NOTE: If the tailcone is removed or it's position is adjusted during the elevator or stabilizer removal procedure, the left and right elevator index plate [4] positions will be in a different position when the tailcone is re-installed. The elevator position cannot be properly measured with the elevator index plate [4] in a different location, therefore, you must do a power-off flight test.

SUBTASK 27-41-11-700-001

(1) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

SUBTASK 27-41-11-860-001

(2) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

SUBTASK 27-41-11-860-002

CAUTION

MAKE SURE THAT YOU ARE CAREFUL WITH THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE SHARP EDGES ON THE TRAMMEL BAR, SPL-1677 CAN CAUSE CHAFING OR DAMAGE TO THE WIRES.

(3) Use the trammel bar, SPL-1677, to set the B dimension of the horizontal stabilizer [1] at 39.17 ±0.01 in. (994.92 ±0.26 mm) (Figure 401).

NOTE: This is the neutral stabilizer setting of zero degrees or 4 units of trim.

(a) Make sure that you protect wire bundles when using the trammel bar, SPL-1677.

SUBTASK 27-41-11-860-003

(4) Move the control column forward and aft several times and then let it go at the neutral position.

SUBTASK 27-41-11-860-004

(5) Measure the elevator position.

(a) Measure the left elevator position on the elevator index plate [4] (Figure 403).

1) Make sure to note if the elevator is above or below the neutral mark.

(b) Measure the right elevator position on the elevator index plate [4] (Figure 403).

1) Make sure to note if the elevator is above or below the neutral mark.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-11-860-005

(6) Do this task: Pressure from the Elevator Hydraulic Systems A and B Removal, TASK 27-31-00-800-802.

SUBTASK 27-41-11-860-006

(7) Set the STAB TRIM PRI switch, S272, on the aft area of the control stand to the CUTOUT position.

SUBTASK 27-41-11-860-007

(8) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	8	C00544	FLIGHT RECORDER POSITION SENSOR

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-11-860-008

(9) Open this circuit breaker (if installed) and install safety tag:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
A	15	C00644	EXTERIOR LIGHTING LOGO ILLUM

SUBTASK 27-41-11-860-009

(10) If it is necessary, use the stabilizer trim wheel on the control stand to set the horizontal stabilizer [1] at zero degrees (4 units of trim).

SUBTASK 27-41-11-480-001

(11) Install the lock, SPL-1672, on the stabilizer trim wheel at the control stand (Figure 402).

(a) Turn the trim wheel to put the handle at the top of the wheel.

(b) Adjust the height of the trim lock to put the trim wheel handle correctly on the yoke.

(c) Install the pin through the yoke.

(d) Install the safety pin.

SUBTASK 27-41-11-410-001

(12) Open this access panel:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-41-11-010-001

(13) To access the left horizontal stabilizer, do this step:

Open these access panels:

Number	Name/Location
331A	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer To Body
331AZ	Horizontal Stabilizer, Access Panel, Inboard L.E. Closure Rib
332AB	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer to Body
333AB	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer to Body
333AZ	Horizontal Stabilizer, Access Panel, Inboard T.E. Closure Rib

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-11-010-002

(14) To access the right horizontal stabilizer, do this step:

Open these access panels:

Number	Name/Location
341A	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer To Body
341AZ	Horizontal Stabilizer, Access Panel - Inbd L.E. Closure Rib
342AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
343AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
343AZ	Horizontal Stabilizer, Access Panel - Inbd T.E. Closure Rib

F. Horizontal Stabilizer Removal

SUBTASK 27-41-11-480-002

(1) Install the sling equipment, SPL-2035 (Figure 404).

(a) Remove the bolts [2] and bolts [3] from the horizontal stabilizer [1] top surface.

CAUTION

MAKE SURE YOU INSTALL THE HOISTING SLING CORRECTLY WHEN YOU REMOVE THE HORIZONTAL STABILIZER WITH OR WITHOUT THE ELEVATOR INSTALLED. IF YOU DO NOT INSTALL THE HOISTING SLING CORRECTLY FOR THE REMOVAL OF THE HORIZONTAL STABILIZER, YOU CAN CAUSE DAMAGE TO EQUIPMENT.

(b) Attach the sling equipment, SPL-2035, to the horizontal stabilizer [1] with fasteners.

NOTE: Low clearance sling is used only with elevator removed.

(c) Attach the load cell, STD-12395, to the sling equipment, SPL-2035.

(d) Attach a hoist to the load cell, STD-12395.

CAUTION

YOU MUST CAREFULLY LIFT THE HOISTING SLING. A SUDDEN MOVEMENT OF THE HOISTING SLING CAN CAUSE DAMAGE TO THE HORIZONTAL STABILIZER.

(e) Lift the weight of the horizontal stabilizer [1].

1) Use the load cell, STD-12395, on the sling to make sure that the force used when lifting horizontal stabilizer [1] is not more than:

- 888 lb (403 kg) (830 lb (376 kg) airplane part + 58 lb (26 kg) tool) with elevator attached
- 688 lb (312 kg) (630 lb (286 kg) airplane part + 58 lb (26 kg) tool) without elevator attached.

SUBTASK 27-41-11-020-001

WARNING

DECREASE THE PRESSURE BEFORE YOU DISCONNECT THE HYDRAULIC LINE. PRESSURIZED FLUID CAN CAUSE INJURIES TO PERSONNEL.

(2) Disconnect the hydraulic line [25] of the elevator tab installed aft of the stabilizer rear spar.

SUBTASK 27-41-11-020-002

(3) Disconnect these electrical connectors:

(a) Flight recorder position sensor

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Exterior logo light (if installed).

SUBTASK 27-41-11-020-003

(4) If the elevator is attached to the horizontal stabilizer, do this step:

(a) Open this access panel:

Number	Name/Location
318BR	Tailcone Access Door

or

Open this access panel:

Number	Name/Location
317BL	Tailcone Access Door

(b) Remove the nut [23], nut [24], and bolt [21] to disconnect the elevator control pushrod [5] from the elevator.

SUBTASK 27-41-11-020-004

(5) Remove the horizontal stabilizer [1] (Figure 405).

NOTE: If the bolts are frozen, use pin removal equipment, SPL-2030, to assist in removal.

(a) At the horizontal stabilizer rear spar, do these steps:

1) Remove the nut [32] and washer [34] from the bolt [28].

2) Remove the nuts [35] and washers [34] from the bolts [38].

3) Remove the bolt [28], washer [29], and washer [27].

a) If it is necessary, remove the seal support structure before you remove this bolt.

b) Keep a record of the bolt length and location for the installation.

4) Remove the bolts [38], washers [37], and washers [27].

a) If it is necessary, remove the seal support structure before you remove these bolts.

b) Keep a record of each bolt length and location for the installation.

5) Remove the washer [30], washers [39], pin [33], pins [36], and antirotation lock [31].

a) If it is necessary, adjust the tension of the sling to help remove the pins.

6) Remove and inspect each bolt or pin.

NOTE: If an existing bolt or pin has missing plating, cracked, or flaking, prior to further flight replace with new parts or repair in accordance with a method approved by an Authorized Representative for the Boeing Commercial Airplanes (BCA) Organization Designation Authorization who has been authorized to make those findings.

a) If the bolts or pins show signs of damage: pitting, corrosion, no plating (pins only), galling (bolts only) or wear beyond drawing tolerances, replace them with the improved bolts or pins.

b) If the pins or bolts show no sign of damage, they can be reinstalled or replaced with an improved front spar bolts or rear spar pins designed to resist wear, galling, or corrosion.

(b) At the horizontal stabilizer front spar, do these steps:

1) Remove the pins [44], nuts [43], washers [42], shims [45], washers [46], washers [40], and bolts [41].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Lift the horizontal stabilizer [1] out horizontally, then lower to the support stand.

(d) Remove and inspect each bolt or pin.

1) If the bolts or pins show signs of damage: pitting, corrosion, no plating (pins only), galling (bolts only) or wear beyond drawing tolerances, replace them with the improved bolts or pins.

2) If the pins or bolts show no sign of damage, they can be reinstalled or replaced with an improved front spar bolts or rear spar pins designed to resist wear, galling, or corrosion.

(e) If there is an indication of hydraulic fluid contamination on the lugs or clevises, examine the components in the vertical fin for external leakage:

- Main and standby rudder Power Control Unit (PCU).
- Hydraulic hoses and tubing.

NOTE: An example of hydraulic fluid contamination is cracked, peeled, or blistered paint.

SUBTASK 27-41-11-080-003

(6) If it is necessary, remove the sling equipment, SPL-2035.

(a) Release tension applied to the sling equipment, SPL-2035.

(b) Remove the hoist from the load cell, STD-12395.

(c) Remove the load cell, STD-12395 from the sling equipment, SPL-2035.

(d) Remove the fasteners that attach the sling equipment, SPL-2035.

(e) Install the bolts [2] and bolts [3] at the horizontal stabilizer [1] top surface.

F. Horizontal Stabilizer Installation

NOTE: Do an inspection of the area near the horizontal stabilizer identification plate for a stenciled note or placard which restricts the horizontal stabilizer to an individual airplane because of a matched set approval.

SUBTASK 27-41-11-480-003

(1) Install the sling equipment, SPL-2035 (Figure 404):

(a) Remove the bolts [2] and bolts [3] from the horizontal stabilizer [1] top surface.

(b) Attach the sling equipment, SPL-2035, to the horizontal stabilizer [1] with fasteners.

(c) Attach the load cell, STD-12395, to the sling equipment, SPL-2035.

NOTE: Low clearance sling is used only with elevator removed.

(d) Attach a hoist to the load cell, STD-12395.

SUBTASK 27-41-11-640-001

(2) Lubricate the bolts, washers, bushings in the front and rear spar fittings, and pins with corrosion inhibiting material, G50136.

(a) Do not put the corrosion inhibiting material, G50136, on the threaded portion of the bolts.

SUBTASK 27-41-11-640-002

(3) Lubricate the bolt threads and nut threads with compound, D50004.

NOTE: This anti-sieze compound prevents galling of the threads.

SUBTASK 27-41-11-420-001

(4) Install the horizontal stabilizer [1] (Figure 405).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION YOU MUST CAREFULLY LIFT THE HOISTING SLING. A SUDDEN MOVEMENT OF THE HOISTING SLING CAN CAUSE DAMAGE TO THE HORIZONTAL STABILIZER.

(a) Lift and put the horizontal stabilizer [1] in its position.

1) Use the load cell, STD-12395, on the sling to make sure that the force used when lifting horizontal stabilizer [1] is not more than:

- 888 lb (403 kg) (830 lb (376 kg) airplane part + 58 lb (26 kg) tool) with elevator attached
- 688 lb (312 kg) (630 lb (286 kg) airplane part + 58 lb (26 kg) tool) without elevator attached.

(b) Align the horizontal stabilizer [1] with the rear and front fittings on the airplane.

(c) Temporarily install the bolts [41] on the front spar of the horizontal stabilizer [1].

NOTE: You can use the stabilizer alignment tool, alignment equipment, SPL-13581, to align the stabilizer in place of using the bolts [41].

(d) At the rear spar of the horizontal stabilizer [1], do these steps:

1) Install the antirotation lock [31], pin [33], washer [30], washer [27], washer [29], bolt [28] with the bolt heads either forward or aft, washer [34], and nut [32].

2) Install the pins [36], washers [39], washers [27], washers [37], bolts [38] with the bolt heads either forward or aft, washers [34], and nuts [35].

3) Measure the clearance between the bushing faces of the external and internal lugs (Figure 405).

NOTE: This clearance measurement is for the sum of the two clearances (A1 and A2) at each of the three rear spar clevises.

a) Make sure that the maximum allowable clearance for each clevis at the center (failsafe) and lower lugs (sum of the two clearances, A1 and A2, at each lug) is 0.032 in. (0.81 mm).

b) Make sure that the maximum allowable clearance for the upper clevis (sum of the two clearances, A1 and A2) is 0.046 in. (1.17 mm).

4) Tighten the nut [32] to 575 ±75 in-lb (65 ±9 N·m) and nuts [35] to 575 ±75 in-lb (65 ±9 N·m) but keep a clearance of 0.005 in. (0.13 mm) – 0.090 in. (2.29 mm) after the nut is tightened.

NOTE: The clearance of 0.005 in. (0.13 mm) – 0.090 in. (2.29 mm) after the nut [32], and nut [35] are tightened, is taken between the Stabilizer Center Section Clevis and washer [34].

(e) At the front spar of the horizontal stabilizer [1], do these steps:

1) Remove the bolts [41].

2) Measure the clearance between the bushing faces of the lugs and clevises.

3) Install the shim [47] to get a maximum clearance of 0.005 in. (0.13 mm) for each side of the lugs (maximum of 0.010 in. (0.25 mm) total allowable clearance for each clevis).

4) Install the washers [40], bolts [41], washers [46], washers [42], shims [45], and nuts [43].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) If it is necessary, add the shim washers [48] and/or shim washers [49] between the nut [43] and washer [42] to align the pin hole of the bolt [41] and nut [43].

b) Tighten the nuts [43] to an initial torque of 50 in-lb (5.6 N·m).

c) Make sure that the stepped portion of the bolts [41] touch the washers [42], or shim washers [48] and/or shim washers [49], if used.

<1> If it is necessary, remove the shims [45] until the stepped portion of the bolts [41] touch the washers [42] or shim washers [48] and/or shim washers [49], if used.

d) Make sure that the gap "X" between the shims [45] and washers [42] is 0.002 in. (0.05 mm) or less.

<1> If it is necessary, add shims [45] until the gap "X" is between 0.002 in. (0.05 mm) - 0.000 in. (0.00 mm).

e) Tighten the nuts [43] to 950 in-lb (107.3 N·m) – 1400 in-lb (158.2 N·m).

f) Install the new pins [44].

<1> If it is necessary, tighten or loosen the nuts [43], to get the pin hole alignment.

SUBTASK 27-41-11-080-001

(5) Remove the sling equipment, SPL-2035, from the horizontal stabilizer [1].

(a) Release tension applied to the sling equipment, SPL-2035.

(b) Remove the hoist from the load cell, STD-12395.

(c) Remove the load cell, STD-12395 from the sling equipment, SPL-2035.

(d) Remove the fasteners that attach the sling equipment, SPL-2035.

(e) Install the bolts [2] and bolts [3] at the horizontal stabilizer [1] top surface.

SUBTASK 27-41-11-420-002

(6) If the elevator is not attached to the horizontal stabilizer [1], do this task: Elevator - Installation, TASK 27-31-11-400-801.

SUBTASK 27-41-11-420-003

(7) If the elevator is attached to the horizontal stabilizer [1], connect the elevator control pushrod [5] to the elevator:

(a) Move the elevator by hand to the neutral position.

(b) Install the bolt [21] with the bolt head inboard and nuts [23], nuts [24] to connect the elevator control pushrod [5] to the elevator.

(c) Close this access door:

Number	Name/Location
318BR	Tailcone Access Door

or

Close this access door:

Number	Name/Location
317BL	Tailcone Access Door

SUBTASK 27-41-11-420-004

(8) Connect the hydraulic line [25] (that is installed just aft of the stabilizer rear spar) of the elevator tab mechanism actuator.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Tighten the B-nut on hydraulic line [25] to 140 ±7 in-lb (16 ±1 N·m).

SUBTASK 27-41-11-420-005

(9) Connect these electrical connectors:

(a) Flight recorder position sensor

(b) Exterior logo light (if it is installed).

SUBTASK 27-41-11-410-002

(10) For the left horizontal stabilizer, do this step:

(a) Close these access panels:

Number	Name/Location
331A	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer To Body
331AZ	Horizontal Stabilizer, Access Panel, Inboard L.E. Closure Rib
332AB	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer to Body
333AB	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer to Body
333AZ	Horizontal Stabilizer, Access Panel, Inboard T.E. Closure Rib

SUBTASK 27-41-11-410-003

(11) For the right horizontal stabilizer, do this step:

(a) Close these access panels:

Number	Name/Location
341A	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer To Body
341AZ	Horizontal Stabilizer, Access Panel - Inbd L.E. Closure Rib
342AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
343AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
343AZ	Horizontal Stabilizer, Access Panel - Inbd T.E. Closure Rib

SUBTASK 27-41-11-390-001

(12) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

SUBTASK 27-41-11-080-002

(13) Remove the lock, SPL-1672, from the stabilizer trim wheel at the control stand.

SUBTASK 27-41-11-820-001

(14) Adjust the stabilizer-to-body seals (Figure 406):

(a) Set the horizontal stabilizer [1] to a zero degree trim (four units of trim).

(b) Make sure that the clearance between the stabilizer-to-body blade seals and the airplane body surface along the upper and lower horizontal edge is 0.00 in. (0.00 mm) - 0.04 in. (1.02 mm).

1) If it is necessary to adjust the stabilizer-to-body blade seals, you must first set the horizontal stabilizer [1] to 5 units of trim.

2) Adjust the stabilizer-to-body blade seals in or out, if it is necessary.

(c) Make sure that the stabilizer-to-body bulb seals touch and push against the airplane body surface.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Move the stabilizer leading edge to the full down position (the ball nut is against the downstop).

(e) Make sure that the clearance is 0.00 in. (0.00 mm) - 0.04 in. (1.02 mm) between the airplane body surface and the stabilizer-to-body blade seals at these locations:

1) The blade seals adjacent to the gap cover of the lower spar.

a) If it is necessary to adjust the stabilizer-to-body blade seals, you must first set the horizontal stabilizer [1] to 5 units of trim.

b) Adjust the stabilizer-to-body blade seals in or out, as necessary.

2) The blade seal adjacent to the gap cover of the upper spar.

a) If it is necessary to adjust the stabilizer-to-body blade seals, you must first set the horizontal stabilizer [1] to 5 units of trim.

b) Adjust the stabilizer-to-body blade seals in or out, if it is necessary.

SUBTASK 27-41-11-860-010

(15) Set the STAB TRIM PRI switch, S272, to the NORMAL position.

SUBTASK 27-41-11-820-002

(16) If the same stabilizer, elevator, and elevator tab that was removed was re-installed (without elevator or elevator tab rework or adjustment - and the tailcone was not removed), do this check to find if a flight test is necessary:

NOTE: If the tailcone was removed, or its position adjusted during the stabilizer or elevator removal procedure, the left and right elevator index plate [4] positions will be in a different position when the tailcone is re-installed. The elevator cannot be properly measured with the elevator index plate [4] in a different location, therefore, you must do a power-off flight test.

(a) Do this task: Elevator Hydraulic System A and B - Pressurization, TASK 27-31-00-800-801.

(b) Do this task: Null Procedure - Mach Trim Actuator, TASK 27-31-00-700-801.

CAUTION MAKE SURE THAT YOU ARE CAREFUL WITH THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE SHARP EDGES ON THE TRAMMEL BAR, SPL-1677 CAN CAUSE CHAFING OR DAMAGE TO THE WIRES.

(c) Use the trammel bar, SPL-1677, to set the B dimension of the horizontal stabilizer [1] to 39.17 ±0.01 in. (994.92 ±0.26 mm) Figure 401.

NOTE: This is the neutral stabilizer setting of zero degrees or 4 units of trim.

1) Make sure that you protect wire bundles when you use the trammel bar, SPL-1677.

(d) Move the control column forward and aft several times and then let it go at the neutral position.

(e) Make sure that the right elevator position, “Z”, is within ± 0.06 in. (1.5 mm) of the neutral mark on the right elevator index plate [4] (Figure 403).

1) If it is necessary, adjust the PCU input rods to achieve the ± 0.06 in. (1.5 mm) measurement on the right elevator index plate [4] (TASK 27-31-00-820-803).

(f) Make sure that the stabilizer geometry is correct:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that the left elevator is within 0.12 in. (3.0 mm) of the initial left elevator position.

NOTE: The initial left elevator position is the position, “Z”, measured before the removal of the stabilizer.

2) Make sure that the right elevator is within 0.12 in. (3.0 mm) of the initial right elevator position.

NOTE: The initial right elevator position is the position, “Z”, measured before the removal of the stabilizer.

3) Make sure that the left elevator is within 0.12 in. (3.0 mm) of the right elevator position.

NOTE: This measurement compares the left and right stabilizer half positions after the installation of the two sides of the stabilizer. It makes sure that the left and right elevators are within 0.12 in. (3.0 mm) of their original positions. The 0.12 in. (3.0 mm) difference is calculated to have a negligible effect on manual reversion.

(g) If the measurements in the above step are not within limits, the elevator system should be adjusted and test flown for manual reversion.

NOTE: You cannot adjust the elevator control pushrod [5] to make sure that the elevator is within the limits. Adjustment of the elevator control pushrod [5] is too coarse to get the minimum tolerance of 0.12 in. (3.0 mm). One half turn of the elevator control pushrod [5] moves the trailing edge of the elevator up or down 0.20 in. (5.1 mm).

SUBTASK 27-41-11-860-011

(17) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	8	C00544	FLIGHT RECORDER POSITION SENSOR

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-11-860-012

(18) Remove the safety tag and close this circuit breaker (if installed):

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
A	15	C00644	EXTERIOR LIGHTING LOGO ILLUM

SUBTASK 27-41-11-820-003

(19) Do these system tests (if it is necessary):

NOTE: If the tailcone has not been removed and the same stabilizer, elevator, or elevator tab has been re-installed (without elevator or elevator tab rework or adjustment) and the elevator position “Z” measurements (done previously in this procedure) are within the specified limits, a flight test is not necessary.

If the tailcone has been removed, or either the stabilizer, elevator, or elevator tab have been replaced (with elevator or elevator tab adjustment), a flight test is necessary.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

If the tailcone was not removed or adjusted, or the same stabilizer, elevator, or elevator tab was re-installed (without elevator tab rework or adjustment), but the elevator position “Z” measurements (done previously in this procedure) are NOT within the specified limits, a flight test is necessary.

(a) Do this task: Elevator Travel Limit - Test, TASK 27-31-00-700-805.

(b) Make sure that the elevator pushrods are correctly adjusted (TASK 27-31-00-820-802).

NOTE: If the elevator pushrods are adjusted, a flight test is necessary.

(c) Do this task: Elevator Tab Control System - Operational Test, TASK 27-31-00-700-802.

(d) Use the stabilizer trim wheel to make sure that the horizontal stabilizer [1] operates through full travel between the stops.

(e) Do this task: Elevator Position Transmitter Installation Test, TASK 31-31-51-700-801.

(f) To test the logo lights, do the test portion of this task: Logo Light - Light Assembly Replacement, TASK 33-49-00-960-802.

(g) If it is necessary, do this task: Elevator Power-Off Flight Test, TASK 27-31-00-710-803.

SUBTASK 27-41-11-410-004

(20) Close this access door:

Number	Name/Location

HORIZONTAL STABILIZER LEADING EDGE - REMOVAL/INSTALLATION

1. General

A. This procedure contains these tasks:

(1) Horizontal stabilizer leading edge removal

(2) Horizontal stabilizer leading edge installation.

B. The horizontal stabilizer leading edge is referred to as the "leading edge" in this procedure.

C. This procedure is applicable for the left and right leading edges.

TASK 27-41-21-000-801

2. Horizontal Stabilizer Leading Edge Removal

(Figure 401)

A. Location Zones

Zone	Area
331	Left Horizontal Stabilizer - Removable Leading Edge
341	Right Horizontal Stabilizer - Removable Leading Edge

B. Procedure

SUBTASK 27-41-21-020-001

(1) Remove the leading edge [3] of the horizontal stabilizer [1]:

(a) Using non-metallic tools, remove sealant from leading edge [3] and tip cap assembly [4].

(b) Remove the bolts from the tip cap assembly [4] and slightly move it out enough so the leading edge [3] can be remove.

(c) Remove the bolts [2] that attach the lower surface and the inboard of the leading edge [3] to the front spar.

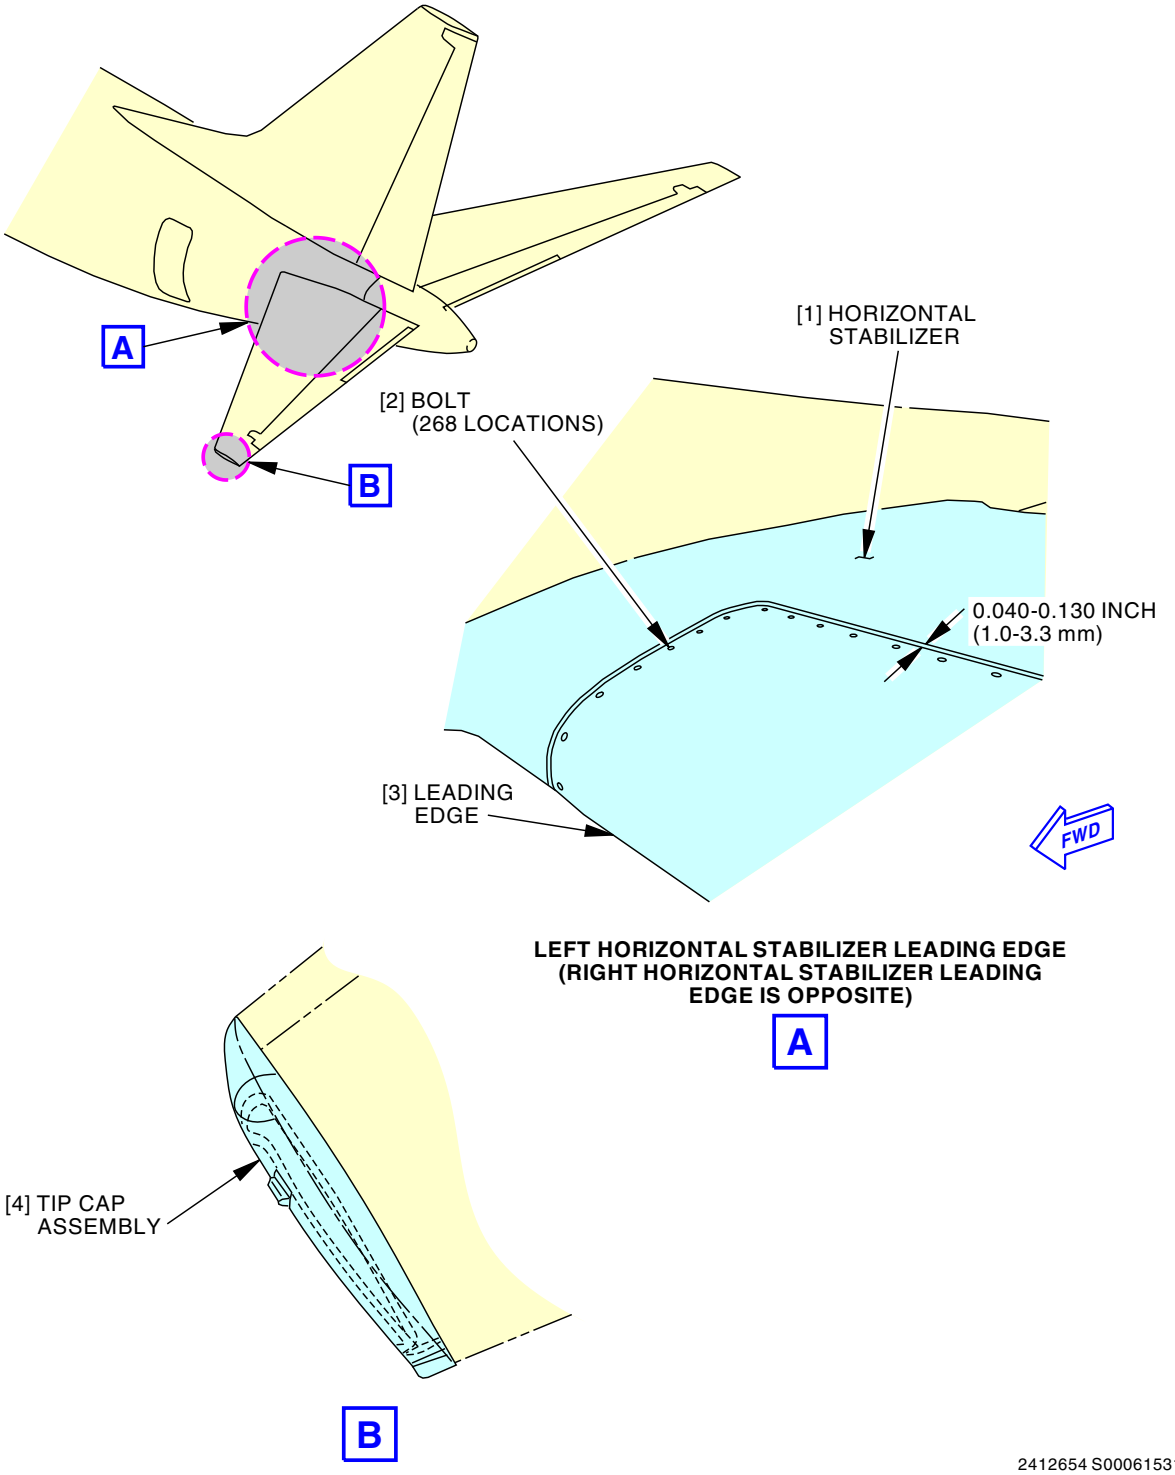
(d) Hold the leading edge [3] and remove the bolts [2] that attach the top surface of the leading edge [3] to the front spar.

(e) Hold each end of the leading edge [3].

(f) Remove the leading edge [3] from the airplane.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details



Horizontal Stabilizer Leading Edge Installation
Figure 401/27-41-21-990-801

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-41-21-400-801

3. Horizontal Stabilizer Leading Edge Installation

(Figure 401)

A. Consumable Materials

Reference	Description	Specification
A00247	Sealant - Pressure And Environmental - Chromate Type	BMS5-95
A00900	Sealant - Silicone, RTV - Dow Corning 93-006-1RF (Formerly 93-006-1. Use until Stock depleted)	BMS5-175 Type I Class B-1/2

B. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
3	Leading edge	55-10-52-04A-190	SIA ALL
		55-10-52-04A-195	SIA ALL
		55-10-52-04A-200	SIA ALL
		55-10-52-04A-205	SIA ALL
		55-10-52-04A-210	SIA ALL
		55-10-52-04A-215	SIA ALL
		55-10-52-04A-220	SIA ALL
		55-10-52-04A-225	SIA ALL

C. Location Zones

Zone	Area
331	Left Horizontal Stabilizer - Removable Leading Edge
341	Right Horizontal Stabilizer - Removable Leading Edge

D. Procedure

SUBTASK 27-41-21-420-001

(1) Install the leading edge [3]:

(a) Lift and put the leading edge [3] in its position.

(b) Make sure that the clearance between the leading edge [3] and the horizontal stabilizer [1] is 0.040 in. (1.02 mm) - 0.130 in. (3.30 mm).

CAUTION

ALIGN THE LEADING EDGE ASSEMBLY ALONG THE FULL LENGTH OF THE EDGE BEFORE YOU INSTALL THE FASTENERS. IF YOU PUSH THE ASSEMBLY INTO ITS POSITION AND INSTALL THE FASTENERS, DAMAGE CAN OCCUR TO THE RIB CHORDS.

1) Make sure that you check the alignment of the leading edge assembly along the full length prior to installing the fasteners.

NOTE: If the leading edge assembly is not aligned or forced into position during installation, then the induced strains can cause tension cracks in the rib chords.

(c) Install the bolts [2] that attach the top surface of the leading edge [3] to the front spar.

(d) Install the bolts [2] that attach the lower surface and inboard of the leading edge [3] to the front spar.

(e) Install the tip cap assembly [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Fill the clearance between the leading edge [3] and the horizontal stabilizer [1] with Dow Corning 93-006-1 RF sealant, A00900 or sealant, A00247.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

HORIZONTAL STABILIZER CENTER SECTION HINGE FITTING - REMOVAL/INSTALLATION

1. General

A. This procedure contains these tasks:

(1) Horizontal stabilizer center section hinge fitting removal

(2) Horizontal stabilizer center section hinge fitting installation.

B. The horizontal stabilizer center section hinge fitting is referred to as the "hinge fitting".

C. This procedure is applicable for the left and right hinge fittings.

TASK 27-41-31-000-801

2. Horizontal Stabilizer Center Section Hinge Fitting Removal

(Figure 401, Figure 402)

A. References

Reference	Title

E. Prepare for the Removal

SUBTASK 27-41-31-020-001

WARNING MAKE SURE THAT ALL PERSONNEL, AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(1) Remove the horizontal stabilizers (TASK 27-41-11-000-801).

SUBTASK 27-41-31-020-002

(2) Remove the stabilizer to body front spar sliding seals and pedestals (TASK 53-31-31-000-801, TASK 53-31-31-000-802).

NOTE: This will give additional space for the stabilizer center section to move forward.

SUBTASK 27-41-31-860-001

(3) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	8	C00544	FLIGHT RECORDER POSITION SENSOR

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-31-860-002

WARNING MAKE SURE THAT ALL PERSONNEL, AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(4) Make sure the horizontal stabilizer is in the neutral position, if not, do these steps:

(a) If it is installed, remove the lock, SPL-1672 (Figure 401).

(b) On the control stand, set the stabilizer trim wheel to put the horizontal stabilizer at zero degrees (4 units of trim).

SUBTASK 27-41-31-480-001

(5) Install the lock, SPL-1672, on the stabilizer trim wheel at the control stand (Figure 401):

(a) Turn the trim wheel to put the handle at the top of the wheel.

(b) Adjust the height of the trim lock to put the trim wheel handle correctly on the yoke.

(c) Install the pin through the yoke.

(d) Install the safety pin.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-31-010-001

(6) Open this access door:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-41-31-010-002

(7) For the left hinge fitting, do this step:

(a) Open these access panels:

Number	Name/Location
331A	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer To Body
331AZ	Horizontal Stabilizer, Access Panel, Inboard L.E. Closure Rib
332AB	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer to Body
333AB	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer to Body
333AZ	Horizontal Stabilizer, Access Panel, Inboard T.E. Closure Rib

SUBTASK 27-41-31-010-003

(8) For the right hinge fitting, do this step:

(a) Open these access panels:

Number	Name/Location
341A	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer To Body
341AZ	Horizontal Stabilizer, Access Panel - Inbd L.E. Closure Rib
342AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
343AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
343AZ	Horizontal Stabilizer, Access Panel - Inbd T.E. Closure Rib

F. Hinge Fitting Removal

(Figure 402)

SUBTASK 27-41-31-010-004

(1) Remove bracket [57], bracket [58], bracket [59], bracket [61], bracket [62] and wire bundle [60].

SUBTASK 27-41-31-480-002

(2) Use wood beam, STD-9463, or wood beams that are approximately 4 in. (10 cm) by 4 in. (10 cm) cross-section to hold the horizontal stabilizer center section (Figure 402).

(a) Use as many wood beams, STD-9463, or wood beams as necessary to make sure that the horizontal stabilizer center section is level and supported before the hinge pin [26] is removed.

SUBTASK 27-41-31-020-003

(3) Remove the hinge fittings [24] from the bulkhead support structure:

NOTE: Both hinge fittings [24] are to be removed.

(a) Remove the pin [20], nut [19], and washer [21].

1) Discard the pin [20].

(b) Remove the pin [22], nut [18], bushing spacer [23].

1) Discard the pin [22].

(c) Remove the bolts [2] and washers [3] from the bushing retainer [1].

(d) Remove the bushing retainer [1].

(e) Use the set, SPL-2026, and push out these parts:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) The hinge insert pin [27]
2) The bushing retainer [25]
3) The hinge pin [26].

(f) To remove the adjustable hinge bushing [28], bushing spacer [16], and hinge bushing [17], do these steps:

1) Turn the adjustable hinge bushing [28] to remove it.

NOTE: The adjustable hinge bushing [28] has threads and must be turned for removal or installation.

2) Remove the bushing spacer [16] and hinge bushing [17].

NOTE: The bushing spacer [16] will come off when you remove the adjustable hinge bushing [28].

SUBTASK 27-41-31-020-004

(4) Remove the upper thrust brace [38] and lower thrust brace [39]:

(a) Remove the pin [32], nut [31], washer [30], and bolt [29] that attach the upper thrust brace [38] and lower thrust brace [39] to the thrust brace fitting [51].

1) Use a marker or a pin to make marks on the upper thrust brace [38] and lower thrust brace [39] to help make the installation easier.

a) Do not use sharp objects to make marks.

(b) Remove the pin [37], nut [36], washer [35], and bolt [45].

SUBTASK 27-41-31-020-005

(5) Remove the thrust brace fitting [51] from the hinge fitting [24]:

(a) Remove the nuts [50], washers [49], washers [48], and bolts [47] that attach the thrust brace fitting [51] to the hinge fitting [24].

1) Use a marker or pen to make marks on the thrust brace fitting [51] to help make the installation easier.

a) Do not use sharp objects to make marks.

(b) Remove the thrust brace fitting [51] and shim [46].

SUBTASK 27-41-31-020-006

(6) Remove the fail safe link [10] from the hinge fitting [24]:

(a) Remove the nuts [7], washers [5], washers [6], bolt [4], and bolt [9].

(b) Remove the bonding jumper [8].

(c) Remove the pin [56], nut [15], washer [14], washer [13], and bolt [12].

1) Discard the pin [56].

(d) Remove the fail safe link [10] and filler [11].

SUBTASK 27-41-31-020-007

(7) Remove the hinge fitting [24]:

(a) Remove the hi-locs [52] from the bracket [53].

(b) Remove the hi-locs [54] from the bracket [55].

(c) Remove the pin [44], nut [43], washer [42], and bolt [40] from the hinge fitting [24].

1) Discard the pin [32].

(d) Remove the pin [37], nut [36], washer [35], washer [34] and bolt [33] from the hinge fitting [24].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Discard the pin [37].

(e) With the boards in place, carefully move the horizontal stabilizer center section forward as much as the cutout in the fuselage structure will let you.

NOTE: Use as many maintenance personnel as necessary on the left and right sides of the rear spar connection to lift and move forward.

NOTE: With the boards in position, the Center Section will be able to move approximately 1.5 in. (3.8 cm) forward.

1) Make sure that the horizontal stabilizer center section does not hit the neutral shift input rods.

NOTE: The neutral shift input rods can be damaged if they are hit by the horizontal stabilizer center section.

(f) Move the hinge fitting [24] in a clockwise or counterclockwise direction while you move it back and forth until it is removed.

1) If moved in either the clockwise or counterclockwise direction, alternate back and forth until the hinge fitting comes out.

(g) Remove the hinge fitting [24] from the airplane.

G. Hinge Fitting Installation

(Figure 402)

SUBTASK 27-41-31-420-001

(1) Install each hinge fitting [24]:

(a) Lubricate the bolt threads of bolt [33] and bolt [40] with grease, D00633.

(b) Put the hinge fittings [24] in their positions.

(c) Install the bolt [33], washer [34], washer [35], and nut [36].

1) Tighten the nut [36] to 2750 ±550 in-lb (310.7 ±62.1 N·m).

2) Carefully move the horizontal stabilizer center section into its position.

3) Install the new pin [37].

a) Tighten nut [36] if it is necessary to get the pin hole alignment but do not exceed 5300 in-lb (598.8 N·m).

(d) Install the bolt [40], washer [41], washer [42], and nut [43].

1) Tighten the nut [43] to 5925 ±525 in-lb (669 ±60 N·m).

2) Install the new pin [44].

a) Tighten the nut [43] if it is necessary to get the pin hole alignment but do not exceed 8600 in-lb (971.7 N·m).

SUBTASK 27-41-31-420-002

(2) Install the fail safe link [10] for each hinge fitting [24]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Lubricate the bolt [12] and bolt threads with grease, D00633.

(b) Apply sealant, A00247, to the bolt [4] and bolt [9].

(c) Put the fail safe link [10] and filler [11] on the hinge fitting [24].

(d) Install the bolt [12], washer [13], washer [14], and nut [15].

1) Tighten the nut [15] to 1415 ±115 in-lb (159.9 ±13.0 N·m).

2) Install the new pin [56].

a) Tighten the nut [15] if it is necessary to get the pin hole alignment but do not exceed 2000 in-lb (226.0 N·m).

(e) Install the bolt [4], washers [5], washers [6], and nuts [7].

1) Tighten the nuts [7] to 530 ±160 in-lb (59.9 ±18.1 N·m).

(f) Install the bolt [9], washers [5], washers [6], bonding jumper [8] (between washers [6]), and nuts [7].

1) Tighten the nuts [7] to 530 ±160 in-lb (59.9 ±18.1 N·m).

2) Use an intrinsically safe approved bonding meter, COM-1550, to make sure that the resistance between the free end of the bonding jumper [8] and fail safe link [10] is 0.00216 ohm (2.16 milliohms) or less.

3) Apply sealant, A00247, at the end of the bonding jumper [8].

SUBTASK 27-41-31-420-003

(3) Install the thrust brace fitting [51] on each hinge fitting [24]:

(a) Lubricate the bolts [47] with sealant, A00247.

(b) Put the thrust brace fitting [51] and shim [46] on the hinge fitting [24].

1) Remove or add shim [46] until you can install the bolts [47] and nuts [50] easily.

(c) Install the bolts [47], washers [48], washers [49], and nuts [50].

1) Tighten the nuts [50] to 850 ±220 in-lb (96.0 ±24.9 N·m).

SUBTASK 27-41-31-420-004

(4) Connect the upper thrust brace [38] and lower thrust brace [39] to the thrust brace fitting:

(a) Lubricate the bolt [29], bolt [45], and bolt threads with grease, D00633.

(b) Put the lower thrust brace [39] and upper thrust brace [38] in their positions.

(c) Install the bolt [29], washer [30], and nuts [31].

1) Tighten the nuts [31] to 490 ±50 in-lb (55 ±6 N·m).

2) Install the new pin [32].

a) Tighten the nuts [31] if it is necessary to get the pin hole alignment, but do not exceed 650 in-lb (73.4 N·m).

(d) Install the bolt [45], washers [35], and nuts [36].

1) Tighten the nuts [36] to 490 ±50 in-lb (55 ±6 N·m).

2) Install the new pin [37].

NOTE:

a) Tighten the nuts [36] if it is necessary to get the pin hole alignment, but do not exceed 650 in-lb (73.4 N·m).

SUBTASK 27-41-31-220-001

(5) Do a check of the dimension between the hinge fittings [24] and bulkhead support structure:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Attach an L-angle shape to the forward side of the bulkhead flange to use as a reference plane.

(b) Install the dial indicator, STD-1238.

(c) Measure the dimension between the hinge fitting [24] and the bulkhead support structure.

SUBTASK 27-41-31-420-005

(6) Install the hinge fittings [24] to the bulkhead support structure:

(a) Install each adjustable hinge bushing [28]:

1) Install the adjustable hinge bushing [28] by hand until it touches the hinge fitting bearing.

2) Use the dial indicator, STD-1238, to measure the dimension between the hinge fitting [24] and the bulkhead support structure.

3) Make sure that this dimension is the same as you measured before.

4) If it is necessary, loosen or tighten the adjustable hinge bushing [28] until you get the correct dimension.

(b) Install the hinge bushing [17]:

1) Lubricate the hinge bushing [17] with compound, D50004.

2) Install the hinge bushing [17].

(c) Install the hinge pin [26]:

1) Lubricate hinge pin [26] and protector, SPL-2036, with grease, D00633.

NOTE: The protector, SPL-2036, is used to protect the head of the hinge pin [26].

2) Use the protector, SPL-2036, to install the hinge pin [26].

CAUTION

DO NOT USE TOO MUCH FORCE WHEN YOU INSTALL THE HINGE PIN. DAMAGE TO THE HINGE PIN CAN OCCUR.

a) Do not apply too much force to install the hinge pin [26].

(d) Install the bushing spacer [23] and nut [18].

1) Tighten the nut [18] by hand.

(e) Install the bolts [2] and washers [3] to attach the bushing retainer [1] to the hinge fitting [24].

(f) Tighten the bolts [2] to 62.5 ±12.5 in-lb (7.1 ±1.5 N·m).

(g) Install the bushing retainer [25] on the adjustable hinge bushing [28].

CAUTION

DO NOT APPLY TORQUE TO THE WRENCH FLATS ON THE HINGE PINS. THIS CAN CAUSE DAMAGE TO THE EQUIPMENT.

(h) Temporarily remove the bushing retainer [25].

(i) Tighten the nut [18] to 750 ±100 in-lb (84.7 ±11.3 N·m).

(j) If the pin holes do not align, tighten the nut [18] a maximum 30 degrees as necessary to align the nearest pin hole.

(k) Use the dial indicator, STD-1238, to measure the dimension between the hinge fitting [24] and bulkhead support structure.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that the dimension is the same as you measured before and after you installed the adjustable hinge bushing [28] in ± 0.005 in. (0.127 mm).

(l) Do a check of the clearance between the bulkhead support structure and hinge bushing [17].

1) Remove the bolts [2] and washers [3] to remove the bushing retainer [1].

2) Do a check of the clearance between the bulkhead support structure and hinge bushing [17].

3) Make sure that the clearance is 0.12 +0.07 / -0.08 in. (3.05 +1.78 / -2.03 mm).

4) Install the bolts [2] and washers [3] to attach the bushing retainer [1] to the hinge fitting [24].

(m) Install the bushing retainer [25] with the hinge insert pin [27].

1) Turn the hinge insert pin [27] until you align the pin holes.

CAUTION

DO NOT APPLY TORQUE TO THE WRENCH FLATS ON THE HINGE PINS. THIS CAN CAUSE DAMAGE TO THE EQUIPMENT.

(n) Install the washer [21] and nut [19].

1) Tighten the nut [19] to a maximum of 50 in-lb (5.6 N·m).

2) If the pin hole of the nut [19] does not align, loosen the nut [19] a maximum of 30 degrees as necessary to align the nearest pin hole of the nut [19].

3) Install the new pin [20].

(o) Install the hi-locs [52] to attach the bracket [53] to the bulkhead support structure.

(p) Install the hi-locs [54] to attach the bracket [55] to the bulkhead support structure.

(q) Remove the wood beams, STD-9463, that held the horizontal stabilizer center section (Figure 402).

SUBTASK 27-41-31-410-001

(7) Install the bracket [57], bracket [58], bracket [59], bracket [61], bracket [62] and wire bundle [60].

SUBTASK 27-41-31-080-001

(8) Remove the L-shape and the dial indicator, STD-1238.

SUBTASK 27-41-31-420-006

(9) Install the stabilizer to body front spar sliding seals and pedestal (TASK 53-31-31-400-801, TASK 53-31-31-400-802)..

SUBTASK 27-41-31-420-007

(10) Install the horizontal stabilizers (TASK 27-41-11-400-801).

SUBTASK 27-41-31-420-008

(11) Install the stabilizer to body front spar sliding seals and pedestals (TASK 53-31-31-400-801, TASK 53-31-31-400-802).

SUBTASK 27-41-31-080-002

(12) Make sure that the lock, SPL-1672, has been removed from the stabilizer trim wheel at the control stand (Figure 401).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-31-710-001

(13) Move the trim control wheel to make sure that the stabilizer operates smoothly through the full travel between the jackscrew stops.

SUBTASK 27-41-31-220-002

(14) Make sure that the clearance between the jackscrew support fitting and the fuselage structure is 0.030 ±0.020 in. (0.76 ±0.51 mm) on the two sides of the stabilizer.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-41-31-410-002

(1) For the left hinge fitting, do this step:

(a) Close these access panels:

Number	Name/Location
331A	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer To Body
331AZ	Horizontal Stabilizer, Access Panel, Inboard L.E. Closure Rib
332AB	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer to Body
333AB	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer to Body
333AZ	Horizontal Stabilizer, Access Panel, Inboard T.E. Closure Rib

SUBTASK 27-41-31-410-003

(2) For the right hinge fitting, do this step:

(a) Close these access panels:

Number	Name/Location
341A	Horizontal Stabilizer, Gap Cover, Horizontal Stabilizer To Body
341AZ	Horizontal Stabilizer, Access Panel - Inbd L.E. Closure Rib
342AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
343AB	Horizontal Stabilizer, Gap Cover - H. Stab. to Body
343AZ	Horizontal Stabilizer, Access Panel - Inbd T.E. Closure Rib

SUBTASK 27-41-31-390-001

(3) Apply an aerodynamic smoother sealant, A02315, to all non-bonded structural components contacting exterior skins.

NOTE: Sealant does not need to be applied to gaps between panels that are used for regular access as long as they are less than limits given in the Structural Repair Manual (SRM SUBJECT 51-10-01).

(a) Do this task: Aerodynamic Smoother Application, TASK 51-22-00-390-809.

SUBTASK 27-41-31-410-004

(4) Close this access door:

Number	Name/Location
318BR	Tailcone Access Door

SUBTASK 27-41-31-860-003

(5) Make sure that the stabilizer trim cutout switches are set to the NORMAL position.

SUBTASK 27-41-31-860-004

(6) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	8	C00544	FLIGHT RECORDER POSITION SENSOR

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STABILIZER FORWARD CONTROL MECHANISM - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the stabilizer forward control mechanism

(2) An installation of the stabilizer forward control mechanism.

B. The stabilizer forward control mechanism is referred to as the "forward mechanism" in this procedure.

TASK 27-41-41-000-801

2. Stabilizer Forward Control Mechanism Removal

(Figure 401, Figure 402)

A. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Access Panels

Number	Name/Location
112A	Forward Access Door
311BL	Stabilizer Trim Access Door

C. Prepare for the Removal

SUBTASK 27-41-41-860-003

(1) Move the stabilizer to the full APL NOSE UP position.

SUBTASK 27-41-41-860-004

(2) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-41-010-001

(3) To get access to the forward stabilizer forward control mechanism [43], do this step:

(a) Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-41-41-010-002

(4) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Forward Mechanism Removal

SUBTASK 27-41-41-820-001

CAUTION MAKE SURE THAT THE CHAIN IS LOOSE BEFORE YOU RELEASE THE CABLE TENSION. TOO MUCH CABLE TENSION CAN CAUSE DAMAGE TO THE CHAIN.

(1) Adjust the upper adjusting nuts [24] of the aft support link [22] to loosen the chain [8].

SUBTASK 27-41-41-020-014

(2) Remove the lockwire from the upper turnbuckle [35].

SUBTASK 27-41-41-020-013

(3) Remove the nut [34], washer [33], bushing [32], washer [31], washer [51], washer [50], and bolt [30] to disconnect the upper turnbuckle [35] from the bracket.

SUBTASK 27-41-41-020-002

(4) Loosen the lower turnbuckle [1] to release the cable tension.

SUBTASK 27-41-41-020-003

(5) Remove the nuts [42] and washers [41] to remove the cable guard [40] from the cable drum [39].

SUBTASK 27-41-41-020-004

(6) Remove the STA cable from the bottom of the cable drum [39].

(a) Put a 50 lbf (222.4 N) load on the trim control wheel to extend the STB cable and make the removal of the STA cable easier.

(b) Install a tag to the STA cable for easy installation.

SUBTASK 27-41-41-020-005

(7) Disconnect the flexible shaft [21] from the forward stabilizer forward control mechanism [43].

SUBTASK 27-41-41-020-006

(8) Turn the trim control wheel until the connector link [11] of the chain [8] is between the idler sprocket [9] and the forward mechanism sprocket [10].

SUBTASK 27-41-41-020-007

(9) Remove the pins [12] from the connector link [11].

SUBTASK 27-41-41-020-008

(10) Disconnect the chain [8] at the connector link [11].

(a) Make sure that the loose ends of the chain [8] are clear of the forward stabilizer forward control mechanism [43].

SUBTASK 27-41-41-020-009

(11) Remove the STB cable from the top of the cable drum [39].

(a) Install a tag to the STB cable for easy installation.

SUBTASK 27-41-41-020-010

(12) Remove the forward stabilizer forward control mechanism [43]:

(a) Remove the nut [7], washer [6], washers [5], bushing [4], washer [3], and bolt [2] to disconnect the lower turnbuckle [1] from the brackets.

(b) Hold the forward stabilizer forward control mechanism [43].

(c) Remove nut [29], washer [28], bushing [27], washer [26], and bolt [25] from the forward support link [37].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Remove the nut [16], washer [15], bushing [14], washer [52], and bolt [13] from the aft support link [22].

(e) Remove the nut [20], washer [19], bushing [18], washer [53], and bolt [17] from the aft support link [22].

(f) Remove the forward stabilizer forward control mechanism [43] from the airplane.

END OF TASK

G. Stabilizer Forward Control Mechanism Installation

SUBTASK 27-41-41-420-001

(1) Install the forward stabilizer forward control mechanism [43].

(a) Put the forward stabilizer forward control mechanism [43] in its position.

(b) Install the bolt [17], washer [53], bushing [18], washer [19], and nut [20] to attach the aft support link [22] to the structure.

1) Apply compound, C00528, to the washer [53].

(c) Install the bolt [13], washer [52], bushing [14], washer [15], and nut [16] to attach the aft support link [22] to the structure.

1) Apply compound, C00528, to the washer [52].

(d) Install the bolts [25], washers [26], bushings [27], washers [28], and nuts [29] to attach the forward support link [37] to the structure.

1) Apply compound, C00528, to the bushings [27].

(e) Install the bolt [2], washer [3], bushing [4], washers [5], washer [6], and nut [7] to connect the lower turnbuckle [1] to the brackets.

SUBTASK 27-41-41-420-002

(2) Adjust the lower turnbuckle [1] to get approximately 12.43 in. (315.7 mm) between the connections.

(a) Make sure that there is approximately equal extension of the screws on each side of the sleeve.

SUBTASK 27-41-41-020-011

(3) Connect the chain [8].

(a) Put the chain [8] on the idler sprocket [9] and the forward mechanism sprocket [10].

(b) If it is necessary to correct the length of the chain [8], remove the links from the chain [8].

1) Install the cotter pins.

(c) Connect the chain [8] at the connector link [11].

(d) Install the pins [12] on the outboard side of the chain [8].

SUBTASK 27-41-41-820-002

(4) Adjust the chain [8] tension.

(a) Apply a 5 lbf (22.2 N) force at approximately 4.5 ±1.0 in. (114 ±26 mm) from where the chain [8] touches the forward mechanism sprocket [10].

(b) Make sure that the movement of the chain [8] is 0.25 ±0.07 in. (6.4 ±1.8 mm).

(c) If it is necessary, do these steps to get the correct chain movement:

1) Adjust the upper adjusting nuts [24] and upper adjusting nut [38].

2) Make sure that all three A dimensions equal ± 0.06 in. (1.52 mm) from each other:

a) Measure the A dimensions of left and right aft support link [22].

NOTE: The A dimension is the distance of the aft support link between the center of the two connection bolts.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

b) Measure the A dimension of the forward support link [37].

