inspection tasks:

(1) Elevator Power Control Unit (PCU) Visual Inspection

(2) Elevator PCU Inspection.

(a) This task supplies the data for a dimensional inspection of the elevator PCU.

(b) This task does not remove or install the elevator PCU, refer to the Elevator Power Control Unit - Removal/Installation procedures to remove and install the elevator PCU.

TASK 27-31-14-210-801

2. Elevator Power Control Unit Visual Inspection

(Figure 601)

NOTE: This procedure is a scheduled maintenance task.

D. Elevator Power Control Unit Visual Inspection

SUBTASK 27-31-14-860-006

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SPOILERS AND THE THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) To pressurize hydraulic systems A and B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-31-14-010-004

(2) Remove this access panel to get access to the elevator Power Control Units (PCUs):

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-14-210-001

(3) Do a general visual inspection of the elevator PCU.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-14-210-002

(4) Do a general visual inspection to make sure that there are no hydraulic leaks from the elevator PCU.

SUBTASK 27-31-14-860-007

(5) To remove power from hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-31-14-410-004

(6) Install this access panel:

Number	Name/Location
318BR	Tailcone Access Door

END OF TASK

Reference	Description
STD-1096	Micrometer - Depth, 0-1 inch, Readable to 1/1000 inch
STD-1097	Caliper - Vernier, 0-6 inch, Readable to 1/1000 inch

D. Location Zones

Zone	Area
317	Tail Cone Compartment - Left
318	Tail Cone Compartment - Right

E. Elevator Power Control Unit Inspection

SUBTASK 27-31-14-020-004

(1) Remove the elevator power control unit (PCU). To remove it, do this task: Elevator Power Control Unit - Removal, TASK 27-31-14-000-801.

SUBTASK 27-31-14-020-005

(2) Use these tools to check for wear on the parts of the elevator PCU connections:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-31-14-020-006

(3) Examine the parts of the elevator PCU connections for worn areas:

(a) Remove the parts to be checked.

(b) Measure the parts as necessary with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096, or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions that follow.

(d) If the parts are not in the tolerance, replace or repair the part as required.

ELEVATOR PITOT-STATIC SYSTEM - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Elevator Pitot-Static System Flushing

(2) Elevator Pitot-Static System Drainage Inspection

(3) Elevator Pitot Probe Inspection

(4) Elevator Pitot System Leak Test

(5) Elevator Pitot System Pressurization.

TASK 27-31-17-170-801

2. Elevator Pitot-Static System Flushing

(Figure 201)

A. General

(1) Air Pressure in PSIG/kPa will simulate knots of computed airspeed (kcas).

SUBTASK 27-31-17-170-001

(1) Flush the pitot system:

(a) Inspect the pitot probes, do this task: Elevator Pitot Probe - Inspection, TASK 27-31-17-200-802.

1) If debris is visually detected or visual inspection can not be completed, do these steps:

a) Remove the elevator pitot probe, do this task: Feel System Pitot Probe Removal, TASK 27-31-94-000-801.

b) Clean the elevator pitot probe, refer to task: Pitot Probe Cleaning, TASK 34-11-01-100-801.

c) Install the elevator pitot probe, do this task: Feel System Pitot Probe Installation, TASK 27-31-94-400-801.

CAUTION MAKE SURE THAT YOU DISCONNECT THE FEEL COMPUTER LINES BEFORE YOU FLUSH THE LINES WITH A DRY FILTERED AIR SOURCE OF 20-30 PSIG, STD-1280. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT CAN OCCUR.

(b) Disconnect the left and right pitot lines [4] from the elevator feel computer [5].

(c) Install plugs on the elevator feel computer [5] ports.

(d) Remove the left and right restrictor valves [3] from the pitot lines [4].

(e) Clean the restrictor valves [3] with degreasing solvent, B50126, or solvent, B00062 (TASK 27-31-17-200-801).

(f) Put a 5 gallon (19 liter) container, STD-1154, below the pitot lines to catch any debris.

(g) Install the pitot plug, COM-16577, on the pitot line [4] for the left elevator feel computer [5].

(h) Install the pitot test adapter, COM-1916, on the left pitot probe.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) From the left pitot probe, flush the left pitot line [4] with 20 psig (137.9 kPa) - 30 psig (206.8 kPa) of air constantly for 3 minutes and no unwanted material comes out from the tubes using a 0-30 psig dry filtered regulated air source, STD-1280.

1) Make sure that the pitot line [4] is not blocked and air flows out of the other open end.

2) If air does not flow out of the other end from the left pitot system, do the following steps:

a) Remove the elevator pitot probe, do this task: Feel System Pitot Probe Removal, TASK 27-31-94-000-801.

b) Clean the elevator pitot probe, refer to task: Pitot Probe Cleaning, TASK 34-11-01-100-801.

c) Install the elevator pitot probe, do this task: Feel System Pitot Probe Installation, TASK 27-31-94-400-801.

(j) Remove the pitot plug, COM-16577, from the pitot line [4] for the left elevator feel computer [5].

(k) Install the pitot plug, COM-16577, on the pitot line [4] for the left restrictor valve [3].

(l) From the left pitot probe, flush the left pitot line [4] with 20 psig (137.9 kPa) - 30 psig (206.8 kPa) of air constantly for 3 minutes and no unwanted material comes out from the tubes using a 0-30 psig dry filtered regulated air source, STD-1280.

1) Make sure that the pitot line [4] is not blocked and air flows out of the other open end.

(m) Remove the pitot plug, COM-16577, from the pitot line [4] for the left restrictor valve [3].

(n) Remove the pitot test adapter, COM-1916, from the left pitot probe.

(o) Install the pitot test adapter, COM-1916, on the right pitot probe.

(p) Install the pitot plug, COM-16577, on the pitot line [4] for the right elevator feel computer [5].

(q) From the right pitot probe, flush the right pitot line [4] with 20 psig (137.9 kPa) - 30 psig (206.8 kPa) of air constantly for 3 minutes and no unwanted material comes out from the tubes using a 0-30 psig dry filtered regulated air source, STD-1280.

1) Make sure that the pitot line [4] is not blocked and air flows out of the other open end.

2) If air does not flow out of the other end from the right pitot system, do the following steps:

a) Remove the elevator pitot probe, do this task: Feel System Pitot Probe Removal, TASK 27-31-94-000-801.

b) Clean the elevator pitot probe, refer to task: Pitot Probe Cleaning, TASK 34-11-01-100-801.

c) Install the elevator pitot probe, do this task: Feel System Pitot Probe Installation, TASK 27-31-94-400-801.

(r) Remove the pitot plug, COM-16577, from the pitot line [4] for the right elevator feel computer [5].

(s) Install the pitot plug, COM-16577, on the pitot line [4] for the restrictor valve [3].

(t) From the right pitot probe, flush the right pitot line [4] with 20 psig (137.9 kPa) - 30 psig (206.8 kPa) of air constantly for 3 minutes and no unwanted material comes out from the tubes using a 0-30 psig dry filtered regulated air source, STD-1280.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that the pitot line [4] is not blocked and air flows out of the other open end.

(u) Remove the pitot test adapter, COM-1916, from the right pitot probe.

(v) Remove the pitot plug, COM-16577, from the pitot line [4] for the right restrictor valve [3].

(w) Check the 5 gallon (19 liter) container, STD-1154, for unwanted material from the pitot lines.

1) If unwanted material is found in the container, examine the pitot lines.

(x) Remove the plugs from the elevator feel computer [5] ports.

(y) Connect the pitot lines [4] to the elevator feel computer [5].

(z) Install the restrictor valves [3] on the pitot lines [4].

SUBTASK 27-31-17-170-002

(2) Flush the static system:

(a) Disconnect the static lines [2] from the elevator feel computer [5].

(b) Install plugs on the elevator feel computer [5] ports.

(c) Flush the static lines [2] from each end with 20 psig (137.9 kPa) - 30 psig (206.8 kPa) of air for 3 minutes and no unwanted material comes out from the tubes using a 0-30 psig dry filtered regulated air source, STD-1280.

1) Make sure that the static lines [2] are not blocked and air flows out of the other open end.

(d) Remove the plugs from the elevator feel computer [5] ports.

(e) Connect the static lines [2] to the elevator feel computer [5].

SUBTASK 27-31-17-210-001

(3) Make sure that there is no unwanted material in the ports of the pitot-static system.

SUBTASK 27-31-17-210-002

(4) Do this task: Elevator Pitot-Static System Drainage - Inspection, TASK 27-31-17-200-801.

SUBTASK 27-31-17-790-001

(5) Do this task: Elevator Pitot System Leak - Test, TASK 27-31-17-790-801.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-17-860-002

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

SUBTASK 27-31-17-410-001

(2) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

END OF TASK

B00130	Alcohol - Isopropyl	TT-I-735

C. Location Zones

Zone	Area
311	Area Aft of Pressure Bulkhead - Left
312	Area Aft of Pressure Bulkhead - Right
323	Vertical Fin - Front Spar To Rear Spar

D. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door
323FL	Vertical Fin, Access

E. Prepare for the Inspection

SUBTASK 27-31-17-010-003

(1) Open these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
323FL	Vertical Fin, Access

SUBTASK 27-31-17-860-003

(2) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

F. Elevator Pitot-Static System Drainage Inspection

SUBTASK 27-31-17-170-003

(1) Drain the pitot system:

(a) Remove the restrictor valves [3] from the pitot lines [4].

(b) Make sure that the pitot lines [4] drain correctly.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Make sure that the hoses between the pitot-static probes and the rigid metal tubing loop up and do not trap water (Figure 201).

(d) If necessary, flush the pitot system (Elevator Pitot-Static System Flushing, TASK 27-31-17-170-801).

(e) Clean the restrictor valves [3] with alcohol, B00130, alcohol, B00065, or alcohol, B00068.

(f) Install the restrictor valves [3].

SUBTASK 27-31-17-170-004

(2) Examine the static system:

(a) Disconnect the static lines [2] from elevator feel computer [5].

(b) Make sure that the static lines [2] drain correctly.

1) If it is necessary, flush the static system (Elevator Pitot-Static System Flushing, TASK 27-31-17-170-801).

(c) Connect the static lines [2].

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-17-860-004

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

SUBTASK 27-31-17-410-003

(2) Close these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
323FL	Vertical Fin, Access

SUBTASK 27-31-17-390-002

(3) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

END OF TASK

TASK 27-31-17-200-802

4. Elevator Pitot Probe - Inspection

(Figure 201)

A. General

(1) The tasks that follow give more data on how to examine the elevator pitot probes [1].

(a) See Pitot Probe Special Detailed Inspection, TASK 34-11-01-200-802.

(b) See Pitot Probe Detailed Inspection, TASK 34-11-01-200-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

B. References

Reference	Title

C. Location Zones

Zone	Area
323	Vertical Fin - Front Spar To Rear Spar

D. Elevator Pitot Probe Inspection

SUBTASK 27-31-17-170-005

(1) Examine the pitot probe for damage.

(a) Make sure that the maximum tip bluntness of the elevator pitot probe [1] is not more than 0.04 in. (1.0 mm).

(b) Make sure that the elevator pitot probe [1] is not bent or the electrical heater is damaged.

(c) If it is necessary, replace the elevator pitot probe [1]. These are the tasks:

- Feel System Pitot Probe Removal, TASK 27-31-94-000-801
- Feel System Pitot Probe Installation, TASK 27-31-94-400-801.

——— END OF TASK ———

TASK 27-31-17-790-801

5. Elevator Pitot System Leak - Test

(Figure 201)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Air Pressure in PSIG/kPa will simulate knots of computed airspeed (kcas).

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

F. Elevator Pitot System Leak Test

SUBTASK 27-31-17-390-001

WARNING

WHEN THE PITOT PROBES HAVE COVERS ON THEM, MAKE SURE THAT A PERSON ON THE GROUND CAN SEE THE COVERS. ALSO MAKE SURE YOU ATTACH A TAG TO THE LEFT CONTROL WHEEL IN THE FLIGHT COMPARTMENT AS A REMINDER THAT THE PITOT PROBES HAVE COVERS ON THEM. IF THE COVERS ARE NOT REMOVED FROM THE PITOT PROBES, INCORRECT AIRSPEED-SENSING AND ALTITUDE-SENSING SIGNALS CAN OCCUR. THIS CAN CAUSE DANGEROUS FLIGHT CONDITIONS.

CAUTION

MAKE SURE THAT THE PITOT PROBE HAS NO ADDED WEIGHT ON IT FROM THE TEST HOSE. THE WEIGHT OF THE TEST HOSE CAN BEND OR TWIST THE PITOT PROBE OUT OF TOLERANCE.

(1) Connect the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent, with the pitot test adapter, COM-1916, to the elevator pitot probes [1].

SUBTASK 27-31-17-020-001

(2) In the aft unpressurized compartment, below the elevator feel computer [5], do these steps:

(a) Remove the restrictor valves [3] from the bottom of the pitot lines [4] (Figure 201).

(b) If you are using the regulator, SPL-1742, or equivalent, for the leak test, do these steps:

NOTE: The DPS 400 Test Set can be used as an alternative tool to the DPS 500.

1) Connect the pressure gage lines from the regulator, SPL-1742, or equivalent, to the drain holes of the pitot lines [4].

(c) If you are using the air data model test set, COM-1914, for the leak test, do these steps:

1) Install the pitot plugs, COM-16577, on the ends of the pitot lines [4].

2) Install a streamer on the opening of the aft unpressurized compartment.

a) Make sure that you can easily see the streamer from the ground.

NOTE: This is to remind you to remove the plugs and install the restrictor valves again when the test is completed.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-17-790-002

(3) Do the pitot system leak test:

NOTE: The pitot drain lines must be sealed to hold pressure during the test.

CAUTION

DO NOT INCREASE THE PRESSURE TO MORE THAN 5 PSIG (34.5 KPA) (437 KNOTS OF COMPUTED AIRSPEED (KCAS)), DURING THE TEST. IF THE PRESSURE IS MORE THAN 5 PSIG (34.5 KPA) (437 KCAS), IT CAN CAUSE DAMAGE TO THE ELEVATOR FEEL COMPUTER.

(a) Operate the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent, to apply pressure of 0.90 +0.07 / -0.00 psig (6.21 +0.48 / -0.00 kPa) to simulate 194 to 201 kcas.

(b) Set the shutoff valve in the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent to the OFF position.

(c) Make sure that the pressure does not decrease more than 0.2 psig (1.4 kPa) (8 kcas) during a 2-minute time.

NOTE: The low pressure pressurization steps above make sure that there is no system leak before you apply full pressure in the following steps.

1) If it is necessary, repair the pitot system or pressurization equipment leak.

(d) Operate the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent, to apply pressure of 4.8 ±0.1 psig (33.1 ±0.7 kPa) to simulate 425 to 433 kcas.

(e) Set the shutoff valve in the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent to the OFF position.

(f) Make sure that the pressure does not decrease more than 0.3 psig (2.1 kPa) (12 kcas) during a 2-minute time.

(g) Operate the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent to decrease the pitot pressure to zero.

SUBTASK 27-31-17-160-001

(4) At the elevator pitot probes [1] on the vertical fin, do these steps:

(a) Remove the pressure lines with the pitot test adapter, COM-1916, from the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent.

(b) Remove the pitot test adapter, COM-1916, from the elevator pitot probes [1].

SUBTASK 27-31-17-080-001

(5) In the aft unpressurized compartment, below the elevator feel computer [5], do these steps:

(a) If you used the regulator, SPL-1742, or equivalent, for the leak test, do these steps:

1) Disconnect the pressure gage lines of the regulator, SPL-1742, or equivalent from the drain holes of the pitot lines [4].

(b) If you used the air data model test set, COM-1914, for the leak test, do these steps:

1) Remove the pitot plugs, COM-16577, that were installed on the ends of the pitot lines [4].

2) Remove the streamer on the opening of the aft unpressurized compartment.

(c) Install the restrictor valves [3] on the bottom of the pitot lines [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Elevator Pitot System Pressurization

SUBTASK 27-31-17-480-001

(1) Prepare the elevator pitot system for pressurization:

NOTE: The next two steps are not necessary if you are using the air data model test set, COM-1914.

(a) Remove the restrictor valves [3] from the pitot lines [4].

(b) Connect the pressure gage lines from the regulator, SPL-1742, or equivalent to the drain holes of the pitot line [4].

NOTE: The DPS 400 Test Set can be used as an alternative tool to the DPS 500.

WARNING

WHEN THE PITOT PROBES HAVE COVERS ON THEM, MAKE SURE THAT A PERSON ON THE GROUND CAN SEE THE COVERS. ALSO MAKE SURE YOU ATTACH A TAG TO THE LEFT CONTROL WHEEL IN THE FLIGHT COMPARTMENT AS A REMINDER THAT THE PITOT PROBES HAVE COVERS ON THEM. IF THE COVERS ARE NOT REMOVED FROM THE PITOT PROBES, INCORRECT AIRSPEED-SENSING AND ALTITUDE-SENSING SIGNALS CAN OCCUR. THIS CAN CAUSE DANGEROUS FLIGHT CONDITIONS.

(c) Seal the drain hole in each elevator pitot probe [1].

CAUTION

MAKE SURE THAT THE WEIGHT OF THE TEST HOSE IS NOT ON THE PITOT PROBE. THE WEIGHT OF THE HOSE CAN BEND OR TWIST THE PROBE UNTIL IT IS NOT IN TOLERANCE.

(d) Connect the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent to the two elevator pitot probes [1].

SUBTASK 27-31-17-480-002

CAUTION

DO NOT LET THE PRESSURE BECOME MORE THAN 5 PSIG (34.5 KPA). DAMAGE TO THE COMPONENT COULD OCCUR.

(2) Pressurize the elevator pitot system:

(a) Operate the air data model test set, COM-1914, or regulator, SPL-1742, to pressurize the system, as necessary, to get the system test data.

(b) Slowly operate the air data model test set, COM-1914, or regulator, SPL-1742, to remove pressure from the system until it is at zero.

SUBTASK 27-31-17-010-007

(3) Remove the pressurization equipment from the airplane:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the pressure gage lines from the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent to the drain holes.

(b) Install the restrictor valves [3] in each of the pitot lines [4].

(c) Remove the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent from the elevator pitot probes [1].

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-17-860-008

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR FEEL SHIFT MODULE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of an elevator feel shift module.

(2) An installation of an elevator feel shift module.

TASK 27-31-20-000-801

2. Elevator Feel Shift Module Removal

(Figure 401, Figure 402)

(4) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

E. Elevator Feel Shift Module Removal

(Figure 402)

SUBTASK 27-31-20-020-001

WARNING RELEASE THE CONNECTION SLOWLY AND LET THE PRESSURE DECREASE BEFORE YOU COMPLETELY REMOVE THE HYDRAULIC LINE. IF YOU DISCONNECT THE HYDRAULIC LINE WHEN IT HAS PRESSURE, A SPRAY OF HYDRAULIC FLUID CAN CAUSE INJURY TO PERSONS.

(1) Disconnect the hydraulic lines [4] and hydraulic line [6] from the elevator feel shift module [1].

(a) Install the caps and plugs on the open ports and hydraulic lines.

(b) Discard the packings [7].

SUBTASK 27-31-20-480-001

(2) Disconnect the electrical connector [5] from the elevator feel shift module [1].

SUBTASK 27-31-20-020-002

(3) Hold the elevator feel shift module [1] and remove the bolts [2] and washers [3] that connect the elevator feel shift module [1] to the bracket.

SUBTASK 27-31-20-480-002

(4) Remove the elevator feel shift module [1].

G. Prepare for the Installation

SUBTASK 27-31-20-860-004

(1) Make sure that the pressure to the elevator hydraulic systems A and B is removed (TASK 27-31-00-800-802).

H. Elevator Feel Shift Module Installation

SUBTASK 27-31-20-420-001

(1) Install the elevator feel shift module [1]:

(a) Install the washers [3] and bolts [2] to attach the elevator feel shift module [1] to the bracket.

1) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the electrical resistance between the elevator feel shift module [1] and the bracket, that it is attached to, is 0.005 ohms or less.

2) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the electrical resistance between the elevator feel shift module [1] and the airplane structure is 0.005 ohms or less.

3) If the electrical resistance at the two locations is more than 0.005 ohms, then remove the elevator feel shift module [1] and prepare the electrical faying surfaces.

(b) Apply a fillet seal of sealant, A00247 along the joint edges (TASK 51-22-00-390-806).

SUBTASK 27-31-20-420-002

(2) Connect electrical electrical connector [5] to the elevator feel shift module [1].

SUBTASK 27-31-20-420-003

(3) Remove the caps and plugs from the open ports, hydraulic lines [4] and hydraulic line [6].

SUBTASK 27-31-20-420-006

(4) If the packings [7] and unions [8] are not installed on the elevator feel shift module [1], then do these steps:

(a) Lightly apply hydraulic fluid, D00153 to the new packings [7].

(b) Install the packings [7] and unions [8] on the elevator feel shift module [1].

SUBTASK 27-31-20-420-004

(5) Connect the hydraulic lines [4] and hydraulic line [6] to the elevator feel shift module [1].

NOTE: Apply a layer of hydraulic fluid to the hydraulic fittings before you install the hydraulic lines.

SUBTASK 27-31-20-420-007

(6) Tighten the B-nuts on the hydraulic lines [4] to 270 ±14 in-lb (31 ±2 N·m).

SUBTASK 27-31-20-420-008

(7) Tighten the B-nut on the hydraulic line [6] to 170 ±9 in-lb (19 ±1 N·m).

SUBTASK 27-31-20-720-001

(8) Do this task: Elevator Feel Shift Module - Test, TASK 27-31-20-740-801.

SUBTASK 27-31-20-720-002

(9) Do this task: Feel Force System - Test, TASK 27-31-00-700-813.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-20-860-005

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	4	C01392	STICK SHAKER LEFT

F/O Electrical System Panel, P6-1

SUBTASK 27-31-20-860-006

(2) Put the SYSTEM A FLIGHT CONTROL SHUTOFF and the SYSTEM B FLIGHT CONTROL SHUTOFF switches on the P5 forward overhead panel to the ON position.

SUBTASK 27-31-20-860-007

(3) Set the STAB TRIM PRI switch, S272, on the aft area of the control stand to the NORMAL position.

SUBTASK 27-31-20-410-001

(4) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR FEEL SHIFT MODULE - ADJUSTMENT/TEST

1. General

A. This procedure has this task:

(1) A test of the elevator feel shift module

TASK 27-31-20-740-801

2. Elevator Feel Shift Module - Test

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Make sure that the two Stall Management Yaw Damper (SMYD) computers are installed for this test.

NOTE: The Stall Management Yaw Damper Computer P/N 285A1010-4 or subsequent is necessary for this test.

B. References

SUBTASK 27-31-20-420-005

WARNING	MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-31-20-410-002

(3) Open this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

F. Elevator Feel Shift Module Test

SUBTASK 27-31-20-700-001

(1) Do a test of the Elevator Feel Shift Module (EFSM) with the SMYD number 1 energized:

(a) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	5	C01206	SMYD-2 CMPTR DC

(b) Push the ON/OFF button on the BITE panel on the front of SMYD number 1.

1) Make sure that EXISTING FAULTS? shows on the display.

(c) Push the down arrow button until OTHER FUNCTIONS? shows on the display.

(d) Push the YES button on the BITE panel on the front of SMYD number 1.

1) Make sure that SYSTEM CONFIG? shows on the display.

(e) Push the down arrow button until SET OUTPUTS? shows on the display.

(f) Push the YES button on the BITE panel on the front of SMYD number 1.

1) Make sure that SS CMD? shows on the display.

(g) Push the YES button on the BITE panel on the front of SMYD number 1.

NOTE: SS ACTIVATE will show on the display, and then REMOVE CMD? will show on the display.

1) Make sure that the Captain's control column shakes.

2) After a minimum of 60 seconds, make sure that the FEEL DIFF PRESS light on the P5 forward overhead panel does not come on.

3) Make sure that CMD REMOVED shows on the display after the Captain's control column stops shaking.

(h) Push the MENU button on the BITE panel on the front of SMYD number 1.

1) Make sure that SS CMD? shows on the display.

(i) Push the NO button on the BITE panel on the front of SMYD number 1.

1) Make sure that SS CMD & EFS CMD? shows on the display.

(j) Push the YES button on the BITE panel on the front of SMYD number 1.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that SS & EFS ACTIVATE shows on the display before REMOVE CMD shows on the display.
2) Make sure that the Captain's control column shakes.
3) Make sure that these lights come on and stay on after a minimum of 20 to 60 seconds:
   a) Left and right MASTER CAUTION lights on the P7 glareshield panel
   b) FEEL DIFF PRESS light on the P5 forward overhead panel.
4) Make sure that CMD REMOVED shows on the display after the Captain's control column stops shaking.

   NOTE: The FEEL DIFF PRESS light must go off.

(k) Push the master caution PUSH TO RESET on the P7 glareshield panel.
   1) Make sure that these lights go off:
      a) Left MASTER CAUTION light on the P7 glareshield panel
      b) Right MASTER CAUTION light on the P7 glareshield panel.

(l) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	5	C01206	SMYD-2 CMPTR DC

(m) Push the ON/OFF button on the BITE panel on the front of SMYD number 1.

SUBTASK 27-31-20-700-002

(2) Do a test of the Elevator Feel Shift Module (EFSM) with the SMYD number 2 energized:

(a) Open this circuit breaker and install safety tag:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	5	C01204	SMYD-1 CMPTR DC

(b) Push the ON/OFF button on the BITE panel on the front of SMYD number 2.
   1) Make sure that EXISTING FAULTS? shows on the display.

(c) Push the down arrow button until OTHER FUNCTIONS? shows on the display.

(d) Push the YES button on the BITE panel on the front of SMYD number 2.
   1) Make sure that SYSTEM CONFIG? shows on the display.

(e) Push the down arrow button until SET OUTPUTS? shows on the display.

(f) Push the YES button on the BITE panel on the front of SMYD number 2.
   1) Make sure that SS CMD? shows on the display.

(g) Push the YES button on the BITE panel on the front of SMYD number 2.

   NOTE: SS ACTIVATE will show on the display, and then REMOVE CMD? will show on the display.

   1) Make sure that the First Officer's control column shakes.
   2) After a minimum of 60 seconds, make sure that the FEEL DIFF PRESS light on the P5 forward overhead does not come on.
   3) Make sure that CMD REMOVED shows on the display after the First Officer's control column stops shaking.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(h) Push the MENU button on the BITE panel on the front of SMYD number 2.

1) Make sure that SS CMD? shows on the display.

(i) Push the NO button on the BITE panel on the front of SMYD number 2.

1) Make sure that SS CMD & EFS CMD? shows on the display.

(j) Push the YES button on the BITE panel on the front of SMYD number 2.

1) Make sure that SS & EFS ACTIVATE shows on the display before REMOVE CMD shows on the display.

2) Make sure that the First Officer's control column shakes.

3) Make sure that these lights come on and stay on after a minimum of 20 to 60 seconds:

a) Left and right MASTER CAUTION lights on the P7 glareshield panel

b) FEEL DIFF PRESS light on the P5-3 forward overhead panel.

4) Make sure that CMD REMOVED shows on the display after the First Officer's control column stops shaking.

NOTE: The FEEL DIFF PRESS light must go off.

(k) Push the master caution PUSH TO RESET on the P7 glareshield panel.

1) Make sure that these lights go off:

a) Left MASTER CAUTION light on the P7 glareshield panel

b) Right MASTER CAUTION light on the P7 glareshield panel.

(l) Remove the safety tag and close this circuit breaker:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	5	C01204	SMYD-1 CMPTR DC

(m) Push the ON/OFF button on the BITE panel on the front of SMYD number 2.

SUBTASK 27-31-20-700-003

(3) Do a test of the Elevator Feel Shift Module (EFSM) with the SMYD number 1 and the SMYD number 2 energized:

(a) Do the steps to SMYD number 1 and SMYD number 2 at the same time.

(b) Make sure that these circuit breakers are closed:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	5	C01204	SMYD-1 CMPTR DC

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	5	C01206	SMYD-2 CMPTR DC

(c) Push the ON/OFF button on the BITE panel that is on the front of each SMYD.

1) Make sure that EXISTING FAULTS? shows on each of the two displays.

(d) Push the down arrow button on each SMYD until OTHER FUNCTIONS? shows on each of the two displays.

(e) Push the YES button on the BITE panel that is on the front of each SMYD.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that SYSTEM CONFIG? shows on each of the two displays.

(f) Push the down arrow button on each SMYD until SET OUTPUTS? shows on each of the two displays.

(g) Push the YES button on the BITE panel that is on the front of each SMYD.

1) Make sure that SS CMD? shows on each of the two displays.

(h) Push the YES button on the BITE panel that is on the front of each SMYD.

NOTE: SS ACTIVATE will show on the two displays, and then REMOVE CMD? will show on the two displays.

1) Make sure that the Captain's and First Officer's control columns shake.

2) After a minimum of 60 seconds, make sure that the FEEL DIFF PRESS light on the P5 forward overhead panel does not come on.

3) Make sure that CMD REMOVED shows on each of the two displays after the two control columns stop shaking.

(i) Push the MENU button on the BITE panel that is on the front of each SMYD.

1) Make sure that SS CMD? shows on each of the two displays.

(j) Push the NO button on the BITE panel that is on the front of each SMYD.

1) Make sure that SS CMD & EFS CMD? shows on each of the two displays.

(k) Push the YES button on the BITE panel that is on the front of each SMYD.

1) Make sure that SS & EFS ACTIVATE shows on each of the two displays before REMOVE CMD shows on each of the two displays.

2) Make sure that the Captain's and First Officer's control columns shake.

3) Make sure that these lights come on and stay on after a minimum of 20 to 60 seconds:

a) Left and right MASTER CAUTION lights on the P7 glareshield panel

b) FEEL DIFF PRESS light on the P5-3 forward overhead panel.

4) Make sure that CMD REMOVED shows on each of the two displays after the two control columns stop shaking.

NOTE: The FEEL DIFF PRESS light should go off.

(l) Push the master caution PUSH TO RESET on the P7 glareshield panel.

1) Make sure that these lights go off:

a) Left MASTER CAUTION light on the P7 glareshield panel

b) Right MASTER CAUTION light on the P7 glareshield panel.

(m) Push the ON/OFF button on the BITE panel that is on the front of each SMYD.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-20-860-008

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-20-410-003

(2) Close this access door:

C. Location Zones

Zone	Area
316	APU Compartment - Right
334	Left Horizontal Stabilizer - Elevator
335	Left Horizontal Stabilizer - Tip
344	Right Horizontal Stabilizer - Elevator
345	Right Horizontal Stabilizer - Tip

D. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door
318BR	Tailcone Access Door
334PT	Horizontal Stabilizer, Tab Control Rod Fairing
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Prepare for the Removal

SUBTASK 27-31-31-860-006

(1) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-31-31-040-001

(2) Do this task: Elevator and Tab Control System - Deactivation, TASK 27-31-00-000-801.

SUBTASK 27-31-31-820-001

(3) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-31-010-001

(4) Remove these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-31-010-002

(5) For the left elevator tab pushrods, remove this access panel:

Number	Name/Location
334PT	Horizontal Stabilizer, Tab Control Rod Fairing

SUBTASK 27-31-31-010-003

(6) For the right elevator tab pushrods, remove this access panel:

Number	Name/Location
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-31-480-001

(7) Use the bar, SPL-1677, to set the “B” dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)) (Figure 27-31-00-990-810).

(a) Make sure to protect wire bundles when the bar, SPL-1677, is used.

SUBTASK 27-31-31-220-001

(8) Measure and record the elevator tab [22] position (Figure 27-31-00-990-818):

NOTE: Measuring and recording the elevator tab position before the elevator tab removal may improve the manual reversion success rate, if the elevator tab needs to be adjusted after installation. The elevator tab position can be measured with the elevator tab rigging bar, SPL-10345, installed on the third elevator tab hinge (from inboard).

(a) If the same elevator tab [22] will be re-installed, do these steps before the elevator tab [22] removal:

1) Make sure that the elevator tab [22] meets the freeplay limits.

a) To do a check of the freeplay limits, do this task: Elevator Tab Freeplay - Check, TASK 27-31-32-200-802.

(b) Push the elevator trailing edge up by hand (Figure 27-31-00-990-813).

(c) While the elevator trailing edge is moved down, align the projected center of the elevator trailing edge with the index mark within ± 0.04 in. (1.0 mm), or less.

1) Measure and record the elevator tab [22] position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure that the distance between the left elevator tab [22] and elevator tab rigging bar, SPL-10345, is within 0.25 in. (6.35 mm) - 0.47 in. (11.94 mm).

3) Make sure that the distance between the right elevator tab [22] and elevator tab rigging bar, SPL-10345, is within 0.25 in. (6.35 mm) - 0.47 in. (11.94 mm).

SUBTASK 27-31-31-480-002

(9) Install the rig pin E-5 from the rigging pin kit, SPL-1585, in the aft control quadrant (Figure 401).

F. Elevator Tab Removal

SUBTASK 27-31-31-020-001

(1) Remove the bolts [24] from the access panel [23] to get access to the elevator tab pushrods [25].

SUBTASK 27-31-31-020-002

(2) Remove the elevator tab [22]:

(a) Remove the pins [48], nuts [30], washers [31], bushings [32], and bolts [33] from the elevator tab [22] and elevator tab pushrods [25].

1) Discard the pins [48].

(b) Hold the elevator tab [22] while the elevator tab [22] is disconnected from the elevator [21].

1) For the hinge 1 (inboard hinge), remove the pin [44], nut [45], washers [43], bushing [42], washer [41], and bolt [40].

a) Discard the pin [44].

2) For the hinge 2 (inboard hinge), remove pin [44], nut [45], washers [47], bushings [42], washer [41], and bolt [46].

3) For the hinges 3, 4, 5, and 6 (outboard hinges), remove the pins [44], nuts [45], washers [47], bushings [42], washers [41], and bolts [46].

a) Discard the pins [44].

CAUTION DO NOT LET THE BONDING JUMPERS HOLD THE WEIGHT OF THE ELEVATOR TAB ASSEMBLY. IF YOU DO, YOU CAN CAUSE DAMAGE TO THE BONDING JUMPERS.

4) Remove the nut [26], washers [27], and bolt [29] to disconnect the bonding jumper [28] from the elevator [21].

5) Remove the nut [34], washers [35], and bolt [37] to disconnect the bonding jumper [36] from the elevator [21].

(c) Remove the elevator tab [22].

SUBTASK 27-31-31-020-004

(3) If it is necessary to remove the bonding jumper [28] or bonding jumper [36] from the elevator tab [22], do these steps:

(a) Remove the nut [49], washers [50], bolt [51] to disconnect the bonding jumper [36] from the elevator tab [22].

(b) Remove the nut [52], washers [53], and bolt [54] to disconnect the bonding jumper [28] from the elevator tab [22].

344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

G. Prepare for the Installation

SUBTASK 27-31-31-860-003

(1) Examine the data plate on the elevator tab [22] for the necessary number of the tab adjust weights (SRM SUBJECT 51-60-06).

SUBTASK 27-31-31-860-004

(2) Make sure that the elevator [21] has the correct number of the tab adjust weights.

(a) Add or remove weights on the elevator balance panels as applicable.

H. Elevator Tab Installation

SUBTASK 27-31-31-020-003

(1) Install the elevator tab [22] (Figure 402):

(a) If the bonding jumper [36] was removed from the elevator tab [22], do these steps:

1) Use cotton wiper, G00034, moist in solvent, B00184, to clean the mating surfaces of the elevator tab [22], nut [49], washers [50], bonding jumper [36], and bolt [51].

2) Install the bolt [51], washers [50], bonding jumper [36], and nut [49].

3) Tighten the nut [49] to 33 in-lb (3.7 N·m) - 40 in-lb (4.5 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Measure the electrical resistance between the bonding jumper [36] and bolt [51] (SWPM 20-20-00).
   a) Use a non-intrinsically safe bonding meter, COM-614.
   b) Make sure that the electrical bonding resistance is 0.0015 ohm (1.5 milliohm) or less.
5) Apply a fillet seal with sealant, A00247, or sealant, A00767, to cover the nut [49], washers [50], and bonding jumper [36] (SWPM 20-20-10 Paragraph 4.C).
   a) Do not apply sealant, A00247, or sealant, A00767, to the head side of the bolt.

(b) If the bonding jumper [28] was removed from the elevator tab [22], do these steps:
1) Use cotton wiper, G00034, moist in solvent, B00184, to clean the mating surfaces of the elevator tab [22], nut [52], washers [53], bonding jumper [28], and bolt [54].
2) Install the bolt [54], washers [53], bonding jumper [28], and nut [52].
3) Tighten the nut [52] to 26 in-lb (2.9 N·m) - 30 in-lb (3.4 N·m).
4) Measure the electrical resistance between the bonding jumper [28] and bolt [54] (SWPM 20-20-00).
   a) Use a non-intrinsically safe bonding meter, COM-614.
   b) Make sure that the electrical bonding resistance is 0.0015 ohm (1.5 milliohm) or less.
5) Apply a fillet seal with sealant, A00247, or sealant, A00767, to cover the nut [52], washers [53], and bonding jumper [28] (SWPM 20-20-10 Paragraph 4.C).
   a) Do not apply sealant, A00247, or sealant, A00767, to the head side of the bolt.

(c) Put the elevator tab [22] near its position behind the elevator [21].

CAUTION DO NOT LET THE BONDING JUMPERS HOLD THE WEIGHT OF THE ELEVATOR TAB ASSEMBLY. IF YOU DO, YOU CAN CAUSE DAMAGE TO THE BONDING JUMPERS.

(d) Connect the bonding jumper [28] to the elevator [21]:
1) Use cotton wiper, G00034, moist in solvent, B00184, to clean the mating surfaces of the elevator [21], nut [26], washers [27], bonding jumper [28], and bolt [29].
2) Install the bolt [29], washers [27], and nut [26] to attach the bonding jumper [28] to the elevator [21].
   a) Install the head of the bolt [29] on outside surface.
   b) Tighten the nut [26] to a torque tool setpoint of 30 in-lb (3.4 N·m).
3) Measure the electrical resistance between the bonding jumper [28] and bolt [29] (SWPM 20-20-00).
   a) Use a non-intrinsically safe bonding meter, COM-614.
   b) Make sure that the electrical bonding resistance is 0.015 ohm (15.0 milliohm) or less.
4) Apply a fillet seal with sealant, A00247, to the cover the nut [26], washers [27], bonding jumper [28], and end of the bolt [29] (SWPM 20-20-10 Paragraph 4.C).
   a) Do not apply sealant, A00247, to the head side of the bolt.

(e) Connect the bonding jumper [36] to the elevator [21]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Use cotton wiper, G00034, moist in solvent, B00184, to clean the mating surfaces of the elevator [21], nut [34], washers [35], bonding jumper [36], and bolt [37].
2) Install the bolt [37], washers [35], and nut [34] to attach the bonding jumper [36] to the elevator [21].
   a) Install the head of the bolt [37] on outside surface.
   b) Tighten the nut [34] to a torque tool setpoint of 30 in-lb (3.4 N·m).
3) Measure the electrical resistance between terminal of the bonding jumper [36] and bolt [37] (SWPM 20-20-00).
   a) Use a non-intrinsically safe bonding meter, COM-614.
   b) Make sure that the electrical bonding resistance is 0.015 ohm (15.0 milliohm) or less.
4) Apply a fillet seal with sealant, A00247, to the nut [34], washers [35], bonding jumper [28], and end of the bolt [37] (SWPM 20-20-10 Paragraph 4.C).
   a) Do not apply sealant, A00247, to the head side of the bolt.

SUBTASK 27-31-31-420-001

(2) Connect the elevator tab [22] to the elevator [21]:
   (a) If the nuts [30] or nuts [45] were loosened or removed, they need to be replaced with new nuts.

   NOTE: Use of new nuts [30] or new nuts [45] will make sure that they have the necessary run-on torque.

   (b) Apply compound, D50004, to the threads of the bolts [40] and bolts [46].
      1) Do not apply compound, D50004, to the unthreaded part of the bolts.
   (c) For the hinges 3, 4, 5 and 6 (outboard hinges), install the bolts [46], washers [41], bushings [42], washers [47], and new nuts [45].
      1) Tighten the nuts [45] to 95 ±5 in-lb (10.7 ±0.6 N·m).
      2) Install the new pin [44] in the end of the bolts [46].
   (d) For hinge 2 (inboard hinge), install the bolt [46], washer [41], bushings [42], washers [47], and new nut [45].
      1) Tighten the new nuts [45] to 95 ±5 in-lb (10.7 ±0.6 N·m).
      2) Install new pin [44] in the end of the bolt [46].
         a) If it is necessary, you can remove the washer [47] under the nut [45] to install pin [44].
   (e) For hinge 1 (inboard hinge), install the bolt [40], washer [41], bushing [42], washers [43], and new nut [45].
      1) Tighten the new nuts [45] to 95 ±5 in-lb (10.7 ±0.6 N·m).
      2) Install new pin [44] in the end of the bolt [40].
         a) If it is necessary, you can remove the washer [43] under the nut [45] to install the pin [44].
   (f) Apply a coating of compound, D50004, on the outside diameter of bolts [33].
   (g) Install the bolts [33], bushings [32], washers [31], and new nuts [30] to connect the tab pushrods [25] to the elevator tab [22].