NOTE: The A dimension is the distance of the forward support link between the center of the two connection bolts.

c) Make sure that all three A dimensions are ± 0.06 in. (1.52 mm) from each other.

d) Install MS20995NC32 lockwire, G01912.

SUBTASK 27-41-41-420-003

(5) Connect the STB cable.

(a) Attach the eye of the STB cable in the slot in the top of the cable drum [39].

(b) Turn the trim control wheel to wind the STB cable 28-1/2 turns on the front of the cable drum [39].

SUBTASK 27-41-41-420-004

(6) Connect the STA cable.

(a) Attach the STA cable to the cable drum [39].

1) Use a force gauge, COM-1557, to put a 50 lbf (222 N) load on the trim control wheel to pull on the STB cable and make installation of the cable STA easier.

(b) Wind the STA cable approximately 4-1/2 turns on the front of the cable drum [39].

SUBTASK 27-41-41-420-005

(7) Install the washers [41] and nuts [42] to attach the cable guard [40] to the forward stabilizer forward control mechanism [43].

SUBTASK 27-41-41-860-005

(8) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-41-820-003

(9) Adjust the cables STA and STB (TASK 27-41-00-820-801).

SUBTASK 27-41-41-420-006

(10) Connect the flexible shaft [21] to the stabilizer forward control mechanism [43].

(a) Make sure that the splines engage before you tighten the union.

SUBTASK 27-41-41-420-010

(11) Install the bolt [30], washer [50], washer [51], washer [31], bushing [32], washer [33], and nut [34] to connect the upper turnbuckle [35] to the brackets.

(a) Install MS20995NC32 lockwire, G01912.

NOTE: The lockwire must be attached to the tab of the washer of the upper turnbuckle.

SUBTASK 27-41-41-710-001

(12) Do this task: Stabilizer Manual Trim and Trim Indicator - Test, TASK 27-41-00-700-801.

COLUMN CUTOUT SWITCH - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Column cutout switch removal.

(2) Column cutout switch installation.

B. This procedure is applicable for the captain's and first officer's column cutout switches.

(1) Electrical connectors D12156 and D817 are located on the captain's column cutout switch, M1983.

(2) Electrical connectors D10553, D2257 and D3124 are located on the first officer's column cutout switch, M1201.

TASK 27-41-51-000-801

SUBTASK 27-41-51-010-002

(3) Remove this access panel for the captain's cutout switch (TASK 53-14-01-020-801).

(a) Remove this access panel:

Number	Name/Location
113AC	Fwd Nose Wheel Well Upper Access Panel

SUBTASK 27-41-51-010-003

(4) Remove this access panel for the first officer's cutout switch (TASK 53-14-01-020-801).

(a) Remove this access panel:

Number	Name/Location
114AC	Fwd Nose Wheel Well Upper Access Panel

E. Column Cutout Switch Removal

SUBTASK 27-41-51-020-001

(1) Disconnect the electrical connectors for the column cutout switches.

SUBTASK 27-41-51-020-002

(2) Do these steps before the removal of the captain's column cutout switch [9]:

(a) Remove the nut [6], washer [5], and bolt [4] to disconnect the rod assembly [8] from the column cutout switch arm [3].

(b) Remove the screw [13] from the standoffs on the column cutout switches.

SUBTASK 27-41-51-020-003

(3) Do these steps to remove the captain's column cutout switch [9]:

(a) Remove the bolts [1] and washers [2] that attach the captain's column cutout switch [9] to the beam assembly.

(b) Remove the captain's column cutout switch [9].

SUBTASK 27-41-51-020-006

(4) Do these steps before the removal of the first officer's column cutout switch [12]:

(a) Remove the nut [6], washer [5], and bolt [4] to disconnect the rod assembly [8] from the column cutout switch arm [3].

(b) Remove the screw [13] from the standoffs on the column cutout switches.

SUBTASK 27-41-51-020-004

(5) Do these steps to remove the first officer's column cutout switch [12]:

(a) Remove the bolts [10] and washers [11] that attach the first officer's column cutout switch [12] to the beam assembly.

(b) Remove the first officer's column cutout switch [12].

SUBTASK 27-41-51-020-005

(6) If it is necessary, remove the control column position sensor from the column cutout switch. To remove it, do this task: Control Column Position Sensor Removal, TASK 31-31-52-000-801.

G. Column Cutout Switch Installation

SUBTASK 27-41-51-420-001

(1) If it is necessary, install the control column position sensor to the column cutout switch. To install it, do this task: Control Column Position Sensor Installation, TASK 31-31-52-400-801.

SUBTASK 27-41-51-420-002

(2) Do these steps to install the captain's column cutout switch [9]:

(a) Put the captain's column cutout switch [9] in its position.

(b) Install the bolts [1] and washers [2] to attach the captain's column cutout switch [9] to the beam assembly.

(c) Connect the electrical connectors.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-51-420-003

(3) Do these steps to install the first officer's column cutout switch [12]:

(a) Put the first officer's column cutout switch [12] in its position.

(b) Install the bolts [10] and washers [11] to attach the first officer's column cutout switch [12] to the beam assembly.

(c) Connect the electrical connectors.

SUBTASK 27-41-51-420-004

(4) Install the screw [13] to the standoffs on the column cutout switches.

SUBTASK 27-41-51-420-005

(5) Connect the rod assembly [8] to the column cutout switch arm [3]:

(a) Install the rig pin E-1 from the rigging pin kit, SPL-1585 through the left elevator forward control quadrant.

(b) Install the rig pin ST-4 from the rigging pin kit, SPL-1585 in the column cutout switch.

(c) Remove the lockwires from the rod assembly [8].

(d) Turn the jamnuts [7] until you can easily install the bolt [4] that connect the rod assembly [8] to the column cutout switch arm [3].

(e) Install the bolt [4], washer [5], and nut [6] to connect the rod assembly [8] to the column cutout switch arm [3].

(f) Tighten the jamnuts [7].

(g) Install the MS20995C32 lockwires, G01048.

(h) Remove the rig pin E-1 from the left elevator forward control quadrant.

(i) Remove the rig pin ST-4 from the control column switch.

SUBTASK 27-41-51-710-001

(6) Do this task: Column Cutout Switches Test, TASK 27-41-00-710-801.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-41-51-860-002

(1) Make sure that these circuit breakers are closed:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
C	8	C00544	FLIGHT RECORDER POSITION SENSOR

210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
311	Area Aft of Pressure Bulkhead - Left
312	Area Aft of Pressure Bulkhead - Right

D. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

E. Prepare for the Removal

SUBTASK 27-41-71-860-001

(1) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-71-010-001

(2) To get access to the stabilizer trim motor [1], do this step:

Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Stabilizer Trim Motor Removal

SUBTASK 27-41-71-020-001

(1) Remove the stabilizer trim motor [1]:

(a) Clean the electrical connectors [2] using thermoplastic cleaner, B50124, (isopropyl alcohol) (SWPM 20-60-01).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Disconnect the electrical connectors [2] from the stabilizer trim motor [1].

NOTE: A blue filter seal can be found in the connector. The filter is for Electro-Magnetic Interference (EMI) protection and must stay in the connector.

(c) Install protective caps on the electrical connectors [2].

(d) Remove the nuts [6], washers [5], washers [11] and bolts [4] that attaches the stabilizer trim motor [1] to the stabilizer trim actuator [3].

(e) Remove the nut [10], washer [9], washer [8] and bolt [7] that attaches the stabilizer trim motor [1] to the stabilizer trim actuator [3].

(f) Remove the stabilizer trim motor [1].

(g) Put a cover on the mounting pad to keep unwanted materials out of the stabilizer trim actuator [3].

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

G. Stabilizer Trim Motor Installation

SUBTASK 27-41-71-020-002

(1) Remove the cover from the mounting pad.

SUBTASK 27-41-71-160-001

(2) Make sure that the mating surfaces of the stabilizer trim motor [1] and stabilizer trim actuator [3] are clean and free of paint.

SUBTASK 27-41-71-640-001

(3) Fill the internal spline of the stabilizer trim actuator [3] with grease, D00633.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-71-420-001

(4) Install the stabilizer trim motor [1].

(a) Engage the splined shaft of the stabilizer trim motor [1] with the internal spline of the stabilizer trim actuator [3].

(b) Install the bolts [4], washer [5], washers [11], and nuts [6].

(c) Install the bolt [7], washer [8], washer [9], and nut [10].

(d) Connect the electrical connectors [2].

NOTE: A blue filter seal can be found in the connector. The filter is for Electro-Magnetic Interference (EMI) protection and must stay in the connector.

SUBTASK 27-41-71-220-001

(5) Measure the electrical bonding resistance between the stabilizer trim motor [1] and airplane structure (SWPM 20-20-00) (Figure 401).

(a) Use an intrinsically safe approved bonding meter, COM-1550.

(b) Make sure that the electrical bonding resistance is 0.0025 ohms (2.5 milliohms) or less.

SUBTASK 27-41-71-390-001

(6) Apply sealant, A50337, to fully cover the bolt [7], washer [8], washer [9], and nut [10].

SUBTASK 27-41-71-860-002

(7) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-71-820-001

(8) Do this task: Stabilizer Trim Motor Test, TASK 27-41-71-700-801.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-41-71-410-001

(1) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STABILIZER TRIM MOTOR - ADJUSTMENT/TEST

1. General

A. This procedure has one task. The task is the test of the stabilizer trim motor.

TASK 27-41-71-700-801

2. Stabilizer Trim Motor Test

A. References

Reference	Title
22-11-81-710-801	Stabilizer Trim Motor Autopilot Test (P/B 501)
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
330	Subzone - Left Horizontal Stabilizer and Elevator
340	Subzone - Right Horizontal Stabilizer and Elevator

C. Prepare for the Test

SUBTASK 27-41-71-860-004

(1) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-71-860-005

(2) Make sure that the STAB TRIM PRI (S272) and B/U (S149) switches on the aft area of the control stand are in the NORMAL position.

SUBTASK 27-41-71-860-006

(3) Make sure that the STAB TRIM override switch, on the P8 panel, is in the NORM position.

NOTE: The override switch is on the same control panel for the FLT DK DOOR.

D. Stabilizer Trim Motor Test

SUBTASK 27-41-71-710-001

(1) Do the test of the stabilizer trim motor:

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Supply system B hydraulic power (TASK 29-11-00-860-801).

(b) Set the flaps to a position from 1-40 units.

1) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE DOWN position.

a) Make sure that the stabilizer leading edge moves up.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

b) Release the stabilizer trim control switches.

2) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE UP position.
   a) Make sure that the stabilizer leading edge moves down.
   b) Release the stabilizer trim control switches.
3) Push and hold the stabilizer trim control switches on the first officer's control wheel to the NOSE DOWN position.
   a) Make sure that the stabilizer leading edge moves up.
   b) Release the stabilizer trim control switches.
4) Push and hold the stabilizer trim control switches on the first officer's control wheel to the NOSE UP position.
   a) Make sure that the stabilizer leading edge moves down.
   b) Release the stabilizer trim control switches.
5) Check the travel time for the stabilizer leading edge to move from the NOSE UP position to the NOSE DOWN position:
   a) Push the stabilizer trim control switches on the captain's control wheel to the NOSE UP position and hold until the stabilizer reaches it's lower limit of travel.
   b) Push the stabilizer trim control switches on the captain's control wheel to the NOSE DOWN position and hold until the stabilizer reaches it's upper limit of travel.
      <1> Make sure that the time for the stabilizer leading edge to move from its lower limit of travel to its upper limit of travel is between 31-39 seconds.
      <2> Make sure that the operation is smooth and there is no unusual noise.
6) Use the stabilizer trim control switches on the captain's control wheel to move the stabilizer many times in the two directions, one after the other for 3 seconds each.
   a) Make sure that the operation is smooth and there is no unusual noise.
7) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE UP position until the system comes to the full trim speed.
   a) Move the stabilizer trim control switches momentarily to OFF and then to the NOSE DOWN position.
   b) Make sure that the stabilizer leading edge moves up immediately after you move the stabilizer trim control switches to the NOSE DOWN position.
   c) Release the stabilizer trim control switches after confirming that the leading edge moves up.
8) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE DOWN position until the system comes to the full trim speed.
   a) Move the stabilizer trim control switches momentarily to OFF and then to the NOSE UP position.
   b) Make sure that the stabilizer leading edge moves down immediately after you move the stabilizer trim control switches to the NOSE UP position.
   c) Release the stabilizer trim control switches after confirming that the leading edge moves down.
9) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE UP position until the system comes to full trim speed.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Release the stabilizer trim control switches.

b) Make sure that the stabilizer trim wheel moves no more than 2.5 turns (900 degrees).

10) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE DOWN position until the system comes to full trim speed.

a) Release the stabilizer trim control switches.

b) Make sure that the stabilizer trim wheel moves no more than 2.5 turns (900 degrees).

(c) Set the flaps to the full up position.

1) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE DOWN position.

a) Make sure that the stabilizer leading edge moves up.

b) Release the stabilizer trim control switches.

2) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE UP position.

a) Make sure that the stabilizer leading edge moves down.

b) Release the stabilizer trim control switches.

3) Check the travel time for the stabilizer leading edge to move from the NOSE UP position to the NOSE DOWN position:

a) Push the stabilizer trim control switches on the captain's control wheel to the NOSE UP position and hold until the stabilizer reaches it's lower limit of travel.

b) Push the stabilizer trim control switches on the captain's control wheel to the NOSE DOWN position and hold until the stabilizer reaches it's upper limit of travel.

<1> Make sure that the time for the stabilizer leading edge to move from its lower limit of travel to its upper limit of travel is between 47–58 seconds.

<2> Make sure that the operation is smooth and there is no unusual noise.

4) Use the stabilizer trim control switches on the captain's control wheel to move the stabilizer many time in the two directions one after the other for 3 seconds each.

a) Make sure that the operation is smooth and there is no unusual noise.

5) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE UP position until the system comes to the full trim speed.

a) Move the stabilizer trim control switches momentarily to OFF and then to the NOSE DOWN position.

b) Make sure that the stabilizer leading edge moves up immediately after you move the stabilizer trim control switches to the NOSE DOWN position.

c) Release the stabilizer trim control switches.

6) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE DOWN position until the system comes to the full trim speed.

a) Move the stabilizer trim control switches momentarily to OFF and then to the NOSE UP position.

b) Make sure that the stabilizer leading edge moves down immediately after you move the stabilizer trim control switches to the NOSE UP position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

c) Release the stabilizer trim control switches.

7) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE UP position until the system comes to full trim speed.

a) Release the stabilizer trim control switches.

b) Make sure that the stabilizer trim wheel moves no more than 0.5 turns (180 degrees).

8) Push and hold the stabilizer trim control switches on the captain's control wheel to the NOSE DOWN position until the system comes to full trim speed.

a) Release the stabilizer trim control switches.

b) Make sure that the stabilizer trim wheel moves no more than 0.5 turns (180 degrees).

(d) Remove system B hydraulic power (TASK 29-11-00-860-805).

(e) Do this task: Stabilizer Trim Motor Autopilot Test, TASK 22-11-81-710-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STABILIZER BALL NUT AND JACKSCREW GEARBOX - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the primary stabilizer ball nut and jackscrew gearbox

(2) An installation of the stabilizer ball nut and jackscrew gearbox.

B. The stabilizer ball nut and jackscrew gearbox is referred to as the stabilizer trim actuator in this procedure.

C. The stabilizer trim actuator includes the ballnut, jackscrew, and jackscrew gearbox.

27-CMR-08

TASK 27-41-81-000-801

2. Stabilizer Ball Nut and Jackscrew Gearbox Removal

(Figure 401, Figure 402, Figure 403)

NOTE: This procedure is a scheduled maintenance task.

C. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
311	Area Aft of Pressure Bulkhead - Left
312	Area Aft of Pressure Bulkhead - Right

D. Access Panels

Number	Name/Location
112A	Forward Access Door
311BL	Stabilizer Trim Access Door

E. Prepare for the Removal

SUBTASK 27-41-81-860-001

(1) Set the stabilizer leading edge to the full down (airplane nose up) position.

SUBTASK 27-41-81-860-002

(2) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-81-010-001

(3) To get access to the stabilizer forward control mechanism, do this step:

(a) Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-41-81-010-002

(4) To get access to the stabilizer trim actuator, do this step:

(a) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-41-81-820-001

CAUTION

MAKE SURE THAT THE CHAIN IS LOOSE BEFORE YOU RELEASE THE CABLE TENSION. TOO MUCH CABLE TENSION CAN CAUSE DAMAGE TO THE CHAIN.

(5) Adjust the upper adjusting nuts [5] of the aft support link [6] to loosen the chain (Figure 401).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-81-020-002

(6) Disconnect the upper turnbuckle [4].

SUBTASK 27-41-81-020-003

(7) Loosen the lower turnbuckle [3] to release the tension of the STA cable [66] and STB cable [65] (Figure 401).

SUBTASK 27-41-81-020-004

(8) Do this task: Stabilizer Trim Motor Removal, TASK 27-41-71-000-801.

F. Stabilizer Trim Actuator Removal

SUBTASK 27-41-81-020-005

(1) Remove the clamps [44] for the electrical connectors [47] from the jackscrew gearbox [24].

(a) Remove the nuts [46], washers [45], and bolts [43] to remove the clamps [44] from the jackscrew gearbox [24].

(b) Remove the electrical connectors [47] from the jackscrew gearbox [24].

(c) Install the bolt [43], washers [45], and nuts [46] back to the jackscrew gearbox [24].

SUBTASK 27-41-81-020-006

(2) Remove the cable drum guard [67] and spacers [26] from the cable drum [27].

(a) Remove the pin [83] and castellated nut [82] from the support plate [62] that is attached to the cable drum [27].

1) Discard the pin [83].

(b) Remove the nut [60], washer [59], bolt [57], and washer [58], that attach the cable drum guard [67] to the support plate [62].

(c) Remove the bolts [63], washers [64], support plate [62], spacers [26], and washer [84] from the cable drum [27].

NOTE: Because work space is small, keep the bolts [63] in the support plate [62] and in spacers [26] to aid with the removal procedure.

(d) Remove the bolts [48] and washers [49] that attach the cable drum guard [67] to the cable drum [27].

(e) Remove the cable drum guard [67] and spacers [26].

SUBTASK 27-41-81-020-007

CAUTION

KEEP TENSION ON THE CABLE AT ALL TIMES. WHEN THE CABLE IS DISCONNECTED FROM THE CABLE DRUM, TENSION NEEDS TO BE KEPT ON THE CABLE SO THAT THE CABLE DOES NOT BECOME CAUGHT IN THE CABLE GUARDS ON THE OTHER CABLE DRUM. THIS CAN CAUSE DAMAGE TO THE CABLE AND THE CABLE MAY NEED TO BE REPLACED.

(3) Disconnect the STB cable [65] from the cable drum [27].

(a) Use the force gauge, COM-1557, on the stabilizer trim wheel handle to put a 50 lb (22.7 kg) load on the STA cable [66].

NOTE: This will keep the STA cable on the drum, which will make the removal of the STB cable easier.

SUBTASK 27-41-81-480-001

(4) Install the pinion gear wrench, SPL-10319, on the internal spline of the jackscrew gearbox [24].

SUBTASK 27-41-81-020-008

(5) Move the jackscrew [23] to put the stabilizer leading edge to the full up position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

DO NOT DAMAGE OR KINK THE CABLE WHILE YOU UNWIND IT FROM THE FORWARD CABLE DRUM. THE CABLE CAN KINK BETWEEN THE CABLE GUARD AND THE FORWARD CABLE DRUM WHEN YOU REMOVE THE LAST WRAP OF CABLE. IF YOU REMOVE THE CABLE TOO QUICKLY, YOU CAN CAUSE DAMAGE THE END OF THE CABLE.

CAUTION

KEEP TENSION ON THE CABLE AT ALL TIMES. WHEN THE CABLE IS DISCONNECTED FROM THE CABLE DRUM, TENSION NEEDS TO BE KEPT ON THE CABLE SO THAT THE CABLE DOES NOT BECOME CAUGHT IN THE CABLE GUARDS ON THE OTHER CABLE DRUM. THIS CAN CAUSE DAMAGE TO THE CABLE AND THE CABLE MAY NEED TO BE REPLACED.

(a) When the stabilizer starts to move, pull the STB cable [65] into the tail compartment and wind it on a cable spool, STD-22106.

NOTE: It is necessary to use the cable spool, STD-22106, to prevent damage and maintain tension on the cable.

NOTE: It is recommended that a mechanic watch the cable unwind from the forward cable drum to make sure that no damage occurs to the cable as the last three wraps of cable are slowly unwound from the cable drum.

(b) When the ballnut [28] touches the stops, keep a record of the number of turns of the STA cable [66] on the cable drum [27].

CAUTION

KEEP TENSION ON THE CABLE AT ALL TIMES. WHEN THE CABLE IS DISCONNECTED FROM THE CABLE DRUM, TENSION NEEDS TO BE KEPT ON THE CABLE SO THAT THE CABLE DOES NOT BECOME CAUGHT IN THE CABLE GUARDS ON THE OTHER CABLE DRUM. THIS CAN CAUSE DAMAGE TO THE CABLE AND THE CABLE MAY NEED TO BE REPLACED.

(c) Disconnect the STA cable [66] from the cable drum [27].

SUBTASK 27-41-81-480-002

(6) Install the control cable clamp, SPL-1569, to the cables.

(a) Attach the DO NOT OPERATE tags, STD-858, to the stabilizer trim wheels.

SUBTASK 27-41-81-480-003

WARNING

INSTALL THE HORIZONTAL STABILIZER LOCKS. THE STABILIZER LEADING EDGE CAN MOVE UP QUICKLY WHEN YOU DISCONNECT THE JACKSCREW. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(7) Install the lock, SPL-1678, on the jackscrew fitting [21] (Figure 403).

(a) Install the lower horizontal stabilizer lock.

NOTE: The maximum torque for the lower lock assembly bolts is 12 in-lb (1 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

DO NOT MOVE THE JACKSCREW FITTING INTO THE HORIZONTAL STABILIZER LOCKS. THIS CAN CAUSE DAMAGE TO THE EQUIPMENT.

(b) Turn the motor shaft or cable drum by hand to move the stabilizer leading edge down until the stabilizer truss touches the horizontal stabilizer lock.

(c) Install the upper horizontal stabilizer lock.

NOTE: The maximum torque for the upper lock assembly bolts is 12 in-lb (1 N·m).

1) Make sure that the adjustable leveling feet are adjusted so that they contact the jackscrew fittings [21].

SUBTASK 27-41-81-480-004

(8) Install the equipment, SPL-1728, to the jackscrew gearbox [24] (Figure 403).

(a) Install the hoist adapter to the sleeve of the jackscrew gearbox [24].

(b) Install the hoist bar between the frames at the top of the stabilizer trim compartment.

(c) Attach the hoist to the hoist bar and connect it to the hoist adapter.

SUBTASK 27-41-81-020-009

(9) Remove the stabilizer trim actuator [53] from the airplane (Figure 402).

(a) Remove the nut [42], washers [40], and bolt [39] to disconnect the bonding jumper [41] from the jackscrew gearbox [24].

1) Install the bolt [39], washers [40], and nut [42] back in the jackscrew gearbox [24].

(b) Remove the bolts [72], washer [73], washer [74], and nuts [75] from the safety strap [56].

(c) Remove the bolts [68], washers [69], washers [70], and nuts [71] from the safety strap [56].

(d) Remove the bolts [54] and washers [55] from the safety strap [56].

(e) Remove the pins [38], nuts [37], washers [36], spacers [35], washers [34], and bolts [33] that attaches the ballnut [28] to the jackscrew fitting [21].

1) Discard the pins [38].

(f) Remove the bolts [29] and washers [30] to remove the upper gimbal pins [31] from the upper gimbal fittings [22].

(g) Move the ballnut [28] down and adjust the jackscrew [23] until it is clear from the jackscrew fitting [21].

(h) Install the washers [30] and bolts [29] to attach the upper gimbal pins [31] back in the upper gimbal fittings [22].

(i) Remove the pins [52], nuts [51], washers [50], and lower gimbal pins [25] from the stabilizer trim actuator [53].

1) Discard the pins [52].

(j) Lower the jackscrew [23] until it is clear of the stabilizer truss.

(k) Lower the stabilizer trim actuator [53] from the airplane.

END OF TASK

311BL	Stabilizer Trim Access Door

G. Stabilizer Trim Actuator Installation

SUBTASK 27-41-81-220-001

(1) Do the subsequent inspections only if you replaced a stabilizer trim actuator with a serviceable stabilizer trim actuator that is not new or not overhauled, before further flight:

(a) Detailed Visual Inspection of the Stabilizer Trim Actuator for metal particles, corrosion, cracks, damage, and worn areas (TASK 27-41-81-210-801).

(b) Horizontal Stabilizer Trim Actuator Gearbox Backlash Inspection (TASK 27-41-81-210-802).

(c) Upper and Lower Gimbal Wear Limits Inspection (TASK 27-41-81-200-801).

(d) Stabilizer Jackscrew, Ballnut and Gimbal Lubrication (TASK 12-22-41-600-801).

SUBTASK 27-41-81-820-003

(2) Do the jackscrew gearbox clocking for a new stabilizer trim actuator [53] as follows (Figure 404):

(a) Put the new stabilizer trim actuator [53] on a table with the lower gimbal on the table.

1) Make sure that the cable drum [27] points up.

CAUTION

HOLD THE JACKSCREW. THIS WILL PREVENT THE MOVEMENT OF THE JACKSCREW AND DAMAGE TO THE EQUIPMENT.

(b) Put a support on the jackscrew [23] with foam or equivalent.

(c) Move the ballnut [28] to the upper stop.

(d) Look through the cable drum [27] bottom and turn the cable drum [27] clockwise until the zerk fitting points to the 3 o'clock position.

1) Make sure that the timing index mark is between the 1 o'clock and 3 o'clock position.

(e) If the zerk fitting does not face the 3 o'clock position and timing index mark is not between the 1 o'clock and 3 o'clock position, do this step:

1) Turn the cable drum [27] clockwise until the timing index mark and zerk fitting is in these positions at the same time.

(f) When the timing index mark and zerk fitting are in the correct position, the actuator is clocked correctly.

SUBTASK 27-41-81-020-010

(3) If the cable drum guard [67] and spacers [26] are installed on the cable drum [27], do these steps (Figure 402):

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the castellated nut [82] and pin [83].

1) Discard the pin [83].

(b) Remove the bolts [63] and washers [64] from the support plate [62].

(c) Remove the bolts [48] and washers [49] that attach the cable drum guard [67] to the cable drum [27].

(d) Remove the nut [60], washer [59], washer [58], and bolt [57] that attach the cable drum guard [67] to the support plate [62].

(e) Remove the cable drum guard [67] and spacers [26].

SUBTASK 27-41-81-480-005

(4) Install the hoist adapter and hoist to the jackscrew gearbox [24] (Figure 403).

SUBTASK 27-41-81-480-006

(5) Lift the stabilizer trim actuator [53] into the airplane (Figure 402).

SUBTASK 27-41-81-420-001

(6) Install the stabilizer trim actuator [53].

(a) Loosely install bolts [33], washers [34], spacers [35], washers [36], and nuts [37].

(b) Install the jackscrew [23] through the jackscrew fitting [21].

(c) Align the stabilizer trim actuator [53] with structure.

(d) Apply grease, D00633, to the lower gimbal pins [25].

(e) Install the lower gimbal pins [25] with the grease fitting outboard, washers [50], nuts [51] to connect the stabilizer trim actuator [53] to the structure.

1) Tighten the nuts [51] by hand and then tighten them to nearest pin hole.

(f) Install the new pins [52].

(g) Install the bolts [54] and washers [55] with bolt head outboard to connect the stabilizer trim actuator [53] to the safety strap [56].

(h) Install the bolts [68], washers [69], washers [70], and nuts [71] with bolt head outboard to connect the stabilizer trim actuator [53] to the safety strap [56].

(i) Install the bolts [72], washers [73], washers [74], and nuts [75] with bolt head outboard to connect the stabilizer trim actuator [53] to the safety strap [56].

(j) If it is removed, install the washers [55] and bolts [54] with bolt head outboard to connect the stabilizer trim actuator [53] to the safety strap [56].

(k) Connect the ballnut [28] to the jackscrew fitting [21].

1) Make sure that the ballnut [28] is installed with the grease fitting toward the access door.

a) If it is necessary, rotate the ballnut [28] half a turn.

2) Remove the bolts [29] and washers [30] from the upper gimbal pins [31].

3) Remove the upper gimbal fittings [22] and yokes [32] from the ballnut [28].

4) Lubricate the upper gimbal fittings [22] and yokes [32] with grease, D00633.

5) Install the yokes [32] on the ballnut [28].

6) Engage the upper gimbal fittings [22] on the yokes [32].

7) Turn the jackscrew [23] to engage the upper gimbal fittings [22] with the jackscrew fitting [21].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

8) Install the upper gimbal pins [31] to connect the ballnut [28] to the jackscrew fitting [21].

9) Install the bolts [29] and washers [30] to the upper gimbal pins [31].

10) Install MS20995NC32 lockwire, G01912, to attach the two bolt heads together on each upper gimbal pin.

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

11) Apply Cor-Ban 27L Compound, G50237, to all the bolt holes on the jackscrew fitting [21].

12) Tighten the nuts [37] by hand and then loosen the nuts [37] to the nearest pin hole.

13) Install the new pins [38].

SUBTASK 27-41-81-420-002

(7) Install the bonding jumper [41] to the jackscrew gearbox [24].

(a) Remove the nut [42], washers [40], and bolt [39] from the jackscrew gearbox [24].

(b) Clean the area around the bolt for electrical bonding.

(c) Install the bolt [39], bonding jumper [41] (below the bolt head), washers [40], and nut [42].

SUBTASK 27-41-81-760-001

(8) Measure the electrical bonding resistance between the jackscrew gearbox [24] and aluminum structure (SWPM 20-20-10).

(a) Use an intrinsically safe approved bonding meter, COM-1550.

(b) Make sure that the electrical bonding resistance is 0.001 ohm (1.0 milliohm) or less.

SUBTASK 27-41-81-390-001

(9) Apply a fillet seal of sealant, A50337, or sealant, A50231, around the bolt [39] and nut [42] (TASK 51-22-00-390-806).

SUBTASK 27-41-81-080-001

(10) Remove equipment, SPL-1728, from the jackscrew gearbox [24] (Figure 403).

(a) Remove the hoist adapter from the jackscrew [23].

(b) Remove the hoist bar and hoist from the airplane.

SUBTASK 27-41-81-080-002

(11) Remove the lock, SPL-1678.

(a) If it is necessary, install the wire bundle clamps.

SUBTASK 27-41-81-420-003

(12) Connect the STA cable [66] to the cable drum [27] (Figure 402).

(a) With the ballnut [28] against the upper stop, wind the STA cable [66] on the cable drum [27] approximately 1.8 turns.

(b) Install the cable terminal in the lower terminal slot of the cable drum [27].

(c) Install the new pin [61] to connect the cable terminal to the cable drum [27].

1) Install the ends of the pin [61] in the terminal slot.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Remove the control cable clamp, SPL-1569.

CAUTION

MAKE SURE THAT THE CABLE WINDS ONTO THE DRUM GROOVES CORRECTLY WITH EACH TURN OF THE DRUM. IF YOU JAM THE CABLE BETWEEN THE CABLE AND THE CABLE DRUM GUARD, DAMAGE TO THE CABLE WILL OCCUR.

(e) Operate the jackscrew to move the stabilizer leading edge to full down position to wind the cable on the cable drum approximately 50.3 turns.

NOTE: Operate the jackscrew until it stops.

NOTE: It is necessary to use the pinion gear wrench, SPL-10319, or equivalent when you operate the jackscrew to move the stabilizer leading edge.

SUBTASK 27-41-81-420-004

CAUTION

KEEP TENSION ON THE CABLE AT ALL TIMES. WHEN THE CABLE IS DISCONNECTED FROM THE CABLE DRUM, TENSION NEEDS TO BE KEPT ON THE CABLE SO THAT THE CABLE DOES NOT BECOME CAUGHT IN THE CABLE GUARDS ON THE OTHER CABLE DRUM. THIS CAN CAUSE DAMAGE TO THE CABLE AND THE CABLE MAY NEED TO BE REPLACED.

(13) Connect the STB cable [65] to the cable drum [27].

(a) Use the force gauge, COM-1557, on the stabilizer trim wheel handle to put a 50 lb (22.7 kg) load on the STA cable [66].

NOTE: This will keep the STA cable on the drum, which will make the installation of the STB cable easier.

NOTE: All the grooves of the cable drum will be filled with cable except for 1/2 turn between the STA and STB cable.

(b) Install the cable terminal in the top terminal slot of the cable drum [27].

(c) Install the new pin [61] to connect the cable terminal to the cable drum [27].

1) Install the ends of the pin [61] in the terminal slot.

SUBTASK 27-41-81-420-005

(14) Install the spacers [26] and cable drum guard [67] to the cable drum [27].

(a) Apply Cor-Ban 27L Compound, G50237, to the bolts [48], bolt [57], nut [60], and bolts [63].

(b) Install the bolts [48] and washers [49] to attach the cable drum guard [67] to the cable drum [27].

1) Tighten the bolts [48].

CAUTION

MAKE SURE THAT YOU INSTALL THE WASHER BETWEEN THE SUPPORT PLATE AND THE CABLE DRUM. IF YOU DO NOT OBEY, THE CABLE DRUM WILL NOT TURN CORRECTLY DURING OPERATION.

(c) Install the washer [84] to the cable drum [27].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

MAKE SURE THAT YOU INSTALL THE SUPPORT PLATE CORRECTLY. IF YOU DO NOT INSTALL THE SUPPORT PLATE, THE AMOUNT OF TORQUE NECESSARY TO DISENGAGE THE MANUAL CLUTCH CAN BE MORE THAN THE LIMITS.

(d) Install the bolts [63], washers [64], support plate [62], and spacers [26] to the cable drum [27].

1) Install the bolts [63] to the washers [64], support plate [62], and spacers [26].

NOTE: The bearing assembly of the support plate [62] must be on the same side as the cable drum [27].

2) Install the bolts [63] to the cable drum [27].

3) Tighten the bolts [63].

(e) Install the bolt [57], washer [58], nut [60], and washer [59] to attach the cable drum guard [67] to the support plate [62].

1) Tighten the bolt [57].

(f) Install the castellated nut [82] to the cable drum [27].

1) Install the castellated nut [82] to the thread of the cable drum [27].

2) Hand tighten the castellated nut [82] against the support plate [62].

3) Align the castellated nut [82] to the nearest pin hole.

(g) Install the new pin [83] to the castellated nut [82].

SUBTASK 27-41-81-080-003

(15) Remove the pinion gear wrench, SPL-10319, from the jackscrew gearbox [24].

SUBTASK 27-41-81-730-001

(16) Do this task: Stabilizer Clutch Friction System Test, TASK 27-41-00-700-806.

SUBTASK 27-41-81-420-006

(17) Do this task: Stabilizer Trim Motor Installation, TASK 27-41-71-400-801.

SUBTASK 27-41-81-820-002

(18) Adjust the STA cable [66], STB cable [65] and then reconnect the upper turnbuckle [4] (TASK 27-41-00-820-801).

SUBTASK 27-41-81-640-001

(19) Lubricate the upper gimbal and lower gimbal at the grease fittings and jackscrew (TASK 12-22-41-600-801).

SUBTASK 27-41-81-420-008

(20) Install the electrical connectors [47] to the jackscrew gearbox [24].

(a) Remove the nuts [46], washers [45], and bolts [43] from the jackscrew gearbox [24].

(b) Put the clamps [44] for the electrical connectors [47] on the jackscrew gearbox [24].

(c) Install the bolts [43], washers [45], and nuts [46] to install the clamps [44] to the jackscrew gearbox [24].

SUBTASK 27-41-81-860-003

(21) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

STABILIZER BALL NUT AND JACKSCREW GEARBOX - INSPECTION/CHECK

1. General

A. This procedure contains these tasks:

(1) A detail visual inspection of the stabilizer trim ball nut and jackscrew gearbox

(2) An inspection of the stabilizer jackscrew gearbox backlash

(3) An inspection of the upper and lower gimbal wear limits.

27-CMR-07

TASK 27-41-81-210-801

2. Stabilizer Trim Ball Nut and Jackscrew Gearbox Detail Visual Inspection

(Figure 601)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) This task is for the visual inspection of the stabilizer trim ball nut and jackscrew gearbox in detail.

H. Stabilizer Trim Ball Nut and Jackscrew Gearbox Detail Visual Inspection

SUBTASK 27-41-81-210-001

(1) Do these stabilizer trim actuator inspections:

NOTE: If a stabilizer trim actuator is replaced with a serviceable actuator that is not new or not overhauled, do a detailed inspection of the replacement actuator and horizontal stabilizer gearbox backlash inspection.

(a) Do a detailed inspection of all attachment points to make sure that they are secure and do not have damage as follows:

1) Make sure that the stabilizer trim actuator is correctly attached to the airplane structure.

2) If damage parts are found, remove, examine, repair or replace them.

(b) Do a general visual inspection of the area under, on, and around the stabilizer trim actuator to see if grease is escaping from ballnut.

NOTE: Large amounts of grease present around the stabilizer trim actuator, can indicate that grease is escaping from the ballnut due to a faulty seal or raised/leaking return tube.

1) If a faulty seal or a raised/return tube that have leakage are suspected, do a detailed inspection of the ballnut tube retainers for deformation, corrosion, or lifted return tubes.

2) If the ballnut tube retainers have deformation, corrosion, or the raised/return tube have leakage, remove and replace the actuator (TASK 27-41-81-000-801 and TASK 27-41-81-400-801).

(c) Examine cable drum and cables for damage or binding.

(d) Examine the electrical connectors of the stabilizer trim motor for damage.

(e) Examine the grease on and around the jackscrew and ballnut for metallic particles, other solid particles, and corrosion products in the grease.

NOTE: Metallic particles in the grease can be an indication of degradation of the balls in the ball nut. If metallic particles are found in the grease, remove for repair and replace the stabilizer trim actuator.

(f) If metallic particles, or other solid particles, or corrosion products are found in the grease, do this step:

1) Remove for repair and replace the stabilizer trim actuator (TASK 27-41-81-000-801 and TASK 27-41-81-400-801).

(g) Examine the vicinity of the ballnut, on the jackscrew, or directly below the stabilizer trim actuator for the bearing balls that fall out of the ball bearing.

NOTE: The bearing ball dimension is 0.21875 in. (5.55625 mm) diameter.

(h) If the bearing balls are found, remove for repair and replace the stabilizer trim actuator (TASK 27-41-81-000-801 and TASK 27-41-81-400-801).

(i) Wipe the grease and dirt from the jackscrew threads with a clean, dry, non-abrasive cotton cloth, G50316.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(j) Do a detailed visual inspection of the upper and lower gimbals for cracks or damage (View B, Figure 601).

1) Examine the areas around the holes and bushings.

2) If parts with damage are found, remove, repair or replace them.

a) Do this task: Upper and Lower Gimbal Wear Limits Inspection, TASK 27-41-81-200-801.

(k) Do a detailed inspection of the jackscrew as follows:

1) Examine the jackscrew threads for cross-threading, distortion, or stripping.

2) Do a check for metallic particles, pitting, gouging, corrosion, spalling, or brinelling in the jackscrew threads.

NOTE: If metallic particles are observed in the grease, there can be damage in the jackscrew/ball nut assembly. Normal wear of the jackscrew actuator can occur but this will not release visible metallic particles in the grease.

NOTE: Phosphate coating on the horizontal stabilizer trim actuator ballscrew can be normal.

3) Do check the jackscrew for obvious differences in thread shape between thread grooves in the lower, middle, and upper portions of the jackscrew.

4) Do a check the jackscrew for damage or cracking.

5) Remove the DO NOT OPERATE tag, STD-858, from the STAB TRIM PRI switch.

6) Make sure that the STAB TRIM switch, on the stab trim and cabin door panel, P8-47 module, is in the NORM position.

7) Set the STAB TRIM PRI switch, S272, located on the aft area of the control stand, to the NORMAL position.

WARNING MAKE SURE THAT ALL PERSONNEL, AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

8) Push and hold the stabilizer trim control switches on the Captain's Control Wheel (NOSE UP or NOSE DOWN) to move the jackscrew to a different position.

9) Set the STAB TRIM PRI switch, S272, to the CUTOUT position.

10) Attach the DO NOT OPERATE tag, STD-858, to the STAB TRIM PRI switch.

11) Wipe the grease and dirt from the jackscrew threads with a clean, dry, non-abrasive cotton cloth, G50316.

12) Examine the jackscrew as follows:

a) Examine the jackscrew threads for cross-threading, distortion, or stripping.

b) Examine the jackscrew threads for metallic particles, pitting, gouging, corrosion, spalling, or brinelling.

NOTE: If metallic particles are observed in the grease, there can be damage in the jackscrew/ball nut assembly. Normal wear of the jackscrew actuator can happen but this will not release visible metallic particles in the grease.

c) Examine the jackscrew for obvious differences in thread shape between thread grooves in the lower, middle, and upper portions.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

13) If damage is found, replace the stabilizer jackscrew actuator (TASK 27-41-81-000-801 and TASK 27-41-81-400-801).

SUBTASK 27-41-81-640-002

(2) Lubricate the stabilizer trim jackscrew (TASK 12-22-41-600-801).

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-41-81-410-003

(1) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-41-81-080-005

(2) Remove the DO NOT OPERATE tag, STD-858, from the STAB TRIM PRI switch, S272.

SUBTASK 27-41-81-860-010

(3) Set the STAB TRIM PRI switch, S272, to the NORMAL position.

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Prepare for the Inspection

SUBTASK 27-41-81-860-006

(1) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT

SUBTASK 27-41-81-860-011

(2) Set the STAB TRIM PRI switch, S272, on the control stand, to the CUTOUT position.

SUBTASK 27-41-81-010-004

(3) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

G. Stabilizer Jackscrew Gearbox Backlash Inspection

SUBTASK 27-41-81-860-004

(1) Move the stabilizer to 8.5 units of trim.

SUBTASK 27-41-81-480-008

(2) Install the equipment, SPL-1752, and the dial indicator, STD-1238, on the jackscrew as follows:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Install the plate assembly of the equipment, SPL-1752, on the jackscrew fitting with the screws.

(b) Install the left and right bulkhead plate assembly of the equipment, SPL-1752, to the bulkhead stiffeners with the screws.

(c) Install the C-channel and hydraulic cylinder assembly of the equipment, SPL-1752, to the left and right bulkhead plate assembly of the equipment, SPL-1752, with the pins.

NOTE: The flat side of the C-channel assembly of the equipment, SPL-1752, should point forward.

(d) Hold the upper end of the jackscrew with both hands and turn clockwise and counter-clockwise to ensure the brake ratchet pawls are engaged.

NOTE: This will lock the jackscrew in place so that the jackscrew will not turn when the load is applied.

(e) Connect the clevis eye of the hydraulic cylinder of the equipment, SPL-1752, to the clevis on the plate assembly of the equipment, SPL-1752, with the pin and lock pin.

(f) Connect the hydraulic assembly hose of the equipment, SPL-1752, to the hydraulic cylinder coupling of the equipment, SPL-1752.

(g) Install the magnetic holder of the equipment, SPL-1752, and dial indicator, STD-1238, on the jackscrew.

SUBTASK 27-41-81-700-001

(3) Pressurize the equipment, SPL-1752, to 900 psi (6205 kPa) – 950 psi (6550 kPa) with the hand hydraulic pump of the equipment, SPL-1752.

SUBTASK 27-41-81-700-002

(4) If the dial indicator, STD-1238, shows more than 0.025 in. (0.64 mm), replace the stabilizer ball nut and jackscrew gearbox (TASK 27-41-81-000-801 and TASK 27-41-81-400-801).

SUBTASK 27-41-81-080-004

(5) Remove the equipment, SPL-1752, and dial indicator, STD-1238, from the jackscrew:

(a) Remove the magnetic holder of the equipment, SPL-1752, and dial indicator, STD-1238, from the jackscrew.

(b) Disconnect the clevis eye of the hydraulic assembly of the equipment, SPL-1752, from the hydraulic cylinder coupling, of the equipment, SPL-1752, and remove the hydraulic assembly.

(c) Remove the pin and lock pin to disconnect the hydraulic cylinder of the equipment, SPL-1752, from the clevis on the plate assembly of the equipment, SPL-1752.

(d) Unlock the jackscrew.

(e) Remove the pins that attach the C-channel and hydraulic cylinder assembly of the equipment, SPL-1752, to the left and right bulkhead plate assembly of the equipment, SPL-1752.

(f) Remove the C-channel and hydraulic cylinder assembly of the equipment, SPL-1752, from the left and right bulkhead plate assembly of the equipment, SPL-1752.

(g) Remove the screws that attach the left and right bulkhead plate assembly of the equipment, SPL-1752, to the bulkhead stiffeners.

(h) Remove the left and right bulkhead plate assembly of the equipment, SPL-1752, from the bulkhead stiffeners.

(i) Remove the screws that attach the plate assembly of the equipment, SPL-1752, to the jackscrew fitting.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(j) Remove the plate assembly of the equipment, SPL-1752, from the jackscrew fitting.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-41-81-410-004

(1) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-41-81-860-007

(2) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT

SUBTASK 27-41-81-860-009

(3) Set the STAB TRIM PRI switch, S272, on the control stand, to the NORMAL position.

E. Upper and Lower Gimbal Wear Limits Inspection

SUBTASK 27-41-81-020-011

(1) Remove the stabilizer ball nut and jackscrew gearbox (TASK 27-41-81-000-801).

SUBTASK 27-41-81-020-012

(2) Examine the parts of the lower and upper gimbals for worn areas as follows:

(a) Remove the parts that you will check.

(b) Measure the parts as necessary with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions from (Table 601).

(d) If the parts are not in the tolerance, replace or repair the parts.

Table 601/27-41-81-993-801

NAME OF THE PARTS THAT ARE IN CONTACT	QTY	DIM.	DIAMETER DESIGN LIMITS		WEAR LIMITS

STABILIZER CONTROL CABLE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the stabilizer trim control cables

(2) An installation of the stabilizer trim control cables.

B. The stabilizer trim control cables are referred to as the STA and STB cables in this procedure. The STA cable is located to the left of the STB cable.

C. The stabilizer trim control cable includes the cable with a swaged end connected to the aft cable drum and an end with an eyelet that connects it to the forward cable drum.

TASK 27-41-82-000-801

2. Stabilizer Control Cable Removal

(Figure 401, Figure 402)

312	Area Aft of Pressure Bulkhead - Right

D. Access Panels

Number	Name/Location
112A	Forward Access Door
117A	Electronic Equipment Access Door
311BL	Stabilizer Trim Access Door

E. Prepare for the Removal

SUBTASK 27-41-82-860-001

(1) Set the stabilizer leading edge to the full down (airplane nose up) position.

SUBTASK 27-41-82-860-002

(2) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-82-010-001

(3) To get access to the stabilizer forward control mechanism and the forward pulleys, do this step:

(a) Open these access panels:

Number	Name/Location
112A	Forward Access Door
117A	Electronic Equipment Access Door

SUBTASK 27-41-82-010-002

(4) To get access to the stabilizer trim actuator and the aft pulley, do this step:

(a) Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-41-82-010-003

(5) Remove the cargo liners and floor panels (Figure 402).

(a) Do this task: Cargo Compartment Ceiling Liner Removal, TASK 50-10-03-000-801.

(b) Do this task: Passenger Cabin Floor Panel Removal, TASK 53-21-00-000-801.

SUBTASK 27-41-82-020-001

(6) Disconnect the upper turnbuckle [4].

SUBTASK 27-41-82-820-001

CAUTION

MAKE SURE THAT THE CHAIN IS LOOSE BEFORE YOU RELEASE THE CABLE TENSION. TOO MUCH CABLE TENSION CAN CAUSE DAMAGE TO THE CHAIN.

(7) Adjust the upper adjusting nuts [7] of the aft support link [8] to loosen the chain (Figure 401).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-82-020-002

(8) Loosen the lower turnbuckle [3] to release the tension of the STA cable [6] and STB cable [5].

SUBTASK 27-41-82-020-009

(9) Remove the half ball pressure seals, do this task: Control Cable Half Ball Pressure Seal Removal, TASK 20-10-04-000-802.

SUBTASK 27-41-82-020-003

(10) Do this task: Stabilizer Trim Motor Removal, TASK 27-41-71-000-801.

F. Stabilizer Control Cable Removal

SUBTASK 27-41-82-020-004

(1) Remove the cable drum guard [28] and spacers [14] from the cable drum [15]:

(a) Remove the pin [83] and castellated nut [82] from the support plate [25] that is attached to the cable drum [15].

1) Discard the pin [83].

(b) Remove the nut [23], washer [22], washer [21], and bolt [20] that attach the cable drum guard [28] to the support plate [25].

(c) Remove the bolts [26], washers [27], support plate [25], spacers [14], and washer [84] from the cable drum [15].

NOTE: Because work space is small, you must keep the bolts [26] in the support plate [25] and in the spacers [14] to help the removal procedure.

(d) Remove the bolts [16] and washers [17] that attach the cable drum guard [28] to the cable drum [15].

(e) Remove the cable drum guard [28] from the cable drum [15].

SUBTASK 27-41-82-020-005

(2) Do these steps to disconnect the STB cable [5] from the cable drum [15]:

(a) Install the pinion gear wrench, SPL-10319, on the internal spline of the jackscrew gearbox [12] (Figure 401).

NOTE: Insert the arm of the pinion gear wrench, SPL-10319, into the motor mount hole to keep the internal spline of the jackscrew gearbox [12] from turning.

(b) Use the force gauge, COM-1557, on the captain's or first officer's stabilizer trim wheel handle to put a 50 lb (22.7 kg) load on the handle to stretch the STA cable [6].

NOTE: This will keep the STA cable [6] on the drum and will make the removal of the STB cable [5] easier.

(c) Disconnect the STB cable [5] from the cable drum [15].

SUBTASK 27-41-82-020-006

(3) Remove the STB cable [5] from the cable run.

(a) Remove the arm of the pinion gear wrench, SPL-10319, from the stabilizer trim motor mount hole.

(b) Using the captain's or first officer's stabilizer trim control wheel, move the jackscrew [11] to put the stabilizer leading edge to the full up (airplane nose down) position.

CAUTION

MAKE SURE THAT YOU DO NOT DAMAGE OR KINK THE CABLE WHILE YOU WIND IT ONTO THE SPOOL OR REEL. DAMAGE TO THE CABLE CAN OCCUR.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(CAUTION PRECEDES)

CAUTION IF YOU ARE TO USE THE CABLE AGAIN, DO NOT LET IT TOUCH THE DIRTY SURFACES. DIRT IN THE GREASE ON THE CABLES CAN CAUSE FAILURE OF THE CABLE OR CAN CAUSE PROBLEMS WHEN RE-RIGGING THE CABLE.

(c) When the stabilizer starts to move, pull the STB cable [5] into the tail compartment and wind it on a spool or a reel.

NOTE: Tension must always be kept on the STB cable [5] while pulling it into the tail compartment. The best way to keep steady tension on the STB cable [5] is to have a mechanic pulling the cable into the tail compartment while another winds it onto a spool or reel.

NOTE: To ensure the STB cable [5] is not damaged or kinked as it is unwound from the forward drum, it is best to have a mechanic in the forward compartment to watch the cable as it unwinds from the forward drum. This will ensure that the mechanic operating the stabilizer trim control wheel does not turn the forward drum too far and kink the cable on the right cable guard spacer (Figure 401).

(d) When the ballnut touches the upper stop, keep a record of the number of turns of the STA cable [6] on the cable drum [15].

(e) Disconnect the STA cable [6] from the cable drum [15].

NOTE: Use a control cable clamp, SPL-1569, to keep tension on the STA cable [6] to keep it from unwinding on the forward cable drum.

(f) Disconnect the STB cable [5] from the forward cable drum.

1) Remove the nut and washer from the clevis bolt.
2) Remove the clevis bolt from the STB cable [5] eyelet.

SUBTASK 27-41-82-480-001

(4) Remove the STB cable [5] from the aircraft.

(a) Attach lockstitch or some similar material to the aft end of the STB cable [5].

CAUTION MAKE SURE THAT YOU DO NOT DAMAGE OR KINK THE CABLE WHILE YOU WIND IT ONTO THE SPOOL OR REEL. DAMAGE TO THE CABLE CAN OCCUR.

CAUTION IF YOU ARE TO USE THE CABLE AGAIN, DO NOT LET IT TOUCH THE DIRTY SURFACES. DIRT IN THE GREASE ON THE CABLES CAN CAUSE FAILURE OF THE CABLE OR CAN CAUSE PROBLEMS WHEN RE-RIGGING THE CABLE.

(b) Using a spool or reel, wind the STB cable [5] up in the forward mechanism compartment.

1) Remove the idler pulleys to let the aft end of the cable through the pulley stations (Figure 402).
2) Remove the aft pulley as required to let the end of the cable through the pulley stations (Figure 402).

NOTE: The aft pulley must only be removed while the cable end passes through the bracket to decrease the cable rubbing.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-82-020-007

(5) Do the following steps to remove the STA cable [6] from the aircraft:

(a) Remove the cable clamp from the STA cable [6] at the aft cabin pressure bulkhead while maintaining force on the STA cable [6].

(b) Using the captain's or first officer's stabilizer trim control wheel, unwind the STA cable [6] from the forward drum.

CAUTION MAKE SURE THAT YOU DO NOT DAMAGE OR KINK THE CABLE WHILE YOU WIND IT ONTO THE SPOOL OR REEL. DAMAGE TO THE CABLE CAN OCCUR.

CAUTION IF YOU ARE TO USE THE CABLE AGAIN, DO NOT LET IT TOUCH THE DIRTY SURFACES. DIRT IN THE GREASE ON THE CABLES CAN CAUSE FAILURE OF THE CABLE OR CAN CAUSE PROBLEMS WHEN RE-RIGGING THE CABLE.

(c) Pull the STA cable [6] into the tail compartment and wind it on a spool or a reel.

NOTE: Tension must always be kept on the STA cable [6] while pulling it into the tail compartment. The best way to keep steady tension on the STA cable [6] is to have a mechanic pulling the cable into the tail compartment while another mechanic winds the cable onto a spool or reel.

NOTE: To ensure the STA cable [6] is not damaged or kinked as it is unwound from the forward drum, it is recommended to have a mechanic in the forward compartment to watch the cable as it slowly unwinds from the forward drum. This will ensure that the mechanic pulling the cable into the aft unpressurized compartment does not pull the cable too far and kink the cable on the left cable guard spacer (Figure 401).

(d) Disconnect the STA cable [6] from the forward cable drum.

1) Remove the cotter pin [18], the nut, the washer, and the washers from the clevis bolt.

a) Discard the cotter pin [18].

2) Remove the clevis bolt from the STA cable [6] eyelet.

SUBTASK 27-41-82-480-002

(6) Remove the STA cable [6] from the aircraft.

(a) Attach lockstitch or some similar material to the aft end of the STA cable [6].

CAUTION MAKE SURE THAT YOU DO NOT DAMAGE OR KINK THE CABLE WHILE YOU WIND IT ONTO THE SPOOL OR REEL. DAMAGE TO THE CABLE CAN OCCUR.

CAUTION IF YOU ARE TO USE THE CABLE AGAIN, DO NOT LET IT TOUCH THE DIRTY SURFACES. DIRT IN THE GREASE ON THE CABLES CAN CAUSE FAILURE OF THE CABLE OR CAN CAUSE PROBLEMS WHEN RE-RIGGING THE CABLE.

(b) Using a spool or reel, wind the STA cable [6] up in the forward mechanism compartment.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Remove the idler pulleys to let the aft end of the cable through the pulley stations (Figure 402).

TASK 27-41-82-400-801

3. Stabilizer Control Cable Installation

(Figure 401, Figure 402)

A. General

(1) It is recommended that cable assemblies on each side of a cable loop be replaced at the same time using the same grade material in order to minimize asymmetric relaxation.

(2) It is recommended that airplanes supplied with the cables that contain higher zinc coating (Grade D or Grade K) be re-tensioned 3 to 4 months into service. This will bring the tension of the control cables within the desired range. After the cables are re-tensioned, the high zinc cables (Grade D or Grade K) will continue to relax at a rate that is equivalent to the Grade B cables. To identify the grade of the cable, refer to: Control Cable Grades and Diameters/Table 27-11-00-993-802.

H. Prepare for the Installation

SUBTASK 27-41-82-860-003

(1) Use the pinion gear wrench, SPL-10319 to set the stabilizer leading edge to the full down (airplane nose up) position.

SUBTASK 27-41-82-100-001

(2) Use a clean cloth to clean the grease and dirt from the forward and aft cable drums.

SUBTASK 27-41-82-420-001

(3) Install the STA cable [6] and the STB cable [5] into the cable runs (Figure 402).

(a) Put the new, or used, cables in the forward mechanism compartment.

(b) Attach the lockstitch to the aft end of STA cable [6] and STB cable [5].

(c) Pull the lockstitch from the aft unpressurized compartment and guide the stabilizer control cables through the cable runs of the airplane.

1) Make sure that the idler pulleys are removed.

2) Remove the aft pulley as required to let the end of the cable through the pulley stations (Figure 402).

NOTE: The aft pulley must only be removed while the cable end passes through the bracket to decrease the cable rubbing.

SUBTASK 27-41-82-420-002

(4) Wind STA cable [6] and STB cable [5] onto a spool or reel in the aft unpressurized compartment.

SUBTASK 27-41-82-420-003

(5) Install the idler pulleys in the idler pulley brackets at the locations shown in (Figure 402).

(a) Make sure that the STA cable [6] and STB cable [5] are in the groove above each idler pulley.

I. Stabilizer Control Cable Installation

(Figure 401, Figure 402)

SUBTASK 27-41-82-420-004

(1) Connect the STA cable [6] to the bottom slot of the forward cable drum (Figure 401):

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Using the captain's or first officer's stabilizer control wheel, rotate the forward drum so that the lower cable connection point is on the left side of the airplane.

1) Install the eyelet bolt through the STA cable [6] eyelet, the washers on the eyelet bolt, the castle nut on the eyelet bolt, and a new cotter pin [18] through the eyelet bolt (Figure 401).

CAUTION

MAKE SURE THAT THE CABLE WINDS ONTO THE DRUM GROOVES CORRECTLY WITH EACH TURN OF THE DRUM. IF YOU JAM THE CABLE BETWEEN THE CABLE AND THE CABLE DRUM GUARD, DAMAGE TO THE CABLE WILL OCCUR.

(b) Use the captain's or first officer's stabilizer trim control wheel to wind the STA cable [6] "completely" onto the forward cable drum (Approximately 33 1/2 turns).

NOTE: Tension must always be kept on the STA cable [6] while winding it onto the forward cable drum. The best way to keep steady tension on the STA cable [6] is to have a mechanic applying tension to the cable in the aft unpressurized compartment while another mechanic keeps the cable in position in the forward mechanism compartment.

NOTE: To ensure the STA cable [6] is not damaged or kinked as it is wound onto the forward drum, it is recommended to have a mechanic in the forward mechanism compartment to watch the cable as it slowly winds onto the forward cable drum. This will ensure that the mechanic that is turning the stabilizer trim control wheel, does not turn the forward drum too much and damage or kink the cable.

SUBTASK 27-41-82-420-005

(2) Connect the STB cable [5] to the top slot of the forward cable drum (Figure 401):

(a) While keeping tension on the STA cable [6], use the captain's or first officer's stabilizer control wheel to rotate the forward drum so that the upper cable connection point is on the right side of the airplane.

1) Install the STB cable [5] eyelet in the location on the upper right side of the forward cable drum.

a) Install the eyelet bolt through the STB cable [5] eyelet and the washer and nut on the eyelet bolt.

CAUTION

MAKE SURE THAT THE CABLE WINDS ONTO THE DRUM GROOVES CORRECTLY WITH EACH TURN OF THE DRUM. IF YOU JAM THE CABLE BETWEEN THE CABLE AND THE CABLE DRUM GUARD, DAMAGE TO THE CABLE WILL OCCUR.

(b) Use the captain's or first officer's stabilizer trim control wheel to wind the STB cable [5] onto the forward cable drum approximately 2 turns.

NOTE: Tension must always be kept on STA cable [6] and STB cable [5] while winding them onto the forward cable drum. The best way to keep steady tension on the cables is to have a mechanic applying tension to the cable in the aft unpressurized compartment while another mechanic keeps the cable in position at the forward cable drum.

(c) Install non-metallic wedges between STA cable [6], STB cable [5] and the cable guards on the left and right sides of the forward cable drum.

NOTE: The wedges are used to keep tension on STA cable [6] and STB cable [5] while the cables are rigged to the rear cable drum [15].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-82-420-006

(3) Install the STB cable [5] on the cable drum [15]:

(a) Install the cable terminal in the top terminal slot of the cable drum [15].

(b) Install a new pin [61] to connect the cable terminal to the cable drum [15].

1) Install the ends of the pin [61] in the terminal slot.

(c) Place approximately 1.7 wraps of STB cable [5] on the cable drum [15].

CAUTION MAKE SURE THAT THE STB CABLE IS IN THE GROOVE OF THE FORWARD PULLEY AND AFT PULLEY BEFORE YOU TIGHTEN THE CABLE. IF YOU DO NOT OBEY, DAMAGE TO THE EQUIPMENT CAN OCCUR.

(d) Using the pinion gear wrench, SPL-10319, wind the STB cable [5] onto the cable drum [15] until the ballscrew reaches the upper stops. Use the pinion gear wrench, SPL-10319 to keep tension on the STB cable [5].

1) Make sure that the STB cable [5] is in the groove of the forward (STA 330) and the aft (STA 1038) pulley (Figure 402).

SUBTASK 27-41-82-420-007

(4) Install the STA cable [6] on the cable drum [15]:

(a) Place approximately 1.8 wraps of cable around the aft cable drum and install the cable terminal in the bottom terminal slot of the cable drum [15].

(b) Install the new pin [61] to connect the cable terminal to the cable drum [15].

1) Install the ends of the pin [61] in the terminal slot.

(c) Remove the non-metallic wedges from the forward cable drum while keeping tension on the STA cable [6] at the aft cable drum.

(d) Attach a control cable clamp, SPL-1569 to the STA cable [6], forward of the aft cable drum.

WARNING MAKE SURE THAT YOU DO NOT GET FINGERS OR HANDS CAUGHT BETWEEN THE CABLE AND THE DRUM OR INTO A LOOP OF CABLE. IF THE CABLE MOVES SUDDENLY, DANGEROUS INJURY TO PERSONNEL CAN OCCUR.

CAUTION MAKE SURE THAT THE STA CABLE IS IN THE GROOVE OF THE FORWARD PULLEY AND AFT PULLEY BEFORE YOU TIGHTEN THE CABLE. IF YOU DO NOT OBEY, DAMAGE TO THE EQUIPMENT CAN OCCUR.

(e) Apply tension to the STA cable [6] with the control cable clamp, SPL-1569 until there is sufficient cable to complete the last wrapping around the aft cable drum [15].

1) If necessary, loosen the lower turnbuckle [3], on the forward mechanism, to get sufficient play in the cable.

2) Make sure that the STA cable [6] is in the groove of the forward (STA 330) and the aft (STA 1038) pulley (Figure 402).

SUBTASK 27-41-82-080-001

(5) Remove the control cable clamp, SPL-1569.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-82-420-008

(6) Install the spacers [14] and cable drum guard [28] to the cable drum [15]:

(a) Apply grease, D00633, to bolts [16], bolt [20], and bolts [26].

(b) Install the bolts [16] and washers [17] to attach the cable drum guard [28] to the cable drum [15].

1) Tighten the bolts [16] to 63 in-lb (7.1 N·m) - 67 in-lb (7.6 N·m).

CAUTION MAKE SURE THAT YOU INSTALL THE WASHER BETWEEN THE SUPPORT PLATE AND THE CABLE DRUM. IF YOU DO NOT OBEY, THE CABLE DRUM WILL NOT TURN CORRECTLY DURING OPERATION.

(c) Install the washer [84] to the cable drum [15].

CAUTION MAKE SURE THAT YOU INSTALL THE SUPPORT PLATE CORRECTLY. THE SUM OF TORQUE TO DISENGAGE THE MANUAL CLUTCH CAN BE MORE THAN THE LIMITS. IF YOU DO NOT OBEY, DAMAGE CAN OCCUR.

(d) Install the bolts [26], washers [27], support plate [25] and the spacers [14] to the cable drum [15].

1) Install the bolts [26] to the washers [27], support plate [25] and the spacers [14].

NOTE: The bearing assembly of the support plate [25] must be on the same side as the cable drum [15].

2) Install the bolts [26] to the cable drum [15].

3) Tighten the bolts [26] to 63 in-lb (7.1 N·m) - 67 in-lb (7.6 N·m).

(e) Install the bolt [20], washer [21], washer [22], and nut [23] to attach the cable drum guard [28] to the support plate [25].

1) Tighten the bolt [20] to 63 in-lb (7.1 N·m) - 67 in-lb (7.6 N·m).

(f) Install the castellated nut [82] to the cable drum [15].

1) Install the castellated nut [82] to the thread of the cable drum [15].

2) Hand tighten the castellated nut [82] against the support plate [25].

3) Align the castellated nut [82] back to the nearest pin hole.

(g) Install the new pin [83] to the castellated nut [82].

SUBTASK 27-41-82-820-002

CAUTION MAKE SURE THAT THE ROUTING OF STABILIZER CABLES STA AND STB ARE CORRECT ON ALL PULLEYS AND FLOOR BEAM FAIRLEADS. IF YOU DO NOT OBEY, DAMAGE TO THE AIRPLANE CAN OCCUR.

(7) Adjust the STA cable [6] and STB cable [5]. To adjust them, do this task: Stabilizer Control Cable and Chain - Adjustment, TASK 27-41-00-820-801.

SUBTASK 27-41-82-020-008

(8) Reconnect the upper turnbuckle [4] after the STA and STB cables are completely rigged.

SUBTASK 27-41-82-080-002

(9) Remove the pinion gear wrench, SPL-10319 from the jackscrew gearbox [12].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-82-730-001

(10) Do this task: Stabilizer Clutch Friction System Test, TASK 27-41-00-700-806.

SUBTASK 27-41-82-420-009

(11) Do this task: Stabilizer Trim Motor Installation, TASK 27-41-71-400-801.

SUBTASK 27-41-82-860-004

(12) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-82-730-002

SUBTASK 27-41-82-730-003

(14) Do this task: Horizontal Stabilizer Trim Control System Friction Test, TASK 27-41-00-700-802.

SUBTASK 27-41-82-610-001

(15) Do this task: Horizontal Stabilizer Actuator Brake - Servicing, TASK 12-22-41-610-801.

NOTE: This lubrication procedure must be performed after the installation of any new stabilizer trim actuator.

SUBTASK 27-41-82-730-004

(16) Do this task: Stabilizer Trim Wheel Free Movement Test, TASK 27-41-00-700-804.

SUBTASK 27-41-82-730-005

(17) Do this task: Stabilizer Electric Trim System Test, TASK 27-41-00-700-803.

SUBTASK 27-41-82-420-010

(18) Install the half ball pressure seals. Do this task: Control Cable Half Ball Pressure Seal Installation, TASK 20-10-04-400-802.

SUBTASK 27-41-82-700-001

(19) Do a cycle check for the flight control system along the cable runs STA cable [6] and STB cable [5]:

(a) If necessary, use a video camera on areas that are not visible.

(b) Make sure that the cable routing is correct.

(c) Operate the system along the full range of travel.

(d) Make sure that there is free movement in all directions of travel.

(e) Make sure that the flight control surfaces align correctly.

(f) Make sure that the flight control surfaces have the correct routing and clearances.

(g) Make sure that the bellcranks and control rods move correctly.

(h) Make sure that the detents align correctly for the full range of the cable control mechanism.

(i) Make sure that the controls have the correct cushion for the full range of the cable control mechanism.

(j) Make a note of usual sounds from closed areas while the system is in operation.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

J. Put the Airplane Back To Its Usual Condition

SUBTASK 27-41-82-410-001

(1) Install the cargo liners and floor panels that were removed for access to the idler pulleys (TASK 50-10-03-400-801, TASK 53-21-00-400-801).

SUBTASK 27-41-82-410-002

(2) Close these access panels:

Number	Name/Location
112A	Forward Access Door
117A	Electronic Equipment Access Door

SUBTASK 27-41-82-410-003

(3) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STABILIZER TRIM CUTOUT SWITCHES - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Stabilizer trim cutout switch removal

(2) Stabilizer trim cutout switch installation.

B. This procedure is applicable to the primary cutout switch (S272) and back up cutout switch (S149).

TASK 27-41-91-000-801

2. Stabilizer Trim Cutout Switch Removal

(Figure 401)

A. Location Zones

Zone	Area
212	Flight Compartment - Right

B. Prepare for the Removal

SUBTASK 27-41-91-860-001

(1) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

C. Cutout Switch Removal

SUBTASK 27-41-91-010-001

(1) Remove the screws [6] and pull the panel out from the control stand.

SUBTASK 27-41-91-020-001

(2) Disconnect the electrical terminal [7] from the back of the cutout switch [1].

SUBTASK 27-41-91-020-002

(3) Remove the cutout switch [1] from the panel:

(a) Remove the locknut [8], switch guard [4], locking ring [3], lockwasher [5], and locknut [2] from the cutout switch [1].

(b) Remove the cutout switch [1] from the back side of the panel.

Stabilizer Trim Cutout Switch Installation
Figure 401/27-41-91-990-801

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-41-91-400-801

3. Stabilizer Trim Cutout Switch Installation

(Figure 401)

A. References

Reference	Title
27-41-91-700-801	Primary Stabilizer Trim Cutout Switch Test (P/B 501)
27-41-91-700-802	Back Up Stabilizer Trim Cutout Switch Test (P/B 501)

B. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
1	Cutout switch	27-41-91-01-120	SIA ALL

C. Location Zones

Zone	Area
212	Flight Compartment - Right

D. Procedure

SUBTASK 27-41-91-420-001

(1) Install the cutout switch [1] on the panel:

(a) Install the cutout switch [1], locknut [2], lockwasher [5], and locking ring [3] on the back side of the panel.

(b) Install the switch guard [4] and locknut [8] on the front side of the panel.

NOTE: The cutout switch [1], locking ring [3], and switch guard [4] have keys to ensure correct installation.

SUBTASK 27-41-91-420-002

(2) Connect the electrical terminal [7] to the back of the cutout switch [1].

SUBTASK 27-41-91-420-003

(3) Install the panel on the control stand:

(a) Put the panel in its position on the control stand.

(b) Install the screws [6].

SUBTASK 27-41-91-860-002

(4) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-91-820-001

(5) Do this task: Primary Stabilizer Trim Cutout Switch Test, TASK 27-41-91-700-801.

SUBTASK 27-41-91-820-002

(6) Do this task: Back Up Stabilizer Trim Cutout Switch Test, TASK 27-41-91-700-802.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STABILIZER TRIM CUTOUT SWITCHES - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) Primary stabilizer trim cutout switch test

(2) Back up stabilizer trim cutout switch test.

27-CMR-09

TASK 27-41-91-700-801

2. Primary Stabilizer Trim Cutout Switch Test

NOTE: This procedure is a scheduled maintenance task.

A. Location Zones

Zone	Area
212	Flight Compartment - Right

B. Prepare for the Test

SUBTASK 27-41-91-860-004

(1) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-91-860-005

(2) Make sure that the STAB TRIM override switch on the P8 panel is in the NORM position.

NOTE: The override switch is on the same control panel for the FLT DK DOOR.

C. Primary Stabilizer Trim Cutout Switch Test

SUBTASK 27-41-91-710-001

WARNING MAKE SURE THAT ALL PERSONNEL AND EQUIPMENT ARE AWAY FROM THE HORIZONTAL STABILIZER. THE MOVEMENT OF THE HORIZONTAL STABILIZER DURING MAINTENANCE CAN CAUSE INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) Do the test of the STAB TRIM PRI switch, S272, on the aft area of the control stand as follows:

(a) Make sure that the STAB TRIM PRI switch is in the NORMAL position.

(b) Push and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

(c) Make sure that the stabilizer leading edge start to move down.

(d) Set the STAB TRIM PRI switch to the CUTOUT position.

(e) Make sure that the movement of the stabilizer stops immediately.

(f) Release the stabilizer trim switches.

(g) Set the STAB TRIM PRI switch to the NORMAL position.

(h) Push and hold the STAB TRIM switches on the captain's control wheel to the NOSE DOWN position.

(i) Make sure that the stabilizer leading edge moves up.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(j) Set the STAB TRIM PRI switch to the CUTOUT position.

(k) Make sure that the movement of the stabilizer stops immediately.

(l) Release the stabilizer trim switches.

(m) Set the STAB TRIM PRI switch back to the NORMAL position.

——— END OF TASK ———

27-CMR-09

TASK 27-41-91-700-802

3. Back Up Stabilizer Trim Cutout Switch Test

NOTE: This procedure is a scheduled maintenance task.

B. Location Zones

Zone	Area
212	Flight Compartment - Right

C. Prepare for the Test

SUBTASK 27-41-91-860-007

(1) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-91-860-008

(2) Make sure that the STAB TRIM override switch, on P8 panel is in the NORM position.

SUBTASK 27-41-91-860-009

(3) Make sure that the VHF NAV and IRS switches, on the P5 Forward Overhead Panel, are in the NORMAL positions.

SUBTASK 27-41-91-860-010

(4) Do this task: Air Data Inertial Reference System - Alignment from the ISDU, TASK 34-21-00-820-802 or Air Data Inertial Reference System - Alignment from the FMC CDU, TASK 34-21-00-820-801 or Air Data Inertial Reference System - Automatic Alignment from the IRS MSU, TASK 34-21-00-820-803.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-91-860-011

WARNING

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(5) Supply hydraulic power to hydraulic systems A and B (Hydraulic System A or B Pressurization, TASK 29-11-00-860-801).

SUBTASK 27-41-91-860-012

(6) Make sure that the trailing edge flaps are in the UP position.

SUBTASK 27-41-91-860-015

(7) Make sure that the PRI cutout switch is in the NORMAL position.

SUBTASK 27-41-91-860-016

(8) Make sure that the B/U cutout switch is in the NORMAL position.

SUBTASK 27-41-91-860-017

(9) Make sure that both flight director switches are OFF.

SUBTASK 27-41-91-860-018

(10) Make sure that the autopilot is not engaged.

SUBTASK 27-41-91-860-019

(11) Set the altitude on the Mode Control Panel (MCP) to a minimum of 10,000 ft (3048 m) above the current field elevation.

D. Back Up Stabilizer Trim Cutout Switch Test

SUBTASK 27-41-91-710-002

(1) Do the test of the B/U (back up) stabilizer trim cutout switch, S149, on the aft area of the control stand as follows:

(a) Push the CMD A or CMD B autopilot engage switch, on the P7 panel, to engage the autopilot.

(b) Make sure that the CMD A or CMD B autopilot engage switch light comes on.

NOTE: A flashing yellow box will momentarily appear around the CWS P and/or CWS R on the Primary Flight Display (PFD) flight mode annunciator.

(c) Move the control column forward approximately 2 in. (5 cm), then release the control column.

NOTE: If still present, the flashing yellow box around the CWS P and/or CWS R will disappear when the control column is released.

1) Do not apply forces to the control column or stabilizer trim wheel.

NOTE: This is to prevent an accidental autopilot disengagement and failure of the test.

(d) Make sure that the stabilizer trim wheel is rotating in the nose-down direction.

(e) While the stabilizer trim wheel is rotating, move the B/U cutout switch to the CUTOUT position.

(f) Make sure that the autopilot disengages and that the CMD A or CMD B autopilot engage switch light turns off.

(g) Make sure that the stabilizer trim wheel stops moving.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(h) Push the captain's or first officer's autopilot disengage switch on the control wheel to reset the autopilot disengage warnings.

(i) Set the B/U cutout switch to the NORMAL position.

(j) Push the CMD A or CMD B autopilot engage switch, on the P7 panel, to engage the autopilot.

(k) Make sure that the CMD A or CMD B autopilot engage switch light comes on.

NOTE: A flashing yellow box will momentarily appear around the CWS P and/or CWS R on the PFD flight mode annunciator.

(l) Move the control column aft approximately 2 in. (5 cm), then release the control column.

NOTE: If still present, the flashing yellow box around the CWS P and/or CWS R will disappear when the control column is released.

1) Do not apply forces to the control column or stabilizer trim wheel.

NOTE: This is to prevent an accidental autopilot disengagement and failure of the test.

(m) Make sure that the stabilizer trim wheel is rotating in the nose up direction.

(n) While the stabilizer trim wheel is rotating, move the B/U cutout switch to the CUTOUT position.

(o) Make sure that the autopilot disengages and that the CMD A or CMD B autopilot engage switch light turns off.

(p) Make sure that the stabilizer trim wheel stops moving.

(q) Push the captain's or first officer's autopilot disengage switch on the control wheel to reset the autopilot disengage warnings.

(r) Set the B/U cutout switch to the NORMAL position.

E. Put the Airplane Back to its Usual Condition

SUBTASK 27-41-91-860-013

(1) Remove hydraulic power from Hydraulic Systems A and B (Hydraulic System A or B Power Removal, TASK 29-11-00-860-805).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STABILIZER TRIM LIMIT SWITCHES - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of a stabilizer trim limit switch

(2) An installation of a stabilizer trim limit switch.

B. The stabilizer trim limit switch is referred to as the "limit switch" in this procedure.

C. There are three limit switches (S144, S145, and S844) and four stabilizer takeoff warning switches (S132, S1184, S546 and S1183) on the brackets along the stabilizer jackscrew.

D. This procedure is applicable to all three limit switches.

TASK 27-41-94-000-801

2. Stabilizer Trim Limit Switch Removal

(Figure 401)

A. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
311	Area Aft of Pressure Bulkhead - Left
312	Area Aft of Pressure Bulkhead - Right

B. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

C. Prepare for the Removal

SUBTASK 27-41-94-860-001

(1) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT

SUBTASK 27-41-94-010-001

(2) To get access to the limit switch, do this step:

Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

SUBTASK 27-41-94-860-002

(3) Move the stabilizer until the cam is not in contact with the limit switch.

D. Limit Switch Removal

SUBTASK 27-41-94-020-001

(1) Remove the limit switch [1]:

(a) Disconnect the limit switch [1] wire from the wire connection.

(b) Remove the locknut [4] and washer [3] which attach the limit switch arm [5] to the limit switch [1].

(c) Remove the lockwasher [6] and retainer nut [7] which attach the limit switch [1] to the bracket assembly [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Remove the limit switch [1] from the bracket assembly [2].

E. Limit Switch Installation

SUBTASK 27-41-94-420-001

(1) Install the limit switch [1] as follows:

(a) Install the limit switch [1] through the bracket assembly [2].

(b) Install the retainer nut [7] and lockwasher [6] to attach the limit switch [1] to the bracket assembly [2].

(c) Tighten the retainer nut [7] to 15 in-lb (2 N·m) - 25 in-lb (3 N·m).

(d) Install lockwire on retainer nut [7].

(e) Turn the limit switch arm [5] to the approximate position for installation but make sure that it does not touch the cam.

(f) Put the limit switch arm [5] on the limit switch [1] to engage the serrations.

(g) Install the washer [3] and locknut [4].

1) Tighten the locknut [4] by hand.

NOTE: You will tighten the locknut [4] after you adjust the limit switch [1].

(h) Connect the limit switch [1] wire at the wire connection.

SUBTASK 27-41-94-860-003

(2) Remove the safety tag and close this circuit breaker:

STABILIZER TRIM LIMIT SWITCHES - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) An adjustment of the stabilizer trim limit switches

(2) A test of the stabilizer trim limit switches.

B. The stabilizer trim limit switch is referred to as the "limit switch" in this procedure.

C. There are three limit switches (S144, S145, and S844) and two stabilizer takeoff warning switches (S132, S1184, S546 and S1183) on the brackets along the stabilizer jackscrew.

D. This procedure is applicable for all three limit switches.

TASK 27-41-94-820-801

2. Stabilizer Trim Limit Switches Adjustment

(Figure 501)

A. References

Reference	Title

G01505	Lockwire - Safety And Lock	NASM20995

D. Location Zones

Zone	Area
311	Area Aft of Pressure Bulkhead - Left
312	Area Aft of Pressure Bulkhead - Right

E. Access Panels

Number	Name/Location
311BL	Stabilizer Trim Access Door

F. Prepare for the Test

SUBTASK 27-41-94-010-002

(1) To get access to the limit switches, do this step:

Open this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-94-860-004

(2) Use the bar, SPL-1677, to set the applicable "B" dimensions as follows:

NOTE: Make sure to protect wire bundles when using the trammel bar, SPL-1677. The sharp edges on the trammel bar, SPL-1677, can cause chafing or damage to the wires.

(a) With the stabilizer autopilot and electric actuator nose down (flaps not up), make sure the switch S145 "B" dimension at -0.45 units of trim is 45.48 ±0.05 in. (1155.2 ±1.3 mm).

(b) With the stabilizer electric actuator nose down (flaps up), make sure the switch S844 "B" dimension at 3.85 units of trim is 39.39 ±0.05 in. (1000.5 ±1.3 mm).

(c) With the stabilizer autopilot and electric actuator nose up, make sure the switch S144 "B" dimension at 14.00 units of trim is 24.80 ±0.05 in. (629.9 ±1.3 mm).

G. Stabilizer Trim Limit Switches Adjustment

SUBTASK 27-41-94-820-002

(1) Adjust the Type 2 style stabilizer trim limit switch, Figure 501 (Sheet 4):

(a) Remove the lockwire from the lockscrews [3].

(b) Loosen the locknut [4].

(c) Loosen the two lockscrews [3].

(d) Use a 3/32 inch (2.4 millimeters) HEX torque wrench (30 in-lbs), COM-1587 to turn the worm gear with no more than 6 in-lb (0.7 N·m) until the limit switch [1] starts to operate (when you hear a click).

(e) If you cannot turn the worm gear with 6 in-lb (0.7 N·m) of torque, then do these steps:

1) Move the stabilizer until the limit switch [1] does not touch the cam.

2) Adjust the limit switch arm [2].

CAUTION

DO NOT MOVE THE LIMIT SWITCH ARM MORE THAN ITS RANGE OF MOVEMENT. IT CAN CAUSE DAMAGE TO THE LIMIT SWITCH

3) Move the stabilizer by hand until the limit switch [1] clicks.

4) Make sure the "B" dimension is the same as follows:

a) With the stabilizer autopilot and electric actuator nose down (flaps not up), make sure the switch S145 "B" dimension at -0.45 units of trim is 45.48 ±0.05 in. (1155.2 ±1.3 mm).

b) With the stabilizer electric actuator nose down (flaps up), make sure the switch S844 "B" dimension at 3.85 units of trim is 39.39 ±0.05 in. (1000.5 ±1.3 mm).

c) With the stabilizer autopilot and electric actuator nose up, make sure the switch S144 "B" dimension at 14.00 units of trim is 24.80 ±0.05 in. (629.9 ±1.3 mm).

(f) Tighten the lockscrews [3].

(g) Tighten the locknut [4] to 20 in-lb (2 N·m) - 25 in-lb (3 N·m).

(h) Install the lockwire, G01505, on the lockscrews [3], Lockwire, Cotter Pins, and Lockrings - Installation, TASK 20-10-44-400-801.

SUBTASK 27-41-94-820-003

(2) Adjust the Type 1 style stabilizer trim limit switch, Figure 501 (Sheet 5):

(a) Remove the lockwire from the lockscrew [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Loosen the locknut [4].

(c) Loosen the lockscrew [3].

(d) Using a slot-head screwdriver, turn the lockscrew [3] worm gear until the switch is in the desired position.

(e) If you can not turn the worm gear with 6 in-lb (0.7 N·m) of torque, then do these steps:

1) Move the stabilizer until the limit switch [1] does not touch the cam.

2) Adjust the limit switch arm [2].

3) Move the stabilizer by hand until the limit switch [1] clicks.

4) Make sure the "B" dimension is the same as follows:

a) With the stabilizer autopilot and electric actuator nose down (flaps not up), make sure the switch S145 "B" dimension at -0.45 units of trim is 45.48 ±0.05 in. (1155.2 ±1.3 mm).

b) With the stabilizer electric actuator nose down (flaps up), make sure the switch S844 "B" dimension at 3.85 units of trim is 39.39 ±0.05 in. (1000.5 ±1.3 mm).

c) With the stabilizer autopilot and electric actuator nose up, make sure the switch S144 "B" dimension at 14.00 units of trim is 24.80 ±0.05 in. (629.9 ±1.3 mm).

(f) Tighten the lockscrew [3].

(g) Tighten the locknut [4] to 20 in-lb (2 N·m) - 25 in-lb (3 N·m).

(h) Install the lockwire, G01505, on the lockscrews [3], Lockwire, Cotter Pins, and Lockrings - Installation, TASK 20-10-44-400-801.

SUBTASK 27-41-94-820-004

(3) Make sure that the limit switch arm [2] overtravel is sufficient:

(a) With the stabilizer leading edge in the full down position (airplane nose up), make sure that the switch S144 can be rotated away from the cam surface by a minimum of 0.05 in. (1.27 mm) with finger pressure only.

(b) With the stabilizer leading edge in the full up position (airplane nose down), make sure that the switches S145 and S844 can be rotated away from the cam surface by a minimum of 0.05 in. (1.27 mm) with finger pressure only.

SUBTASK 27-41-94-710-002

(4) Do this task: Stabilizer Trim Limit Switches Test, TASK 27-41-94-700-801.

SUBTASK 27-41-94-410-002

TASK 27-41-94-700-801

3. Stabilizer Trim Limit Switches Test

A. General

(1) The trim system can move the stabilizer to a position more than the limits that were set during the adjustment of the limit switches because of the coasting. This occurs when power has been removed from the stab trim actuator but the ballscrew continues to move as it comes to a stop. This condition is normal. This makes the "B" dimension tolerances for the test are larger than the tolerance for the adjustment.

(2) This test is applicable only for limit switches S145, S844, and S144.

B. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)

311BL	Stabilizer Trim Access Door

G. Stabilizer Trim Limit Switches Test

SUBTASK 27-41-94-710-003

(1) Do the test of the limit switch S844:

(a) Set the STAB TRIM PRI switch, S272, in the CUTOUT position.

(b) Use the stabilizer trim wheel to move the stabilizer to the maximum leading edge up (APL NOSE DOWN) position.

(c) Set the STAB TRIM PRI switch in the NORMAL position.

(d) Turn the captain's stabilizer trim wheel clockwise approximately 3 turns.

(e) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

(f) Make sure that the stabilizer leading edge does not move.

(g) Release the stabilizer trim switches.

(h) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

(i) Make sure that the stabilizer leading edge moves down (APL NOSE UP).

(j) Release the stabilizer trim switches.

(k) Move the stabilizer to approximately 3.85 units of trim

(l) Move the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position until the stabilizer stops automatically.

CAUTION MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(m) Use the bar, SPL-1677, to measure the "B" dimension.

(n) Make sure that the "B" dimension is 39.39 ±0.10 in. (1000.5 ±2.5 mm).

SUBTASK 27-41-94-710-004

(2) Do the test of the limit switch, S145, as follows:

(a) If you will use the standby hydraulic pump motor to move the flaps, then do these steps:

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

CAUTION DO NOT OPERATE THE TRAILING EDGE FLAPS WITH ELECTRICAL POWER MORE THAN ONE FULL EXTEND/RETRACT CYCLE IN 25 MINUTES. YOU CAN CAUSE DAMAGE TO THE FLAP ELECTRIC MOTORS IF YOU OPERATE THEM TOO FREQUENTLY.

1) Put the ALTERNATE FLAP arm switch in the ARM position.

   NOTE: The standby hydraulic pump motor will operate when the ALTERNATE FLAP arm switch is in the ARM position.

2) Move the alternate flap drive control switch to extend the flaps to the 5-unit position.

(b) If you use the system B hydraulic power to move the flap, then do these steps:

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

1) Pressurize hydraulic system B (TASK 29-11-00-860-801).

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

2) Move the flap control lever to extend the flaps to the 5-unit position.

(c) Set the STAB TRIM PRI switch in the CUTOUT position.

(d) Use the stabilizer trim wheel to move the stabilizer to the maximum leading edge up (APL NOSE DOWN) position.

(e) Set the STAB TRIM PRI switch in the NORMAL position.

(f) Turn the captain's stabilizer trim wheel clockwise approximately 2 +/- 0.25 turns.

(g) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

(h) Make sure that the stabilizer leading edge does not move.

(i) Release the stabilizer trim switches.

(j) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

(k) Make sure that stabilizer leading edge moves down (APL NOSE UP).

(l) Release the stabilizer trim switches.

(m) Move the stabilizer to approximately 1 units of trim.

(n) Move the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position until the stabilizer stops automatically.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(o) Use the bar, SPL-1677, to measure the "B" dimension.

(p) Make sure that the "B" dimension is 45.48 ±0.10 in. (1155.2 ±2.5 mm).

(q) Move the flap control lever or the alternate flap drive control switch to retract the flaps.

(r) Remove the pressure from hydraulic system B (TASK 29-11-00-860-805).

SUBTASK 27-41-94-710-005

(3) Do the test of the limit switch S144 as follows:

(a) Move the stabilizer to the maximum leading edge down (APL NOSE UP) position.

(b) Turn the captain's stabilizer trim wheel counterclockwise approximately 3 turns.

(c) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE UP position.

(d) Make sure that the stabilizer leading edge does not move.

(e) Release the stabilizer trim switches.

(f) Move and hold the stabilizer trim switches on the captain's control wheel to the NOSE DOWN position.

(g) Make sure that stabilizer leading edge moves up (APL NOSE DOWN).

(h) Release the stabilizer trim switches.

(i) Move the stabilizer to approximately 12 units of trim.

(j) Move the stabilizer trim switches on the captain's control wheel to the NOSE UP position until the stabilizer stops automatically.

CAUTION

MAKE SURE TO GIVE PROTECTION TO THE WIRE BUNDLES WHEN YOU USE THE TRAMMEL BAR, SPL-1677. THE TRAMMEL BAR HAS SHARP EDGES THAT CAN CAUSE DAMAGE TO THE WIRE BUNDLE INSULATION.

(k) Use the bar, SPL-1677, to measure the "B" dimension.

(l) Make sure that the "B" dimension is 24.80 ±0.10 in. (629.9 ±2.5 mm).

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-41-94-410-003

(1) Close this access panel:

Number	Name/Location
311BL	Stabilizer Trim Access Door

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STABILIZER TRIM CONTROL SWITCH - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Stabilizer trim control switch removal

(2) Stabilizer trim control switch installation.

B. The stabilizer trim control switch is referred to as the "switch assembly" in this procedure.

C. The switch assembly has an electrical cable which connects to the terminal block in the control wheel. If a switch becomes defective, the switch and electrical cable are replaced as an assembly.

D. This procedure is applicable for the captain's and first officer's switch assembly.

TASK 27-41-97-000-801

2. Stabilizer Trim Control Switch Removal

(Figure 401)

A. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Prepare for the Removal

SUBTASK 27-41-97-860-001

(1) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT

C. Switch Assembly Removal

SUBTASK 27-41-97-020-001

(1) Remove the medallion [2] from the control wheel.

(a) Remove the screws [3].

(b) Remove the pad [4].

SUBTASK 27-41-97-020-002

(2) Remove the screws [6] from the terminal block cover [5].

(a) Remove the terminal block cover [5].

SUBTASK 27-41-97-020-003

(3) Remove the stabilizer trim control switch [1]:

(a) Remove the screws [11], washers [10], and washers [12] to disconnect the switch wires from the terminal block [9].

(b) Remove the terminals from the switch wires to help the removal.

(c) Attach a threading wire to the switch electrical cable.

NOTE: This threading wire that is attached to the electrical cable is to help with the installation of the switch assembly.

(d) Remove the screws [7] which attach the stabilizer trim control switch [1] to the control wheel handle.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Slowly pull the stabilizer trim control switch [1] from the horn of the control wheel until the switch wires show.

NOTE: Pull until approximately 3 in. (76 mm) of the threaded wire comes out of the control wheel handle. Do not remove the threaded wire from the control wheel. It is necessary to use this threaded wire for installation.

——— END OF TASK ———

212	Flight Compartment - Right

C. Switch Assembly Installation

SUBTASK 27-41-97-420-001

(1) Install the stabilizer trim control switch [1]:

NOTE: A threaded wire is attached to the switch electrical cable.

(a) Slowly pull the switch electrical cable through the control wheel handle with the other end of the threaded wire.

(b) Install the insulator [8] between the stabilizer trim control switch [1] and the interphone switch wires.

(c) Put the stabilizer trim control switch [1] in its position.

(d) Install the screws [7] to hold the stabilizer trim control switch [1] to the control wheel.

1) Tighten the screw [7] to 4.0 ±0.5 in-lb (0.45 ±0.06 N·m).

2) Make sure there is 0.002 in. (0.05 mm) clearance between the control wheel handle and stabilizer trim control switch [1].

(e) Remove the threaded wire from the switch electrical cable.

(f) Install the terminals on the switch wires.

(g) Install the screws [11], washers [10], and washers [12] to connect the terminals of the switch wire to the terminal block [9].

1) Make sure that the terminals are installed correctly according to the color code identification (Figure 401).

SUBTASK 27-41-97-420-002

(2) Install the screws [6] to attach the terminal block cover [5] to the control wheel.

SUBTASK 27-41-97-420-003

(3) Install the medallion [2] on the control wheel.

(a) Install the pad [4].

(b) Install the screws [3].

SUBTASK 27-41-97-860-002

(4) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-41-97-710-001

(5) Do this task: Stabilizer Trim Control Switch Test, TASK 27-41-97-700-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

STABILIZER TRIM CONTROL SWITCH - ADJUSTMENT/TEST

1. General

A. This procedure has this task:

(1) Stabilizer Trim Control Switch Test - Use this test to make sure that the stabilizer trim control switches operate correctly.

B. The stabilizer trim control switches are installed on the control wheels. Each control wheel has two stabilizer trim control switches.

C. This procedure is applicable for the stabilizer trim control switches on the captain's and first officer's control wheels.

TASK 27-41-97-700-801

2. Stabilizer Trim Control Switch Test

NOTE: This procedure is a scheduled maintenance task.

A. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Prepare for the Test

SUBTASK 27-41-97-860-004

(1) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT
D	10	C00840	FLIGHT CONTROL STAB TRIM ACTUATOR

SUBTASK 27-41-97-860-005

(2) Make sure that the STAB TRIM PRI switch, S272 on the control stand is in the NORMAL position.

SUBTASK 27-41-97-860-006

(3) Make sure that the STAB TRIM override switch on P8 panel is in the NORM position.

NOTE: The override switch is on the same control panel for the FLT DK DOOR.

C. Stabilizer Trim Control Switch Test

SUBTASK 27-41-97-710-002

(1) Do a test of the stabilizer trim control switches on the applicable control wheel:

(a) Push and hold the two stabilizer trim control switches on the applicable control wheel to the NOSE DOWN position.

(b) Make sure that the stabilizer leading edge moves up.

(c) Make sure that the trim wheels turn in the nose down position.

(d) Make sure that the STAB TRIM indicator for the applicable control wheel moves in the NOSE DOWN position.

(e) Release the two stabilizer trim control switches.

(f) Push and hold the two stabilizer trim control switches on the applicable control wheel to the NOSE UP position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Make sure that the stabilizer leading edge moves down.

(h) Make sure that the trim wheels turn in the nose up position.

(i) Make sure that the STAB TRIM indicator for the applicable control wheel moves in the NOSE UP position.

(j) Release the two stabilizer trim control switches.

(k) Using either the captain's or first officer's trim control switch, move the stabilizer to 4 units of trim as indicated by the stabilizer position indicator.

(l) Push and hold the left stabilizer trim control switch on the applicable control wheel to the NOSE UP position.

(m) Make sure that the stabilizer leading edge does not move.

(n) Release the left stabilizer trim control switch.

(o) Push and hold the left stabilizer trim control switch on the applicable control wheel to the NOSE DOWN position.

(p) Make sure that the stabilizer leading edge does not move.

(q) Release the left stabilizer trim control switch.

(r) Push and hold the right stabilizer trim control switch on the applicable control wheel to the NOSE UP position.

(s) Make sure that the stabilizer leading edge does not move.

(t) Release the right stabilizer trim control switch.

(u) Push and hold the right stabilizer trim control switch on the applicable control wheel to the NOSE DOWN position.

(v) Make sure that the stabilizer leading edge does not move.

(w) Release the right stabilizer trim control switch.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TRAILING EDGE FLAP SYSTEM - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks for the trailing edge flap system:

(1) A task to deactivate the trailing edge flap system

(2) A task to reactivate the trailing edge flap system

(3) A task to operate the trailing edge flaps with primary control

(4) A task to operate the trailing edge flaps with alternate control

(5) A task to manually operate the trailing edge flaps without airplane power

(6) A task to extend the trailing edge flaps

(7) A task to retract the trailing edge flaps

(8) A task to operate the trailing edge flaps with the leading edge flaps and slats retracted and disabled

(9) A task to install the flap control handle lockout assembly

(10) A task to remove the flap control handle lockout assembly.

TASK 27-51-00-040-801

2. Trailing Edge Flap System Deactivation

(Figure 201, Figure 202)

A. General

(1) Use this task to deactivate the trailing edge flap system.

NOTE: This task will also deactivate the leading edge system.

B. References

Reference	Title

212	Flight Compartment - Right

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Flap Deactivation

SUBTASK 27-51-00-210-001

(1) Make sure that the ALTERNATE FLAPS ARM switch on the P5 overhead panel is in the OFF position (Figure 201).

SUBTASK 27-51-00-860-001

(2) Open these circuit breakers and install safety locks:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

SUBTASK 27-51-00-480-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-00-040-001

(4) Deactivate the trailing edge flap bypass valve (Figure 202):

(a) Disconnect the electrical connector from the bypass valve.

NOTE: If desired, inspect the connector for corrosion now. If there is corrosion, refer to the SWPM 20-60-03 to correct the problem. This step is also done in the installation task.

(b) Move the manual override lever on the bypass valve to position 2.

(c) Install the lock, SPL-1676 on the bypass valve.

1) Make sure that the detent pin is installed.

SUBTASK 27-51-00-210-002

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Trailing Edge Flap System - Tryout

NOTE: This tryout is to make sure that the trailing edge flap system is in zero energy state.

(a) Make sure that the trailing edge flaps do not move using primary flight controls:

1) Move the flap control lever to a minimum of one lever detent position away from the current position.

2) Make sure that the trailing edge flaps do not move.

3) Return the flap control lever to the detent position corresponding to the current flap position.

(b) Make sure that the trailing edge flaps do not move using the alternate flight controls:

1) Set the alternate flaps arm switch to the ARM position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) If flaps are in retracted position, set the alternate flaps control switch to DOWN position.

b) If flaps are in the extended position, set the alternate flaps control switch to UP position.

2) Make sure that the trailing edge flaps do not move.

3) Return the alternate flaps control switch to OFF, and the alternate flaps arm switch to OFF.

SUBTASK 27-51-00-420-006

(6) If the flaps are in the retracted position, do this task to install the flap control handle lockout assembly: Flap Control Handle Lockout Assembly Installation, TASK 27-51-00-400-801.

SUBTASK 27-51-00-480-001

(7) Put DO-NOT-OPERATE tags on the ALTERNATE FLAPS switches.

——— END OF TASK ———

F. Procedure

SUBTASK 27-51-00-480-003

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-00-440-001

(2) Reactivate the trailing edge flap bypass valve (Figure 202):

(a) Remove the lock, SPL-1676 from the bypass valve.

(b) Move the manual override lever on the bypass valve to position 1.

(c) Before you connect the electrical connector, examine the connector for corrosion.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS THAT USE DEICING FLUID WHICH CONTAINS POTASSIUM FORMATE. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(d) If there was corrosion, refer to SWPM 20-60-03 to correct the problem.

(e) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

(f) Connect the electrical connector to the bypass valve.

SUBTASK 27-51-00-860-002

(3) Remove the safety locks and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

SUBTASK 27-51-00-080-001

(4) Remove the DO-NOT-OPERATE tags from the ALTERNATE FLAPS switches (Figure 201).

SUBTASK 27-51-00-020-001

(5) Do this task to remove the lockout assembly if it is installed: Flap Control Handle Lockout Assembly Removal, TASK 27-51-00-000-801.

END OF TASK

TASK 27-51-00-860-801

4. Trailing Edge Flap System Operation With Primary Control

(Figure 203)

A. General

(1) The primary control system uses the hydraulic system B to move the flaps.

B. References

Reference	Title
24-22-00-860-801	Supply Electrical Power (P/B 201)
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Trailing Edge Flap System Operation With Primary Control Procedure

SUBTASK 27-51-00-860-003

(1) Do this task: Supply Electrical Power, TASK 24-22-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-860-004

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-00-860-005

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Move the flap control lever to the applicable detent position.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-006

(1) Move the flap control lever to the UP position to retract the flaps and slats.

SUBTASK 27-51-00-860-007

(2) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

TASK 27-51-00-860-802

5. Trailing Edge Flap System Operation With Alternate Control

(Figure 201)

A. General

(1) The alternate control system uses electrical power to move the flaps.

B. References

Reference	Title
24-22-00-860-801	Supply Electrical Power (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Procedure

SUBTASK 27-51-00-860-008

(1) Do this task: Supply Electrical Power, TASK 24-22-00-860-801.

SUBTASK 27-51-00-860-009

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION

DO NOT OPERATE THE TRAILING EDGE FLAPS WITH ELECTRICAL POWER MORE THAN ONE FULL EXTEND/RETRACT CYCLE IN 25 MINUTES. YOU CAN CAUSE DAMAGE TO THE FLAP ELECTRIC MOTORS IF YOU OPERATE THEM TOO FREQUENTLY.

(2) Move the ALTERNATE FLAPS ARM switch on the P5 panel to arm the alternate control system.

NOTE: The Standby Hydraulic System activates when the ALTERNATE FLAPS ARM switch is set to arm. The Standby Hydraulic System also operates the rudder and thrust reversers.

SUBTASK 27-51-00-860-010

CAUTION

DO NOT OPERATE THE TRAILING EDGE FLAPS WITH ELECTRICAL POWER MORE THAN ONE FULL EXTEND/RETRACT CYCLE IN 25 MINUTES. YOU CAN CAUSE DAMAGE TO THE FLAP ELECTRIC MOTORS IF YOU OPERATE THEM TOO FREQUENTLY.

(3) Move the flap control lever to the 40-unit position.

NOTE: This will decrease the load on the flap electric (alternate) motor. You can move the lever past where you will move the flaps to.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-860-011

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION WAIT A MINIMUM OF 15 SECONDS AFTER THE FLAPS STOP BEFORE YOU USE THE ALTERNATE SYSTEM TO MOVE THE FLAPS AGAIN. YOU CAN CAUSE DAMAGE TO THE FLAP ALTERNATE MOTOR.

(4) Move the ALTERNATE FLAPS control switch to UP or DOWN to extend or retract the flaps as it is necessary.

NOTE: The leading edge flaps and slats will extend with alternate control.

(a) To deactivate the leading edge flaps and slats, do this task:Trailing Edge Flap System Operation With Leading Edge Flaps and Slats Disabled, TASK 27-51-00-860-805.

SUBTASK 27-51-00-860-012

(5) Move the ALTERNATE FLAPS control switch to the OFF position.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-013

WARNING MAKE SURE THE POSITION OF THE FLAPS AGREES WITH THE POSITION OF THE FLAP CONTROL LEVER. WHEN YOU SUPPLY HYDRAULIC POWER, THE FLAPS AND SLATS WILL MOVE AUTOMATICALLY TO THE POSITION OF THE FLAP CONTROL LEVER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Move the ALTERNATE FLAPS control switch until the flaps are in the same position as the flap control lever or move the flap control lever to the position of the flaps.

SUBTASK 27-51-00-860-014

(2) Move the ALTERNATE FLAPS control switch to the OFF position.

SUBTASK 27-51-00-860-015

(3) Move the ALTERNATE FLAPS ARM switch to the OFF position to disarm the alternate control system.

END OF TASK

TASK 27-51-00-980-801

6. Trailing Edge Flap System Manual Operation

(Figure 204)

A. General

(1) Use this task to manually operate the trailing edge flap system without airplane power.

B. References

Reference	Title

ECCN 9E991 BOEING PROPRIETARY - See title page for details

C. Consumable Materials

Reference	Description	Specification
D00467	Fluid - Landing Gear Shock Strut	BMS3-32 Type II
G50237	Compound - Corrosion Inhibiting, Non-drying - Cor-Ban 27L	BMS3-38

D. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

E. Procedure

SUBTASK 27-51-00-480-004

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-00-040-002

WARNING DO THE TRAILING EDGE FLAP DEACTIVATION PROCEDURE BEFORE YOU DO WORK ON THE FLAP SYSTEM. WITH THE FLAPS ACTIVATED, THE FLAPS CAN MOVE AND CAUSE INJURY TO PERSONS OR DAMAGE TO EQUIPMENT.

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-00-010-001

(3) Remove the cover [4] from the flap power drive unit [1]:

(a) Remove the bolts [3] and washers [2] that attach the cover [4] to the flap power drive unit [1].

(b) Remove the cover [4] from the flap power drive unit [1]

SUBTASK 27-51-00-980-001

WARNING MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE FLAPS. THE FLAPS WILL MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

CAUTION DO NOT TURN THE MANUAL DRIVE WITH MORE THAN 350 POUND-INCHES (39.5 NEWTON-METERS) TORQUE OR FASTER THAN 1000 RPM. YOU CAN CAUSE DAMAGE TO THE POSITION SENSOR GEARBOX AND THE TORQUE TUBES.

(4) Use a 3/8 inch square drive to turn the manual drive on the PDU to extend or retract the trailing edge flaps to the applicable position.

NOTE: Refer to the cover [4] for the correct direction to turn the manual drive. Look at the number 4 or 5 ballscrew to find the position of the flaps.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) If the pin is sheared, do this task: Flap Power Drive Unit Manual Drive Shearout Replacement, TASK 27-51-51-960-801.

NOTE: The manual drive on the PDU has a shearout installed to prevent damage to the system from too much drive torque.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-980-002

WARNING

MAKE SURE THE POSITION OF THE FLAPS AGREES WITH THE POSITION OF THE FLAP CONTROL LEVER. WHEN YOU SUPPLY HYDRAULIC POWER, THE FLAPS AND SLATS WILL MOVE AUTOMATICALLY TO THE POSITION OF THE FLAP CONTROL LEVER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Turn the manual drive until the flaps are in a position which agrees with the flap control lever.

SUBTASK 27-51-00-410-001

(2) Install the cover [4] on the flap power drive unit [1]:

(a) Apply fluid, D00467 to the packing [5] on the cover [4].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply a thin layer of Cor-Ban 27L Compound, G50237 to the mating surface of the cover [4] and the flap power drive unit [1].

(c) Put the cover [4] in its position on the flap power drive unit [1].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(d) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [3].