   NOTE: The inboard bolt is installed with the head inboard and the outboard bolt is installed with the head outboard.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION TIGHTEN THE NEW NUTS CORRECTLY. IF YOU TIGHTEN THEM INCORRECTLY, THE PUSHRODS CAN BECOME DISCONNECTED. THIS CAN CAUSE DAMAGE TO THE ELEVATOR AND STABILIZER.

1) Tighten the new nuts [30] to 75 ±5 in-lb (8.5 ±0.6 N·m).
2) Install the new pins [48] in the anti-rotation boss at the head of the bolts [33].

SUBTASK 27-31-31-420-002

(3) Install the bolts [24] to connect the access panel [23] to the elevator [21].

SUBTASK 27-31-31-610-001

(4) Do this task: Elevator Tab Hinge Lubrication, TASK 12-22-31-640-802.

SUBTASK 27-31-31-080-001

(5) Remove rig pin E-5 of the rigging pin kit, SPL-1585, from the aft control quadrant.

SUBTASK 27-31-31-860-007

(6) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-31-31-860-008

(7) Do this task: Elevator and Tab Control System - Activation, TASK 27-31-00-400-801.

SUBTASK 27-31-31-820-002

(8) Adjust the tab pushrods until you get the same elevator tab [22] that was measured before the elevator tab [22] removal (TASK 27-31-00-820-805).

I. Elevator Tab Installation Test

SUBTASK 27-31-31-710-001

(1) Do this task: Elevator Surface Friction and Balance - Test, TASK 27-31-00-700-803.

SUBTASK 27-31-31-710-002

(2) Do this task: Elevator Tab Linkage - Test, TASK 27-31-00-700-807.

J. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-31-410-001

(1) Install these access panels:

Number	Name/Location
311BL	Stabilizer Trim Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-31-410-002

(2) For the left elevator tab pushrods, install this access panel:

Number	Name/Location
334PT	Horizontal Stabilizer, Tab Control Rod Fairing

SUBTASK 27-31-31-410-003

(3) For the right elevator tab pushrods, install this access panel:

Number	Name/Location
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-31-390-001

(4) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

SUBTASK 27-31-31-710-003

(5) If it is necessary, do this task: Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR AND ELEVATOR TAB FREEPLAY - INSPECTION/CHECK

1. General

A. This procedure contains tasks to inspect the following for freeplay:

(1) The elevator output torque tube buss linkage.

(2) The elevator tab.

TASK 27-31-32-200-801

2. Elevator Output Torque Tube Buss Linkage Freeplay - Check

(Figure 601)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this test to do a check of the elevator output torque tube buss linkage freeplay.

G. Prepare for the Check

SUBTASK 27-31-32-860-001

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(1) Pressurize the elevator hydraulic systems A and B (TASK 27-31-00-800-801).

SUBTASK 27-31-32-860-002

(2) Make sure the flaps are in the full up position (TASK 27-51-00-860-801).

SUBTASK 27-31-32-010-001

(3) Remove this access door:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-32-860-003

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677, to set the "B" dimension at 39.17 ±0.01 in. (994.92 ±0.26 mm) or use the trim system to move the stabilizer to 4 units of trim (Figure 601).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-32-860-004

(5) Operate the elevator in the full travel 6 times.

SUBTASK 27-31-32-860-005

(6) Make sure the control column is in the neutral position.

H. Elevator Output Torque Tube Buss Linkage Freeplay Check

SUBTASK 27-31-32-220-001

CAUTION DO NOT PUT A LOAD OF MORE THAN 65 POUNDS (290 NEWTONS) ON THE ELEVATORS AT ONE TIME. IF THE LOAD IS TOO HEAVY, IT CAN CAUSE DAMAGE TO THE ELEVATORS.

(1) Set the FLT CONTROL A switch on the forward overhead panel, P5, to the OFF position.

(2) Make sure the FLT CONTROL B switch on the forward overhead panel, P5, is in the ON position.

(3) Put a piece of adhesive tape, G50393, over the right elevator index plate [1].

(4) Use a block, STD-1278, and force gauge, COM-1557, to apply a force of 15 ±1 lbf (67 ±5 N) to the right elevator trailing edge in the down direction and release slowly.

(a) Apply the force approximately 0.5 in. (12.7 mm) forward of the trailing edge and 1 in. (25 mm) outboard of the inboard edge of the elevator (next to the tailcone).

(b) Slowly remove the force from the elevator.

(c) Make a mark of the right elevator position on the tape.

(5) Use a block, STD-1278, and force gauge, COM-1557, to apply a force of 10 ±1 lbf (44 ±5 N) to right elevator trailing edge in the up direction.

(a) Apply the force approximately 0.5 in. (12.7 mm) forward of the trailing edge and 1 in. (25 mm) outboard of the inboard edge of the elevator (next to the tailcone).

(b) Hold the force of 10 ±1 lbf (44 ±5 N) on the elevator.

(c) Make a mark of the right elevator position on the tape.

(d) Slowly remove the force from the elevator.

(6) Make sure that the total up and down freeplay of the right elevator is 0.21 in. (5.33 mm) or less.

(a) If the total up and down freeplay is more than 0.21 in. (5.33 mm), do a check of the torque tube and the torque tube crank arm bearing for excessive wear.

(7) Remove the tape.

(8) Set the FLT CONTROL A switch on the forward overhead panel, P5, to the ON position.

(9) Set the FLT CONTROL B switch on the forward overhead panel, P5, to the OFF position.

(10) Put a piece of tape over the left elevator index plate [1].

(11) Use a block, STD-1278, and force gauge, COM-1557, to apply a force of 15 ±1 lbf (67 ±5 N) to left elevator trailing edge in the down direction and release slowly.

(a) Apply the force approximately 0.5 in. (12.7 mm) forward of the trailing edge and 1 in. (25 mm) outboard of the inboard edge of the elevator (next to the tailcone).

(b) Slowly remove the force from the elevator.

(c) Make a mark of the left elevator position on the tape.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(12) Use a block, STD-1278, and force gauge, COM-1557, to apply a force of10 ±1 lbf (44 ±5 N) to left elevator trailing edge in the up direction.

(a) Apply the force approximately 0.5 in. (12.7 mm) forward of the elevator trailing edge and 1 in. (25 mm) outboard of the inboard edge of the elevator (next to the tailcone).

(b) Hold the force of 10 ±1 lbf (44 ±5 N) on the elevator.

(c) Make a mark of the left elevator position on the tape.

(d) Slowly remove the force from the elevator.

(13) Make sure that the total up and down freeplay of the left elevator is 0.21 in. (5.33 mm) or less.

(a) If the total up and down freeplay is more than 0.21 in. (5.33 mm), do a check of the torque tube and the torque tube crank arm bearing for excessive wear.

(14) Remove the tape.

(15) Set the FLT CONTROL B switch on the forward overhead panel, P5, to the ON position.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-32-860-006

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

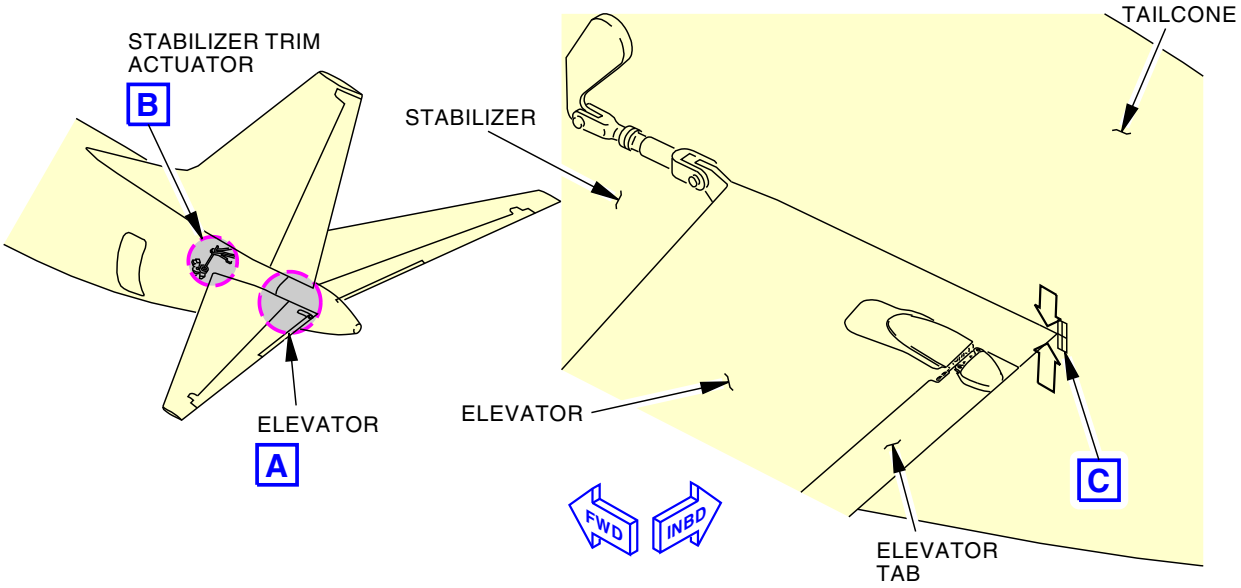
SUBTASK 27-31-32-410-001

(2) Install this access door:

Number	Name/Location
311BL	Stabilizer Trim Access Door

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details



LEFT ELEVATOR

27-CMR-02

TASK 27-31-32-200-802

3. Elevator Tab Freeplay - Check

(Figure 602)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this test to do a check of the elevator tab trailing edge freeplay, the elevator tab hinge line axial freeplay, and the elevator tab hinge line radial freeplay.

(2) This check is applicable to the left and right side elevator tabs.

B. References

Reference	Title

E. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Prepare for the Check

SUBTASK 27-31-32-860-007

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES. MAKE SURE THAT THE INBOARD FAN DUCT COWL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED. THE FLIGHT CONTROL SURFACES CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize the elevator hydraulic systems A and B (TASK 27-31-00-800-801).

SUBTASK 27-31-32-860-008

(2) Make sure that the flaps are in the full up position (TASK 27-51-00-860-801).

SUBTASK 27-31-32-010-002

(3) Remove this access door:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-32-860-009

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(4) Use the bar, SPL-1677, to set the "B" dimension at 39.17 ±0.01 in. (994.92 ±0.26 mm) or use the trim system to move the stabilizer to 4 units of trim (Figure 602).

SUBTASK 27-31-32-860-010

(5) Operate the elevator in the full travel 6 times.

SUBTASK 27-31-32-860-011

(6) Make sure that the control column is in the neutral position.

G. Elevator Tab Trailing Edge Freeplay Check

SUBTASK 27-31-32-220-002

(1) Do a check of the elevator tab trailing edge freeplay (Figure 602):

(a) Remove pressure from the elevator hydraulic systems A and B (TASK 27-31-00-800-802).

(b) Make sure that the flaps are retracted to the full up position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Make sure that the stabilizer is set to 4.0 ± 0.5 units of trim.

CAUTION DO NOT USE MORE THAN HAND PRESSURE WHEN YOU INSTALL THE WOOD BLOCK. IF YOU USE MORE THAN HAND PRESSURE, YOU CAN CAUSE DAMAGE TO THE ELEVATOR OR TAIL CONE.

(d) Install a wood block between the inboard edge of the elevator and the tail cone to keep the elevator from moving (Figure 602).

1) Make sure that you cover the wood block with duct tape or equivalent so that you do not damage the paint of the elevator or tail cone.

WARNING DO NOT MOVE THE CONTROL COLUMNS WHILE THE MOUNTING PLATE IS IN ITS POSITION. MOVEMENT OF THE CONTROL COLUMNS CAN CAUSE INJURY TO PERSONNEL OR DAMAGE TO THE ELEVATOR.

CAUTION MAKE SURE THAT YOU INSTALL THE MOUNTING PLATE CORRECTLY. THE MOUNTING PLATE CAN CAUSE DAMAGE TO THE ELEVATOR IF YOU DO NOT INSTALL IT CORRECTLY.

(e) Attach a mounting plate to the elevator trailing edge forward of the elevator tab hinge 2.

1) If double-back tape is used to attach the mounting plate, make sure that it is not made of compressible foam.

2) Attach the mount, STD-1279, and the dial indicator, STD-1238, plunger on the top of the elevator tab, approximately 0.1 in. (3 mm) forward of the trailing edge of the elevator tab and within 0.5 in. (13 mm) of the inboard side of the hinge 2 centerline.

3) Adjust the dial indicator, STD-1238, to zero.

(f) Use a block and a force gauge, COM-1557, to push down on the top of the elevator tab with a force of 10.0 ±0.2 lbf (44.5 ±0.9 N).

1) Apply the force on the elevator tab at the trailing edge, as close as possible to the tab hinge 2 centerline.

2) Make a record of the travel shown on the dial indicator, STD-1238.

3) Slowly remove the force.

(g) Do not adjust the dial indicator, STD-1238.

(h) Push up on the bottom surface of the elevator tab with a force of 10.0 ±0.2 lbf (44.5 ±0.9 N), directly below the force applied before.

1) Make a record of the travel shown on the dial indicator, STD-1238.

2) Slowly remove the force.

(i) Make sure that the sum of the two travel records is 0.03 in. (0.76 mm) or less.

1) If the sum of the two travel records is more than 0.03 in. (0.76 mm), do a check of the hinges for excessive wear and replace if it is necessary.

(j) Remove the mount, STD-1279, and the dial indicator, STD-1238.

(k) Remove the mounting plate.

(l) If no other checks are necessary, remove the wood block from between the inboard edge of the elevator and the tail cone.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Elevator Tab Hinge Axial Freeplay Check

SUBTASK 27-31-32-220-003

(1) Do a check of the elevator tab hinge axial freeplay (Figure 602):

(a) Remove pressure from the elevator hydraulic systems A and B (TASK 27-31-00-800-802).

(b) Make sure that the flaps are retracted to the full up position.

(c) Make sure that the stabilizer is set at 4.0 ± 0.5 units of trim.

CAUTION DO NOT USE MORE THAN HAND PRESSURE WHEN YOU INSTALL THE WOOD BLOCK. IF YOU USE MORE THAN HAND PRESSURE, YOU CAN CAUSE DAMAGE TO THE ELEVATOR OR TAIL CONE.

(d) Install a wood block between the inboard edge of the elevator and the tail cone to keep the elevator from moving (Figure 602).

1) Make sure that you cover the wood block with duct tape or equivalent so that you do not damage the paint of the elevator or tail cone.

(e) Do these steps to make sure that the axial play (inboard - outboard direction) of the tab is 0.036 in. (0.91 mm) or less.

1) Hold the elevator tab at the trailing edge and move it outboard with hand pressure.

2) Use a 0.0 - 0.5 Inch feeler gauge, STD-1107, or a dial caliper, STD-1303, to measure the clearance between the elevator and the outboard end of the elevator tab.

a) If it is necessary, insert a flat metal filler block between the elevator and the elevator tab to help in this measurement.

b) Make a record of the clearance dimension.

3) Hold the elevator tab at the trailing edge and move it inboard with hand pressure.

4) Measure the clearance between the elevator and the outboard end of the elevator tab.

a) Make a record of the clearance dimension.

5) Make sure that the difference between the two measured clearances, or the axial freeplay, is less than 0.036 in. (0.91 mm).

(f) If no other checks are necessary, remove the wood block from between the inboard edge of the elevator and the tail cone.

I. Elevator Tab Hinge Line Freeplay Check

SUBTASK 27-31-32-220-004

(1) Do a check of the elevator tab hinge line freeplay (Figure 602):

(a) If it is necessary, remove pressure from the elevator hydraulic systems A and B (TASK 27-31-00-800-802).

(b) Make sure that the stabilizer is set at 4.0 ± 0.5 units of trim.

(c) Make sure that the flaps are retracted to the full up position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION DO NOT USE MORE THAN HAND PRESSURE WHEN YOU INSTALL THE WOOD BLOCK. IF YOU USE MORE THAN HAND PRESSURE, YOU CAN CAUSE DAMAGE TO THE ELEVATOR OR TAIL CONE.

(d) Install a wood block between the inboard edge of the elevator and the tail cone to keep the elevator from moving (Figure 602).

1) Make sure that you cover the wood block with duct tape or equivalent so that you do not damage the paint of the elevator or tail cone.

CAUTION MAKE SURE THAT YOU INSTALL THE MOUNTING PLATE CORRECTLY. THE MOUNTING PLATE CAN CAUSE DAMAGE TO THE ELEVATOR IF YOU DO NOT INSTALL IT CORRECTLY.

(e) Attach a mounting plate to the elevator trailing edge, forward of elevator tab hinge 3.

1) If double-back tape is used to attach the mounting plate, make sure that it is not made of compressible foam.

(f) Attach the mount, STD-1279, and the dial indicator, STD-1238, plunger on the elevator tab leading edge directly over the top of the tab hinge centerline (Figure 602).

(g) Adjust the dial indicator, STD-1238, to zero once there is contact with the elevator tab leading edge.

(h) Use a block and a force scale to apply a 10.0 ±0.5 lbf (44.5 ±2.2 N) in the up direction.

NOTE: The force is to be applied in line with the plunger on the bottom side of the tab leading edge.

(i) Make a record of the travel shown on the dial indicator, STD-1238.

(j) Slowly remove the force.

(k) Do not adjust the dial indicator, STD-1238.

(l) Use a block and a force scale to apply 10.0 ±0.5 lbf (44.5 ±2.2 N) in the down direction.

NOTE: The force is to be applied to the top side of the tab leading edge.

(m) Make a record of the travel shown on the dial indicator, STD-1238.

(n) Slowly remove the force.

(o) Make sure that the sum of the two travel records is 0.03 in. (0.76 mm) or less.

1) If the sum of the two travel records is more than 0.03 in. (0.76 mm), do a check of the hinges for excessive wear and replace if it is necessary.

(p) Move the mount, STD-1279, the dial indicator, STD-1238, and the mounting plate to the next hinge centerline.

(q) Repeat the above steps for the other three outboard tab hinges (hinges 4, 5, and 6).

(r) Remove the mount, STD-1279, and the dial indicator, STD-1238.

(s) Remove the mounting plate.

(t) Remove the wood block from between the inboard edge of the elevator and the tail cone.

SUBTASK 27-31-32-640-001

(2) Lubricate the elevator tab hinges (TASK 12-22-31-640-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

J. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-32-860-012

(1) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

SUBTASK 27-31-32-410-002

(2) Install this access door:

ELEVATOR TAB CONTROL MECHANISM - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the elevator tab control mechanism

(2) An installation of the elevator tab control mechanism

(3) A removal of the tab pushrod

(4) An installation of the tab pushrod

(5) A removal of the elevator tab lock actuator

(6) An installation of the elevator tab lock actuator

(7) A removal of the elevator tab control mechanism springs

(8) An installation of the elevator tab control mechanism springs.

B. The elevator tab control mechanism is referred to as the "tab mechanism" in this procedure.

C. The tab mechanism includes the crank assembly and two tab pushrods.

D. This procedure is applicable to the left and right tab mechanisms.

TASK 27-31-34-000-801

2. Elevator Tab Control Mechanism - Removal

(4) Open the applicable access panels:

Number	Name/Location
334PT	Horizontal Stabilizer, Tab Control Rod Fairing
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-34-860-002

CAUTION MAKE SURE THAT YOU ARE CAREFUL WITH THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE SHARP EDGES ON THE TRAMMEL BAR, SPL-1677 CAN CAUSE CHAFING OR DAMAGE TO THE WIRES.

(5) Use the trammel bar, SPL-1677, to set the “B” dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)) (TASK 27-31-00-820-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-34-700-001

(6) Measure and record the elevator tab [22] position in relation to the elevator [21].

NOTE: Measure and record the elevator tab position before you remove the tab to improve the manual reversion success rate, if the tab needs to be adjusted after installation. The elevator tab position can be measured with the elevator tab rigging bar, SPL-10345. It is installed on the third elevator tab hinge (from inboard).

(a) Manually push the elevator trailing edge up.

(b) While you move the elevator trailing edge down, align the projected center of the elevator trailing edge with the index mark within 0.00 ±0.04 in. (0.0 ±1.0 mm) (TASK 27-31-00-820-802).

1) Install the elevator tab rigging bar, SPL-10345 (TASK 27-31-00-820-805).

a) Install the elevator tab rigging bar, SPL-10345, below the elevator and elevator tab at the third elevator tab hinge (from inboard).

<1> Make sure that the stand offs for the elevator tab rigging bar, SPL-10345, rest on the skin fastener heads to prevent skin variation.

b) Make sure that the cross bar on the elevator tab rigging bar, SPL-10345, touches the lower surface of the elevator trailing edge.

c) Push the elevator tab rigging bar, SPL-10345, FWD until elevator stop indexes on the AFT edge of elevator near elevator rear spar.

d) Slide step gage FWD under elevator tab to obtain reading.

2) Measure and record the elevator tab [22] position.

3) Make sure that the distance between the left elevator tab [22] and elevator tab rigging bar, SPL-10345, is within 0.25 in. (6.35 mm) - 0.47 in. (11.94 mm).

4) Make sure that the distance between the right elevator tab [22] and elevator tab rigging bar, SPL-10345, is within 0.25 in. (6.35 mm) - 0.47 in. (11.94 mm).

SUBTASK 27-31-34-010-001

(7) Open this access door:

Number	Name/Location
318BR	Tailcone Access Door

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

SUBTASK 27-31-34-010-002

(9) Open the applicable access panels:

Number	Name/Location
334AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334GB	Horizontal Stabilizer, Elevator Hinge Cover
344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Elevator Tab Control Mechanism Removal

SUBTASK 27-31-34-020-001

(1) Disconnect the hydraulic line [31] from the elevator tab control mechanism [32].

SUBTASK 27-31-34-020-002

(2) Disconnect the electrical line clamp [30] from the elevator tab control mechanism [32].

SUBTASK 27-31-34-020-003

(3) Remove the elevator tab control mechanism [32], do these steps:

(a) Remove the screws [48] and washers [55] from the pin retainers [49].

1) Rotate the pin retainer [49] arms up.

(b) Remove the nut [52], washer [51], bushing [95], and pin assembly [40] that attach the elevator tab control mechanism [32] to the elevator [21].

(c) Remove the nuts [47], washers [46], spacers [54], and bolts [41] that attach the tab pushrods [29] to the elevator tab control mechanism [32].

(d) Remove the nut [45], washer [43], washer [94], and pin assembly [42] that attach the elevator tab control mechanism [32] to the elevator [21].

SIA 001-006

(e) Remove the nut [37], washer [36], nut [35], washer [34], bushing [60], bushing [38], bolt assembly [39], and pin [61] that attach the elevator tab control mechanism [32] to the horizontal stabilizer [33].

NOTE: For ease of removal of bushing [38] use the removal / installation equipment, SPL-12558.

(f) Discard the pin [61].

SIA 007-999

(g) Remove the nut [37], washer [36], nut [35], washer [34], bushing [60], bushing [38], bolt assembly [39], and safety cable that attach the elevator tab control mechanism [32] to the horizontal stabilizer [33].

NOTE: For ease of removal of bushing [38] use the removal / installation equipment, SPL-12558.

(h) Discard the safety cable.

SIA ALL

(i) Remove the elevator tab control mechanism [32] from the airplane.

G. Elevator Tab Control Mechanism Installation

SUBTASK 27-31-34-860-003

(1) Make sure that the hydraulic power is removed from the elevator hydraulic systems A and B (TASK 27-31-00-800-802).

SUBTASK 27-31-34-420-001

(2) Install the elevator tab control mechanism [32], do these steps (Figure 402):

(a) Install the retention clips on the aft attach lugs.

1) Make sure that the retention clips lock into their positions.

(b) Put the elevator tab control mechanism [32] in its position.

(c) Connect the tab pushrods [29] to the elevator tab control mechanism [32], do these steps:

1) Apply compound, D50004, to the threads of the bolts [41] and outer surface of the spacers [54].

2) Install the bolts [41], washers [46], spacers [54], and new nuts [47] to connect the tab pushrods [29] to the elevator tab control mechanism [32].

NOTE: The inboard bolt is installed with the head inboard and the outboard bolt is installed with the head outboard.

a) Tighten the nuts [47] to 70 in-lb (8 N·m) - 80 in-lb (9 N·m).

NOTE: If you loosened or removed the nuts, they need to be replaced and not re-installed. Using new nuts will ensure that they have the required run-on torque of 3.5 in-lb (0.4 N·m).

(d) Apply compound, D50004, to the threads of the pin assembly [40].

(e) Install the pin assembly [40] with the head at the inside of the elevator tab control mechanism [32], bushing [95], washer [51], and nut [52] to connect the elevator tab control mechanism [32] to elevator [21].

1) Use a Phillips screwdriver, STD-7502, set-up to hold the heads of the pin assembly [40] while tightening the nut [52].

2) Tighten the nut [52] to 30 in-lb (3.4 N·m) - 40 in-lb (4.5 N·m).

(f) Apply compound, D50004, to the threads of the pin assembly [42].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Install the pin assembly [42] with the head at the inside of the elevator tab control mechanism [32], washer [94], washer [43], and nut [45] to connect the elevator tab control mechanism [32] to the elevator [21].

1) Tighten the nut [45] to 30 in-lb (3.4 N·m) - 40 in-lb (4.5 N·m).

(h) Turn the pin retainer [49] arms down and install the screws [48] and washers [55] to attach the pin retainers [49] to the elevator tab control mechanism [32].

(i) Apply compound, D50004, to the threads of the bolt assemblies [39] and the outer surface of the bushings [60].

(j) Install the bushing [38], bolt assembly [39], bushing [60], washer [34], and nut [35] to connect the elevator tab control mechanism [32] to the horizontal stabilizer [33].

NOTE: The bolts are installed with the heads at the outside of the tab mechanism.

1) Tighten the nut [35] to 50 in-lb (6 N·m) - 60 in-lb (7 N·m).

CAUTION

DO NOT TIGHTEN THE NUTS [35] AGAIN AFTER YOU TIGHTEN THE NUT [37]. YOU CAN CAUSE DAMAGE TO EQUIPMENT.

(k) Install the washer [36] and nut [37].

1) Tighten the nut [37] to 12 in-lb (1 N·m) - 15 in-lb (2 N·m).

SIA 001-006

(l) Install a new pin [61].

SIA 007-999

(m) Install the safety cable kit, G51674.

1) Apply corrosion inhibiting material, G50136, to both sides of the clevis assembly of the horizontal stabilizer [33] and to the cable holes.

NOTE: It is not required to completely fill the inside of the cable holes with corrosion inhibiting material, G50136.

2) Install the safety cable through the cable holes (TASK 20-10-44-400-801).

SIA ALL

(n) Connect the hydraulic line [31] to the elevator tab control mechanism [32].

(o) Tighten the B-nut on the hydraulic line [31] to 140 ±7 in-lb (16 ±1 N·m).

(p) Connect the electrical line and the electrical line clamp [30] to the elevator tab control mechanism [32].

SUBTASK 27-31-34-211-001

(3) Do a detailed inspection of the inboard and outboard aft attach lugs of the elevator tab control mechanism after installation (TASK 27-31-00-220-801).

SUBTASK 27-31-34-700-002

(4) Adjust the tab rods to the position that you measured before removing the mechanism, do this task: Elevator Tab Pushrods - Adjustment, TASK 27-31-00-820-805.

SUBTASK 27-31-34-730-002

(5) Do this task: Elevator Travel Limit - Test, TASK 27-31-00-700-805.

SUBTASK 27-31-34-730-003

(6) Do this task: Elevator Tab Linkage - Test, TASK 27-31-00-700-807.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-34-730-004

(7) Do this task: Control Column Power Force - Test, TASK 27-31-00-700-810.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-34-410-002

(1) Close these access doors:

Number	Name/Location
311BL	Stabilizer Trim Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-34-410-020

(2) Close the applicable access panels:

(TASK 27-31-41-400-801)

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

SUBTASK 27-31-34-410-003

(3) Close the applicable access panels:

Number	Name/Location
334GB	Horizontal Stabilizer, Elevator Hinge Cover
334PT	Horizontal Stabilizer, Tab Control Rod Fairing
344GB	Horizontal Stabilizer, Hinge Cover, Elevator Station 24.09
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-34-410-021

CAUTION

TORQUE FASTENERS AFTER SEAL ADJUSTMENT AS HIGH AS POSSIBLE WITHIN A 10-15 IN-LB RANGE. TOO MUCH TORQUE CAN CAUSE DAMAGE TO THE SEAL PANELS.

(4) Close the applicable access panels:

Number	Name/Location
334AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344AB	Horizontal Stabilizer, Seal, Trailing Edge to Elevator

SUBTASK 27-31-34-390-001

(5) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

SUBTASK 27-31-34-730-005

(6) Do this task: Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-31-34-000-802

4. Elevator Tab Pushrod - Removal

(Figure 401, Figure 402)

A. General

(1) This task is applicable for the two left elevator tab and two right elevator tab pushrods.

B. References

344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

F. Prepare for the Removal

SUBTASK 27-31-34-860-004

(1) Remove pressure from the elevator hydraulic systems A and B, do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-34-010-004

(2) Open these access doors:

Number	Name/Location
311BL	Stabilizer Trim Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-34-010-005

(3) Open the applicable access panels:

(TASK 27-31-41-000-801)

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

SUBTASK 27-31-34-010-007

(4) Open the applicable access panels:

Number	Name/Location
334AT	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334GT	Horizontal Stabilizer, Elevator Hinge Cover
334PT	Horizontal Stabilizer, Tab Control Rod Fairing
344AT	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
344GT	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 39.02
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-34-860-005

(5) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-34-860-006

CAUTION MAKE SURE THAT YOU ARE CAREFUL WITH THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE SHARP EDGES ON THE TRAMMEL BAR, SPL-1677 CAN CAUSE CHAFING OR DAMAGE TO THE WIRES.

(6) Use the bar, SPL-1677, to set the "B" dimension at 4 units of trim (39.17 ±0.01 in. (994.92 ±0.26 mm)) (TASK 27-31-00-820-801).

SUBTASK 27-31-34-860-007

(7) Manually push the elevator trailing edge full up.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-34-860-008

(8) While you move the elevator trailing edge down, align the center of the elevator trailing edge with the index mark to 0.00 ±0.04 in. (0.0 ±1.0 mm), or less (TASK 27-31-00-820-802).

NOTE: Keep the elevators at this position while you measure and adjust the tab pushrods. If the elevator position is changed, you must put the elevator trailing edge at the full up position and do this step again before you continue.

SUBTASK 27-31-34-480-001

(9) Install the elevator tab rigging bar, SPL-10345 (TASK 27-31-00-820-805).

(a) Install the elevator tab rigging bar, SPL-10345, below the elevator and elevator tab at the third elevator tab hinge (from inboard).

1) Make sure that the stand offs for the elevator tab rigging bar, SPL-10345, rest on the skin fastener heads to prevent skin variation.

(b) Make sure that the cross bar on the elevator tab rigging bar, SPL-10345, touches the lower surface of the elevator trailing edge.

(c) Push the elevator tab rigging bar, SPL-10345, FWD until elevator stop indexes on the AFT edge of elevator near elevator rear spar.

(d) Slide step gage FWD under elevator tab to obtain reading.

(e) Record the elevator tab dimension measured from the elevator tab faired/neutral position to the rigged up position.

NOTE: Adjusting the elevator tab back to this recorded position may reduce the need for a second flight test.

G. Tab Pushrod Removal

SUBTASK 27-31-34-020-004

(1) Remove the bolts [24] that attach the access panel [23] to the elevator [21].

SUBTASK 27-31-34-020-005

(2) Remove the tab pushrod [29], do these steps:

(a) Remove the screws [48] and washers [55] from the pin retainer [49].

(b) Remove the pin [53], nut [25], washer [26], bushing [27], and bolt [28] from the tab pushrod [29] and elevator tab [22].

1) Discard the pin [53].

(c) Remove the upper access panels to disconnect the elevator tab control mechanism [32] from the elevator [21], do these steps:

1) Remove the nut [52], washer [51], bushing [95], and pin assembly [40] that attach the elevator tab control mechanism [32] to the elevator [21].

NOTE: For ease of removal of pin assembly use removal / installation equipment, SPL-12558.

2) Remove the nut [45], washer [43], washer [94], and pin assembly [42] that attach the elevator tab control mechanism [32] to the elevator [21].

NOTE: For ease of removal of pin assembly use removal / installation equipment, SPL-12558.

(d) Remove the nut [47], washer [46], spacer [54], and bolt [41] from the elevator tab control mechanism [32] and tab pushrod [29].

(e) Disconnect the tab pushrod [29] from the elevator tab control mechanism [32].

(f) Remove the tab pushrod [29] from the airplane.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-34-420-002

(3) Use the fixture, SPL-11021, to assist in measuring and replacing the new or replacement tab pushrods [29] to match the removed old tab pushrods [29] (TASK 27-31-00-820-805).

NOTE: Measuring the new or replacement tab pushrod using fixture, SPL-11021 is optional. The tool is used to adjust the new or replacement tab rods off the airplane to the same length as the removed tab rods. This adjustment will reduce the chance that a second flight test will be required.

NOTE: Use the previously recorded elevator tab dimension obtained using (TASK 27-31-00-820-805).

(a) Make sure that no changes to the recorded elevator tab dimensions are made after removal.

(b) Install the old removed tab pushrods [29] onto the fixture, SPL-11021.

(c) Set the digital scales to zero.

(d) Remove the old tab pushrods [29].

(e) Install the new or replacement tab pushrods [29] onto the fixture, SPL-11021.

NOTE: The inboard and outboard pushrod must be identified prior to adjustment. The slot in the retainer that attaches the pushrod is on the inboard for the RH elevator and outboard for the LH elevator.

(f) Record readings from the scale.

(g) Adjust the new or replacement tab pushrods [29] by coarse or fine method until scale is back to 0.0 ± 0.0005 inches (TASK 27-31-00-820-805).

NOTE: The fine adjustments may be made with the pushrod installed on the tool. The coarse adjustments must be made with the pushrods removed from the tool.

(h) Tighten the checknut to prevent movement of the rod end prior to installation.

NOTE: Do not lockwire the checknuts until final adjustment is done on the airplane.

(i) Remove the new or replacement tab pushrods [29] from fixture, SPL-11021.

(j) Using the information from the previously recorded old elevator tab dimension, tag the new tab pushrods [29] with the same information.

(k) Install the new or replacement tab pushrods [29] onto the fixture, SPL-11021.

(l) Make sure that the scales reads 0.0 ± 0.0005 inches.

(m) Remove the tab pushrods [29].

1) Make sure that no adjustment is made to tab pushrods [29] when removing from fixture, SPL-11021.

(n) Tighten the checknuts on the tab pushrods [29] (TASK 27-31-00-820-805).

(o) Install the new or replacement tab pushrods [29] onto the airplane (TASK 27-31-34-400-802).

(p) Make sure that the tab position is the same as the tab dimension first obtained from the old tab pushrods elevator tab rigging bar, SPL-10345, readings within ± 0.01 inches.

NOTE: If required, adjust the tab pushrods on the airplane.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Tab Pushrod Installation

SUBTASK 27-31-34-860-009

(1) Make sure that the hydraulic power is removed from the elevator hydraulic systems A and B (TASK 27-31-00-800-802).

SUBTASK 27-31-34-420-003

(2) Install the tab pushrods [29], do these steps (Figure 402):

(a) Put the tab pushrods [29] in its position.

1) Make sure that the orientation of the tab pushrods [29] is correct.

a) For the left tab pushrod [29], the HI-LOK collars must be in the 3 o'clock and 6 o'clock positions at each end. For the right tab pushrod [29], the HI-LOK collars must be in the 2 o'clock and 5 o'clock positions at each end. This orientation is applicable to the left and right elevator tab mechanisms.

2) If you loosened or removed the nuts [47] or nuts [25], replace them with new nuts [47] or nuts [25].

NOTE: New nuts will make sure that they have the required run-on torque.

(b) Install the elevator tab control mechanism [32] to the elevator [21], do these steps:

1) Apply compound, D50004, to the threads of the pin assembly [40].

2) Install the pin assembly [40] with the head at the inside of the elevator tab control mechanism [32], bushing [95], washer [51], and nut [52] to connect the elevator tab control mechanism [32] to elevator [21].

a) Use a Phillips screwdriver, STD-7502, set-up to hold the heads of the pin assembly [40] while tightening the nut [52].

b) Tighten the nut [52] to 30 in-lb (3.4 N·m) - 40 in-lb (4.5 N·m).

3) Apply compound, D50004, to the threads of the pin assembly [42].

4) Install the pin assembly [42] with the head at the inside of the elevator tab control mechanism [32], washer [94], washer [43], and nut [45] to connect the elevator tab control mechanism [32] to the elevator [21].

a) Make sure that the longer tab mechanism pin assembly [42] installs inboard (View F, Figure 402).

b) Tighten the nut [45] to 30 in-lb (3.4 N·m) - 40 in-lb (4.5 N·m).

(c) Apply compound, D50004, to the threads of the bolts [41] and outer surface of the spacers [54].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Install the bolts [41], spacers [54], washers [46], and new nuts [47] to connect the tab pushrods [29] to the elevator tab control mechanism [32].

NOTE: The inboard bolt is installed with the head inboard and the outboard bolt is installed with the head outboard.

CAUTION

IF THE NEW NUTS [47] ARE NOT TIGHTENED CORRECTLY, THEN THE PUSHRODS CAN BECOME DISCONNECTED AND CAUSE DAMAGE TO THE ELEVATOR AND STABILIZER.

(e) Tighten the nuts [47] to 70 in-lb (7.9 N·m) - 80 in-lb (9.0 N·m).

(f) Install the screws [48] and washers [55] to attach the pin retainers [49] to the elevator tab control mechanism [32].

(g) Apply compound, D50004, to the threads of the bolts [28] and outer surface of the bushings [27].

(h) Install the bolts [28], bushings [27], washers [26], and new nuts [25] to connect the tab pushrods [29] to the elevator tab [22].

NOTE: The inboard bolt is installed with the head inboard and the outboard bolt is installed with the head outboard.

CAUTION

IF THE NEW NUTS [25] ARE NOT TIGHTENED CORRECTLY, THEN THE PUSHRODS CAN BECOME DISCONNECTED AND CAUSE DAMAGE TO THE ELEVATOR AND STABILIZER.

(i) Tighten the nuts [25] to 70 in-lb (7.9 N·m) - 80 in-lb (9.0 N·m).

1) Install a new pins [53] in the anti-rotation boss at the head of the bolt [28].

SUBTASK 27-31-34-820-001

(3) Adjust the tab pushrods [29] until you get the same tab position that you measured before you removed the elevator tab pushrods [29], do this task: Elevator Tab Pushrods - Adjustment, TASK 27-31-00-820-805.

SUBTASK 27-31-34-420-004

(4) Install the bolts [24] to attach the access panel [23] to the elevator [21].

SUBTASK 27-31-34-730-006

(5) Do this task: Elevator Travel Limit - Test, TASK 27-31-00-700-805.

SUBTASK 27-31-34-730-007

(6) Do this task: Control Column Power Force - Test, TASK 27-31-00-700-810.

SUBTASK 27-31-34-730-008

(7) Do this task: Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-34-410-008

(1) Close the applicable access panels:

Number	Name/Location
334AT	Horizontal Stabilizer, Seal, Trailing Edge to Elevator
334GT	Horizontal Stabilizer, Elevator Hinge Cover
334PT	Horizontal Stabilizer, Tab Control Rod Fairing
344AT	Horizontal Stabilizer, Seal, Trailing Edge to Elevator

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Number	Name/Location
344GT	Horizontal Stabilizer, Elevator Hinge Cover, Elevator Sta 39.02
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-34-410-011

(2) Close the applicable access panels:

(TASK 27-31-41-400-801)

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

SUBTASK 27-31-34-410-013

(3) Close these access doors:

Number	Name/Location
311BL	Stabilizer Trim Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-34-390-002

(4) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

SUBTASK 27-31-34-730-009

(5) Do this task: Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

——— END OF TASK ———

TASK 27-31-34-000-803

6. Elevator Tab Lock Actuator - Removal

(Figure 401, Figure 402, Figure 403)

A. References

Reference	Title
27-31-00-710-803	Elevator Power-Off Flight Test (P/B 501)

343	Right Horizontal Stabilizer - Rear Spar to Trailing Edge
344	Right Horizontal Stabilizer - Elevator

D. Access Panels

Number	Name/Location
318BR	Tailcone Access Door
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

E. Prepare for the Removal

SUBTASK 27-31-34-860-010

(1) Remove pressure from the elevator hydraulic systems A and B. To remove it, do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-34-010-010

(2) Open this access door:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-34-010-011

(3) Open the applicable access panels:

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

SUBTASK 27-31-34-480-002

(4) Install the rig pin E-5 from rigging pin kit, SPL-1585 in the aft control quadrant (Figure 401).