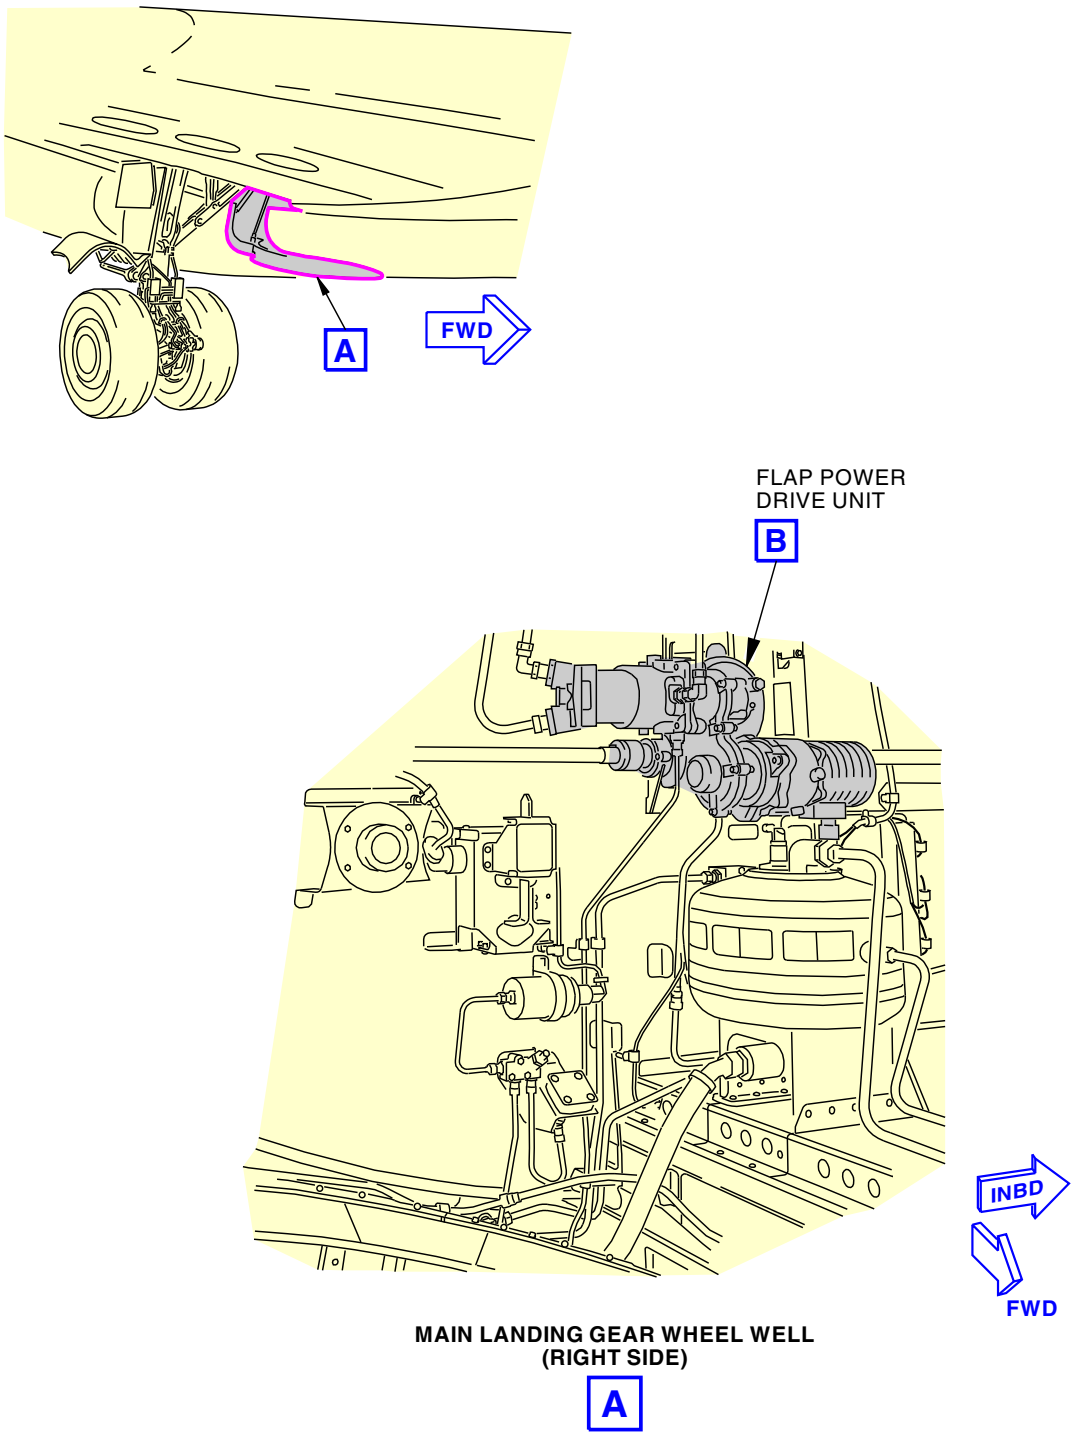
(e) Install the bolts [3] and washers [2] to attach the cover [4].

SUBTASK 27-51-00-440-002

(3) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details



Trailing Edge Flap Manual Operation

TASK 27-51-00-860-803

7. Extend the Trailing Edge Flaps

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Procedure

SUBTASK 27-51-00-860-016

CAUTION DO NOT OPERATE TRAILING EDGE FLAPS WITH THE FAIRING PANELS LOOSE OR REMOVED FROM THE AIRPLANE. DAMAGE TO EQUIPMENT CAN OCCUR.

(1) Do one of these tasks to extend the trailing edge flaps:

(a) To extend the flaps with hydraulic power, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(b) To extend the flaps with electrical power in alternate mode, do this task: Trailing Edge Flap System Operation With Alternate Control, TASK 27-51-00-860-802.

(c) To manually extend the flaps, do this task: Trailing Edge Flap System Manual Operation, TASK 27-51-00-980-801.

——— END OF TASK ———

TASK 27-51-00-860-804

8. Retract the Trailing Edge Flaps

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Procedure

SUBTASK 27-51-00-860-017

CAUTION DO NOT OPERATE TRAILING EDGE FLAPS WITH THE FAIRING PANELS LOOSE OR REMOVED FROM THE AIRPLANE. DAMAGE TO EQUIPMENT CAN OCCUR.

(1) Do one of these tasks to retract the trailing edge flaps:

(a) To retract the flaps with hydraulic power, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(b) To retract the flaps with electrical power in alternate mode, do this task: Trailing Edge Flap System Operation With Alternate Control, TASK 27-51-00-860-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) To manually retract the flaps, do this task: Trailing Edge Flap System Manual Operation, TASK 27-51-00-980-801.

——— END OF TASK ———

TASK 27-51-00-860-805

9. Trailing Edge Flap System Operation With Leading Edge Flaps and Slats Disabled

A. General

(1) This task gives instructions to operate the trailing edge flap system with the leading edge flaps and slats retracted and disabled.

(2) You can operate the trailing edge flaps with primary or alternate control or manually after you do the Disable the Leading Edge Slats part of this task.

B. References

212	Flight Compartment - Right

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

G. Disable the Leading Edge Slats

SUBTASK 27-51-00-860-018

(1) Do this task: Supply Electrical Power, TASK 24-22-00-860-801.

SUBTASK 27-51-00-860-019

(2) Make sure the trailing edge flaps and the leading edge flaps and slats are in the retracted position. If they are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-00-860-020

(3) Remove the standby hydraulic system power, do this task: Standby Hydraulic System Power Removal, TASK 29-21-00-000-802.

SUBTASK 27-51-00-860-021

(4) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-51-00-480-005

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-00-860-022

(6) Move the LE cruise depressurization valve to the closed position (Figure 205):

NOTE: It will be necessary to use the FSEU to operate the LE cruise depressurization valve.

(a) To get access to the main equipment center, do this task.

Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

(b) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?

(c) Push the NO button until OTHER FUNCTNS? shows on the display.

(d) Push the YES button to select OTHER FUNCTNS? on the FSEU.

(e) Push the YES button to select SET OUTPUTS? from the OTHER FUNCTNS? menu.

(f) Push the YES button to select LE DEPR VALVE? from the SET OUTPUTS? menu.

(g) Push the YES button at the SET ON? display to change the position of the LE cruise depressurization valve.

NOTE: This will drive the valve to the closed position. The FSEU will automatically change the position of the valve back to the open position after approximately 75 seconds.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-980-003

(7) Move the manual override handle on the LE cruise depressurization valve to the OFF position (Figure 206):

(a) Do not force movement of the manual override handle with tools.

(b) Remove lockwire from the manual override handle on the LE cruise depressurization valve.

(c) Move the manual override handle to the OFF position.

(d) If you cannot move the manual override handle on the LE cruise depressurization valve, then make sure the leading edge and trailing edge surfaces are fully retracted. Then use the FSEU to operate the valve again.

CAUTION MAKE SURE YOU USE A 0.316 INCH (8.03 MM) RIG PIN IN THE CRUISE DEPRESSURIZATION VALVE HANDLE. A SMALLER RIG PIN CAN PERMIT THE LEADING EDGE FLAPS AND SLATS TO MOVE IF HYDRAULIC POWER IS SUPPLIED. THIS CAN CAUSE DAMAGE TO THE AIRPLANE.

(e) Install a 0.316 inch (8.03 mm) rig pin in the manual override handle to keep the handle in the OFF position.

(f) Attach a DO-NOT-REMOVE tag on the rig pin.

SUBTASK 27-51-00-480-006

(8) Install the lock, SPL-1675 to prevent the operation of the standby hydraulic system (Figure 206).

(a) Make sure the ALTERNATE FLAPS ARM switch is in the OFF position.

(b) Disconnect the electrical connector from the leading edge standby drive shutoff valve.

1) If desired, inspect the connector for corrosion now. If there is corrosion, refer to SWPM 20-60-03 to correct the problem.

NOTE: It is recommended that this step is also done when the connector is reconnected.

WARNING MAKE SURE THAT THE MANUAL OVERRIDE LEVER IS IN POSITION 1 TO PREVENT THE MOVEMENT OF THE LEADING EDGE SLATS. IF THE LEADING EDGE SLATS MOVE, DAMAGE TO AN OPEN THRUST REVERSER AND INJURIES TO PERSONNEL CAN OCCUR.

(c) Make sure the manual override lever at the leading edge standby drive shutoff valve is in position 1 (standby hydraulic power is OFF).

WARNING MAKE SURE TO INSTALL THE GROUND LOCK ON THE STANDBY HYDRAULIC MODULE TO PREVENT ACCIDENTAL STANDBY SYSTEM OPERATION OF THE LEADING EDGE FLAPS AND SLATS. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(d) Install the lock, SPL-1675 on the standby hydraulic module.

(e) Install the lockpin.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Trailing Edge Flap Operation With Primary Control

SUBTASK 27-51-00-860-023

(1) Make sure you do the Disable the Leading Edge Slats part of this task before you operate the trailing edge flaps.

SUBTASK 27-51-00-860-024

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

NOTE: The leading edge flaps and slats will move to the retracted position when you supply hydraulic power if they are not in the retracted position.

SUBTASK 27-51-00-860-025

WARNING

MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE TRAILING EDGE FLAPS. THE FLAPS WILL MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(3) Move the flap control lever to the applicable detent position.

SUBTASK 27-51-00-860-026

(4) To retract the trailing edge flaps, move the flap control lever to the UP position.

SUBTASK 27-51-00-860-027

(5) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

I. Trailing Edge Flap Operation With Alternate Control

SUBTASK 27-51-00-860-028

(1) Make sure you do the Disable the Leading Edge Slats part of this task before you operate the trailing edge flaps.

SUBTASK 27-51-00-860-029

WARNING

MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE TRAILING EDGE FLAPS. THE FLAPS WILL MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(2) Move the ALTERNATE FLAPS ARM switch on the P5 panel to arm the alternate control system.

SUBTASK 27-51-00-860-030

CAUTION

WAIT A MINIMUM OF 15 SECONDS AFTER THE FLAPS STOP BEFORE YOU USE THE ALTERNATE SYSTEM TO MOVE THE FLAPS AGAIN. YOU CAN CAUSE DAMAGE TO THE FLAP ALTERNATE MOTOR.

(3) Move the ALTERNATE FLAPS control switch to DOWN to extend the trailing edge flaps as it is necessary.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-860-031

(4) Move the ALTERNATE FLAPS control switch to the OFF position.

SUBTASK 27-51-00-860-032

WARNING

MAKE SURE THE POSITION OF THE FLAPS AGREES WITH THE POSITION OF THE FLAP CONTROL LEVER. WHEN YOU SUPPLY HYDRAULIC POWER, THE FLAPS AND SLATS WILL MOVE AUTOMATICALLY TO THE POSITION OF THE FLAP CONTROL LEVER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) To retract the trailing edge flaps, move the ALTERNATE FLAPS control switch to UP until the flaps are in the same position as the flap control lever.

SUBTASK 27-51-00-860-033

(6) Move the ALTERNATE FLAPS control switch to the OFF position.

SUBTASK 27-51-00-860-034

(7) Move the ALTERNATE FLAPS ARM switch to the OFF position to disarm the alternate control system.

SUBTASK 27-51-00-080-002

(8) Remove the lock, SPL-1675 from the standby hydraulic module (Figure 206):

(a) Remove the detent pin.

(b) Remove the lock, SPL-1675 from the standby hydraulic module.

(c) Make sure the override lever at the leading edge standby drive shutoff valve is in position 1.

(d) Before you connect the electrical connector, examine the connector for corrosion.

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS WHERE DEICING FLUID THAT CONTAIN POTASSIUM FORMATE IS USED. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(e) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

(f) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

(g) Connect the electrical connector to the leading edge standby drive shutoff valve.

J. Trailing Edge Flap Manual Operation

(Figure 204)

SUBTASK 27-51-00-860-035

(1) Make sure you do the Disable the Leading Edge Slats part of this task before you operate the trailing edge flaps.

SUBTASK 27-51-00-480-007

(2) Install DO-NOT-OPERATE tags on the flap control lever, the ALTERNATE FLAPS switches and the hydraulic control switches.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-040-003

WARNING DO THE TRAILING EDGE FLAP DEACTIVATION PROCEDURE BEFORE YOU DO WORK ON THE FLAP SYSTEM. WITH THE FLAPS ACTIVATED, THE FLAPS CAN MOVE AND CAUSE INJURY TO PERSONS OR DAMAGE TO EQUIPMENT.

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-00-010-002

(4) Remove the cover [4] from the flap power drive unit [1]:

(a) Remove the bolts [3] and washers [2] that attach the cover [4] to the flap power drive unit [1].

(b) Remove the cover [4] from the power drive unit [1].

SUBTASK 27-51-00-980-004

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION DO NOT TURN THE MANUAL DRIVE WITH MORE THAN 350 POUND-INCHES (39.5 NEWTON-METERS) TORQUE OR FASTER THAN 1000 RPM. YOU CAN CAUSE DAMAGE TO THE POSITION SENSOR GEARBOX AND THE TORQUE TUBES.

(5) Use a 3/8 inch square drive to turn the manual drive on the PDU to extend the trailing edge flaps to the applicable position.

(a) Refer to the cover [4] for the correct direction to turn the manual drive.

(b) Look at the number 4 or 5 ballscrew to find the position of the flaps.

SUBTASK 27-51-00-980-005

WARNING MAKE SURE THE POSITION OF THE FLAPS AGREES WITH THE POSITION OF THE FLAP CONTROL LEVER. WHEN YOU SUPPLY HYDRAULIC POWER, THE FLAPS AND SLATS WILL MOVE AUTOMATICALLY TO THE POSITION OF THE FLAP CONTROL LEVER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) To retract the trailing edge flaps, turn the manual drive in the retract direction until the flaps are in a position which agrees with the flap control lever.

SUBTASK 27-51-00-410-002

(7) Install the cover [4] on the flap power drive unit [1]:

(a) Apply fluid, D00467 to the packing [5] on the cover [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply a thin layer of Cor-Ban 27L Compound, G50237 to the mating surface of the cover [4] and the flap power drive unit [1].

(c) Put the cover [4] in its position on the flap power drive unit [1].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(d) Apply a thin layer of Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [3].

(e) Install the bolts [3] and washers [2] to attach the cover [4].

SUBTASK 27-51-00-440-003

(8) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

K. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-480-008

(1) Remove the DO-NOT-OPERATE tags from the flap control lever, the ALTERNATE FLAPS switches and the hydraulic control switches if they are installed.

SUBTASK 27-51-00-020-002

(2) Remove the rig pin from the manual override lever on the LE cruise depressurization valve (Figure 206).

(a) Make sure the manual override lever moves from the OFF position to the ON position.

(b) Install lockwire on the manual override lever.

SUBTASK 27-51-00-410-003

(3) Below the main equipment center, do this task.

Close this access panel:

TASK 27-51-00-000-801

10. Flap Control Handle Lockout Assembly Removal

(Figure 207)

A. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-13747	Control Handle Lockout Assy (C27008-14 Assembly Included in C27008-20 and -22 Equipment) Part #: C27008-22 Supplier: 81205

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Flap Control Handle Lockout Assembly Removal

SUBTASK 27-51-00-080-003

(1) Remove the control handle lockout assy (C27008-14 assembly), SPL-13747:

(a) Remove the t-pin from the control handle lockout assembly.

(b) Remove the control handle lockout assembly from the handle of the flap control lever.

(c) Stow the t-pin in the control handle lockout assembly.

——— END OF TASK ———

TASK 27-51-00-400-801

11. Flap Control Handle Lockout Assembly Installation

(Figure 207)

A. General

(1) The flap control handle lockout assembly prevents the accidental movement of the flap control lever. With electrical power on, the flaps will operate if you move the flap control lever.

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-13747	Control Handle Lockout Assy (C27008-14 Assembly Included in C27008-20 and -22 Equipment) Part #: C27008-22 Supplier: 81205

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Flap Control Handle Lockout Assembly Installation

SUBTASK 27-51-00-480-009

(1) Install the control handle lockout assy (C27008-14 assembly), SPL-13747:

(a) Remove the t-pin from the control handle lockout assembly.

(b) Put the control handle lockout assembly on the handle of the flap control lever.

1) Make sure that the pin at the lower end of the control handle lockout assembly is in the detent on the detent plate.

(c) Install the t-pin to lock the control handle lockout assembly on the flap control lever handle.

——— END OF TASK ———

TRAILING EDGE FLAP SYSTEM - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) An operational test of the trailing edge flap system

(2) An adjustment of the trailing edge flap control system

(3) An adjustment of the trailing edge flap drive system

(4) A functional test of the trailing edge flap system

(5) A BITE test of the FSEU display and existing faults

(6) A BITE test of the trailing edge flap asymmetry and skew systems

(7) A BITE test of the trailing edge flap load relief system

(8) A test of flap priority valve

(9) A test of flap control lever force

(10) An functional test of the alternate control system for the trailing edge flaps

(11) An operational test of the no-back brakes inside the transmissions

(12) A functional test of the trailing edge flap load relief system

TASK 27-51-00-710-801

2. Trailing Edge Flap System Operational Test

(Figure 501)

A. General

(1) During the operational test, you make sure the operation of the trailing edge flaps is satisfactory. This test does not make sure the flaps are adjusted correctly. You must not use this test as an alternate for the system test of the trailing edge flaps.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Prepare for the Operational Test

SUBTASK 27-51-00-860-038

WARNING

MAKE SURE THAT ALL PERSONS AND EQUIPMENT ARE CLEAR OF CONTROL SURFACES, CABLES, AND LANDING GEAR AREAS. PRESSURIZATION OF A HYDRAULIC SYSTEM CAN MOVE CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS. MOVEMENT OF CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

NOTE: When operating the high lift devices on the ground with only the system B EMDP supplying power the pump low pressure light may momentarily illuminate. This illumination and associated pressure drop should be considered normal as long as the pressure recovers within 10 seconds of initiating movement of the high lift devices.

E. Primary Method for the Trailing Edge Flap System Operation Test

SUBTASK 27-51-00-710-001

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(1) Do these steps for the primary method of the trailing edge flap operation test:

NOTE: Use the flap position indicator to find the position of the flaps.

(a) Do one of these methods to show the flap position sensor and skew sensor inputs to the FSEU:

1) On the FSEU BITE display (Method 1):

a) Push the ON/OFF button on the FSEU to display “EXISTING FAULTS?”.

b) Push the NO switch three times on the FSEU to display “OTHER FUNCTNS?”.

c) Push the YES switch on the FSEU to display “SET OUTPUTS?”.

d) Push the NO switch on the FSEU to display “I/O MONITOR?”.

e) Push the YES switch on the FSEU to display “PROX SENSORS?”.

f) Push the NO switch on the FSEU to display 'SYNCHRO INPUTS?”.

g) Push the YES switch on the FSEU to display 'LVR POS”.

2) On the MAX Display System (MDS) (Method 2):

a) Push the SYS button on the Multifunction Display Panel (MFP).

b) Select the Maint button on the MENU bar at the top right of the System Page..

c) Push the SEL button on the SELECTOR knob.

d) Turn the SELECTOR knob to select MAINT DATA PGS on the Maintenance menu.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

e) Move the cursor down and then select the ATA 27 FLIGHT CONTROL DISPLAY button below the REAL column on the MAINT DATA PGS menu.

(b) Move the flap control lever to the UP position and wait for the flaps to reach the UP position.

1) Make sure that the flap position indicator pointers are within the detent Up white band.

(c) Make sure that the position and skew sensor values displayed on the FSEU fall within the following range:

1) For Method 1, push the arrow keys on the FSEU to step through the position and skew sensor values at the UP position.

2) For Method 2, observe the skew sensor values on the MDS.

DISPLAY	FSEU SENSOR VALUE RANGE	MDS SENSOR VALUE RANGE
LVR POS	-2.8 to 2.8	-2.8 to 2.8
L FL POS	-3.7 to 1.8	-3.7 to 1.8
R FL POS	-3.7 to 1.8	-3.7 to 1.8
F1 SKEW	295.7 to 311.0	-64.3 to -49
F2 SKEW	330.5 to 346.0	-29.5 to -14
F3 SKEW	0.0 to 13.2	0.0 to 13.2
F4 SKEW	332.8 to 346.9	-27.2 to -13.1
F5 SKEW	13.1 to 27.2	-27.2 to -13.1
F6 SKEW	346.8 to 360.0	0.0 to 13.2
F7 SKEW	14.0 to 29.5	-29.5 to -14
F8 SKEW	49.0 to 64.3	-64.3 to -49

(d) Move the flap control lever to the 10-unit position and wait for the flaps to reach the 10 position.

1) Make sure that the pointers on the flap position indicator are in the 10-unit white band.

(e) Make sure that the position and skew sensor values displayed on the FSEU fall within the following range:

1) For Method 1, push the arrow keys on the FSEU to step through the position and skew sensor values at the 10 position.

2) For Method 2, observe the skew sensor values on the MDS at the 10 position.

DISPLAY	FSEU SENSOR VALUE RANGE	MDS SENSOR VALUE RANGE
LVR POS	50.6 to 54.6	50.6 to 54.6
L FL POS	146.2 to 154.9	146.2 to 154.9
R FL POS	146.2 to 154.9	146.2 to 154.9
F1 SKEW	95.9 to 113.6	95.9 to 113.6
F2 SKEW	149.1 to 166.7	149.1 to 166.7
F3 SKEW	164.7 to 181.5	164.7 to 181.5

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

DISPLAY	FSEU SENSOR VALUE RANGE	MDS SENSOR VALUE RANGE
F4 SKEW	121.0 to 138.5	121.0 to 138.5
F5 SKEW	221.5 to 239.0	121.0 to 138.5
F6 SKEW	178.5 to 195.3	164.7 to 181.5
F7 SKEW	193.3 to 210.9	149.1 to 166.7
F8 SKEW	246.4 to 264.1	95.9 to 113.6

(f) Move the flap control lever to the 40-unit position and wait for the flaps to reach the 40 position.

1) Make sure that the pointers on the flap position indicator are in the 40-unit white band.

(g) Make sure that the position and skew sensor values displayed on the FSEU fall within the following range:

1) For Method 1, push the arrow keys on the FSEU to step through the position and skew sensor values at the 40 position.

2) For Method 2, observe the skew sensor values on the MDS at the 40 position.

DISPLAY	FSEU SENSOR VALUE RANGE	MDS SENSOR VALUE RANGE
LVR POS	105.4 to 110.9	105.4 to 110.9
L FL POS	267.1 to 273.3	267.1 to 273.3
R FL POS	267.1 to 273.3	267.1 to 273.3
F1 SKEW	224.4 to 242.1	224.4 to 242.1
F2 SKEW	279.2 to 296.9	279.2 to 296.9
F3 SKEW	288.7 to 305.5	288.7 to 305.5
F4 SKEW	265.1 to 282.1	265.1 to 282.1
F5 SKEW	77.9 to 94.9	265.1 to 282.1
F6 SKEW	54.5 to 71.3	288.7 to 305.5
F7 SKEW	63.1 to 80.8	279.2 to 296.9
F8 SKEW	117.9 to 135.6	224.4 to 242.1

(h) For Method 1, push the ON/OFF button on the front panel of the FSEU to turn it off.

(i) For Method 2, push the SYS button on the MFP to put the displays back to normal.

(j) Move the flap control lever to the UP position and wait for the flaps to reach the UP position.

1) Make sure that the pointers on the flap position indicator are in the UP white band.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Alternate Method for the Trailing Edge Flap System Operation Test

SUBTASK 27-51-00-860-041

> **WARNING** MAKE SURE THAT ALL PERSONS AND EQUIPMENT ARE CLEAR OF CONTROL SURFACES, CABLES, AND LANDING GEAR AREAS. PRESSURIZATION OF A HYDRAULIC SYSTEM CAN MOVE CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS. MOVEMENT OF CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-00-710-002

(2) Do these steps for the alternate method of the trailing edge flap operation test:

(a) Move the flap control lever to the UP detent and wait for the flaps to reach the UP position.

(b) Push the ON/OFF button on the FSEU to display “EXISTING FAULTS?”.

(c) Push the NO switch three times on the FSEU to display “OTHER FUNCTIONS?”.

(d) Push the YES switch on the FSEU to display “SET OUTPUTS?”.

(e) Push the NO switch on the FSEU to display “I/O MONITOR?”.

(f) Push the YES switch on the FSEU to display “PROX SENSORS?”.

(g) Push the NO switch twice on the FSEU to display “DISCRETE INPUTS?”.

(h) Push the YES switch on the FSEU to display “ALTN ARM?”.

(i) Make sure that the FSEU displays “ALTN ARM NOT ARM”.

(j) Put the Alternate Flaps Master Arming Switch, that is on the aft overhead panel, to the “Arm” position.

(k) Make sure that the FSEU displays “ALTN ARM ARMED”.

(l) Put the Alternate Flaps Master Arming Switch, that is on the aft overhead panel, to the “Off” position.

(m) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

(n) Put the Alternate Flaps Master Arming Switch, that is on the aft overhead panel, to the “Arm” position.

(o) Move the flap control lever to the 1 detent and wait for the flaps to reach the 1 position.

(p) Make sure that the flap position indicator pointers lie within the detent 1 white band.

(q) Move the Alternate Flap Drive Control Switch to the “Down” position for 5 seconds, then release.

1) Make sure that the trailing edge flaps, leading edge flaps and slats do not move.

2) Make sure that the flap position indicator pointers remains within the detent 1 white band.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(r) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

(s) Move the Alternate Flap Drive Control Switch to the “Up” and hold until the flaps stop moving.

(t) Make sure that the flap position indicator pointers lie within the detent Up white band.

(u) Make sure that the “LE FLAPS TRANSIT” and “LE EXTEND” master indication lights on the center panel are off.

(v) Make sure that all the LE flaps and slats indication lights on the aft overhead panel are off.

(w) Move the flap control lever to the 40 detent.

(x) Move the Alternate Flap Drive Control Switch to the “Down” position for 5 seconds, then release.

(y) Wait for the leading edge surfaces to fully extend.

(z) Make sure that the LE indication flaps “EXTEND” and slats “FULL EXTEND” lights on the aft overhead panel are now on.

(aa) Move the Alternate Flap Drive Control Switch to the “Down” position and hold until the flaps stop moving.

(ab) Make sure that the flap position indicator pointers lie within the detent 40 white band.

(ac) Make sure that the “LE FLAPS EXT” master indication light is on.

(ad) Put the Alternate Flaps Master Arming Switch, that is on the aft overhead panel, to the “Off” position.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-043

(1) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

TASK 27-51-00-820-801

3. Trailing Edge Flap Control System Adjustment and Test

(Figure 502)

A. General

(1) This task does an adjustment of the trailing edge flap control system.

(a) The trailing edge flap control system includes the flap control lever, flap control unit, flap control valve, control cables WFA and WFB, and follow-up cables WFFA and WFFB.

(2) When you retract the trailing edge flaps with hydraulic power, it is necessary to stop for two minutes after you move the flaps. The flaps can move a small distance for 2 minutes after extension or retraction.

(3) The adjustment instructions included in this task are included in the Flap Actuation Rigging Instructions drawing 256A3001.

(4) Before you do cable adjustment, permit a minimum of one hour at a constant ambient temperature of ± 5 degrees F (± 2.8 degrees C) for the airframe temperature to become stable.

(a) It is recommended to do the cable adjustments in a controlled environment such as a hangar.

NOTE: Direct sunlight on the airframe will cause the cable readings to be inaccurate.

(b) All temperature readings will be taken as ambient outside but adjacent to the applicable area of the airframe.

(c) The cable tension values will not be correct when there are temperature differences along the cable run.

(d) It is recommended that airplanes supplied with the cables that contain higher zinc coating (Grade D or Grade K) be re-tensioned 3 to 4 months into service. This will bring the tension of the control cables within the desired range. After the cables are re-tensioned, the high zinc cables (Grade D or Grade K) will continue to relax at a rate that is equivalent to the Grade B cables. To identify the grade of the cable, refer to: Control Cable Grades and Diameters/Table 27-11-00-993-802.

(5) Before you do cable adjustment, allow the tensiometer to stabilize to the same temperature as the airplane.

SUBTASK 27-51-00-020-003

(1) For the flap position transmitters on the left and right wings, do this task: Flap Position Transmitter Removal, TASK 27-58-01-000-801.

NOTE: If you do not remove the flap position transmitters, they can become incorrectly adjusted.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-480-010

WARNING MAKE SURE THAT YOU INSTALL THE DOWNLOCK PINS ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-00-860-045

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE TE FLAPS AND FLAP DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION CAREFULLY MONITOR THE FLAP MOVEMENT AFTER YOU COMPLETE THE WORK ON THE FLAP CONTROL SYSTEM OR THE FLAP DRIVE SYSTEM. IF YOU DO NOT ADJUST THE COMPONENTS CORRECTLY, YOU CAN CAUSE DAMAGE TO THE TRAILING-EDGE FLAP SYSTEM.

(3) Use the alternate system or the manual drive to retract the trailing edge flaps to the UP position.

SUBTASK 27-51-00-040-005

(4) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

H. Trailing Edge Flap Control System Adjustment

SUBTASK 27-51-00-020-004

CAUTION DISCONNECT THE TORQUE TUBES FROM THE FLAP-POWER DRIVE UNIT BEFORE YOU ADJUST THE FLAP CONTROL SYSTEM. ADJUST THE FLAP DRIVE SYSTEM CORRECTLY. IF YOU DO NOT, IT CAN CAUSE DAMAGE TO THE FLAP SYSTEM.

(1) If the flap drive system is not adjusted correctly, disconnect the torque tubes [18] from the power drive unit [17].

(a) Install the clamp set, SPL-1726, on the torque tubes [18] on each side of the power drive unit [17].

(b) Remove the screws [14] that attach the coupling sleeves [15] to the splined couplings [16].

(c) Move the coupling sleeves [15] off the splined couplings [16].

(d) Move the torque tubes [18] away from the flap power drive unit [17].

SUBTASK 27-51-00-010-003

(2) Remove the floor panel to get access to the top of the flap control unit [4], do this task: Passenger Cabin Floor Panel Removal, TASK 53-21-00-000-801.

NOTE: The floor panel is located between stations 706 and 727B on the right side of the airplane.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-010-004

(3) Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-51-00-010-016

(4) To get access to the turnbuckles [3] for the cable assemblies [1] WFA and WFB, do this step:

Open this access panel:

Number	Name/Location
114AC	Fwd Nose Wheel Well Upper Access Panel

(a) Do this task: Nose Wheel Well Access Panels Removal, TASK 53-14-01-020-801.

SUBTASK 27-51-00-820-001

(5) Do the adjustment of the flap control lever [7] and cable assemblies [1] WFA and WFB.

(a) Put the flap control lever [7] in the rigged position.

1) Move the flap control lever [7] aft until the detent pin is out of the UP detent.

2) Put a 0.19 in. (4.83 mm) thick rigging block between the detent pin on the flap control lever [7] and the upstop on the detent plate.

a) Make sure that the rigging block does not go into the flaps UP detent.

(b) Install a clamp to hold the quadrant [6] against the aft side of the stop [5] on the flap control unit [4].

(c) Remove the clips [2] from the turnbuckles [3] on the cable assemblies [1] WFA and WFB.

(d) If you installed a new cable assembly [1], do these steps:

1) Use the turnbuckles [3] to adjust the tension in the cable assemblies [1] to 275 ±15 lbf (1.22 ±0.07 kN).

2) Remove the clamp from the quadrant [6].

3) Remove the rigging block from the flap control lever [7].

4) Move the flap control lever [7] through its full travel 25 times.

5) Put the flap control lever [7] in the rigged position with the rigging block.

6) Install the clamp to hold the quadrant [6] against the aft side of the stop [5] on the flap control unit [4].

(e) Use the turnbuckles [3] to adjust the tension in the cable assemblies [1] WFA and WFB to the limit shown in (Table 501).

1) Adjust the tensions close to the maximum values in the table.

NOTE: The cables will stretch over a period of time.

2) During the adjustment, make sure that the tension in the cable assemblies [1] is never less than 50 lbf (0.22 kN).

NOTE: To make sure that the tension is correct, the temperature of the airframe must be constant in the limit of ±5 degrees for a minimum of one hour.

(f) Remove the clamp from the quadrant [6].

(g) Remove the rigging block from the flap control lever [7].

(h) Move the flap control lever [7] through its full travel a minimum of 5 times. Stop with the flap control lever [7] in the 1-unit position.

(i) Carefully move the flap control lever [7] forward until you feel resistance.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(j) Measure the distance between the detent pin on the flap control lever [7] and the upstop on the detent plate.

(k) If the distance is not in the limit of 0.19 in. (4.83 mm), then adjust the cable assembly [1] and the flap control lever [7] again.

(l) Install the clips [2] on the turnbuckles [3].

Table 501/27-51-00-993-801

Temperature	Cable Tension Pounds (kilograms)

-24 (-31.1)	60 (27)	90 (41)	37 (17)	47 (21)
-26 (-32.2)	58 (26)	88 (40)	37 (17)	47 (21)
-28 (-33.3)	56 (25)	86 (39)	37 (17)	47 (21)
-30 (-34.4)	55 (25)	85 (39)	36 (16)	46 (21)
-32 (-35.5)	54 (24)	84 (38)	36 (16)	46 (21)
-34 (-36.7)	53 (24)	83 (37)	35 (16)	45 (20)
-36 (-37.8)	52 (24)	82 (37)	35 (16)	45 (20)
-38 (-38.9)	51 (23)	81 (37)	34 (15)	44 (20)
-40 (-40.0)	50 (23)	80 (36)	34 (15)	44 (20)

NOTE: The minimum (Low) cable tension listed in the table above maintenance action and should not be construed as an in-service operational limit for cable tension.

SUBTASK 27-51-00-820-002

(6) Make sure that the flap power drive unit [17] is in the rigged position.

(a) Make sure that the black rig mark on the cable drum [12] extends past the white cable guard [13] a minimum of 0.03 in. (0.76 mm) on each side.

WARNING DO NOT RETRACT THE POWER DRIVE UNIT PAST THE RIG MARK IN THE UP DIRECTION. YOU CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(b) If the power drive unit [17] is not in the rigged position, use the manual drive to move the power drive unit [17].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-820-003

(7) Install the rig pin [27] from the rigging pin kit, SPL-1585, in the flap control unit [4].

NOTE: This will make sure the flap control unit [4] is in the adjusted position.

(a) Remove the screws [25], washers [32] and the lower pan [26] from the flap control unit [4].

(b) Install the rig pin [27] through the cam follower arm and the valve cam.

SUBTASK 27-51-00-820-004

(8) Adjust the tension in the follow-up cables WFFA and WFFB.

(a) Remove the clips [8] from the turnbuckles [10] on the cables [9] and cables [11].

(b) If you installed a new cable [9] or cable [11], use the turnbuckles to adjust the tension in the cables to 125 +10 / -0 lbf (0.56 +0.05 / -0.00 kN)).

1) Use the low tension cable tensiometer, COM-1553, to measure the tension of the cable.

(c) Use the turnbuckles [10] to adjust the tension in the cables WFFA and WFFB to the limit shown in (Table 501).

NOTE: If the temperature is 30°F (-1.11°C) or higher the minimum tension is 50 lbf (0.22 kN). If the temperature is less than 30°F (-1.11°C) the minimum tension is 30 +10 / -0 lbf (0.13 +0.05 / -0.00 kN).

NOTE: To make sure that the tension is correct, the temperature of the airframe must be constant in the limit of ±5 degrees for a minimum of one hour.

1) During the adjustment, make sure that the tension in the cables is never less than the minimum.

2) Use the low tension cable tensiometer, COM-1553, to measure the tension of the cable.

(d) Make sure you can easily remove and install the rig pin [27].

(e) Install the clips [8] on the turnbuckles [10].

SUBTASK 27-51-00-820-005

(9) Make a preliminary adjustment of the trailing edge flap control valve [19].

NOTE: This adjustment will make sure that the ballscrew nuts do not hit the upstops on the ballscrews when you retract the flaps. The final adjustment will be done after the flap drive system is adjusted.

(a) Measure the distance the valve slide [29] extends past the index surface [28] on the trailing edge flap control valve [19].

(b) If the valve slide [29] does not extend past the index surface [28] in the limit of 0.0 in. (0.00 mm) to 0.03 in. (0.76 mm), then adjust the trailing edge flap control valve [19]:

1) Loosen the nut [30] and nut [33] on the adjustable sleeve [31].

2) Turn the adjustable sleeve [31] to change the position of the rod end [24] until the valve slide [29] and the index surface [28] align in the limit.

3) Tighten the nut [30] and nut [33] on the adjustable sleeve [31].

4) Make sure that the distance between the center of the rod end [24] and the nut [33] is less than 0.94 in. (23.88 mm).

5) Make sure that the distance between the nut [30] and the hex on the adjustable sleeve [31] is less than 0.19 in. (4.83 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

MAKE SURE THAT YOU REMOVE THE HYDRAULIC POWER BEFORE YOU DISCONNECT THE ROD END FROM THE SUMMING LEVER. IF YOU DISCONNECT THE ROD END WITH HYDRAULIC POWER ON, YOU CAN CAUSE DAMAGE TO THE FLAP CONTROL UNIT.

6) If it is necessary, disconnect the rod end [24] from the summing lever [20].

NOTE: It is necessary to disconnect the rod end [24] if you cannot align the valve slide [29] and index surface [28] while the adjustable sleeve [31] is in the limits.

a) Remove the nut [23], washer [22], and bolt [21] that attach the rod end [24] to the summing lever [20].

b) Change the position of the adjustable sleeve [31].

c) Install the bolt [21], washer [22] and nut [23] to attach the rod end [24] to the summing lever [20].

7) Tighten the nut [30] and nut [33].

NOTE: It is not necessary to install the lockwire on the nuts now. You will install lockwire after the final adjustment is complete.

SUBTASK 27-51-00-820-006

(10) Do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

SUBTASK 27-51-00-420-002

(11) Connect the torque tubes [18] to the flap power drive unit [17].

(a) Remove the clamp set, SPL-1726, from the torque tubes [18].

(b) Make sure that the ballscrew nuts for transmission No. 4 and No. 5 are 1/2 turn ±10 degrees (±0.25 inch) (±6.3 millimeters) from the upstop on the ballscrew yoke.

(c) Apply grease, D00633, to the coupling sleeve [15].

(d) Put the splined couplings [16] in the coupling sleeve [15].

(e) Install the screws [14] to attach the torque tubes [18] to the power drive unit [17].

(f) Install MS20995C32 lockwire, G01048, on the screws [14].

SUBTASK 27-51-00-420-003

(12) For the flap position transmitters on the left and right wings, do this task: Flap Position Transmitter Installation, TASK 27-58-01-400-801.

SUBTASK 27-51-00-860-046

WARNING

MAKE SURE THAT ALL PERSONS AND EQUIPMENT ARE CLEAR OF CONTROL SURFACES, CABLES, AND LANDING GEAR AREAS. PRESSURIZATION OF A HYDRAULIC SYSTEM CAN MOVE CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS. MOVEMENT OF CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(13) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-860-047

(14) Use the primary system to extend the trailing edge flaps to the 40-unit position, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-00-860-048

(15) Use the primary system to retract the trailing edge flaps to the UP position, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

NOTE: Wait a minimum of 2 minutes before you remove the hydraulic power. The flaps can move a small distance during this time.

SUBTASK 27-51-00-860-049

(16) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-51-00-820-007

(17) Do these steps to do a check of the adjustment of the trailing edge flap control valve [19].

(a) Make sure that you can install the rig pin [27] in the flap control unit [4].

(b) Make sure that the ballscrew nuts for transmission No. 4 and No. 5 are 1/2 turn ±10 degrees (±0.25 inch) (±6.3 millimeters) from the upstop on the ballscrew yoke.

SUBTASK 27-51-00-820-008

(18) If you cannot install the rig pin [27] or if the ballscrew nuts are not in the correct position, then do a final adjustment of the trailing edge flap control valve [19].

NOTE: It can be necessary to adjust the trailing flap control valve more than once to get it to the correct position.

(a) Loosen the nut [30] and nut [33] on the adjustable sleeve [31].

CAUTION

ADJUST THE FLAP CONTROL VALVE A SMALL DISTANCE AT A TIME. IF YOU ADJUST THE FLAP CONTROL VALVE TOO FAR, THE BALLSCREW NUTS CAN HIT THE UPSTOPS. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(b) Turn the adjustable sleeve [31] to change the position of the valve slide [29].

NOTE: If the flaps did not retract far enough, adjust the valve slide [29] to be further out of the trailing edge flap control valve [19]. If the flaps retracted too far, adjust the valve slide [29] to be further in the trailing edge flap control valve [19].

(c) Tighten the nut [30] and nut [33] on the adjustable sleeve [31].

NOTE: Make sure that the distance between the center of the rod end [24] and the nut [33] is less than 0.94 in. (23.88 mm). Make sure the distance between the nut [30] and the hex on the adjustable sleeve [31] is less than 0.19 in. (4.83 mm).

CAUTION

MAKE SURE THAT YOU REMOVE THE HYDRAULIC POWER BEFORE YOU DISCONNECT THE ROD END FROM THE SUMMING LEVER. IF YOU DISCONNECT THE ROD END WITH HYDRAULIC POWER ON, YOU CAN CAUSE DAMAGE TO THE FLAP CONTROL UNIT.

(d) If it is necessary, disconnect the rod end [24] from the summing lever [20].

NOTE: It is necessary to disconnect the rod end [24] if you cannot adjust the valve slide [29] enough to get the flaps in the correct position.

1) Remove the nut [23], washer [22] and bolt [21] that attach the rod end [24] to the summing lever [20].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Change the position of the adjustable sleeve [31].

3) Install the bolt [21], washer [22] and nut [23] to attach the rod end [24] to the summing lever [20].

(e) Tighten the nut [30] and nut [33].

WARNING

MAKE SURE THAT ALL PERSONS AND EQUIPMENT ARE CLEAR OF CONTROL SURFACES, CABLES, AND LANDING GEAR AREAS. PRESSURIZATION OF A HYDRAULIC SYSTEM CAN MOVE CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS. MOVEMENT OF CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(f) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(g) Use the primary system to fully extend and retract the trailing edge flaps a minimum of five times, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(h) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

(i) Make sure that you can install the rig pin [27] in the flap control unit [4].

(j) Make sure that the ballscrew nuts for transmission No. 4 and No. 5 are 1/2 turn ±10 degrees (±0.25 inch) (±6.3 millimeters) from the upstop on the ballscrew yoke.

SUBTASK 27-51-00-420-004

(19) Install lockwire on the nut [30], nut [33] and the adjustable sleeve [31].

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-410-004

(1) Close this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-51-00-410-014

(2) Close this access panel:

Number	Name/Location
114AC	Fwd Nose Wheel Well Upper Access Panel

(a) Do this task: Nose Wheel Well Access Panels Installation, TASK 53-14-01-420-801.

(b) Do this task: Cabin Pressure Leak Test, TASK 05-51-91-790-801.

SUBTASK 27-51-00-410-005

(3) Install the floor panel above the flap control unit [4], do this task: Passenger Cabin Floor Panel Installation, TASK 53-21-00-400-801.

SUBTASK 27-51-00-410-006

(4) Install the lower pan [26] on the flap control unit [4].

(a) Remove the rig pin [27].

(b) Put the lower pan [26] in its location on the flap control unit [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(c) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the screws [25].

(d) Install the washers [32] and screw [25] to attach the lower pan [26].

END OF TASK

TASK 27-51-00-820-802

4. Trailing Edge Flap Drive System Adjustment

(Figure 503)

A. General

(1) This task does a check of the adjustment and an adjustment of the trailing edge flap drive system. The procedure to adjust the inboard flaps is in (TASK 27-51-11-820-801). The procedure to adjust the outboard flaps is in (TASK 27-51-21-820-801).

(a) The trailing edge flap drive system includes the flap transmissions, angle gearboxes, torque tubes, and the flap power drive unit.

B. References

F. Do a Check of the Trailing Edge Flap Drive System Adjustment

SUBTASK 27-51-00-040-006

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-00-480-011

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-00-980-006

(3) Manually extend the flaps until the ballscrew nuts touch the downstops on the ballscrews:

(a) If the torque tubes are not connected to the flap power drive unit, manually extend the flaps on each wing:

1) If all of the torque tubes on the wing are connected, use a coupling sleeve wrench, SPL-5384, on the torque tube couplings inboard of the tee-angle gearbox.

CAUTION DO NOT MOVE ONE END OF A FLAP MORE THAN 1.4 INCHES (35.5 MILLIMETERS) OF BALLSCREW TRAVEL MORE THAN THE OTHER END. YOU CAN CAUSE THE FLAP TO SKEW TO MUCH. THIS CAN CAUSE DAMAGE TO THE FLAP.

2) If all of the torque tubes on the wing are not connected, use a coupling sleeve wrench, SPL-5384, to drive each flap independently.

(b) If the torque tubes are connected to the flap power drive unit, and all of the torque tubes are connected on each wing, use the manual drive to extend the flaps. To use the manual drive, do this task: Trailing Edge Flap System Manual Operation, TASK 27-51-00-980-801.

SUBTASK 27-51-00-220-001

(4) Do a check of the adjustment of the flap drive system on each wing:

NOTE: If all of the torque tubes on the wing are not connected, it is not necessary to do this check.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) At all of the transmissions, measure and record the dimension from the downstop on the ballscrew nut to the downstop on the ballscrew.

NOTE: This dimension is referred to as Dimension Y.

(b) Make sure the Dimension Y for the transmission No. 4 and transmission No. 5 are in these limits:

1) If the torque tubes are connected between the wings, Dimension Y must be 0.0 (the ballscrew nut touches the downstop) for one transmission and in the limit of 0.0 in. (0.00 mm) to 0.1 in. (2.54 mm) for the other transmission.

2) If the torque tubes are not connected between the wings, Dimension Y must be 0.0 (the ballscrew nut touches the downstop) for the two transmission.

(c) On the left wing flap drive system:

1) Make sure Dimension Y for transmissions No. 1 and No. 3 are in the limit of 0.0 in. (0.00 mm) to 0.2 in. (5.08 mm) more than Dimension Y at transmission No. 4.

2) Make sure Dimension Y for transmission No. 2 is in the limit of 0.0 in. (0.00 mm) to 0.22 in. (5.59 mm) more than Dimension Y at transmission No. 1.

(d) On the right wing flap drive system:

1) Make sure Dimension Y for transmissions No. 6 and No. 8 are in the limit of 0.0 in. (0.00 mm) to 0.2 in. (5.08 mm) more than Dimension Y at transmission No. 5.

2) Make sure Dimension Y for transmission No. 7 is in the limit of 0.0 in. (0.00 mm) to 0.22 in. (5.59 mm) more than Dimension Y at transmission No. 8.

SUBTASK 27-51-00-820-009

(5) If the flap drive system is not adjusted correctly on each wing, do the trailing edge flap drive system adjustment.

G. Trailing Edge Flap Drive System Adjustment

SUBTASK 27-51-00-020-005

(1) For the flap position transmitters on the left and right wings, do this task: Flap Position Transmitter Removal, TASK 27-58-01-000-801.

NOTE: If you do not remove the flap position transmitters before you disconnect the torque tubes, they will become incorrectly adjusted.

SUBTASK 27-51-00-020-006

(2) Disconnect the torque tubes [18] from the flap power drive unit [17] (Figure 502):

NOTE: This will disconnect the flap drive system for the left wing from the right wing. It is necessary to adjust the left and the right wings independently, then connect them together.

(a) Remove the screws [14] that attach the coupling sleeves [15] to the splined couplings [16].

(b) Move the coupling sleeves [15] off the splined couplings [16].

(c) Move the torque tubes [18] away from the flap power drive unit [17].

SUBTASK 27-51-00-020-007

(3) Disconnect the torque tube from the inboard side of transmission No. 2 or transmission No. 7 (Figure 503):

NOTE: This will disconnect the flap drive system for the outboard flaps from the inboard flaps.

(a) Remove the screws [14] that attach the coupling sleeves [15] to the splined couplings [16].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Move the coupling sleeves [15] off the splined couplings [16].

(c) Move the torque tubes away from the transmission.

SUBTASK 27-51-00-820-010

(4) Adjust the flap drive system for the outboard flap:

NOTE: This procedure is applicable to the drive system for the outboard flap on the left wing and the right wing.

CAUTION

DO NOT MOVE ONE END OF A FLAP MORE THAN 1.4 INCHES (35.5 MILLIMETERS) OF BALLSCREW TRAVEL MORE THAN THE OTHER END. YOU CAN CAUSE THE FLAP TO SKEW TO MUCH. THIS CAN CAUSE DAMAGE TO THE FLAP.

(a) Use a coupling sleeve wrench, SPL-5384, on the coupling on the inboard side of transmission No. 2 to extend the outboard flap until one of the ballscrew nuts touch the downstop on the ballscrew.

(b) Make sure the ballscrew nut at transmission No. 1 touches the downstop (Dimension Y = 0).

(c) Make sure the Dimension Y for transmission No. 2 is in the limit of 0.0 in. (0.00 mm) to 0.2 in. (5.08 mm).

(d) If the ballscrew nuts for transmissions No. 1 and No. 2 are not in the limits, adjust the drive system for the outboard flap:

1) Disconnect the torque tubes between transmissions No. 1 and No. 2:

a) Remove the screws [14] that attach the coupling sleeves [15] to the splined couplings [16].

b) Move the coupling sleeve [15] off the splined coupling [16].

c) Move the torque tube away from the transmission.

2) Manually extend the transmissions until the ballscrew nuts for transmissions No. 1 and transmission No. 2 touch the downstops.

3) Connect the torque tubes between the transmissions No. 1 and No. 2:

NOTE: To align the torque tube couplings, you can retract the transmission No. 2 a maximum of 1/3 of a torque tube turn.

a) Apply grease, D00633, to the coupling sleeve [15].

b) Put the splined coupling [16] in the coupling sleeve [15].

c) Install the screws [14] to attach the torque tube to the transmission.

d) Install MS20995NC32 lockwire, G50347, on the screw [14].

SUBTASK 27-51-00-820-011

(5) Adjust the flap drive system for the inboard flap:

NOTE: This procedure is applicable to the drive system for the inboard flap on the left wing and the right wing.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

DO NOT MOVE ONE END OF A FLAP MORE THAN 1.4 INCHES (35.5 MILLIMETERS) OF BALLSCREW TRAVEL MORE THAN THE OTHER END. YOU CAN CAUSE THE FLAP TO SKEW TO MUCH. THIS CAN CAUSE DAMAGE TO THE FLAP.

(a) Use a coupling sleeve wrench, SPL-5384, on the coupling on the inboard side of transmission No. 4 to extend the inboard flap until one of the ballscrew nuts touch the downstop on the ballscrew.

(b) Make sure the ballscrew nut at transmission No. 4 touches the downstop (Dimension Y = 0).

(c) Make sure the Dimension Y for transmission No. 3 is in the limit of 0.0 in. (0.00 mm) to 0.18 in. (4.57 mm).

(d) If the ballscrew nuts for transmissions No. 3 and No. 4 are not in the limits, adjust the drive system for the inboard flap:

1) Disconnect the torque tubes between transmissions No. 3 and No. 4:

a) Remove the screws [14] that attach the coupling sleeve [15] to the splined coupling [16].

b) Move the coupling sleeve [15] off the splined coupling [16].

c) Move the torque tube away from the transmission.

2) Manually extend the transmissions until the ballscrew nuts for transmissions No. 3 and transmission No. 4 touch the downstops.

3) Connect the torque tubes between the transmissions No. 3 and No. 4.

NOTE: To align the torque tube couplings, you can retract the transmission No. 3 a maximum of 1/3 of a torque tube turn.

a) Apply grease, D00633, to the coupling sleeve [15].

b) Put the splined coupling [16] in the coupling sleeve [15].

c) Install the screws [14] to attach the torque tube to the transmission.

d) Install MS20995NC32 lockwire, G50347, on the screws [14].

SUBTASK 27-51-00-820-012

(6) Connect the inboard and the outboard flaps:

NOTE: This procedure is applicable to the drive system for the inboard and outboard flaps on the left wing and the right wing.

(a) Make sure the ballscrew nuts at transmission No. 1 and transmission No. 4 touch the downstop (Dimension Y = 0).

(b) Make sure the Dimension Y for transmission No. 2 is in the limit of 0.0 in. (0.00 mm) to 0.2 in. (5.08 mm).

(c) Make sure the Dimension Y for transmission No. 3 is in the limit of 0.0 in. (0.00 mm) to 0.18 in. (4.57 mm).

(d) Connect the torque tubes between the transmissions No. 2 and No. 3.

NOTE: To align the torque tube couplings, you can retract the transmission No. 2 a maximum of 1/3 of a torque tube turn.

1) Apply grease, D00633, to the coupling sleeve [15].

2) Put the splined coupling [16] in the coupling sleeve [15].

3) Install the screws [14] to attach the torque tube to the transmission.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Install MS20995NC32 lockwire, G50347, on the screws [14].

(e) Make sure that the Dimension Y for transmission No. 2 is in the limit of 0.0 in. (0.00 mm) to 0.4 in. (10.16 mm).

SUBTASK 27-51-00-820-013

(7) Move the flap drive system to the retracted position (Figure 502):

(a) Make sure that the Trailing Edge (TE) Flap Power Bypass Valve is in position 2.

WARNING DO NOT RETRACT THE POWER DRIVE UNIT PAST THE RIG MARK IN THE UP DIRECTION. YOU CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(b) Use the manual drive on the flap power drive unit [17] to retract it to the retracted position.

NOTE: The flap power drive unit is in the retracted position when the black rig mark on the cable drum [12] extends past the white cable guard [13] a minimum of 0.03 in. (0.76 mm) on each side.

(c) Make sure that the flap power drive unit is in the retracted position and install the rig pin [27] in the flap control unit using rig pin F70207-116 from rigging pin kit, SPL-1585.

(d) Use a coupling sleeve wrench, SPL-5384, on the torque tube couplings inboard of the tee-angle gearbox to retract the left and right wings to the retracted position.

NOTE: The flap drive systems for the wings are in the retracted position when the ballscrew nuts are 1/2 turn +/- 10 degrees (+/- 0.25 inch) from the upstop on the yoke.

1) Retract the flap drive systems until the ballscrew nuts for transmission No. 4 and transmission No. 5 are approximately 1/2 turn from the upstop on the yokes.