SUBTASK 27-31-34-220-001

(5) Measure the elevator tab position.

(a) Keep a record of the elevator tab position.

(b) If you will change the adjustment of the two elevator tab pushrods, then you need to do an elevator power-off flight test. Do this task: Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

F. Tab Lock Actuator Removal

SUBTASK 27-31-34-020-006

(1) Disconnect the hydraulic line [31] from the actuator [78] and install caps and plugs on the hydraulic line and port (Figure 402).

NOTE: The spring must be at the neutral position when the hydraulic line is disconnected.

SUBTASK 27-31-34-020-007

(2) Remove the actuator [78]:

(a) Remove the nut [80], washer [79], bushing [93], bushing [77], and bolt [76] from the actuator [78].

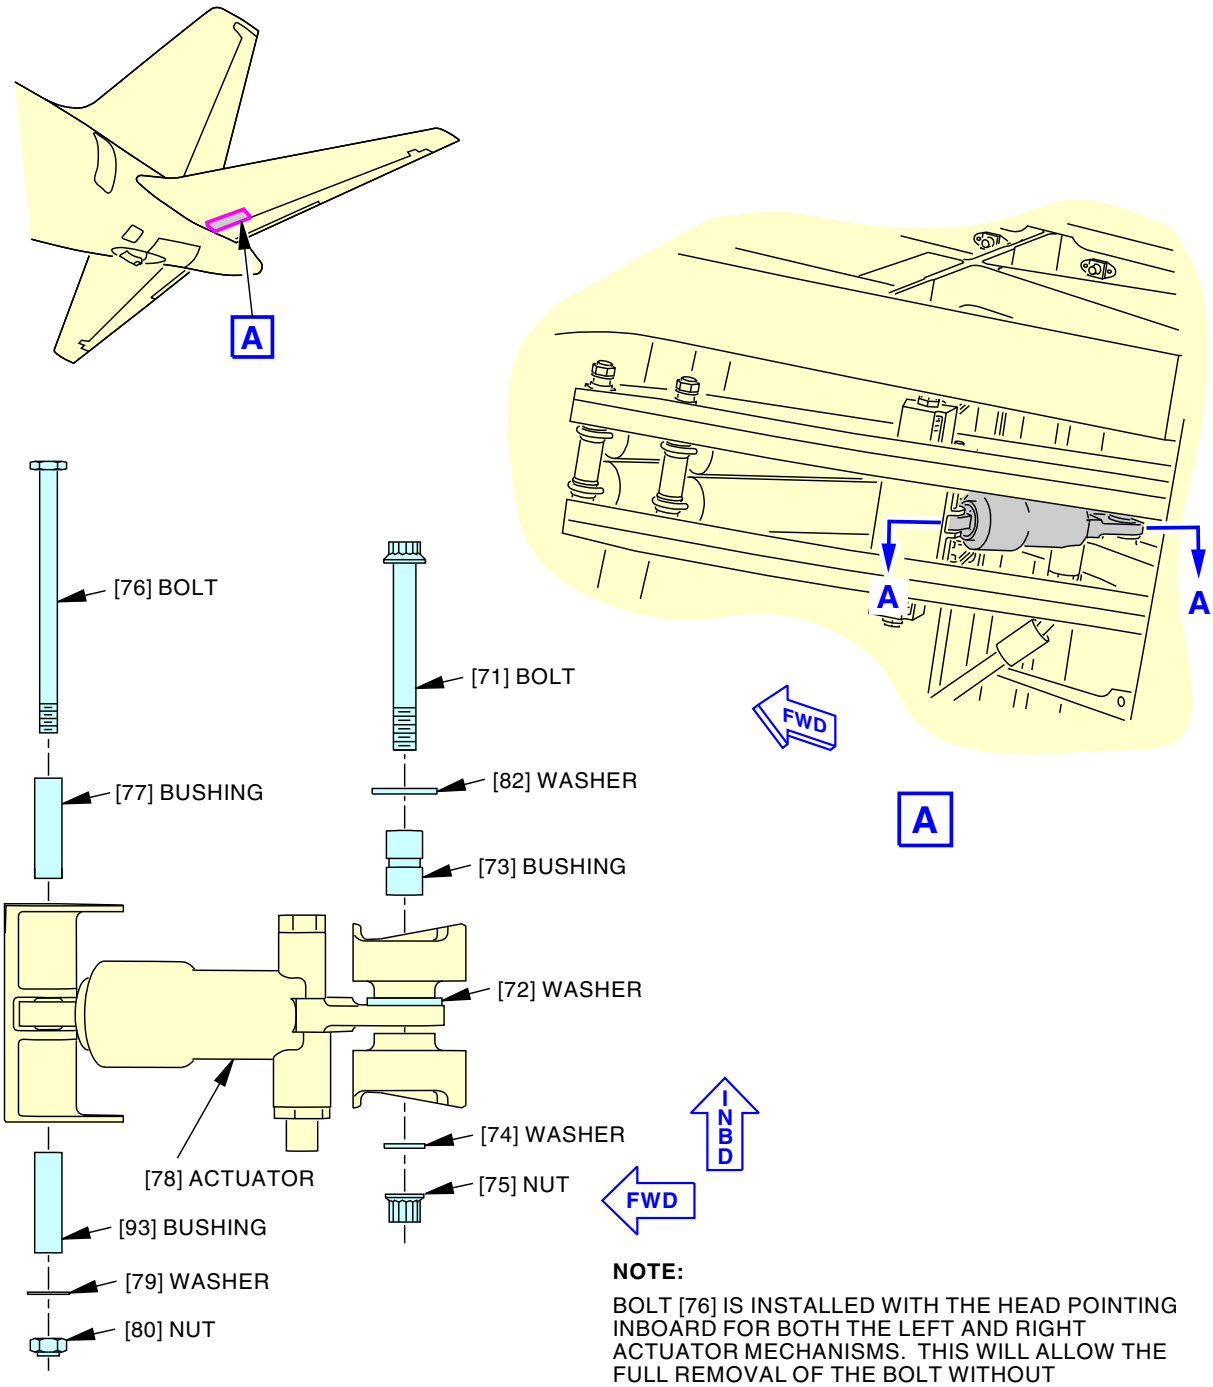
ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the nut [75], washer [74], washer [72], bushing [73], washer [82] and bolt [71] from the actuator [78].

(c) Remove the actuator [78] from the airplane.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details



(LEFT SIDE IS SHOWN, RIGHT SIDE IS OPPOSITE)

A-A

NOTE:

BOLT [76] IS INSTALLED WITH THE HEAD POINTING INBOARD FOR BOTH THE LEFT AND RIGHT ACTUATOR MECHANISMS. THIS WILL ALLOW THE FULL REMOVAL OF THE BOLT WITHOUT CONTACTING ADJACENT STRUCTURE.

D. Location Zones

Zone	Area
318	Tail Cone Compartment - Right
333	Left Horizontal Stabilizer - Rear Spar to Trailing Edge
334	Left Horizontal Stabilizer - Elevator
343	Right Horizontal Stabilizer - Rear Spar to Trailing Edge
344	Right Horizontal Stabilizer - Elevator

E. Access Panels

Number	Name/Location
318BR	Tailcone Access Door
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

F. Tab Mechanism Installation

SUBTASK 27-31-34-860-011

(1) Make sure that the hydraulic power is removed from the elevator hydraulic systems A and B (Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802).

SUBTASK 27-31-34-420-005

(2) Install the actuator [78]:

(a) Install the bolt [71], washer [82], bushing [73], washer [72], washer [74], and nut [75].

(b) Install the bolt [76], bushing [77], bushing [93], washer [79], and nut [80].

NOTE: The bolt [76] is installed with the head pointing inboard on both the left and right actuator mechanisms. This will allow the full removal of the bolt from the actuator mechanism without it contacting the adjacent structure.

SUBTASK 27-31-34-420-006

(3) Connect the hydraulic line:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the caps and plugs from the hydraulic and electrical lines.

(b) Connect hydraulic line [31] from the elevator tab control mechanism [32].

(c) Tighten the B-nut on the hydraulic line [31] to 140 ±7 in-lb (16 ±1 N·m).

SUBTASK 27-31-34-080-001

(4) Remove rig pin E-5 of the rigging pin kit, SPL-1585 from the aft control quadrant (Figure 401).

SUBTASK 27-31-34-730-010

(5) Do this task: Elevator Tab Control System - Operational Test, TASK 27-31-00-700-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-34-410-014

(1) Close the applicable access panels:

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

SUBTASK 27-31-34-410-016

(2) Close this access door:

Number	Name/Location
318BR	Tailcone Access Door

——— END OF TASK ———

TASK 27-31-34-000-804

8. Elevator Tab Control Mechanism Springs - Removal

E. Prepare for the Removal

SUBTASK 27-31-34-860-012

(1) Remove pressure from the elevator hydraulic systems A and B. To remove it, do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-34-010-013

(2) Open the applicable access panels:

(TASK 27-31-41-000-801)

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

F. Elevator Tab Control Mechanism Spring Removal

SUBTASK 27-31-34-020-008

(1) Do these steps to remove one or both of the aft springs [83]: (Figure 404)

(a) Install the hook assembly and the tool handle from the spring rem/instl equipment, SPL-13742 on the short fitting assembly from the spring rem/instl equipment, SPL-13742 in the correct position for the aft springs [83] to be removed.

1) If both aft springs [83] are installed, attach the hook assembly on the center of the aft bushing [85].

2) If one of the aft springs [83] is missing or broken, attach the hook assembly on the aft bushing [85] around the remaining aft spring [83].

(b) Install the spring rem/instl equipment, SPL-13742 on the elevator control tab mechanism assembly.

(c) Put a socket wrench, COM-6048 or equivalent on the bolt [87].

WARNING DO NOT TIGHTEN THE TOOL HANDLE TOOL MUCH. THIS CAN CAUSE DAMAGE TO THE TOOL, AIRPLANE STRUCTURE OR INJURY TO PERSONNEL.

(d) At the same time, slowly turn the tool handle and the socket wrench, COM-6048 until the bolt [87] starts to come loose.

1) Make sure that you do not tighten the tool handle too much, it should take approximately 1/4 turn to loosen the bolt [87].

(e) After the bolt [87] is loose, remove the nut [92], washer [91], bolt [87], nut [90], washer [89], and bolt [88].

(f) Loosen the tool handle.

(g) Remove one or both of the aft springs [83] as necessary.

SUBTASK 27-31-34-020-009

(2) Do these steps to remove one or both of the forward springs [84]: (Figure 404)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Install the hook assembly and the tool handle from the spring rem/instl equipment, SPL-13742 on the long fitting assembly from the spring rem/instl equipment, SPL-13742 in the correct position for the forward springs [84] to be removed.

1) If both forward springs [84] are installed, attach the hook assembly on the center of the foward bushing [86].

2) If one of the forward springs [84] is missing or broken, attach the hook assembly on the foward bushing [86] around the remaining forward spring [84].

(b) Install the spring rem/instl equipment, SPL-13742 on the elevator control tab mechanism assembly.

(c) Put a socket wrench, COM-6048 or equivalent on the bolt [87].

WARNING DO NOT TIGHTEN THE TOOL HANDLE TOOL MUCH. THIS CAN CAUSE DAMAGE TO THE TOOL, AIRPLANE STRUCTURE OR INJURY TO PERSONNEL.

(d) At the same time, slowly turn the tool handle and the socket wrench, COM-6048 until the bolt [87] starts to come loose.

1) Make sure you do not tighten the tool handle too much, it should take approximately 1/4 turn to loosen the bolt [87].

(e) After the bolt [87] is loose, remove the nut [92], washer [91], bolt [87], nut [90], washer [89], and bolt [88].

(f) Loosen the tool handle.

(g) Remove one or both of the forward springs [84] as necessary.

G. Elevator Tab Control Mechanism Spring Installation

SUBTASK 27-31-34-420-007

(1) Do these steps to install the aft springs [83]: (Figure 404)

NOTE: The direction of the coil wind (twist) and the number of coils differ by the manufacture. It is acceptable to install the appropriate springs from different suppliers on the same elevator tab control mechanism.

(a) Install the hook assembly and the tool handle from the spring rem/instl equipment, SPL-13742 on the short fitting assembly from the spring rem/instl equipment, SPL-13742.

(b) Install the spring rem/instl equipment, SPL-13742 on the elevator control tab mechanism assembly.

(c) Install one end of the aft springs [83] in the correct holes in the crank.

(d) Put the other end of the aft springs [83] in the correct groove on the aft bushing [85].

(e) Attach the hook assembly from the spring rem/instl equipment, SPL-13742 to the aft bushing [85].

(f) Slowly turn the tool handle until the bolt [88] can be installed through the aft bushing [85].

(g) Install the bolt [88], bolt [87], washer [89], nut [90], washer [91], and nut [92].

1) Tighten the nut [90] to 115 ±15 in-lb (13 ±2 N·m).

2) Tighten the nut [92] to 90 ±15 in-lb (10 ±2 N·m).

(h) Remove the spring rem/instl equipment, SPL-13742.

SUBTASK 27-31-34-420-008

(2) Do these steps to install the forward springs [84]: (Figure 404)

NOTE: The direction of the coil wind (twist) and the number of coils differ by the manufacture. It is acceptable to install the appropriate springs from different suppliers on the same elevator tab control mechanism.

(a) Install the hook assembly and the tool handle from the spring rem/instl equipment, SPL-13742 on the long fitting assembly from the spring rem/instl equipment, SPL-13742.

(b) Install the spring rem/instl equipment, SPL-13742 on the elevator control tab mechanism assembly.

(c) Install one end of the forward springs [84] in the correct holes in the crank.

(d) Put the other end of the forward springs [84] in the correct groove on the foward bushing [86].

(e) Attach the hook assembly from the spring rem/instl equipment, SPL-13742 to the foward bushing [86].

(f) Slowly turn the tool handle until the bolt [88] can be installed through the foward bushing [86].

(g) Install the bolt [88], bolt [87], washer [89], nut [90], washer [91], and nut [92].

(h) Remove the spring rem/instl equipment, SPL-13742.

SUBTASK 27-31-34-730-011

(3) Do this task: Elevator and Elevator Trim Control System - Operational Test, TASK 27-31-00-710-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-34-730-012

(4) Do this task: Elevator Tab Control System - Operational Test, TASK 27-31-00-700-802.

H. Put the Airplane Back to its Usual Condition

SUBTASK 27-31-34-410-017

(1) Close the applicable access panels:

(TASK 27-31-41-400-801)

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
343BB	Horizontal Stabilizer, Access Panel - T.E. Area

E. Elevator Balance Weight Installation and Elevator Tab Control Mechanism General Visual Inspection

SUBTASK 27-31-34-010-022

(1) Remove these access panels to get access to the applicable balance bays. Do this task: Balance Bay Panels - Removal, TASK 55-10-11-000-801.

(a) For the left elevator, remove these access panels:

Number	Name/Location
333CB	Horizontal Stabilizer, Access Panel, Trailing Edge
333DB	Horizontal Stabilizer, Access Panel, Trailing Edge

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) For the right elevator, remove these access panels:

Number	Name/Location
343CB	Horizontal Stabilizer, Access Panel - T.E. Area
343DB	Horizontal Stabilizer, Access Panel - T.E. Area

SUBTASK 27-31-34-010-023

(2) Remove these access panels to get access to the applicable elevator tab control mechanism.

(a) For the left elevator, remove these access panels:

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
334PT	Horizontal Stabilizer, Tab Control Rod Fairing

(b) For the right elevator, remove these access panels:

Number	Name/Location
343BB	Horizontal Stabilizer, Access Panel - T.E. Area
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

SUBTASK 27-31-34-210-001

(3) Do a general visual inspection of the left or right elevator balance weight installations and the left or right elevator tab control mechanisms (Figure 601 or Figure 602).

SUBTASK 27-31-34-410-023

(4) Install these access panels to remove access to the applicable balance bays. Do this task: Balance Bay Panels - Installation, TASK 55-10-11-400-801.

(a) For the left elevator, install these access panels:

Number	Name/Location
333CB	Horizontal Stabilizer, Access Panel, Trailing Edge
333DB	Horizontal Stabilizer, Access Panel, Trailing Edge

(b) For the right elevator, install these access panels:

Number	Name/Location
343CB	Horizontal Stabilizer, Access Panel - T.E. Area
343DB	Horizontal Stabilizer, Access Panel - T.E. Area

SUBTASK 27-31-34-410-024

(5) Install these access panels to remove access to the applicable elevator tab control mechanism.

(a) For the left elevator, install these access panels:

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
334PT	Horizontal Stabilizer, Tab Control Rod Fairing

(b) For the right elevator, install these access panels:

Number	Name/Location
343BB	Horizontal Stabilizer, Access Panel - T.E. Area
344PT	Horizontal Stabilizer, Tab Control Rod Fairing, Elevator Sta 34.0

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-34-390-003

(6) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

ELEVATOR TAB CONTROL VALVE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the elevator tab control valve

(2) An installation of the elevator tab control valve

B. The elevator tab control valve is referred to as the "control valve" in this procedure.

C. This procedure is applicable to the control valves for the left and right elevator tab control mechanisms. The upper control valve is for the left elevator tab control mechanism and the lower control valve is for the right elevator tab control mechanism.

TASK 27-31-35-000-801

2. Elevator Tab Control Valve - Removal

(Figure 401)

(4) To get access to the control valve, open this access panel:

Number	Name/Location
318BR	Tailcone Access Door

E. Control Valve Removal

SUBTASK 27-31-35-020-001

(1) Disconnect hydraulic lines [10] from the control valve [11].

(a) Discard the packings [9].

(b) Install the caps and plugs on the control valve [11] ports and hydraulic lines [10].

SUBTASK 27-31-35-020-002

(2) Disconnect the electrical line [5] from the control valve [11].

SUBTASK 27-31-35-020-003

(3) Remove the bolts [6] and washers [7] that attach the control valve [11] to the airplane structure.

F. Control Valve Installation

SUBTASK 27-31-35-860-002

(1) Make sure hydraulic power is removed from the elevator hydraulic systems A and B (TASK 27-31-00-800-801).

SUBTASK 27-31-35-420-001

(2) If the unions [8] and packings [9] are not installed in the control valve [11], then do these steps:

(a) Lubricate the unions [8], union [12] and new packings [9] with hydraulic fluid, D00153.

(b) Install the new packings [9], unions [8], and union [12] to the control valve [11].

SUBTASK 27-31-35-420-002

(3) Install the control valve [11] to the airplane structure.

(a) Install the bolts [6] and washers [7] in the control valve [11].

(b) Remove the caps and plugs from the hydraulic lines [10] and electrical line [5].

(c) Connect the hydraulic lines [10] to the control valve [11].

(d) Tighten the B-nuts on the hydraulic lines [10] for unions [8] 140 ±14 in-lb (16 ±2 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Tighten the B-nut on the hydraulic line [10] for union [12] 110 ±6 in-lb (12 ±1 N·m).

(f) Connect the electrical line [5] to the control valve [11].

SUBTASK 27-31-35-860-003

(4) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-35-730-001

(5) Do this task: Elevator Tab Control System - Operational Test, TASK 27-31-00-700-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-35-410-001

(1) Close this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-35-860-006

(2) For the left elevator tab control valve, close these circuit breakers:

SUBTASK 27-31-37-820-001

CAUTION

YOU MUST INSTALL THE RIG PIN IN THE RIG PIN FITTING OF THE ELEVATOR-FEEL-COMPUTER. IF YOU DO NOT ATTACH THE ELEVATOR-FEEL-COMPUTER TO THE INPUT ARM, IT CAN CAUSE DAMAGE WHEN YOU REMOVE IT.

(4) Install the pin, SPL-1673, through the input arm [3] and into the rig pin fitting [9] on the elevator feel computer [1].

F. Removal

SUBTASK 27-31-37-020-003

(1) Remove MS20995C20 lockwire, G50225, from the four bolts [4].

NOTE: Use care to prevent scoring or damage to finished surfaces.

SUBTASK 27-31-37-020-004

(2) Remove the bolts [4] and washers [5] from the solenoid valve [2].

SUBTASK 27-31-37-020-005

(3) Remove the solenoid valve [2] from the plug assembly [6] and manifold [10].

NOTE: Use care to prevent damage to the electrical connector.

SUBTASK 27-31-37-020-008

(4) Remove and discard the cup seal [7].

SUBTASK 27-31-37-020-006

(5) Remove and discard the gasket plate [8].

SUBTASK 27-31-37-020-007

(6) Repeat the above steps for the opposite system.

C. Consumable Materials

Reference	Description	Specification
D00153	Fluid - Hydraulic Fluid, Fire Resistant (Interchangeable And Intermixable With BMS 3-11 Type V)	BMS3-11 Type IV
G50225	Lockwire - MS20995C20, Corrosion Resistant Steel - 0.020 Inch (0.508 mm) Diameter	NASM20995

D. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
2	Solenoid valve	27-31-37-01-370	SIA ALL
7	Cup seal	27-31-37-01-390	SIA ALL
8	Gasket plate	27-31-37-01-385	SIA ALL

E. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Elevator Feel Computer Solenoid Valve Installation

SUBTASK 27-31-37-420-003

(1) Install the new gasket plate [8] on the manifold [10].

SUBTASK 27-31-37-420-004

(2) Install the new cup seal [7] on the solenoid valve [2].

SUBTASK 27-31-37-420-005

(3) Attach the solenoid valve [2] to the plug assembly [6].

SUBTASK 27-31-37-420-006

(4) Install the solenoid valve [2] to the manifold [10] with the washers [5] and bolts [4].

(a) Tighten the bolts [4] to 50 in-lb (6 N·m) - 70 in-lb (8 N·m).

SUBTASK 27-31-37-420-007

(5) Safety wire the bolts [4] with MS20995C20 lockwire, G50225.

SUBTASK 27-31-37-420-008

(6) Make sure that there is no leakage of hydraulic fluid, D00153, at the hydraulic components.

SUBTASK 27-31-37-420-009

(7) Repeat the above steps for the opposite system.

SUBTASK 27-31-37-000-001

(8) Remove the pin, SPL-1673, from the rig pin fitting [9] of the elevator feel computer [1].

SUBTASK 27-31-37-870-002

(9) Bleed the elevator control system.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	2	C01064	AFCS SYS B MACH TRIM DC
B	3	C01046	AFCS SYS B FCC DC
B	4	C00716	AFCS SYS B ENGAGE INTLK
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
C	1	C01037	AFCS SYS B MACH TRIM AC
C	2	C01042	AFCS SYS B SNSR EXC AC
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
D	13	C00311	INDICATOR MASTER DIM BUS 1
D	14	C00312	INDICATOR MASTER DIM BUS 2

(b) Move the stabilizer to the maximum leading edge up (APL NOSE DOWN) position (the mechanical limits).

NOTE: This can be done with the control wheel STAB TRIM switches or the stabilizer trim control wheel.

1) Make sure that the ballnut is against the jackscrew upstop.

(c) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

CAUTION

MAKE SURE THAT THE PITOT PROBE HAS NO ADDED WEIGHT ON IT FROM THE TEST HOSE. THE WEIGHT OF THE TEST HOSE CAN BEND OR TWIST THE PITOT PROBE OUT OF TOLERANCE.

(d) Connect the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, to the two pitot probes on the vertical fin.

(e) Use the regulator, SPL-1742, or air data model test set, COM-1914, to raise the airspeed to 2.46 psig (300 knots).

NOTE: When pressure to the pitot system is applied or removed, the rate must not be more than 2.46 psig (300 knots) for each minute.

WARNING

KEEP PERSONS AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES. THE AILERONS, ELEVATORS, RUDDER, FLAPS, SLATS, SPOILERS, STABILIZER AND NOSE GEAR CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(f) Pressurize Hydraulic System A and B, with one of the following steps:

1) If a Portable Hydraulic Cart is used, do this task: Hydraulic System A or B Pressurization with a Portable Hydraulic Cart, TASK 29-11-00-860-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) If a Portable Hydraulic Cart is not used, do these tasks:

NOTE: Both the Electric Motor-Driven Pump (EMDP) and Engine Driven Pump (EDP) should be run at the same time.

- Hydraulic System Pressurization with an Electric Motor-Driven Pump (EMDP), TASK 29-11-00-860-803
- Hydraulic System A or B Pressurization with an Engine-Driven Pump (EDP), TASK 29-11-00-860-804.

(g) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

(h) Wait for 10 seconds.

(i) Do these steps to cycle the power between Hydraulic Systems A and B:

1) Set the flight controls hydraulic power switches as follows:

a) Set the FLT CONTROL B switch to OFF position.

b) Set the FLT CONTROL A switch to A ON position.

c) Wait for 2 seconds.

d) Set the FLT CONTROL A switch to OFF position.

e) Set the FLT CONTROL B switch to B ON position.

f) Wait for 2 seconds.

2) Repeat the cycle 10 times.

(j) Slowly, do control column sweeps with pitot pressure applied.

(k) Do these steps to cycle pitot pressure:

1) Use the regulator, SPL-1742, or air data model test set, COM-1914, connected at the elevator pitot probes on the vertical stabilizer, to lower the airspeed to 0 psig (0 knots).

2) Use the regulator, SPL-1742, or air data model test set, COM-1914, connected at the elevator pitot probes on the vertical stabilizer, to increase the airspeed to 2.46 psig (300 knots).

3) Use the regulator, SPL-1742, or air data model test set, COM-1914, connected at the elevator pitot probes on the vertical stabilizer, to lower the airspeed to 0 psig (0 knots).

(l) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

(m) Wait for 10 seconds.

(n) Remove the pressure from the Hydraulic Systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-31-37-710-001

(10) Do this task: Elevator Feel Computer Leakage Check, TASK 27-31-37-200-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-37-860-019

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

SUBTASK 27-31-37-020-009

(2) At the two pitot probes on the vertical fin, remove the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent from the pitot probes.

SUBTASK 27-31-37-410-003

(3) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR FEEL COMPUTER - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the elevator feel computer

(2) An installation of the elevator feel computer.

TASK 27-31-37-000-801

2. Elevator Feel Computer Removal

(Figure 401)

A. References

Reference	Title
20-10-51-000-801	Flareless Tubing Assembly Removal (P/B 401)
27-31-00-800-801	Elevator Hydraulic System A and B - Pressurization (P/B 201)
27-31-00-800-802	Pressure from the Elevator Hydraulic Systems A and B Removal (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1673	Pin - Safety, Elevator Feel Computer Part #: F80153-1 Supplier: 81205
SPL-1677	Assembly - Trammel Bar, Stabilizer Trim Actuator Part #: F80055-36 Supplier: 81205 Opt Part #: F80055-1 Supplier: 81205

C. Location Zones

Zone	Area
311	Area Aft of Pressure Bulkhead - Left
312	Area Aft of Pressure Bulkhead - Right

D. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

E. Prepare for the Removal

SUBTASK 27-31-37-010-001

(1) Open this access door:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-37-860-001

(2) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-37-860-002

(3) Do these steps to set the B Dimension (Figure 401):

NOTE: The B Dimension is measured between the center of the upper and lower Gimbal pins on the stabilizer trim jackscrew. This requires two persons: one person will be in the flight compartment, the second person will be in the tail of the airplane with a headset.

(a) Turn the stabilizer trim wheel on the control stand to set the B Dimension.

(b) Use the bar, SPL-1677, to measure the B Dimension at 39.17 ±0.01 in. (994.92 ±0.26 mm) (Figure 401).

CAUTION

MAKE SURE TO PREVENT DAMAGE TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CHAFE OR CAN CAUSE DAMAGE THE WIRES OR BUNDLE INSULATION.

1) Make sure that the bar, SPL-1677, does not cause damage to the wire bundles.

SUBTASK 27-31-37-860-003

(4) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-37-860-004

(5) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	2	C01064	AFCS SYS B MACH TRIM DC
B	3	C01046	AFCS SYS B FCC DC
B	4	C00716	AFCS SYS B ENGAGE INTLK
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
C	1	C01037	AFCS SYS B MACH TRIM AC
C	2	C01042	AFCS SYS B SNSR EXC AC
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-31-37-480-001

CAUTION

YOU MUST INSTALL THE SAFETY PIN, F80153-1 IN THE RIG PIN HOLE OF THE ELEVATOR FEEL COMPUTER. IF THE ELEVATOR FEEL COMPUTER IS NOT ATTACHED TO THE INPUT ARM, IT CAN BE DAMAGED WHEN IT IS REMOVED.

(6) Install the pin, SPL-1673, in the input arm [8] and elevator feel computer assembly [1].

F. Elevator Feel Computer Removal

SUBTASK 27-31-37-020-001

CAUTION

DO NOT LIFT THE ELEVATOR FEEL COMPUTER BY THE INPUT ARM, OR APPLY A TORQUE OF MORE THAN 300 POUND-INCHES (33.9 NEWTON-METERS) TO THE INPUT ARM. THE ELEVATOR FEEL COMPUTER IS VERY SENSITIVE AND IT CAN BE DAMAGED.

(1) Remove the elevator feel computer assembly [1]:

(a) Disconnect the spring [16A] from the crank [25].

(b) Remove the nut [26], washer [31], washer [27], and bolt [28] to disconnect the crank [25] from the elevator feel computer assembly [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Remove the nut [23], washer [22], and bolt [21] to disconnect the stabilizer pushrod [2] from the input arm [8].

(d) Disconnect the electrical connectors [7] from the elevator feel computer assembly [1].

WARNING

RELEASE THE CONNECTION SLOWLY AND LET THE PRESSURE DECREASE BEFORE YOU COMPLETELY REMOVE THE HYDRAULIC LINE. IF YOU DISCONNECT THE HYDRAULIC LINE WHEN IT HAS PRESSURE, A SPRAY OF HYDRAULIC FLUID CAN CAUSE INJURY TO PERSONS.

(e) Disconnect the return hydraulic lines [29], pressure hydraulic lines [30], pitot lines, and static lines from the elevator feel computer assembly [1].

1) Install tags on lines and port fittings to clearly show the correct connection location (TASK 20-10-51-000-801).

(f) Install caps to the hydraulic lines, pitot lines, and static lines.

(g) Install plugs to all ports.

(h) Remove the nuts [6], washers [5], washers [4], and bolts [3] that attach the elevator feel computer assembly [1] to the airplane structure.

(i) Remove the elevator feel computer assembly [1] from the airplane.

SUBTASK 27-31-37-540-001

(2) Discard the packings [9], packings [12], packings [14], packings [17], and packings [19].

END OF TASK

G. Elevator Feel Computer Installation

SUBTASK 27-31-37-860-005

(1) Make sure that pressure is removed from the elevator hydraulic systems A and B.

(a) If it is necessary, do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-37-860-006

CAUTION

MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(2) Use the bar, SPL-1677, to make sure that the B Dimension is at 39.17 ±0.01 in. (994.92 ±0.26 mm) (Figure 401).

SUBTASK 27-31-37-420-001

(3) If the packings [9], packings [12], packings [14], packings [17], packings [19], filters [11], unions [13], unions [15], unions [18], unions [20], and reducers [10] are not installed in the elevator feel computer assembly [1], do these steps:

(a) Lightly lubricate the new packings [9], new packings [12], new packings [14], new packings [17], and new packings [19] with hydraulic fluid, D00153.

(b) Install these items in the elevator feel computer assembly [1]:

1) The packings [9] and reducers [10] to the fittings for the computer pressure lines

2) The filters [11], packings [12], and unions [13] to the fittings for the hydraulic lines

3) The packings [14] and unions [15] to the fittings for the return lines

4) The packings [17] and unions [18] to the fittings for the static lines

5) The packings [19] and unions [20] to the fittings for the pitot lines.

SUBTASK 27-31-37-080-001

(4) Remove the pin, SPL-1673, from the input arm [8] and elevator feel computer assembly [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-37-480-002

(5) Install the rig pin E-4 from the test set rigging pin kit, SPL-1585, in the input arm [8] and elevator feel computer assembly [1].

SUBTASK 27-31-37-420-002

(6) Install the elevator feel computer assembly [1].

(a) Put the elevator feel computer assembly [1] in its position.

(b) Install the bolts [3], washers [4] (under the bolt), washers [5] (under the nut), and nuts [6] to attach the elevator feel computer assembly [1] to the airplane structure.

(c) Connect the stabilizer pushrod [2] to the input arm [8].

1) If the bolt [21] cannot be installed, do these steps to adjust the length of the stabilizer pushrod [2]:

a) Loosen the checknut [24] on the stabilizer pushrod [2].

b) Turn the rod end fitting of the stabilizer pushrod [2] until the bolt [21] can be installed easily by hand.

c) Make sure that the rod end extends more than half of the distance across the inspection hole in the stabilizer pushrod [2].

d) Tighten the checknut [24].

2) Install the washer [22] and nut [23] to the bolt [21].

(d) Connect the spring [16A] to the elevator feel computer assembly [1].

(e) Connect the crank [25] to the elevator feel computer assembly [1].

(f) Install the bolt [28], washer [27], washer [31], and nut [26].

(g) Connect the spring [16] to the crank [25].

CAUTION MAKE SURE THAT YOU CONNECT THE HYDRAULIC LINES TO THE CORRECT PORTS. IF YOU INSTALL THE HYDRAULIC LINES TO INCORRECT PORTS, YOU CAN CAUSE DAMAGE TO THE ELEVATOR FEEL COMPUTER.

(h) Connect the hydraulic lines to the elevator feel computer assembly [1] (TASK 20-10-51-400-801).

1) Remove the caps and plugs.

2) Connect the return hydraulic lines [29] to the elevator feel computer assembly [1].

a) Tighten the B-nuts on the return hydraulic lines [29] to 170 ±9 in-lb (19 ±1 N·m).

3) Connect the pressure hydraulic lines [30] to the elevator feel computer assembly [1].

a) Tighten the B-nuts on the pressure hydraulic lines [30] to 140 ±7 in-lb (16 ±1 N·m).

(i) Remove the caps and plugs from pitot lines and static lines.

(j) Connect the pitot lines and static lines to the fittings on the elevator feel computer assembly [1].

(k) Connect the electrical connectors [7] to the elevator feel computer assembly [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-37-080-002

(7) Remove the rig pin E-4 of the rigging pin kit, SPL-1585, from the input arm [8] and elevator feel computer assembly [1].

SUBTASK 27-31-37-860-007

(8) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-37-860-021

(9) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	2	C01064	AFCS SYS B MACH TRIM DC
B	4	C00716	AFCS SYS B ENGAGE INTLK
C	1	C01037	AFCS SYS B MACH TRIM AC
C	2	C01042	AFCS SYS B SNSR EXC AC
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-31-37-860-022

(10) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	3	C01046	AFCS SYS B FCC DC

SUBTASK 27-31-37-870-001

(11) Bleed the elevator control system.

(a) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

WARNING MAKE SURE THAT ALL PERSONNEL, AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(b) Move the stabilizer to the maximum leading edge up (APL NOSE DOWN) position (the mechanical limits).

NOTE: This can be done with the control wheel STAB TRIM switches or the stabilizer trim control wheel.

1) Make sure that the ballnut is against the jackscrew upstop.

(c) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION MAKE SURE THAT THE PITOT PROBE HAS NO ADDED WEIGHT ON IT FROM THE TEST HOSE. THE WEIGHT OF THE TEST HOSE CAN BEND OR TWIST THE PITOT PROBE OUT OF TOLERANCE.

(d) Connect the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, to the two pitot probes on the vertical fin.

(e) Use the regulator, SPL-1742, or air data model test set, COM-1914, to raise the airspeed to 2.46 psig (300 knots).

NOTE: When pressure to the pitot system is applied or removed, the rate must not be more than 2.46 psig (300 knots) for each minute.

WARNING KEEP PERSONS AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES. THE AILERONS, ELEVATORS, RUDDER, FLAPS, SLATS, SPOILERS, STABILIZER AND NOSE GEAR CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(f) Pressurize Hydraulic System A and B, with one of the following steps:

1) If a Portable Hydraulic Cart is used, do this task: Hydraulic System A or B Pressurization with a Portable Hydraulic Cart, TASK 29-11-00-860-802.

2) If a Portable Hydraulic Cart is not used, do these tasks:

NOTE: Both the Electric Motor-Driven Pump (EMDP) and Engine Driven Pump (EDP) should be run at the same time.

- Hydraulic System Pressurization with an Electric Motor-Driven Pump (EMDP), TASK 29-11-00-860-803
- Hydraulic System A or B Pressurization with an Engine-Driven Pump (EDP), TASK 29-11-00-860-804.

(g) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

(h) Wait for 10 seconds.

(i) Do these steps to cycle the power between Hydraulic Systems A and B:

1) Set the flight controls hydraulic power switches as follows:

- A ON, B OFF - Hold for 2 seconds
- B ON, A OFF - Hold for 2 seconds.

2) Repeat the cycle 10 times.

(j) Slowly, do control column sweeps with pitot pressure applied.

(k) Do these steps to cycle pitot pressure:

1) Use the regulator, SPL-1742, or air data model test set, COM-1914, connected at the elevator pitot probes on the vertical stabilizer, to lower the airspeed to 0 psig (0 knots).

2) Use the regulator, SPL-1742, or air data model test set, COM-1914, connected at the elevator pitot probes on the vertical stabilizer, to increase the airspeed to 2.46 psig (300 knots).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Use the regulator, SPL-1742, or air data model test set, COM-1914, connected at the elevator pitot probes on the vertical stabilizer, to lower the airspeed to 0 psig (0 knots).

(l) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

(m) Wait for 10 seconds.

SUBTASK 27-31-37-860-008

(12) Remove the pressure from the Hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-31-37-210-001

(13) Make sure that there is no hydraulic leakage from the elevator feel computer (TASK 27-31-37-200-801).

SUBTASK 27-31-37-860-009

WARNING MAKE SURE THAT ALL PERSONNEL, AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(14) Move the horizontal stabilizer to the neutral stabilizer position (zero degrees or 4 units of trim).

NOTE: This can be done with the control wheel STAB TRIM switches or the stabilizer trim wheel.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-37-860-023

(1) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	2	C01064	AFCS SYS B MACH TRIM DC
B	3	C01046	AFCS SYS B FCC DC
B	4	C00716	AFCS SYS B ENGAGE INTLK
C	1	C01037	AFCS SYS B MACH TRIM AC
C	2	C01042	AFCS SYS B SNSR EXC AC
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-31-37-860-018

(2) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

SUBTASK 27-31-37-020-002

(3) At the two pitot probes on the vertical fin, remove the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, or equivalent from the pitot probes.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-37-730-001

(4) Do this task: Elevator Pitot System Leak - Test, TASK 27-31-17-790-801.

SUBTASK 27-31-37-730-002

(5) Do this task: Feel Differential Pressure Light - Test, TASK 27-31-00-700-812.

SUBTASK 27-31-37-730-003

(6) Do this task: Feel Force System - Test, TASK 27-31-00-700-813.

SUBTASK 27-31-37-410-001

(7) Close this access door:

Number	Name/Location
311BL	Stabilizer Trim Access Door

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR FEEL COMPUTER - INSPECTION/CHECK

1. General

A. This procedure contains this task:

(1) Elevator Feel Computer Leakage Check

(2) Elevator Feel Computer Solenoid Valve Inspection

TASK 27-31-37-200-801

2. Elevator Feel Computer Leakage Check

(Figure 27-31-37-990-801)

A. General

(1) Use this task to do a check for leakage at the elevator feel computer.

B. References

Reference	Title

C. Consumable Materials

Reference	Description	Specification
G01043	Cloth - Lint-free	
G50641	Swab - ITW Texwipe TX762 Absorbond Swab With Long Handle	

D. Elevator Feel Computer Leakage Check

SUBTASK 27-31-37-200-001

(1) Do these steps to do a check for leakage:

(a) Clean any residual hydraulic fluid from the elevator feel computer with a lint-free cloth, G01043.

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(b) Pressurize the elevator hydraulic system A and B for one minute and make sure that there is no leakage (TASK 27-31-00-800-801).

(c) Move the Captain's or First Officer's yoke forward then aft then center (neutral).

(d) Visually examine the external surface of the elevator feel computer static tubes for signs of hydraulic fluid.

(e) Visually examine the supply, return and feel pressure tubing B-nuts connection to the elevator feel computer.

(f) Remove pressure from elevator hydraulic system A and B (TASK 27-31-00-800-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) If there is no sign of hydraulic fluid at these locations, then continue.

(h) If there is a sign of hydraulic fluid at these locations, the B-nuts may not be correctly installed or may have become loose.

1) Make sure that the B-nut is seated and tightened (TASK 20-10-51-400-801).

(i) Use a lint-free cloth, G01043, to clean off the ends of the static lines of hydraulic fluid.

(j) From the open end of the static lines, carefully put a Texwipe TX762 swab, G50641 (Q-tip), approximately 1 in. (25 mm) or more into the static lines.

1) Wipe the inside surface in the static lines.

2) Remove the Texwipe TX762 swab, G50641 (Q-tip), and visually examine it for signs of hydraulic fluid.