2) Make sure the distance from the upstop for transmission No. 4 and transmission No. 5 are the same in the limit of 0.25 in. (6.35 mm).

SUBTASK 27-51-00-820-014

(8) Connect the torque tubes [18] to the flap power drive unit [17]:

NOTE: This will connect the flap drive system for the left wing to the right wing.

(a) Do not rotate the torque tubes more than 5 spline teeth, in either direction, to the nearest position where the bolt holes align at the torque tube coupling connection.

1) Do not rotate the Power Drive Unit (PDU) at this step.

(b) Apply grease, D00633, to the coupling sleeve [15].

(c) Put the splined coupling [16] in the coupling sleeve [15].

(d) Install the screws [14] to attach the torque tube [18] to the power drive unit [17].

(e) Install MS20995NC32 lockwire, G50347, on the screws [14].

SUBTASK 27-51-00-210-003

(9) Make sure the torque trip indicators on the transmissions are set.

SUBTASK 27-51-00-020-008

(10) Remove the rig pin [27] from the flap power control unit.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-420-005

(1) For the flap position transmitters on the left and the right wing, do this task: Flap Position Transmitter Installation, TASK 27-58-01-400-801.

SUBTASK 27-51-00-440-004

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

TASK 27-51-00-730-801

5. Trailing Edge Flap System Test

(Figure 501)

A. General

(1) This task does a functional test of the trailing edge flap system. This task includes these parts:

(a) A test of the Flap/Slat Electronics Unit (FSEU) display and a check of existing faults

(b) A test of the asymmetry and skew systems

(c) A test of the load relief system

(d) A test of the primary operation

(e) A test of the power supply for the ALTERNATE FLAPS switches and the bypass valve

(f) A test of the power supply for the flap electric motor

(g) A test of the UP limit switch

(h) A test of the DOWN limit switch

(i) A test of the flap priority valve

(j) A test of the force required to move the flap control lever.

Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

F. Trailing Edge Flap System Test

SUBTASK 27-51-00-730-001

(1) Do this task: FSEU Display and Existing Faults Test, TASK 27-51-00-740-801.

SUBTASK 27-51-00-730-002

(2) Do this task: Trailing Edge Flap Asymmetry Skew System BITE Test, TASK 27-51-00-740-802.

SUBTASK 27-51-00-730-006

(3) Do this task: Trailing Edge Flap Load Relief System BITE Test, TASK 27-51-00-740-803.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-860-052

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-00-730-004

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP-DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Do a test of the primary operation of the trailing edge flaps:

(a) Move the flap control lever to the UP position.

(b) Make sure that the flaps reach the UP position.

(c) Do one of these methods to show the flap lever sensor, position sensors and skew sensor inputs to the FSEU:

1) On the FSEU Built-In-Test Equipment (BITE) display (Method 1):

a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?

b) Push the NO button until OTHER FUNCTNS? shows on the display.

c) Push the YES button to show SET OUTPUTS? on the display.

d) Push the NO button until I/O MONITOR? shows on the display.

e) Push the YES button to select I/O MONITOR? on the menu.

f) Push the NO button until SYNCHRO INPUTS? shows on the display.

g) Push the YES button to select SYNCHRO INPUTS? from the menu.

2) On the MAX Display System (MDS) (Method 2):

a) Push the SYS button on the Multi Function Display (MFD).

b) Select the MAINT button on the MENU bar at the top right of the System Page.

c) Push the SEL button on the SELECTOR knob.

d) Turn the SELECTOR knob to select MAINT DATA PGS on the Maintenance menu.

e) Move the cursor down and then select the ATA 27 FLIGHT CONTROL DISPLAY button below the REAL column on the MAINT DATA PGS menu.

(d) Make sure the inputs for the sensors are in the limits shown in Table 502 or Table 503 for the UP position.

1) For Method 1, push the arrow keys on the FSEU to step through the sensor values.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 502/27-51-00-993-802

Display (Sensor)	FSEU Sensor Value Range (Flap Position)			
	UP	1-Unit	15-Units	40-Units
LVR POS	-2.8 to 2.8	13.8 to 21.4	61.4 to 68.3	105.4 to 110.9
L FL POS	-3.7 to 1.8	34.5 to 40.8	176.1 to 185.0	267.1 to 273.3
R FL POS	-3.7 to 1.8	34.5 to 40.8	176.1 to 185.0	267.1 to 273.3
F1 SKEW	295.7 to 311.0	12.2 to 29.1	117.8 to 135.6	224.4 to 242.1
F2 SKEW	330.5 to 346.0	60.9 to 78.1	171.0 to 188.6	279.2 to 296.9
F3 SKEW	0.0 to 13.2	82.9 to 99.2	185.2 to 201.8	288.7 to 305.5
F4 SKEW	332.8 to 346.9	24.3 to 40.0	147.3 to 164.6	265.1 to 282.1
F5 SKEW	13.1 to 27.2	320.0 to 335.7	195.4 to 212.7	77.9 to 94.9
F6 SKEW	346.8 to 360.0	260.8 to 277.1	158.2 to 174.8	54.5 to 71.3
F7 SKEW	14.0 to 29.5	281.9 to 299.1	171.4 to 189.0	63.1 to 80.8
F8 SKEW	49.0 to 64.3	330.9 to 347.8	224.4 to 242.2	117.9 to 135.6

2) For Method 2, observe the sensor values on the MDS.

Table 503/27-51-00-993-805

Display (Sensor)	MDS Sensor Value Range (Flap Position)			
	UP	1-Unit	15-Units	40-Units
LVR POS	-2.8 to 2.8	13.8 to 21.4	61.4 to 68.3	105.4 to 110.9
L FL POS	-3.7 to 1.8	34.5 to 40.8	176.1 to 185.0	267.1 to 273.3
R FL POS	-3.7 to 1.8	34.5 to 40.8	176.1 to 185.0	267.1 to 273.3
F1 SKEW	-64.3 to -49	12.2 to 29.1	117.8 to 135.6	224.4 to 242.1
F2 SKEW	-29.5 to -14	60.9 to 78.1	171.0 to 188.6	279.2 to 296.9
F3 SKEW	0.0 to 13.2	82.9 to 99.2	185.2 to 201.8	288.7 to 305.5
F4 SKEW	-27.2 to -13.1	24.3 to 40.0	147.3 to 164.6	265.1 to 282.1
F5 SKEW	-27.2 to -13.1	24.3 to 40.0	147.3 to 164.6	265.1 to 282.1
F6 SKEW	0.0 to 13.2	82.9 to 99.2	185.2 to 201.8	288.7 to 305.5
F7 SKEW	-29.5 to -14	60.9 to 78.1	171.0 to 188.6	279.2 to 296.9
F8 SKEW	-64.3 to -49	12.2 to 29.1	117.8 to 135.6	224.4 to 242.1

(e) Move the flap control lever to the 1-unit detent.

1) Measure the time it takes for the leading edge flaps and slats to extend from the UP to the extend position.

a) If a hydraulic cart is used to supply System B hydraulic power, it should take the leading edge flaps 5.5 to 7.5 seconds and the slats 7.5 to 9.5 seconds to extend.

b) If the Electric Motor-Driven Pump (EMDP) is used to supply System B hydraulic power, it should take the leading edge flaps 7.0 to 9.0 seconds and the slats 9.0 to 11.0 seconds to extend.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Make sure the inputs for the sensors are in the limits shown in (Table 502 or Table 503) for the 1-unit position.

1) For Method 1, push the arrow keys on the FSEU to step through the sensor values.

2) For Method 2, observe the sensor values on the MDS.

(g) Move the flap control lever to the 40-unit position to extend the flaps.

1) Measure the time it takes for the trailing edge flaps to extend from the 1-unit position to the 40-unit position.

a) If a hydraulic cart or Engine Driven Pump (EDP) was used to supply System B hydraulic power, it should take 22 to 27 seconds for the flaps to extend.

b) If the EMDP was used to supply System B hydraulic power, it should take 55 to 69 seconds for the flaps to extend.

(h) Make sure the inputs for the sensors are in the limits shown in Table 502 or Table 503 for the 40-unit position.

1) For Method 1, push the arrow keys on the FSEU to step through the sensor values.

2) For Method 2, observe the sensor values on the MDS.

(i) Move the flap control lever to the 1-unit position to retract the flaps.

1) Measure the time it takes for the trailing edge flaps to retract from the 40-unit position to the 1-unit position.

a) If a hydraulic cart was used to supply System B hydraulic power, it should take 22 to 27 seconds for the flaps to retract.

b) If the EMDP was used to supply System B hydraulic power, it should take 55 to 69 seconds for the flaps to retract.

(j) Move the flap control lever to the UP detent.

1) Measure the time it takes for the leading edge flaps and slats to retract.

a) If a hydraulic cart is used to supply System B hydraulic power, it should take the leading edge flaps 7.0 to 9.0 seconds and the slats 6.5 to 8.5 seconds to retract.

b) If the EMDP is used to supply System B hydraulic power, it should take the leading edge flaps 8.0 to 10.0 seconds and the slats 7.0 to 9.0 seconds to retract.

(k) Move the flap control lever to the 15-unit position to extend the flaps.

(l) Make sure the inputs for the sensors are in the limits shown in Table 502 or Table 503 for the 15-unit position.

1) For Method 1, push the arrow keys on the FSEU to step through the sensor values.

2) For Method 2, observe the sensor values on the MDS.

(m) For Method 1, push the ON/OFF button on the front panel of the FSEU to turn it off.

(n) For Method 2, push the SYS button on the Multi Function Panel (MFP) to put the displays back to normal.

(o) Move the flap control lever to the UP position to retract the flaps.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-720-001

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP-DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Do a test of the power supply for the ALTERNATE FLAPS switches and the bypass valve:

(a) Move the flap control lever to the UP position.

(b) Make sure that the Leading Edge (LE) surfaces and Trailing Edge (TE) surfaces to reach their UP position.

(c) Push the ON/OFF button on the FSEU to display “EXISTING FAULTS?”.

(d) Push the NO button three times on the FSEU to display “OTHER FUNCTIONS?”.

(e) Push the YES button on the FSEU to display “SET OUTPUTS?”.

(f) Push the NO button on the FSEU to display “I/O MONITOR?”.

(g) Push the YES button on the FSEU to display “PROX SENSORS?”.

(h) Push the NO button twice on the FSEU to display “DISCRETE INPUTS?”.

(i) Push the YES button on the FSEU to display “ALTN ARM”.

(j) Make sure that the FSEU displays “ALTN ARM NOT ARM”.

(k) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the ARM position.

(l) Make sure that the FSEU displays “ALTN ARM ARMED”.

(m) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the OFF position.

(n) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

(o) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the ARM position.

(p) Move the flap control lever to the 1-unit position to extend the flaps.

(q) Wait for the LE and TE surfaces to reach their 1-unit position.

(r) Make sure that the pointers on the flap position indicator are in the 1-unit white band.

(s) Move and hold the ALTERNATE FLAPS control switch in the DOWN position for 5 seconds, then release.

NOTE: With the circuit breaker open, the bypass valve will not operate.

(t) Make sure that the flaps do not extend and that the flap position indicator pointers remain within the detent 1-unit white band.

(u) Close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

(v) Move the ALTERNATE FLAPS control switch to the UP position and hold until the flaps stop moving.

(w) Make sure that the flap position indicator pointer lies within the detent UP white band.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(x) Make sure that the “LE FLAPS TRANSIT” and “LE EXTEND” master indication lights on the center panel are off.

(y) Make sure that all the LE flaps and slats indication lights on the overhead panel, P5, are off.

(z) Move the flap control lever to the 40-unit detent.

(aa) Move and hold the ALTERNATE FLAPS control switch to the DOWN position for 5 seconds, then release.

(ab) Wait for the LE surfaces to fully extend.

(ac) Make sure that the LE flaps “EXTEND” and slats “FULL EXTEND” indication lights on the aft overhead panel are now on.

(ad) Move the ALTERNATE FLAPS control switch to the DOWN position and hold until the flaps stop moving.

(ae) Make sure that the flap position indicator pointer lies within the detent 40-unit white band.

(af) Make sure that the “LE FLAPS EXT” master indication light on the center panel is on.

(ag) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the OFF position.

SUBTASK 27-51-00-720-002

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP-DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(7) Do a test of the power supply for the flap electric motor and the time necessary to retract the flaps:

(a) Move the flap control lever to the 1-unit position to extend the flaps.

(b) Make sure that the pointers on the flap position indicator are in the 1-unit white band.

(c) Open this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

(d) Move the ALTERNATE FLAPS arm switch to the ARM position.

(e) Move and hold the ALTERNATE FLAPS control switch in the UP position for 5 seconds.

NOTE: With the circuit breaker open, the electric motor will not operate.

(f) Make sure that the flaps do not retract.

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE SLATS DURING THIS PROCEDURE. THE SLATS CAN MOVE AUTOMATICALLY WHEN THE HYDRAULIC SYSTEM IS PRESSURIZED. THIS CAN CAUSE INJURY TO PERSONS OR DAMAGE TO EQUIPMENT.

(g) Move and hold the ALTERNATE FLAPS control switch in the DOWN position for 5 seconds.

(h) Make sure that the flaps do not move and that the flap position indicator pointers remain within the 1-unit white band.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) Close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

(j) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the OFF position.

(k) Wait for the LE and TE surfaces to hydraulically reach their 1-unit position.

(l) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the ARM position.

(m) Measure the time it takes for the TE flaps to go from the 1-unit position to the UP position.

1) Move the ALTERNATE FLAPS control switch to the UP position and hold until the flaps stop.

2) Make sure that the time for the retraction of the TE flaps is between 47 to 58 seconds.

(n) Make sure that the flap position indicator pointer is within the detent UP white band.

(o) Move the flap control lever to the UP detent.

(p) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the OFF position.

SUBTASK 27-51-00-720-003

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP-DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(8) Do a test of the UP limit switch:

(a) Move the flap control lever to the 1-unit detent position.

(b) Wait for the LE surfaces and TE surfaces to reach the 1-unit position.

(c) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the ARM position.

(d) Move and hold the ALTERNATE FLAPS control switch in the UP position until the flaps stop.

(e) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?

(f) Do a check of the position sensor inputs to the FSEU:

1) Push the NO button three times on the FSEU to display “OTHER FUNCTNS?”.

2) Push the YES button on the FSEU to display “SET OUTPUTS?”.

3) Push the NO button on the FSEU to display “I/O MONITOR?”.

4) Push the YES button on the FSEU to display “PROX SENSORS?”.

5) Push the NO button on the FSEU to display “SYNCHRO INPUTS?”.

6) Push the YES button on the FSEU to display “LVR POS”.

7) Push the arrow keys to step through the position sensor values at the UP position.

8) Make sure that the inputs for the sensors are in the limits shown in (Table 504) for the UP position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 504/27-51-00-993-803

Display (Sensor)	Sensor Input (Flap Position)	
	UP	40-Units
L FL POS	-1.2 to 4.7	259.9 to 270.3
R FL POS	-1.2 to 4.7	259.9 to 270.3

9) Move the flap control lever to the UP detent.

(g) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the OFF position.

SUBTASK 27-51-00-720-004

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP-DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(9) Do a test of the DOWN limit switch:

(a) Move the ALTERNATE FLAPS arm switch to the OFF position.

(b) Move the flap control lever to the 30-unit position to extend the flaps.

(c) Wait for the LE surfaces and TE surfaces to reach the 30-unit position.

(d) Make sure that the pointers on the flap position indicator are in the 30-unit white band.

(e) Move the ALTERNATE FLAPS arm switch to the ARM position.

(f) Move the flap control lever to the 40-unit position.

(g) Move and hold the ALTERNATE FLAPS control switch in the DOWN position until the flaps stop.

(h) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?

(i) Do a check of the position sensor inputs to the FSEU:

1) Push the NO button three times on the FSEU to display “OTHER FUNCTIONS?”.

2) Push the YES button on the FSEU to display “SET OUTPUTS?”.

3) Push the NO button on the FSEU to display “I/O MONITOR?”.

4) Push the YES button on the FSEU to display “PROX SENSORS?”.

5) Push the NO button on the FSEU to display “SYNCHRO INPUTS?”.

6) Push the YES button on the FSEU to display “LVR POS?”.

7) Push the arrow keys to step through the position sensor values at the 40-unit position.

8) Make sure that the inputs for the sensors are in the limits shown in (Table 504) for the 40-unit position.

(j) Push the ON/OFF button on the front panel of the FSEU to turn it off.

(k) Move the ALTERNATE FLAPS arm switch to the OFF position.

SUBTASK 27-51-00-720-005

(10) Do this task: Flap Priority Valve Test, TASK 27-51-00-720-801.

SUBTASK 27-51-00-720-006

F. FSEU Display and Existing Faults Test

SUBTASK 27-51-00-740-001

WARNING IF THERE IS HYDRAULIC PRESSURE DURING THIS TEST, KEEP PERSONNEL AWAY FROM THE FLAPS. THE FLAPS CAN MOVE AND CAUSE INJURIES TO PERSONNEL OR DAMAGE TO EQUIPMENT.

(1) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?

SUBTASK 27-51-00-750-001

(2) Do a test of the DC power supplies for the FSEU:

(a) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

Open this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1

(b) Make sure that the front panel display on the FSEU is still on.

(c) Close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1

(d) Open this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	9	C01468	FLIGHT CONTROL FSEU DC 2

(e) Make sure that the front panel display on the FSEU is still on.

(f) Open this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1

(g) Make sure that the front panel display on the FSEU is off.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(h) Close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2

(i) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

(j) Make sure that the front panel display on the FSEU comes on.

SUBTASK 27-51-00-740-002

(3) Do a test of the BITE display on the FSEU:

(a) Push the down arrow until GROUND TESTS? shows on the display.

(b) Push the YES button to select GROUND TESTS? on the FSEU.

(c) Push the down arrow until DISPLAY TEST? shows on the display.

(d) Push the YES button to select DISPLAY TEST? on the FSEU.

(e) Make sure that the display characters on the front panel of the FSEU turn on in groups of four for approximately 2 seconds.

SUBTASK 27-51-00-740-003

(4) Do a check for EXISTING FAULTS with the FSEU:

NOTE: During the following BITE test, all the LE indication lights (12 amber transit and 20 green extend/full extend lights) on the aft overhead panel will be on for about 5 seconds.

(a) Push the MENU button twice.

NOTE: The display will show EXISTING FAULTS?

(b) Push the YES button to select the EXISTING FAULTS? test.

NOTE: The display will show TEST IN PROGRESS.

(c) Make sure that the lights come on for 5 seconds while the display shows TEST IN PROGRESS:

1) P5 Aft Overhead Panel

a) Leading Edge Devices TRANSIT

b) Leading Edge Devices EXT

c) Leading Edge Devices FULL EXT

(d) Make sure there are no EXISTING FAULTS.

SUBTASK 27-51-00-740-004

(5) Do a test of the ASYM MODE on the FSEU:

(a) Push the MENU switch on the FSEU to display “EXISTING FAULTS?”.

NOTE: The takeoff and landing warning horn might sound when the following steps are performed. If the horns sound, no action is required.

(b) Push the NO switch three times on the FSEU to display “OTHER FUNCTIONS?”.

(c) Push the YES switch on the FSEU to display “SET OUTPUTS?”.

(d) Push the NO switch on the FSEU to display “I/O MONITOR?”.

(e) Push the YES switch on the FSEU to display “PROX SENSORS?”.

(f) Push the NO switch twice on the FSEU to display “DISCRETE INPUTS?”.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Push the YES switch on the FSEU to display “ALTN ARM NOT ARM”.

(h) Push the NO switch five times on the FSEU to display “ASY MODE CLOSED”.

(i) Open this circuit breaker:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	7	C01208	STALL WARN ASYM MODE

(j) Make sure that the FSEU displays “ASY MODE OPEN”.

(k) Close this circuit breaker:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	7	C01208	STALL WARN ASYM MODE

(l) Make sure that the FSEU displays “ASY MODE CLOSED”.

(m) Push the ON/OFF button on the front panel of the FSEU to turn off the display.

SUBTASK 27-51-00-740-011

(6) Do a check for the autoslat analog discrete input to the FSEU:

(a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: Select MENU on the display to show EXISTING FAULTS?.

(b) Push the NO button until OTHER FUNCTIONS? shows on the display.

(c) Push the YES button to select OTHER FUNCTIONS? on the FSEU.

(d) Push the NO button until I/O MONITOR? shows on the display.

(e) Push the YES button to select I/O MONITOR? on the FSEU.

(f) Push the NO button until DISCRETE INPUTS? shows on the display.

(g) Push the YES button to select DISCRETE INPUTS? on the FSEU.

(h) Push the NO button until AUTOSLT1 shows on the display.

NOTE: Line 2 on the display will show either COMMAND or NOT CMD.

(i) Push the down arrow to show AUTOSLT2 on the display.

NOTE: Line 2 on the display will show either COMMAND or NOT CMD.

(j) If AUTOSLT1 or AUTOSLT2 shows COMMAND on line 2, the FSEU receives an autoslat command discrete input from the Stall Management Yaw Damper Computer (SMYDC).

1) If AUTOSLT1 or AUTOSLT2 shows COMMAND on line 2, refer to the IFIM and do the applicable procedure(s).

NOTE: The autoslat command discrete from the SMYDC prevents the FSEU leading edge un-commanded motion monitor from being set. AUTOSLT1 comes from SMYDC 1 and AUTOSLT2 comes from SMYDC 2.

(k) If AUTOSLT1 and AUTOSLT2 shows NOT CMD on line 2, then continue.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-058

(1) Push the ON/OFF button on the front panel of the FSEU to turn it off.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-410-008

(2) Close this access panel:

Number	Name/Location

——— END OF TASK ———

TASK 27-51-00-740-802

7. Trailing Edge Flap Asymmetry Skew System BITE Test

(Figure 501 and Figure 504)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) This test does a check of the asymmetry and skew detection functions for the trailing edge flaps.

B. Location Zones

Zone	Area
117	Electrical and Electronics Compartment - Left
118	Electrical and Electronics Compartment - Right
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
212	Flight Compartment - Right

C. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

D. Prepare for the Test

SUBTASK 27-51-00-010-007

(1) To get access to the main equipment center, do this step:

(a) Open this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

E. Trailing Edge Flap Asymmetry and Skew BITE Test

SUBTASK 27-51-00-740-005

(1) Push the ON/OFF button, on the front panel of the Flap/Slat Electronics Unit (FSEU), to turn on the display.

NOTE: The display will show EXISTING FAULTS?

SUBTASK 27-51-00-740-006

(2) Do the BITE test of the asymmetry and skew detection systems:

(a) Push the NO button until GROUND TESTS? shows on the display.

(b) Push the YES button to select TE ASYM-SKW-IND? on the FSEU.

(c) Push the Yes button to show TEST IN PROGRESS on the FSEU.

(d) Make sure that the left indicator needle moves in the clockwise direction.

(e) Push the Yes button in response to IS L IND NDL CW? on the FSEU.

(f) Make sure that the left indicator needle moves in the counterclockwise direction.

(g) Push the Yes button in response to IS L IND NDL CCW? on the FSEU.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(h) Make sure that the right indicator needle moves in the clockwise direction.

(i) Push the Yes button in response to IS R IND NDL CW? on the FSEU.

(j) Make sure that the right indicator needle moves in the counterclockwise direction.

(k) Push the Yes button in response to IS R IND NDL CCW? on the FSEU.

(l) Make sure that TEST PASSED shows at the end of the test.

SUBTASK 27-51-00-210-004

(3) Make sure that the manual override lever, on the flap bypass valve, is in POSITION 1 (View B, Figure 504).

NOTE: The flap bypass valve is installed in the right main wheel well.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-062

(1) Push the ON/OFF button, on the front panel of the FSEU, to turn it off.

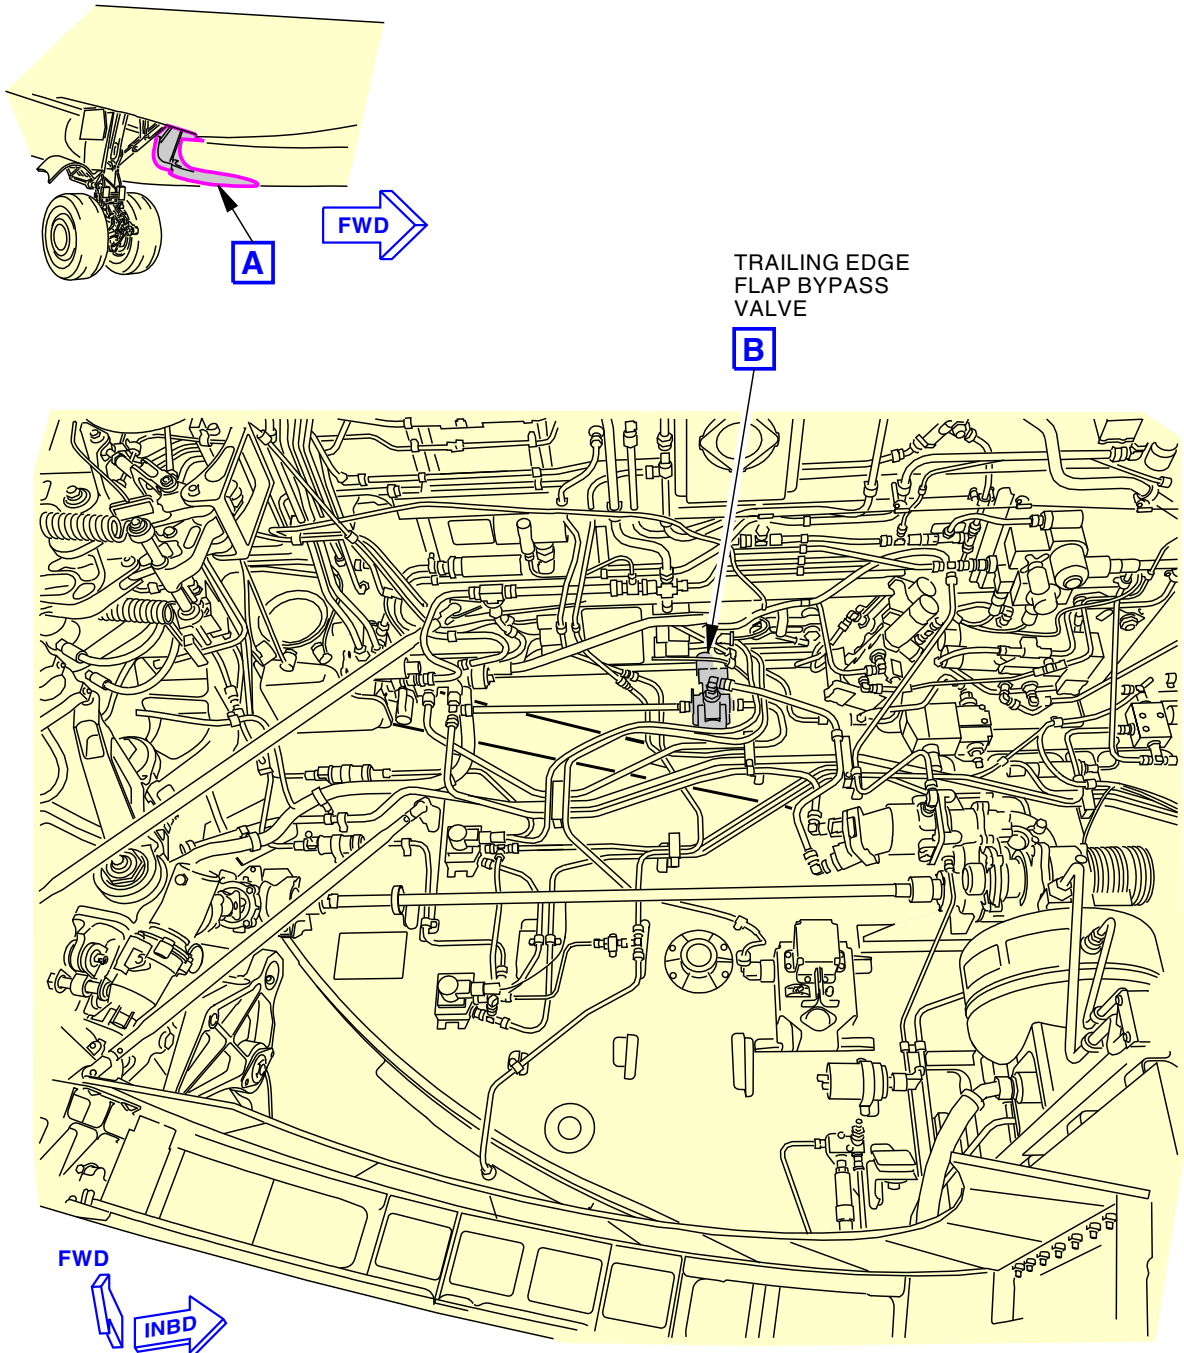
SUBTASK 27-51-00-410-009

(2) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details



Trailing Edge Flap Bypass Valve
Figure 504/27-51-00-990-817 (Sheet 1 of 2)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-51-00-740-803

8. Trailing Edge Flap Load Relief System BITE Test

(Figure 501)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) This test does a check of the load relief functions for the trailing edge flaps.

(2) In this procedure it is necessary to move the flap control lever to move the trailing edge flaps.

B. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)

C. Location Zones

Zone	Area
117	Electrical and Electronics Compartment - Left
118	Electrical and Electronics Compartment - Right
212	Flight Compartment - Right

D. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

E. Prepare for the Test

SUBTASK 27-51-00-860-067

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-00-860-100

(2) Set the FLT CONTROL and SPOILER switches on the P5-3 panel to the OFF position.

SUBTASK 27-51-00-010-008

(3) To get access to the main equipment center, do this step:

Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

F. Trailing Edge Flap Load Relief System BITE Test

SUBTASK 27-51-00-740-007

(1) Push the ON/OFF button on the front panel of the Flap/Slat Electronics Unit (FSEU) to turn on the display.

NOTE: The display will show EXISTING FAULTS?

SUBTASK 27-51-00-740-008

(2) Do the BITE test of the load relief system:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF

(b) Push the NO switch twice on the FSEU to display “GROUND TESTS?”.

(c) Push the YES switch on the FSEU to display “TE ASYM-SKW-IND?”.

(d) Push the NO switch on the FSEU to display “TE FLAP LD REL?”.

(e) Push the YES switch on the FSEU to display “WARNING:FLP CLR?”.

(f) Push the YES switch on the FSEU to display “FLP LVR TO 40?”.

(g) Move the flap control lever to the 40-unit detent.

(h) Push the YES switch on the FSEU to display “TEST IN PROGRESS?”.

(i) Make sure the “FLP LOAD RLF 40” is displayed on the FSEU front panel.

1) Verify FLAP LOAD RELIEF light momentarily illuminates.

(j) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF

NOTE: During the following BITE test, the FLAP LOAD RELIEF light on the forward panel will go on during load relief.

NOTE: The flaps will move in the subsequent steps and the flap indicator will move accordingly.

(k) Push the MENU switch on the FSEU to display “TE FLAP LD REL?”.

(l) Push the YES switch on the FSEU to display “WARNING:FLP CLR?”.

(m) Push the YES switch on the FSEU to display “FLP LVR TO 40?”.

1) Verify FLAP LOAD RELIEF light momentarily illuminates.

NOTE: The flaps will retract to the 30-unit position before extending to the 40-unit position.

(n) Push the YES switch on the FSEU to display “FLP LVR TO 10?”.

(o) Move the flap control lever to the 10-unit detent.

(p) Wait for all the surfaces to reach the flaps 10-unit position.

(q) Push the YES switch on the FSEU to display “FLP LVR TO 5?”.

1) Verify FLAP LOAD RELIEF light momentarily illuminates.

NOTE: The flaps will retract to the 5-unit position before extending to the 10-unit position.

(r) Move the flap control lever to the 5-unit detent.

(s) Wait for all the surfaces to reach the flaps 5-unit position.

(t) Push the YES switch on the FSEU to display “FLP LVR TO UP?”.

1) Verify FLAP LOAD RELIEF light momentarily illuminates.

NOTE: The flaps will stay in its position.

(u) Move the flap control lever to the UP detent.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(v) Wait for all the surfaces to reach the flaps UP position.

(w) Push the YES switch on the FSEU to display “TEST PASSED”.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-068

(1) Push the ON/OFF button on the front panel of the FSEU to turn it off.

SUBTASK 27-51-00-410-010

(2) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-51-00-860-101

(3) Set the FLT CONTROL and SPOILER switches on the P5–3 panel to the ON position.

SUBTASK 27-51-00-860-070

(4) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

TASK 27-51-00-720-801

9. Flap Priority Valve Test

(Figure 501)

A. General

(1) This test does a check of the flap priority valve.

B. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Test

SUBTASK 27-51-00-860-073

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Use a hydraulic service cart to supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

NOTE: It will be necessary to control the pressure output of the hydraulic service cart.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Flap Priority Valve Test

SUBTASK 27-51-00-860-074

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP DRIVE MECHANISMS BEFORE YOU MOVE THE FLAPS. THE FLAPS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Move the flap control lever to the 30-unit position to extend the flaps.

NOTE: Wait for the flaps to get to the 30-unit position.

SUBTASK 27-51-00-730-005

(2) Reduce the pressure output from the hydraulic service cart to 2000 psi (13,790 kPa).

SUBTASK 27-51-00-720-007

(3) Do a check of the time necessary to retract the flaps.

NOTE: The flaps will retract slowly with the hydraulic pressure reduced.

(a) Move the flap control lever to the 25-unit position.

NOTE: The flaps can make noise while they retract slowly.

(b) Make sure the time necessary to retract the flaps is a minimum of 59 seconds.

NOTE: It is not necessary to wait more than 1 minute for the flaps to retract.

(c) Increase the pressure output from the hydraulic service cart to 3000 psi (20,684 kPa).

NOTE: The flaps will retract much faster at normal operating pressure.

(d) Move the flap control lever to the 5-unit position.

NOTE: Wait for the flaps to get to the 5-unit position.

SUBTASK 27-51-00-720-008

(4) Do a check of the time necessary to retract the flaps to the UP position.

(a) Move the flap control lever to the UP position.

(b) Make sure the time necessary to retract the flaps is 17 to 22 seconds.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-075

(1) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

END OF TASK

TASK 27-51-00-720-802

10. Flap Control Lever Force Test

(Figure 501)

A. General

(1) This test does a check of the force necessary to move the flap control lever.

B. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
COM-1557	Gauge - Force Part #: DG-200 Supplier: 92456 Part #: FDIX 100 Supplier: 0BFD9 Part #: FDIX 50 Supplier: 0BFD9 Part #: LG-050 Supplier: 92456 Part #: LG-100 Supplier: 92456 Opt Part #: DPP-500G Supplier: 92456 Opt Part #: DPPH-150 Supplier: 92456 Opt Part #: DPPH-200 Supplier: 92456 Opt Part #: DPPH-50 Supplier: 92456 Opt Part #: FDI 100 Supplier: 0BFD9 Opt Part #: FDI 50 Supplier: 0BFD9 Opt Part #: FDV 100 Supplier: 0BFD9 Opt Part #: FDV 50 Supplier: 0BFD9

D. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

E. Prepare for the Test

SUBTASK 27-51-00-860-078

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

F. Flap Control Lever Force Test

SUBTASK 27-51-00-860-079

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Move the flap control lever to the UP position to retract the flaps.

SUBTASK 27-51-00-720-009

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Measure the force necessary to move the flap control lever to the 1-unit position:

(a) Move the flap control lever out of the UP detent.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Put a force gauge, COM-1557 on the end of the flap control lever.

(c) Use the force gauge, COM-1557 to move the flap control lever to the 1-unit position.

NOTE: Make sure the force gauge, COM-1557 is perpendicular to the flap control lever when you measure the force.

(d) Make sure the force necessary to move the flap control lever is less than 5 lbf (22.24 N).

SUBTASK 27-51-00-720-010

(3) Use the force gauge, COM-1557 to measure the force necessary to move the flap control lever to the 40-unit position with a stop at each detent.

(a) Make sure the force necessary to move the flap control lever is less than 5 lbf (22.24 N).

SUBTASK 27-51-00-720-011

(4) Use the force gauge, COM-1557 to measure the force necessary to move the flap control lever to the UP position with a stop at each detent.

(a) Make sure the force necessary to move the flap control lever is less than 5 lbf (22.24 N).

SUBTASK 27-51-00-080-004

(5) Remove the force gauge, COM-1557 from the end of the flap control lever.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-080

(1) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

TASK 27-51-00-720-805

11. Flap Control Lever Feel Test

A. General

(1) This test does a check on the Flap Control Lever movement in the up and down movement. To make sure that there is a smooth procedure with the flight handle after control cable adjustments.

B. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Prepare for the Test

SUBTASK 27-51-00-860-103

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B with hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

E. Flap Control Level Feel Test

SUBTASK 27-51-00-720-018

(1) Put the Flap Control Lever between UP and 1 detent.

SUBTASK 27-51-00-720-019

(2) Lift up and move the Flap Control Lever forward to the UP detent.

SUBTASK 27-51-00-720-020

(3) Stow the Flap Control Lever from the lifted position into the UP detent.

(a) Make sure that axial movement is in the bottom direction

(b) Make sure that it is put at the bottom of the detent

(c) Make sure that the Lever goes into the stand smoothly.

NOTE: There will be some permitted resistance because of the cable load in the UP detent.

SUBTASK 27-51-00-720-021

(4) Move the Flap Control Lever from the UP detent.

(a) Make sure that axial movement is in the up direction.

SUBTASK 27-51-00-720-022

(5) Make sure that the Flap Control Lever is smooth when moved in the up direction.

NOTE: There will be some permitted resistance because of the cable load in the UP detent.

SUBTASK 27-51-00-720-023

(6) Stow and attach safely the Flap Control Lever back into the UP detent to complete the test.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-104

(1) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

END OF TASK

TASK 27-51-00-720-803

12. Alternate Flap Control System Functional Test

(Figure 501)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) During the functional test, you make sure the alternate operation of the Trailing Edge (TE) flaps is satisfactory.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

B. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Functional Test

SUBTASK 27-51-00-860-083

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

E. Procedure

SUBTASK 27-51-00-720-012

(1) Do these steps for the Alternate Flap System Functional Test:

CAUTION DO NOT CONTINUOUSLY OPERATE THE FLAP ELECTRIC MOTOR FOR MORE THAN 4 MINUTES. YOU MUST WAIT A MINIMUM OF 25 MINUTES BETWEEN OPERATIONS OF THE FLAP ELECTRIC MOTOR. IF YOU DO NOT OBEY, DAMAGE TO THE EQUIPMENT CAN OCCUR.

(a) Move the flap control lever to the 1-unit position to extend the flaps.

(b) Make sure the pointers on the flap position indicator are in the 1-unit white band.

(c) Open this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

CAUTION DO NOT OPERATE THE TRAILING EDGE FLAPS WITH ELECTRICAL POWER MORE THAN ONE FULL EXTEND/RETRACT CYCLE IN 25 MINUTES. YOU CAN CAUSE DAMAGE TO THE FLAP ELECTRIC MOTORS IF YOU OPERATE THEM TOO FREQUENTLY.

(d) Move the ALTERNATE FLAPS ARM switch to the ARM position.

(e) Move and hold the ALTERNATE FLAPS CONTROL switch in the UP position for 5 seconds.

NOTE: With the circuit breaker open, the electric motor will not operate.

(f) Make sure the flaps do not retract.

(g) Move and hold the ALTERNATE FLAPS CONTROL switch in the DOWN position for 5 seconds.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(h) Make sure that the flaps do not move and that the flap position indicator pointers remain within the 1-unit white band.

(i) Close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

(j) Put the ALTERNATE FLAPS ARM switch, on the aft overhead panel in the “OFF” position.

(k) Wait for the Leading Edge (LE) and TE surfaces to hydraulically reach their 1-unit position.

(l) Put the ALTERNATE FLAPS ARM switch, on the aft overhead panel in the “ARM” position.

(m) Measure the time it takes for the TE flaps to go from the 1-unit position to the UP position.

(n) Move the ALTERNATE FLAPS CONTROL switch to the UP position and hold until the flaps stop.

(o) Make sure that the time for the retraction of the TE flaps is between 47 to 58 seconds.

(p) Make sure that the flap position indicator pointer is within the detent UP white band.

(q) Move the flap control lever to the UP detent.

(r) Put the ALTERNATE FLAPS ARM switch, on the aft overhead panel in the “OFF” position.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-084

(1) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

TASK 27-51-00-710-802

13. Transmission No-Back Brake Operational Test

(Figure 501)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) During this operational test, you make sure the no-back brakes in the transmissions operate.

(2) This test involves listening for a ratchet sound from the transmissions while the flaps extend.

(3) A minimum of two people are necessary to do this test.

B. References

643	Right Wing - Fairing Flap Support No. 7
644	Right Wing - Fairing Flap Support No. 8

E. Prepare for the Operational Test

SUBTASK 27-51-00-480-012

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-00-010-009

(2) Remove the aft fairings for the outboard flaps:

NOTE: Removal of the aft fairings for the inboard flaps is not necessary since the ratcheting sound can be heard easily without removal.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Do this task: Outboard Flap Inboard Support Aft Fairing Removal, TASK 27-51-28-000-805.

(b) Do this task: Outboard Flap Outboard Support Aft Fairing Removal, TASK 27-51-28-000-803.

SUBTASK 27-51-00-860-087

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

F. Operational Test of the Transmission No-Back Brake

NOTE: This test is applicable to all of the transmissions for the trailing edge flaps.

SUBTASK 27-51-00-860-088

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Retract the flaps to the UP position. To retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-00-710-003

(2) Do a test of the no-back brake in the transmissions:

(a) Put a stethoscope, COM-1797 on the applicable transmission to listen for a ratchet sound.

NOTE: The ratchet sound from the inboard flaps can be easily heard without the need for a stethoscope.

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(b) Extend the flaps to the 15 unit position and listen for a ratchet sound from the transmissions. To extend the trailing edge flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

NOTE: The ratchet sound is the no-back brake inside the transmission. It is necessary to do the test again for the additional transmissions, or have additional people listen to the transmissions.

(c) If the ratchet sound cannot be heard on the outboard flaps transmission, install test equipment, SPL-12536 and perform the test again.

(d) If it is necessary to do this test on another transmission, retract the flaps to the UP position. To retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(e) If the ratcheting sound is not heard replace the transmission.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) For the inboard transmission replacement do this task: INBOARD FLAP TRANSMISSIONS - REMOVAL/INSTALLATION, PAGEBLOCK 27-51-31/401.

2) For the outboard transmission replacement do this task: OUTBOARD FLAP TRANSMISSIONS - REMOVAL/INSTALLATION, PAGEBLOCK 27-51-41/401.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-089

(1) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-51-00-080-005

(2) Remove test equipment, SPL-12536 if it was installed.

SUBTASK 27-51-00-410-011

(3) Install the aft fairings for the outboard flaps:

(a) Do this task: Outboard Flap Inboard Support Aft Fairing Installation, TASK 27-51-28-400-805.

(b) Do this task: Outboard Flap Outboard Support Aft Fairing Installation, TASK 27-51-28-400-803.

——— END OF TASK ———

TASK 27-51-00-720-804

14. Trailing Edge Flap Load Relief System Functional Test

(Figure 501)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) This task does a functional check of the load relief system for the trailing edge flaps. It makes sure that there is airspeed data from the Air Data Inertial Reference Unit (ADIRU) to the Flap/Slat Electronics Unit (FSEU).

(2) In this procedure it is necessary to use the pitot static system to simulate airspeed.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Prepare for the Test

SUBTASK 27-51-00-860-092

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-00-860-099

(2) Turn OFF system A and B hydraulic power to the flight controls and spoilers on the P5-3 panel.

SUBTASK 27-51-00-010-010

(3) To get access to the main equipment center, do this step:

Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

G. Trailing Edge Flap Load Relief System Functional Test

SUBTASK 27-51-00-740-009

(1) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?

SUBTASK 27-51-00-000-001

(2) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF

SUBTASK 27-51-00-740-010

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Do the Built-In-Test Equipment (BITE) test of the load relief system:

(a) Push the down arrow until GROUND TESTS? shows on the FSEU.

(b) Push the YES button to display “TE ASYM-SKW-IND?” on the FSEU.

(c) Push the down arrow until TE FLAP LD REL? shows on the display.

(d) Push the YES button until “WARNING: FLP CLR?” shows on the display.

(e) Push the YES button until “FLP LVR TO 40?” shows on the display.

(f) Move the flap control lever to the 40-unit detent.

(g) Push the YES button on the FSEU to display “TEST IN PROGRESS”.

(h) Make sure that “FLP LOAD RLF 40” is displayed on the FSEU front panel.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF

NOTE: During the BITE test, the FLAP LOAD RELIEF light on the forward panel will go on during load relief.

(j) Push the MENU button on the FSEU to display “TE FLAP LD REL?”.

(k) Push the YES button on the FSEU to display “WARNING: FLP CLR?”.

(l) Push the YES button on the FSEU to display “FLP LVR TO 40?”.

(m) Push the YES button on the FSEU to display “FLP LVR TO 10?”.

(n) Move the flap control lever to the 10-unit detent.

(o) Wait for all surfaces to reach the flaps 10-unit detent position.

(p) Push the YES button on the FSEU to display “FLP LVR TO 5?”.

(q) Move the flap control lever to the 5-unit detent.

(r) Wait for all surfaces to reach the flaps 5-unit detent position.

(s) Push the YES button on the FSEU to display “FLP LVR TO UP?”.

(t) Move the flap control lever to the UP detent.

(u) Wait for all surfaces to reach the flaps UP position.

(v) Push the YES button on the FSEU to display “TEST IN PROGRESS”.

(w) Make sure that the FLAP LOAD RELIEF light was on during the load relief.

(x) Make sure the “TEST PASSED” is displayed on the FSEU.

SUBTASK 27-51-00-860-093

(4) Push the ON/OFF button on the front panel of the FSEU to turn it off.

SUBTASK 27-51-00-860-094

(5) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	1	C00523	HEATERS CAPT PITOT
C	2	C00238	HEATERS TEMP PROBE
C	3	C01072	HEATERS ALPHA VANE LEFT
D	3	C01071	HEATERS ALPHA VANE RIGHT

SUBTASK 27-51-00-480-013

(6) Connect a pitot/static system tester to the left pitot probe to supply airspeed output from the left ADIRU (TASK 34-11-00-790-801).

SUBTASK 27-51-00-860-098

(7) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF

SUBTASK 27-51-00-720-013

(8) Do a test of the load relief system with the flaps at 40 units:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Use the primary system to extend the flaps to the 40-unit position. To extend the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(b) Use the air data model test set, COM-1914 to raise the airspeed to 168 knots (193.33 mph), on the Captain's display unit.

NOTE: When you apply or remove pressure to the pitot system, the rate must not be more than 300 knots (345.23 mph) for each minute.

(c) Make sure the trailing edge flaps retract to the 30-unit position.

(d) Use the air data model test set, COM-1914 to lower the airspeed to 161 knots (185.28 mph).

(e) Make sure the trailing edge flaps extend to the 40-unit position.

SUBTASK 27-51-00-720-014

(9) Do a test of the load relief system with the flaps at 30 units:

(a) Use the primary system to retract the flaps to the 30-unit position. To retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(b) Use the air data model test set, COM-1914 to raise the airspeed to 177 knots (203.69 mph).

NOTE: When you apply or remove pressure to the pitot system, the rate must not be more than 300 knots (345.23 mph) for each minute.

(c) Make sure the trailing edge flaps retract to the 25-unit position.

(d) Use the air data model test set, COM-1914 to lower the airspeed to 170 knots (195.63 mph).

(e) Make sure the trailing edge flaps extend to the 30-unit position.

SUBTASK 27-51-00-720-015

(10) Do a test of the load relief system with the flaps at 25 units:

(a) Use the primary system to retract the flaps to the 25-unit position. To retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(b) Use the air data model test set, COM-1914 to raise the airspeed to 192 knots (220.95 mph).

NOTE: When you apply or remove pressure to the pitot system, the rate must not be more than 300 knots (345.23 mph) for each minute.

(c) Make sure the trailing edge flaps retract to the 15-unit position.

(d) Use the air data model test set, COM-1914 to lower the airspeed to 185 knots (212.89 mph).

(e) Make sure the trailing edge flaps extend to the 25-unit position.

SUBTASK 27-51-00-720-016

(11) Do a test of the load relief system with the flaps at 15 units:

(a) Use the primary system to retract the flaps to the 15-unit position. To retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Use the air data model test set, COM-1914 to raise the airspeed to 202 knots (232.46 mph).

NOTE: When you apply or remove pressure to the pitot system, the rate must not be more than 300 knots (345.23 mph) for each minute.

(c) Make sure the trailing edge flaps retract to the 10-unit position.

(d) Use the air data model test set, COM-1914 to lower the airspeed to 195 knots (224.40 mph).

(e) Make sure the trailing edge flaps extend to the 15-unit position.

SUBTASK 27-51-00-720-017

(12) Do a test of the load relief system with the flaps at 10 units:

(a) Use the primary system to retract the flaps to the 10-unit position. To retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(b) Use the air data model test set, COM-1914 to raise the airspeed to 212 knots (243.97 mph).

NOTE: When you apply or remove pressure to the pitot system, the rate must not be more than 300 knots (345.23 mph) for each minute.

(c) Make sure the trailing edge flaps retract to the 5-unit position.

(d) Use the air data model test set, COM-1914 to lower the airspeed to 205 knots (235.91 mph).

(e) Make sure the trailing edge flaps extend to the 10-unit position.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-00-860-095

(1) Move the flap control lever to the UP position to retract the flaps.

SUBTASK 27-51-00-860-096

(2) Put the system back to ambient pressure.

NOTE: When you apply or remove pressure to the pitot system, the rate must not be more than 300 knots (345.23 mph) for each minute.

SUBTASK 27-51-00-080-006

(3) Disconnect the pitot/static system tester from the pitot system:

CAUTION DO NOT DISCONNECT THE PITOT SYSTEM TEST ADAPTER WHEN THE PITOT-STATIC SYSTEM IS NOT AT AMBIENT PRESSURE. IF YOU DO, DAMAGE TO THE ADM CAN OCCUR.

(a) Disconnect the air data model test set, COM-1914 from the pitot test adapter, COM-1916.

(b) Remove the pitot test adapter, COM-1916, from the pitot probe.

(c) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	1	C00523	HEATERS CAPT PITOT
C	2	C00238	HEATERS TEMP PROBE
C	3	C01072	HEATERS ALPHA VANE LEFT
D	3	C01071	HEATERS ALPHA VANE RIGHT

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-860-097

(4) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-51-00-410-012

(5) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TRAILING EDGE FLAP SYSTEM - INSPECTION/CHECK

1. General

A. This procedure has these inspections:

(1) An inspection of the trailing edge flap drive system components

(2) An inspection of the trailing edged flap actuation system.

TASK 27-51-00-210-801

2. Trailing Edge Flap Drive System Inspection

(Figure 601)

NOTE: This procedure is a scheduled maintenance task.

C. Trailing Edge Flap Drive System Inspection

SUBTASK 27-51-00-480-014

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-00-010-011

(2) Extend the trailing edge flaps to the 40-unit position, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-00-040-008

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-00-210-005

(4) Do a general visual inspection of these items:

(a) Flap transmissions

(b) Torque tube support

(c) Seal rib angle gearbox

(d) Main landing gear beam angle gearbox

(e) Torque tube couplings

(f) Tee angle gearbox and U-joint.

SUBTASK 27-51-00-440-005

(5) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-00-010-012

(6) Retract the trailing edge flaps to the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

E. Prepare for the Inspection

SUBTASK 27-51-00-480-015

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-00-010-013

(2) Extend the trailing edge flaps to the 40-unit position. To extend the flaps, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-00-040-009

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Outboard Flap Inspection

(Figure 602)

SUBTASK 27-51-00-010-014

(1) At the flap supports, remove the leading edge skin panel [2] from the main flap [1] forward of the carriage:

(a) Remove the bolts [3] that attach the leading edge skin panel [2].

(b) Remove the leading edge skin panel [2] from the main flap [1].

Open these access panels:

Number	Name/Location
567BT	Flap, Forward Carriage Bearing And Fitting
567ET	Flap, Forward Carriage Bearing And Fitting
667BT	Flap, Forward Carriage Bearing And Fitting
667ET	Flap, Forward Carriage Bearing And Fitting

SUBTASK 27-51-00-210-006

(2) Do a detailed visual inspection of these items at the flap supports:

NOTE: These are flap supports No. 1, 2, 7 and 8.

(a) Aft flap drive rod, push rod and bellcrank

NOTE: Some freeplay in the bellcrank is acceptable.

(b) Carriage rollers

(c) Aft link and fittings

(d) Forward carriage bearing and fitting.

SUBTASK 27-51-00-210-007

(3) Do a detailed visual inspection of the deflection control rollers between the inboard and outboard flaps and at the outboard end of the outboard flap.

SUBTASK 27-51-00-210-008

(4) At the outboard aft flap, do a detailed visual inspection of these items:

(a) Aft flap track attachments.

NOTE: There are four aft flap tracks on the outboard flap.

(b) Inboard and outboard programming rollers.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Inboard and outboard aft flap pushrods.

(d) Rubstrips common to the aft flap support tracks, and common to the inboard and outboard edge program tracks.

(e) Inboard and outboard aft flap track rollers.

SUBTASK 27-51-00-410-013

(5) Install the leading edge skin panel [2] on the main flap [1] forward of the carriage:

(a) Close these access panels:

Number	Name/Location
567BT	Flap, Forward Carriage Bearing And Fitting
567ET	Flap, Forward Carriage Bearing And Fitting
667BT	Flap, Forward Carriage Bearing And Fitting
667ET	Flap, Forward Carriage Bearing And Fitting

(b) Put the leading edge skin panel [2] in its location on the leading edge of the main flap [1].

(c) Apply compound, C00528 to the holes for the bolts [3].

(d) Install the bolts [3] to attach the leading edge skin panel [2].

(e) Apply sealant, A00247 to fill all of the clearances around the leading edge skin panel [2] that are more than 0.05 in. (1.27 mm).

G. Inboard Flap Inspection

(Figure 603)

SUBTASK 27-51-00-210-009

(1) At the outboard flap support for the inboard flap, do a detailed visual inspection of these items:

NOTE: These are flap supports No. 3 and 6.

(a) Aft flap drive rod and crankshaft

(b) Carriage rollers

SUBTASK 27-51-00-210-010

(2) At the inboard flap support for the inboard flap, do a detailed visual inspection of these items:

NOTE: These are flap supports No. 4 and 5.

(a) Carriage rollers

SUBTASK 27-51-00-210-011

(3) At the inboard aft flap, do a detailed visual inspection of these items:

(a) Aft flap track attachments.

NOTE: There are two aft flap tracks on the inboard flap.

(b) Inboard and outboard programming rollers.

(c) Inboard and outboard aft flap pushrods.

(d) Rubstrips common to the aft flap support tracks, and common to the inboard and outboard edge program tracks.

(e) Inboard and outboard aft flap track rollers.

SUBTASK 27-51-00-440-006

(4) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-00-010-015

(5) Retract the trailing edge flaps to the retracted position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

——— END OF TASK ———

FLAP/SLAT ELECTRONICS UNIT (FSEU) - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Flap/slat electronics unit (FSEU) removal

(2) Flap/slat electronics unit (FSEU) installation.

TASK 27-51-01-000-801

2. Flap/Slat Electronics Unit Removal

(Figure 401)

A. General

(1) The flap/slat electronics unit is installed on the E1-1 shelf in the main equipment center.

B. References

Reference	Title

A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

G. Flap/Slat Electronic Unit Installation Test

SUBTASK 27-51-01-740-001

(1) Do the Existing Faults BITE test with the flap/slat electronics unit [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) To do the BITE test, do this task: FSEU Display and Existing Faults Test, TASK 27-51-00-740-801.

SUBTASK 27-51-01-740-002

(2) Do the Leading Edge Cruise Depressurization Test with the flap/slat electronics unit [1].

(a) To do the depressurization test, do this task: Leading Edge Cruise Depressurization Test, TASK 27-81-00-730-801.

SUBTASK 27-51-01-700-001

(3) Do the Leading Edge Uncommanded Motion Protection Test with the flap/slat electronics unit [1].

(a) To do the uncommanded motion protection test, do this task: Leading Edge Uncommanded Motion Protection Test, TASK 27-81-00-700-804.

SUBTASK 27-51-01-740-003

(4) Do the Load Relief BITE test with the flap/slat electronics unit [1].

(a) To do the BITE test, do this task: Trailing Edge Flap Load Relief System BITE Test, TASK 27-51-00-740-803.

SUBTASK 27-51-01-740-004

(5) Do the Asymmetry Skew System BITE test with the flap/slat electronics unit [1].

(a) To do the BITE test, do this task: Trailing Edge Flap Asymmetry Skew System BITE Test, TASK 27-51-00-740-802.

SUBTASK 27-51-01-710-001

(6) Do a test of the air mode inhibit function of the flap/slat electronics unit [1]:

(a) Simulate air mode, do this task: Put the Airplane in the Air Mode, TASK 32-09-00-860-801.

NOTE: It is only necessary to simulate air mode with system 1.

(b) Push the ON/OFF button on the front panel of the flap/slat electronics unit [1] to turn it off and then on.

(c) Make sure that INHIBIT: IN AIR flashes on the display window on the flap/slat electronics unit [1] before the display turns off.

(d) Return the airplane to ground mode, do this task: Return the Airplane to the Ground Mode, TASK 32-09-00-860-802.

(e) Push the ON/OFF button on the front panel of the flap/slat electronics unit [1] to turn it off and then on.

(f) Make sure that INHIBIT: IN AIR does not show on the display window on the flap/slat electronics unit [1].

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-01-010-002

(1) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TRAILING EDGE FLAP BYPASS VALVE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the trailing edge flap bypass valve assembly

(2) An installation of the trailing edge flap bypass valve assembly

(3) A removal of the trailing edge flap bypass valve motor

(4) An installation of the trailing edge flap bypass valve motor.

B. The trailing edge bypass valve assembly includes the valve housing, the bypass valve and the bypass valve motor.

TASK 27-51-02-000-801

2. Trailing Edge Flap Bypass Valve Assembly Removal

(Figure 401)

A. General

(1) This task includes the removal of the bypass valve assembly as a unit. The bypass valve assembly includes the housing, the valve and the valve motor.

B. References

Reference	Title

C. Location Zones

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

D. Prepare for the Removal

SUBTASK 27-51-02-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-02-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-02-860-001

(3) Remove the pressure from the system B hydraulic reservoir (TASK 29-09-00-860-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-02-860-002

(4) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

E. Trailing Edge Flap Bypass Valve Assembly Removal

SUBTASK 27-51-02-020-001

(1) Disconnect the electrical connector [5] from the bypass valve assembly [4].

(2) If desired, inspect the connector for corrosion now, do this task: Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802.

NOTE: This step is also done in the installation task.

SUBTASK 27-51-02-020-002

(3) Disconnect the hydraulic lines [1] from the bypass valve assembly [4]:

(a) Put a container below the bypass valve assembly [4] to hold the hydraulic fluid.

(b) Disconnect the hydraulic lines [1] from the bypass valve assembly [4].

(c) Install caps on the hydraulic lines [1] and plugs in the hydraulic ports.

SUBTASK 27-51-02-020-003

(4) Remove the flap bypass valve assembly [4]:

(a) Remove the bolts [6] and washers [7] that attach the bypass valve assembly [4] to the bracket [2].

(b) Remove the bypass valve assembly [4] from the bracket [2].

SUBTASK 27-51-02-020-004

(5) If you will install a new bypass valve assembly [4], remove the unions [13] and packings [14] from the bypass valve assembly [4].

D00054	Fluid - Hydraulic Assembly Lubricant - MCS 352B (Formerly Monsanto MCS 352B)	
D00070	Fluid - Hydraulic, Petroleum Base	MIL-PRF-5606 (Replaces MIL-H-5606)

E. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
4	Bypass valve assembly	27-51-02-01-010	SIA ALL
14	Packing	27-51-02-01-015	SIA ALL

F. Location Zones

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

G. Trailing Edge Flap Bypass Valve Assembly Installation

SUBTASK 27-51-02-420-001

(1) If they are not installed, install the unions [13] in the bypass valve assembly [4]:

(a) Apply MCS 352B fluid, D00054 or fluid, D00070 to the new packings [14].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Put the packings [14] and the unions [13] in their location on the bypass valve assembly [4].

SUBTASK 27-51-02-420-002

(2) Install the bypass valve assembly [4]:

(a) Make sure that the mating surface of the bypass valve assembly [4] and the bracket [2] are clean for electrical bonding.

(b) Put the bypass valve assembly [4] in its position on the bracket [2].

(c) Install the bolts [6] and washers [7] to attach the bypass valve assembly [4] to the bracket [2].

(d) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the bonding resistance between the bypass valve assembly [4] and the bracket [2] is less than 0.0025 ohm.

SUBTASK 27-51-02-420-003

(3) Connect the hydraulic lines [1] to the bypass valve assembly [4]:

(a) Remove the caps from the hydraulic lines [1] and the plugs from the ports.

(b) Connect the hydraulic lines [1] to the bypass valve assembly [4].

(c) Tighten the B-nuts on the hydraulic lines [1] to 500 ±25 in-lb (56 ±3 N·m).

SUBTASK 27-51-02-210-001

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS WHERE DEICING FLUID THAT CONTAIN POTASSIUM FORMATE IS USED. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(4) Before you connect the electrical connector [5], examine the connector for corrosion (TASK 20-60-07-910-802).

SUBTASK 27-51-02-420-004

(5) Connect the electrical connector [5] to the bypass valve assembly [4].

SUBTASK 27-51-02-860-004

(6) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

SUBTASK 27-51-02-860-016

(7) Pressurize the system B hydraulic reservoir (TASK 29-09-00-860-801).

SUBTASK 27-51-02-440-001

(8) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-02-720-001

(9) Do this task: Trailing Edge Flap Bypass Valve Functional Test, TASK 27-51-02-720-801.

SUBTASK 27-51-02-210-002

(10) Make sure that there are no hydraulic leaks from the bypass valve assembly [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-02-860-017

(11) If the landing gear downlock pins are not needed, do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

——— END OF TASK ———

TASK 27-51-02-000-803

4. Trailing Edge Flap Bypass Valve Motor Removal

(Figure 401)

A. General

(1) This task includes the removal of the bypass valve motor from the bypass valve.

B. References

D. Prepare for the Removal

SUBTASK 27-51-02-480-003

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-02-040-003

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-02-860-009

(3) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

E. Trailing Edge Flap Bypass Valve Motor Removal

SUBTASK 27-51-02-020-007

(1) Disconnect the electrical connector [5] from the bypass valve motor [8].

(2) If desired, inspect the connector for corrosion now (TASK 20-60-07-910-802).

NOTE: This step is also done in the installation task.

SUBTASK 27-51-02-980-001

(3) Move the manual override lever [3] to POSITION 2.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-02-020-008

(4) Remove the bypass valve motor [8] from the bypass valve [10]:

(a) Remove the screws [9] that attach the bypass valve motor [8] to the bypass valve [10].

(b) Carefully lift the bypass valve motor [8] off bypass valve [10].

——— END OF TASK ———

TASK 27-51-02-400-803

5. Trailing Edge Flap Bypass Valve Motor Installation

(Figure 401)

A. General

(1) This task includes the installation of the bypass valve motor on the bypass valve.

B. References

Reference	Title
20-60-07-910-802	Inspection, Cleaning and Sealing of Electrical Connectors (P/B 201)

C. Consumable Materials

Reference	Description	Specification
G02421	Lockwire	NASM20995C40

D. Location Zones

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

E. Trailing Edge Flap Bypass Valve Motor Installation

SUBTASK 27-51-02-420-007

(1) Install the bypass valve motor [8] on the flap bypass valve [10]:

(a) Carefully put the bypass valve motor [8] in its location on the flap bypass valve [10].

(b) Install the screws [9] to attach the bypass valve motor [8] to the flap bypass valve [10].

(c) Tighten the screws [9] to 12 in-lb (1.4 N·m) - 15 in-lb (1.7 N·m).

(d) Install lockwire, G02421 on the screws [9].

SUBTASK 27-51-02-210-005

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS WHERE DEICING FLUID THAT CONTAIN POTASSIUM FORMATE IS USED. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(2) Before you connect the electrical connector [5], examine the connector for corrosion (TASK 20-60-07-910-802).

SUBTASK 27-51-02-420-008

(3) Connect the electrical connector [5] to the bypass valve motor [8].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-02-860-011

(4) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

SUBTASK 27-51-02-860-020

(5) Pressurize the system B hydraulic reservoir (TASK 29-09-00-860-801).

SUBTASK 27-51-02-440-003

(6) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-02-720-003

(7) Do this task: Trailing Edge Flap Bypass Valve Functional Test, TASK 27-51-02-720-801.

SUBTASK 27-51-02-860-021

(8) If the landing gear downlock pins are not needed, do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TRAILING EDGE FLAP BYPASS VALVE - ADJUSTMENT/TEST

1. General

A. This procedure has a functional test of the trailing edge flap bypass valve.

TASK 27-51-02-720-801

2. Trailing Edge Flap Bypass Valve Functional Test

(Figure 501)

A. References

Reference	Title
27-51-00-740-802	Trailing Edge Flap Asymmetry Skew System BITE Test (P/B 501)
27-51-00-860-804	Retract the Trailing Edge Flaps (P/B 201)
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Location Zones

Zone	Area
117	Electrical and Electronics Compartment - Left
118	Electrical and Electronics Compartment - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Prepare for the Test

SUBTASK 27-51-02-860-013

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-02-860-014

(2) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

D. Trailing Edge Flap Bypass Valve Functional Test

SUBTASK 27-51-02-740-001

(1) Do this task: Trailing Edge Flap Asymmetry Skew System BITE Test, TASK 27-51-00-740-802.

SUBTASK 27-51-02-720-004

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP-DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Do a test of the operational speed of the trailing edge flaps:

(a) Move the flap control lever to the UP position and wait for the flaps to reach the UP position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Measure the time it takes for the trailing edge flaps to extend from the UP position to the 1-unit position:

1) Move the flap control lever to the 1-unit position to extend the flaps.

2) Make sure the time it takes for the flaps to extend to the 1-unit position is 11 to 14 seconds.

NOTE: If you will use the system B Electric Motor-Driven Pump (EMDP) only, the extension time will be 34 to 39 seconds.

(c) Measure the time it takes for the trailing edge flaps to retract from the 1-unit position to the UP position:

1) Move the flap control lever to the UP position to retract the flaps.

2) Make sure the time it takes for the flaps to retract to the UP position is 11 to 14 seconds.

NOTE: If you will use the system B EMDP only, the retraction time will be 34 to 39 seconds.

SUBTASK 27-51-02-720-005

(3) Do a test of the operation of the bypass valve while the trailing edge flaps are moving. Do the next two steps within approximately 10 seconds:

NOTE: It is necessary to do the following two steps within approximately 10 seconds. The flaps must still be extending when you do the second step.

(a) Move the flap control lever to the 1-unit position.

(b) While the trailing edge flaps are extending, move the ALTERNATE FLAPS ARM switch to the ARM position.

(c) Make sure the flaps stop extending when you move the ARM switch.

SUBTASK 27-51-02-720-006

(4) Move the flap control lever to the UP position.

(a) Make sure the flaps do not move.

SUBTASK 27-51-02-720-007

(5) Put the ALTERNATE FLAPS ARM switch in the OFF position.

(a) Make sure the flaps retract to the retracted position.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-02-860-015

(1) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

FLAP PRIORITY VALVE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Flap Priority Valve Removal

(2) Flap Priority Valve Installation

TASK 27-51-04-000-801

2. Flap Priority Valve Removal

(Figure 401)

A. References

Reference	Title
29-09-00-860-802	Hydraulic Reservoirs Depressurization (P/B 201)
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

B. Tools/Equipment

Reference	Description
STD-1054	Container - Fuel Resistant, 5-Gallon (19-Liter)

C. Location Zones

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

D. Prepare for the Removal

SUBTASK 27-51-04-480-001

WARNING MAKE SURE THAT YOU INSTALL THE DOWNLOCK PINS ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-04-860-001

(2) Remove the pressure from the system B hydraulic reservoir (TASK 29-09-00-860-802).

E. Flap Priority Valve Removal

SUBTASK 27-51-04-020-001

(1) Do these steps to remove the flap priority valve [1]:

(a) Disconnect the flap flow limiter [6]

(b) Disconnect hydraulic line [2]and hydraulic line [7] from the flap priority valve [1]:

1) Put a 5-gallon (19-liter) fuel resistant container, STD-1054 below the flap priority valve [1] to hold hydraulic fluid.

2) Disconnect hydraulic line [2] and hydraulic line [7] from the flap priority valve [1].

3) Install plugs in hydraulic line [2] and hydraulic line [7].

(c) Remove the nuts [11] and washers [12], and remove the flap priority valve [1] from the bracket [10].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-04-020-002

(2) If you will install a new flap priority valve [1], do these steps:

(a) Remove the union [5] and packings [4] from the flap priority valve [1].

(b) Remove the union [8] and packing [9] from the flap priority valve [1].

(c) Remove the reducer [3] and packings [4] from the flap priority valve [1].

134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

E. Flap Priority Valve Installation

SUBTASK 27-51-04-420-001

(1) If you will install a new flap priority valve [1], do these steps to install the union [5], union [8], and reducer [3]:

(a) Apply MCS 352B fluid, D00054, or hydraulic fluid, D00153, to the new packings [4] and new packing [9].

(b) Install the packing [4] and union [5] into the flap priority valve [1].

(c) Install the packing [9] and union [8] into the flap priority valve [1].

(d) Install the packing [4] and reducer [3] into the flap priority valve [1].

SUBTASK 27-51-04-420-002

(2) Do these steps to install the flap priority valve [1]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts on the bracket [10].

(b) Put the flap priority valve [1] in its location on the bracket [10].

(c) Install the nuts [11] and washers [12] to hold the flap priority valve [1].

(d) Remove the plugs from hydraulic line [2] and hydraulic line [7].

(e) Connect hydraulic line [2] and hydraulic line [7] to the flap priority valve [1].

(f) Tighten the B-nut on the hydraulic line [2] to 500 ±25 in-lb (56 ±3 N·m).

(g) Tighten the B-nut on the hydraulic line [7] to 140 ±7 in-lb (16 ±1 N·m).

(h) Connect the flap flow limiter [6] to the flap priority flap priority valve [1].

SUBTASK 27-51-04-860-002

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Supply system B hydraulic power (TASK 29-11-00-860-801).

SUBTASK 27-51-04-860-003

(4) Use the primary system to extend and retract the flaps (TASK 27-51-00-860-801).

SUBTASK 27-51-04-210-001

(5) Examine the hydraulic fittings for leaks.

SUBTASK 27-51-04-720-001

(6) Do this task: Flap Priority Valve Test, TASK 27-51-00-720-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP CONTROL LEVER POSITION SENSOR - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) A removal of the flap control lever position sensor

(2) An installation of the flap control lever position sensor

(3) An adjustment of the flap control lever position sensor

(4) An system test of the flap control lever position sensor

(5) A detailed visual inspection of the flap control lever sensor, linkage and rod ends.

B. The flap control lever position sensor is installed in the control stand and operates from the flap control lever.

TASK 27-51-06-000-801

2. Flap Control Lever Position Sensor Removal

(Figure 201)

A. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Prepare for the Removal

SUBTASK 27-51-06-860-001

(1) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-51-06-010-001

(2) Remove the lower right side cover [3] from the lower right side of the control stand [7]:

(a) Remove the screws [5] and the pocket assembly [6] from the lower right side cover [3].

(b) Loosen the two lower screws [8] on the right side of the control stand [7].

(c) Remove the screws [4] that attach the lower right side cover [3] to the control stand [7].

(d) Remove the lower right side cover [3] from the control stand [7].

1) Move the lower right side cover [3] down, away from the upper right side cover [1].

C. Flap Control Lever Position Sensor Removal

SUBTASK 27-51-06-020-001

(1) Disconnect the electrical connector [9] for the flap control lever position sensor [20].

SUBTASK 27-51-06-020-002

(2) Remove the flap control lever position sensor assembly [2]:

NOTE: The position sensor assembly [2] includes the position sensor [20], bracket assembly [23], bracket [24] and the crank [18].

(a) Remove the bolt [15], washers [16] and clamp [14] that attach the wire for the electrical connector [9].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the bolts [11], washers [12], nuts [13] and clamps [10] that attach the wire for the electrical connector [9].

(c) Remove the bolt [22] and nut [21] that attach the link [17] to the crank [18].

(d) Remove the bolts [19] and washers [30] that attach the flap control lever position sensor assembly [2] to the control stand [7].

SUBTASK 27-51-06-020-003

(3) Remove the flap control lever position sensor [20] from the position sensor assembly [2]:

(a) Remove the screw [27], washers [28] and nut [29] that attach the crank [18] to the shaft on the position sensor [20].

(b) Remove the screws [25] and washers [26] that attach the position sensor [20] to the bracket [24].

(c) Remove the flap control lever position sensor [20] from the bracket [24].

——— END OF TASK ———

TASK 27-51-06-400-801

3. Flap Control Lever Position Sensor Installation

(Figure 201)

A. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
1	Upper right side cover	25-11-21-25-080	SIA ALL
2	Sensor assembly	27-51-06-01-085	SIA ALL
3	Lower right side cover	25-11-21-25-150	SIA ALL

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Flap Control Lever Position Sensor Installation

SUBTASK 27-51-06-860-002

(1) Make sure that this circuit breaker is open and has safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-51-06-010-002

(2) Install the flap control lever position sensor [20] on the position sensor assembly [2]:

NOTE: The position sensor assembly [2] includes the position sensor [20], bracket assembly [23], bracket [24] and the crank [18].

(a) Put the bracket assembly [23] in its position on the bracket [24].

(b) Put the crank [18] in its position through the slot in the bracket [24].

(c) Put the crank [18] on the shaft of the position sensor [20] and put the position sensor [20] in its position on the bracket [24].

(d) Install the screw [27], washers [28] and nut [29] to attach the crank [18] to the position sensor [20].

(e) Install the screws [25] and washers [26] to attach the position sensor [20] to the bracket [24].

(f) Make sure that the wire for the electrical connector [9] is approximately 180° from the crank [18].

SUBTASK 27-51-06-420-001

(3) Install the flap control lever position sensor assembly [2]:

(a) Put the flap control lever position sensor assembly [2] in its position on the control stand [7].

(b) Install the bolts [19] and washers [30] that attach the flap control lever position sensor assembly [2].

(c) Install the bolt [22]and nut [21] to attach the link [17] to the crank [18].

SUBTASK 27-51-06-420-002

(4) Connect the electrical connector [9] for the flap control lever position sensor [20].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-06-420-003

(5) Install the clamps [10] with the bolts [11], washers [12], and nuts [13] to attach the wire for the electrical connector [9] to the control stand [7].

SUBTASK 27-51-06-420-004

(6) Install the clamp [14] with the bolt [15] and washers [16] to attach the wire for the electrical connector [9] to the control stand [7].

SUBTASK 27-51-06-860-003

(7) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-51-06-820-001

(8) Do this task: Flap Control Lever Position Sensor Adjustment and Test, TASK 27-51-06-820-801.

SUBTASK 27-51-06-730-001

(9) Do this task: Flap Control Lever Position Sensor System Test, TASK 27-51-06-730-801.

D. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-06-410-001

(1) Install the lower right side cover [3] on the lower right side of the control stand [7]:

(a) Put the lower right side cover [3] in its position on the control stand [7], under the upper right side cover [1].

(b) Install the screws [4] that attach the lower right side cover [3] to the control stand [7].

(c) Tighten the lower screws [8] that attach the upper right side cover [1].

(d) Install the pocket assembly [6] with the screws [5] on the lower right side cover [3].

END OF TASK

TASK 27-51-06-820-801

4. Flap Control Lever Position Sensor Adjustment and Test

(Figure 201, Figure 202)

117A	Electronic Equipment Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Prepare for the Adjustment

SUBTASK 27-51-06-860-005

(1) If it is supplied, remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

NOTE: If system B hydraulic power is supplied, the flaps and slats will operate during the adjustment.

SUBTASK 27-51-06-010-003

(2) Remove the lower right side cover [3] from the lower right side of the control stand [7] (Figure 201):

(a) Remove the screws [5] and the pocket assembly [6] from the lower right side cover [3].

(b) Loosen the two lower screws [8] for the upper right side cover [1] on the right side of the control stand [7].

(c) Remove the screws [4] that attach the lower right side cover [3] to the control stand [7].

(d) Remove the lower right side cover [3] from the control stand [7].

1) Move the lower right side cover [3] down, away from the upper right side cover [1].

SUBTASK 27-51-06-010-004

(3) To get access to the Flap/Slat Electronics Unit (FSEU) on the E1-1 shelf in the main equipment center, do this task (Figure 202).

Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

E. Flap Control Lever Position Sensor Adjustment

SUBTASK 27-51-06-860-006

(1) Move the flap control lever to the 10-unit position.

SUBTASK 27-51-06-740-001

(2) Use the FSEU to find the output of the flap control lever position sensor [20]:

(a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

(b) Push the down arrow until OTHER FUNCTNS? shows on the display.

(c) Push the YES button to select OTHER FUNCTNS? on the FSEU.

(d) Push the down arrow until I/O MONITOR? shows on the display.

(e) Push the YES button to select I/O MONITOR? from the menu.

(f) Push the down arrow until SYNCHRO INPUTS? shows on the display.

(g) Push the YES button to select SYNCHRO INPUTS? from the menu.

(h) Make sure that the LVR POS shows in the limit of 52.3 to 52.9 degrees.

SUBTASK 27-51-06-820-002

(3) If the output of the position sensor [20] shown on the FSEU is not in the limit, adjust the position sensor [20] (Figure 201):

(a) Loosen the bolts [19] that attach the flap control lever position sensor assembly [2] to the control stand [7].

(b) Put a 1/4 inch flat head screwdriver in the drive slot on the position flap control lever sensor assembly [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Carefully turn the position sensor assembly [2] until the FSEU shows the LVR POS in the limit of 52.3 to 52.9 degrees.

(d) Tighten the bolts [19].

(e) Remove the 1/4 inch flat head screwdriver from the drive slot.

(f) Make sure that the LVR POS shows in the limit of 52.37 to 52.87 degrees.

SUBTASK 27-51-06-730-002

(4) Do this task: Flap Control Lever Position Sensor System Test, TASK 27-51-06-730-801.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-06-860-007

(1) Push the ON/OFF button on the front panel of the FSEU to turn it off.

SUBTASK 27-51-06-410-002

(2) For the main equipment center, do this task.

Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-51-06-410-003

(3) Install the lower right side cover [3] on the lower right side of the control stand [7]:

(a) Put the lower right side cover [3] in its position on the control stand [7], under the upper right side cover [1].

(b) Install the screws [4] that attach the lower right side cover [3] to the control stand [7].

(c) Tighten the lower screws [8] that attach the upper right side cover [1]

(d) Install the pocket assembly [6] with the screws [5] on the lower right side cover [3].

END OF TASK

TASK 27-51-06-730-801

5. Flap Control Lever Position Sensor System Test

(Figure 202)

A. References

Reference	Title
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Location Zones

Zone	Area
117	Electrical and Electronics Compartment - Left
118	Electrical and Electronics Compartment - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

D. Prepare for the Test

SUBTASK 27-51-06-860-009

(1) If it is supplied, remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

NOTE: If system B hydraulic power is supplied, the flaps and slats will operate during the system test.

SUBTASK 27-51-06-010-005

(2) To get access to the Flap/Slat Electronics Unit (FSEU) on the E1-1 shelf in the main equipment center, do this task.

Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

E. Flap Control Lever Position Sensor Test

SUBTASK 27-51-06-730-003

(1) Move the flap control lever to the UP position.

SUBTASK 27-51-06-740-002

(2) Use the FSEU to find the output of the flap control lever position sensor [20] in the UP position:

(a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

(b) Push the down arrow until OTHER FUNCTNS? shows on the display.

(c) Push the YES button to select OTHER FUNCTNS? on the FSEU.

(d) Push the down arrow until I/O MONITOR? shows on the display.

(e) Push the YES button to select I/O MONITOR? from the menu.

(f) Push the down arrow until SYNCRO INPUTS? shows on the display.

(g) Push the YES button to select SYNCHRO INPUTS? from the menu.

(h) Make sure that the LVR POS shows on the FSEU in the limit of -2.8 to +2.8 degrees.

SUBTASK 27-51-06-730-004

(3) Move the flap control lever to the 10-unit position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Make sure that the LVR POS shows in the limit of 50.6 to 54.6 degrees.

SUBTASK 27-51-06-730-005

(4) Move the flap control lever to the 40-unit position.

(a) Make sure that the LVR POS shows in the limit of 105.4 to 110.9 degrees.

SUBTASK 27-51-06-730-006

(5) Move the flap control lever to the UP position.

(a) Make sure that the LVR POS shows in the limit of -2.8 to +2.8 degrees.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-06-860-010

(1) Push the ON/OFF button on the front panel of the FSEU to turn it off.

SUBTASK 27-51-06-410-004

(2) For the main equipment center, do this task.

Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

——— END OF TASK ———

TASK 27-51-06-210-801

6. Flap Control Lever Position Sensor and Mechanism Detailed Visual Inspection

(Figure 203)

NOTE: This procedure is a scheduled maintenance task.

A. Location Zones

Zone	Area
212	Flight Compartment - Right

B. Prepare for the Inspection

SUBTASK 27-51-06-010-008

(1) Remove the upper right side cover [1] and lower right side cover [3] from the right side of the control stand [7].

(a) Remove the screws [5] and pocket assembly [6] from the lower right side cover [3].

(b) Remove the screws [8] that attach the upper right side cover [1] and lower right side cover [3] to the control stand [7].

(c) Remove the upper right side cover [1] and lower right side cover [3] from the control stand [7].

1) If it is necessary, remove the stabilizer trim wheel [50] from the right side of the control stand [7].

a) Remove the bolt [51] and spacer [52] that attaches the stabilizer trim wheel [50] to the shaft.

b) Remove the stabilizer trim wheel [50] from the shaft.

C. Flap Control Lever Position Sensor Detailed Visual Inspection

SUBTASK 27-51-06-020-005

(1) Do a detailed visual inspection of the flap control lever sensor assembly [2] and crank [18].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-06-210-001

(2) Do a detailed visual inspection of the ends of the link [17].

D. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-06-410-005

(1) Install the upper right side cover [1] and lower right side cover [3] on the right side of the control stand [7].

(a) Put the upper right side cover [1] and lower right side cover [3] in their position on the control stand [7].

NOTE: The lower right side cover goes under the upper right side cover.

(b) Install the screws [8] that attach the upper right side cover [1] and lower right side cover [3] to the control stand [7].

(c) Install the pocket assembly [6] with the screws [5] on the lower right side cover [3].

SUBTASK 27-51-06-420-005

(2) If removed, install the stabilizer trim wheel [50] on the right side of the control stand [7].

(a) Install the stabilizer trim wheel [50] on the shaft with the handle 90 +/- 15 degrees apart from the handle on the other stabilizer trim wheel [50].

1) Make sure that an equal amount of the shaft is visible on both sides of the pedestal.

(b) Install the spacer [52] and bolt [51] to attach the stabilizer trim wheel [50] to the shaft.

(c) Tighten the bolt [51] to 150 in-lb (16.9 N·m) - 160 in-lb (18.1 N·m) plus run-on torque.

FLAP LEVER POSITION SWITCHES - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Flap lever position switch removal

(2) Flap lever position switch installation.

B. There are two flap lever position switches installed on the control stand:

(1) The flap lever 10 to 40-unit position switch

(2) The flap lever UP position switch.

C. The flap lever position switches are installed on the control stand and operate with the flap control lever.

D. There are two options for removal and installation of the flap lever position switches:

(1) You can remove and install the two flap lever position switches as an assembly.

(2) You can remove and install the two flap lever position switches independently by cutting and splicing the wires.

TASK 27-51-08-000-801

2. Flap Lever Position Switch Removal

(Figure 401)

A. Location Zones

Zone	Area
212	Flight Compartment - Right

B. Access Panels

Number	Name/Location
112A	Forward Access Door

C. Prepare for the Removal

SUBTASK 27-51-08-860-001

(1) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
C	10	C00284	PANEL & INSTR ELEX PANEL

SUBTASK 27-51-08-010-002

(2) Remove the stabilizer trim wheel [8] from the right side of the control stand [13]:

(a) Remove the bolt [31] and spacer [32] that attaches the stabilizer trim wheel [8].

(b) Remove the stabilizer trim wheel [8] from the shaft.

SUBTASK 27-51-08-010-003

(3) Remove the upper side cover [7] and lower side cover [11] from the right side of the control stand [13]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the screws [10] and the pocket assembly [12] from the lower side cover [11].

(b) Remove the screws [6] that attach the upper side cover [7] and the lower side cover [11] to the control stand [13].

(c) Remove the upper side cover [7] and the lower side cover [11] from the control stand [13].

SUBTASK 27-51-08-010-004

(4) Remove the stabilizer trim lightplate [3] from the control stand [13]:

(a) Remove the screws [4] and remove the stabilizer trim lightplate [3].

(b) Remove the nuts [17], washers [16] and washers [15] that attach the wires [14] to the stabilizer trim lightplate [3].

SUBTASK 27-51-08-010-005

(5) Remove the screws [2] and bolt [5] and remove the control stand cover [1] from the control stand [13].

D. Flap Lever Position Switch Removal

SUBTASK 27-51-08-020-001

(1) Disconnect the electrical connector [28] for the flap lever position flap lever position switches [24]:

(a) To get access to the electrical connector [28] from below the control stand [13], do this task.

Open this access panel:

Number	Name/Location
112A	Forward Access Door

(b) Disconnect the electrical connector [28] from below.

(c) Remove the screws [29] and washers [30] that attach the electrical connector [28].

(d) Remove the electrical connector [18] from the control stand [13].

SUBTASK 27-51-08-020-002

(2) Remove the flap lever position switches [24] as an assembly:

(a) Remove the bolts [22], bolt [27] and washers [23] that attach the flap lever position switches [24] and the clamp [21] to the control stand [13].

(b) Remove the bolt [25], washer [26] and clamp [21].

(c) Remove the bolts [19], washers [20] and clamps [21] that attach the wires to the control stand [13].

SUBTASK 27-51-08-020-003

(3) Remove a flap lever position switch [24] independently:

(a) For the 10 to 40-unit flap lever position switch [24], remove the bolts [22] and washers [23] that attach the flap lever position switch [24] to the control stand [13].

1) Remove the bolt [25], washer [26] and clamp [21].

(b) For the UP flap lever position switch [24], remove the bolt [22], bolt [27] and washers [23] that attach the flap lever position switch [24] and the clamp [21] to the control stand [13].

(c) Remove the bolt [19] and washer [20] from a sufficient number of clamps [21] to get access to cut the wires.

(d) Cut the wires for the applicable flap lever position switch [24].

END OF TASK

SUBTASK 27-51-08-420-001

(2) Install the flap lever position switches [24] as an assembly:

(a) Put the flap lever position switches [24] with the wires and electrical connector [18], in their position in the control stand [13].

(b) Install the bolts [22], bolt [27] and washers [23] that attach the flap lever position switches [24] and the clamp [21] to the control stand [13].

(c) Install the bolt [25], washer [26] and clamps [21] that attach the wires to the control stand [13].

(d) Install the bolts [19], washers [20] and clamps [21] that attach the wires to the control stand [13].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-08-420-002

(3) Install a flap lever position switch [24] independently:

(a) Splice the wires from the new flap lever position flap lever position switch [24] with the wires in the control stand [13] (SWPM 20-10-11).

(b) For the 10 to 40-unit flap lever position switch [24], install the bolts [22] and washers [23] that attach the flap lever position switch [24] to the control stand [13].

1) Install the bolt [25], washer [26] and clamps [21] that attach the wires to the control stand [13].

(c) For the UP flap lever position switch [24], install the bolt [22], bolt [27] and washers [23] that attach the flap lever position flap lever position switch [24] and the clamp [21] to the control stand [13].

(d) Install the applicable bolts [19], washers [20] and clamps [21] that attach the wires to the control stand [13].

SUBTASK 27-51-08-820-001

(4) Do this task: Flap Lever Position Switch Adjustment, TASK 27-51-08-820-801.

SUBTASK 27-51-08-420-003

(5) Connect the electrical connector [18]

(a) Do this task: Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802.

(b) Put the electrical connector [18] in its position.

(c) Install the screws [29] and washers [30] to attach the electrical connector [18].

(d) Connect the electrical connector [28] from below the control stand [13].

(e) Close this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-51-08-860-003

(6) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

SUBTASK 27-51-08-740-001

(7) Do this task: Trailing Edge Flap Load Relief System BITE Test, TASK 27-51-00-740-803.

SUBTASK 27-51-08-730-001

(8) Do this task: Leading Edge Cruise Depressurization Test, TASK 27-81-00-730-801.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-08-410-001

(1) Install the control stand cover [1] on the control stand [13] with the screws [2] and the bolt [5].

SUBTASK 27-51-08-010-006

(2) Install the stabilizer trim lightplate [3] on the control stand [13]:

(a) Connect the wires [14] to the stabilizer trim lightplate [3]:

1) Put the wires [14] for in their position on the stabilizer trim lightplate [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Install the washers [15], washers [16] and nuts [17] to attach the wires [14].

(b) Put the stabilizer trim lightplate [3] in its location on the control stand [13].

(c) Loosely install the screws [4].

(d) Adjust the position of the stabilizer trim lightplate [3] to align with the stabilizer trim indicator.

(e) Tighten the screws [4].

SUBTASK 27-51-08-410-002

(3) Install the upper side cover [7] and the lower side cover [11] on the right side of the control stand [13]:

(a) Put the upper side cover [7] and the lower side cover [11] in their position on the control stand [13], with the lower side cover [11] under the upper side cover [7]

(b) Install the screws [6] that attach the upper side cover [7] and lower side cover [11] to the control stand [13].

(c) Install the pocket assembly [12] with the screws [10] on the lower side cover [11].

SUBTASK 27-51-08-410-004

(4) Install the stabilizer trim wheel [8] on the right side of the control stand [13]:

(a) Put the stabilizer trim wheel [8] on the shaft.

(b) Make sure that the handle on the stabilizer trim wheel [8] is 75 to 105 degrees from the handle on the left-side stabilizer trim wheel [8].

(c) Install the bolt [31] and spacer [32] to attach the stabilizer trim wheel [8].

(d) Tighten the bolt [31] to 150 in-lb (16.9 N·m) – 160 in-lb (18.1 N·m) above run-on torque.

SUBTASK 27-51-08-860-004

(5) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
C	10	C00284	PANEL & INSTR ELEX PANEL

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP LEVER POSITION SWITCHES - ADJUSTMENT/TEST

1. General

A. This procedure has an adjustment of the flap lever position switches.

B. The flap lever position switches are installed on the control stand and operate with the flap control lever.

TASK 27-51-08-820-801

2. Flap Lever Position Switch Adjustment

(Figure 501)

A. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Prepare for the Adjustment

SUBTASK 27-51-08-860-005

(1) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
C	10	C00284	PANEL & INSTR ELEX PANEL

SUBTASK 27-51-08-010-007

(2) Remove the stabilizer trim wheel [8] from the right side of the control stand [13]:

(a) Remove the bolt [9] and spacer [26] that attach the stabilizer trim wheel [8].

(b) Remove the stabilizer trim wheel [8] from the shaft.

SUBTASK 27-51-08-010-008

(3) Remove the upper side cover [7] and lower side cover [11] from the right side of the control stand [13]:

(a) Remove the screws [10] and the pocket assembly [12] from the lower side cover [11].

(b) Remove the screws [6] that attach the upper side cover [7] and the lower side cover [11] to the control stand [13].

(c) Remove the upper side cover [7] and the lower side cover [11] from the control stand [13].

SUBTASK 27-51-08-010-009

(4) Remove the stabilizer trim lightplate [3] from the control stand [13]:

(a) Remove the screws [4] and remove the stabilizer trim lightplate [3].

(b) Remove the nuts [17], washers [16] and washers [15] that attach the wires [14] to the stabilizer trim lightplate [3].

SUBTASK 27-51-08-010-010

(5) Remove the screws [2] and bolt [5] and remove the control stand cover [1] from the control stand [13].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

C. Flap Lever Position Switch Adjustment

NOTE: The adjustment of the flap lever position switch [19] is changed by moving the cam [21] on the flap control lever drum [20].

SUBTASK 27-51-08-020-004

(1) Disconnect the electrical connector [18] for the flap lever position switches [19]:

SUBTASK 27-51-08-860-006

(2) Move the flap control lever to the 5-unit position.

SUBTASK 27-51-08-020-005

(3) Loosen the screws [22] that attach the cam [21] to the flap control lever drum [20].

SUBTASK 27-51-08-820-002

(4) Move the cam [21] fully forward.

SUBTASK 27-51-08-820-003

(5) Adjust the cam [21] on the flap control lever drum [20]:

(a) Do a continuity check between these pins on the electrical connector [18] D5150:

1) Make sure there is continuity between pins 8 and 9.

2) Make sure there is no continuity between pins 9 and 11.

(b) Move the flap control lever to the middle position between the 5-unit and 10-unit detents.

(c) Do a continuity check between these pins on the electrical connector [18] D5150:

1) Make sure there is continuity between pins 8 and 9.

2) Make sure there is no continuity between pins 9 and 11.

(d) Hold the flap control lever in the middle position between the 5-unit and 10-unit detents.

(e) Slowly move the cam [21] on the flap control lever drum [20] aft until the flap lever 10-unit switch operates.

1) Make sure there is no continuity between pins 8 and 9.

2) Make sure there is continuity between pins 9 and 11.

(f) Tighten the screws [22] that attach the cam [21] to the flap control lever drum [20].

1) Make sure there is no continuity between pins 8 and 9.

2) Make sure there is continuity between pins 9 and 11.

SUBTASK 27-51-08-820-004

(6) Move the flap control lever to the 5-unit position.

(a) Make sure there is continuity between pins 8 and 9.

(b) Make sure there is no continuity between pins 9 and 11.

SUBTASK 27-51-08-820-005

(7) Move the flap control lever to the 10-unit position.

(a) Make sure there is no continuity between pins 8 and 9.

(b) Make sure there is continuity between pins 9 and 11.

SUBTASK 27-51-08-820-008

(8) Move the flap control lever to the 40-unit position and verify full travel is accomplished without interference or binding.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-08-820-006

(9) Do a check of the adjustment of the UP flap lever position switch [19]:

NOTE: There is no independent adjustment of the UP flap lever position switch [19].

(a) Move the flap control lever to the UP position.

1) Make sure there is no continuity between pins 5 and 6.

2) Make sure there is continuity between pins 5 and 7.

(b) Move the flap control lever to the 1-unit position.

1) Make sure there is continuity between pins 5 and 6.

2) Make sure there is no continuity between pins 5 and 7.

(c) Move the flap control lever to the UP position.

1) Make sure there is no continuity between pins 5 and 6.

2) Make sure there is continuity between pins 5 and 7.

(d) If the cam [21] is not adjusted correctly for the flap lever position switch [19], then adjust the cam [21] again.

SUBTASK 27-51-08-420-004

(10) Connect the electrical connector [18].

SUBTASK 27-51-08-860-007

(11) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

D. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-08-410-005

(1) Install the control stand cover [1] on the control stand [13] with the screws [2] and the bolt [5].

SUBTASK 27-51-08-010-011

(2) Install the stabilizer trim lightplate [3] on the control stand [13]:

(a) Connect the wires [14] to the stabilizer trim lightplate [3]:

1) Put the wires [14] in their position on the stabilizer trim lightplate [3].

2) Install the washers [15], washers [16] and nuts [17] to attach the wires [14].

(b) Put the stabilizer trim lightplate [3] in its location on the control stand [13].

(c) Loosely install the screws [4].

(d) Adjust the position of the stabilizer trim lightplate [3] to align with the stabilizer trim indicator.

(e) Tighten the screws [4].

SUBTASK 27-51-08-410-006

(3) Install the upper side cover [7] and the lower side cover [11] on the right side of the control stand [13]:

(a) Put the upper side cover [7] and the lower side cover [11] in their position on the control stand [13], with the lower side cover [11] under the upper side cover [7].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Install the screws [6] that attach the upper side cover [7] and lower side cover [11] to the control stand [13].

(c) Install the pocket assembly [12] with the screws [10] on the lower side cover [11].

SUBTASK 27-51-08-410-007

(4) Install the stabilizer trim wheel [8] on the right side of the control stand [13]:

(a) Put the stabilizer trim wheel [8] on the shaft.

(b) Make sure the handle on the stabilizer trim wheel [8] is 75 to 105 degrees from the handle of the left-side stabilizer trim wheel [8].

(c) Install the bolt [9] and spacer [26] to attach the stabilizer trim wheel [8].

SUBTASK 27-51-08-860-008

(5) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
C	10	C00284	PANEL & INSTR ELEX PANEL

INBOARD TRAILING EDGE FLAP - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of inboard trailing edge flap

(2) An installation of inboard trailing edge flap

(3) A removal of inboard trailing edge flap bullnose seal

(4) An installation of inboard trailing edge flap bullnose seal

(5) A removal of inboard trailing edge flap outer seal

(6) An installation of inboard trailing edge flap outer seal

B. This procedure includes the removal and installation of the inboard main flap with the aft flap. You can remove and install the main flap with the aft flap either removed or installed. To remove and install the aft flap only, do this tasks: Inboard Aft Flap Removal, TASK 27-51-12-000-801 and Inboard Aft Flap Installation, TASK 27-51-12-400-801.

C. The inboard main flap and aft flap together weigh approximately 333 lb (151 kg). The main flap alone weighs approximately 300 lb (136 kg).

TASK 27-51-11-000-801

2. Inboard Trailing Edge Flap Removal

E. Prepare for the Removal

SUBTASK 27-51-11-860-017

(1) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-11-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-11-010-001

(3) Do this task: Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802.

SUBTASK 27-51-11-010-002

(4) Remove these panels from the wing to body fairing:

Number	Name/Location
194AL	Aft Wing To Body Fairing Panel
194AR	Aft Wing To Body Fairing Panel
194BL	Flap Track Lubrication Panel - Aft
194CL	Aft Wing To Body Fairing Panel

or open these access panels:

Number	Name/Location
194BR	Flap Track Lubrication Panel - Aft
194CR	Aft Wing To Body Fairing Panel

F. Inboard Trailing Edge Flap Removal

SUBTASK 27-51-11-020-001

(1) Remove the support assembly [131] (Figure 401):

(a) Remove the three bolts [130].

1) Keep the three bolts [130] for the installation.

(b) Remove the support assembly [131].

SUBTASK 27-51-11-020-002

(2) Disconnect the skew control rods for the skew mechanisms from the carriages (Figure 401):

(a) At the outboard carriage [13], remove the nut [8], washer [7], washer [5], bolt [4] and bushing [6] that attaches the skew control rod [3] to the outboard carriage [13].

(b) At the inboard carriage [52], remove the nut [47], washer [46], washer [44], bolt [43] and bushing [45] that attaches the skew control rod [41] to the inboard carriage [52].

SUBTASK 27-51-11-020-003

(3) Disconnect the aft flap drive rod [25] from the crankshaft [18]:

(a) Remove the pin [24], nut [23], washer [22], washer [20], bolt [19] and bushing [21] from the crankshaft [18].

(b) Move the aft flap drive rod [25] away from the inboard flap [1].

SUBTASK 27-51-11-980-001

(4) If the aft flap [2] is installed, move the aft flap [2] to the retracted position on the inboard flap [1]:

(a) Move the crankshaft [18] aft until the aft flap [2] is in the retracted position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

DO NOT USE A RIG PIN IN THE CRANKSHAFT TO HOLD THE AFT FLAP IN THE RETRACTED POSITION. THIS CAN CAUSE DAMAGE TO THE CRANKSHAFT OR THE FITTING ON THE MAIN FLAP.

(b) Install the restraint strap [83] (part of the sling, SPL-1729) to hold the aft flap [2] in the retracted position.

SUBTASK 27-51-11-480-001

(5) Install the sling [82] on the inboard flap [1] (Figure 402):

(a) Remove the existing bolts [85] at the inboard and outboard ends of the front spar on the inboard flap [1].

1) Keep these bolts [85] for the installation.

(b) Install the sling fittings [81] in the location of the bolts [85].

(c) Remove the existing bolts [86] at the rear spar at the aft end of the inboard flap [1].

1) Keep these bolts [86] for re-installation.

(d) Install the sling fitting [84] in the location of the bolts [86].

(e) Connect the sling [82] to the sling fittings [81] and sling fitting [84].

(f) Connect the sling [82] to an overhead lifting device.

(g) Use the sling [82] to hold the weight of the inboard flap [1].

SUBTASK 27-51-11-020-004

(6) Remove the stop fittings from the flap tracks (Figure 401):

(a) On the flap track [39], remove the nut [56], washer [55], bushings [54] and bolt [53] from the end of the flap track [39].

(b) On the outboard flap track [14], remove the roller stop [30], roller stop [37] and the aft fairing support fitting [35]:

1) Remove the nuts [29], washers [28], bolt [27] and bolts [36] that attach the aft fairing support fitting [35] to the flap track [14].

2) Remove the nuts [34], washers [33], washers [32] and bolts [31] that attach the aft fairing support fitting [35], roller stop [30] and roller stop [37] to the flap track [14].

3) Remove the roller stop [30], roller stop [37] and the aft fairing support fitting [35] from the flap track [14].

SUBTASK 27-51-11-860-002

(7) Use the manual drive system to extend the trailing edge flaps to the stops on the ballscrews (TASK 27-51-00-980-801).

NOTE: During the manual operation of the trailing edge flap, it is not necessary to do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-11-020-005

(8) Remove the inboard flap [1]:

(a) Hold the weight of the inboard flap [1] with the sling [82] and the overhead lifting device.

(b) Disconnect the inboard carriage [52] from the gimbal [40]:

1) Install a support to hold the ballscrew [42] when it is disconnected from the inboard carriage [52].

2) Remove the nuts [50], washers [49] and bolts [48] that attach the carriage bushings [51] to the inboard carriage [52].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Remove the carriage bushings [51] from the inboard carriage [52].

4) Move the gimbal [40] away from the inboard carriage [52].

(c) Disconnect the outboard carriage [13] from the gimbal [16]:

1) Install a support to hold the ballscrew [17] when it is disconnected from the outboard carriage [13].

2) Remove the nut [11], washer [10] and bolt [9] that attach the carriage carriage bushing [15] and bushing assembly [26] to the outboard carriage [13].

3) Remove the carriage bushing [15] and carriage bushing [26] from the outboard carriage [13].

4) Move the gimbal [16] away from the outboard carriage [13].

(d) Use the sling [82] to move the inboard flap [1] aft and down away from the flap tracks.

CAUTION

BE CAREFUL WHEN YOU LOWER THE FLAP TO THE GROUND. YOU CAN CAUSE DAMAGE TO THE TRAILING EDGE OF THE FLAP.

(e) Use the sling [82] to move the inboard flap [1] outboard and aft away from the airplane.

SUBTASK 27-51-11-210-001

(9) Do a check of the configuration of the inboard flap carriage roller cartridges, and inboard seals:

(a) Do a check of the position of the index marks [120] for the carriage roller cartridges on the inboard and outboard carriages.

1) Make a record of the position to use during the installation.

(b) If you will install a different flap, remove and keep the shim and bullnose seal for the installation.

1) Keep and install the same shim and bullnose seal you removed from the airplane.

NOTE: If you install a different bullnose seal or shim, it can cause unsatisfactory flight performance.

G. Prepare for the Installation

SUBTASK 27-51-11-820-001

(1) Make sure that the carriage roller cartridges are in the correct position (Figure 403):

(a) If you install a different inboard flap [1] than the one you removed, make sure that the cartridge [116] and cartridge [125] are in the same position as the flap you removed.

(b) If you did not record the position of the carriage roller from the flap you removed, then adjust the cartridge [116] and cartridge [125] to the nominal position.

NOTE: The nominal position for the cartridges is -45 degrees for the left wing, and +30 degrees for the right wing.

NOTE: There is no mismatch or alignment dimension to the fixed structure or the outboard flap that the flap is adjusted to meet. The cartridges can be changed from the nominal position to meet lateral trim tolerances.

(c) Make sure that the cartridge [116] and cartridge [125] for the inboard flap [1] are in the same position.

NOTE: The eccentric bushings [115] are not installed on every inboard flap [1].

(d) If it is necessary, adjust the cartridge [125] on the inboard carriage [52] as follows:

1) Loosen the nut [127] on the roller [123].
2) Turn the eccentric bushing [115] until the index mark [120] is in the correct position.
3) Tighten the nut [127] to 160 in-lb (18 N·m) - 975 in-lb (110 N·m).
4) Install the pin [126] in the nut [127].
5) Install the lockwire between the bolts that attach the cartridge [125].

(e) If it is necessary, adjust the cartridge [116] or cartridge [125] on the outboard carriage [13]:

1) Adjust the outboard cartridge [116]:

a) Remove the bolts [113], washers [122] and rub block [121] from the retainer [114].
b) Loosen the nut [118] on the roller [117].
c) Turn the eccentric bushing [115] until the index marks [120] are in the correct position.
d) Tighten the nut [118] on the roller [117] to 160 in-lb (18 N·m) - 975 in-lb (110 N·m).
e) Install the pin [119] in the nut [118].
f) Put the rub block [121] in its position on the retainer [114] and install the bolts [113] and washers [122].

2) Adjust the cartridge [125] as follows:

a) Loosen the nut [127] on the roller [123].
b) Turn the eccentric bushing [115] until the index marks [120] are in the correct position.
c) Tighten the nut [127] on the roller [123] to 160 in-lb (18 N·m) - 975 in-lb (110 N·m).
d) Install the pin [126] in the nut [127].
e) Install lockwire between the bolts that attach the cartridge [125].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-11-210-002

(2) If you will install a different flap, install the shim and bullnose seal you removed from the original flap.

NOTE: Install the same shim and bullnose seal you removed from the airplane. If you install a different bullnose seal or shim, it can cause unsatisfactory flight performance.

SUBTASK 27-51-11-020-006

(3) Make sure that the stop fittings are not installed on the flap tracks.

SUBTASK 27-51-11-480-002

(4) If it is not installed, install the sling [82] on the inboard flap [1] (Figure 402):

(a) Remove the bolts [85] at the inboard and outboard ends of the front spar on the inboard flap [1].

(b) Install the sling fittings [81] in the location of the bolts [85].

(c) Remove the bolts [86] at the rear spar at the aft end of the inboard flap [1].

(d) Install the sling fitting [84] in the location of the bolts [86].

(e) Connect the sling [82] to the sling fittings [81] and sling fitting [84].

SUBTASK 27-51-11-980-002

(5) If it is installed, make sure that the aft flap [2] is restrained in the retracted position on the inboard flap [1]:

CAUTION DO NOT USE A RIG PIN IN THE CRANKSHAFT TO HOLD THE AFT FLAP IN THE RETRACTED POSITION. THIS CAN CAUSE DAMAGE TO THE CRANKSHAFT OR THE FITTING ON THE MAIN FLAP.

(a) Install the restraint strap [83] (part of the sling, SPL-1729) to hold the aft flap [2] in the retracted position.

H. Inboard Trailing Edge Flap Installation

SUBTASK 27-51-11-420-001

(1) Install the inboard flap [1] (Figure 401) as follows:

CAUTION BE VERY CAREFUL WHEN YOU LIFT THE FLAP FROM THE GROUND. IF YOU ARE NOT CAREFUL, YOU CAN CAUSE DAMAGE TO THE TRAILING EDGE OF THE FLAP.

(a) Use the sling [82] and the overhead lifting device to move the inboard flap [1] up into its position aft of the flap track [14] and flap track [39].

(b) Align the forward rollers [12] for the outboard carriage [13] with the flap track [14].

(c) Move the inboard flap track [39] to align with the forward rollers [38] for the inboard carriage [52].

CAUTION DO NOT USE THE SLING TO MOVE THE FLAP ON THE FLAP TRACK AFTER THE AFT ROLLERS ENGAGE. THIS CAN CAUSE DAMAGE TO THE FLAP.

(d) Move the inboard flap [1] up and forward on the flap tracks until the carriages align with the gimbal [16] and gimbal [40].

(e) Connect the outboard carriage [13] to the gimbal [16]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Remove the support from the ballscrew [17] and move the gimbal [16] to its position in the outboard carriage [13].
2) On the left wing, make sure that the ball return [128] on the ballscrew nut [129] are outboard.
3) On the right wing, make sure that the ball return [128] on the ballscrew nut [129] are inboard.

NOTE: This is the recommended position for maintenance.

(f) Install the carriage bushing [15] and carriage bushing [26] to attach the gimbal [16] to the outboard carriage [13].