NOTE: Small quantities of hydraulic fluid leakage into the elevator feel computer static line is considered normal. Each seal is allowed 1 drop for every 100 cycles. Every 200 flight hours equals 100 MEFC cycles. Based on this ratio, a definition of normal leakage would be the approximate accumulation of 2.5 drops of hydraulic fluid after 100 hours of in service flight operation in the right side cavity. The in service duty cycle of the MEFC is approximately 0.5 cycle for every 1 hour of flight.

a) If the leakage rate exceeds 1 drop per hour, replace the elevator feel computer. Do this task: ELEVATOR FEEL COMPUTER - REMOVAL/INSTALLATION, PAGEBLOCK 27-31-37/401.

(k) Do these steps to check the static cavity of the elevator feel computer:

1) Disconnect the static lines from the feel computer.

2) Clean the external surfaces of the static line B-nuts and static cavity tube union fittings of hydraulic fluid.

3) Carefully put a Texwipe TX762 swab, G50641 (Q-tip), in the static cavity tube union fittings.

a) Wipe the inside surface of the static cavity tube union fittings.

b) Remove the Texwipe TX762 swab, G50641 (Q-tip), and visually examine it for signs of hydraulic fluid.

4) Carefully put a Texwipe TX762 swab, G50641 (Q-tip), in the static line ends that connect to the static cavity tube union fittings.

a) Wipe the inside surface of the static lines.

b) Remove the Texwipe TX762 swab, G50641 (Q-tip), and visually examine it for signs of hydraulic fluid.

(l) If there is no sign of hydraulic fluid at these locations, reinstall the static tubes (TASK 27-31-37-400-801).

NOTE: The elevator feel computer is not the source of the leakage.

(m) If any hydraulic fluid is found at the elevator feel computer static line or static cavity, let the static cavity drain.

1) Wait until any hydraulic fluid stops dripping from the static ports before testing for leakage.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

2) Pressurize the elevator hydraulic system A and B (TASK 27-31-00-800-801).
3) Move the Captain's or First Officer's yoke forward then aft then center (neutral).
4) Make sure that no hydraulic fluid leaks from the static line after one minute.

   NOTE: Formation of a drop is not to be considered as leakage.
5) Remove pressure from elevator hydraulic system A and B (TASK 27-31-00-800-802).
6) If there is any leakage from the static line, replace the elevator feel computer (PAGEBLOCK 27-31-37/401).
7) Reinstall the static tubes (TASK 27-31-37-400-801).
8) Tighten the B-nut to the installation torque value (TASK 20-10-51-400-801).

SUBTASK 27-31-37-840-001

(2) Put the airplane back to its usual condition.

END OF TASK

TASK 27-31-37-200-802

3. Elevator Feel Computer Solenoid Valve Inspection

A. General

(1) This procedure contains steps to inspect the elevator feel computer solenoid valve.

(2) The elevator feel computer solenoid valve is referred to as the solenoid valve in this procedure.

B. References

Reference	Title

C. Tools/Equipment

Reference	Description
STD-6151	Gaussmeter

D. Procedure

SUBTASK 27-31-37-860-014

(1) Do this task: Supply Electrical Power, TASK 24-22-00-860-801.

SUBTASK 27-31-37-860-012

(2) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

SUBTASK 27-31-37-240-001

(3) Put the gaussmeter, STD-6151, below the A-side solenoid valve to measure its magnetic field.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Make sure that there is no magnetic field.

NOTE: The gauss meter must show 0.

SUBTASK 27-31-37-240-002

(4) Put the gaussmeter, STD-6151, below the B-side solenoid valve to measure its magnetic field.

(a) Make sure that there is no magnetic field.

NOTE: The gauss meter must show 0.

SUBTASK 27-31-37-860-013

(5) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

SUBTASK 27-31-37-240-003

(6) Put the gaussmeter, STD-6151, below the A-side solenoid valve to measure its magnetic field.

(a) Record the value of the A-side solenoid valve magnitude.

SUBTASK 27-31-37-240-004

(7) Put the gaussmeter, STD-6151, below the B-side solenoid valve to measure its magnetic field.

(a) Record the value of the B-side solenoid valve magnitude.

SUBTASK 27-31-37-240-005

(8) Compare the A-side and B-side solenoid valve magnitude values.

(a) If one of the solenoid valves shows a much less magnitude or if it shows 0, then replace this solenoid valve (PAGEBLOCK 27-31-37/201).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR BALANCE PANEL - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the elevator balance panel

(2) An installation of the elevator balance panel.

B. The elevator balance panel is referred to as the "balance panel" in this procedure.

TASK 27-31-41-000-801

2. Elevator Balance Panel - Removal

(Figure 401, Figure 402)

A. General

(1) This task includes the steps to remove elevator balance panel.

B. References

Reference	Title

F. Prepare for the Removal

SUBTASK 27-31-41-860-001

(1) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-41-010-001

(2) Remove this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-41-010-002

(3) For the left elevator, open these access panels:

(TASK 55-10-11-000-801)

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
333CB	Horizontal Stabilizer, Access Panel, Trailing Edge
333DB	Horizontal Stabilizer, Access Panel, Trailing Edge
333EB	Horizontal Stabilizer, Access Panel, Trailing Edge

SUBTASK 27-31-41-010-003

(4) For the right elevator, open these access panels:

(TASK 55-10-11-000-801)

Number	Name/Location
343BB	Horizontal Stabilizer, Access Panel - T.E. Area
343CB	Horizontal Stabilizer, Access Panel - T.E. Area
343DB	Horizontal Stabilizer, Access Panel - T.E. Area
343EB	Horizontal Stabilizer, Access Panel - T.E. Area

SUBTASK 27-31-41-480-001

(5) Install the rig pin E-5 from the rigging pin kit, SPL-1585, in the aft control quadrant (Figure 401).

G. Elevator Balance Panel Removal

SUBTASK 27-31-41-020-001

CAUTION

DO NOT MIX THE ELEVATOR BALANCE PANELS. IF YOU MIX THE ELEVATOR BALANCE PANELS, DAMAGE TO THE AIRCRAFT CAN OCCUR.

(1) Remove the balance panel [10] (bays 2, 3, and 4).

(a) Remove the bolts [15], bolts [22], and washers [16] that attach the bulb seals [17] to the balance panel [10].

(b) Remove the washers [14] and bolts [13] that attach the balance panel [10] to the idler hinge [18].

(c) Remove the washers [11] and bolts [12] that attach the balance panel [10] to the elevator [6].

(d) Remove the washer [20] and bolt [21] that attach the balance panel [10] to the elevator [6].

(e) Remove the balance panel [10] from the airplane.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-41-020-002

(2) Remove the idler hinge [18] (bays 2, 3, and 4).

(a) Remove the washers [8] and bolts [7] that attach the flat seals [5] to the idler hinge [18].

(b) Remove the flat seals [5] from the airplane.

(c) Remove the washers [4] and bolts [3] that attach the hinge half [2] to the balance panel support [1].

(d) Remove the idler hinge [18] and seal cloth [19] from the airplane.

H. Elevator Balance Panel Installation

SUBTASK 27-31-41-860-002

(1) Make sure that you remove the pressure from the elevator hydraulic system A and B.

(a) If it is necessary, do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-41-420-001

(2) Install the idler hinge [18] (bays 2, 3, and 4).

(a) If you install new balance panel assemblies or seals, apply corrosion inhibiting compound, G00009, as necessary (Figure 402).

NOTE: If you use the same parts that you removed, it is not necessary to apply the corrosion inhibiting compound, G00009.

(b) Position one loose end of the seal cloth [19] between the hinge half [2] and balance panel support [1].

(c) Install the bolts [3] and washers [4] that attach the hinge half [2] to the balance panel support [1].

(d) Tighten the bolt [3] to 23 in-lb (3 N·m) - 27 in-lb (3 N·m).

(e) Install the bolts [7] and washers [8] to attach the flat seals [5] to the idler hinge [18].

1) Do not tighten the bolts [7] until the clearance between the flat seals [5] and the stabilizer trailing edge rib is adjusted.

(f) Make sure that the clearance between the flat seals [5] and stabilizer trailing edge rib is 0.01 +0.06 / -0.00 in. (0.25 +1.53 / -0.00 mm).

(g) Tighten the bolts [7] (TASK 20-50-11-910-801).

SUBTASK 27-31-41-420-002

CAUTION MAKE SURE THAT YOU INSTALL THE CORRECT BALANCE PANEL IN THE CORRECT BAY. BALANCE PANELS IN BAYS 2, 3, AND 4 ARE NOT INTERCHANGEABLE. IF YOU DO NOT FOLLOW THIS CAUTION, DAMAGE TO THE AIRCRAFT CAN OCCUR.

(3) Install the balance panel [10].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) If you install new balance panel assemblies or seals, apply corrosion inhibiting compound, G00009, as necessary (Figure 402).

NOTE: If you use the same parts that you removed, it is not necessary to apply corrosion inhibiting compound, G00009.

(b) Put and hold the balance panel [10] in its position.

(c) Position the loose end of the seal cloth [24] between the balance panel [10] and hinge [9].

(d) Install the bolt [21] and washer [20] to attach the balance panel [10] and hinge [9] to the elevator [6].

(e) Install the bolts [12] and washers [11] to attach the balance panel [10] and hinge [9] to the elevator [6].

1) Do not tighten the bolts [12] and bolt [21] until the gap between the balance panel [10] and hinge [9] is adjusted.

2) Carefully install the seal cloth [24] between the hinge [9] and balance panel [10].

3) Make sure that the gap between the balance panel [10] and hinge [9] for the seal cloth [24] does not allow either of the following conditions:

a) Pinching of the seal material.

b) Movement of the seal inboard or outboard.

NOTE: The nominal design dimension for the gap between the balance panel and hinge for the seal cloth that meets this condition is 0.05 ±0.02 in. (1.3 ±0.5 mm).

(f) Tighten the bolts [12] to 68 in-lb (8 N·m) - 82 in-lb (9 N·m).

(g) Tighten the bolt [21] to 23 in-lb (3 N·m) - 27 in-lb (3 N·m).

(h) Make sure that the idler hinge [18] is turned down from the balance panel support [1].

(i) Position the loose end of the seal cloth [19] between the hinge half [23] and balance panel [10].

(j) Install the bolts [13] and washers [14] to attach the balance panel [10] to the hinge half [23].

1) Do not tighten the bolts [13] until the elevator has moved through the full range of travel.

(k) Manually move the elevator through the full range of travel.

1) Make sure that the seal cloth [19] is not tight for all elevator positions.

(l) Tighten the bolts [13] to 23 in-lb (3 N·m) - 27 in-lb (3 N·m).

(m) Install the bolts [15], bolts [22], and washers [16] that attach the bulb seals [17] to the balance panel [10].

1) Do not tighten the bolts [15] and bolts [22] until the clearance between the flat seals [5] and stabilizer trailing edge rib is adjusted.

CAUTION

MAKE SURE THAT YOU ADJUST THE BULB SEALS CORRECTLY. IF YOU DO NOT ADJUST THE BULB SEALS CORRECTLY, DAMAGE TO THE TRAILING EDGE RIBS CAN OCCUR.

(n) Make sure that the clearance between the bulb seals [17] and stabilizer rib is 0.02 ±0.01 in. (0.51 ±0.26 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(o) Make sure that the clearance between the bulb seals [17] and aft end of the flat seals [5] is 0.02 in. (0.51 mm).

1) If it is necessary, loosen the bolts [7] and adjust the flat seals [5] to get the necessary clearance.

(p) Tighten the bolts [15] and bolts [22] to 23 in-lb (3 N·m) - 27 in-lb (3 N·m).

SUBTASK 27-31-41-080-001

(4) Remove the rig pin E-5 of the rigging pin kit, SPL-1585, from the aft control quadrant (Figure 401).

SUBTASK 27-31-41-710-001

(5) Do this task: Elevator Balance Panels - Test, TASK 27-31-00-700-804.

SUBTASK 27-31-41-010-004

(6) Install this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-41-410-001

(7) For the left elevator, close these access panels:

(TASK 55-10-11-400-801)

Number	Name/Location
333BB	Horizontal Stabilizer, Access Panel, Trailing Edge
333CB	Horizontal Stabilizer, Access Panel, Trailing Edge
333DB	Horizontal Stabilizer, Access Panel, Trailing Edge
333EB	Horizontal Stabilizer, Access Panel, Trailing Edge

SUBTASK 27-31-41-410-002

(8) For the right elevator, close these access panels:

(TASK 55-10-11-400-801)

Number	Name/Location
343BB	Horizontal Stabilizer, Access Panel - T.E. Area
343CB	Horizontal Stabilizer, Access Panel - T.E. Area
343DB	Horizontal Stabilizer, Access Panel - T.E. Area
343EB	Horizontal Stabilizer, Access Panel - T.E. Area

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR BALANCE PANEL - INSPECTION/CHECK

1. General

A. This task supplies the data for a dimensional inspection of the elevator balance panel.

B. This task does not remove or install the elevator balance panel. Refer to the Elevator Balance Panel - Removal/Installation for procedures to remove and install the elevator balance panel.

TASK 27-31-41-200-801

2. Elevator Balance Panel - Inspection

(Figure 601)

A. General

(1) This task gives the wear limits and the repair data for the elevator balance panel.

(2) This task also examines the elevator balance panel for loose or missing attached fasteners.

B. References

Reference	Title
27-31-41-000-801	Elevator Balance Panel - Removal (P/B 401)

Zone	Area
334	Left Horizontal Stabilizer - Elevator
344	Right Horizontal Stabilizer - Elevator

E. Procedure

SUBTASK 27-31-41-211-001

(1) Examine the elevator balance panel for missing or loose fasteners.

(a) If a fastener is loose or missing, then replace it with a new fastener.

SUBTASK 27-31-41-020-003

(2) Remove the elevator balance panel. Do this task: Elevator Balance Panel - Removal, TASK 27-31-41-000-801.

SUBTASK 27-31-41-020-004

(3) Use these tools to do a check for worn areas on the parts of the elevator balance panel connections:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-31-41-020-005

(4) Examine the parts of the elevator balance panel connections for worn areas. Do these steps:

(a) Remove the parts that you will examine.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096, or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Compare the dimensions that you measured with the permitted wear dimensions that are shown in Table 601.

(d) If a part is out of tolerance, then replace or repair the part.

Table 601/27-31-41-993-802

NAME OF THE PARTS THAT ARE IN CONTACT	DIM.	DIAMETER DESIGN LIMITS inches (mm)		WEAR LIMITS inches (mm)	
		MINIMUM	MAXIMUM	PERMITTED MAXIMUM I.D./ MINIMUM O.D. OF WORN PART	MAXIMUM SERVICE DIAMETRIC CLEARANCE
#1 FORWARD HINGE HALF	I.D.	0.0930 (2.362)	0.0980 (2.489)	0.1040 (2.642)	0.0175 (0.445) *[1]
#1 FORWARD HINGE PIN	O.D.	0.0880 (2.235)	0.0900 (2.286)	0.0865 (2.197)	
#2 AFT HINGE HALF	I.D.	0.1830 (4.648)	0.1880 (4.775)	0.1940 (4.928)	0.0175 (0.445) *[1]
#2 AFT HINGE PIN	O.D.	0.1780 (4.521)	0.1800 (4.572)	0.1765 (4.483)	

*[1] TOTAL PLAY IN THE JOINT = 0.0350 INCH (0.889 MILLIMETER)

SUBTASK 27-31-41-020-006

(5) Install the elevator balance panel. Do this task: Elevator Balance Panel - Installation, TASK 27-31-41-400-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CONTROL COLUMN - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of a control column

(2) An installation of a control column.

B. This procedure is applicable for the captain's and first officer's control column.

TASK 27-31-51-000-801

2. Control Column - Removal

(Figure 401)

SUBTASK 27-31-51-010-001

(3) Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-31-51-480-001

(4) Install the rig pin E-1 from the rigging pin kit, SPL-1585 in the left forward quadrant.

F. Control Column Removal

SUBTASK 27-31-51-020-001

(1) Disconnect the electrical wire [11] for the control column shaker [13] from the terminal strip in the lower nose compartment.

SUBTASK 27-31-51-020-002

(2) Disconnect the electrical wire [5] to the control column [1] from the terminal strip in the lower nose compartment.

SUBTASK 27-31-51-020-003

(3) Remove the ring assemblies and dust seals:

(a) Remove the screws [15] and washers [16] from the forward ring assembly [14] and aft ring assembly [17].

(b) Remove the forward ring assembly [14] and aft ring assembly [17].

(c) Remove the aft dust seal [18] and forward dust seal [19].

SUBTASK 27-31-51-020-004

(4) Remove the control column [1]:

CAUTION HOLD THE CONTROL COLUMN WHEN YOU REMOVE THE COUPLINGS. THE CONTROL COLUMN CAN FALL AND CAUSE DAMAGE TO EQUIPMENT.

(a) Hold the control column while you remove the nuts [7], washers [8], and bolts [12] from the outboard couplings [9].

(b) Remove the outboard couplings [9].

(c) Lift and remove the control column [1] from the forward quadrant assembly.

END OF TASK

G. Control Column Installation

SUBTASK 27-31-51-420-001

(1) Put the control column [1] in its position.

(a) Set the control wheel to the neutral position to engage the spade [4] with the clevis [6].

SUBTASK 27-31-51-480-002

(2) Use the protractor, COM-1691 to set the control column to 6.9 +/- 0.8 degrees forward of a vertical line from the floor (Figure 401).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-51-420-002

(3) Install the control column [1]:

(a) Engage the face splines on the control column [1] with the splines on the forward quadrant connector [10].

(b) Install the outboard couplings [9]:

1) Install the bolts [12], washers [8], and nuts [7] on the outboard couplings [9].

NOTE: Make sure that you use the correct bolts.

(c) Do these steps to make the clearances equal at each end of each outboard coupling:

1) Tighten the bolts [12] to 50 in-lb (5.65 N·m) of torque.

2) Tighten the one bolt and then the other to 50 +30 / -0 in-lb (5.6 +3.4 / -0.0 N·m) in approximately 10 in-lb (1.1 N·m) increments until you get the clearances equal to +/- 0.03 in. (0.8 mm) of each other.

(d) Make sure that the control column angle is 6.9 +/- 0.8 degrees forward of the vertical line from the floor.

(e) Connect the electrical wire [5] and electrical wire [11] to the terminal strip in the lower nose compartment.

1) Make sure there is a 5.0 in. (12.7 cm) length of the electrical wire [11] between the two clamps.

SUBTASK 27-31-51-420-003

(4) Install the ring assemblies and dust seals:

(a) Install the forward dust seal [19], aft dust seal [18], forward ring assembly [14], and aft ring assembly [17] with the screws [15] and washers [16].

CAUTION

DO NOT HOLD THE DUST CAP TOO TIGHTLY AGAINST THE WIRE BUNDLE. IT CAN CAUSE DAMAGE TO THE ELECTRICAL WIRES.

(b) If it is necessary, adjust the dust cap [3] to set the edge of the dust seals lightly up against the dust cap [3].

1) Loosen the clamp [2] to adjust the dust cap [3].

(c) Make sure the gap between the two dust seals is 0.060 in. (1.52 mm).

(d) Fill the hole between the notch in the dust seals and the cutout in the floor with sealant, A00247.

SUBTASK 27-31-51-080-001

(5) Remove the rig pin E-1 from the left forward quadrant.

(a) Move the control column [1] full forward then full aft.

1) Make sure the electrical wire [5] and electrical wire [11] are free of any interference.

SUBTASK 27-31-51-410-001

(6) Close this access panel:

Number	Name/Location
112A	Forward Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Control Column Installation Test

SUBTASK 27-31-51-860-003

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	7	C01208	STALL WARN ASYM MODE

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
B	13	C00363	FLIGHT CONT SHUTOFF VALVES FLT CONT
C	13	C01074	FLIGHT CONT SHUTOFF VALVES FLT CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-31-51-710-001

(2) Do a check of the control column:

(a) Move the control column full forward then full aft.

1) Make sure the control column operates correctly and smoothly.

(b) Turn the control wheel through full travel.

1) Make sure the control wheel operates correctly and smoothly.

SUBTASK 27-31-51-710-002

(3) Do this task: Control Column Travel and Centering - Test, TASK 27-31-00-700-809.

SUBTASK 27-31-51-710-003

(4) Do this task: Manual Mode - Test, TASK 27-31-00-700-808.

SUBTASK 27-31-51-710-004

(5) Do this task: Elevator Travel Limit - Test, TASK 27-31-00-700-805.

SUBTASK 27-31-51-710-005

(6) Do the operational test of the PTT switch in this task: Push To Talk (PTT) Control Wheel Switch Installation, TASK 23-51-04-400-801.

SUBTASK 27-31-51-710-006

(7) Do a test of the stabilizer trim control switch on the control wheel:

(a) Make sure that the STAB TRIM PRI switch, S272, on the aft of the control stand is in the NORMAL position.

(b) Move the STAB TRIM switches to APL NOSE UP and then to APL NOSE DOWN.

1) Make sure the stabilizer moves correctly.

SUBTASK 27-31-51-740-001

(8) Do a test of the autopilot disengage switch on the control wheel:

(a) Push the CMD A or CMD B autopilot engage switch on the mode control panel to engage the autopilot.

1) Make sure that the CMD A or CMD B autopilot engage switch light comes on.

(b) Push the captain or first officer autopilot disengage switch on the control wheel to disengage the autopilot.

1) Make sure that the A/P warning lights flash.

2) Make sure that the A/P disengage warning sound comes on.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Push the captain or first officer autopilot disengage switch again.
   a) Make sure that the A/P warning lights go off.
   b) Make sure that there is no A/P disengage warning sound.

SUBTASK 27-31-51-750-001

(9) Make sure that the wire bundle W443 has a minimum clearance of 0.5 in. (12.700 mm) from left forward rudder quadrant full travel motion, while operating the rudder pedals. (Figure 402)

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CONTROL COLUMN SUPPORT BEARING - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of a control column support bearing

(2) An installation of a control column support bearing.

B. The control column support bearing is referred to as "support bearing" in this procedure.

C. the support bearing includes the forward quadrant connector, bearing housing, shim, and bearing.

D. This procedure is applicable for the support bearings on the captain's and first officer's control column.

TASK 27-31-54-000-801

2. Control Column Support Bearing Removal

(Figure 401, Figure 402)

SPL-1585	Kit - Rigging Pin Part #: F70207-151 Supplier: 81205
SPL-1747	Set - Support, Forward Elevator Control Quadrant Part #: C27036-1 Supplier: 81205

C. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
211	Flight Compartment - Left
212	Flight Compartment - Right
318	Tail Cone Compartment - Right

D. Access Panels

Number	Name/Location
112A	Forward Access Door
318BR	Tailcone Access Door

E. Prepare for the Removal

SUBTASK 27-31-54-860-001

(1) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-54-010-001

(2) Get access to the elevator forward quadrant.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Open this access door:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-31-54-010-002

(3) Get access to the elevator aft quadrant.

(a) Remove this access door:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-54-480-001

(4) Install the rig pin E-5 from the rigging pin kit, SPL-1585, in the elevator aft quadrant (Figure 401).

SUBTASK 27-31-54-480-002

(5) Install the rig pin E-1 from the rigging pin kit, SPL-1585, in the left forward quadrant (Figure 402).

SUBTASK 27-31-54-020-001

(6) Remove the applicable control column (TASK 27-31-51-000-801).

F. Control Column Support Bearing Removal

(Figure 402)

SUBTASK 27-31-54-020-002

(1) Turn the cable turnbuckles [1] to release the tension in the elevator control cables.

NOTE: Do not disconnect the cable turnbuckles.

SUBTASK 27-31-54-480-003

CAUTION

MAKE SURE THAT YOU INSTALL A SUPPORT FOR THE FORWARD QUADRANT ASSEMBLY BEFORE YOU REMOVE THE COUPLINGS. KEEP THE SUPPORT UNTIL YOU REMOVE THE COUPLINGS. IF YOU DO NOT HOLD THE FORWARD QUADRANT ASSEMBLY CORRECTLY, YOU CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Install the set, SPL-1747, to support the forward quadrant assembly.

SUBTASK 27-31-54-020-003

(3) Remove the nuts [5], washers [4], and bolts [3] from the inboard couplings [6].

SUBTASK 27-31-54-020-004

(4) Remove the forward quadrant connector [11].

SUBTASK 27-31-54-020-005

(5) Remove the bearing housing [15]:

(a) Remove the nuts [7], washers [9], upper bolts [10] from the bearing housing [15].

(b) Remove the nuts [17], washers [16], washers [14], and lower bolts [13] from the bearing housing [15].

(c) Remove the bearing housing [15] and shim [8] from the airplane.

SUBTASK 27-31-54-020-006

(6) Remove the bearing [12] from the bearing housing [15]:

(a) Turn the bearing [12] at the right angles to the bearing housing [15].

(b) Align the bearing [12] with the slots in the bearing housing [15].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Remove the bearing [12] from the bearing housing [15].

END OF TASK

318	Tail Cone Compartment - Right

E. Access Panels

Number	Name/Location
112A	Forward Access Door
318BR	Tailcone Access Door

F. Control Column Support Bearing Installation

SUBTASK 27-31-54-420-001

(1) Install the bearing [12] in the bearing housing [15]:

(a) Put the bearing [12] at the right angle of the bearing housing [15].

(b) Move the bearing [12] in the bearing housing [15] slots.

1) Turn the bearing [12] to the correct position.

SUBTASK 27-31-54-420-002

(2) Install the bearing housing [15]:

(a) Put the bearing housing [15] and the shim [8] against the structure.

(b) Install the upper bolts [10], washers [9], and nuts [7] that attach the bearing housing [15] to the structure.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Install the lower bolts [13], washers [14], washers [16], and nuts [17] on the bearing housing [15].

SUBTASK 27-31-54-420-003

(3) Install the elevator forward control quadrant assembly [2] to the support bearing:

(a) Install the forward quadrant connector [11] in the bearing housing [15].

(b) Align the spines of the elevator elevator forward control quadrant assembly [2] with the forward quadrant connector [11].

(c) Install inboard couplings [6] with the bolts [3], washers [4], and nuts [5].

(d) Do these steps to make the clearances equal at each end of each inboard coupling [6]:

1) Tighten the bolts [3] to 50 in-lb (5.6 N·m).

2) Tighten the bolt [3] and then the other to 50 in-lb (5.6 N·m) - 70 in-lb (7.9 N·m) in approximately 10 in-lb (1.1 N·m) increments until you get the clearances equal to ± 0.03 in. (0.76 mm) of each other.

(e) Adjust the shim [8] below the bearing housing [15]:

1) Make sure the clearance between the forward quadrant connector [11] and inner race of the bearing [12] is 0.01 in. (0.25 mm) - 0.03 in. (0.76 mm).

2) Make sure the clearance between lower chord of the floor beam and each side of the elevator forward control quadrant assembly [2] is 0.06 in. (1.5 mm) minimum through the full travel.

3) If it is necessary, add or remove shims [8] under the bearing housing [15].

SUBTASK 27-31-54-480-004

(4) Remove the set, SPL-1747, from the elevator forward control quadrant assembly [2].

SUBTASK 27-31-54-420-004

(5) Install the applicable control column (TASK 27-31-51-400-801).

SUBTASK 27-31-54-080-001

(6) Remove the rig pin E-1 of rigging pin kit, SPL-1585, from the left forward quadrant.

SUBTASK 27-31-54-080-002

(7) Remove the rig pin E-5 of the rigging pin kit, SPL-1585, from the aft control quadrant.

SUBTASK 27-31-54-710-001

(8) Do a check of the control column:

(a) Move the control column full forward then full aft.

1) Make sure the control column operates correctly and smoothly.

SUBTASK 27-31-54-820-001

(9) Adjust the elevator control cables EA and EB (TASK 27-31-00-820-801).

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-54-410-001

(1) Install this access door:

Number	Name/Location
318BR	Tailcone Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-54-410-002

(2) Close this access door:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-31-54-860-002

(3) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR FORWARD CONTROL QUADRANT ASSEMBLY - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the elevator forward control quadrant assembly

(2) An installation of the elevator forward control quadrant assembly.

B. The elevator forward control quadrant assembly is referred to as "forward quadrant assembly" in this procedure.

TASK 27-31-61-000-801

2. Elevator Forward Control Quadrant Assembly Removal

(Figure 401, Figure 402)

212	Flight Compartment - Right
318	Tail Cone Compartment - Right

D. Access Panels

Number	Name/Location
112A	Forward Access Door
318BR	Tailcone Access Door

E. Prepare for the Removal

SUBTASK 27-31-61-860-001

(1) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-61-010-001

(2) To get access to the elevator forward quadrant, do this task:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-31-61-010-002

(3) To get access to the elevator aft quadrant, do this task:

Remove this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-61-480-001

(4) Install the rig pin E-5 from the test set rigging pin kit, SPL-1585 in the elevator aft quadrant (Figure 401).

SUBTASK 27-31-61-480-002

(5) Install the rig pin E-1 from the rigging pin kit, SPL-1585 in the left side of forward quadrant assembly (Figure 402).

SUBTASK 27-31-61-020-001

(6) Remove the pitch control wheel steering force transducers from the forward quadrant assembly. To remove them, do this task: Pitch Force Transducer Removal, TASK 22-11-92-000-801.

F. Forward Quadrant Assembly Removal

(Figure 402)

SUBTASK 27-31-61-020-002

(1) Turn the cable turnbuckles to release the tension in the EA cables [2] and EB cables [3].

NOTE: Do not disconnect the cable turnbuckles.

(a) If it is necessary, install control cable clamp, SPL-1569 on the EA cables [2] and EB cables [3].

SUBTASK 27-31-61-020-003

(2) Remove the cables EA cables [2] and EB cables [3] from the forward quadrant assembly [1]:

(a) Remove the screws [10] and retainers [4] from the EA cables [2] and EB cables [3].

(b) Put identification tags on the cables.

(c) Remove the bolts [6], washers [7], and nuts [8] that attach the fairleads [9] to the forward quadrant assembly [1].

SUBTASK 27-31-61-020-004

(3) Remove the bolts [11] and washers [12] that attach the mass balance weight [5] to the forward quadrant assembly [1].

SUBTASK 27-31-61-020-005

(4) Remove the ring assemblies and dust seals from the control column [15]:

(a) Remove the screws [22] and washers [23] from the forward ring assembly [21] and aft ring assembly [24].

(b) Remove the forward ring assembly [21] and aft ring assembly [24].

(c) Remove the aft dust seals [25] and forward dust seals [26].

SUBTASK 27-31-61-080-001

(5) Remove the rig pin E-1 from the left side of the forward quadrant assembly [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-61-020-006

CAUTION

HOLD THE CONTROL COLUMNS AND THE FORWARD QUADRANT ASSEMBLY WHEN YOU REMOVE THEM. THEY CAN FALL AND CAUSE DAMAGE TO EQUIPMENT.

(6) Remove the forward quadrant assembly [1]:

(a) Remove the nuts [18], washers [17], and bolts [13] from the inboard couplings [16].

(b) Remove the inboard couplings [16].

(c) Move the control columns [15] outboard until you can disengage the forward quadrant connector [14] from the forward quadrant assembly [1].

NOTE: Use a marker or a pen to make marks on the forward quadrant connector [14] and the forward quadrant assembly [1] to align the control column during the forward quadrant assembly [1] installation.

(d) Remove the forward quadrant assembly [1].

G. Forward Control Quadrant Installation

(Figure 402)

SUBTASK 27-31-61-480-003

(1) Use the protractor, SPL-1680, to set the control column [15] to 6.9 ± 0.8 degrees forward of a vertical line from the floor (Figure 402, View A-A).

SUBTASK 27-31-61-420-001

(2) Install the mass balance weight [5] to the forward quadrant assembly [1]:

(a) Put the mass balance weight [5] in its position.

(b) Install the bolts [11] and washers [12]].

(c) Install the MS20995NC32 lockwire, G01912.

SUBTASK 27-31-61-480-004

(3) Install the rig pin E-1 in the left side of the forward quadrant assembly [1].

SUBTASK 27-31-61-420-002

(4) Install the forward quadrant assembly [1]:

(a) Set the control wheels to the neutral position.

(b) Put the forward quadrant assembly [1] in its position.

(c) Move the control columns inboard and at the same time align the spines of the elevator forward quadrant assembly [1] with the forward quadrant connector [14].

(d) Install inboard couplings [16] with the bolts [13], washers [17], and nuts [18].

NOTE: Make sure that you use the correct bolts.

(e) Do these steps to make the clearances equal at each end of each inboard coupling:

1) Tighten the bolts [13] to 50 in-lb (5.6 N·m) of torque.

2) Tighten the bolt [13] and then the other to 50 in-lb (5.6 N·m)-70 in-lb (7.9 N·m) in approximately 10 in-lb (1.1 N·m) increments until you get the clearances equal to ± 0.03 in. (0.76 mm) of each other.

SUBTASK 27-31-61-820-001

(5) Adjust the shim below the bearing housings:

(a) Make sure the clearance between lower chord of the floor beam and each side of the forward quadrant assembly [1] is 0.06 in. (1.5 mm) minimum through the full travel.

(b) Make sure the total clearance (sum of the clearances of the two side of forward quadrant assembly) between the bearing and forward quadrant connector is 0.01 in. (0.25 mm)-0.02 in. (0.51 mm).

(c) Make sure the total side play of the control column assembly is 0.01 in. (0.25 mm) - 0.03 in. (0.76 mm).

(d) Make sure the outboard end of the stop on the left side of the forward quadrant assembly [1] is clear of the inboard face of the bracket by 0.07 in. (1.8 mm) - 0.24 in. (6.1 mm).

(e) If it is necessary, add or remove shim(s) below the bearing housing.

SUBTASK 27-31-61-420-003

(6) Install the ring assemblies and dust seals:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Install the forward dust seals [26], aft dust seals [25], forward ring assemblies [21], and aft ring assemblies [24] with the screws [22] and washers [23].

CAUTION

DO NOT HOLD THE DUST CAP TOO TIGHTLY AGAINST THE WIRE BUNDLE. IT CAN CAUSE DAMAGE TO THE ELECTRICAL WIRES.

(b) If it is necessary, adjust the dust cap [20] to set the edge of the dust seals lightly against the dust caps [20].

1) Loosen the clamps to adjust the dust caps [20].

(c) Make sure the gap between the two dust seals is 0.6 in. (15.2 mm).

(d) Fill the gap between the two dust seals with compound, A00225.

(e) Fill the hole between the notch in the dust seals and the cutout in the floor with compound, A00225.

SUBTASK 27-31-61-080-002

(7) Remove the rig pin E-1 from the rigging pin kit, SPL-1585, from the left side of the forward quadrant assembly [1].

SUBTASK 27-31-61-710-001

(8) Do a check of the control column [15]:

(a) Move the control column [15] full forward then full aft.

1) Make sure the control column [15] operates correctly and smoothly.

SUBTASK 27-31-61-420-004

(9) Connect the EA cables [2] and EB cables [3] to the forward quadrant assembly [1]:

(a) Install the bolts [6], washers [7], and nuts [8] that attach the fairleads [9] to the forward quadrant assembly [1].

(b) Remove the identification tags from the EA cable [2] and EB cable [3].

(c) Install the EA cables [2] and EB cables [3] to the forward quadrant assembly [1].

(d) Install the retainers [4] and screws [10] to the EA cables [2] and EB cables [3].

(e) Remove the control cable clamp, SPL-1569, if it is installed.

SUBTASK 27-31-61-080-003

(10) Remove the rig pin E-5 from the rigging pin kit, SPL-1585, from the aft control quadrant (Figure 401).

SUBTASK 27-31-61-420-005

(11) Install the pitch control wheel steering force transducers to the forward quadrant assembly (TASK 22-11-92-400-801).

SUBTASK 27-31-61-860-002

(12) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-61-820-002

(13) Adjust the elevator control cables EA and EB (TASK 27-31-00-820-801).

SUBTASK 27-31-61-710-002

(14) Do this task: Manual Mode - Test, TASK 27-31-00-700-808.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-61-410-001

(1) Install this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-61-410-002

(2) Close this access panel:

Number	Name/Location
112A	Forward Access Door

END OF TASK

ELEVATOR FORWARD CONTROL QUADRANT ASSEMBLY - INSPECTION/CHECK

1. General

A. This procedure has this inspection task:

(1) Elevator Mechanical Control Path.

TASK 27-31-61-210-801

2. Elevator Mechanical Control Path - Inspection

(Figure 601)

NOTE: This procedure is a scheduled maintenance task.

A. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
317	Tail Cone Compartment - Left
318	Tail Cone Compartment - Right

B. Access Panels

Number	Name/Location
112A	Forward Access Door
318BR	Tailcone Access Door

C. Elevator Mechanical Control Path Inspection

SUBTASK 27-31-61-010-003

(1) To get access to the elevator mechanical control path, do this task:

Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-31-61-210-001

(2) Do a general visual inspection of the forward elevator mechanical control path.

SUBTASK 27-31-61-410-003

(3) Close this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-31-61-010-004

(4) To get access to the elevator mechanical control path, do this task:

Remove this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-61-210-002

(5) Do a general visual inspection of the aft elevator mechanical control path.

SUBTASK 27-31-61-410-004

(6) Install this access panel:

Number	Name/Location
318BR	Tailcone Access Door

ELEVATOR FEEL AND CENTERING UNIT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the elevator feel and centering unit

(2) An installation of elevator feel and centering unit.

(3) A removal of the elevator feel and centering unit spring.

(4) An installation of the elevator feel and centering unit spring.

TASK 27-31-64-000-801

2. Elevator Feel and Centering Unit Removal

SUBTASK 27-31-64-010-001

(1) Remove these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-64-860-001

(2) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-64-480-001

(3) Install rig pin E-5 from the rigging pin kit, SPL-1585, in the elevator aft control quadrant.

SUBTASK 27-31-64-480-002

(4) Attach DO NOT OPERATE tags, STD-858, on the control columns.

SUBTASK 27-31-64-020-001

(5) Do this task: Mach Trim Actuator Removal, TASK 22-11-24-000-801.

SUBTASK 27-31-64-020-002

(6) Do this task: Elevator Feel Actuator Removal, TASK 27-31-67-000-801.

G. Elevator Feel and Centering Unit Removal

SUBTASK 27-31-64-020-003

(1) Remove the elevator feel and centering unit [1]:

(a) Remove the nut [7], washer [6], nut [18], washer [5], outer bolt [3], and bolt [4] to disconnect the output rod [8] from the crank [2].

(b) Remove the nut [12], washer [11], washer [10], and bolt [9] to disconnect the micro-adjustment rod [13] from the elevator feel and centering unit [1].

(c) Hold the elevator feel and centering unit [1] and remove the bolts [16] and washers [17] from the bearing assemblies [14].

(d) Remove the elevator feel and centering unit [1] from the support brackets [15].

F. Elevator Feel and Centering Unit Installation

SUBTASK 27-31-64-420-001

(1) Install the elevator feel and centering unit [1]:

(a) Put the elevator feel and centering unit [1] in its position.

(b) Align the bolt installation holes in the bearing assemblies [14] with support brackets [15].

(c) Install the bolts [16] and washers [17] to attach the bearing assemblies [14] to the support brackets [15].

(d) Install the bolt [9], washer [10], washer [11], and nut [12] to connect the micro-adjustment rod [13] to the elevator feel and centering unit [1].

SUBTASK 27-31-64-420-002

(2) Do this task: Elevator Feel Actuator Installation, TASK 27-31-67-400-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-64-420-003

(3) Do this task: Mach Trim Actuator Installation, TASK 22-11-24-400-801.

SUBTASK 27-31-64-860-002

(4) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-64-820-001

(5) Adjust the output rod [8]:

(a) Align the bolt hole of the output rod [8] and bolt hole of the crank [2].

(b) If the alignment difference is more that 0.06 in. (1.52 mm), then do these steps:

1) Turn the sleeve on the output rod [8] until you can install the bolt [4] easily.

NOTE: Always turn the clevis and the sleeve in the same direction and number of threads are equal in the two parts.

SUBTASK 27-31-64-420-004

(6) Install the bolt [4], outer bolt [3], washer [5] (under the outer bolt [3]), nut [18], washer [6] and nut [7] to connect the output rod [8] to the crank [2].

(a) Tighten the outer bolt [3] to 75 in-lb (8.5 N·m) - 85 in-lb (9.6 N·m).

CAUTION

DO NOT TIGHTEN THE OUTER BOLT AGAIN AFTER YOU TIGHTEN THE LAST NUT. YOU CAN CAUSE DAMAGE TO THE EQUIPMENT.

(b) Tighten the nut [7] to 25 in-lb (2.8 N·m) - 35 in-lb (4.0 N·m).

SUBTASK 27-31-64-080-001

(7) Remove the rig pin E-5 of the rigging pin kit, SPL-1585, from the elevator aft control quadrant.

SUBTASK 27-31-64-820-002

(8) Do this task: Elevator Neutral Shift Sensor Adjustment and Test, TASK 22-11-14-820-801.

SUBTASK 27-31-64-860-003

(9) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-64-080-002

(10) Remove the DO NOT OPERATE tags, STD-858, from the control columns.

SUBTASK 27-31-64-710-001

(11) Move the control column full forward and full aft.