(g) Install the bolts [9], washers [10], and nuts [11] that attach the carriage bushing [15] and bushing assembly [26] to the outboard carriage [13].

(h) Tighten the nuts [11] to 65 in-lb (7.3 N·m) - 75 in-lb (8.5 N·m) more than the run-on torque.

(i) Connect the inboard carriage [52] to the gimbal [40]:

1) Remove the support from the ballscrew [42] and move the gimbal [40] to its position in the inboard carriage [52].
2) Apply grease, D00633, to the inside and outside of the carriage bushings [51].
3) Install the carriage bushings [51] to attach the gimbal [40] to the inboard carriage [52].
4) Install the bolts [48], washers [49] and nuts [50] that attach the carriage bushings [51] to the inboard carriage [52].
5) Tighten the nuts [50] to 65 in-lb (7 N·m) - 75 in-lb (8 N·m).

SUBTASK 27-51-11-420-002

(2) Install the stop fittings for the flap tracks:

(a) On the inboard flap track [39], install the bolt [53], bushings [54], washer [55] and nut [56] on the end of the flap track [39].

(b) On the flap track [14], install the roller stop [30], roller stop [37] and the aft fairing support fitting [35]:

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

1) Apply Cor-Ban 27L Compound, G50237 to the mating surfaces of the aft fairing support fitting [35], roller stop [30], roller stop [37], and the flap track [14].
2) Put the roller stop [30], roller stop [37] and the aft fairing support fitting [35] in their positions on the flap track [14].
   a) Make sure that the roller stop [30] and roller stop [37] touch the web of the flap track [14].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

3) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolt [27], bolts [36], and bolts [31].

4) Install the bolts [31], washers [32], washers [33] and nuts [34] that attach the aft fairing support fitting [35], roller stop [30], and roller stop [37] to the flap track [14].

5) Install the bolts [36], bolt [27], washers [28], and nuts [29] that attach the aft fairing support fitting [35] to the flap track [14].

SUBTASK 27-51-11-080-001

(3) Remove the sling [82] from the inboard flap [1] (Figure 402):

(a) Disconnect the sling [82] from the overhead lifting device.

(b) Disconnect the sling [82] from the sling fittings [81] and sling fitting [84].

(c) Remove the sling fittings [81] and sling fitting [84] from the inboard flap [1].

(d) Apply compound, C00528, to the holes for the bolts [85] and bolts [86] in the inboard flap [1].

(e) Install the bolts [85] at the inboard and outboard ends of the front spar on the inboard flap [1].

(f) Install the bolts [86] at the aft end of the inboard flap [1].

SUBTASK 27-51-11-980-003

(4) If the aft flap [2] is installed, move the aft flap [2] to the extended position on the inboard flap [1] as follows:

(a) Remove the restraint strap [83] from the aft flap [2].

(b) Move the crankshaft [18] aft until the aft flap [2] is in the extended position.

SUBTASK 27-51-11-420-003

(5) Connect the aft flap drive rod [25] to the crankshaft [18] (Figure 401) as follows:

(a) Move the aft flap drive rod [25] to its position on the crankshaft [18].

(b) Install the bolt [19], washer [20], bushing [21], washer [22] and nut [23] that attach the aft flap drive rod [25] to the crankshaft [18].

1) Make sure that the head of the bolt [19] is on the inboard side.

(c) Tighten the nut [23] to 30 in-lb (3 N·m) - 50 in-lb (6 N·m).

(d) Install the pin [24] through the nut [23].

SUBTASK 27-51-11-420-004

(6) Connect the skew control rods for the skew mechanisms to the carriages:

(a) Connect the skew control rod [41] to the inboard carriage [52]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

1) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolt [43].
2) Install the bolt [43], washer [44], bushing [45], washer [46], and nut [47] to attach the skew control rod [41] to the inboard carriage [52].
   a) Install the bolt [43] with the head away from the center of the flap track [39].

(b) Connect the skew control rod [3] to the outboard carriage [13]:

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

1) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolt [4].
2) Install the bolt [4], washer [5], bushing [6], washer [7] and nut [8] to attach the skew control rod [3] to the outboard carriage [13].
   a) Install the bolt [4] with the head away from the center of the flap track [14].

SUBTASK 27-51-11-420-005

(7) Install the support assembly [131] (Figure 401):
   (a) Install the support assembly [131].
   (b) Install the three bolts [130].

SUBTASK 27-51-11-410-001

(8) Install these access panels for the wing to body fairing:

Number	Name/Location
194AL	Aft Wing To Body Fairing Panel
194AR	Aft Wing To Body Fairing Panel
194BL	Flap Track Lubrication Panel - Aft
194CL	Aft Wing To Body Fairing Panel

or close these access panels:

Number	Name/Location
194BR	Flap Track Lubrication Panel - Aft
194CR	Aft Wing To Body Fairing Panel

SUBTASK 27-51-11-860-003

(9) Extend the trailing edge flaps:
   (a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.
   (b) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).
   (c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-11-210-003

(10) With the flaps fully extended, make sure that the full surface of the spring assembly [60] on the inboard carriage [52] touches the door [57] on the wing to body fairing and that it holds the door closed (Figure 401).

SUBTASK 27-51-11-820-002

(11) If the spring assembly [60] does not touch the door [57], or hold it closed, adjust the position of the spring assembly [60]:

(a) Loosen the bolts [58] and bolt [59] that hold the spring assembly [60] in its position.

(b) Move the spring assembly [60] until it touches the door [57] with its face parallel to the door.

(c) Tighten the bolts [58] and bolt [59].

SUBTASK 27-51-11-820-003

(12) Do this task: Inboard Trailing Edge Flap Adjustment, TASK 27-51-11-820-801.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-11-410-002

(1) Do this task: Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802.

SUBTASK 27-51-11-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-11-860-004

(3) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

——— END OF TASK ———

TASK 27-51-11-000-802

4. Inboard Trailing Edge Flap Bullnose Seal Removal

A. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)
27-51-00-860-803	Extend the Trailing Edge Flaps (P/B 201)
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

B. Location Zones

Zone	Area
553	Left Wing - Inboard Flap
653	Right Wing - Inboard Flap

C. Prepare for the Removal

SUBTASK 27-51-11-860-005

(1) Extend the trailing edge flaps to the 15-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-11-040-002

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-11-480-003

WARNING MAKE SURE THAT THE GROUND LOCKS ARE INSTALLED IN ALL OF THE LANDING GEAR. WITHOUT THE GROUND LOCKS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(3) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-11-020-007

(4) Remove the bullnose seal [66] (Figure 404):

(a) Move the torque tube door up and inboard to get access to the bullnose seal [66].

(b) Remove the bolts [67] and washers [68] that attach the bullnose seal [66] to the inboard flap [1].

(c) Remove the bullnose seal [66] and shim [69] from the inboard flap [1].

(d) If you will install a different flap, remove and keep the shim [69] and bullnose seal [66] for the installation.

NOTE: Keep and install the same shim [69] and bullnose seal [66] you removed from the airplane. If you install a different bullnose seal or shim, it can cause unsatisfactory flight performance.

END OF TASK

Zone	Area
553	Left Wing - Inboard Flap
653	Right Wing - Inboard Flap

C. Prepare for the Removal

SUBTASK 27-51-11-000-001

(1) Extend the trailing edge flaps to the 15-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-11-000-002

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

D. Inboard Trailing Edge Flap Outer Seal Removal

WARNING MAKE SURE THAT THE GROUND LOCKS ARE INSTALLED IN ALL OF THE LANDING GEAR. WITHOUT THE GROUND LOCKS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

SUBTASK 27-51-11-000-003

(1) If the downlock pins are not installed in the nose and main landing gear, do applicable steps in this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-11-000-004

(2) Do these steps to remove the seal [2]:

(a) Remove the screws [3], self align washers [6], washers [4], and nuts [5] that attach the seal [2] to the flap assembly [1].

(b) Remove the seal [2] from the flap assembly [1].

END OF TASK

Zone	Area
653	Right Wing - Inboard Flap

E. Prepare For the Adjustment

SUBTASK 27-51-11-480-006

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

(1) Make sure that the downlock pins are installed on the nose and main landing gear (TASK 32-00-01-480-801).

SUBTASK 27-51-11-040-003

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-11-010-003

(3) Do this task: Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802 (if required).

SUBTASK 27-51-11-820-004

(4) Make sure the outboard flap [1] is adjusted correctly.

(a) To adjust the outboard flap [1], do this task: Outboard Trailing Edge Flap Adjustment, TASK 27-51-21-820-801.

F. Inboard Trailing Edge Flap Adjustment

NOTE: There is no mismatch, or alignment dimension to the outboard flap, or to fixed structure that the inboard flap is adjusted to meet. The eccentric carriage rollers can be changed from the nominal position to meet lateral trim tolerances.

NOTE: The eccentric bushing is not installed on every inboard flap.

SUBTASK 27-51-11-860-009

(1) Do a check of the adjustment of the deflection roller [12] on the outboard end of the inboard flap [2] (Figure 501):

(a) Manually extend and retract the inboard flap [2] through its full travel (TASK 27-51-00-980-801).

1) While you retract the inboard flap [2], monitor the roller [12] to see if there is preload when it engages the deflection control track [3].

(b) If there is preload when the roller [12] engages the deflection control track [3], then adjust the roller [12]:

1) Manually extend the inboard flap [2] to get access to the roller [12] (TASK 27-51-00-980-801).

2) Remove the bolt [6] and washer [5] that hold the retainer [4] and retainer [13] to the deflection control rib [14].

3) Remove the retainer [13] for the inboard eccentric bushing [10].

4) Remove the pin [7] and loosen the nut [8] on the bolt [11].

5) Turn the inboard eccentric bushing [10] to change the position of the roller [12].

a) Make sure that you do not change the position of the roller [9].

6) Install the retainer [13] for the inboard eccentric bushing [10].

7) Install the bolt [6] and washer [5] that hold the retainer [4] and retainer [13].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

8) Tighten the nut [8] finger tight and install the pin [7].

a) If it is necessary, tighten the nut [8] to the minimum amount necessary to install the pin [7].

SUBTASK 27-51-11-860-010

(2) Retract the trailing edge flaps to the retracted position (TASK 27-51-00-860-804).

SUBTASK 27-51-11-820-006

(3) Do a check of the adjustment of the aft flap drive rod [17]:

(a) Make sure the trailing edge flaps are in the retracted position.

(b) Install rig pin A/S-8 from the rigging pin kit, SPL-1585, in the rig pin hole [18] in the crankshaft [16].

SUBTASK 27-51-11-820-007

(4) If you cannot install the rig pin, adjust the length of the aft flap drive rod [17]:

(a) Loosen the nuts [15] on the aft flap drive rod [17].

(b) Turn the aft flap drive rod [17] to change the length until you can install the rig pin in the crankshaft [16].

(c) Tighten the nuts [15] on the aft flap drive rod [17].

(d) Install lockwire on the nuts [15].

SUBTASK 27-51-11-080-002

(5) Remove the rig pin A/S-8 rig pin from the crankshaft [16].

SUBTASK 27-51-11-210-004

(6) Do a check of the adjustment of the seals [55] on the inboard end of the inboard flap [2] (Figure 502):

NOTE: These seal compression requirements are not necessary on airplanes with undersize seals [55] installed on the inboard end of the inboard flap [2].

(a) With the trailing edge flaps retracted, make sure the seals [55] on the inboard end of the inboard flap [2] do not contact the wing-to-body fairing [56].

(b) Extend the trailing edge flaps to the 40-unit position:

1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

2) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(c) With the trailing edge flaps extended, make sure the seals [55] on the inboard end of the inboard flap [2] do not contact the wing-to-body fairing [56].

SUBTASK 27-51-11-820-008

(7) Do this procedure to adjust the applicable seal [55] (Figure 502):

(a) Loosen the screws [67] that attach the seal [55] and the seal retainer [68] to the inboard inboard flap [2].

(b) Adjust the position of the seal [55] and the seal retainer [68] outboard, relative to the airplane.

1) Make sure you move the seal [55] and the seal retainer [68] together as a unit.

(c) Take gap measurements on both inboard flap inboard ends, at these locations:

1) Aft end of the upper forward seal retainer.

2) Forward end of the upper forward seal retainer.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Forward end of the lower seal retainer.

(d) Use these measurements to find which side of the airplane has the smallest gaps at the measured locations from the wing-to-body fairing.

(e) Tighten the screws [67] for the retainer assemblies on the flap with the smallest measured gaps.

(f) If the measurement between a given left-right pair is not within 0.10 in. (2.54 mm), or the gaps between the seals and wing-to-body fairing are less than 0.3 in. (7.6 mm), adjust the seals until the symmetry and gap requirements are met, or until the maximum adjustment limit is reached.

(g) Tighten the screws [67].

(h) Apply sealant, A00247, to the inboard side of the seal retainer [68] and the threads of the screws [67].

SUBTASK 27-51-11-860-011

(8) Retract the trailing edge flaps:

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Retract the flaps to the retracted position (TASK 27-51-00-860-804).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-11-820-009

(9) Do this procedure to adjust the coverplate [63] to the wing-to-body fairing panels (Figure 502):

(a) Make sure that the clearance between the coverplate [63] and the wing-to-body fairing is 0.1000 +0.1200 / -0.0000 in. (2.5400 +3.0480 / -0.0000 mm).

NOTE: This distance is referred to as dimension C.

(b) If the measurement between the coverplate [63] and the wing-to-body fairing is not within the tolerance, then adjust the coverplate [63]:

1) Loosen the screws that attach the coverplate [63] to the lower surface of the inboard flap.

2) Apply sealant, A00247, to both sides of the coverplate [63] in the area of the attach screws.

3) Adjust the position of the coverplate [63].

4) Apply the sealant, A00247, in the slots before you install the screws.

5) Tighten the screws.

6) Fill and fair the exposed slots if and as required with the sealant, A00247.

NOTE: The gap between the coverplate [63] and the wing-to-body fairing in the flaps retracted position should not be less than 0.1000 in. (2.54 mm), but can be increased up to 0.2200 in. (5.59 mm) if required for the coverplate [63] to clear the wing-to-body fairing panels by at least 0.0200 in. (0.508 mm) in the flaps extended position.

SUBTASK 27-51-11-210-005

(10) On airplanes with the seal [62] on the wing to body fairing, do these steps:

(a) Make sure the seals [62] on the wing-to-body fairing [56] touch the coverplate [63] on the inboard end of the inboard flap [2].

1) If the seal [62] does not touch the coverplate [63], then adjust the applicable seal [62]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Loosen the screws [61] that attach the seal [62] and the seal retainer [60] to the wing-to-body fairing [56].

b) Adjust the position of the seal [62] and the seal retainer [60].

<1> Make sure that you move the seal [62] and the seal retainer [60] together as a unit.

c) Tighten the screws [61].

d) Apply sealant, A00247, to smooth the area around the retainer.

SUBTASK 27-51-11-820-010

(11) Do a check of the clearance at the aft flap seal [69]:

(a) At the aft end of the seal retainer [70], measure the distance between the base of the seal retainer [70] and the wing-to-body fairing [56].

NOTE: This distance is referred to as dimension A.

(b) Make sure the aft flap seal [69] is the correct part for the actual dimension A (Table 501).

Table 501/27-51-11-993-801

Dimension A Inches (mm)	Aft Flap Seal Part Number
Less Than 1.05 in. (26.7 mm)	113A2700-29
1.05 in. (26.7 mm) to 1.45 in. (36.8 mm)	113A3172-56
More Than 1.45 in. (36.8 mm)	113A3172-57

(c) If the aft flap seal [69] is not the correct part number, then replace the aft flap seal with the correct part:

1) Remove the lockwire from the ends of the aft flap seal [69].

2) Remove the aft flap seal [69] from the seal retainer [70].

3) Put the new aft flap seal [69] in the seal retainer [70].

4) Install lockwire on the ends of the aft flap seal [69].

SUBTASK 27-51-11-860-012

(12) Extend the trailing edge flaps:

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-11-210-006

(13) With the flaps fully extended, make sure the full surface of the spring assembly [66] on the inboard carriage [59] touches the door [58] on the wing-to-body fairing [56] and that it holds the door closed.

SUBTASK 27-51-11-820-011

(14) If the spring assembly [66] does not touch the door [58], or hold it closed, adjust the position of the spring assembly [66]:

(a) Loosen the bolts [64] and bolt [65] that hold the spring assembly in its position.

(b) Move the spring assembly [66] until it touches the door [58].

(c) Apply a 5 lbf (22.24 N) force with a spring scale, STD-755, against the end of the spring assembly [66] to push it up against the door [58].

(d) Make sure the spring assembly [66] is flat against the adjacent surface of the door [58].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Tighten the bolts [64] and bolt [65].

SUBTASK 27-51-11-860-013

(15) Retract the trailing edge flaps:

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Retract the flaps to the retracted position (TASK 27-51-00-860-804).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-11-220-001

(16) Do a check of the adjustment of the seals between the inboard and outboard flaps (View A-A, Figure 502):

(a) Measure the distance between the lower skin of the outboard flap [1] and the inboard flap [2].

NOTE: This distance is referred to as Dimension B.

(b) Extend the trailing edge flaps:

1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

2) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(c) Measure the distance the outboard flap seal [51] extends past the skin of the outboard flap [1].

1) The distance the outboard flap seal extends should be Dimension B minus 0.75 in. (19.05 mm).

(d) Measure the distance the inboard flap seal [52] extends past the skin of the inboard flap [2].

1) The distance the outboard flap seal extends should be Dimension B minus 0.70 in. (17.78 mm).

SUBTASK 27-51-11-820-012

(17) If the inboard flap seal [52] and the outboard flap seal [51] are not in the correct position, then adjust the seals (View A-A, Figure 502):

(a) Adjust the outboard flap seal [51]:

1) Loosen the screws [54] that attach the seal retainer for the outboard flap seal [51] to the outboard flap [1].

2) Adjust the position of the seal retainer for the outboard flap seal [51].

3) Tighten the screws [54].

4) Make sure the outboard flap seal [51] extends Dimension B minus 0.75 in. (19.05 mm) from the edge of the outboard flap skin.

(b) Adjust the inboard flap seal [52]:

1) Loosen the screws [53] that attach the seal retainer for the inboard flap seal [52] to the inboard flap [2].

2) Adjust the position of the seal retainer for the inboard flap seal [52].

3) Tighten the screws [53].

4) Make sure the inboard flap seal [52] extends Dimension B minus 0.70 in. (17.78 mm) from the edge of the inboard flap skin.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-11-860-014

(18) Retract the trailing edge flaps:

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Retract the flaps to the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

G. Inboard Fixed Panel Adjustment

SUBTASK 27-51-11-860-015

(1) Make sure the flap is in the retracted position.

SUBTASK 27-51-11-220-002

(2) Measure the mismatch between the fixed lower panels [85] and the lower surface of the inboard flap [2] (Figure 503).

SUBTASK 27-51-11-820-013

(3) If the mismatch is not in the limit of 0.00 ±0.06 in. (0.00 ±1.52 mm), adjust the applicable fixed lower panel [85] (Figure 504):

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Extend the trailing edge flaps to get access to the rods for the fixed lower panels [85] (TASK 27-51-00-860-803).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(d) Adjust the position of the outboard fixed lower panel [93]:

1) Loosen the nuts [91] on the rod [92], rod [94], rod [95] and rod [98].

2) Adjust the length of the rod [92], rod [94], rod [95] and rod [98].

3) Tighten the nuts [91] on the rod [92], rod [94], rod [95] and rod [98].

(e) Adjust the position of the fixed lower panel [107]:

1) Remove the nuts [105], washers [104], washers [103] and bolts [102] that attach the rod [106] to the fixed lower panel [107].

2) Adjust the length of the rods [106].

3) Install the bolts [102], washers [103], washers [104] and nuts [105] to attach the rods [106] to the fixed lower panel [107].

4) Install lockwire on the nuts [91].

(f) Adjust the position of the beam assembly [100]:

NOTE: The beam assembly [100] is between panel [107] and panel [101].

1) Loosen the nuts [91] on the rod [99].

2) Adjust the length of the rod [99].

3) Tighten the nuts [91] on the rod [99].

4) Install lockwire on the nuts [91].

(g) Adjust the position of the inboard fixed lower panel [101]:

1) Adjust the rods [111] on the inboard end of the fixed lower panel [101]:

a) Remove the nut [115], washer [114], washer [113] and bolt [112] that attach the rods [111] to the fixed lower panel [101].

b) Adjust the length of the rods [111].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

c) Install the bolt [112], washer [113], washer [114] and nut [115] to attach the rods [111] to the fixed lower panel [101].

d) Install lockwire on the nut [91].

2) Adjust the rod [108], rod [109] and rod [110] for the fixed lower panel [101]:

a) Loosen the nuts [91] on the rod [108], rod [109] and rod [110].

b) Adjust the length of the rod [108], rod [109] and rod [110].

c) Tighten the nuts [91] on the rod [108], rod [109] and rod [110].

d) Install lockwire on the nuts [91].

(h) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(i) Retract the trailing edge flaps to the retracted position (TASK 27-51-00-860-804).

(j) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(k) Make sure the mismatch between the fixed lower panels and the lower surface of the inboard flap [2] is in the limits.

SUBTASK 27-51-11-220-003

(4) Do a check of the adjustment of the blade seals [84] on the fixed lower panels [85] (Figure 503):

(a) Measure the distance between the lower surface of the inboard flap [2] and the blade seal [84].

SUBTASK 27-51-11-820-014

(5) If the distance between the inboard flap [2] and the blade seal [84] is not in the limit of 0.00 ±0.03 in. (0.00 ±0.76 mm), then adjust the position of the blade seal [84]:

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Extend the trailing edge flaps to get access to the fasteners for the seal retainers [83] (TASK 27-51-00-860-803).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(d) Loosen the screws [82] that attach the seal retainers [83] to the fixed lower panel [85].

(e) Move the seal retainers [83] to the correct position.

1) Make sure that you move the blade seal [84] and the seal retainer [83] together as a unit.

(f) Tighten the screws [82] that attach the seal retainers [83].

(g) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(h) Retract the trailing edge flaps to the retracted position (TASK 27-51-00-860-804).

(i) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(j) Make sure the distance between the inboard flap [2] and the blade seal [84] is in the limit.

SUBTASK 27-51-11-820-015

(6) Do a check of the adjustment of the bulb seals [81] on the fixed lower panels [85] (Figure 504):

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Extend the trailing edge flaps to get access bulb seals [81] on the fixed lower panels [85] (TASK 27-51-00-860-803).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(d) Measure the distance from the aft end of the blade seal [84] to the aft end of the bulb seal [81].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) If the distance between the blade seal [84] and the bulb seal [81] is not in the limit of 1.428 ±0.060 in. (36.271 ±1.524 mm), adjust the position of the bulb seal [81]:

1) Loosen the screws [82] that attach the bulb seal retainer [83].

2) Adjust the position of the bulb seal [81] and the seal retainer [83].

a) Make sure that you move the bulb seal [81] and the seal retainer [83] together as a unit.

3) Tighten the screws [82].

SUBTASK 27-51-11-410-003

(7) Measure the gap between the fixed upper panel, outboard of spoiler #6 on the left wing or spoiler #7 on the right wing, and the upper surface of the inboard flap [2].

(8) If the gap between the panel trailing edge and the flap upper surface is not within 0.005 in. (0.127 mm) to 0.100 in. (2.540 mm), adjust the upper panel (Figure 503):

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

1) Extend the inboard trailing edge flaps to get access to the turnbuckle rod [92], rod [94], rod [95], rod [98] and rod [99] for the fixed upper panels (TASK 27-51-00-860-803).

2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(b) Loosen the two fasteners common to the serrated plates.

(c) Remove the existing safety device wires.

(d) Loosen the lower panel turnbuckle rods common to the upper panel support beam.

(e) Loosen the bolt [118], washer [119], washers [120], washer [121] and nut [122] at each end of the upper panel turnbuckle rod assembly.

1) Add washers [120] as required to achieve a maximum gap of 0.03 in. (0.76 mm) before clamp-up.

2) Make sure that there is a minimum of one washer per side.

(f) Adjust the turnbuckle rods and serrated plates to set the gap between the panel trailing edge and the flap upper surface to within 0.005 in. (0.127 mm) to 0.100 in. (2.540 mm) (Figure 503).

1) Make sure that the threads are visible through the turnbuckle rod inspection hole.

(g) Retighten all fasteners loosened or removed.

(h) Install the safety cable kit, G50375, to the turnbuckle rods as necessary.

SUBTASK 27-51-11-410-004

(9) Do the following steps to adjust the upper fixed trailing edge panel inboard of spoiler #6 on the left wing or spoiler #7 on the right wing:

(a) Loosen the fasteners at each end of the upper turnbuckle rod assembly.

(b) Loosen the fasteners at the panel attach lug.

(c) Remove the existing safety device wires.

(d) Loosen the jam nuts on either end of the turnbuckles.

(e) Adjust the turnbuckle rods to set the gap between the panel trailing edge and the flap upper surface to within 0.005 in. (0.127 mm) to 0.100 in. (2.540 mm) (Figure 503).

(f) Tighten the jam nuts on either end of the turnbuckle rods.

1) Install safety cable kit, G50375, on both ends of the turnbuckle rod.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Tighten the fasteners at the panel attach lugs and at each end of the upper panel turnbuckle rod assemblies.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-11-410-005

(1) Do this task: Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802.

SUBTASK 27-51-11-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-11-860-016

(3) Retract the trailing edge flaps to the retracted position (TASK 27-51-00-860-804).

——— END OF TASK ———

INBOARD AFT FLAP - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Removal of the inboard aft flap

(2) Installation of the inboard aft flap.

B. The aft flap weighs approximately 60 lb (27 kg).

TASK 27-51-12-000-801

2. Inboard Aft Flap Removal

(Figure 401)

A. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)
27-51-00-860-803	Extend the Trailing Edge Flaps (P/B 201)

B. Location Zones

Zone	Area
553	Left Wing - Inboard Flap
653	Right Wing - Inboard Flap

C. Prepare for the Removal

SUBTASK 27-51-12-860-001

(1) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-12-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

D. Inboard Aft Flap Removal

SUBTASK 27-51-12-020-001

(1) At the outboard flap support, disconnect the crankshaft [3] from the aft flap drive rod [10]:

(a) Remove the pin [9], nut [8], washer [7], bushing [6], washer [5] and bolt [4] that attach the crankshaft [3] to the aft flap drive rod [10].

SUBTASK 27-51-12-980-001

(2) Use the crankshaft [3] to manually move the aft flap assembly [2] to the extended position.

SUBTASK 27-51-12-020-002

(3) Disconnect the inboard and outboard aft flap pushrods [11]:

(a) Remove the pins [19], nuts [18], washers [17], washers [15], bolts [14] and bushings [13] that attach the aft flap pushrods [11] to the aft flap assembly [2].

(b) Move the aft flap pushrods [11] away from the aft flap assembly [2].

SUBTASK 27-51-12-020-003

(4) Remove the aft flap assembly [2]:

NOTE: The aft flap assembly [2] weighs approximately 60 lb (27 kg).

(a) Support the aft flap assembly [2].

(b) Disconnect the aft flap tracks [21] from the aft flap assembly [2]:

1) Remove the pins [22], nuts [23], washers [24], washers [26], bolts [27] and bushings [25] that attach the aft flap tracks [21] to the aft flap assembly [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Move the aft flap tracks [21] forward, away from the aft flap assembly [2].

(c) Move the trailing edge of the aft flap assembly [2] down, until it is perpendicular to the main flap [1].

(d) Disengage the inboard and outboard rollers [28] from the programming tracks [38].

1) Disengage the inboard roller [28]first.

TASK 27-51-12-400-801

3. Inboard Aft Flap Installation

NOTE: The sum of the lengths of external repairs to the inboard aft flap trailing edge wedge and the outboard aft flap trailing edge wedge assemblies must be less than or equal to 24 inches. A single repair that includes both the upper and lower surfaces is counted only once against the spanwise total.

653	Right Wing - Inboard Flap

F. Prepare for the Installation

SUBTASK 27-51-12-820-001

(1) If you will not install the same aft flap assembly [2] and main flap [1], make sure that the inboard and outboard rollers [28] are in the most forward position (Figure 401):

NOTE: With the rollers [28] in the most forward position, the slot in the eccentric bushing [29] will align with the index mark on the retainer plate [30].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the nut [34], washer [35] and retainer plate [30] that hold the eccentric bushing [29].

(b) Loosen the nut [33] on the roller [28].

(c) Turn the eccentric bushing [29] until the roller [28] is in the forward position and the slot aligns with the bolt [36].

NOTE: The bolt [36] will stay in its position.

(d) Apply sealant, A00247, to the threads of the bolt [36].

(e) Install the retainer plate [30] with the washer [35] and nut [34].

(f) Torque the nut [33] on the roller [28] to 102.5 ±7.5 in-lb (11.6 ±0.9 N·m).

(g) If a tabbed washer is installed, bend a minimum of two tabs of the washer [32] over the nut [33].

SUBTASK 27-51-12-420-001

(2) Make sure that the aft flap tracks are installed on the main flap [1] and are in the retracted position.

(a) If they are not installed, do this task: Inboard Aft Flap Track Installation, TASK 27-51-16-400-801.

G. Inboard Aft Flap Installation

SUBTASK 27-51-12-420-002

(1) Install the aft flap assembly [2]:

(a) Hold the aft flap assembly [2] below and approximately perpendicular to the main flap [1].

(b) Engage the outboard roller [28] with the outboard programming track [38].

(c) Engage the inboard roller [28] with the inboard programming track [38].

(d) Lift the trailing edge of the aft flap assembly [2] and hold it in its usual position.

(e) Connect the aft flap assembly [2] to the aft flap tracks [21]:

1) Move the aft flap tracks [21] aft until they align with the aft flap assembly [2].

2) Apply a thin layer of grease, D00633, to the outside diameter of the bushings [25].

3) Install the bushings [25], bolts [27], washers [26], washers [24] and nuts [23] that attach the aft flap tracks [21] to the aft flap assembly [2].

4) Torque the nuts [23] to 125 ±25 in-lb (14 ±3 N·m).

5) Install the pins [22] in the nuts [23].

SUBTASK 27-51-12-020-004

(2) Connect the inboard and outboard aft flap pushrod [11]:

(a) Carefully pull the aft flap pushrod [11] through the cutouts to move them to the extended position.

NOTE: The crankshaft [3] will move when you pull on the aft flap pushrod [11].

(b) Apply a thin layer of grease, D00633, to the outside diameter of the bushings [13].

(c) Install the bushings [13], bolts [14], washers [15], washers [17], and nuts [18] that attach the aft flap pushrod [11] to the aft flap assembly [2].

(d) Torque the nuts [18] to 65 ±15 in-lb (7.3 ±1.7 N·m).

(e) Install the pins [19] in the nuts [18].

SUBTASK 27-51-12-980-002

(3) Use the crankshaft [3] to manually move the aft flap assembly [2] to the retracted position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Inboard Aft Flap Adjustment

SUBTASK 27-51-12-480-001

(1) Install the rig pin (no. F70207-113) from the rigging pin kit, SPL-1585, in the crankshaft [3].

SUBTASK 27-51-12-220-001

(2) Measure the distance between the trailing edge of the aft flap assembly [2] and the trailing edge of the upper cove panel [61] on the main flap [1] (Figure 402).

NOTE: Measure the distance aft of the inboard and outboard aft flap pushrods [11].

(a) At the outboard aft flap pushrod [11], make sure that the distance is 9.2745 ±0.0600 in. (235.57 ±1.53 mm).

(b) At the inboard aft flap pushrod [11], make sure that the distance is 9.2319 ±0.0600 in. (234.49 ±1.52 mm).

SUBTASK 27-51-12-820-002

(3) If the distance at the inboard or outboard aft flap pushrods [11] are not in the limit, then adjust the length of the applicable aft flap pushrod [11] (Figure 401):

(a) Remove the rig pin from the crankshaft [3].

(b) Use the crankshaft [3] to manually extend the aft flap assembly [2] to the extended position.

(c) Adjust the length of the applicable aft flap pushrod [11]:

NOTE: For each 90 degree turn of the aft flap pushrod [11], the trailing edge of the aft flap will move 0.04 in. (1.02 mm).

1) Loosen the nuts [20] on the aft flap pushrod [11].

2) Adjust the length of the aft flap pushrod [11].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

3) Apply a thin layer of Cor-Ban 27L Compound, G50237 to the threads of the rod ends [16].

4) Tighten the nuts [20].

5) Install lockwire on the nuts [20] and the locking keys [12].

(d) Use the crankshaft [3] to manually retract the aft flap assembly [2] to the retracted position.

(e) Install the rig pin in the crankshaft [3].

(f) Make sure that the distance from the trailing edge of the aft flap assembly [2] to the trailing edge of the upper cove panel [61] is in the limit.

SUBTASK 27-51-12-980-003

(4) Give support to the aft flap assembly [2].

NOTE: This is the position the rollers [28] will be in with airloads applied to the aft flap assembly [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Do a visual inspection to make sure that the programming rollers [28] touch the bottom surface of the programming tracks [38], and that the aft rollers on the aft flap tracks [21] touch the top surface of the tracks.

NOTE: If necessary, use an inspection mirror, STD-600 or a borescope, STD-7028 to aid with the inspection.

SUBTASK 27-51-12-220-002

(5) At the outboard end of the aft flap assembly [2], measure the vertical alignment at the trailing edge of the aft flap assembly [2] and the main flap [1] (Figure 402).

SUBTASK 27-51-12-820-003

(6) If the vertical alignment of the trailing edge is not in the limit of 0.000 ±0.100 in. (0.00 ±2.54 mm), then adjust the rollers [28] for the inboard and outboard programming tracks [38] (Figure 401):

(a) Make sure that you keep the two rollers [28] adjusted to the same position.

(b) Remove the rig pin from the crankshaft [3].

(c) Use the crankshaft [3] to manually extend the aft flap assembly [2] to the extended position.

(d) Adjust the position of the rollers [28]:

1) Remove the nut [34], washer [35] and retainer plate [30] that hold the eccentric bushing [29].

2) Loosen the nut [33] on the roller [28].

3) Turn the eccentric bushing [29] to adjust the position of the roller [28].

NOTE: Refer to Table 401 to find how far you must turn the eccentric bushing [29].

Table 401/27-51-12-993-801 Programming Roller Eccentric Bushing Adjustment

Eccentric Bushing Position	Aft Flap Trailing Edge Movement Inches (Millimeters)
Nominal to +30	+0.046 (+1.168)
+30 to +60	+0.034 (+0.864)
+60 to +90	+0.013 (+0.330)
Nominal to -30	-0.046 (-1.168)
-30 to -60	-0.034 (-0.864)
-60 to -90	-0.013 (-0.330)

4) Apply sealant, A00247, to the threads of the bolt [36].

5) Install the retainer plate [30] with the washer [35] and nut [34].

6) Torque the nut [33] on the roller [28] to 102.5 ±7.5 in-lb (11.6 ±0.9 N·m).

(e) Use the crankshaft [3] to manually retract the aft flap assembly [2] to the retracted position.

(f) Install the rig pin in the crankshaft [3].

(g) Make sure that the vertical alignment of the trailing edge of the aft flap assembly [2] and the main flap [1] is in the limit.

SUBTASK 27-51-12-220-003

(7) Measure the clearance between the upper cove panel [61] on the main flap [1] and the upper surface of the aft flap assembly [2] (Figure 402).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Measure the clearance at all of the cove panel supports [62] and at the aft flap roller fittings [76].

SUBTASK 27-51-12-820-004

(8) If the clearance between the main flap [1] and the aft flap assembly [2] is not in the limit of 0.10 +0.10 / -0.01 in. (2.54 +2.54 / -0.13 mm), then change the thickness of the shims [75] on the cove panel support [62] and the aft flap roller fittings [76]:

(a) Remove the rig pin from the crankshaft [3].

(b) Use the crankshaft [3] to manually extend the aft flap assembly [2] until you can get access to the fasteners for the shims [75] and shims [77].

(c) If it is necessary, change the thickness of the shims [75] on the cove panel supports [62]:

1) Remove the nuts [74], washers [73] and bolts [72] that attach the upper cove panel [61] to the cove panel support [62].

2) Remove the shim [75] from the cove panel support [62] and the upper cove panel [61].

3) Change the thickness of the shim [75].

NOTE: The maximum permitted thickness of the shim [75] is 0.10 in. (2.54 mm).

4) Apply sealant, A00247, to the mating surfaces of the shim [75].

5) Put the shim [75] in its position between the cove panel support [62] and the upper cove panel [61].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

6) Apply a layer of Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [72].

7) Install the bolts [72], washers [73] and nuts [74].

(d) If it is necessary, change the thickness of the shims [77] on the aft flap roller fittings [76]:

1) Remove the nuts [80], washers [79] and bolts [78] that attach the upper cove panel [61] to the aft flap roller fitting [76].

2) Remove the shims [77] from the aft flap roller fitting [76] and the upper cove panel [61].

3) Change the thickness of the shim [77].

NOTE: The maximum permitted thickness of the shim [77] is 0.10 in. (2.54 mm).

4) Apply sealant, A00247 to the mating surfaces of the shim [77].

5) Put the shim [77] in its position between the aft flap roller fitting [76] and the upper cove panel [61].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

6) Apply a layer of Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [78].

7) Install the bolts [78], washers [79] and nuts [80].

(e) Use the crankshaft [3] to manually retract the aft flap assembly [2] to the retracted position.

(f) Install the rig pin in the crankshaft [3].

(g) Make sure that the clearance between the main flap [1] and the aft flap assembly [2] is in the limit.

SUBTASK 27-51-12-220-004

(9) Measure the clearance between the lower cove panel [68] on the main flap [1] and the lower surface of the aft flap assembly [2].

(a) Measure the clearance at the two lower cove panel supports [62].

SUBTASK 27-51-12-820-005

(10) If the clearance between the main flap [1] and the aft flap assembly [2] is not in the limit of 0.000 ±0.060 in. (0.00 ±1.52 mm), then change the thickness of the shims [81] on the lower cove panel [68] support:

(a) Remove the rig pin from the crankshaft [3].

(b) Use the crankshaft [3] to manually extend the aft flap assembly [2] until you can get access to the fasteners for the shims [81].

(c) Change the thickness of the shim [81] on the cove panel supports [62]:

1) Remove the nuts [71], washers [70], and bolts [69] that attach the lower cove panel [68] to the cove panel support [62].

2) Remove the shim [81] from the cove panel support [62] and the lower cove panel [68].

3) Change the thickness of the shim [81].

NOTE: The maximum permitted thickness of the shim [81] is 0.10 in. (2.54 mm) millimeters).

4) Apply sealant, A00247, to the mating surfaces of the shim [81].

5) Put the shim [81] in its position between the cove panel support [62] and the lower cove panel [68].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

6) Apply a layer of Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [69].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

7) Install the bolts [69], washers [70] and nuts [71].

(d) Use the crankshaft [3] to manually retract the aft flap assembly [2] to the retracted position.

(e) Install the rig pin in the crankshaft [3].

(f) Make sure that the clearance between the main flap [1] and the aft flap assembly [2] is in the limit.

SUBTASK 27-51-12-220-005

(11) At the inboard end of the aft flap assembly [2], measure the compression of the seal [82] on the aft side of the main flap [1]:

(a) Measure and record the distance between the trailing edge of the aft flap assembly [2] and the lower cove panel [68].

NOTE: This distance is referred to as Dimension A.

(b) Remove the rig pin from the crankshaft [3].

(c) Use the crankshaft [3] to manually extend the aft flap assembly [2] until the seal [82] is not compressed against the aft flap assembly [2].

(d) Measure and record the distance between the aft edge of the seal [82] and the lower cove panel [68].

NOTE: This distance is referred to as Dimension B.

SUBTASK 27-51-12-820-006

(12) If Dimension A minus Dimension B is not in the limit of 12.8393 ±0.1000 in. (326.12 ±2.54 mm), then adjust the position of the seal [82]:

(a) Use the crankshaft [3] to manually extend the aft flap assembly [2] until you can get access to the fasteners for the seal [82].

(b) Loosen the nuts [86], washers [85] and bolts [84] that attach the retainer [83].

(c) Move the retainer [83] with the seal [82] to change the distance to the compression of the seal [82].

NOTE: This will change the Dimension B.

(d) Tighten the bolts [84], washers [85] and nuts [86] that attach the retainer [83].

(e) Use the crankshaft [3] to manually retract the aft flap assembly [2] to the retracted position.

(f) Install the rig pin in the crankshaft [3].

SUBTASK 27-51-12-220-006

(13) Outboard of the inboard aft flap track [21], measure the distance between the aft edge of the seal [63] and the seam on the lower surface of the aft flap assembly [2].

(a) If the distance between the seam on the aft flap assembly [2] and the seal [63] is not in the limit of 4.7091 ±0.1000 in. (119.61 ±2.54 mm), then adjust the position of the seal [63]:

1) Remove the rig pin from the crankshaft [3].

2) Use the crankshaft [3] to manually extend the aft flap assembly [2] until you can get access to the fasteners for the seal [63].

3) Loosen the nuts [66], washers [65] and bolts [64] that attach the retainer [67].

4) Move the retainer [67] with the seal [63] to change the distance to the seam on the aft flap assembly [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

5) Tighten the nuts [66], washers [65] and bolts [64] that attach the retainer [67].

6) Use the crankshaft [3] to manually retract the aft flap assembly [2] to the retracted position.

7) Install the rig pin in the crankshaft [3].

(b) Make sure that the distance between the trailing edge of the aft flap assembly [2] and the seal [63] is in the limit.

SUBTASK 27-51-12-220-007

(14) Do a check of the adjustment of the seals at the inboard and outboard ends of the aft flap assembly [2]:

(a) On the inboard and outboard ends of the aft flap assembly [2], measure the distance between the aft flap assembly [2] and the main flap [1].

(b) Remove the rig pin from the crankshaft [3].

(c) Use the crankshaft [3] to manually extend the aft flap assembly [2] until the seal [88] and seal [93] are clear of the main flap [1].

(d) Measure the distance the seal [88] and seal [93] extends away from the aft flap assembly [2].

(e) If the distance the seal [88] and seal [93] extends is not in the limit of the distance you measured plus 0.150 ±0.100 in. (3.81 ±2.54 mm), then adjust the position of the applicable seal [88] or seal [93]:

1) Loosen the nuts [87], washers [91] and bolts [89] that attach the retainer [90].

2) Move the retainer [90] and the seal [88] or seal [93] to change the distance the seal extends past the aft flap assembly [2].

3) Tighten the nuts [87], washers [91] and bolts [92] that attach the retainer [90].

(f) Use the crankshaft [3] to manually retract the aft flap assembly [2] to the retracted position.

NOTE: The seal [88] and seal [93] can extend a maximum of 0.5 in. (12.7 mm) below the lower surface of the main flap [1] when the seals are compressed.

SUBTASK 27-51-12-080-001

(15) Remove the rig pin from the crankshaft [3] if it is necessary.

SUBTASK 27-51-12-420-003

(16) At the outboard flap support, connect the crankshaft [3] to the aft flap drive rod [10] (Figure 401):

(a) Use the crankshaft [3] to manually extend the aft flap assembly [2] until the crankshaft [3] aligns with the aft flap drive rod [10].

(b) Install the bolt [4], washer [5], bushing [6], washer [7] and nut [8] that attach the crankshaft [3] to the aft flap drive rod [10].

1) Make sure that the head of the bolt [4] is on the inboard side.

(c) Torque the nut [8] to 40 ±10 in-lb (4.5 ±1.1 N·m).

(d) Install the pin [9] through the nut [8].

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-12-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-12-860-002

(2) Retract the trailing edge flaps to the retracted position (TASK 27-51-00-860-804).

INBOARD AFT FLAP - INSPECTION/CHECK

1. General

A. This procedure contains a task to do an inspection of the attachment points for the inboard aft flap. The attachment points are the aft flap drive rods and the aft flap tracks.

TASK 27-51-12-200-801

2. Inboard Aft Flap Inspection

(Figure 601)

B. Tools/Equipment

Reference	Description
STD-1096	Micrometer - Depth, 0-1 inch, Readable to 1/1000 inch
STD-1097	Caliper - Vernier, 0-6 inch, Readable to 1/1000 inch

C. Location Zones

Zone	Area
553	Left Wing - Inboard Flap
653	Right Wing - Inboard Flap

D. Procedure

SUBTASK 27-51-12-020-005

(1) Do this task: Inboard Aft Flap Removal, TASK 27-51-12-000-801.

SUBTASK 27-51-12-020-007

(2) Examine the parts of the inboard aft flap (Table 601):

(a) Remove the parts that you will measure.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096, or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are not in tolerance, replace or repair the parts.

Table 601/27-51-12-993-802

NAME OF THE PARTS THAT ARE IN CONTACT	DIM.	DIAMETER DESIGN LIMITS		WEAR LIMITS	
		MINIMUM inches/mm	MAXIMUM inches/mm	PERMITTED MAXIMUM I.D./ MINIMUM O.D. OF WORN PART	MAXIMUM SERVICE CLEARANCE inches/mm
#1 BUSHING	I.D.	0.2500 in. (6.3500 mm)	0.2505 in. (6.3627 mm)	0.2545 in. (6.4643 mm)	0.0050 in. (0.1270 mm)

INBOARD FLAP CARRIAGES - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Inboard flap carriage removal (selection)

(2) Inboard flap carriage installation (selection)

(3) Removal of the outboard carriage for the inboard flap

(4) Installation of the outboard carriage for the inboard flap

(5) Removal of the inboard carriage for the inboard flap

(6) Installation of the inboard carriage for the inboard flap.

TASK 27-51-13-000-801

2. Inboard Flap Carriage Removal (Selection)

A. Location Zones

Zone	Area
541	Left Wing - Fairing Flap Support No. 4
542	Left Wing - Fairing Flap Support No. 3
543	Left Wing - Fairing Flap Support No. 2
553	Left Wing - Inboard Flap
641	Right Wing - Fairing Flap Support No. 5
642	Right Wing - Fairing Flap Support No. 6
643	Right Wing - Fairing Flap Support No. 7
653	Right Wing - Inboard Flap

B. Inboard Flap Carriage Removal (Selection)

SUBTASK 27-51-13-000-001

(1) Do one of these tasks to remove the applicable inboard flap carriage:

(a) Do this task: Inboard Flap Outboard Carriage Removal, TASK 27-51-13-000-802.

(b) Do this task: Inboard Flap Inboard Carriage Removal, TASK 27-51-13-000-803.

——— END OF TASK ———

TASK 27-51-13-400-801

3. Inboard Flap Carriage Installation (Selection)

A. Location Zones

Zone	Area
541	Left Wing - Fairing Flap Support No. 4
542	Left Wing - Fairing Flap Support No. 3
543	Left Wing - Fairing Flap Support No. 2
553	Left Wing - Inboard Flap
641	Right Wing - Fairing Flap Support No. 5
642	Right Wing - Fairing Flap Support No. 6
643	Right Wing - Fairing Flap Support No. 7
653	Right Wing - Inboard Flap

ECCN 9E991 BOEING PROPRIETARY - See title page for details

B. Inboard Flap Carriage Installation (Selection)

SUBTASK 27-51-13-400-001

(1) Do one of these tasks to install the applicable inboard flap carriage:

(a) Do this task: Inboard Flap Outboard Carriage Installation, TASK 27-51-13-400-802.

(b) Do this task: Inboard Flap Inboard Carriage Installation, TASK 27-51-13-400-803.

——— END OF TASK ———

TASK 27-51-13-000-802

4. Inboard Flap Outboard Carriage Removal

(Figure 401)

A. General

(1) This task is applicable to the flap carriages at flap supports No. 3 and 6.

B. References

Reference	Title

D. Prepare for the Removal

SUBTASK 27-51-13-040-001

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-13-020-001

(2) Do this task: Inboard Trailing Edge Flap Removal, TASK 27-51-11-000-801.

E. Inboard Flap Outboard Carriage Removal

SUBTASK 27-51-13-010-001

(1) Remove the upper skin panel [3] from the main flap [1]:

(a) Remove the bolts [4] that attach the upper skin panel [3] to the main flap [1].

(b) Remove the upper skin panel [3].

SUBTASK 27-51-13-020-002

(2) Remove the carriage [2] from the main flap [1]:

(a) Remove the nuts [15], washers [14], washers [13], bolts [12] and bolts [16] that attach the aft end of the carriage [2].

(b) Remove the nuts [11], washers [10] and bolts [9] from the forward end of the carriage [2].

(c) Remove the nuts [8], washers [7], bolts [5] and fillers [6] from the forward end of the carriage [2].

(d) Remove the carriage [2] from the main flap [1].

F. Inboard Flap Outboard Carriage Installation

SUBTASK 27-51-13-020-012

(1) Inspect the rub pads [55] for wear.

(a) If the rub pads [55] are worn greater than 50%, they will need to be replaced.

SUBTASK 27-51-13-420-001

(2) Install the carriage [2] on the main flap [1]:

(a) Make sure the upper skin panel [3] is removed from the main flap [1].

(b) Apply sealant, A00247, to the mating surface of the carriage [2] and the main flap [1].

(c) Put the carriage [2] in its position on the main flap [1].

(d) Apply sealant, A00247, to the mating surface of the fillers [6] and the main flap [1].

(e) Put the fillers [6] in their location on the main flap [1].

(f) Apply sealant, A00247, to the shank and threads of the bolts [5], bolts [9], bolts [12] and bolts [16].

(g) Install the bolts [5], washers [7] and nuts [8] to attach the forward end of the carriage [2] to the main flap [1].

(h) Install the bolts [9], washers [10] and nuts [11] at the forward end of the carriage [2].

1) Make sure that the bolts [9] are installed with the bolt heads down.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) Install the bolts [12], bolts [16], washers [13], washers [14] and nuts [15] to attach the aft end of the carriage [2] to the main flap [1].

SUBTASK 27-51-13-410-001

(3) Install the upper skin panel [3] on the main flap [1]:

(a) Apply sealant, A00247, to the mating surface of the upper skin panel [3] and the main flap [1].

(b) Put the upper skin panel [3] in its position.

(c) Install the bolts [4]:

1) Apply compound, C00528 to the forward and aft rows of holes in the upper skin panel [3].

2) Install the bolts [4] in the forward and aft rows of holes.

3) Apply sealant, A00247, to the bolts [4] that go in the ribs and stiffeners in the main flap [1].

4) Install the bolts [4] in the ribs and stiffeners.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-13-420-002

(1) Do this task: Inboard Trailing Edge Flap Installation, TASK 27-51-11-400-801.

SUBTASK 27-51-13-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

——— END OF TASK ———

TASK 27-51-13-000-803

6. Inboard Flap Inboard Carriage Removal

(Figure 402)

A. General

D. Prepare for the Removal

SUBTASK 27-51-13-040-002

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-13-020-003

(2) Do this task: Inboard Trailing Edge Flap Removal, TASK 27-51-11-000-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Inboard Flap Inboard Carriage Removal

SUBTASK 27-51-13-010-002

(1) Remove the lower skin panel [31] from the main flap [1]:

(a) Remove the bolts [32] that attach the lower skin panel [31] to the main flap [1].

(b) Remove the lower skin panel [31].

SUBTASK 27-51-13-020-004

(2) Remove the secondary torque tube [40] from the main flap [1]:

(a) Remove the retainer [39] from the secondary torque tube [40]:

1) Remove the bolt [41], washer [42], nut [44] and filler [43] that attach the secondary torque tube [40] to the main flap [1].

2) Remove the retainer [39] from the secondary torque tube [40].

(b) Remove the nuts [49], washers [48], washers [51] and bolts [50] that attach the inboard end of the carriage [34] and the secondary torque tube [40] to the primary torque tube [38].

(c) Remove the secondary torque tube [40].

SUBTASK 27-51-13-020-005

(3) Remove the carriage [34] from the main flap [1]:

(a) Remove the nuts [46], washers [45], bolts [47], bolt [54] and spacers [52] that attach the carriage [34], attach plate [37] and rub block [33] to the primary torque tube [38].

(b) Slide the carriage [34] inboard, off of the primary torque tube [38].

653	Right Wing - Inboard Flap

F. Inboard Flap Inboard Carriage Installation

SUBTASK 27-51-13-020-013

(1) Inspect the rub pads [55] for wear.

(a) If the resin material of the rub pads [55] is worn more than 40%, replace the rub pads [55].

SUBTASK 27-51-13-420-003

(2) Install the carriage [34] on the main flap [1]:

(a) Put the carriage [34] in its position on the primary torque tube [38].

(b) Apply sealant, A00247, to the mating surface of the spacers [52].

(c) Apply sealant, A00247, to the shank and threads of the bolts [47] and bolt [54].

(d) Install the bolts [47] and bolt [54] with the spacers [52] through the primary torque tube [38] and the carriage [34].

(e) Put the attach plate [37] and rub block [33] in their position on the bolts [47].

(f) Install the washers [45] and nuts [46] on the bolts [47] and bolt [54].

1) Tighten the nuts [46] to torque tool set point of 470 in-lb (53.10 N·m).

a) Tighten the nuts [46] again before the sealant becomes hard.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) If they are not installed, install the bolts [35] and washers [36] that attach the rub block [33] to the attach plate [37].

SUBTASK 27-51-13-420-004

(3) Install the secondary torque tube [40] in the main flap [1]:

(a) Put the secondary torque tube [40] in its location in the primary torque tube [38].

(b) Install the bolts [50] and washers [51] through the secondary torque tube [40], primary torque tube [38] and the carriage [34].

(c) Install the washers [48] and nuts [49] on the bolts [50].

(d) Tighten the nuts [49] to torque tool set point of 320 in-lb (36.2 N·m).

1) Tighten the nuts [49] again before the sealant becomes hard.

(e) Install the retainer [39] on the secondary torque tube [40].

1) Turn the retainer [39] until the holes for the bolts [41] align.

2) Apply sealant, A00247, to the fillers [43].

3) Install the bolts [41], washers [42], fillers [43] and nuts [44].

SUBTASK 27-51-13-410-002

(4) Install the lower skin panel [31] on the main flap [1]:

(a) Apply sealant, A00247, to the mating surface of the lower skin panel [31] and the main flap [1].

(b) Put the lower skin panel [31] in its position.

(c) Install the bolts [32]:

1) Apply compound, C00528, to the forward and aft rows of holes in the lower skin panel [31].

2) Install the bolts [32] in the forward and aft rows of holes.

3) Apply sealant, A00247, to the bolts [32] that go in the ribs and stiffeners in the main flap [1].

4) Install the bolts [32] in the ribs and stiffeners.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-13-420-005

(1) Do this task: Inboard Trailing Edge Flap Installation, TASK 27-51-11-400-801.