(a) Make sure the control column moves freely and smoothly.

SUBTASK 27-31-64-710-002

(12) Do this task: Feel Force System - Test, TASK 27-31-00-700-813.

SUBTASK 27-31-64-790-001

(13) Make sure that there is no hydraulic leakage at the elevator feel actuator.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-64-410-001

(1) Install these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-64-610-001

(2) If it is necessary, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

END OF TASK

TASK 27-31-64-000-802

4. Elevator Feel and Centering Unit Spring Removal

(Figure 402)

318	Tail Cone Compartment - Right

D. Access Panels

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

E. Prepare for the Removal

SUBTASK 27-31-64-010-002

(1) Open these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-64-040-001

(2) Do this task: Elevator and Tab Control System - Deactivation, TASK 27-31-00-000-801.

SUBTASK 27-31-64-860-004

(3) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-64-400-005

(4) Install the rig pin E-5 from the rigging pin kit, SPL-1585 in the rig pin E-5 hole.

SUBTASK 27-31-64-040-002

(5) Attach a DO NOT OPERATE tag, STD-858 to the control columns.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Elevator Feel and Centering Unit Spring Removal

SUBTASK 27-31-64-020-009

(1) Disconnect the output rod [8] from the crank [2].

(a) Remove the nut [7], washer [6], nut [18], washer [5], outer bolt [3], and bolt [4] to disconnect the output rod [8] from the crank [2].

(b) Move the output rod [8] out of the way.

SUBTASK 27-31-64-000-002

(2) Remove the elevator feel actuator [20] from the elevator feel and centering unit [1].

NOTE: Do not disconnect the hydraulic lines from the elevator feel actuator [20].

(a) Remove the nut [37], washer [38], nut [39], washer [40], and bolt assembly [41] from the aft connection of the elevator feel actuator [20].

(b) Remove the nut [27], washer [26], nut [25], washer [24], antirotation fitting [23], spacer [22], and bolt assembly [21] from the elevator feel actuator [20].

(c) Remove the elevator feel actuator [20].

(d) Set the elevator feel actuator [20] carefully on a piece of soft fabric to prevent damage of the elevator feel actuator [20] or adjacent components.

1) Be careful not to strain the hydraulic lines.

SUBTASK 27-31-64-000-003

(3) Remove the elevator feel and centering cover [19] from the elevator feel and centering unit [1].

NOTE: Removal of the cover is done only to increase visibility of the springs and is not mandatory for this procedure.

SUBTASK 27-31-64-000-004

(4) Remove the inner spring [43] and outer spring [42]:

(a) Remove the bolts [34] to loosen the retainer [47].

(b) Turn the spring post adjustment wrench flats [33] to loosen the springs.

(c) Remove the aft hook of the outer spring [42] from the spring post assembly [44].

1) Use a non-metallic tie-wrap or strap to pull the spring in the aft direction until the outer spring [42] hook is completely removed from the eccentric groove of the spring post assembly [44].

NOTE: Use a protective thin plastic to prevent rubbing the housing surface of the springs.

(d) Remove the aft hook of the inner spring [43] from the spring spring post assembly [44].

1) Use a non-metallic tie-wrap or strap to pull the spring in the aft direction until the inner spring [43] hook is completely removed from the eccentric groove of the spring post assembly [44].

NOTE: Use a protective thin plastic to prevent rubbing the housing surface of the springs.

(e) Remove the forward hooks of the outer spring [42] and inner spring [43] from the cam follower assembly [45].

END OF TASK

F. Elevator Feel and Centering Unit Spring Installation

SUBTASK 27-31-64-400-001

(1) Replace the inner spring [43] and outer spring [42]:

(a) Install the forward spring hooks on the cam follower assembly [45].

1) Make sure that the hooks are put in the eccentric groove correctly.

(b) Use a non-metallic tie-wrap or strap to install the aft spring hooks.

1) Install the inner spring [43] on the spring post assembly [44] by pulling the inner spring coil aft and bending it slightly.

a) Make sure that the hook is put in the eccentric groove correctly.

2) Install the outer spring [42] on the spring post assembly [44] by pulling the outer spring coil aft and bending it slightly.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure that the hook is put in the eccentric groove correctly.

3) Make sure that the forward spring hooks stay on the cam follower assembly [45].

(c) Install the bolts [34] and retainer [47].

(d) Do a detailed visual inspection of the inner spring [43] and outer spring [42] to make sure the spring hooks are in the eccentric groove correctly.

(e) Turn the spring post adjustment wrench flat [33] to tighten the springs.

SUBTASK 27-31-64-700-001

(2) Do a breakout test of the crank [2].

(a) Use a non-metallic tie-wrap or strap to cycle the crank [2] a minimum of 3 times:

1) Use the 0-100 lbs. (0.5 lbs. resolution) mechanical force gauge, COM-1452 to pull down on a non-metallic tie-wrap or strap attached to the crank and note the force when the dial indicator, STD-11969 shows 0.025 in. (0.64 mm).

a) Force must measure 13.0 lbf (57.8 N).

2) Relax the tension on the strap and note the force when the crank starts to move upward.

a) Force must measure 12.0 lbf (53.4 N).

3) Use the 0-100 lbs. (0.5 lbs. resolution) mechanical force gauge, COM-1452 to pull up on a non-metallic tie-wrap or strap attached to the crank and note the force when the dial indicator, STD-11969 shows 0.025 in. (0.64 mm).

a) Force must measure 11.5 lbf (51.2 N).

4) Relax the tension on the strap and note the force when the crank starts to move downward.

a) Force must measure 10.5 lbf (46.7 N).

(b) If the force values exceed these limits, loosen the retainer [47] and rotate the spring post adjustment wrench flat [33] if necessary.

1) Repeat the breakout test until the force values are in the specified limits.

SUBTASK 27-31-64-400-002

(3) Install the elevator feel actuator [20].

(a) Put the elevator feel actuator [20] in its position and hold it in place.

(b) Install the bolt assembly [41], washer [40], and nut [39] to attach the aft connection of the washer [40] to the elevator feel and centering unit [1].

1) Tighten the nut [39] to 85 in-lb (9.6 N·m) - 100 in-lb (11.3 N·m).

(c) Install the washer [38] and nut [37].

CAUTION

DO NOT TIGHTEN THE FIRST NUT AGAIN AFTER YOU TIGHTEN THE LAST NUT. YOU CAN CAUSE DAMAGE TO THE EQUIPMENT.

1) Tighten the nut [27] to 30 in-lb (3.4 N·m) - 35 in-lb (4.0 N·m).

(d) Install the bolt assembly [21], nut [12], antirotation fitting [23], washer [24], and the nut [25] to attach the forward connection of the elevator feel actuator [20] to the elevator feel and centering unit [1].

1) Tighten the nut [25] to 85 in-lb (9.6 N·m) - 100 in-lb (11.3 N·m).

(e) Install the washer [26] and nut [27].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

DO NOT TIGHTEN THE FIRST NUT AGAIN AFTER YOU TIGHTEN THE LAST NUT. YOU CAN CAUSE DAMAGE TO THE EQUIPMENT.

1) Tighten the nut [27] to 30 in-lb (3.4 N·m) - 35 in-lb (4.0 N·m).

SUBTASK 27-31-64-400-003

(4) Install the elevator feel and centering cover [19] if removed.

SUBTASK 27-31-64-400-004

(5) Install the elevator feel and centering unit output rod [8].

(a) Install the bolt [4], outer bolt [3], washer [5] (under the outer bolt [3]), and nut [18] to connect the output rod [8] to the crank [2].

1) Tighten the outer bolt [3] to 75 in-lb (8.5 N·m) - 85 in-lb (9.6 N·m).

(b) Install washer [6] and nut [7].

CAUTION

DO NOT TIGHTEN THE OUTER BOLT AGAIN AFTER YOU TIGHTEN THE LAST NUT. YOU CAN CAUSE DAMAGE TO THE EQUIPMENT.

1) Tighten the nut [7] to 25 in-lb (2.8 N·m) - 35 in-lb (4.0 N·m).

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-64-000-001

(1) Remove the rig pin E-5 of the rigging pin kit, SPL-1585 from the rig pin E-5 hole.

SUBTASK 27-31-64-410-002

(2) Close these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-64-440-001

(3) Do this task: Elevator and Tab Control System - Activation, TASK 27-31-00-400-801.

SUBTASK 27-31-64-860-005

(4) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-64-440-002

(5) Remove the DO NOT OPERATE tag, STD-858 from the control columns.

SUBTASK 27-31-64-700-002

(6) Do this task: Control Column Power Force - Test, TASK 27-31-00-700-810.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR FEEL AND CENTERING UNIT - INSPECTION/CHECK

1. General

A. This procedure contains this task:

(1) Elevator Feel and Centering Unit Inspection

(a) This task supplies the data for a dimensional inspection of the elevator feel and centering unit.

(b) This task does not remove or install the elevator feel and centering unit. Refer to the Elevator Feel and Centering Unit - Removal/Installation for procedures to remove and install the elevator feel and centering unit.

TASK 27-31-64-200-801

2. Elevator Feel and Centering Unit Inspection

(Figure 601)

A. General

(1) This procedure gives the wear limits and the repair data for the elevator feel and centering unit.

E. Procedure

SUBTASK 27-31-64-020-004

(1) Remove the elevator feel and centering unit. Do this task: Elevator Feel and Centering Unit Removal, TASK 27-31-64-000-801.

SUBTASK 27-31-64-020-005

(2) Use these tools to do a check for worn areas on the parts of the elevator feel and centering unit connections:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-31-64-020-006

(3) Examine the parts of the elevator feel and centering unit connections for worn areas. Do these steps:

(a) Remove the parts that you will examine.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096, or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Compare the dimensions that you measured with the permitted wear dimensions that are shown in Table 601.

(d) If a part is out of tolerance, then replace or repair the part.

Table 601/27-31-64-993-801 Wear Limits

NAME OF THE PARTS THAT ARE IN CONTACT	DIM.	DIAMETER DESIGN LIMITS		WEAR LIMITS	
		MINIMUM inches/mm	MAXIMUM inches/mm	PERMITTED MAXIMUM I.D./ MINIMUM O.D. OF WORN PART	MAXIMUM SERVICE DIAMETRIC CLEARANCE
#1 BEARING	I.D.	0.3120 in 7.925 mm	0.3125 in 7.938 mm	0.3155 in 8.014 mm	0.0035 in 0.089 mm
#1 BOLT	O.D.	0.3110 in 7.899 mm	0.3120 in 7.925 mm	0.3106 in 7.889 mm	
#2 OUTPUT ROD	I.D.	0.3120 in 7.925 mm	0.3130 in 7.950 mm	0.3160 in 8.026 mm	0.0040 in 0.102 mm
#2 BOLT	O.D.	0.3110 in 7.899 mm	0.3120 in 7.925 mm	0.3106 in 7.889 mm	

SUBTASK 27-31-64-020-007

(4) Examine the spring of the elevator feel and centering unit. Refer to Figure 601 (Sheet 3).

(a) If the spring is broken, then replace the elevator feel and centering unit. Do these tasks:

1) Elevator Feel and Centering Unit Removal, TASK 27-31-64-000-801

2) Elevator Feel and Centering Unit Installation, TASK 27-31-64-400-801

SUBTASK 27-31-64-020-008

(5) Install the elevator feel and centering unit. Do this task: Elevator Feel and Centering Unit Installation, TASK 27-31-64-400-801.

ELEVATOR FEEL ACTUATOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the elevator feel actuator

(2) An installation of the elevator feel actuator.

B. The elevator feel actuator is installed below the elevator feel and centering unit.

TASK 27-31-67-000-801

2. Elevator Feel Actuator Removal

(Figure 401)

A. References

Reference	Title
27-31-00-800-802	Pressure from the Elevator Hydraulic Systems A and B Removal (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

318BR	Tailcone Access Door

E. Prepare for the Removal

SUBTASK 27-31-67-860-001

(1) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-67-010-001

(2) Remove this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-67-480-001

(3) Install the rig pin E-5 from the rigging pin kit, SPL-1585, in the elevator aft control quadrant (View A, Figure 401).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Elevator Feel Actuator Removal

SUBTASK 27-31-67-020-001

WARNING RELEASE THE CONNECTION SLOWLY AND LET THE PRESSURE DECREASE BEFORE YOU COMPLETELY REMOVE THE HYDRAULIC LINE. IF YOU DISCONNECT THE HYDRAULIC LINE WHEN IT HAS PRESSURE, A SPRAY OF HYDRAULIC FLUID CAN CAUSE INJURY TO PERSONS.

(1) Disconnect the hydraulic line [2], hydraulic line [25], hydraulic line [26], and hydraulic line [27] from the elevator feel actuator [3] (Figure 401).

(a) Remove the unions [12], reducer [13], and union [14].

(b) Discard the packings [11] and packings [15].

(c) Install the caps and plugs on the open ports and hydraulic line [2], hydraulic line [25], hydraulic line [26], hydraulic line [27].

SUBTASK 27-31-67-020-002

(2) Remove the elevator feel actuator [3] from the elevator feel and centering unit [1]:

(a) Remove the nut [20], washer [21], nut [22], washer [23], and bolt assembly [24] from the aft connection of the elevator feel actuator [3].

(b) Remove the nut [17], washer [18], bushing [19], and slide block [16] from the anti-rotation fitting [6].

(c) Remove the nut [10], washer [9], nut [8], washer [7], spacer [5], anti-rotation fitting [6], and bolt assembly [4] from the forward connection of the elevator feel actuator [3].

(d) Remove the elevator feel actuator [3].

END OF TASK

G. Elevator Feel Actuator Installation

SUBTASK 27-31-67-420-001

(1) Install the new packings [11], new packings [15], unions [12], union [14], and reducer [13], do these steps:

(a) Lubricate the packings [11], packings [15], unions [12], union [14], and reducer [13] with hydraulic fluid, D00153.

(b) Install the packings [11], packings [15], unions [12], union [14], and reducer [13] to the elevator feel actuator [3].

SUBTASK 27-31-67-420-002

(2) Install the elevator feel actuator [3], do these steps:

(a) Put and hold the elevator feel actuator [3] in its position.

(b) Install the bolt assembly [24], washer [23], and nut [22] to attach the aft connection of the elevator feel actuator [3] to the elevator feel and centering unit [1].

1) Tighten the nut [22] to 85 in-lb (9.6 N·m) - 100 in-lb (11.3 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

DO NOT TIGHTEN THE NUT [22] AGAIN AFTER YOU TIGHTEN THE NUT [20]. YOU CAN CAUSE DAMAGE TO EQUIPMENT.

(c) Install the washer [21] and nut [20].

1) Tighten the nut [20] to 30 in-lb (3.4 N·m) - 35 in-lb (4 N·m).

(d) Install the bolt assembly [4], spacer [5], anti-rotation fitting [6], washer [7], and nut [8] to attach the forward connection of the elevator feel actuator [3] to the elevator feel and centering unit [1].

1) Tighten the nut [8] to 85 in-lb (9.6 N·m) - 100 in-lb (11.3 N·m).

CAUTION

DO NOT TIGHTEN THE NUT [8] AGAIN AFTER YOU TIGHTEN THE NUT [10]. YOU CAN CAUSE DAMAGE TO EQUIPMENT.

(e) Install the washer [9] and nut [10].

1) Tighten the nut [10] to 30 in-lb (3.4 N·m) - 35 in-lb (4 N·m).

(f) Install the slide block [16], bushing [19], washer [18], and nut [17] to anti-rotation fitting [6].

1) Tighten the nut [17] to 100 in-lb (11.3 N·m) - 125 in-lb (14.1 N·m).

SUBTASK 27-31-67-420-003

(3) Connect the hydraulic line [2], hydraulic line [25], hydraulic line [26], and hydraulic line [27] to the elevator feel actuator [3], do these steps:

(a) Remove the caps and plugs from the open ports, hydraulic line [2], hydraulic line [25], hydraulic line [26], and hydraulic line [27].

(b) Connect hydraulic line [2], hydraulic line [25], hydraulic line [26], and hydraulic line [27].

(c) Tighten the B-nuts on hydraulic line [2] and hydraulic line [27] to 140 ±7 in-lb (16 ±1 N·m).

(d) Tighten the B-nut on hydraulic line [25] to 170 ±9 in-lb (19 ±1 N·m).

(e) Tighten the B-nut on hydraulic line [26] to 140 ±7 in-lb (16 ±1 N·m).

SUBTASK 27-31-67-080-001

(4) Remove the rig pin E-5 of the rigging pin kit, SPL-1585, from the elevator aft control quadrant.

SUBTASK 27-31-67-860-002

(5) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-67-870-001

(6) Bleed the elevator control system, do these steps:

WARNING

MAKE SURE THAT ALL PERSONNEL, AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(a) Move the horizontal stabilizer to the maximum leading edge up (APL NOSE DOWN) position (the mechanical limits).

NOTE: The horizontal stabilizer can be moved with the control wheel STAB TRIM switches or the stabilizer trim control wheel.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that the ballnut is against the jackscrew upstop.

(b) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

CAUTION MAKE SURE THAT THE PITOT PROBE HAS NO ADDED WEIGHT ON IT FROM THE TEST HOSE. THE WEIGHT OF THE TEST HOSE CAN BEND OR TWIST THE PITOT PROBE OUT OF TOLERANCE.

(c) Connect the pressure lines from the air data model test set, COM-1914, or regulator, SPL-1742, to the two pitot probes on the vertical fin.

(d) Use the regulator, SPL-1742, or air data model test set, COM-1914, to raise the airspeed to 2.46 psig (300 knots).

1) Make sure that the rate is 2.46 psig (300 knots) or less for each minute.

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(e) Pressurize Hydraulic System A and B, do one of these steps:

1) If you will use a Portable Hydraulic Cart, do this task: Hydraulic System A or B Pressurization with a Portable Hydraulic Cart, TASK 29-11-00-860-802.

2) If not using a Portable Hydraulic Cart, do these tasks:

NOTE: Both the EMDP and EDP should be run at the same time.

- Hydraulic System Pressurization with an Electric Motor-Driven Pump (EMDP), TASK 29-11-00-860-803
- Hydraulic System A or B Pressurization with an Engine-Driven Pump (EDP), TASK 29-11-00-860-804.

(f) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

(g) Wait for 10 seconds.

(h) Do these steps to cycle the power between Hydraulic Systems A and B:

1) Set the flight controls hydraulic power switches as follows:

a) Set the FLT CONTROL B switch to the OFF position.

b) Set the FLT CONTROL A switch to the A ON position.

c) Wait for 2 seconds.

d) Set the FLT CONTROL A switch to the OFF position.

e) Set the FLT CONTROL B switch to the B ON position.

f) Wait for 2 seconds.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Repeat the cycle 10 times.

(i) Slowly, do control column sweeps with pitot pressure applied.

(j) Do these steps to cycle pitot pressure:

1) Use the regulator, SPL-1742, or air data model test set, COM-1914, to lower the airspeed to 0 psig (0 knots).

2) Use the regulator, SPL-1742, or air data model test set, COM-1914, to increase the airspeed to 2.46 psig (300 knots).

3) Use the regulator, SPL-1742, or air data model test set, COM-1914, to lower the airspeed to 0 psig (0 knots).

(k) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

(l) Wait for 10 seconds.

SUBTASK 27-31-67-860-003

(7) Remove the pressure from the Hydraulic Systems A and B (HYDRAULIC SYSTEMS A AND B - MAINTENANCE PRACTICES, PAGEBLOCK 29-11-00/201).

SUBTASK 27-31-67-790-001

(8) Make sure that there is no hydraulic leakage at the elevator feel actuator [3].

SUBTASK 27-31-67-020-003

(9) Remove the pressure lines that connect the air data model test set, COM-1914, or regulator, SPL-1742, to the two pitot probes on the vertical fin.

SUBTASK 27-31-67-020-004

(10) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

SUBTASK 27-31-67-860-004

WARNING MAKE SURE THAT ALL PERSONNEL, AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(11) Move the horizontal stabilizer to the neutral stabilizer position (zero degrees or 4 units of trim).

NOTE: The horizontal stabilizer can be moved with the control wheel STAB TRIM switches or the stabilizer trim control wheel.

SUBTASK 27-31-67-720-001

(12) Do this task: Feel Force System - Test, TASK 27-31-00-700-813.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-67-410-001

(1) Install this access panel:

Number	Name/Location
318BR	Tailcone Access Door

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR FEEL ACTUATOR - DIFFERENTIAL PRESSURE TEST

1. General

A. This task gives instructions on how to diagnose an Elevator Feel System differential pressure issue, and how to use the elevator feel computer test box, SPL-23206.

TASK 27-31-67-700-801

2. Elevator Feel Actuator - Differential Pressure Test

(Figure 501)

A. General

This task gives instructions on how to diagnose an Elevator Feel System differential pressure issue, and how to use the elevator feel computer test box, SPL-23206.

Row	Col	Number	Name
C	10	C01676	ELEVATOR FEEL LIMIT

G. Elevator Feel System Troubleshooting

SUBTASK 27-31-67-480-002

(1) Place the test box in the aft galley and connect the power plug.

SUBTASK 27-31-67-480-003

(2) Install Elevator Pitot System test equipment:

(a) Install the pitot adaptors on each of the elevator pitot probes.

(b) Using the Y hose, connect a hose to each pitot adaptor.

(c) Install the remaining end of the Y hose to the REGULATED AIR connection on the test box.

SUBTASK 27-31-67-480-004

(3) Install the pressure return hose:

(a) Install one return line on the system A visco drain.

(b) Install one return line on the system B visco drain.

(c) Install the system A return line onto the PITOT A connection on the test box.

(d) Install the system B return line onto the PITOT B connection on the test box.

SUBTASK 27-31-67-410-002

(4) Install the pressure transducers:

(a) Access the DUAL FEEL ACTUATOR in the tail cone compartment.

(b) Remove the SYSTEM B METERED PRESSURE line from the DUAL FEEL ACTUATOR.

(c) Install a cap on the DUAL FEEL ACTUATOR where the SYSTEM B METERED PRESSURE line was removed.

(d) Install one of the pressure transducers from the kit on the SYSTEM B METERED PRESSURE line.

(e) Remove the SYSTEM A METERED PRESSURE line from the DUAL FEEL ACTUATOR.

(f) Install a cap on the DUAL FEEL ACTUATOR where the SYSTEM A METERED PRESSURE line was removed.

(g) Install the remaining pressure transducer from the kit on the SYSTEM A METERED PRESSURE line.

(h) Connect a wire harness to each of the pressure transducers.

(i) Connect the SYSTEM A METERED PRESSURE transducer wire harness to the TRANSMITTER A port on the test box.

(j) Connect the SYSTEM B METERED PRESSURE transducer wire harness to the TRANSMITTER B port on the test box.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-67-700-001

(5) Test Procedure:

(a) Pressurize the hydraulic systems, do this task: Hydraulic System Pressurization with an Electric Motor-Driven Pump (EMDP), TASK 29-11-00-860-803 or Hydraulic System A or B Pressurization with an Engine-Driven Pump (EDP), TASK 29-11-00-860-804

(b) Loosen the PRESSURE REGULATOR knob until it can spin freely.

(c) Push the SHUT OFF VALVE knob in.

(d) Turn on the test box with the POWER SUPPLY switch.

(e) Turn on the pitot pump with the PUMP switch.

(f) Monitor the PITOT PRESSURE A and B gages.

(g) Slowly tighten the PRESSURE REGULATOR knob until the PITOT PRESSURE gages read 2.5 psig (2.5 psi).

NOTE: The pitot pressure gauges will increase in pressure at an identical rate. If either gauge (A or B) lags behind, that is an indication of a restriction or blockage in that pitot system.

(h) Observe the TRANSMITTER A and B HYDRAULIC PRESSURE gage.

1) Both values need to be within 20% of each other.

NOTE: If one of the TRANSMITTER pressures (A or B) is lower by at least 20%, that is the system that has a restriction or blockage.

(i) Loosen the PRESSURE REGULATOR knob until the gages read 0.09 +0.07 / -0.00 psig (0.09 +0.07 / -0.00 psi), and let the pressure stabilize.

(j) Pull the SHUTOFF VALVE knob.

(k) Make sure that the PITOT PRESSURE does not decrease more than 0.2 psig (0.2 psi) during a 2-minute time.

NOTE: If the pressure in either gage A or B decreases more than the limit in that time period, that system has a leak.

H. Return the Aircraft to its Usual Condition

SUBTASK 27-31-67-700-002

(1) Release the pressure in the pitot system

(a) Push in the SHUTOFF Valve knob.

(b) Loosen the PRESSURE REGULATOR knob until it can spin freely.

(c) Once the pitot pressure gauges read 0 psig (0 psi), turn off the PUMP switch.

NOTE: Do not remove the pitot equipment at this time.

SUBTASK 27-31-67-020-005

(2) Remove the pressure transducers.

(a) Remove hydraulic power from the aircraft, do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802

(b) Remove the pressure transducers from the SYSTEM B METERED PRESSURE line and the SYSTEM A METERED PRESSURE line.

(c) Remove the caps from the DUAL FEEL ACTUATOR.

(d) Install the SYSTEM B METERED PRESSURE line and the SYSTEM A METERED PRESSURE line on to the corresponding ports of the DUAL FEEL ACTUATOR.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-67-410-003

(3) Bleed the Elevator Control System

(a) Do this task: Elevator Feel Actuator Installation, TASK 27-31-67-400-801

SUBTASK 27-31-67-020-006

(4) Remove the Pitot Static Equipment

(a) Remove the pitot adaptors from each of the elevator pitot probes.

(b) Disconnect the Y hose from the pressure adaptors.

(c) Remove the pressure return hoses from the visco drains.

SUBTASK 27-31-67-410-004

(5) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT
D	4	C00237	HEATERS ELEV PITOT RIGHT

ELEVATOR INPUT TORQUE TUBE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the elevator input torque tube.

(2) An installation of the elevator input torque tube.

B. The elevator input torque tube is referred to as the "torque tube" in this procedure.

C. The torque tube includes four quadrants and six input cranks.

TASK 27-31-71-000-801

2. Elevator Input Torque Tube Removal

(Figure 401 or Figure 402)

A. References

Reference	Title
27-31-00-800-802	Pressure from the Elevator Hydraulic Systems A and B Removal (P/B 201)
53-53-00-000-801	Tailcone Removal (P/B 401)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1585	Kit - Rigging Pin Part #: F70207-151 Supplier: 81205
SPL-1677	Assembly - Trammel Bar, Stabilizer Trim Actuator Part #: F80055-36 Supplier: 81205 Opt Part #: F80055-1 Supplier: 81205

C. Location Zones

Zone	Area
315	APU Compartment - Left
316	APU Compartment - Right

D. Access Panels

Number	Name/Location

317BL	Tailcone Access Door
318BR	Tailcone Access Door

E. Prepare for the Removal

SUBTASK 27-31-71-860-001

(1) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-71-020-001

(2) If it is necessary, remove the tail cone to get access to the torque tube [18]:

(a) Use marking pens or masking tape to make marks on the airplane to show the tail cone locations for correct installation of the tail cone.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Do this task: Tailcone Removal, TASK 53-53-00-000-801.

SUBTASK 27-31-71-010-002

(3) If the tail cone was not removed, do this step to gain access to the torque tube [18]:

(a) Open these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-71-860-002

(4) Use the bar, SPL-1677, to set the horizontal stabilizer to 4 units of trim.

(a) Make sure to protect wire bundles when using the trammel bar, SPL-1677.

NOTE: The sharp edges on the trammel bar, SPL-1677, can cause chafing or damage to the wires.

SUBTASK 27-31-71-080-001

(5) Install the rig pin E-5 from the rigging pin kit, SPL-1585, on the elevator aft quadrant.

SUBTASK 27-31-71-010-001

(6) To get access to the turnbuckles, do this step:

(a) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Elevator Input Torque Tube Removal

SUBTASK 27-31-71-020-002

(1) Remove the cables EAL, EBL, EAR, and EBR from the quadrants [5]:

(a) Install the clamps on the cables so the cables will not go through the aft pressure bulkhead.

(b) Remove the turnbuckles locking clips.

(c) Loosen the turnbuckles for the elevator cables EAL, EBL, EAR, and EBR.

(d) Remove the nuts [4], washers [3], washers [55] (if applicable), bolts [1], and cable retainers [2] from the four quadrants [5].

(e) Remove the cables from the quadrants [5].

SUBTASK 27-31-71-020-003

(2) Remove the torque tube [18] (Figure 402):

(a) Remove the nut [16], washer [15], and bolt [14] to disconnect the elevator position sensor rod [13] from the torque tube [18].

(b) Remove the nut [29], washer [28], washer [27], and bolt [26] to disconnect the autopilot actuator rod [19] from the input crank [30].

(c) Remove the nuts [11], washers [10], washers [9], and bolts [8] to disconnect the four input rods [7] of the elevator power control units [6] from the four input cranks [12].

(d) Remove the nut [24], washer [23], washer [22], and bolt [21] to disconnect the feel and centering rod [20] from the input crank [25].

(e) Use the drill bit 0.247 +0.003 / -0.000 in. (6.27 +0.08 / -0.00 mm) and the drill centering guide to drill out the lockbolts [32] and collars [33] from the center bearing retainer [31].

1) Make sure that the holes are not out of tolerance.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Remove the rig pin E-5 from the elevator aft quadrant.

(g) Remove the nuts [43], washers [42], nuts [41], washers [40], bolt assemblies [38], and bushings [39] to disconnect the two elevator power control units [6] from the torque tube [18].

(h) Remove the bolt shrouds [54] from the left and right assemblies.

NOTE: There is a bolt shroud [54] on the bolt heads and the nut ends of the bolts [44].

(i) Remove the nuts [47], washers [46], bolts [44], and bushings [45] to disconnect the two reaction links [37] from the torque tube [18].

(j) Remove the nuts [48], washers [49], nuts [50], washers [52], washers [51], washers [34], bolt assemblies [35], and bushings [53] to disconnect the torque tube [18] from the support structure.

(k) Remove the torque tube [18] from the airplane.

END OF TASK

F. Elevator Input Torque Tube Installation

SUBTASK 27-31-71-420-001

(1) Install the torque tube [18] (Figure 402):

(a) Lubricate the bushings, bolts, and bearings with grease, D00013.

(b) Hold the torque tube [18] in its position.

(c) Attach the torque tube [18] to the support structure:

1) Install the bushings [53], bolt assemblies [35], washers [34], washers [51], washers [52], and nuts [50].

a) Tighten the nuts [50] to 90 in-lb (10.2 N·m) - 105 in-lb (11.9 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

MAKE SURE THAT YOU DO NOT TIGHTEN THE INNER NUT AGAIN AFTER YOU TIGHTEN THE OUTER NUT. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT CAN OCCUR.

2) Install the washers [49] and nuts [48].

a) Tighten the nuts [48] to 30 in-lb (3.4 N·m) - 35 in-lb (4.0 N·m).

CAUTION

EXAMINE FOR DAMAGE THE INNER/OUTER OF THE RODS/BOLTS BEFORE YOU INSTALL THE ROD END BOLTS. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT CAN OCCUR.

(d) Connect the torque tube [18] to the two reaction links [37]:

1) Install the bushings [45], bolts [44], washers [46], and nuts [47].

a) Install the left bolt [44] (on the left assembly) with the bolt head inboard and the right bolt [44] (on the right assembly) with the bolt head outboard.

(e) Install the bolt shrouds [54] on the left and right assemblies.

NOTE: There is a bolt shroud [54] on the bolt heads and the nut ends of the bolts [44].

(f) Install the two elevator power control units [6] to the torque tube [18]:

1) Install the bushings [39], bolt assemblies [38], washers [40], and nuts [41].

a) Tighten the nuts [41] to 550 in-lb (62.1 N·m) - 600 in-lb (67.8 N·m).

CAUTION

MAKE SURE THAT YOU DO NOT TIGHTEN THE INNER NUT AGAIN AFTER YOU TIGHTEN THE OUTER NUT. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT CAN OCCUR.

2) Install the washers [42] and nuts [43].

a) Tighten the nuts [43] to 225 in-lb (25.4 N·m) - 250 in-lb (28.2 N·m).

(g) If it is necessary, drill the diameter of the 0.247 +0.003 / -0.000 in. (6.27 +0.08 / -0.00 mm) holes in the center bearing retainer [31].

(h) Use the drill centering guide adapter to make sure that the holes are not out of tolerance.

(i) Install the lockbolts [32] and collars [33] to attach the center bearing retainer [31] to the bracket.

(j) Connect the feel and centering rod [20] to the input crank [25]:

1) Install the bolt [21], washer [22] (under the bolt [21]), washer [23] (under the nut [24]), and nut [24].

(k) Connect the four input rods [7] of the two elevator power control units [6] to the input cranks [12]:

1) Install the bolts [8], washers [9], washers [10], nuts [11].

(l) Install the bolt [26], washer [27], washer [28], and nut [29] to connect the autopilot actuator rod [19] to the input crank [30].

(m) Install the bolt [14], washer [15], and nut [16] to connect the elevator position sensor rod [13] to the torque tube [18].

SUBTASK 27-31-71-420-002

(2) Install the cables EAL, EBL, EAR, and EBR to the quadrants [5]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Install the bolts [1], washers [55] (if applicable), washers [3], nuts [4], and cable retainers [2] to attach the cables to the four quadrants [5] (TASK 20-10-93-400-801).

(b) Remove the clamps from the cables.

(c) Install the turnbuckles locking clips.

SUBTASK 27-31-71-420-003

(3) If the tail cone was removed, do this task: Tailcone Installation, TASK 53-53-00-400-801.

G. Elevator Input Torque Tube Installation Test

SUBTASK 27-31-71-820-001

(1) Adjust the tension of the EAL, EBL, EAR, and EBR control cables (Elevator Control Cables EA and EB and Pitch Force Transducers - Adjustment, TASK 27-31-00-820-801).

SUBTASK 27-31-71-820-002

(2) Adjust the elevator pushrod (Elevator Control Pushrods - Adjustment, TASK 27-31-00-820-802).

SUBTASK 27-31-71-820-003

(3) Adjust the output rod of the elevator feel and centering unit (Input Rods of the Elevator Neutral Shift Mechanism and Output Rod of the Feel and Centering Unit - Adjustment, TASK 27-31-00-820-804).

SUBTASK 27-31-71-710-001

(4) Move the elevator slowly by hand through the full travel up and down.

(a) Make sure that the elevator moves freely.

SUBTASK 27-31-71-860-003

(5) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

SUBTASK 27-31-71-710-002

(6) Do this check of the synchronized operation of the elevator power control units:

(a) Put the FLT CONTROL A switch to OFF and the FLT CONTROL B switch to ON.

1) Make sure that the elevator trailing edge move more than 0.02 in. (0.5 mm).

2) If it is necessary, adjust the input rods of the power control units (Input Rods of the Elevator Power Control Unit - Adjustment, TASK 27-31-00-820-803).

(b) Put the FLT CONTROL A switch to ON and the FLT CONTROL B switch to OFF.

1) Make sure that the elevator trailing edge moves more than 0.02 in. (0.5 mm).

2) If it is necessary, adjust the input rods of the power control units (Input Rods of the Elevator Power Control Unit - Adjustment, TASK 27-31-00-820-803).

SUBTASK 27-31-71-710-003

(7) Do this task: Control Column Power Force - Test, TASK 27-31-00-700-810.

SUBTASK 27-31-71-710-004

(8) Do this task: Feel Force System - Test, TASK 27-31-00-700-813.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-71-410-002

(1) If the tail cone was not removed, do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Close these access panels:

Number	Name/Location
317BL	Tailcone Access Door
318BR	Tailcone Access Door

SUBTASK 27-31-71-410-001

(2) Close this access panel:

C. Location Zones

Zone	Area
317	Tail Cone Compartment - Left
318	Tail Cone Compartment - Right

D. Prepare for the Removal

SUBTASK 27-31-74-860-001

(1) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-74-020-001

(2) Do this task: Tailcone Removal, TASK 53-53-00-000-801.

SUBTASK 27-31-74-860-002

(3) Use the bar, SPL-1677, to set the horizontal stabilizer to 4 units of trim.

(a) Make sure to protect wire bundles when using the trammel bar, SPL-1677.

NOTE: The sharp edges on the trammel bar, SPL-1677, can cause chafing or damage to the wires.

SUBTASK 27-31-74-020-002

(4) Do this task: Autopilot Elevator Actuator - Removal, TASK 22-11-26-000-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Elevator Output Torque Tube Removal

CAUTION

YOU MUST BE CAREFUL WITH THE ELEVATOR AFTER YOU REMOVE THE TORQUE TUBES. IT IS POSSIBLE THAT THE ELEVATOR CAN HIT THE HORIZONTAL STABILIZER TRAILING EDGE LOWER BEAM AND ELEVATOR MAST ARM FITTING. IF YOU DO NOT OBEY, DAMAGE TO THE EQUIPMENT CAN OCCUR.

SUBTASK 27-31-74-020-003

(1) Remove the mounting bracket [31] of the elevator autopilot actuators:

(a) Remove the bolts [27] and washers [28] from the mounting bracket [31].

(b) Remove the bolts [29] and washers [30] from the mounting bracket [31].

(c) Remove the nuts [35], washers [34], washers [33], and bolts [32] from the mounting bracket [31].

(d) Remove the nuts [39], washers [38], washers [37], and bolts [36] from the mounting bracket [31].

(e) Remove the mounting bracket [31] from the airplane.

SUBTASK 27-31-74-480-001

(2) Install the rig pin E-5 from the rigging pin kit, SPL-1585, in the elevator aft control quadrant.

SUBTASK 27-31-74-020-004

(3) Remove the output torque tube [1]:

(a) Remove the nuts [25], nuts [23], washers [22], bushings [24], and bolt assemblies [26] to disconnect the two elevator control pushrods [4] from the output torque tube [1].

(b) Remove the nuts [9], washers [8], washers [7], and bolts [6] to disconnect the two elevator PCUs [5] from the output torque tube [1].

(c) Move the elevator PCUs [5] away from the aft bulkhead until the input cranks are in the bottom.

(d) At each end of the output torque tube [1], remove the nuts [20], washers [21], nuts [15], washers [14], bolts [11], bushing [12] (different on right and left sides), and bushings [13] to disconnect the output torque tube [1] from the inboard pivot brackets [2] and reaction links [10].

(e) At each end of the output torque tube [1], remove the nuts [17], washers [18], washers [19], and bolts [16] to disconnect the output torque tube [1] from the outboard pivot brackets [3].

(f) Remove the output torque tube [1] from the airplane.

D. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
1	Output torque tube	27-31-00-17-110	SIA ALL

E. Location Zones

Zone	Area
317	Tail Cone Compartment - Left
318	Tail Cone Compartment - Right

F. Elevator Output Torque Tube Installation

SUBTASK 27-31-74-420-001

(1) Install the output torque tube [1]:

(a) Lubricate the bushings, bolts, and bearings with grease, D00013.

(b) Put the output torque tube [1] in its position.

(c) Install the alignment pins to keep the bearing components in the inboard pivot clevis fittings of the output torque tube [1].

(d) Connect the output torque tube [1] to the outboard pivot brackets [3]:

1) At each of the output torque tube [1], install the bolts [16] with the bolt head inboard, washers [19], washers [18], and nuts [17].

a) Tighten the nuts [17] to 480 in-lb (54.2 N·m) - 790 in-lb (89.3 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

BE CAREFUL WHEN YOU INSTALL THE BOLTS [11]. YOU CAN CAUSE DAMAGE TO THE BEARING COMPONENTS IF YOU HIT THE BOLTS [11] DURING THE INSTALLATION.

(e) Connect the output torque tube [1] to the inboard pivot brackets [2] and reaction links [10]:

1) At each end of the output torque tube [1], install the bushing [12] (different on right and left sides), bushings [13], bolts [11], washers [14], and nuts [15].

a) Tighten the nuts [15] to 500 in-lb (56.5 N·m) - 600 in-lb (67.8 N·m).

CAUTION

DO NOT TIGHTEN THE NUT [15] AGAIN AFTER YOU TIGHTEN THE NUT [20], YOU CAN CAUSE DAMAGE TO EQUIPMENT.

2) Install the washers [21] and nuts [20].

a) Tighten the nuts [20] to 150 in-lb (16.9 N·m) - 220 in-lb (24.9 N·m).

SUBTASK 27-31-74-420-007

(2) Install the elevator control pushrods [4] to the output torque tube [1]:

(a) Install the bolt assemblies [26] with the bolt heads facing outboard, bushings [24], washers [22], nuts [23], and nuts [25].

1) Do not tighten the nuts [23] and nuts [25].

NOTE: The nuts [23] and nuts [25] will be tightened after the adjustment.

SUBTASK 27-31-74-420-008

(3) Install the elevator PCU [5] to the output torque tube [1]:

(a) Install the bolts [6], washers [7] (under the bolt), washers [8] (under the nut), and nuts [9].

SUBTASK 27-31-74-420-002

(4) Install the mounting bracket [31] for the autopilot elevator actuators:

(a) Put the mounting bracket [31] in position.

(b) Install bolts [27] and washers [28].

(c) Install bolts [29] and washers [30].

(d) Install the bolts [32], washers [33] (under the bolt), washers [34] (under the nut), and nuts [35].

(e) Install the bolts [36], washers [37] (under the bolt), washers [38] (under the nut), and nuts [39].

SUBTASK 27-31-74-420-003

(5) Install the autopilot elevator actuators on the mounting bracket [31] (TASK 22-11-26-400-801).

SUBTASK 27-31-74-080-001

(6) Remove rig pin E-5 of the rigging pin kit, SPL-1585, from the elevator aft quadrant.

SUBTASK 27-31-74-420-009

(7) Do this task: Tailcone Installation, TASK 53-53-00-400-801.

SUBTASK 27-31-74-820-001

(8) Adjust the elevator control pushrods (TASK 27-31-00-820-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-74-860-003

(1) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR INDEX PLATE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of an elevator index plate

(2) An installation of an elevator index plate.

B. This procedure is applicable for the left and right elevator index plates.

C. You must do this procedure when the tail cone is removed and a new or different tail cone is installed.

TASK 27-31-81-000-801

2. Elevator Index Plate Removal

(Figure 401)

A. General

(1) This task includes the steps to remove the elevator index plate [1] from a removed tail cone.

B. Location Zones

Zone	Area
315	APU Compartment - Left
316	APU Compartment - Right

C. Elevator Index Plate Removal

SUBTASK 27-31-81-020-001

(1) Do these steps to remove the elevator index plate [1]:

(a) Remove the lockwire.

(b) Remove the nuts [4], washers [3], and bolts [2] from the elevator index plate [1].

(c) Remove the elevator index plate [1] from the tail cone.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Prepare for the Installation

SUBTASK 27-31-81-010-001

(1) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-81-010-002

(2) Remove this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-81-480-001

CAUTION MAKE SURE TO PREVENT DAMAGE TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CHAF OR CAN CAUSE DAMAGE TO THE WIRES OR BUNDLE INSULATION.

(3) Use the bar, SPL-1677, to set the B dimension at 39.17 ±0.01 in. (994.92 ±0.26 mm). (Figure 403).

SUBTASK 27-31-81-860-001

(4) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-31-81-860-002

(5) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-31-81-480-002

(6) Attach DO NOT OPERATE tags, STD-858, to the control columns.

SUBTASK 27-31-81-480-003

(7) Use the beam, SPL-1730, to adjust the elevator trailing edge (Figure 402):

(a) Set the beam, SPL-1730, on the stabilizer lower surface.

(b) Set the elevator trailing edge to the index mark on the beam, SPL-1730.

(c) Remove the beam, SPL-1730.

I. Elevator Index Plate Installation

(Figure 401)

SUBTASK 27-31-81-420-001

(1) Do these steps to install the elevator index plate [1]:

(a) Align the center mark of the elevator index plate [1] with the elevator trailing edge.

(b) Drill two 0.190 +0.004 / -0.000 in. (4.826 +0.102 / -0.000 mm) diameter holes through the tail cone and the elevator index plate [1].

(c) Install the bolts [2], washers [3], and nuts [4] to attach the elevator index plate [1] to the tail cone.

(d) Install the MS20995NC32 lockwire, G01912.

SUBTASK 27-31-81-080-001

(2) Remove the DO NOT OPERATE tags, STD-858, from the control columns.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-81-210-001

(3) Make sure that the elevator trailing edge aligns with the center mark of the elevator index plate [1].

J. Put the Airplane Back to Its Usual Condition

SUBTASK 27-31-81-410-001

(1) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-81-410-002

(2) Install this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-81-860-003

(3) Do this task: Putting the Elevator Systems A and B Back to the Condition Before the Pressure Removal, TASK 27-31-00-840-802.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

ELEVATOR NEUTRAL SHIFT MECHANISM - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Elevator Neutral Shift Mechanism Removal

(2) Elevator Neutral Shift Mechanism Installation

TASK 27-31-91-000-801

2. Elevator Neutral Shift Mechanism Removal

(Figure 401, Figure 402)

A. References

Reference	Title

D. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door
318BR	Tailcone Access Door

E. Prepare for the Removal

SUBTASK 27-31-91-860-001

(1) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-91-010-001

(2) Remove this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-31-91-010-002

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-31-91-480-001

(4) Use the bar, SPL-1677 to set B dimension at 39.17 ±0.01 in. (994.92 ±0.26 mm). (Figure 401 (Sheet 2))

NOTE: Make sure to protect wire bundles when using the trammel bar, SPL-1677. The sharp edges on the trammel bar, SPL-1677 can cause chafing or damage to the wires.

SUBTASK 27-31-91-860-002

(5) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
C	4	C00456	AFCS SYS A MACH TRIM AC
D	1	C01049	AFCS SYS A WARN LIGHT (BAT)

D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-31-91-480-002

(6) Install the lock, SPL-1672 on the stabilizer trim wheel at the control stand (Figure 402):

(a) Turn the stabilizer trim wheel to put the handle at the top of the wheel.

(b) Adjust the height of the lock, SPL-1672 until the yoke is under the handle.

(c) Install the pin through the yoke.

(d) Install the safety pin.

SUBTASK 27-31-91-480-003

(7) Install the rig pin E-5 from the rigging pin kit, SPL-1585 in the aft control quadrant, (Figure 401).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Neutral Shift Mechanism Removal

(Figure 401)

SUBTASK 27-31-91-020-001

(1) Do these steps to remove the elevator neutral shift mechanism [1]:

(a) Remove the nut [8], washer [9], nut [10], washers [7], and bolt [6] to disconnect the elevator neutral shift mechanism [1] from the mach trim actuator [5].

(b) Remove the nuts [28], washers [26], washers [24], and bolts [25] to disconnect control rod [23] and control rod [27] from the elevator neutral shift mechanism [1].

(c) Remove the nuts [4], washers [3], and bolts [2] that attach the elevator neutral shift mechanism [1] to the support brackets [29].

(d) Remove the nuts [13], washers [12], and bolts [11] that attach the elevator neutral shift mechanism [1] to the support brackets [29].

(e) Remove the elevator neutral shift mechanism [1] and spacers [17] from the airplane.

NOTE: Note the quantity, orientation, and location of the spacers [17] before you remove them from the elevator neutral shift mechanism [1].

G. Neutral Shift Mechanism Installation

(Figure 401)

SUBTASK 27-31-91-640-001

(1) Do these steps to replace the bearings [16] of the elevator neutral shift mechanism [1]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the right outer bearing housing [15] from the short end of the elevator neutral shift mechanism [1].

(b) Remove the bearing [16] from the short end of the elevator neutral shift mechanism [1].

(c) Remove the left outer bearing housing [14] from the long end of the elevator neutral shift mechanism [1].

(d) Remove the nut [21], washer [20], washer [19], and bolt [18] from the long end of the elevator neutral shift mechanism [1].

(e) Remove the bearing retainer [22] and bearing [16] from the elevator neutral shift mechanism [1].

(f) Apply sealant, A00247 between each new bearing [16], their bearing housings and bearing retainer [22].

(g) Install the bearings [16], left outer bearing housing [14], right outer bearing housing [15], and bearing retainer [22] back on the elevator neutral shift mechanism [1].

(h) Turn the bearing retainer [22] until you can install the bolt [18], washer [19] (under the bolt head), washer [20] (under the nut), and the nut [21].

SUBTASK 27-31-91-420-001

(2) Do these steps to install the elevator neutral shift mechanism [1]:

(a) Put the elevator neutral shift mechanism [1] between the support brackets [29].

1) Align the elevator neutral shift mechanism [1] with the mach trim actuator [5].

2) Install the spacers [17] between the elevator neutral shift mechanism [1] and support brackets [29].

a) Add or remove spacers [17], if necessary.

(b) Install the bolts [2], washers [3] (under the nuts), and nuts [4] to attach the left side of the elevator neutral shift mechanism [1] to the left support bracket [29].

(c) Install the bolts [11], washers [12] (under the nuts), and nuts [13] to attach the right side of the elevator neutral shift mechanism [1] to the right support bracket [29].

WARNING MAKE SURE THAT YOU TURN THE NEUTRAL SHIFT CRANK IN THE UP DIRECTION. IF YOU INSTALL THE NEUTRAL SHIFT CRANK INCORRECTLY, THE STABILIZER CAN MOVE QUICKLY WHEN YOU ENGAGE THE AUTOPILOT. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(d) Make sure the crank of the elevator neutral shift mechanism [1] is in the up direction and connected to the mach trim actuator [5].

1) Install the bolt [6] from the left to the right side (bolt head on the left side).

2) Install the washers [7] (under the nut) and nut [8].

a) Tighten the nut [8] to 85 in-lb (10 N·m)–100 in-lb (11 N·m).

CAUTION DO NOT TIGHTEN THE NUT [10] AGAIN AFTER YOU TIGHTEN THE NUT [8]. YOU CAN CAUSE DAMAGE TO THE BOLT ASSEMBLY.

3) Install the washer [9] and nut [10].

a) Tighten the nut [10] to 30 in-lb (3 N·m)–35 in-lb (4 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Connect the control rods [27] and control rods [23]to the elevator neutral shift mechanism [1].

1) Install the bolts [25], washers [24], washers [26], and nuts [28].

SUBTASK 27-31-91-080-001

(3) Remove the rig pin E-5 of the rigging pin kit, SPL-1585 from the aft control quadrant.

SUBTASK 27-31-91-860-003

(4) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-1

ELEVATOR NEUTRAL SHIFT MECHANISM - INSPECTION/CHECK

1. General

A. This procedure contains this task:

(1) Elevator Neutral Shift Mechanism Inspection

(a) This task supplies the data for a dimensional inspection of the elevator neutral shift mechanism [1].

(b) This task does not remove or install the elevator neutral shift mechanism [1], refer to the Elevator Neutral Shift Mechanism - Removal/Installation for procedures to remove and install the elevator neutral shift mechanism [1].

TASK 27-31-91-200-801

2. Elevator Neutral Shift Mechanism - Inspection

(Figure 601)

A. General

(1) This procedure gives wear limits and repair data for the elevator neutral shift mechanism [1].

B. References

Reference	Title
27-31-91-000-801	Elevator Neutral Shift Mechanism Removal (P/B 401)

E. Procedure

SUBTASK 27-31-91-020-002

(1) Do this task to remove the elevator neutral shift mechanism [1]: Elevator Neutral Shift Mechanism Removal, TASK 27-31-91-000-801.

SUBTASK 27-31-91-020-003

(2) Use these tools to check for wear on the parts of the elevator neutral shift mechanism [1] connections:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-31-91-020-004

(3) Do these steps to examine the parts of the elevator neutral shift mechanism [1] connections for worn areas:

(a) Remove the parts to be checked.

(b) Measure the parts as necessary with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Compare the dimensions you measured with the permitted wear dimensions that follow.

(d) If the parts are not in the tolerance, replace or repair the part as required.

Table 601/27-31-91-993-801

NAME OF THE PARTS THAT ARE IN CONTACT	DIM.	DIAMETER DESIGN LIMITS		WEAR LIMITS	
		MINIMUM inches/mm	MAXIMUM inches/mm	PERMITTED MAXIMUM I.D./ MINIMUM O.D. OF WORN PART	MAXIMUM SERVICE DIAMETRIC CLEARANCE
#1 outer bearing housing [3]	I.D.	1.9375 in 49.212 mm	1.9385 in 49.238 mm	1.9415 in 49.314 mm	0.004 in 0.102 mm
#1 bearing [4]	O.D.	1.9365 in 49.187 mm	1.9375 in 49.212 mm	1.9360 in 49.174 mm	
#2 bearing [5]	I.D.	0.9995 in 25.387 mm	1.0000 in 25.400 mm	1.0025 in 25.463 mm	0.0035 in 0.089 mm
#2 elevator neutral shift mechanism [1]	O.D.	0.9985 in 25.362 mm	0.9990 in 25.375 mm	0.9965 in 25.311 mm	

SUBTASK 27-31-91-020-005

(4) Do this task to install the elevator neutral shift mechanism [1]: Elevator Neutral Shift Mechanism Installation, TASK 27-31-91-400-801.

FEEL SYSTEM PITOT PROBE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Feel System Pitot Probe Removal

(2) Feel System Pitot Probe Installation

B. The Feel System Pitot Probe is referred to as the "pitot probe [8]" in this procedure.

C. A pitot probe [8] is installed on each side of the vertical fin. This procedure is applicable for the left and right pitot probes [8].

TASK 27-31-94-000-801

2. Feel System Pitot Probe Removal

(Figure 401 and Figure 402)

A. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
COM-2481	Sealant Removal Tool (meets BSS7384 requirements) Part #: 1-6390-A Supplier: 63318 Part #: 10810 Supplier: $0855 Part #: 10811 Supplier: $0855 Part #: 10812 Supplier: $0855 Part #: 234350 Supplier: 5HCF1 Part #: 235072 Supplier: 5HCF1 Part #: 235073 Supplier: 5HCF1 Part #: 235074 Supplier: 5HCF1 Part #: 235075 Supplier: 5HCF1 Part #: 235076 Supplier: 5HCF1 Part #: 311/03 Supplier: F6892 Part #: 311/14 Supplier: F6892 Part #: 311/25 Supplier: F6892 Part #: 311/37 Supplier: F6892 Part #: AS1 Supplier: $1351 Part #: AS2 Supplier: $1351 Part #: AS3 Supplier: $1351 Part #: DAD5013 Supplier: 7RKH2 Part #: DFD5019 Supplier: 7RKH2 Part #: JNT411B60 Supplier: 3DN12 Part #: JNT411B90 Supplier: 3DN12 Part #: SCD5019 Supplier: 7RKH2 Part #: ST982LF-9 Supplier: 81205 Part #: TS1275-4 Supplier: 22975

B. Location Zones

Zone	Area
323	Vertical Fin - Front Spar To Rear Spar

ECCN 9E991 BOEING PROPRIETARY - See title page for details

C. Feel System Pitot Probe Removal

SUBTASK 27-31-94-860-001

(1) For the left pitot probe [8], open this circuit breaker and install safety tag:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT

SUBTASK 27-31-94-860-002

(2) For the right pitot probe [8], open this circuit breaker and install safety tag:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
D	4	C00237	HEATERS ELEV PITOT RIGHT

SUBTASK 27-31-94-140-001

WARNING MAKE SURE THAT THE PITOT PROBE HEAT IS OFF. A HOT PROBE CAN CAUSE INJURIES TO PERSONNEL.

CAUTION MAKE SURE THAT THE PITOT PROBE HAS NO ADDED WEIGHT ON IT FROM THE TEST HOSE. THE WEIGHT OF THE TEST HOSE CAN BEND OR TWIST THE PITOT PROBE OUT OF TOLERANCE.

CAUTION MAKE SURE THAT THE AREA AROUND THE PITOT PROBE IS CLEAR OF UNWANTED MATERIAL. CONTAMINATION OF THE PITOT SYSTEM CAN OCCUR.

(3) Use the sealant removal tool, COM-2481, to remove the sealant from around the baseplate [5] of the pitot probe [8].

SUBTASK 27-31-94-020-001

(4) Remove the bolts [9] from the baseplate [5] of the pitot probe [8].

SUBTASK 27-31-94-020-002

CAUTION MAKE SURE THAT THE PITOT PROBE HAS NO WEIGHT ON IT. THE PITOT PROBE CAN BEND OR TWIST OUT OF TOLERANCE.

(5) Do these steps to loosen the pitot probe [8] from the airplane skin:

(a) Hold the probe strut [7].

(b) Pull the pitot probe [8] out from the airplane skin until you can get access to the pitot hose fitting [10] and electrical connector [1] on the base of the pitot probe [8].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-94-020-003

CAUTION USE TWO WRENCHES TO APPLY COUNTER PRESSURE ON THE FITTING DURING DISASSEMBLE. USE ONE WRENCH ON EACH SIDE OF THE FITTING. IF YOU DO NOT OBEY THIS INSTRUCTION DAMAGE TO THE TUBE OR FITTING CAN OCCUR.

(6) Disconnect the elbow [11] from the baseplate [5].

SUBTASK 27-31-94-020-004

(7) Remove the long screw [6] from the pitot probe side of the electrical connector [1].

SUBTASK 27-31-94-020-005

(8) Disconnect the electrical connector [1].

SUBTASK 27-31-94-420-001

(9) Install the long screw [6] in the electrical connector [1].

SUBTASK 27-31-94-020-007

(10) Temporarily attach the electrical connector [1] and pitot hose fitting [10] to the airplane structure with tape so they do not fall inside vertical fin.

SUBTASK 27-31-94-020-008

(11) Put a cap on the elbow [11] to keep out unwanted material.

NOTE: This step is not necessary if you will replace the pitot probe immediately.

SUBTASK 27-31-94-020-009

(12) Disconnect the bonding jumper [24] from the baseplate [5].

(a) Remove the bolt [19], washer [20], and bonding jumper [24].

SUBTASK 27-31-94-020-014

(13) Remove the pitot probe [8] with the baseplate [5] as whole assembly.

(a) If the gasket [2] is damaged, discard it.

NOTE: The gasket can be reused if tit is not damaged.

SUBTASK 27-31-94-020-010

(14) If it is necessary, remove the baseplate [5] from the pitot probe [8].

(a) Remove the lockwire, and discard it.

(b) Remove the bolts [3] and washers [4] from the baseplate [5].

NOTE: Hardened sealant can be softened with heat for easier removal. The baseplate and probe may be heated in an oven, 150°F (65.6°C) for 20 minutes to soften the sealant.

(c) Remove the baseplate [5].

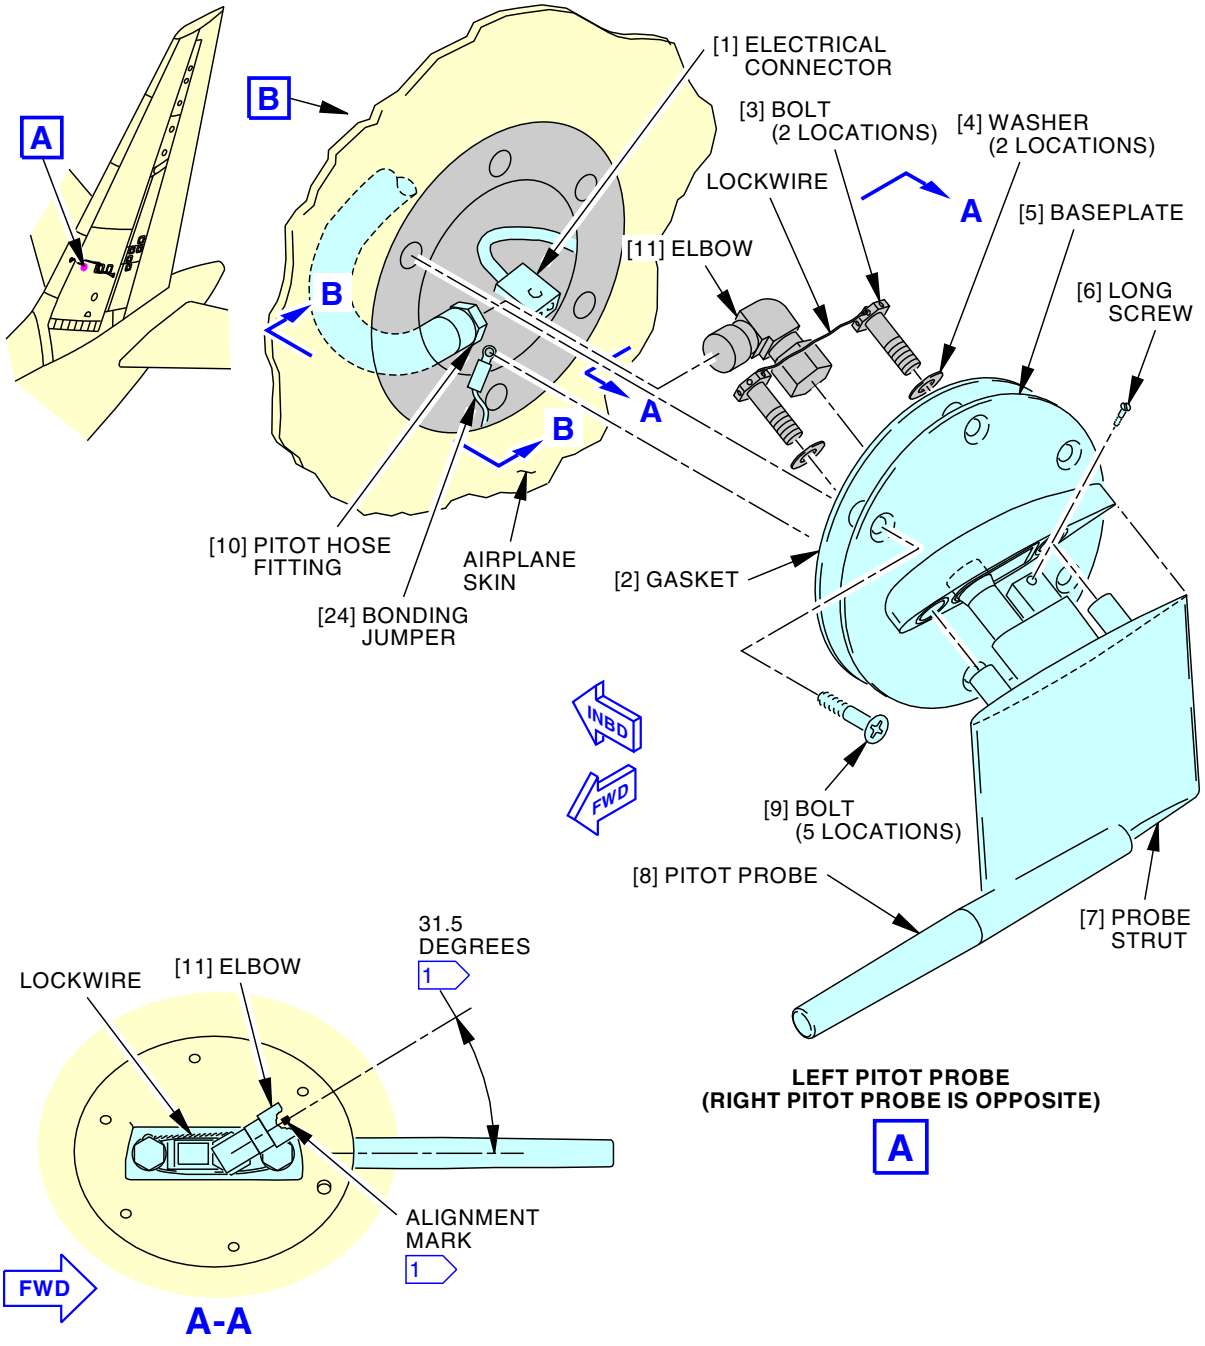
SUBTASK 27-31-94-020-011

(15) Keep the baseplate [5] for another installation.

NOTE: The baseplates are not interchangeable between positions.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details



1 THE CENTER OF THE 90-DEGREE ELBOW SHOULD ALIGN 31.5 DEGREES ABOVE THE CENTER OF THE PITOT PROBE (OR ALIGNMENT MARK SHOWN). THIS WILL PREVENT MOISTURE FROM COLLECTING IN LOW SPOTS OF THE PITOT ASSEMBLY AND PITOT HOSE.

Zone	Area
323	Vertical Fin - Front Spar To Rear Spar

F. Feel System Pitot Probe Installation

SUBTASK 27-31-94-110-001

(1) For the surface of the baseplate [5], do this task: Clean Bare, Clad, or Plated Metal with Solvent, TASK 20-10-34-110-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-94-420-002

(2) If removed, do these steps to install the pitot probe [8] on the baseplate [5]:

(a) Put the pitot probe [8] on the baseplate [5].

(b) Install the bolts [3] and washers [4] in the baseplate [5].

(c) Install the MS20995NC32 lockwire, G01912 on the bolts [3].

(d) Apply sealant, A00247, around the head of the two bolts [3].

SUBTASK 27-31-94-420-015

(3) Put the gasket [2] into position on the baseplate [5].

SUBTASK 27-31-94-420-005

(4) Connect the bolt [19], washer [20], and bonding jumper [24] to the baseplate [5].

(a) Measure the resistance between the terminal of the bonding jumper [24] and airplane skin with a intrinsically safe approved bonding meter, COM-1550.

(b) Make sure that the resistance is not more than 2.5 milliohms (0.0025 ohm).

SUBTASK 27-31-94-420-007

(5) Make sure that the torque of the pitot hose fitting [10] is 161 in-lb (18 N·m) - 179 in-lb (20 N·m).

SUBTASK 27-31-94-420-013

(6) Do these steps to install the elbow [11] to the pitot probe [8]:

(a) If installed, remove the cap.

(b) Make sure that there is not a loop or downward oriented dip in the flexible pitot hose.

NOTE: A loop or downward oriented dip in the flexible pitot hose can cause water accumulation. Water accumulation can cause an erratic airspeed indication, resulting in an Indicated Airspeed (IAS) disagree message.

(c) Make sure that the center of the elbow [11] is aligned with the alignment mark on the inboard side of the pitot probe [8] base (Figure 401).

NOTE: The lowest point of the flexible hose must be the connection with the pitot probe.

(d) Install the elbow [11] to the pitot probe [8].

SUBTASK 27-31-94-420-006

(7) Tighten the elbow [11] to the base of the pitot probe [8] to 126 in-lb (14 N·m) - 154 in-lb (17 N·m).

SUBTASK 27-31-94-420-014

(8) Do these steps to connect the electrical connector [1] to the pitot probe [8]:

(a) Examine the electrical connector [1] for loose, bent, or broken pins.

(b) Remove the long screw [6] from the electrical connector [1].

(c) Connect the electrical connector [1].

1) Make sure that the pins are connected correctly (Figure 402).

NOTE: Pin B is the pin on the side closest to the offset screw hole.

(d) Install the long screw [6] in the electrical connector [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-31-94-390-001

(9) Apply a thin layer of sealant, A00247, or PR-1828 sealant, A00708 (quick curing), on the mating surfaces of the baseplate [5] and pitot probe [8].

NOTE: You can use the PR-1828 sealant, A00708, quick curing sealant, in applications where the aircraft needs to go quickly back into service. The two part sealant should be mixed and then applied per SEALS AND SEALING - MAINTENANCE PRACTICES, PAGEBLOCK 51-22-00/201.

NOTE: If the aircraft needs to go quickly back into service, and you do not use the quick curing sealant, it is not necessary to apply either sealant immediately if the cure time of either of the two sealants will cause a flight delay. To prevent moisture damage to the airplane, sealant must be applied as soon as it is convenient for the operator.

SUBTASK 27-31-94-420-010

CAUTION

DO NOT LET DUST, DIRT, OR OTHER UNWANTED MATERIAL GET IN THE PROBES. CONTAMINATION CAN CAUSE DAMAGE TO THE SYSTEM.

(10) Do these steps to install the pitot probe [8]:

(a) Hold the probe strut [7].

(b) Put the pitot hose fitting [10] and electrical connector [1] in the installation hole.

(c) Install the bolts [9] in the baseplate [5] of the pitot probe [8].

1) Apply compound, C00528, to the bolts [9] and baseplate [5] hole.

2) Tighten the bolts [9] to 32 in-lb (3.6 N·m) - 39 in-lb (4.4 N·m).

(d) Put the pitot probe [8] into position on the airplane skin.

1) Measure the baseplate [5] to skin misfair at the forward and aft edges of the baseplate [5] to be within +/-0.040 in. (1.0 mm).

SUBTASK 27-31-94-390-002

(11) Fill the gap between the baseplate [5] and the airplane skin with sealant, A00247, or PR-1828 sealant, A00708 (quick curing).

NOTE: It is not necessary to apply the sealant immediately if the cure time of the sealant will cause a flight delay. To prevent moisture damage to the airplane, sealant must be applied as quickly as possible.

(a) Make sure that the baseplate [5] and sealant are flat with the airplane skin.

SUBTASK 27-31-94-760-001

(12) Measure the resistance between the strut of the pitot probe [8] and the airplane skin with a intrinsically safe approved bonding meter, COM-1550.

(a) If the resistance is more than 0.010 ohms, do these steps:

1) Remove the pitot probe [8].

2) Clean the bonding surfaces, including the countersunk holes in the pitot probe [8] (SWPM 20-20-00).

3) Replace the bolts with new bolts.

4) Re-install the pitot probe [8].

5) Measure the resistance between the strut of the pitot probe [8] and the airplane skin with a intrinsically safe approved bonding meter, COM-1550.

6) If the resistance is more than 0.010 ohms, do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Remove the pitot probe [8].

b) Replace the nutplates and rivets that attach the pitot probe [8] (SRM PROCEDURE 51-40-02-0G-0).

c) Reinstall the pitot probe [8] and make sure that the bonding resistance is not more than 0.010 ohm.

SUBTASK 27-31-94-860-005

(13) For the left pitot probe [8], remove the safety tag and close this circuit breaker:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	4	C00236	HEATERS ELEV PITOT LEFT

SUBTASK 27-31-94-860-006

(14) For the right pitot probe [8], remove the safety tag and close this circuit breaker:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
D	4	C00237	HEATERS ELEV PITOT RIGHT

G. Feel System Pitot Probe Installation Test

SUBTASK 27-31-94-710-001

(1) Do this task: Elevator Pitot System Leak - Test, TASK 27-31-17-790-801.

SUBTASK 27-31-94-710-002

(2) Do this task: Pitot Probe, AOA Sensor, and TAT Probe Heater - System Test, TASK 30-31-00-730-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STALL WARNING SYSTEM - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) Stall Warning System - Operational Test

(2) Stall Management Yaw Damper BITE Test - Existing Faults

(3) Stall Management Yaw Damper BITE Test - Fault History

(4) Stall Management Yaw Damper BITE Test

TASK 27-32-00-710-801

2. Stall Warning System - Operational Test

NOTE: This procedure is a scheduled maintenance task.

A. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Stall Warning System Operational Test

SUBTASK 27-32-00-710-001

(1) Do a test of the No. 1 Stall Warning System:

(a) Push and hold the STALL WARNING TEST NO. 1 switch on the P5-18 panel.

1) Make sure that the captain's control column shaker operates for more than five seconds.

(b) Release the STALL WARNING TEST NO. 1 switch.

1) Make sure that the captain's control column shaker stops.

SUBTASK 27-32-00-710-002

(2) Do a test of the No. 2 Stall Warning System:

NOTE: SPEED BRAKE DO NOT ARM light may momentarily turn on and off for SMYD 285A1010-110.

(a) Push and hold the STALL WARNING TEST NO. 2 switch on the P5-18 panel.

1) Make sure that the first officer's control column shaker operates for more than five seconds.

(b) Release the STALL WARNING TEST NO. 2 switch.

1) Make sure that the first officer's control column shaker stops.

——— END OF TASK ———

TASK 27-32-00-740-801

3. Stall Management Yaw Damper (SMYD) BITE Test - Existing Faults

(Figure 501)

A. General

(1) This procedure does the EXISTING FAULTS portion of the Stall Management Yaw Damper (SMYD) BITE.

(2) This procedure does an exchange of SMYD 1 and 2 if a maintenance message is present, and NO FAULT is found.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(3) Do this BITE test for SMYD 1 and 2 to make sure all the faults are found.

(4) For EXISTING FAULTS, the SMYD does internal tests, discrete output checks, sensor interface checks, and checks of inputs to the SMYD. All faults that are found during the EXISTING FAULTS are active. A maintenance message identifies a specific failure which is found by the SMYD.

E. Stall Management Yaw Damper (SMYD) BITE Test - Existing Faults

SUBTASK 27-32-00-010-001

(1) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-32-00-860-020

(2) To align the Inertial Reference Unit (IRU), do this task: Air Data Inertial Reference System - Alignment from the ISDU, TASK 34-21-00-820-802 or Air Data Inertial Reference System - Alignment from the FMC CDU, TASK 34-21-00-820-801 or Air Data Inertial Reference System - Automatic Alignment from the IRS MSU, TASK 34-21-00-820-803.

SUBTASK 27-32-00-200-001

(3) To make sure that the Flight Management Computer (FMC) is powered and has good weight data entered, do these steps:

NOTE: Zero Fuel Weight (ZFW) is calculated by subtracting the total fuel weight from the combined total weight of the airplane and contents. For the BITE test, any number between 70 and 150 (normal ZFW in thousands of pounds) will verify a check pass.

(a) Push the INIT REF button on the Control Display Unit (CDU).

(b) On the PERF INIT page, enter the following:

1) 3L: ZFW prompt, enter 94 for lbs or 43 for kg.

NOTE: GW/CRZ CG in 1L will auto calculate after ZFW is entered.

2) 4L: RES prompt, enter 4.0

3) 5L: CI prompt, enter 30.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-32-00-740-001

(4) Do the EXISTING FAULTS test on the SMYD BITE:

(a) Push the ON/OFF switch.

NOTE: The display will show EXISTING FAULTS? If a fault occurs, make sure that all FMC and ADIRU values are good.

(b) Push the YES switch and make sure the display shows:

1) Either a message corresponding the first fault in the list.

2) Or the display shows NO FAULTS.

(c) If there are existing faults, go to the IFIM and do the applicable procedure(s).

(d) If the display shows NO FAULTS, push the MENU switch to return to the EXISTING FAULTS? display.

(e) Do these steps to unlatch existing faults:

1) Push the down arrow until RESET LATCHES? shows.

2) Push the YES switch to reset the latches.

NOTE: END OF LIST will display when done.

(f) If a maintenance message is present and the SMYD shows NO FAULTS:

1) Do an exchange check of the SMYD 1 and 2 to find if a SMYD is damaged (IFIM and do the applicable procedure(s)).

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-32-00-860-004

(1) Push the ON/OFF switch to turn the SMYD display off.

SUBTASK 27-32-00-410-001

(2) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

TASK 27-32-00-740-802

4. Stall Management Yaw Damper (SMYD) BITE Test - Fault History

(Figure 501)

A. General

(1) This procedure does the FAULT HISTORY? portion of the Stall Management Yaw Damper (SMYD) BITE.

(2) The SMYD keeps a record of faults in FAULT HISTORY. The faults are grouped by flight leg. Flight leg 0 (LEG 0) is the most recent flight and includes faults that occurred on the ground after the most recent flight. Only flight legs with faults will be displayed.

117A	Electronic Equipment Access Door

F. Stall Management Yaw Damper (SMYD) BITE Test - Fault History

SUBTASK 27-32-00-740-002

(1) Do the FAULT HISTORY test on the SMYD BITE.

(a) Push the ON/OFF switch on the SMYD BITE display to turn the BITE display on.

NOTE: EXISTING FAULTS? will be shown.

(b) Push the down arrow until the display shows FAULT HISTORY?.

1) Push the YES switch.

a) If there are faults in history, the display will show FLIGHT LEG -n, where n is the most recent flight with faults recorded.

b) If there are no faults, the message NO FAULT HISTORY will show.

2) Push the up arrow or down arrow to go through the flight legs.

3) If you push YES at any flight leg display the message corresponding to the first fault in the list will show.

4) To show the faults for the flight leg use the up arrow and down arrow.

NOTE: To return to the FLIGHT LEG N display, push the MENU switch.

5) To return to the FAULT HISTORY display, push the MENU switch.

6) Go to the IFIM and do the applicable procedure(s).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-32-00-860-007

(1) Push the ON/OFF switch to turn the SMYD display off.

SUBTASK 27-32-00-410-002

(2) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

——— END OF TASK ———

TASK 27-32-00-740-803

5. Stall Management Yaw Damper (SMYD) BITE Test

(Figure 501)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) This task does the GROUND TEST? portion of the Stall Management Yaw Damper (SMYD) BITE.

(2) For GROUND TEST, the SMYD has several menus:

(a) SELF TEST? - This does a self test sequence of the SMYD.

(b) DISCRETE INPUTS? - This monitors the status of each displayed discrete inputs to the SMYD.

(c) ARINC429 INPUTS? - This monitors the status of each ARINC429 input to the SMYD.

(d) ANALOG INPUTS? - This shows the status of these sensors:

1) AOA SENSOR?

2) FLAP SENSOR?

(e) SERVO TEST? - This does a test of the integrity of the interface between the SMYD and rudder power control unit.

1) YD LVDT?

NOTE: This is only for the SMYD in the number 2 position.

(f) DISPLAY TEST? This does a test of the SMYD display.

(3) This task has a procedure for each of these menu items.

(4) This task also contains the INPUT SIGNAL INTEGRITY TEST procedure from the OTHER FUNCTION? menu.

SUBTASK 27-32-00-860-010

(1) To align the Inertial Reference Unit (IRU), do this task: Air Data Inertial Reference System - Alignment from the ISDU, TASK 34-21-00-820-802 or Air Data Inertial Reference System - Alignment from the FMC CDU, TASK 34-21-00-820-801 or Air Data Inertial Reference System - Automatic Alignment from the IRS MSU, TASK 34-21-00-820-803.

SUBTASK 27-32-00-860-019

(2) To make sure that the Flight Management Computer (FMC) is powered and has good weight data entered, do these steps:

NOTE: Zero Fuel Weight (ZFW) is calculated by subtracting the total fuel weight from the combined total weight of the airplane and contents. For the BITE test, any number between 70 and 150 (normal ZFW in thousands of pounds) will verify a check pass.

(a) Push the INIT REF button on the Control Display Unit (CDU).

(b) On the PERF INIT page, enter the following:

1) 3L: ZFW prompt, enter 94 for lbs or 43 for kg.

NOTE: GW/CRZ CG in 1L will auto calculate after ZFW is entered.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) 4L: RES prompt, enter 4.0

3) 5L: CI prompt, enter 30.

SUBTASK 27-32-00-010-003

(3) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

NOTE: Do the steps that follow on both SMYD #1 and SMYD #2.

SUBTASK 27-32-00-860-011

(4) Make sure that these circuit breakers are closed:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	9	C00109	FLIGHT RECORDER AC
C	10	C00468	FLIGHT RECORDER DC

SUBTASK 27-32-00-860-015

(5) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	3	C01072	HEATERS ALPHA VANE LEFT
D	3	C01071	HEATERS ALPHA VANE RIGHT

G. SELF TEST

SUBTASK 27-32-00-740-021

(1) Self Test using the Onboard Maintenance Function (OMF) (Recommended Method):

(a) Set the GND TESTS switch, on the P61-4 panel, to the ENABLE position.

(b) Push the SYS button in the Multi Function Display (MFD) section of the on the P9-82 multi function panel.

(c) Use the SELECTOR, on the P9-82 multi function panel, to make these selections:

- MAINT
- ONBD MAINT
- LINE MAINT
- GROUND TESTS
- 27 - Flight Controls Stall Management yaw Damper System
- System Test.

(d) Follow the on-screen instructions and then select the rectangular CONTINUE button.

(e) Use the SELECTOR, on the P9-82 multi function panel, to make this selection:

- START TEST.

(f) Make sure that when the test is complete, there are no faults and you see the TEST CONDITION: PASS message.

1) If you see TEST CONDITION: FAILED, go to the IFIM and do the applicable procedure(s).

2) If you do additional tests on the P9-82 multi function panel, select the NEW TEST button.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-32-00-740-022

(2) Self Test using SMYD box in Electronic Equipment Bay (Alternate Method):

(a) Push the ON/OFF switch to turn on the BITE display.

(b) Push the down arrow to show GROUND TESTS?

(c) Push the YES switch.

1) Make sure that SELF TEST? shows.

(d) Push the YES switch to start the self test.

1) TEST IN PROGRESS will show while the test is run.

2) When the self test is complete either:

a) A message corresponding to the first fault will show.

b) Or SMYD LRU OK will show.

3) If faults are detected, go to the IFIM and do the applicable procedure(s).

4) Push the MENU switch to go back to the SELF TEST? display.

H. DISCRETE INPUTS

SUBTASK 27-32-00-740-016

(1) If running tests out of sequence, make sure that the BITE setup conditions have selected GROUND TESTS? and SELF TEST?.

(a) Push the YES switch to start the discrete inputs test.

(b) Push the MENU button.

(c) Make sure that the display shows: SELF TEST?

(d) Push down arrow button.

(e) Make sure that display shows: DISCRETE INPUTS?

(f) Push the YES button.

1) For the SMYD 1 Discrete Input Test:

a) Make sure that the program pin inputs are correct (WDM 27-32-11).

NOTE: For each pin, the display will show OPEN or GND. Some pins are not applicable because of the SMYD model and configuration.

2) For the SMYD 2 Discrete Input Test:

a) Make sure that the program pin inputs are correct (WDM 27-32-21).

NOTE: For each pin, the display will show OPEN or GND. Some pins are not applicable because of the SMYD model and configuration.

(g) Push down arrow button.

(h) Make sure that the display shows: asym en = gnd.

(i) Open this circuit breaker:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	7	C01208	STALL WARN ASYM MODE

(j) Make sure that the display shows: asym en = open.

(k) Push down arrow button.

(l) Make sure that the display shows: asymetry = open.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(m) Push down arrow button.

(n) Make sure that the display shows: LE UCM = open.

(o) Push down arrow button.

(p) Make sure that the display shows: TOGA = open.

(q) Push and hold the TOGA switch on the number 1 or number 2 throttle lever.

(r) Make sure that the display shows: TOGA = gnd.

(s) Release the TOGA switch.

(t) Make sure that the display shows: TOGA = open.

(u) Push down arrow button.

(v) Make sure that the display shows: nlg = gnd.

WARNING

MAKE SURE THAT ALL PERSONNEL AND EQUIPMENT ARE CLEAR OF CONTROL SURFACES AND LANDING GEAR DOOR AREAS BEFORE YOU SIMULATE THE AIRPLANE TO THE AIR MODE. THE SIMULATED AIR MODE CAN CAUSE MOVEMENT TO CONTROL SURFACES, LANDING GEAR, AND LANDING GEAR DOORS. IF YOU DO NOT OBEY THIS INSTRUCTION, INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT CAN OCCUR.

(w) Put a proximity sensor test set, SPL-1690, between S1014 and S1015 nose gear air/ground sensor face and its steel target.

NOTE: The sensors are located in the aft lower nose wheel well.

(x) Make sure that the display shows: nlg = air.

(y) Remove the proximity sensor test set, SPL-1690, from S1014 and S1015.

(z) Make sure that the display shows: nlg = gnd.

(aa) Push down arrow button.

(ab) Make sure that the display shows: air/gnd = gnd.

(ac) Set the GND TESTS Switch, on the P61-4 panel, to the ENABLE position.

(ad) Select the SYS button in the MFD section of the on the P9-82 multi function panel.

(ae) Make the following selections on the MAX Display System (MDS):

- MAINT
- ONBD MAINT
- OTHER FUNCTIONS
- SPECIAL FUNCTIONS
- 32 - Proximity Switch Electronic Unit
- PSEU - Air/Ground Override
- CONTINUE
- Select CONTINUE under the PRECONDITIONS screen
- START FUNCTION
- Select SYS 1 and 2 IN AIR.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING MAKE SURE THAT ALL PERSONNEL AND EQUIPMENT ARE CLEAR OF CONTROL SURFACES AND LANDING GEAR DOOR AREAS BEFORE YOU SIMULATE THE AIRPLANE TO THE AIR MODE. THE SIMULATED AIR MODE CAN CAUSE MOVEMENT TO CONTROL SURFACES, LANDING GEAR, AND LANDING GEAR DOORS. IF YOU DO NOT OBEY THIS INSTRUCTION, INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT CAN OCCUR.

(af) =

Select CONTINUE by pushing on the center selector button SEL.

1) Make sure that these condition are seen on the MDS:
   - Air/Gnd Override is ACTIVE
   - System 1: AIR
   - System 2: AIR.

(ag) Make sure that the display shows: air/gnd = air.

(ah) Select Set SYS 1 and 2 ON GND.

WARNING MAKE SURE THAT ALL PERSONNEL AND EQUIPMENT ARE CLEAR OF CONTROL SURFACES AND LANDING GEAR DOOR AREAS BEFORE YOU SIMULATE THE AIRPLANE TO THE AIR MODE. THE SIMULATED AIR MODE CAN CAUSE MOVEMENT TO CONTROL SURFACES, LANDING GEAR, AND LANDING GEAR DOORS. IF YOU DO NOT OBEY THIS INSTRUCTION, INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT CAN OCCUR.

(ai) Select CONTINUE by pushing on the center selector button SEL.

1) Make sure that these conditions are seen on the MDS:
   - Air/Gnd Override is NOT ACTIVE
   - System 1: GND
   - System 2: GND.

(aj) Make sure that the display shows: air/gnd = gnd.

(ak) Push down arrow button.

(al) Make sure that the display shows: MLG = gnd.

(am) Open these circuit breakers:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
D	1	C01399	PSEU PRI
D	2	C01400	PSEU ALTN

(an) Make sure that the display shows: MLG = open.

(ao) Close these circuit breakers:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
D	1	C01399	PSEU PRI
D	2	C01400	PSEU ALTN

(ap) Make sure that the display shows: MLG = gnd.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(aq) Push down arrow button.

(ar) Make sure that the display shows: A/S pwr present.

(as) Do this step to disable the FC Autoslat DC 1 power to SMYD 1:

1) Open this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

(at) Do this step to disable the FC Autoslat DC 2 power to SMYD 2:

1) Open this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2

(au) Make sure that the SMYD 1 and SMYD 2 displays show: A/S pwr missing.

(av) For SMYD 1, do this step:

1) Close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

(aw) For SMYD 2, do this step:

1) Close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2

(ax) Make sure that the SMYD 1 and SMYD 2 displays show: A/S pwr present.

(ay) Push down arrow button.

(az) Make sure that the display shows: S/S pwr present.

(ba) For SMYD 1, do this step to disable the stick shaker L power:

1) Open this circuit breaker:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	4	C01392	STICK SHAKER LEFT

I (bb) For SMYD 2, do this step to disable the stick shaker R power:

1) Open this circuit breaker:

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	6	C01393	STICK SHAKER RIGHT

(bc) Make sure that SMYD 1 and SMYD 2 displays show: S/S pwr missing.

(bd) For SMYD 1, do this step:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Close this circuit breaker:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	4	C01392	STICK SHAKER LEFT

(be) For SMYD 2, do this step:

1) Close this circuit breaker:

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	6	C01393	STICK SHAKER RIGHT

(bf) Make sure that SMYD 1 and SMYD 2 displays show: S/S pwr present.

(bg) Push down arrow button.

(bh) Make sure that the display shows: YD pwr present.

(bi) For SMYD 1, do this step to disable the Yaw Damper 1 DC power:

1) Open this circuit breaker:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
D	7	C00286	YAW DAMPER 1 DC

(bj) For SMYD 2, do this step to disable the Yaw Damper 2 DC power:

1) Open this circuit breaker:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
D	6	C01354	YAW DAMPER 2 DC

(bk) Make sure that SMYD 1 and SMYD 2 displays show: YD pwr missing.

(bl) For SMYD 1, do this step:

1) Close this circuit breaker:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
D	7	C00286	YAW DAMPER 1 DC

(bm) For SMYD 2, do this step:

1) Close this circuit breaker:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
D	6	C01354	YAW DAMPER 2 DC

(bn) Make sure that SMYD 1 and SMYD 2 displays show: YD pwr present.

(bo) Push down arrow button.

(bp) Make sure that the display shows: FC B sw = on.

(bq) Put the Flight Control B switch, on the P5-3 overhead panel, to the OFF position.

(br) Make sure that the display shows: FC B sw = off.

(bs) Put the Flight Control B switch, on the P5-3 overhead panel, to the ON position.

(bt) Make sure that the display shows: FC B sw = on.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(bu) Push down arrow button.

(bv) Make sure that the display shows: eng rqst = false.

(bw) Put and HOLD the Yaw Damper Engage switch, on P5-3 overhead panel, to the ON position.

(bx) Make sure that the display shows: eng rqst = true.

(by) Put the Yaw Damper Engage switch, on P5-3 overhead panel, to the OFF position.

(bz) Push down arrow button.

(ca) Make sure that the display shows: flap up = up.

WARNING KEEP PERSONS AND EQUIPMENT AWAY FROM ALL CONTROL SURFACES AND THE NOSE GEAR WHEN HYDRAULIC POWER IS SUPPLIED. THE AILERONS, ELEVATORS, RUDDER, FLAPS, SLATS, SPOILERS, AND THE NOSE GEAR ARE SUPPLIED WITH POWER BY THE HYDRAULIC SYSTEMS. INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT CAN OCCUR WHEN HYDRAULIC POWER IS SUPPLIED.

(cb) Supply system B hydraulic power (TASK 29-11-00-860-801).

(cc) Put the flaps to 1 detent.

(cd) Make sure that the display shows: flap up = not up.

(ce) Close this circuit breaker:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	7	C01208	STALL WARN ASYM MODE

(cf) Put the flaps to 0 detent.

(cg) Remove the system B hydraulic power (TASK 29-11-00-860-805).

I. ARINC429 TEST

SUBTASK 27-32-00-740-009

(1) If you the tests out of sequence, make sure that the BITE setup conditions have selected GROUND TEST? and DISCRETE INPUTS?.

(a) Push the MENU button.

(b) Make sure that the display shows: DISCRETE INPUTS?

(c) Push the NO switch.

(d) Make sure that the display shows: ARINC429 INPUTS?.

(e) Push the YES switch to start the ARINC429 test.

(f) Make sure that the display shows: ON SIDE IR BUS?.

(g) Push the YES switch.

(h) Make sure that the display shows: BUS ACTIVE.

(i) Disable the SMYD 1 ONSIDE IR BUS:

1) Open these circuit breakers:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name

J. SENSOR TEST

SUBTASK 27-32-00-480-001

WARNING MAKE SURE THAT THE AOA SENSORS ARE COOL BEFORE YOU TOUCH THEM. THE AOA SENSORS CAN BE SUFFICIENTLY HOT TO BURN YOU.

(1) Install the angle of attack probe test fixture, SPL-1917, on the left alpha vane.

SUBTASK 27-32-00-740-017

(2) Do this sensor test for SMYD 1:

(a) From the ARINC 429 INPUTS?, push the down arrow button.

NOTE: If running out of sequence, make sure the BITE setup conditions have selected GROUND TESTS? and scrolled down to ARINC 429 INPUTS?.

(b) Make sure that the display shows: ANALOG INPUTS?.

(c) Push the YES button.

(d) Make sure that the display shows: AOA SENSOR?.

(e) Push the YES button.

NOTE: The display will show AOA and a value. Positive angles correspond to the AOA sensor trailing edge above test fixture zero point. Negative angles correspond to the AOA sensor trailing edge below test fixture zero point. The Aerodynamic Offset of each sensor is noted on its trailing edge.

(f) Move the left AOA sensor to minus 35 degrees.

(g) Make sure that the display shows: -35 - Aerodynamic Offset, ± 1 degree.

(h) Move the left AOA sensor to minus 14 degrees.

(i) Make sure that the display shows: -14 - Aerodynamic Offset, ± 1 degree.

(j) Move the left AOA sensor to 0 degrees.

(k) Make sure that the display shows: 0 - Aerodynamic Offset, ± 1 degree.

(l) Move the left AOA sensor to plus 14 degrees.

(m) Make sure that the display shows: 14 - Aerodynamic Offset, ± 1 degree.

(n) Move the left AOA sensor to plus 35 degrees.

(o) Make sure that the display shows: 35 - Aerodynamic Offset, ± 1 degree.

(p) Move the left AOA sensor to 0 degrees.

(q) Push the MENU button.

(r) Make sure that the display shows: AOA SENSOR?.

(s) Push the down arrow button.

(t) Make sure that the display shows: FLAP SENSOR?.

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(u) Pressurize the System B Hydraulic power (TASK 29-00-00-800-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(v) Push the YES button.
(w) Make sure that the display shows: FLAP DET 0.
(x) Move the flaps to the detent 1 position.
(y) Make sure that the display shows: FLAP DET 1.
(z) Move the flaps to the detent 2 position.
(aa) Make sure that the display shows: FLAP DET 2.
(ab) Move the flaps to the detent 5 position.
(ac) Make sure that the display shows: FLAP DET 5.
(ad) Move the flaps to the detent 10 position.
(ae) Make sure that the display shows: FLAP DET 10.
(af) Move the flaps to the detent 15 position.
(ag) Make sure that the display shows: FLAP DET 15.
(ah) Move the flaps to the detent 25 position.
(ai) Make sure that the display shows: FLAP DET 25.
(aj) Move the flaps to the detent 30 position.
(ak) Make sure that the display shows: FLAP DET 30.
(al) Move the flaps to the detent 40 position.
(am) Make sure that the display shows: FLAP DET 40.
(an) Move the flaps to 0 detent.
(ao) Make sure that the display shows: FLAP DET 0.
(ap) Push the MENU button.
(aq) Make sure that the display shows: FLAP SENSOR?.
(ar) Push the MENU button.
(as) Make sure that the display shows: ANALOG INPUTS?.
(at) Push the MENU button.
(au) Make sure that the display shows: ANALOG INPUTS?.
(av) Remove the system B hydraulic power (TASK 29-11-00-860-805).

SUBTASK 27-32-00-080-001

(3) Remove the angle of attack probe test fixture, SPL-1917, from the left alpha vane.

SUBTASK 27-32-00-480-002

WARNING MAKE SURE THAT THE AOA SENSORS ARE COOL BEFORE YOU TOUCH THEM. THE AOA SENSORS CAN BE SUFFICIENTLY HOT TO BURN YOU.

(4) Install the angle of attack probe test fixture, SPL-1917, on the right alpha vane.

SUBTASK 27-32-00-740-018

(5) Do this sensor test for SMYD 2:

(a) From the ARINC 429 INPUTS?, push the down arrow button.

NOTE: If done out of sequence, make sure the BITE setup conditions have selected GROUND TESTS? and scrolled down to ARINC 429 INPUTS?.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Make sure that the display shows: ANALOG INPUTS?.

(c) Push the YES button.

(d) Make sure that the display shows: AOA SENSOR?.

(e) Push the YES button.

NOTE: The display will show AOA and a value. Positive angles correspond to the AOA sensor trailing edge above test fixture zero point. Negative angles correspond to the AOA sensor trailing edge below test fixture zero point. The Aerodynamic Offset of each sensor is noted on its trailing edge.

(f) Move the right AOA sensor to minus 35 degrees.

(g) Make sure that the display shows: -35 + Aerodynamic Offset, ± 1 degree.

(h) Move the right AOA sensor to minus 14 degrees.

(i) Make sure that the display shows: -14 + Aerodynamic Offset, ± 1 degree.

(j) Move the right AOA sensor to 0 degrees.

(k) Make sure that the display shows: 0 + Aerodynamic Offset, ± 1 degree.

(l) Move the right AOA sensor to plus 14 degrees.

(m) Make sure that the display shows: 14 + Aerodynamic Offset, ± 1 degree.

(n) Move the right AOA sensor to plus 35 degrees.

(o) Make sure that the display shows: 35 + Aerodynamic Offset, ± 1 degree.

(p) Move the right AOA sensor to 0 degrees.

(q) Push the MENU button.

(r) Make sure that the display shows: AOA SENSOR?.

(s) Push the down arrow button.

(t) Make sure that the display shows: FLAP SENSOR?.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(u) Pressurize the System B Hydraulic power (TASK 29-00-00-800-802).

(v) Push the YES button.

(w) Make sure that the display shows: FLAP DET 0.

(x) Move the flaps to the detent 1 position.

(y) Make sure that the display shows: FLAP DET 1.

(z) Move the flaps to the detent 2 position.

(aa) Make sure that the display shows: FLAP DET 2.

(ab) Move the flaps to the detent 5 position.

(ac) Make sure that the display shows: FLAP DET 5.

(ad) Move the flaps to the detent 10 position.

(ae) Make sure that the display shows: FLAP DET 10.

(af) Move the flaps to the detent 15 position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D	3	C01071	HEATERS ALPHA VANE RIGHT

K. SERVO TEST

NOTE: The SERVO TEST can be run from SMYD 1 and SMYD 2. Do the steps below for either SMYD.

SUBTASK 27-32-00-740-019

(1) Do this servo test for SMYD 1:

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize the System B Hydraulic power (TASK 29-00-00-800-802).

1) Make sure that the FLT CONTROL A and FLT CONTROL B switches, on the flight controls panel, are both in the ON position before continuing.

2) Make sure that the SPOILER A and SPOILER B switches are both in the ON position before continuing.

(b) Make sure that the display shows: GROUND TEST?.

(c) Push the YES button.

(d) Push the down arrow button until SERVO TEST? is shown on the display.

NOTE: A series of warning message will show.

(e) Push the YES button.

(f) Make sure that the display shows these messages in this sequence:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

- WARNING! WARNING!
- RUDDER MOVEMENT
- RUDDER CLEARED?

(g) Push the YES button.

(h) Make sure that the display shows: SYS B HYD ON?.

(i) Make sure that the Hydraulic B is on.

(j) Push the YES button.

NOTE: If NO is pushed, then TURN ON HYD B will show on the display.

(k) Make sure that the display shows: FLT CTRL B ON.

(l) Make sure that the Flight Control B switch is set to the ON position.

(m) Push the YES button.

NOTE: If NO is pushed, then FLT CTRL B TO ON will show on the display.

(n) Make sure that the display shows: YAW DMPR ENGAGED?.

(o) Put the Yaw Damper engage switch to the ON position.

(p) Push the YES button.

NOTE: If NO is pushed, the display will show ENGAGE YAW DMPR.

(q) Make sure that the display shows: ZERO COMMAND?.

NOTE: During this test the SMYD will initiate a zero rudder command.

(r) Push the YES button.

(s) Make sure that the display shows these messages in this sequence:

NOTE: There will be approximately a 10 second delay between messages.

- RUDDER MOVING
- YD cmd value (where the value is 0.0 ± 0.2)
- YD LVDT value (where the value is 0.0 ± 0.2)
- END ZERO COMMAND?

(t) Push the YES button.

(u) Make sure that the display shows these messages in this sequence:

- RUDDER MOVING
- TEST EXITING
- ZERO COMMAND?

(v) Push the down arrow button.

(w) Make sure that the display shows: SWEEP TEST?.

(x) Push the ON/OFF button on the BITE panel of the SMYD 2.

(y) Push the down arrow button repeatedly until the display shows: OTHER FUNCTNS? on the SMYD 2.

(z) Push the YES button on the SMYD 2.

(aa) Push the down arrow button repeatedly until the display shows: I/O MONITOR on the SMYD 2.

(ab) Push the YES button on the SMYD 2.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(ac) Push the down arrow button repeatedly until the display shows: OTHER DATA on the SMYD 2.

(ad) Push the YES button on the SMYD 2.

(ae) Push the down arrow button repeatedly until the display shows: WORD 151? on the SMYD 2.

(af) Push the YES button on the SMYD 2.

(ag) Make sure that the display shows: (value) degree (where the value is a number that can be disregarded).

(ah) Push the YES button on the SMYD 1.

(ai) Make sure that the display shows these messages in this sequence:

NOTE: There will be approximately a 2 second or a 10 second delay between messages.

NOTE: During this test the SMYD will initiate a left rudder command, then right rudder command and then zero rudder command. If test passes, the message TEST PASSED will show.

1) Monitor the SMYD 2 display during the test.

NOTE: The value shown on the SMYD 2 will change to a number similar to the LVDT value on the SMYD 1.

- RUD CMD LEFT
- YD LVDT value (where the value is a number that can be disregarded)
- RUD CMD RIGHT
- YD LVDT value (where the value is a number that can be disregarded)
- RUD CMD ZERO
- YD LVDT value (where the value is a number that can be disregarded)
- TEST PASSED.

(aj) Put the Flight Control B switch to the OFF position.

(ak) Make sure that the Yaw Damper engage switch disengages.

(al) Make sure that the YAW DAMPER light, on the P5-3 overhead panel, comes on.

(am) Put the Flight Control A switch to the ON position.

(an) Put the Flight Control A switch to the Standby Rudder position.

(ao) Put the Yaw Damper engage switch to the ON position.

(ap) Open these circuit breakers:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
D	6	C01354	YAW DAMPER 2 DC
D	7	C00286	YAW DAMPER 1 DC

(aq) Make sure that the Yaw Damper engage switch disengages.

(ar) Push the ON/OFF button on BITE panel on the face of SMYD 2 and SMYD 1.

(as) Make sure that the display shows: TURN OFF DISPLAY?.

(at) Push the YES button on the two panels.

(au) If the test failed, TEST FAILED will show followed by a message for the first fault.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) To isolate the fault, go to the IFIM and do the applicable procedure(s).

(av) Close these circuit breakers:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
D	6	C01354	YAW DAMPER 2 DC
D	7	C00286	YAW DAMPER 1 DC

(aw) Remove the system B hydraulic power (TASK 29-11-00-860-805).

SUBTASK 27-32-00-740-020

(2) Do this servo test for SMYD 2:

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize the System B Hydraulic power (TASK 29-00-00-800-802).

(b) Make sure that the display shows: GROUND TESTS?.

(c) Push the YES button.

(d) Push the down arrow button until SERVO TEST? is shown on the display.

NOTE: A series of warning message will show.

(e) Push the YES button.

(f) Make sure that the display shows these messages in this sequence:

- WARNING! WARNING!
- RUDDER MOVEMENT
- RUDDER CLEARED?

(g) Push the YES button.

(h) Make sure that the display shows: FLT CTRL A STBY?.

(i) Make sure that the Flight Control A switch is set to the Standby position.

(j) Push the YES button.

NOTE: If NO is pushed, then FLT CTRL A TO STBY will show on the display.

(k) Make sure that the display shows: FLT CTRL B STBY?.

(l) Make sure that the Flight Control B switch is set to the Standby position.

(m) Push the YES button.

NOTE: If NO is pushed, then FLT CTRL B TO STBY will show on the display.

(n) Make sure that the display shows: YAW DMPR ENGAGED?.

(o) Put the Yaw DMPR engage switch to on.

(p) Push the YES button.

NOTE: If NO is pushed, then ENGAGE YAW DMPR will show on the display.

(q) Make sure that the display shows: ZERO COMMAND?.

NOTE: During this test the SMYD will initiate a zero rudder command.

(r) Push the YES button.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(s) Make sure that the display shows these messages in this sequence:

NOTE: There will be approximately a 10 second delay between messages.

- RUDDER MOVING
- YD cmd value (where the value is 0.0 ± 0.2)

D	7	C00286	YAW DAMPER 1 DC

(ap) Make sure that the Yaw Damper engage switch disengages.

(aq) Push the ON/OFF button on BITE panel on the face of SMYD 2 and SMYD 1.

(ar) Make sure that the display shows: TURN OFF DISPLAY?.

(as) Push the YES button on the two panels.

(at) If the test failed, TEST FAILED shows followed by a message for the first fault.

1) To isolate the fault, go to the IFIM and do the applicable procedure(s).

(au) Close these circuit breakers:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
D	6	C01354	YAW DAMPER 2 DC
D	7	C00286	YAW DAMPER 1 DC

(av) Remove the system B hydraulic power (TASK 29-11-00-860-805).

L. DISPLAY TEST

SUBTASK 27-32-00-740-023

(1) Push the ON/OFF switch to turn on the BITE display.

SUBTASK 27-32-00-740-024

(2) Push the down arrow until GROUND TESTS? shows on the display.

SUBTASK 27-32-00-740-025

(3) Push the YES button to select GROUND TESTS? on the SMYD.

SUBTASK 27-32-00-740-026

(4) Push the down arrow until DISPLAY TEST? shows on the display.

SUBTASK 27-32-00-740-027

(5) Push the YES button to select DISPLAY TEST? on the SMYD.

SUBTASK 27-32-00-740-028

(6) It is necessary to watch the SMYD display during this test.

SUBTASK 27-32-00-740-029

(7) Make sure that all pixels on the display come on during the test.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

M. INPUT SIGNAL INTEGRITY TEST

SUBTASK 27-32-00-740-015

(1) Push the MENU switch to show GROUND TESTS?

(a) Push the down arrow to display OTHER FUNCTNS?

(b) Push the YES switch.

(c) Push the down arrow to display I/O MONITOR?

(d) Push the YES switch to display ARINC429 INPUTS?

(e) Push the YES switch.

(f) Push the down arrow until CDS DEU BUS? shows.

(g) Push the YES switch to show WORD 017?

NOTE: Skip the next three steps if WORD 017? does not show.

(h) Push the YES switch.

(i) Make sure that these SMYD BITE readout values show:

1) Between -39 and -29 when the speedbrake lever is in the FLIGHT DETENT position.

2) Between -3 and +3 when the speedbrake lever is in the DOWN position.

(j) Push the MENU switch.

(k) Push the down arrow until WORD 352? shows.

(l) Push the YES switch until BIT 27 shows.

(m) Make sure that the SMYD BITE readout values show:

1) 1, when the WING ANTI-ICE switch, on the P5 forward overhead panel, is in the ON position.

2) 0, when the WING ANTI-ICE switch, on the P5 forward overhead panel, is in the OFF position.

N. Put the Airplane Back to Its Usual Condition

SUBTASK 27-32-00-860-012

(1) Push the ON/OFF switch to turn the SMYD BITE display off.

SUBTASK 27-32-00-410-003

(2) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-32-00-860-014

(3) Set the GND TESTS switch, on the P61-4 panel, to the NORM position.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STALL WARNING TEST MODULE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Removal of the stall warning test module

(2) Installation of the stall warning test module.

TASK 27-32-21-000-801

2. Stall Warning Test Module Removal

(Figure 401)

A. Location Zones

Zone	Area
212	Flight Compartment - Right

B. Prepare for the Removal

SUBTASK 27-32-21-860-001

(1) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	5	C01204	SMYD-1 CMPTR DC

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	5	C01206	SMYD-2 CMPTR DC

C. Stall Warning Test Module Removal

SUBTASK 27-32-21-020-001

(1) Remove the stall warning test module [1]:

(a) Hold the stall warning test module [1].

(b) Release the quarter turn fasteners [2] which attach the stall warning test module [1] to the aft overhead panel.

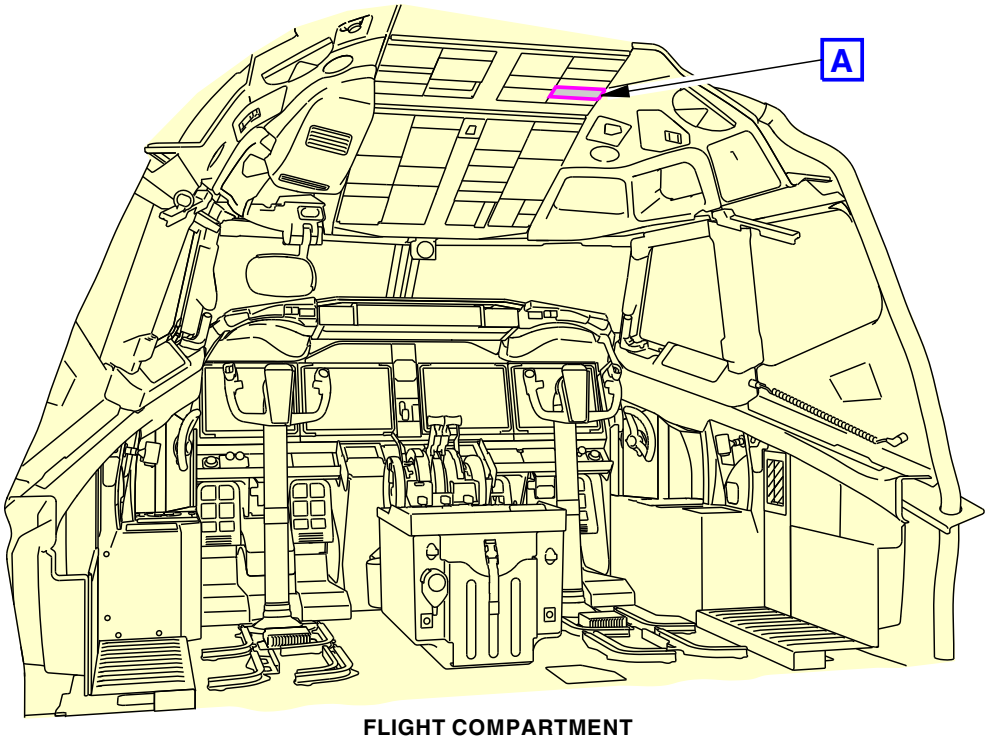
(c) Lower the stall warning test module [1] from the aft overhead panel.

(d) Disconnect the electrical connectors [3] from the back of the stall warning test module [1].

(e) Remove the stall warning test module [1].

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details



FLIGHT COMPARTMENT

TASK 27-32-21-400-801

3. Stall Warning Test Module Installation

(Figure 401)

A. References

Reference	Title
24-22-00-860-803	Supply External Power (P/B 201)

B. Stall Warning Test Module Installation

SUBTASK 27-32-21-420-001

(1) Connect the electrical connectors [3] to the stall warning test module [1].

SUBTASK 27-32-21-420-002

(2) Install the stall warning test module [1] in the aft overhead panel.

SUBTASK 27-32-21-410-001

(3) Tighten the quarter turn fasteners [2].

SUBTASK 27-32-21-860-002

(4) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	5	C01204	SMYD-1 CMPTR DC

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	5	C01206	SMYD-2 CMPTR DC

C. Stall Warning Test Module Installation Test

SUBTASK 27-32-21-860-003

(1) Do this task: Supply External Power, TASK 24-22-00-860-803.

SUBTASK 27-32-21-860-004

(2) Push and hold the STALL WARNING TEST NO. 1 switch on the module.

NOTE: The amber SPD LIM light on the on-side Primary Flight Display will come on. A YAW DAMPER light on the P5-3 panel with a related MASTER CAUTION light is possible. A SPD LIM annunciation that stays on more than 5 seconds after the stick shaker operates could be a problem.

(a) Make sure that the captain's control column shaker operates.

SUBTASK 27-32-21-860-005

(3) Release the STALL WARNING TEST NO. 1 switch.

(a) Make sure that the shaker stops.

SUBTASK 27-32-21-860-006

(4) Push and hold the STALL WARNING TEST NO. 2 switch on the module.

(a) Make sure that the first officer's control column shaker operates.

SUBTASK 27-32-21-860-007

(5) Release the STALL WARNING TEST NO. 2 switch.

(a) Make sure that the shaker stops.

END OF TASK

1	Stick shaker	27-32-31-01-065	SIA ALL

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Control Column Shaker Installation

SUBTASK 27-32-31-420-001

(1) Attach the stick shaker [1] to the strap on the control column with the bolts [5], nuts [4], shims [3], and spacers [2].

(a) Make sure that the strap is attached to the control column with the rivet.

1) If necessary, slide the strap up and down along the control column to make sure that the strap rivet is aligned into the column hole.

(b) Make sure that there is a minimum of 0.50 inch clearance between the shaker and the rudder pedal adjustment crank.

SUBTASK 27-32-31-420-002

(2) Tighten the bolts [5] to 20 in-lb (2.3 N·m) - 25 in-lb (2.8 N·m).

SUBTASK 27-32-31-420-003

(3) Add or remove shims [3] as necessary between the stick shaker [1] and strap to get a snug fit.

SUBTASK 27-32-31-420-004

(4) Connect the electrical connector to the stick shaker [1]..

SUBTASK 27-32-31-860-002

(5) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	6	C01393	STICK SHAKER RIGHT

D. Control Column Shaker Installation Test

SUBTASK 27-32-31-710-001

(1) Do a check of the stick shaker [1]:

(a) Push and hold the STALL WARNING TEST NO. 1 switch (for the Captain's shaker) on the P5-18 panel.

(b) Make sure that the Captain's stick shaker [1] operates.

(c) Release the STALL WARNING TEST NO. 1 switch.

(d) Make sure that the Captain's stick shaker [1] stops.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Push and hold the STALL WARNING TEST NO. 2 switch (for the First Officer's shaker) on the P5-18 panel.

(f) Make sure that the First Officer's stick shaker [1] operates.

(g) Release the STALL WARNING TEST NO. 2 switch.

(h) Make sure that the First Officer's stick shaker [1] stops.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STALL MANAGEMENT YAW DAMPER (SMYD) - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Removal of the Stall Management Yaw Damper (SMYD)

(2) Installation of the Stall Management Yaw Damper (SMYD).

B. There are two Stall Management Yaw Damper (SMYD).

C. The two SMYD are located in the Electrical and Electronics Compartment.

D. The procedure for the removal and installation of the two SMYDs are the same.

(4) Open the following circuit breaker (if installed):

(a) Open this circuit breaker and install safety tag:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
A	15	C00644	EXTERIOR LIGHTING LOGO ILLUM

SUBTASK 27-41-00-860-005

(5) If necessary, use the stabilizer trim wheel on the control stand to set the horizontal stabilizer at zero degrees (4 units of trim).

SUBTASK 27-41-00-480-001

(6) Install the lock, SPL-1672 on the stabilizer trim wheel at the control stand (Figure 201):

(a) Turn the trim wheel to put the handle at the top of the wheel.

(b) Adjust the height of the trim lock to put the trim wheel handle correctly on the yoke.

(c) Install the pin through the yoke.

(d) Install the safety pin.

F. Horizontal Stabilizer Trim Control System - Tryout

NOTE: This tryout is to make sure that the Horizontal Stabilizer Trim Control System is in zero state.

SUBTASK 27-41-00-210-001

(1) Make sure that the lock, SPL-1672 is installed on the stabilizer trim wheel at the control stand (Figure 201).

SUBTASK 27-41-00-210-002

(2) Make sure that these circuit breakers are open and have safety tags:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	8	C00544	FLIGHT RECORDER POSITION SENSOR

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
A	15	C00644	EXTERIOR LIGHTING LOGO ILLUM

SUBTASK 27-41-00-860-009

(5) Set the STAB TRIM PRI switch, S272, on the aft of the control stand to the NORMAL position.

SUBTASK 27-41-00-210-004

(6) Use the stabilizer trim wheel to make sure that the horizontal stabilizer operates through full travel between the stops.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

HORIZONTAL STABILIZER TRIM CONTROL SYSTEM - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) Stabilizer Control Cable and Chain Adjustment - Use this task to adjust the horizontal stabilizer control cables and chain.

(2) Stabilizer Manual Trim and Trim Indicator Test - Use this test to make sure the horizontal stabilizer moves to the correct position when it is operated from the stabilizer trim wheel. This test also makes sure that the stabilizer trim indicator operates correctly.

(3) Horizontal Stabilizer Trim Control System Friction Test - Use this test to check the force to operate the horizontal stabilizer.

(4) Stabilizer Electric Trim System Test - Use this test to make sure the horizontal stabilizer moves at the correct speed when it is operated from the STAB TRIM switches.

(5) Stabilizer Trim Wheel Free Movement Test - Use this test to test the amount of horizontal stabilizer movement after the STAB TRIM switches are released.

(6) Stabilizer Trim Limit Switches Test - Use this test to make sure the stabilizer trim limit switches operate correctly.

(7) Stabilizer Clutch Friction System Test - Use this test to make sure that the correct force will disconnect the manual clutch.

(8) Column Actuated Stabilizer Trim Cutout Switch Override Test - Use this test to make sure the horizontal stabilizer follows the commands from the STAB TRIM switches, even though the column actuated STAB TRIM cutout switches give the opposite command.

(9) Stabilizer Trim Secondary Brake System Test - Use this test to make sure the stabilizer secondary brake can prevent movement of the horizontal stabilizer.

(10) Stabilizer Trim Cutout Test - Use this procedure to make sure the stabilizer trim cutout switch operates correctly. The stabilizer trim cutout switch stops the horizontal stabilizer when the control column command is opposite from the STAB TRIM switches.

(11) Column Cutout Switches Test - Use this test to make sure the captain's and first officer's column cutout switches operate correctly.

TASK 27-41-00-820-801

2. Stabilizer Control Cable and Chain - Adjustment

(Figure 501)

A. General

(1) Use this task to adjust the horizontal stabilizer control cables and chain.

(2) Before the cable adjustment is done, permit a minimum of one hour at a constant ambient temperature of ± 5°F (± 2.8°C) for the airframe temperature to become stable.

(a) It is recommended to do the cable adjustments in a controlled environment such as a hangar.

NOTE: Direct sunlight on the airframe will cause the cable readings to be inaccurate.

(b) All temperature readings will be taken as ambient outside but adjacent to the applicable area of the airframe.

(c) The cable tension values will not be correct when there are temperature differences along the cable run.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) It is recommended that airplanes supplied with the cables that contain higher zinc coating (Grade D or Grade K) be re-tensioned 3 to 4 months into service. This will bring the tension of the control cables within the desired range. After the cables are re-tensioned, the high zinc cables (Grade D or Grade K) will continue to relax at a rate that is equivalent to the Grade B cables. To identify the grade of the cable, refer to: Control Cable Grades and Diameters/Table 27-11-00-993-802.

(e) It is recommended that cable assemblies on each side of a cable loop be replaced at the same time using the same cable grade material in order to minimize asymmetric relaxation.

(3) Before the cable adjustment is done, allow the tensiometer to stabilize to the same temperature as the airplane.

(4) If the cables need to be replaced, do this task: Stabilizer Control Cable Removal, TASK 27-41-82-000-801.

B. References

Reference	Title

E. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
311	Area Aft of Pressure Bulkhead - Left
312	Area Aft of Pressure Bulkhead - Right

F. Access Panels

Number	Name/Location
112A	Forward Access Door
311BL	Stabilizer Trim Access Door

G. Prepare for the Adjustment

SUBTASK 27-41-00-010-001

(1) Open these access panels:

Number	Name/Location
112A	Forward Access Door
311BL	Stabilizer Trim Access Door

SUBTASK 27-41-00-020-001

WARNING

DO NOT OPERATE THE STABILIZER ELECTRICALLY UNTIL YOU ADJUST THE STABILIZER TRIM LIMIT SWITCHES, CABLES, AND CHAIN. THE HORIZONTAL STABILIZER CAN MOVE QUICKLY WHEN YOU OPERATE THE STABILIZER TRIM LIMIT SWITCHES. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Disconnect the flexible shaft [8] from the stabilizer forward control mechanism.

SUBTASK 27-41-00-020-002

(3) Remove the pins [14] from the connector link [13] to disconnect the chain [10].

SUBTASK 27-41-00-020-003

(4) To remove the upper turnbuckle [2], do these steps:

(a) Remove the lockwire from the upper turnbuckle [2].

(b) Remove the nut [6], washer [5], washer [4], and bolt [3].

(c) Remove the nut [17], washer [19], bushing [21], washer [22], washer [23], washer [24], and bolt [25].

(d) Remove the upper turnbuckle [2].

SUBTASK 27-41-00-820-001

(5) If the new cables are installed, adjust the lower turnbuckle [9] on the stabilizer forward mechanism to its maximum length 0.50 in. (12.7 mm) minimum thread engagement on each rod end.

NOTE: This will move the forward drum aft.

H. Stabilizer Control Cable and Chain Adjustment

SUBTASK 27-41-00-710-001

(1) Adjust the tension of the cable STA and cable STB.

NOTE: It is necessary to use the pinion gear wrench, SPL-10319, to operate the stabilizer system.

NOTE: You will need to use the control wheel switches to move the stabilizer since the stab trim control wheel chain has been disconnected.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) If the new cables are installed, do these steps to stretch the cables:

NOTE: If the tension is adjusted on existing cables (cables that were already on the aircraft), do not need to do these steps. Go to the steps to adjust the cable STA and cable STB to their correct rigging tension.

1) Adjust the lower turnbuckle [9] to get the cable tension of 350 ±50 lbf (1557 ±223 N).
   a) Operate the stabilizer system through a full cycle.
   b) Put the cables at the center of the forward cable drum.
   c) Tighten the lower turnbuckle [9].
   d) Use the high tension cable tensiometer, COM-1554, to make sure that the cable tension is at 350 ±50 lbf (1557 ±223 N).
   e) Operate the stabilizer system through a full cycle.
   f) Put the cables at the center of the forward cable drum.
   g) Make sure that the cable tension stays at 350 ±50 lbf (1557 ±223 N).
   h) Operate the stabilizer system through 5 full cycles.
   i) Make sure that the cable tension stays at 350 ±50 lbf (1557 ±223 N).

(b) Do these steps to adjust cable STA and cable STB to the correct rigging tension:

1) Operate the stabilizer system through a full cycle.
2) Put the cables at the center of the forward cable drum.
3) Adjust the lower turnbuckle [9] to get the cable rigging tension (Table 501).

NOTE: Adjust the tensions close to the maximum values in the table. The cables will stretch over a period of time.

The minimum (low) cable tension listed in the table below applies only during maintenance action and should not be construed as an in-service operational limit for cable tension.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 501/27-41-00-993-818 Cable Rigging Tension Values (Continued)

Temp Deg F (C)	Low Tolerance Lbs (newtons)	High Tolerance Lbs (newtons)
-38 (-39.4)	74 (329)	124 (552)
-39 (-38.9)	74 (329)	124 (552)
-40 (-40.0)	74 (329)	124 (552)

4) Operate the stabilizer system through 5 full cycles.

5) Put the cables at the center of the forward cable drum.

6) Do the following steps to make sure that the stabilizer trim cable tension is correct:

a) Use the high tension cable tensiometer, COM-1554, or low tension cable tensiometer, COM-1553, to make sure that the cable tension is the same as the tension in the Table 501.

b) If the cable tension is not correct, adjust the lower turnbuckle [9] to get the correct cable rigging tension (Table 501).

7) Make sure that the lower turnbuckle [9] length is 11.00 in. (279.4 mm) - 15.25 in. (387.3 mm) after the adjustment.

8) Make sure that the horizontal stabilizer moves freely through the full travel to the airplane nose down limit.

SUBTASK 27-41-00-020-005

(2) Connect the chain [10].

(a) Install the chain [10] over the two idler sprockets [11] and forward mechanism sprocket [12].

(b) Connect the chain [10] at the connector link [13].

(c) Install the pins [14] on the outboard side of the chain [10].

SUBTASK 27-41-00-820-002

(3) Adjust the chain [10] tension.

(a) Apply a 5 lbf (22 N) force at approximately 4.5 ±1.0 in. (114.3 ±25.4 mm) from where the chain [10] touches the forward mechanism sprocket [12].

(b) Make sure that the movement of the chain [10] is 0.25 ±0.07 in. (6.35 ±1.78 mm).

(c) Do a check of the chain [10] tension.

1) Turn the stabilizer trim wheel approximately 8 turns in the airplane nose up direction.

a) Measure the chain [10] tension.

b) If necessary, adjust the chain [10] tension again.

2) Turn the stabilizer trim wheel approximately 8 turns in the airplane nose down direction.

a) Measure the chain [10] tension.

b) If necessary, adjust the chain [10] tension again.

3) Repeat this check until the chain rigging tension is maintained.

(d) If it is necessary, do these steps to get the correct chain movement:

1) Adjust the upper adjusting nuts [15] and upper adjusting nuts [18].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure that all three “A” dimensions equal ± 0.06 in. (1.52 mm) from each other.
   a) Measure the “A” dimensions of left and right aft support link [7].
      NOTE: The “A” dimension is the distance of the aft support link between the center of the two connection bolts.
   b) Measure the “A” dimension of the forward support link [1].
      NOTE: The “A” dimension is the distance of the forward support link between the center of the two connection bolts.
   c) Make sure that all three “A” dimensions are ± 0.06 in. (1.52 mm) from each other.
   d) Install MS20995NC32 lockwire, G01912.

SUBTASK 27-41-00-420-001

(4) Connect the flexible shaft [8] to the forward mechanism.

CAUTION MAKE SURE THAT YOU ARE CAREFUL WITH THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE SHARP EDGES ON THE TRAMMEL BAR, SPL-1677 CAN CAUSE CHAFING OR DAMAGE TO THE WIRES.

(a) Use the bar, SPL-1677, to set the "B" dimension to the 39.17 ±0.03 in. (994.9 ±0.8 mm).
(b) Turn the flexible shaft [8] until the stabilizer position indicator is at 4 units of trim.
(c) Connect the flexible shaft [8] to the forward mechanism.

SUBTASK 27-41-00-420-002

(5) Install the upper turnbuckle [2] to the forward mechanism.
   (a) Install the bolt [25], washer [24], washer [23], washer [22], bushing [21], washer [19], and nut [17].
   (b) Adjust the upper turnbuckle [2] until you can install the bolt [3] freely through the rod end at the forward mechanism.
   (c) Install the washer [4], washer [5], nut [6], and bolt [3].

SUBTASK 27-41-00-710-014

(6) Operate the stabilizer system to the NOSE DOWN stop (stabilizer leading edge moves up) and do a check for the conditions that follow:
   (a) The clearance between the cables and cable guard is not less than 0.25 in. (6.35 mm) for the upper position.
      NOTE: The cable guard is installed at station 237 in the bulkhead.
      1) If it is necessary, adjust the cable guard.
   (b) The clearance between the cables and wire raceway on top of the nose wheel well is not less than 0.35 in. (8.9 mm).
   (c) The cables do not touch the pulley flanges.
   (d) The cables are in ±2 degrees of the plane of the pulleys.
   (e) The clearance between the aileron control cable and the chain at the forward mechanism sprocket [12] is not less than 0.75 in. (19.0 mm).
   (f) The pulleys turn freely with no interference from the cable guards.
   (g) The cables are installed through the grommets and the air pressure seals.
   (h) The cables do not touch the cable guards, rub strips, or grommets.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) The clearance between the cables and adjacent structure is not less than 0.20 in. (5.1 mm).

SUBTASK 27-41-00-710-002

(7) Operate the stabilizer system to the NOSE UP stop (stabilizer leading edge moves down) and do a check for the conditions that follow:

(a) Make sure that the two STAB TRIM indicators on the control stand show 14±0.5 units of trim.

(b) Make sure that the difference between the two STAB TRIM indicators is less than 0.5 units of trim.

(c) The clearance between the cables and cable guard is not less than 0.25 in. (6.4 mm) for the lower position.

NOTE: The cable guard is installed at station 237 in the bulkhead.

1) If it is necessary, adjust the cable guard.

(d) The clearance between the cables and wire raceway on top of the nose wheel well is not less than 0.35 in. (8.9 mm).

(e) The cables do not touch the pulley flanges.

(f) The cables are in ±2 degrees of the plane of the pulleys.

(g) The clearance between the aileron control cable and the chain at the forward mechanism sprocket [12] is not less than 0.75 in. (19.0 mm).

(h) The pulleys turn freely with no interference from the cable guards.

(i) The cables are installed through the grommets and the air pressure seals.

(j) The cables do not touch the cable guards, rub strips, or grommets.

(k) The clearance between the cables and adjacent structure is not less than 0.20 in. (5.1 mm).

SUBTASK 27-41-00-420-003

(8) Install MS20995NC32 lockwires, G01912, to the upper turnbuckle [2] and lower turnbuckle [9] with the double twist method.

NOTE: The lockwire must be attached the tab of the washer of the upper turnbuckle.

TASK 27-41-00-700-801

3. Stabilizer Manual Trim and Trim Indicator - Test

(Figure 502, Figure 503)

A. General

(1) Use this test to make sure the horizontal stabilizer moves to the correct position when it is operated from the stabilizer trim wheel. It also make sure that the stabilizer trim indicator operates correctly.

(2) If this test is performed as part of stabilizer control cable STA/STB replacement or removal/installation procedures, make sure that the forward and aft stabilizer cable drum wraps of the control cables when the stabilizer is in the full airplane nose UP and airplane nose DOWN positions.

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1677	Assembly - Trammel Bar, Stabilizer Trim Actuator Part #: F80055-36 Supplier: 81205 Opt Part #: F80055-1 Supplier: 81205

SUBTASK 27-41-00-010-002

(1) To get access to the stabilizer trim actuator, do this step:

Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Stabilizer Manual Trim and Trim Indicator Test

SUBTASK 27-41-00-710-003

WARNING MAKE SURE THAT ALL PERSONNEL, AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(1) Do the test of the stabilizer manual trim and trim indicator test.

(a) Turn the captain's control trim wheel counterclockwise (full APL NOSE DOWN) until it touches the stops.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

MAKE SURE TO PREVENT DAMAGE TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CHAF OR CAN CAUSE DAMAGE TO THE WIRES OR BUNDLE INSULATION.

1) Use the bar, SPL-1677, to make sure that the "B" dimension is 45.84 ±0.10 in. (1164.3 ±2.5 mm).
2) Make sure that the two STAB TRIM indicators on the control stand show -0.7 ±0.5 units of trim.
3) Make sure that the difference between the two STAB TRIM indicators is less than 0.5 units of trim.
4) Make sure that the STB cable is a minimum of 0.75 full wraps on the forward drum.
5) Make sure that the STA cable is a minimum of 0.75 full wraps on the aft drum.

(b) Turn the captain's control trim wheel clockwise (full APL NOSE UP) until it touches the stops.

1) Make sure that the horizontal stabilizer moves down freely through the full travel.

CAUTION

MAKE SURE TO PREVENT DAMAGE TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CHAF OR CAN CAUSE DAMAGE TO THE WIRES OR BUNDLE INSULATION.

2) Use the bar, SPL-1677, to make sure that the "B" dimension is 21.32 ±0.10 in. (541.5 ±2.6 mm).
3) Make sure that the two STAB TRIM indicators on the control stand show 16.4 ±0.5 unit of trim.
4) Make sure that the difference between the two STAB TRIM indicators is less than 0.5 units of trim.
5) Make sure that the STA cable is a minimum of 0.75 full wraps on the forward drum.
6) Make sure that the STB cable is a minimum of 0.75 full wraps on the aft drum.

E. Prepare for the Test

SUBTASK 27-41-00-860-011

(1) Set the STAB TRIM PRI switch, S272, on the aft area of the control stand to the CUTOUT position.

SUBTASK 27-41-00-480-002

(2) Install the adapter, SPL-1748, on the captain's control trim wheel (Figure 504).

(a) Remove the fasteners that attach the stabilizer trim wheel to the shaft (TASK 27-41-61-010-801).

F. Procedure

SUBTASK 27-41-00-710-004

WARNING MAKE SURE THAT ALL PERSONNEL, AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(1) Do the friction test of the horizontal stabilizer trim control:

(a) Turn the captain's control trim wheel counterclockwise (full APL NOSE DOWN) until it touches the stops.

(b) Turn the captain's control trim wheel clockwise (full APL NOSE UP) until it touches the stops.

1) Make sure the torque necessary to operate the control trim wheel is not more than 62 in-lb (7.0 N·m) or not less than 22 in-lb (2.5 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure the system operates smoothly.

(c) Turn the control trim wheel counterclockwise (full APL NOSE DOWN) until it touches the stops.

1) Make sure the torque necessary to operate the control trim wheel is not more than 62 in-lb (7.0 N·m) or not less than 22 in-lb (2.5 N·m).

2) Make sure the system operates smoothly.

SUBTASK 27-41-00-080-002

(2) Remove the adapter, SPL-1748, from the captain's control trim wheel.

(a) Install the fasteners that attach the stabilizer trim wheel to the shaft (TASK 27-41-61-410-801).

SUBTASK 27-41-00-860-032

(3) Set the STAB TRIM PRI switch, S272, on the aft area of the control stand to the NORMAL position.

(2) Make sure that the STAB TRIM PRI switch, S272, on the aft area of the control stand is in the NORMAL position.

SUBTASK 27-41-00-860-015

(3) Make sure that the STAB TRIM override switch on the P8 panel is in the NORM position.

NOTE: The override switch is on the same control panel for the FLT DK DOOR.

SUBTASK 27-41-00-860-033

(4) Supply hydraulic power for systems A and B (TASK 29-11-00-860-801).

E. Procedure

SUBTASK 27-41-00-710-005

WARNING MAKE SURE THAT ALL PERSONNEL, AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(1) Do the test of the electrical trim system test:

(a) Set the flaps to any position from 1-40 units, Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.
   a) Make sure the stabilizer leading edge moves up.
   b) Release the stabilizer trim switches.
2) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.
   a) Make sure the stabilizer leading edge moves down.
   b) Release the stabilizer trim switches.
3) Push and hold the stabilizer trim switches on the first officer's control wheel to the NOSE DOWN position.
   a) Make sure the stabilizer leading edge moves up.
   b) Release the stabilizer trim switches.
4) Push and hold the stabilizer trim switches on the first officer's control wheel to the NOSE UP position.
   a) Make sure the stabilizer leading edge moves down.
   b) Release the stabilizer trim switches.
5) Push the stabilizer trim switches on the captain's control wheel to the NOSE UP position until it stops and then to the NOSE DOWN position until it stops.
   a) Make sure the time for the stabilizer to move from its lower limit of travel to its upper limit of travel is between 31-39 seconds.
   b) Make sure that the operation is smooth and there is no unusual noise.
6) Use the stabilizer trim switches on the captain's control wheel to move the stabilizer many times in the two directions one after the other for 3 seconds each.
   a) Make sure that the operation is smooth and there is no unusual noise.
7) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position until the system comes to the full trim speed.
   a) Move the stabilizer trim switches momentarily to OFF and then to the NOSE DOWN position.
   b) Make sure the stabilizer leading edge moves up immediately after you move the stabilizer trim switches to the NOSE DOWN position.
8) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position until the system comes to the full trim speed.
   a) Move the stabilizer trim switches momentarily to OFF and then to the NOSE UP position.
   b) Make sure the stabilizer leading edge moves down immediately after you move the stabilizer trim switches to the NOSE UP position.

(b) Set the flaps to the full up position, Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.
   1) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.
      a) Make sure the stabilizer leading edge moves up.
      b) Release the stabilizer trim switches.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.
   a) Make sure the stabilizer leading edge moves down.
   b) Release the stabilizer trim switches.
3) Push and hold the stabilizer trim switches on the first officer's control wheel to the NOSE DOWN position.
   a) Make sure the stabilizer leading edge moves up.
   b) Release the stabilizer trim switches.
4) Push and hold the stabilizer trim switches on the first officer's control wheel to the NOSE UP position.
   a) Make sure the stabilizer leading edge moves down.
   b) Release the stabilizer trim switches.
5) Push the stabilizer trim switches on the captain's control wheel to the NOSE UP position until it stops and then to the NOSE DOWN position until it stops.
   a) Make sure the time for the stabilizer to move from its lower limit of travel to its upper limit of travel is 47-58 seconds.
   b) Make sure that the operation is smooth and there is no unusual noise.
6) Use the stabilizer trim switches on the captain's control wheel to move the stabilizer many times in the two directions, one after the other, for 3 seconds each.
   a) Make sure that the operation is smooth and there is no unusual noise.
7) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position until the system comes to the full trim speed.
   a) Move the stabilizer trim switches momentarily to OFF and then to the NOSE DOWN position.
   b) Make sure the stabilizer leading edge moves up immediately after you move the stabilizer trim switches to the NOSE DOWN position.
8) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position until the system comes to the full trim speed.
   a) Move the stabilizer trim switches momentarily to OFF and then to the NOSE UP position.
   b) Make sure the stabilizer leading edge moves down immediately after you move the stabilizer trim switches to the NOSE UP position.
9) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.
   a) Make sure the stabilizer leading edge moves down.
   b) Set the STAB TRIM PRI switch, S272, on the aft area of the control stand to the CUTOUT position.
   c) Make sure that the movement of the stabilizer stops immediately.
   d) Set the STAB TRIM PRI switch, S272, to the NORMAL position.
   e) Make sure the stabilizer continues to move.
   f) Release the stabilizer trim switches.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-00-860-034

(2) Do the test of the Stabilizer Trim Primary and Backup (Cutout) Switches (S272 and S149):

NOTE: This test specifies the use of the captain's control wheel to complete the test. If necessary, use of the first officer's control wheel instead of the captain's control wheel is acceptable, provided that this substitution is maintained throughout the test.

(a) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

(b) Make sure that the STAB TRIM PRIMARY and BACKUP (Cutout) Switches (S272 and S149) are in the NORMAL (guarded) position.

(c) Make sure that the Column Actuated Stabilizer Trim (Override) Switch (S847 OR S1 OF P8-47 Module) is set to the NORM (guarded) position.

WARNING

MAKE SURE THAT ALL PERSONS AND EQUIPMENT ARE CLEAR OF CONTROL SURFACES, CABLES, AND LANDING GEAR AREAS. PRESSURIZATION OF A HYDRAULIC SYSTEM CAN MOVE CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS. MOVEMENT OF CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION

DO NOT GO MORE THAN THE DUTY CYCLE OF THE STABILIZER TRIM (MAIN ELECTRIC) MOTOR OF 2 MINUTES ON AND 13 MINUTES OFF DURING THE TEST. IF YOU DO NOT OBEY INSTRUCTIONS, DAMAGE TO THE STABILIZER TRIM MOTOR CAN OCCUR.

(d) Position the stabilizer to an intermediate position.

NOTE: Approximately 8 units of trim is satisfactory for an intermediate position.

(e) Set the STAB TRIM PRIMARY (S272) and BACKUP (S149) (Cutout) Switches to the CUTOUT (unguarded) position.

(f) Move the STAB TRIM switches on the captain's control wheel to the NOSE UP position, and hold them in this position.

(g) Make sure that the stabilizer does not move.

(h) Move the STAB TRIM switches on the captain's control wheel to the NOSE DOWN position, and hold them in this position.

(i) Make sure that the stabilizer does not move.

(j) Set the STAB TRIM PRIMARY and BACKUP (Cutout) Switches (S272 and S149) to the NORMAL (guarded) position.

(k) Make sure that the stabilizer trims in both the NOSE UP and NOSE DOWN directions using the STAB TRIM switches on the captain's control wheel.

(l) Set the STAB TRIM PRIMARY (Cutout) Switch (S272) to the CUTOUT (unguarded) position.

NOTE: The STAB TRIM BACKUP (Cutout) Switch (S149) should still be in the NORMAL (guarded) position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(m) Move the STAB TRIM switches on the captain's control wheel to the NOSE UP position, and hold them in this position.

(n) Make sure that the stabilizer does not move.

(o) Move the STAB TRIM switches on the captain's control wheel to the NOSE DOWN position, and hold them in this position.

(p) Make sure that the stabilizer does not move.

(q) Set the STAB TRIM PRIMARY (Cutout) Switch (S272) to the NORMAL (guarded) position.

NOTE: The STAB TRIM BACKUP (Cutout) Switch (S149) should still be in the NORMAL (guarded) position.

(r) Make sure that the stabilizer trims in both the NOSE UP and NOSE DOWN directions using the STAB TRIM switches on the captain's control wheel.

(s) Set the STAB TRIM BACKUP (Cutout) Switch (S149) to the CUTOUT (unguarded) position.

NOTE: The STAB TRIM PRIMARY (Cutout) Switch (S272) should still be in the NORMAL (guarded) position.

(t) Move the STAB TRIM switches on the captain's control wheel to the NOSE UP position, and hold them in this position.

(u) Make sure that the stabilizer does not move.

(v) Move the STAB TRIM switches on the captain's control wheel to the NOSE DOWN position, and hold them in this position.

(w) Make sure that the stabilizer does not move.

(x) Set the STAB TRIM BACKUP (Cutout) Switch (S149) to the NORMAL (guarded) position.

NOTE: The STAB TRIM PRIMARY (Cutout) Switch (S272) should still be in the NORMAL (guarded) position.

(y) Make sure that the stabilizer trims in both the NOSE UP and NOSE DOWN directions using the STAB TRIM switches on the captain's control wheel.

SUBTASK 27-41-00-710-013

(3) Remove hydraulic power from systems A and B (TASK 29-11-00-860-805).

——— END OF TASK ———

TASK 27-41-00-700-804

6. Stabilizer Trim Wheel Free Movement Test

A. General

(1) Use this test to check the freeplay between the horizontal stabilizer trim motor and the ballscrew.

B. References

(2) Make sure that the STAB TRIM PRI switch, S272, on the aft area of the control stand is in the NORMAL position.

SUBTASK 27-41-00-860-019

(3) Make sure that the STAB TRIM override switch on the P8 panel is in the NORM position.

NOTE: The override switch is on the same control panel for the FLT DK DOOR.

E. Procedure

SUBTASK 27-41-00-710-006

(1) Do the test of the stabilizer trim wheel free movement:

(a) Set the flaps to the 5-unit position (TASK 27-51-00-860-803).

1) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position until the system comes to full trim speed.

a) Release the stabilizer trim switches.

<1> Make sure that the stabilizer trim wheel continues to move not more than 2.5 turns (900 degrees).

b) Make sure that the reverse travel (APL NOSE DOWN) is not more than 27 degrees.

2) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position until the system comes to full trim speed.

a) Release the stabilizer trim switches.

<1> Make sure that the stabilizer trim wheel continues to move not more than 2.5 turns (900 degrees).

b) Make sure that the reverse travel (APL NOSE UP) is not more than 100 degrees.

(b) Set the flaps to the full up position (TASK 27-51-00-860-804).

1) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position until the system comes to full trim speed.

a) Release the stabilizer trim switches.

<1> Make sure that the stabilizer trim wheel continues to move not more than 0.5 turns (180 degrees).

b) Make sure that the reverse travel (APL NOSE UP) is not more than 65 degrees.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position until the system comes to full trim speed.

a) Release the stabilizer trim switches.

<1> Make sure that the stabilizer trim wheel continues to move not more than 0.5 turns (180 degrees).

b) Make sure that the reverse travel (APL NOSE DOWN) is not more than 65 degrees.

——— END OF TASK ———

TASK 27-41-00-700-805

7. Stabilizer Trim Limit Switches Test

(Figure 505)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this test to make sure that the stabilizer trim limit switches operate correctly.

(2) The trim system can move the stabilizer to a position more than the limits that were set during the adjustment of the limit switches. This condition is usual. Thus the "B" dimension tolerances for the test are larger than the tolerance for the adjustment.

(3) This test is applicable only for limit switches S145, S844, S144.

F. Prepare for the Test

SUBTASK 27-41-00-860-021

(1) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-00-860-022

(2) Make sure that the STAB TRIM PRI switch, S272, on the aft area of the control stand is in the NORMAL position.

SUBTASK 27-41-00-860-023

(3) Make sure that the STAB TRIM override switch on the P8 is in the NORM position.

NOTE: The override switch is on the same control panel for the FLT DK DOOR.

SUBTASK 27-41-00-860-024

(4) Make sure that the flaps are in the full up position.

SUBTASK 27-41-00-010-003

(5) To get access to the limit switches, do this step:

Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

G. Procedure

SUBTASK 27-41-00-710-007

(1) Do the test of the limit switch S844:

(a) Move the stabilizer to the maximum leading edge up (APL NOSE DOWN) position (the mechanical limits). This can be done using the STAB TRIM switches and then the stabilizer trim wheel.

(b) Turn the captain's stabilizer trim wheel clockwise approximately 3 turns.

(c) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

1) Make sure that the stabilizer leading edge does not move.

2) Release the stabilizer trim switches.

(d) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

1) Make sure that the stabilizer leading edge moves down (APL NOSE UP).

2) Release the stabilizer trim switches.

(e) Move the stabilizer to approximately 5 units of trim.

(f) Move the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position until the stabilizer stops automatically.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

1) Use the bar, SPL-1677 to measure the "B" dimension.

NOTE: Make sure to protect wire bundles when using the trammel bar, SPL-1677. The sharp edges on the trammel bar, SPL-1677 can cause chafing or damage to the wires.

2) Make sure the "B" dimension is 39.39 ±0.10 in. (1000.5 ±2.5 mm).

NOTE: The STAB TRIM indicator gives approximate indications. Do not use the STAB TRIM indicator indications to adjust the stabilizer trim switches ("B" dimension).

a) Make sure that the STAB TRIM indicator on the control stand reads 3.85 units of trim.

SUBTASK 27-41-00-710-008

(2) Do the test of the limit switch, S145:

(a) If you use the standby hydraulic pump motor to move the flaps, then do these steps:

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

1) Put the ALTERNATE FLAP arm switch in the ARM position.

NOTE: The standby hydraulic pump motor will operate when the ALTERNATE FLAP arm switch is in the ARM position.

2) Move the alternate flap drive control switch to extend the flaps to the 5-unit position.

(b) If you use the system B hydraulic power to move the flaps, then do these steps:

1) Pressurize hydraulic system B. To pressurize it, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

2) Move the flap control lever to extend the flaps to the 5-unit position.

(c) Move the stabilizer to the maximum leading edge up (APL NOSE DOWN) position (mechanical limits).

NOTE: This can be done with the stabilizer trim switches and then the stabilizer trim wheel.

(d) Turn the captain's stabilizer trim wheel clockwise approximately 2.00 ±0.25 turns.

(e) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

1) Make sure that the stabilizer leading edge does not move.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Release the stabilizer trim switches.

(f) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

1) Make sure that stabilizer leading edge moves down (APL NOSE UP).

2) Release the stabilizer trim switches.

(g) Move the stabilizer to approximately 1 unit of trim.

(h) Move the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position until the stabilizer stops automatically.

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

1) Use the bar, SPL-1677 to measure the "B" dimension.

NOTE: Make sure to protect wire bundles when using the trammel bar, SPL-1677. The sharp edges on the trammel bar, SPL-1677 can cause chafing or damage to the wires.

2) Make sure that the "B" dimension is 45.48 ±0.10 in. (1155.2 ±2.5 mm).

a) Make sure that that the STAB TRIM indicator on the control stand reads -0.45 units of trim.

NOTE: The STAB TRIM indicator gives approximate indications. Do not use the STAB TRIM indicator indications to adjust the stabilizer trim switches ("B" dimension).

(i) Move the flap control lever or the alternate flap drive control switch to retract the flaps.

(j) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-41-00-710-009

(3) Do the test of the limit switch S144:

(a) Move the stabilizer to the maximum leading edge down (APL NOSE UP) position (mechanical limits).

NOTE: This can be done with the stabilizer trim switches and then the stabilizer trim wheel.

(b) Turn the captain's stabilizer trim wheel counterclockwise approximately 3 turns.

(c) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

1) Make sure that the stabilizer leading edge does not move.

2) Release the stabilizer trim switches.

(d) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

1) Make sure that stabilizer leading edge moves up (APL NOSE DOWN).

2) Release the stabilizer trim switches.

(e) Move the stabilizer to approximately 12 units of trim.

(f) Move the stabilizer trim switches on the captain's control wheel to the NOSE UP position until the stabilizer stops automatically.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Use the bar, SPL-1677 to measure the "B" dimension.

NOTE: Make sure to protect wire bundles when using the trammel bar, SPL-1677. The sharp edges on the trammel bar, SPL-1677 can cause chafing or damage to the wires.

2) Make sure that the "B" dimension is 24.80 ±0.10 in. (629.9 ±2.6 mm).

a) Make sure that the STAB TRIM indicator on the control stand reads 14.0 units of trim.

NOTE: The STAB TRIM indicator gives approximate indications. Do not use the STAB TRIM indicator indications to adjust the stabilizer trim switches ("B" dimension).

E. Prepare for the Test

SUBTASK 27-41-00-020-006

(1) Do this task: Stabilizer Trim Motor Removal, TASK 27-41-71-000-801.

SUBTASK 27-41-00-480-003

(2) Install the wrench, SPL-1684, on the internal spline on the stabilizer gearbox.

(a) Make sure the wrench does not turn.

SUBTASK 27-41-00-480-004

(3) Install the adapter, SPL-1748, on the captain's stabilizer trim wheel (Figure 504).

(a) Remove the fasteners that attach the stabilizer trim wheel to the shaft (TASK 27-41-61-010-801).

F. Procedure

SUBTASK 27-41-00-710-010

(1) Do a check of the manual clutch disconnect:

(a) Turn the captain's stabilizer trim wheel 3 turns or more counterclockwise.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Make sure the torque necessary to operate the stabilizer trim wheel is not more than 163 in-lb (18.42 N·m).

NOTE: 163 in-lb (18.42 N·m) is equal to a tangential force at the handle of the trim wheel of approximately 46 lbf (205 N).

(c) Turn the captain's stabilizer trim wheel 3 turns or more clockwise.

(d) Make sure the torque necessary to operate the stabilizer trim wheel is not more than 163 in-lb (18.42 N·m).

NOTE: 163 in-lb (18.42 N·m) is equal to a tangential force at the handle of the trim wheel of approximately 46 lbf (205 N).

SUBTASK 27-41-00-480-005

(2) Remove the wrench, SPL-1684 and the adapter, SPL-1748.

(a) Install the fasteners that attach the stabilizer trim wheel to the shaft (TASK 27-41-61-410-801).

SUBTASK 27-41-00-420-005

(3) Do this task: Stabilizer Trim Motor Installation, TASK 27-41-71-400-801.

——— END OF TASK ———

TASK 27-41-00-700-807

9. Column Actuated Stabilizer Trim Cutout Switch Override Test

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this test to make sure that the horizontal stabilizer follows the commands from the STAB TRIM switches, even though the column actuated STAB TRIM cutout switches give the opposite command.

B. References

Reference	Title
27-31-00-800-801	Elevator Hydraulic System A and B - Pressurization (P/B 201)

SUBTASK 27-41-00-780-001

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

E. Procedure

SUBTASK 27-41-00-710-011

(1) Do the column actuated stabilizer trim cutout switch override test:

(a) Make sure that the STAB TRIM PRI switch, S272 on the aft area of the control stand is in the NORMAL position.

(b) Set the STAB TRIM override switch on the P8 panel to the OVRD position.

NOTE: The override switch is on the same control panel for the FLT DK DOOR.

(c) Turn the stabilizer trim wheel to set the stabilizer to approximately 8 units of trim.

(d) Pull the captain's control column full aft.

(e) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

1) Make sure that the stabilizer leading edge moves up (STAB TRIM indicator movement in the APL NOSE DOWN direction).

2) Release the stabilizer trim switches.

(f) Put the captain's control column to the neutral detent.

(g) Set the STAB TRIM override switch on the P8 panel to the NORM position.

(h) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

1) Make sure that the stabilizer leading edge moves up (STAB TRIM indicator movement in the APL NOSE DOWN direction).

2) Pull the captain's control column full aft.

3) Make sure that the movement of the stabilizer stops.

4) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

5) Make sure that the stabilizer leading edge moves down (STAB TRIM indicator movement in the APL NOSE UP direction).

6) Release the stabilizer trim switches.

(i) Put the captain's control column to the neutral detent.

(j) Set the STAB TRIM override switch on the P8 panel, to the OVRD position.

(k) Push the captain's control column full forward.

(l) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

1) Make sure that the stabilizer leading edge moves down (STAB TRIM indicator movement in the APL NOSE UP direction).

2) Release the stabilizer trim switches.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(m) Put the captain's control column to the neutral detent.

(n) Set the STAB TRIM override switch on the P8 panel, to the NORM position.

(o) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

1) Make sure that the stabilizer leading edge moves down (STAB TRIM indicator movement in the APL NOSE UP direction).

2) Push the captain's control column full forward.

3) Make sure that the movement of the stabilizer stops.

4) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

5) Make sure that the stabilizer leading edge moves up (STAB TRIM indicator movement in the APL NOSE DOWN direction).

6) Release the stabilizer trim switches.

(p) Put the captain's control column to the neutral detent.

SUBTASK 27-41-00-780-002

(2) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

——— END OF TASK ———

TASK 27-41-00-700-808

10. Stabilizer Trim Secondary Brake System Test

(Figure 506)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) This test is to make sure that the stabilizer secondary brake can prevent movement of the horizontal stabilizer.

B. References

D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-00-010-004

(2) To get access to the stabilizer trim actuator, do this step:

Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

G. Stabilizer Trim Secondary Brake System Test

SUBTASK 27-41-00-700-001

(1) Do the stabilizer trim secondary brake system test:

WARNING MAKE SURE THAT ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE CONTROL SURFACES AND LANDING GEAR DOOR AREAS. THE CONTROL SURFACES, THE LANDING GEAR, AND THE LANDING GEAR DOORS CAN MOVE WHEN YOU DO THE AIR MODE SIMULATION. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Turn the captain's stabilizer trim wheel several turns counterclockwise (2-3 turns is satisfactory).

NOTE: If necessary, use of the first officer's control wheel instead of the captain's control wheel is acceptable, provided that this substitution is maintained throughout the test.

(b) Install the torque socket, SPL-13949, onto the upstop of the jackscrew.

CAUTION IF MORE THAN 800 IN-LB (90.4 N•M) OF TORQUE IS APPLIED TO BALLSCREW ACTUATOR ASSEMBLIES, DAMAGE TO THE BALLSCREW ACTUATOR ASSEMBLY MAY OCCUR.

(c) Apply a 500 ±20 in-lb (56.5 ±2.3 N·m) counterclockwise torque to the upstop of the jackscrew and hold.

1) Make sure that the torque is not put on the safety rod nut.

2) While maintaining torque on the jackscrew, use a marker to make a line on the jackscrew shield and the retainer - seal (View A-A, Figure 506).

NOTE: The arc distance should be measured on the outside radius of the jackscrew shield.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Release the torque.

CAUTION

IF MORE THAN 800 IN-LB (90.4 N•M) OF TORQUE IS APPLIED TO BALLSCREW ACTUATOR ASSEMBLIES, DAMAGE TO THE BALLSCREW ACTUATOR ASSEMBLY MAY OCCUR.

(d) Apply a 500 ±20 in-lb (56.5 ±2.3 N·m) clockwise torque to the upstop of the jackscrew and hold.

1) Make sure that the torque is not put on the safety rod nut.

2) While maintaining torque on the jackscrew, use a marker to make a line on the jackscrew shield and retainer - seal (View A-A, Figure 506).

NOTE: The arc distance should be measured on the outside radius of the jackscrew shield.

3) Release the torque.

(e) Use a tape measure, STD-14434, to measure the arc distance between the lines.

1) Make sure that the arc distance dimension is not more than 1.06 in. (26.9 mm) (36.0 degrees).

a) If the arc distance dimension is more than 1.06 in. (26.9 mm) (36.0 degrees), replace the horizontal stabilizer trim actuator (TASK 27-41-81-000-801 and TASK 27-41-81-400-801).

(f) Remove the torque socket, SPL-13949, from the upstop of the jackscrew.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-41-00-410-004

(1) Close this access panel:

SUBTASK 27-41-00-860-029

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-41-00-860-030

(2) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Procedure

SUBTASK 27-41-00-710-012

(1) Do the stabilizer trim cutout test:

(a) Make sure that the STAB TRIM PRI switch, S272 and BACKUP switch, S149 on the aft area of the control stand is in the NORMAL position.

(b) Make sure that the STAB TRIM override switch on the P8 panel is in the NORM position.

NOTE: The override switch is on the same control panel for the FLT DK DOOR.

(c) Position the stabilizer to an intermediate position (Approximately 8 units of trim is satisfactory).

(d) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

1) Make sure that the stabilizer leading edge moves down (APL NOSE UP).

2) While the stabilizer moves, push the captain's control column forward until the column cutout switch stops the stabilizer.

3) Immediately release the control column to the neutral position with the two stabilizer trim switches still held in the nose up position.

4) With the control column in the neutral position, make sure the stabilizer leading edge continues to move down.

5) Release the stabilizer trim switches.

(e) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

1) Make sure that the stabilizer leading edge moves up (APL NOSE DOWN).

2) While the stabilizer moves, pull the captain's control column aft until the column cutout switch stops the stabilizer.

3) Immediately release the control column to the neutral position with the two stab trim switches still held in the nose down position.

4) With the control column in the neutral position, make sure the stabilizer leading edge continues to move up.

5) Release the stabilizer trim switches.

(f) Position the stabilizer to an intermediate position (Approximately 8 units of trim is satisfactory).

(g) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

1) Make sure that the stabilizer leading edge moves down (APL NOSE UP).

2) While the stabilizer moves, push the captain's control column forward until the column cutout switch stops the stabilizer.

3) Hold the captain's control column in this position and immediately release the stabilizer trim switches.

4) Use a protractor, COM-1691 to make sure the captain's control column is between 2.90° and 3.70° forward from the neutral position.

5) Put the captain's control column back to the neutral position.

(h) Position the stabilizer to an intermediate position (Approximately 8 units of trim is satisfactory).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

1) Make sure that the stabilizer leading edge moves up (APL NOSE DOWN).

2) While the stabilizer moves, pull the captain's control column aft until the column cutout switch stops the stabilizer.

3) Hold the captain's control column in this position and immediately release the stabilizer trim switches.

4) Use a protractor, COM-1691 to make sure the captain's control column is between 3.20° and 4.21° aft from the neutral position.

5) Put the captain's control column back to the neutral position.

SUBTASK 27-41-00-860-031

(2) Do this task: Put the Elevator Hydraulic Systems A and B Back to the Condition Before the Pressurization, TASK 27-31-00-840-801.

——— END OF TASK ———

TASK 27-41-00-710-801

12. Column Cutout Switches Test

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) Use this test to make sure that the captain's and first officer's column cutout switches operate correctly.

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
COM-1691	Protractor - Digital, Vertical or Horizontal Part #: 21465A82 Supplier: 3A054 Part #: 31-038-3 (Model Pro 360) Supplier: 1X822 Part #: 31-040-9 (Model Pro 3600) Supplier: 1X822 Part #: 950-317 (Model Pro 360) Supplier: 01EP7 Part #: 950-318 (Model Pro 3600) Supplier: 01EP7 Part #: KS5549 Supplier: 75245 Part #: KS6005 Supplier: 75245

C. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Column Cutout Switches Test

WARNING

MAKE SURE THAT PERSONNEL AND EQUIPMENT ARE CLEAR OF ALL FLIGHT CONTROL SURFACES, THE THRUST REVERSERS AND THE LANDING GEAR. THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS AND THE LANDING GEAR CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

SUBTASK 27-41-00-730-001

(1) Do the test of the captain's column cutout switch:

(a) Do one of the steps that follow:

1) Install the protractor, COM-1691, on the captain's control column.

NOTE: The neutral position of the control column is 6.9 degrees forward of the vertical position.

2) Use the MAX Display System (MDS) to view the control column position throughout this test:

a) Select MAINT.

b) Select MAINT DATA PGS.

c) Select 27 FLIGHT CONTROL - DISPLAY.

d) Make sure that COLUMN POSN shows.

NOTE: The neutral position of the control column is 0 degrees.

(b) Make sure that the STAB TRIM PRI switch is set to the NORMAL position.

(c) Make sure that the STAB TRIM override switch is set to the NORM position.

(d) Set the stabilizer to 8 units of trim.

(e) Move and hold the STAB TRIM switches on the captain's control wheel to the NOSE UP position.

1) Make sure that the stabilizer moves to the nose up position.

(f) Move the captain's control column forward to the maximum travel distance.

1) Make sure that the stabilizer movement stops.

(g) Move the captain's control column to the neutral position.

1) Make sure that the stabilizer moves to the nose up position.

(h) Move and hold the STAB TRIM switches on the captain's control wheel to the NOSE DN position.

1) Make sure that the stabilizer moves to the nose down position.

(i) Move the captain's control column rearward to the maximum travel distance.

1) Make sure that the stabilizer movement stops.

(j) Move the captain's control column to the neutral position.

1) Make sure that the stabilizer moves to the nose down position.

(k) Move the captain's control column rearward slowly until the stabilizer movement stops.

(l) Make sure that the captain's control column position is 3.20 to 4.21 degrees rearward from the neutral position.

(m) Release the STAB TRIM switches on the captain's control wheel.

(n) Move the captain's control column to the neutral position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(o) Move and hold the STAB TRIM switches on the captain's control wheel to the NOSE UP position.

1) Make sure that the stabilizer moves to the nose up position.

(p) Move the captain's control column forward slowly until the stabilizer movement stops.

(q) Make sure that the captain's control column position is 2.90 to 3.70 degrees forward from the neutral position.

(r) Release the STAB TRIM switches on the captain's control wheel.

(s) Move the captain's control column to the neutral position.

(t) If installed, remove the protractor, COM-1691, from the captain's control column.

SUBTASK 27-41-00-730-002

(2) Do the test of the first officer's column cutout switch:

(a) Do one of the steps that follow:

1) Install the protractor, COM-1691, on the first officer's control column.

NOTE: The neutral position of the control column is 6.9 degrees forward of the vertical position.

2) Use the MDS to view the control column position throughout this test:

a) Select MAINT.

b) Select MAINT DATA PGS.

c) Select 27 FLIGHT CONTROL - DISPLAY.

d) Make sure that COLUMN POSN shows.

NOTE: The neutral position of the control column is 0 degrees.

(b) Make sure that the STAB TRIM PRI switch is set to the NORMAL position.

(c) Make sure that the STAB TRIM override switch is set to the NORM position.

(d) Set the stabilizer to 8 units of trim.

(e) Move and hold the STAB TRIM switches on the first officer's control wheel to the NOSE UP position.

1) Make sure that the stabilizer moves to the nose up position.

(f) Move the first officer's control column forward to the maximum travel distance.

1) Make sure that the stabilizer movement stops.

(g) Move the first officer's control column to the neutral position.

1) Make sure that the stabilizer moves to the nose up position.

(h) Move and hold the STAB TRIM switches on the first officer's control wheel to the NOSE DN position.

1) Make sure that the stabilizer moves to the nose down position.

(i) Move the first officer's control column rearward to the maximum travel distance.

1) Make sure that the stabilizer movement stops.

(j) Move the first officer's control column to the neutral position.

1) Make sure that the stabilizer moves to the nose down position.

(k) Move and hold the STAB TRIM switches on the first officer's control wheel to the NOSE UP position.

1) Make sure that the stabilizer moves to the nose up position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(l) Move the first officer's control column forward slowly until the stabilizer movement stops.

(m) Make sure that the first officer's control column position is 2.90 to 3.70 degrees forward from the neutral position.

(n) Release the STAB TRIM switches on the first officer's control wheel.

(o) Move the first officer's control column to the neutral position.

(p) Move and hold the STAB TRIM switches on the first officer's control wheel to the NOSE DN position.

1) Make sure that the stabilizer moves to the nose down position.

(q) Move the first officer's control column rearward slowly until the stabilizer movement stops.

(r) Make sure that the first officer's control column position is 3.20 to 4.21 degrees rearward from the neutral position.

(s) Release the STAB TRIM switches on the first officer's control wheel.

(t) Move the first officer's control column to the neutral position.

(u) If installed, remove the protractor, COM-1691, from the first officer's control column.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

HORIZONTAL STABILIZER - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of a horizontal stabilizer

(2) An installation of a horizontal stabilizer.

B. You can remove and install the horizontal stabilizer with or without the elevator and elevator tab.

C. This procedure is applicable for the left and right horizontal stabilizers.

TASK 27-41-11-000-801

2. Horizontal Stabilizer Removal

(Figure 401, Figure 402, Figure 403, Figure 404, Figure 405)

A. References

Reference	Title

E. Prepare for the Removal

NOTE: If the horizontal stabilizer [1] is being removed and the same stabilizer, elevator, and elevator tab is going to be re-installed (without elevator or elevator tab rework or adjustment), then the following procedure will determine if a flight test is necessary.