SUBTASK 27-51-13-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

——— END OF TASK ———

INBOARD FLAP CARRIAGES - INSPECTION/CHECK

1. General

A. This procedure contains the tasks to do inspections of the carriages for the inboard trailing edge flaps.

TASK 27-51-13-200-801

2. Inboard Flap Carriage Inspection (Selection)

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
541	Left Wing - Fairing Flap Support No. 4
542	Left Wing - Fairing Flap Support No. 3
641	Right Wing - Fairing Flap Support No. 5
642	Right Wing - Fairing Flap Support No. 6

B. Inboard Flap Carriage Inspection (Selection)

SUBTASK 27-51-13-200-001

(1) Do one of these tasks to inspect the applicable inboard flap carriage:

(a) Do this task: Inboard Flap Outboard Carriage Inspection, TASK 27-51-13-200-802.

(b) Do this task: Inboard Flap Inboard Carriage Inspection, TASK 27-51-13-200-803.

——— END OF TASK ———

TASK 27-51-13-200-802

3. Inboard Flap Outboard Carriage Inspection

(Figure 601)

A. General

(1) This task gives wear limits for the outboard carriage on the inboard flap.

(2) This task is applicable to the carriages at flap supports No. 3 and 6.

E. Inboard Flap Outboard Carriage Inspection

SUBTASK 27-51-13-020-006

(1) Do this task: Inboard Flap Outboard Carriage Removal, TASK 27-51-13-000-802.

SUBTASK 27-51-13-020-014

(2) Inspect the rub pads [8] for wear.

(a) If the rub pads [8] are worn greater than 50%, they will need to be replaced.

SUBTASK 27-51-13-020-007

(3) Use these tools to do a check for wear on the part of the inboard flap outboard carriage:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-51-13-020-008

(4) Examine the parts of the inboard flap outboard carriage (Table 601):

(a) Remove the parts that you will measure.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096, or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are not in tolerance, replace or repair the parts.

Table 601/27-51-13-993-801

NAME OF THE PARTS THAT ARE IN CONTACT	DIM.	DIAMETER DESIGN LIMITS		WEAR LIMITS	
		MINIMUM inches/mm	MAXIMUM inches/mm	PERMITTED MAXIMUM I.D./ MINIMUM O.D. OF WORN PART	MAXIMUM SERVICE CLEARANCE inches/mm
#1 BUSHING	I.D.	1.1870 in 30.150 mm	1.1878 in 30.170 mm	1.1915 in 30.264 mm	0.0050 in

TASK 27-51-13-200-803

4. Inboard Flap Inboard Carriage Inspection

(Figure 602)

A. General

(1) This task gives wear limits for the inboard carriage on the inboard flap.

(2) This task is applicable to the carriages at flap supports No. 4 and 5.

B. References

Reference	Title

E. Inboard Flap Inboard Carriage Inspection

SUBTASK 27-51-13-020-009

(1) Do this task: Inboard Flap Inboard Carriage Removal, TASK 27-51-13-000-803.

SUBTASK 27-51-13-020-015

(2) inspect the rub pads [8] for wear.

(a) If the rub pads [8] are worn greater than 40%, they will need to be replaced.

SUBTASK 27-51-13-020-010

(3) Use these tools to do a check for wear on the part of the inboard flap inboard carriage:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-51-13-020-011

(4) Examine the parts of the inboard flap inboard carriage (Table 602):

(a) Remove the parts that you will measure.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096, or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are not in tolerance, replace or repair the parts.

INBOARD AFT FLAP ACTUATING MECHANISM - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Inboard aft flap actuating mechanism removal

(2) Inboard aft flap actuating mechanism installation.

B. The aft flap actuating mechanism includes these parts:

(1) The aft flap drive rod

(2) The interconnect pushrod

(3) The crankshaft

(4) The aft flap pushrods

(5) The cables

(6) The outboard bellcrank

(7) The inboard bellcrank

TASK 27-51-14-000-801

2. Inboard Aft Flap Actuating Mechanism Removal

(Figure 401)

B. Location Zones

Zone	Area
553	Left Wing - Inboard Flap
653	Right Wing - Inboard Flap

C. Prepare for the Removal

SUBTASK 27-51-14-860-001

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-14-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-14-010-001

(3) Do this task: Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802.

SUBTASK 27-51-14-010-002

(4) Remove the upper skin panel [4] from the outboard end of the main flap [1]:

(a) Remove the bolts [3] that attach the upper skin panel [4] to the main flap [1].

(b) Remove the upper skin panel [4].

SUBTASK 27-51-14-010-003

(5) Remove the lower skin panel [58] from the inboard end of the main flap [1]:

(a) Remove the bolts [57] that attach the lower skin panel [58] to the main flap [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the lower skin panel [58].

SUBTASK 27-51-14-010-004

(6) Remove the leading edge panel [40] from the outboard end of the main flap [1]:

(a) Remove the bolts [42] that attach the leading edge panel [40] to the main flap [1].

(b) Remove the leading edge panel [40].

D. Inboard Aft Flap Mechanism Removal

SUBTASK 27-51-14-020-001

(1) Remove the aft flap drive rod assembly [43]:

(a) Remove the pins [50], nuts [49], washers [48], bushings [47], washers [46] and bolts [45] that attach the aft flap drive rod assembly [43] to the drive rod fitting [44] and the crankshaft assembly [17].

(b) Remove the aft flap drive rod assembly [43].

SUBTASK 27-51-14-020-002

(2) Remove the interconnect push rod assembly [18]:

(a) Remove the pin [26], nut [25], washer [24], washer [22], bolt [21] and bushing [23] that attach the interconnect push rod assembly [18] to the crankshaft assembly [17].

(b) Remove the pin [16], nut [15], washer [14], washer [12], bolt [11] and bushing [13] that attach the interconnect push rod assembly [18] to the outboard bellcrank assembly [33].

(c) Remove the interconnect push rod assembly [18].

SUBTASK 27-51-14-020-003

(3) Remove the crankshaft assembly [17]:

(a) Remove the pin [56], nut [55], washer [54], washers [52], bolts [51] and bushings [53] that attach the crankshaft assembly [17] to the ribs [41].

(b) Remove the crankshaft assembly [17].

SUBTASK 27-51-14-020-004

(4) Remove the aft flap push rod assemblies [34]:

(a) Remove the pin [32], nut [31], washer [30], washer [28], bolt [27] and bushing [29] that attach the outboard aft flap push rod assembly [34] to the outboard bellcrank assembly [33].

(b) Remove the pin [32], nut [31], washer [30], bushing [29], washer [28] and bolt [27] that attach the inboard aft flap push rod assembly [34] to the inboard bellcrank assembly [67].

(c) Remove the pin [80], nut [79], washer [78], washer [76], bolt [75] and bushing [77] that attach the aft flap push rod assemblies [34] to the aft flap [2].

(d) Remove the aft flap push rod assemblies [34].

SUBTASK 27-51-14-020-005

(5) Remove the cable assemblies [19] and cable assemblies [64]:

(a) Remove the locking clips [66] from the turnbuckles [65].

(b) Turn the turnbuckles [65] to loosen the cable assemblies [19] and cable assemblies [64].

(c) Remove the pins [63], nuts [62], washers [61], washers [60], teflon washers [90] and bolts [59] that attach the cable assemblies [64] to the inboard bellcrank assembly [67].

(d) Remove the pins [39], nuts [38], washer [37], washers [36], teflon washers [90] and bolts [35] that attach the cable assemblies [19] to the outboard bellcrank assembly [33].

(e) Remove the cable assemblies [19] and cable assemblies [64].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-14-020-006

(6) Remove the outboard bellcrank assembly [33]:

(a) Remove the pin [10], nut [9], washer [8], washer [6], bolt [5] and bushings [7] that attach the outboard bellcrank assembly [33] to the main flap [1].

(b) Remove the outboard bellcrank assembly [33].

SUBTASK 27-51-14-020-007

(7) Remove the inboard bellcrank assembly [67]:

(a) Remove the pin [73], nut [72], washer [71], washer [69], bolt [68] and bushings [70] that attach the inboard bellcrank assembly [67] to the main flap [1].

(b) Remove the inboard bellcrank assembly [67].

F. Inboard Aft Flap Actuating Mechanism Installation

SUBTASK 27-51-14-420-001

(1) Install the inboard bellcrank assembly [67]:

(a) Put the inboard bellcrank assembly [67] in its position in the main flap [1].

(b) Install the bushings [70], bolt [68], washer [69], washer [71] and nut [72] to attach the inboard bellcrank assembly [67].

NOTE: Install the bolt [68] with the head down.

(c) Tighten the nut [72] to 100 in-lb (11.3 N·m) to 150 in-lb (16.9 N·m).

(d) Install the pin [73] in the nut [72].

SUBTASK 27-51-14-420-002

(2) Install the outboard bellcrank assembly [33]:

(a) Put the outboard bellcrank assembly [33] in its position in the main flap [1].

(b) Install the bushings [7], bolt [5], washer [6], washer [8] and nut [9] to attach the outboard bellcrank assembly [33].

NOTE: Install the bolt [5] with the head up.

(c) Tighten the nut [9] to 100 in-lb (11.3 N·m) to 150 in-lb (16.9 N·m).

(d) Install the pin [10] in the nut [9].

SUBTASK 27-51-14-420-003

(3) Install the cable assemblies [19] and cable assemblies [64]:

(a) Put the cable assemblies [19] and cable assemblies [64] in their position in the main flap [1].

(b) Install the bolts [35], washers [36], washers [37], teflon washers [90] and nuts [38] to attach the cable assemblies [19] to the outboard bellcrank assembly [33].

(c) Install the bolts [59], washers [60], washers [61], teflon washers [90] and nuts [62] to attach the cable assemblies [64] to the inboard bellcrank assembly [67].

(d) Tighten the nuts [38] and nuts [62] to 50 in-lb (5.6 N·m) to 80 in-lb (9.0 N·m).

(e) Install the pins [39] in the nuts [38].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Install the pins [63] in the nuts [62].

(g) Connect the cable assemblies [19] and cable assemblies [64] together at the turnbuckles [65].

NOTE: Do not tighten the turnbuckles [65] or install the locking clips [66] at this time.

SUBTASK 27-51-14-420-004

(4) Install the crankshaft assembly [17]:

(a) Put the crankshaft assembly [17] in its position between the ribs [41] on the leading edge of the main flap [1].

(b) Install the bushings [53], bolt [51], washer [52], washer [54], and nut [55] that attach the crankshaft assembly [17] to the ribs [41].

(c) Tighten the nut [55] to 160 in-lb (18.1 N·m) to 240 in-lb (27.1 N·m).

(d) Install the pin [56] in the nut [55].

SUBTASK 27-51-14-420-005

(5) Install the interconnect push rod assembly [18]:

(a) Put the interconnect push rod assembly [18] in its position between the crankshaft assembly [17] and the outboard bellcrank assembly [33].

(b) Install the bushing [13], bolt [11], washer [12], washer [14] and nut [15] that attach the interconnect push rod assembly [18] to the crankshaft assembly [17].

NOTE: Install the bolt [11] with the head outboard.

(c) Install the bushing [23], bolt [21], washer [22], washer [24] and nut [25] that attach the interconnect push rod assembly [18] to the outboard bellcrank assembly [33].

NOTE: Install the bolt [21] with the head up.

(d) Tighten the nut [15] and nut [25] to 50 in-lb (5.6 N·m) to 80 in-lb (9.0 N·m).

(e) Install the pin [16] in the nut [15].

(f) Install the pin [26] in the nut [25].

SUBTASK 27-51-14-820-001

(6) Adjust the interconnect push rod assembly [18], cable assemblies [19] and cable assemblies [64]:

(a) Move the crankshaft assembly [17] to the retracted position.

(b) Install the rig pin from the rigging pin kit, SPL-1585 (F70207–113 or F70207–114) in the crankshaft assembly [17].

(c) Install the rig pin from the rigging pin kit, SPL-1585 (F70207–113 or F70207–114) in the outboard bellcrank assembly [33].

(d) If you cannot install the rig pin in the outboard bellcrank assembly [33], adjust the length of the interconnect push rod assembly [18]:

1) Loosen the nuts [20] on the interconnect push rod assembly [18].

2) Turn the interconnect push rod assembly [18] until you can install the rig pin in the outboard bellcrank assembly [33].

3) Tighten the nuts [20] on the interconnect push rod assembly [18].

4) Install MS20995C32 lockwire, G01048 on the nuts [20].

(e) Install the rig pin from the rigging pin kit, SPL-1585 (F70207–113 or F70207–114) in the inboard bellcrank assembly [67].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) If you cannot install the rig pin in the inboard bellcrank assembly [67], adjust the cables:

1) Remove the rig pin from the rigging pin kit, SPL-1585 from the crankshaft assembly [17].

2) If it is necessary, remove the tension from the forward cable assembly [19] and cable assembly [64]:

a) Remove the locking clips [66] from the turnbuckles [65].

b) Turn the turnbuckles [65].

3) Install the rig pin from the rigging pin kit, SPL-1585 (F70207–113 or F70207–114) in the inboard bellcrank assembly [67] and the outboard bellcrank assembly [33].

4) Use a high tension cable tensiometer, COM-1554 to adjust the tension in the aft cable assembly [19] until it is in the limit of 200 ±25 lbf (889.6 ±111.2 N).

NOTE: The cable is 3/16” (0.1875 in. (4.7625 mm)) diameter.

5) Use a high tension cable tensiometer, COM-1554 to adjust the tension in the forward cable assembly [19] until you can easily remove and install the rig pins in the bellcranks.

a) Make sure that the tension in the aft cable assembly [19] stays in the limit.

NOTE: The cable is 3/16” (0.1875 in. (4.7625 mm)) diameter.

(g) Install the locking clips [66] in the turnbuckles [65] for the cable assemblies [19] and cable assemblies [64].

(h) Remove the rig pins from the inboard bellcrank assembly [67], outboard bellcrank assembly [33] and the crankshaft assembly [17].

SUBTASK 27-51-14-420-006

(7) Install the aft flap push rod assemblies [34]:

(a) Put the aft flap push rod assemblies [34] in their location between the aft flap [2] and the bellcranks.

(b) Install the bolt [27], washer [28], bushing [29], washer [30] and nut [31] that attach the inboard aft flap push rod assembly [34] to the inboard bellcrank assembly [67].

(c) Install the bushing [29], bolt [27], washer [28], washer [30] and nut [31] that attach the outboard aft flap push rod assembly [34] to the outboard bellcrank assembly [33].

(d) Install the bushings [77],bolts [75], washers [76], washers [78] and nuts [79] that attach the aft flap push rod assemblies [34] to the aft flap [2].

(e) Tighten the nuts [31] and nuts [79] to 50 in-lb (5.6 N·m) to 80 in-lb (9.0 N·m).

(f) Install pins [32] in the nuts [31].

(g) Install pins [80] in the nuts [79].

SUBTASK 27-51-14-820-002

(8) If the aft flap [2] is installed, do an adjustment of the aft flap push rod assemblies [34]:

(a) Use the crankshaft assembly [17] to manually move the aft flap [2] to the retracted position.

(b) Install the rig pin from the rigging pin kit, SPL-1585 (F70207–113 or F70207–114) in the crankshaft assembly [17].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Measure the distance between the trailing edge of the aft flap [2] and the trailing edge of the upper cove panel [101] on the main flap [1] (Figure 402).

NOTE: Measure the distance aft of the inboard and outboard aft flap push rod assemblies [34].

1) At the outboard push rod assembly [34], make sure that the distance is 9.2745 ±0.0600 in. (235.57 ±1.53 mm).

2) At the inboard push rod assembly [34], make sure that the distance is 9.2319 ±0.0600 in. (234.49 ±1.52 mm).

(d) If the distance at the inboard or outboard pushrod is not in the limit, then adjust the length of the applicable aft flap push rod assembly [34] (Figure 401):

1) Remove the rig pin from the crankshaft assembly [17].

2) Use the crankshaft assembly [17] to manually extend the aft flap [2] to the extended position.

3) Adjust the length of the applicable aft flap push rod assembly [34]:

NOTE: For each 90 degree turn of the aft flap push rod assembly [34], the trailing edge of the aft flap will move 0.04 in. (1.02 mm).

a) Loosen the nuts [81] on the aft flap push rod assembly [34].

b) Adjust the length of the aft flap push rod assembly [34].

c) Tighten the nuts [81].

d) Install MS20995C32 lockwire, G01048 on the nuts [81] and the locking keys [74].

4) Use the crankshaft assembly [17] to manually retract the aft flap [2] to the retracted position.

5) Install the rig pin from the rigging pin kit, SPL-1585 (F70207–113 or F70207–114) in the crankshaft assembly [17].

6) Make sure that the distance from the trailing edge of the aft flap [2] to the trailing edge of the upper cove panel [101] is in the limit.

(e) Remove the rig pin from the crankshaft assembly [17].

(f) Use the crankshaft assembly [17] to manually extend the aft flap [2] to the extended position.

SUBTASK 27-51-14-420-007

(9) Install the aft flap drive rod assembly [43]:

(a) Put the aft flap drive rod assembly [43] in its position between the drive rod fitting [44] and the crankshaft assembly [17].

(b) Install the bolts [45], washers [46], bushings [47], washers [48] and nuts [49] that attach the aft flap drive rod assembly [43] to the crankshaft assembly [17] and the drive rod fitting [44].

1) Make sure that the heads of the bolts [45] are on the inboard side.

(c) Tighten the nuts [49] to 30 in-lb (3.4 N·m) to 50 in-lb (5.6 N·m).

(d) Install the pins [50] through the nuts [49].

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-14-410-001

(1) Install the leading edge panel [40] on the outboard end of the main flap [1]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Apply sealant, A00247 to the mating surface of the leading edge panel [40] and the main flap [1].

(b) Put the leading edge panel [40] in its position.

(c) Install the bolts [42]:

1) Apply compound, C00528 to the forward and aft rows of holes in the leading edge panel [40].

2) Install the bolts [42] in the forward and aft rows of holes.

3) Apply sealant, A00247 to the bolts [42]b that go in the ribs and stiffeners in the main flap [1].

4) Install the bolts [42] in the ribs and stiffeners.

SUBTASK 27-51-14-410-002

(2) Install the upper skin panel [4] on the outboard end of the main flap [1]:

(a) Apply sealant, A00247 to the mating surface of the upper skin panel [4] and the main flap [1].

(b) Put the upper skin panel [4] in its position.

(c) Install the bolts [3]:

1) Apply compound, C00528 to the forward and aft rows of holes in the upper skin panel [4].

2) Install the bolts [3] in the forward and aft rows of holes.

3) Apply sealant, A00247 to the bolts [3] that go in the ribs and stiffeners in the main flap [1].

4) Install the bolts [3] in the ribs and stiffeners.

SUBTASK 27-51-14-410-003

(3) Install the lower skin panel [58] on the inboard end of the main flap [1]:

(a) Apply sealant, A00247 to the mating surface of the lower skin panel [58] and the main flap [1].

(b) Put the lower skin panel [58] in its position.

(c) Install the bolts [57]:

1) Apply compound, C00528 to the forward and aft rows of holes in the lower skin panel [58].

2) Install the bolts [57] in the forward and aft rows of holes.

3) Apply sealant, A00247 to the bolts [57] that go in the ribs and stiffeners in the main flap [1].

4) Install the bolts [57] in the ribs and stiffeners.

SUBTASK 27-51-14-410-004

(4) Do this task: Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802.

SUBTASK 27-51-14-440-001

(5) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-14-860-002

(6) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

END OF TASK

INBOARD FLAP TRACKS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Inboard Flap Track Removal (Selection)

(2) Inboard Flap Track Installation (Selection)

(3) Inboard Flap Outboard Track Removal

(4) Inboard Flap Outboard Track Installation

(5) Inboard Flap Inboard Track Removal

(6) Inboard Flap Inboard Track Installation.

TASK 27-51-15-000-801

2. Inboard Flap Track Removal (Selection)

A. Procedure

SUBTASK 27-51-15-000-001

(1) Do one of these tasks to remove the applicable inboard flap track:

(a) Do this task: Inboard Flap Outboard Track Removal, TASK 27-51-15-000-802.

(b) Do this task: Inboard Flap Inboard Track Removal, TASK 27-51-15-000-803.

——— END OF TASK ———

TASK 27-51-15-400-801

3. Inboard Flap Track Installation (Selection)

A. Procedure

SUBTASK 27-51-15-400-001

(1) Do one of these tasks to install the applicable inboard flap track:

(a) Do this task: Inboard Flap Outboard Track Installation, TASK 27-51-15-400-802.

(b) Do this task: Inboard Flap Inboard Track Installation, TASK 27-51-15-400-803.

——— END OF TASK ———

TASK 27-51-15-000-802

4. Inboard Flap Outboard Track Removal

(Figure 401)

A. General

(1) This task is applicable to the flap tracks at flap supports No. 3 and 6.

D. Location Zones

Zone	Area
542	Left Wing - Fairing Flap Support No. 3
642	Right Wing - Fairing Flap Support No. 6

E. Prepare for the Removal

SUBTASK 27-51-15-860-001

(1) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-15-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-15-010-001

(3) Remove the fairings for the outboard track on the inboard flap, do these tasks:

- Inboard Flap Support Forward Fairing Removal, TASK 27-51-18-000-801
- Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802

SUBTASK 27-51-15-020-001

(4) Do this task: Inboard Trailing Edge Flap Removal, TASK 27-51-11-000-801.

SUBTASK 27-51-15-020-002

(5) Do this task: Inboard Flap Outboard Skew Mechanism Removal, TASK 27-59-02-000-803.

SUBTASK 27-51-15-020-003

(6) Do this task: Inboard Flap Outboard Transmission Removal, TASK 27-51-31-000-802.

F. Inboard Flap Outboard Track Removal

SUBTASK 27-51-15-480-001

(1) If you use the adapter, SPL-1733, install it on the flap track [1]:

(a) Install the adapter, SPL-1733 on the flap track [1] approximately 35 in. (89 cm) aft of the track attach fitting.

(b) Put a low profile hydraulic jack, COM-1568 below the adapter, SPL-1733 to support the flap track [1].

(c) If you do not use the adapter, SPL-1733, make sure that you support the flap track while you disconnect it.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-15-020-020

(2) Remove the nut [28], washers [29], and bolt [30] that attach the bonding jumper [27] to the structure.

SUBTASK 27-51-15-020-021

(3) Remove the clamp [34] that attaches the electrical wire to the bracket as follows:

(a) Remove the bolt [31], washer [32], and clipnut [33].

SUBTASK 27-51-15-020-004

(4) Disconnect the forward end of the flap track [1] from the track attach fitting:

(a) Remove the bolts [13] and washers [12] that attach the failsafe fitting [14] to the track attach fitting.

(b) Remove the pin [18], nut [17], washer [16], and fuse pin [15] from the forward end of the flap track [1].

SUBTASK 27-51-15-020-005

(5) Disconnect the aft end of the flap track [1] from the structure:

(a) Remove the bolt [8], washer [9], washer [10], and nut [11] from the outboard side of the flap track [1].

(b) Remove the bolt [7], washer [6], washer [4], and nut [3] from the inboard side of the flap track [1].

(c) Measure the thickness of the shim [5].

1) Make sure to mark the track with this measurement data.

NOTE: This measurement data for the removal and replacement of the flap tracks is an important step to obtain ample free movement in the fuse pin joint at the forward end of the flap track and return of the flaps to former operating condition.

SUBTASK 27-51-15-020-006

(6) If you install a new flap track [1], remove the transmission attach fitting [2] from the flap track [1]:

(a) Remove the pin [25], nut [24], washer [26], and bolt [19] that attach the forward end of the transmission attach fitting [2].

(b) Remove the pin [23], nut [22], washer [21], and bolt [20] that attach the aft end of the transmission attach fitting [2].

G. Inboard Flap Outboard Track Installation

SUBTASK 27-51-15-420-001

(1) If it is not installed, install the transmission attach fitting [2]:

(a) Put the transmission attach fitting [2] in its position on the flap track [1].

(b) Install the bolt [20], washer [21], and nut [22] that attach the aft end of the transmission attach fitting [2] to the flap track [1].

(c) Install the pin [23] in the nut [22].

(d) Install the bolt [19], washer [26], and nut [24] that attach the forward end of the transmission attach fitting [2] to the flap track [1].

(e) Install the pin [25] in the nut [24].

SUBTASK 27-51-15-480-002

(2) If you will use the adapter, SPL-1733, install it on the flap track [1]:

(a) Install the adapter, SPL-1733 on the flap track [1] approximately 35 in. (89 cm) aft of the track attach fitting.

(b) Put a low profile hydraulic jack, COM-1568, below the adapter, SPL-1733, to support the flap track [1].

SUBTASK 27-51-15-420-002

(3) Install the flap track [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) If it is not installed, install the shim [5] on the structure.

1) Make sure that the shim [5] is the same thickness as the shim [5] that you removed.

NOTE: The original thickness of the shim [5] is on a marker on the structure.

NOTE: If it is necessary to replace the flap track with a new unit, a new shim [5] may need to be made and should be marked and checked after the nuts are torqued that attach the flap track to the structure.

2) Apply sealant, A00247, to the mating surface between shim [5] and flap track [1], and mating surface between shim [5] and structure.

3) Put the shim [5] in its location.

(b) Attach the aft end of the flap track [1]:

1) Lift the flap track [1] to its location on the structure.

2) Install the bolt [7], washer [6], washer [4], and nut [3] that attach the inboard end of the flap track [1].

3) Install the bolt [8], washer [9], washer [10], and nut [11] that attach the outboard end of the flap track [1].

(c) Attach the forward end of the flap track [1]:

1) Apply grease, D00633, to the outside of the fuse pin [15] and the inside of the bushings.

2) Install the fuse pin [15] to attach the forward end of the flap track [1] to the track attach fitting.

(d) Tighten the nut [3] to a torque set point of 1800 in-lb (203 N·m).

(e) Tighten the nut [11] to a torque set point of 1300 in-lb (147 N·m).

(f) Make sure that you can turn the fuse pin [15] in the joint with a maximum of 10 in-lb (1 N·m).

NOTE: You can push up on the forward end of the flap track [1] to take the weight off the fuse pin [15] when you measure the torque.

(g) Install the washer [16] and nut [17] on the fuse pin [15].

(h) Tighten the nut [17] to 330 in-lb (37 N·m) - 350 in-lb (40 N·m).

(i) Loosen the nut [17] to align the hole for the pin [18].

(j) Install the pin [18] in the nut [17].

(k) Apply a fillet seal with sealant, A00247, around the joint where the shim [5], flap track [1], and airplane structure are attached.

SUBTASK 27-51-15-420-003

(4) Install the failsafe fitting [14] on the track attach fitting:

(a) Put the failsafe fitting [14] in its location on the track attach fitting.

(b) Install the bolts [13] and washers [12] to attach the failsafe fitting [14].

SUBTASK 27-51-15-420-014

(5) Install the clamp [34] that attaches the electrical wire to the bracket as follows:

(a) Install the bolt [31], washer [32], and clipnut [33] that attach the clamp [34] and electrical wire to the bracket.

SUBTASK 27-51-15-420-015

(6) Install the bonding jumper [27] as follows:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Use cotton wiper, G00034, moist in alcohol, B00130, to clean the mating surfaces of the washers [29] and bonding jumper [27].

(b) Clean the mating surface of the structure with 60 grit wet/dry aluminum oxide sandpaper, G51464.

1) Clean the mating surface of the structure with wiper, G50262, moist in alcohol, B00130.

2) If it is necessary, use wiper, G50262, to remove remaining solvent.

(c) Install the bolt [30], washers [29], and nut [28] that attach the bonding jumper [27] to the structure.

1) Apply sealant, A50155, sealant, A50110, sealant, A50231, or sealant, A50296, to the mating surfaces of the bolt [30], washers [29], nut [28], bonding jumper [27], and airplane structure.

2) Tighten the nut [28] to 28 in-lb (3.2 N·m) - 35 in-lb (4.0 N·m).

3) Make sure that there is squeeze out around all the interfaces of each component.

(d) Measure the electrical bonding resistance between the bonding jumper [27] and airplane structure (SWPM 20-20-00).

1) Use the non-intrinsically safe bonding meter, COM-614.

2) Make sure that the electrical bonding resistance is 0.001 ohm (1.0 milliohm) or less.

SUBTASK 27-51-15-480-003

(7) If it is necessary, remove the adapter, SPL-1733, from the flap track [1].

SUBTASK 27-51-15-420-004

(8) Do this task: Inboard Flap Outboard Transmission Installation, TASK 27-51-31-400-802.

SUBTASK 27-51-15-420-005

(9) Do this task: Inboard Flap Outboard Skew Mechanism Installation, TASK 27-59-02-400-803.

SUBTASK 27-51-15-420-006

(10) Do this task: Inboard Trailing Edge Flap Installation, TASK 27-51-11-400-801.

SUBTASK 27-51-15-820-001

(11) Do this task: Inboard Trailing Edge Flap Adjustment, TASK 27-51-11-820-801.

SUBTASK 27-51-15-820-002

(12) Do this task: Flap Skew Detection System Adjustment, TASK 27-59-00-820-801.

SUBTASK 27-51-15-640-001

(13) Do this task: Inboard Flap Outboard Flap Track Lubrication, TASK 12-22-51-640-814.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-15-410-001

(1) Install the fairings for the outboard track on the inboard flap, do these tasks:

- Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802
- Inboard Flap Support Forward Fairing Installation, TASK 27-51-18-400-801

SUBTASK 27-51-15-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-15-860-002

(3) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

——— END OF TASK ———

TASK 27-51-15-000-803

6. Inboard Flap Inboard Track Removal

(Figure 402)

A. General

(1) This task is applicable to the flap tracks at flap supports No. 4 and 5.

G. Prepare for the Removal

SUBTASK 27-51-15-860-003

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-15-480-004

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-15-860-004

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-15-860-005

(4) For the left inboard flap, if applicable:

Open these access panels:

Number	Name/Location
193CL	Wheel Well Panel - Aft Outboard
194CL	Aft Wing To Body Fairing Panel

SUBTASK 27-51-15-860-006

(5) For the right inboard flap, if applicable:

Open these access panels:

Number	Name/Location
193CR	Wheel Well Panel - Aft Outboard
194CR	Aft Wing To Body Fairing Panel

SUBTASK 27-51-15-860-007

(6) If the inboard flap hold equipment, SPL-9469 is not available, then do this task: Inboard Trailing Edge Flap Removal, TASK 27-51-11-000-801.

SUBTASK 27-51-15-480-005

(7) Do the following steps to install the trailing edge inboard flap hold equipment, SPL-9469:

NOTE: The inboard flap hold equipment, SPL-9469 will support the inboard flap so that inboard flap removal is not necessary.

NOTE: It is not necessary that the aft flap be installed in order to install the inboard flap hold equipment, SPL-9469.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Inflate the shock strut with a sufficient amount of nitrogen, G00018 to provide clearance for the mounting bracket of the lower brace assembly from hold equipment, SPL-9469 (Main Landing Gear Shock Strut Servicing, Airplane on the Ground, TASK 12-15-31-610-802).

(b) Attach the lower brace assembly to the bottom of the outer cylinder of the main landing gear.

(c) Adjust the length of the lower brace assembly until you can attach the lower brace assembly to the aft flap track assembly.

(d) Attach the upper brace assembly to the upper end of the outer cylinder.

(e) Adjust the length of the upper brace assembly until you can attach the upper brace assembly to the aft most fitting on the lower brace assembly.

(f) Attach the side brace assembly to the side brace of the main landing gear.

NOTE: The flange of the backing plate is oriented in the downward direction.

(g) Adjust the length of the side brace assembly until you can attach it to the forward most fitting on the lower brace assembly.

(h) Extend the three brace assemblies until the weight of the flap is supported.

1) If necessary, push up on the inboard flap while extending the brace assemblies.

SUBTASK 27-51-15-020-007

(8) Do this task: Inboard Flap Inboard Skew Mechanism Removal, TASK 27-59-02-000-804.

SUBTASK 27-51-15-020-008

(9) Do this task: Inboard Flap Inboard Transmission Removal, TASK 27-51-31-000-803.

H. Inboard Flap Inboard Track Removal

NOTE: Make sure you support the flap track [41] while you disconnect it.

SUBTASK 27-51-15-480-006

(1) If you will use the adapter, SPL-1733, install it on the flap track [41]:

(a) Install the adapter, SPL-1733 on the flap track [41] approximately 20 in. (51 cm) aft of the track forward attach fitting.

(b) Put a low profile hydraulic jack, COM-1568 below the adapter, SPL-1733 to support the flap track [41].

SUBTASK 27-51-15-020-010

(2) Disconnect the forward end of the flap track [41]:

(a) Remove the nut [56], washer [55] and bolt [52] that attach the flap track [41] to the forward attach assembly [50].

(b) Remove the nut [58], washer [54] and bolt [51] that attach the flap track [41] to the forward attach assembly [50].

SUBTASK 27-51-15-020-019

(3) Disconnect the link [45] from the structure:

(a) Remove the nut [43], washer [42] and bolt [46] from the bolt [49].

(b) Remove the lockwire from the nut [48] and washer [47].

(c) Remove the nut [48] and washer [47] from the bolt [49].

(d) Remove the bolt [49] that attaches the link [45] to the structure.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-15-020-011

(4) If you will install a new flap track [41], remove the transmission attach fitting [53] and the link [45] from the flap track [41]:

(a) Remove the bolts [60], bolt [64], washers [61] and nuts [62] that attach the transmission attach fitting [53] to the flap track [41].

(b) Disconnect the link [45] from the flap track [41]:

1) Remove the pin [66], nut [67], washer [65] and bolt [68] from the bolt [72].

2) Remove the lockwire from the nut [71] and washer [70].

3) Remove the nut [71], washer [70] and washer [69] from the bolt [72].

4) Remove the bolt [72], bushing [73] and washer [69] that attaches the link [45] to the flap track [41].

G. Inboard Flap Inboard Track Installation

SUBTASK 27-51-15-420-007

(1) If they are not installed, install the transmission attach fitting [53] and link [45] on the flap track [41]:

(a) Install the transmission attach fitting [53]:

1) Put the transmission attach fitting [53] in its position on the flap track [41].

2) Install the bolts [60], bolt [64], washers [61], and nuts [62] that attach the transmission attach fitting [53] to the flap track [41].

3) Tighten the nut [62] to 600 in-lb (67.8 N·m) - 800 in-lb (90.4 N·m).

4) Install the pins [63] in the nuts [62].

(b) Install the link [45] on the flap track [41]:

1) Put the link [45] in its position on the flap track [41].

2) Install the bolt [72], bushing [73], washers [69], washer [70], and nut [71] to attach the link [45] to the flap track [41].

3) Tighten the nut [71] to 290 in-lb (32.8 N·m) - 510 in-lb (57.6 N·m).

4) Install lockwire between the nut [71] and the washer [70].

5) Install the bolt [68], washer [65], and nut [67] in the bolt [72].

6) Tighten the nut [67] to 30 in-lb (3.4 N·m) - 60 in-lb (6.8 N·m).

7) Install the pin [66] in the nut [67].

SUBTASK 27-51-15-480-007

(2) If you use the adapter, SPL-1733, install it on the flap track [41]:

(a) Install the adapter, SPL-1733 on the flap track [41] approximately 20 in. (51 cm) aft of the track forward attach fitting.

(b) Put a low profile hydraulic jack, COM-1568 below the adapter, SPL-1733 to support the flap track [41].

SUBTASK 27-51-15-020-012

(3) Connect the link [45] to the structure:

(a) Put the link [45] in its position on the structure.

(b) Install the bolt [49], washer [47], and nut [48] to attach the link [45] to the structure.

(c) Tighten the nut [48] to 290 in-lb (32.8 N·m) - 510 in-lb (57.6 N·m).

(d) Install lockwire between the nut [48] and the washer [47].

(e) Install the bolt [46], washer [42], and nut [43] in the bolt [49].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Tighten the nut [43] to 30 in-lb (3.4 N·m) - 60 in-lb (6.8 N·m).

(g) Install the pin [44] in the nut [43].

SUBTASK 27-51-15-420-008

(4) Connect the forward end of the flap track [41]:

(a) Put the flap track [41] in its position on the forward attach assembly [50].

(b) Install the bolt [51], washer [54], and nut [58] that attach the flap track [41] to the forward attach assembly [50].

(c) Install the pin [59] in the nut [58].

(d) Install the bolt [52], washer [55], and nut [56] that attach the flap track [41] to the forward attach assembly [50].

(e) Install the pin [57] in the nut [56].

SUBTASK 27-51-15-480-008

(5) If it is necessary, remove the adapter, SPL-1733 from the flap track [41].

SUBTASK 27-51-15-420-009

(6) Do this task: Inboard Flap Inboard Transmission Installation, TASK 27-51-31-400-803.

SUBTASK 27-51-15-420-010

(7) Do this task: Inboard Flap Inboard Skew Mechanism Installation, TASK 27-59-02-400-804.

SUBTASK 27-51-15-420-011

(8) If the inboard flap hold equipment, SPL-9469 was not used, do this task: Inboard Trailing Edge Flap Installation, TASK 27-51-11-400-801.

SUBTASK 27-51-15-080-001

(9) Remove the inboard flap hold equipment, SPL-9469.

(a) Retract the three brace assemblies to remove the weight of the inboard flap from the hold equipment, SPL-9469.

(b) Remove the side brace assembly.

(c) Remove the upper brace assembly.

(d) Remove the lower brace assembly.

SUBTASK 27-51-15-820-003

(10) Do this task: Inboard Trailing Edge Flap Adjustment, TASK 27-51-11-820-801.

SUBTASK 27-51-15-820-004

(11) Do this task: Flap Skew Detection System Adjustment, TASK 27-59-00-820-801.

SUBTASK 27-51-15-640-002

(12) Do this task: Inboard Flap Inboard Flap Track Lubrication, TASK 12-22-51-640-813.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-15-840-001

(1) If the hold equipment, SPL-9469 was used then do these steps:

(a) Inflate the shock strut to the proper servicing height (Main Landing Gear Shock Strut Servicing, Airplane on the Ground, TASK 12-15-31-610-802).

(b) For the left inboard flap, close these access panels:

Number	Name/Location
193CL	Wheel Well Panel - Aft Outboard

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Number	Name/Location
194CL	Aft Wing To Body Fairing Panel

(c) For the right inboard flap, close these access panels:

Number	Name/Location
193CR	Wheel Well Panel - Aft Outboard
194CR	Aft Wing To Body Fairing Panel

SUBTASK 27-51-15-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-15-860-008

(3) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

INBOARD FLAP TRACKS - INSPECTION/CHECK

1. General

A. This procedure has these tasks:

(1) Inboard Flap Track Inspection (Selection)

(2) Inboard Flap Outboard Track Inspection

(3) Inboard Flap Inboard Track Inspection.

TASK 27-51-15-200-801

2. Inboard Flap Track Inspection (Selection)

A. References

Reference	Title

27-51-13-200-803	Inboard Flap Inboard Carriage Inspection (P/B 601)

B. Procedure

SUBTASK 27-51-15-200-001

(1) Do one of these tasks to inspect the applicable inboard flap track:

(a) Do this task: Inboard Flap Outboard Carriage Inspection, TASK 27-51-13-200-802.

(b) Do this task: Inboard Flap Inboard Carriage Inspection, TASK 27-51-13-200-803.

——— END OF TASK ———

TASK 27-51-15-200-802

3. Inboard Flap Outboard Track Inspection

(Figure 601)

A. General

(1) This task gives wear limits for the outboard track on the inboard flap.

(2) This task is applicable to the flap tracks at flap supports No. 3 and 6.

B. References

Reference	Title

642	Right Wing - Fairing Flap Support No. 6

E. Procedure

SUBTASK 27-51-15-020-013

(1) Do this task: Inboard Flap Outboard Track Removal, TASK 27-51-15-000-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-15-020-014

(2) Use these tools to do a check for wear on the part of the inboard flap outboard track:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-51-15-020-015

(3) Examine the parts of the inboard flap outboard track (Table 601):

(a) Remove the parts that you will measure.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are not in tolerance, replace or repair the parts.0.070 in. (1.778 mm).

Table 601/27-51-15-993-801

NAME OF THE PARTS THAT ARE IN CONTACT	DIM.	DIAMETER DESIGN LIMITS		WEAR LIMITS	
		MINIMUM inches/mm	MAXIMUM inches/mm	PERMITTED MAXIMUM I.D./ MINIMUM O.D. OF WORN PART	MAXIMUM SERVICE CLEARANCE inches/mm
BUSHING [1]	I.D.	0.7000 in. (17.7800 mm)	0.7095 in. (18.0213 mm)	0.7118 in. (18.0797 mm)	0.0336 in. (0.8534 mm)
FUSE PIN [5]	O.D.	0.6800 in. (17.2720 mm)	0.6805 in. (17.2847 mm)	0.6782 in. (17.2263 mm)	
BUSHING [2]	I.D.	0.7000 in. (17.7800 mm)	0.7095 in. (18.0213 mm)	0.7118 in. (18.0797 mm)	0.0336 in. (0.8534 mm)
FUSE PIN [5]	O.D.	0.6800 in. (17.2720 mm)	0.6805 in. (17.2847 mm)	0.6782 in. (17.2263 mm)	
BUSHING [3]	I.D.	0.5620 in. (14.2748 mm)	0.5670 in. (14.4018 mm)	0.5695 in. (14.4653 mm)	0.0080 in. (0.2032 mm)
BOLT [7]	O.D.	0.5605 in. (14.2367 mm)	0.5615 in. (14.2621 mm)	0.5590 in. (14.1986 mm)	
BUSHING [4]	I.D.	0.5620 in. (14.2748 mm)	0.5670 in. (14.4018 mm)	0.5695 in. (14.4653 mm)	0.0700 in. (1.7780 mm)
BOLT [6]	O.D.	0.4985 in. (12.6619 mm)	0.4995 in. (12.6873 mm)	0.4970 in. (12.6238 mm)	

SUBTASK 27-51-15-420-012

(4) Do this task: Inboard Flap Outboard Track Installation, TASK 27-51-15-400-802.

END OF TASK

TASK 27-51-15-200-803

4. Inboard Flap Inboard Track Inspection

(Figure 602)

A. General

(1) This task gives wear limits for the inboard track on the inboard flap.

(2) This task is applicable to the flap tracks at flap supports No. 4 and 5.

E. Procedure

SUBTASK 27-51-15-020-016

(1) Do this task: Inboard Flap Inboard Track Removal, TASK 27-51-15-000-803.

SUBTASK 27-51-15-020-017

(2) Use these tools to do a check for wear on the part of the inboard flap inboard track:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-51-15-020-018

(3) Examine the parts of the inboard flap inboard track (Table 602):

(a) Remove the parts that you will measure.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are not in tolerance, replace or repair the parts.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

INBOARD AFT FLAP TRACKS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Inboard Aft Flap Track Removal

(2) Inboard Aft Flap Track Installation.

B. This procedure is applicable to the two aft flap tracks on the inboard flap.

TASK 27-51-16-000-801

2. Inboard Aft Flap Track Removal

(Figure 401)

A. References

Reference	Title

27-51-18-000-802	Inboard Flap Support Aft Fairing Removal (P/B 401)

B. Location Zones

Zone	Area
553	Left Wing - Inboard Flap
653	Right Wing - Inboard Flap

C. Prepare for the Removal

SUBTASK 27-51-16-010-001

(1) Do this task: Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802.

SUBTASK 27-51-16-860-001

(2) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-16-040-001

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-16-020-001

(4) Do this task: Inboard Aft Flap Removal, TASK 27-51-12-000-801.

D. Inboard Aft Flap Track Removal

SUBTASK 27-51-16-020-002

(1) Remove aft flap track [2] from the main flap [1]:

(a) Remove the nuts [4] that attach the cartridge assemblies [3] and cartridge assemblies [5] to the aft flap track support [6] on the main flap [1].

NOTE: There are two cartridge assemblies [3] and two cartridge assemblies [5] on the inboard and the outboard aft flap track supports.

(b) Remove the cartridge assemblies [3] and cartridge assemblies [5] from the aft flap track support [6].

(c) Carefully remove the aft flap track [2] from the aft flap track support [6].

END OF TASK

653	Right Wing - Inboard Flap

E. Inboard Aft Flap Track Installation

SUBTASK 27-51-16-420-001

(1) If the downstop is not installed on the aft flap track [2], do these steps:

(a) Install the bolt [11], bushings [9], washer [10], washer [7], and nut [8] on the aft flap track [2].

(b) Tighten the nut [8] to 50 in-lb (5.6 N·m) to 75 in-lb (8.5 N·m).

SUBTASK 27-51-16-420-002

(2) Install the aft flap track [2] in the main flap [1]:

(a) Carefully put the aft flap track [2] in its position in the aft flap track support [6] in the main flap [1].

NOTE: Make sure that the downstop is forward of the forward cartridge assemblies [5].

(b) Apply a layer of sealant, A00247 to the mating surface of the cartridge assemblies [3] and cartridge assemblies [5] and the aft flap track support [6].

(c) Put the cartridge assemblies [3] and cartridge assemblies [5] in their position in the aft flap track support [6].

(d) Install the nuts [4] that attach the cartridge assemblies [3] and cartridge assemblies [5] to the aft flap track support [6].

SUBTASK 27-51-16-420-003

(3) Do this task: Inboard Aft Flap Installation, TASK 27-51-12-400-801.

NOTE: It is necessary to do the aft flap adjustment after you install the aft flap.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-16-410-001

(1) Do this task: Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-16-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-16-860-002

(3) Retract the trailing edge flaps to the retracted position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

INBOARD FLAP SUPPORT FAIRING - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Inboard flap support fairing removal (Selection)

(2) Inboard flap support fairing installation (Selection)

(3) Inboard flap support forward fairing removal

(4) Inboard flap support forward fairing installation

(5) Inboard flap support aft fairing removal

(6) Inboard flap support aft fairing installation.

TASK 27-51-18-000-803

2. Inboard Flap Support Fairing Removal (Selection)

A. Location Zones

Zone	Area
542	Left Wing - Fairing Flap Support No. 3
642	Right Wing - Fairing Flap Support No. 6

B. Inboard Flap Support Fairing Removal (Selection)

SUBTASK 27-51-18-000-001

(1) Do one of these tasks to remove the applicable inboard flap support fairing:

(a) Do this task: Inboard Flap Support Forward Fairing Removal, TASK 27-51-18-000-801.

(b) Do this task: Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802.

——— END OF TASK ———

TASK 27-51-18-400-803

3. Inboard Flap Support Fairing Installation (Selection)

A. Location Zones

Zone	Area
542	Left Wing - Fairing Flap Support No. 3
642	Right Wing - Fairing Flap Support No. 6

B. Inboard Flap Support Fairing Installation (Selection)

SUBTASK 27-51-18-400-001

(1) Do one of these tasks to install the applicable inboard flap support fairing:

(a) Do this task: Inboard Flap Support Forward Fairing Installation, TASK 27-51-18-400-801.

(b) Do this task: Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802.

——— END OF TASK ———

TASK 27-51-18-000-801

4. Inboard Flap Support Forward Fairing Removal

(Figure 401)

A. General

(1) This task is applicable to the forward fairing on the No. 3 and No. 6 flap supports.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Inboard Flap Support Forward Fairing Removal

SUBTASK 27-51-18-040-001

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-18-020-001

(2) Remove the forward fairing [1]:

(a) Remove the bolts [5] that attach the forward end of the forward fairing [1].

(b) Support the forward fairing [1] and remove the bolts [3] and washers [4] that attach the forward fairing [1] to the fairing attach fitting [13].

(c) Lower the forward fairing [1] until you can get access to the nuts [11] on the jumper wires [23].

(d) Remove the nuts [11] and washers [12] that attach the jumper wires [23].

(e) Remove the forward fairing [1].

SUBTASK 27-51-18-020-002

(3) If it is necessary, remove the fairing attach fitting [13]:

(a) Remove the lockwires, bolts [8] and washers [9] that attach the fairing attach fitting [13] to the transmission attach fitting [10].

642	Right Wing - Fairing Flap Support No. 6

F. Inboard Flap Support Forward Fairing Installation

SUBTASK 27-51-18-420-001

(1) If it is not installed, install the fairing attach fitting [13] on the transmission attach fitting [10].

(a) Apply primer, C00259, to the mating surfaces of the shim [7].

(b) Put the fairing attach fitting [13] and shim [7] in their location on the transmission attach fitting [10].

(c) Apply compound, C00528, to the bolts [8].

(d) Install the bolts [8] and washers [9] to attach the fairing attach fitting [13].

(e) Install lockwire on the bolts [8].

SUBTASK 27-51-18-420-002

(2) Install the forward fairing [1].

(a) Connect the jumper wires [23] as follows:

1) Lift the forward fairing [1] until you can put the jumper wires [23] on the studs.

2) Install the washers [12] and nuts [11] to attach the jumper wires [23].

3) Apply sealant, A02315, to the nuts [11].

(b) Apply primer, C00259, to the mating surfaces of the shims [22] and shim [24].

(c) If previously removed, put the shims [22] or shim [24] in its position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Apply compound, C00528, to the bolts [3] and bolts [5].

(e) Install the bolts [3] and washers [4] to attach the forward fairing [1] to the fairing attach fitting [13].

1) Tighten the bolts [3] to 90 in-lb (10.2 N·m) - 125 in-lb (14.1 N·m).

(f) Install the bolts [5] to attach the forward end of the forward fairing [1].

1) Tighten the bolts [5] to 73 in-lb (8.25 N·m) - 77 in-lb (8.70 N·m).

SUBTASK 27-51-18-820-001

(3) Do this task: Inboard Flap Support Fairing Adjustment, TASK 27-51-18-820-801.

SUBTASK 27-51-18-390-001

(4) Fill the clearance between the front of the forward fairing [1] and the lower surface of the wing with sealant, A02315.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-18-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

——— END OF TASK ———

TASK 27-51-18-000-802

6. Inboard Flap Support Aft Fairing Removal

(Figure 401)

A. General

(1) This task is applicable to the aft fairing on the No. 3 and No. 6 flap supports.

E. Inboard Flap Support Aft Fairing Removal

SUBTASK 27-51-18-040-002

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-18-010-001

(3) Remove the tailcone [26] from the aft end of the aft fairing [2]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the bolts [25] that attach the tailcone [26] to the aft fairing [2].

(b) Remove the tailcone [26] from the aft fairing [2].

SUBTASK 27-51-18-010-002

(4) Remove the access cover [15] and access cover [21] from the forward end of the aft fairing [2]:

(a) These are the panels:

Number	Name/Location
542CL	Flap Support No. 3, Access Cover
542CR	Flap Support No. 3, Access Cover
642CL	Flap Support No. 6, Access Cover
642CR	Flap Support No. 6, Access Cover

(b) Remove the bolts [14] and washers [76] that attach the access cover [15] and access cover [21] to the aft fairing [2].

NOTE: The washers [76] are located under the access cover [15].

(c) Remove the access cover [15] and access cover [21].

SUBTASK 27-51-18-020-003

(5) Remove the aft fairing [2]:

(a) Disconnect the aft end of the aft fairing [2]:

1) Support the aft end of the aft fairing [2] while you remove the pin [41] and bolt [36].

2) Remove the pin [41], nut [40], washer [39], washer [37], bolt [36] and bushing [38] that attach the lower end of the attach beam [42] to the flap track [6].

3) Remove the pin [32], nut [31], washer [30], washer [28], bolt [27] and bushing [29] that attach the drive rod [34] to the main flap [33].

(b) Disconnect the forward end of the aft fairing [2]:

1) Remove the nut [20] and washer [19] from the pivot bolt [16].

2) Remove the pivot bolt [16], washer [17] and bushing [18] that attach the aft fairing [2] to the transmission attach fitting [10].

(c) Lower the aft fairing [2] until you can get access to the nuts [11] on the jumper wires [23].

NOTE: If the forward fairing has been removed (TASK 27-51-18-000-801), then the jumper wires [23] may have already been removed.

(d) Remove the nuts [11] and washers [12] that attach the jumper wires [23].

(e) Remove the jumper wires [23] from the studs.

(f) Lower the aft fairing [2].

SUBTASK 27-51-18-020-004

(6) If you will install a new aft fairing [2], remove the fairing drive linkage from the aft fairing [2]:

NOTE: The fairing drive linkage includes the drive rod [34], adjust link [35], adjust rod [43] and the attach beam [42].

(a) Remove the pin [55], nut [54], washer [53], washer [51], bolt [50] and bushing [52] that attach the adjust rod [43] to the aft fairing [2].

(b) Remove the adjust link [35] from the aft fairing [2]:

1) Remove the pin [60], nut [59] and washer [58] from the bolt [63].

2) Remove the bolt [63], washer [64], washer [65] and washer [56].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make a note of the quantity, thickness and location of the washer [56] and washer [65].

3) Remove the bushing [61] and bushing [62] from the aft fairing [2].

(c) Disconnect the drive rod [34] and adjust link [35] from the attach beam [42]:

1) Remove the pin [74], nut [73] and washer [72] from the bolt [67].

2) Remove the bolt [67], washer [68], washer [70], bushing [69], bushing [71] and washers [75].

a) Make a note of the quantity and location of the washer [68], washer [70] and washers [75].

(d) Remove the pin [49], nut [48], washer [47], washer [45], bolt [44] and bushing [46] that attach the adjust rod [43] to the adjust link [35].

——— END OF TASK ———

TASK 27-51-18-400-802

7. Inboard Flap Support Aft Fairing Installation

(Figure 401)

A. General

(1) This task is applicable to the aft fairing on the No. 3 and No. 6 flap supports.

642CR	Flap Support No. 6, Access Cover

G. Inboard Flap Support Aft Fairing Installation

SUBTASK 27-51-18-020-005

(1) If the fairing drive linkage is not installed on the aft fairing [2], do these steps:

NOTE: The fairing drive linkage includes the drive rod [34], adjust link [35], adjust rod [43] and the attach beam [42].

(a) Connect the adjust rod [43] to the adjust link [35]:

1) Install the bushing [46], bolt [44], washer [45], washer [47] and nut [48] that attach the adjust rod [43] to the adjust link [35].

a) For the left wing, install the bolt [44] with the head on the same side of the adjust link [35] as the bushing [46].

b) For the right wing, install the bolt [44] with the head on the opposite side of the adjust link [35] as the bushing [46].

2) Install the pin [49] in the nut [48].

(b) Connect the drive rod [34] and adjust link [35] to the attach beam [42]:

1) Put the adjust link [35] in its location on the attach beam [42] with the washers [75], bushing [69] and bushing [71].

a) Add washers [75] as necessary so that the total gap between the attach beam [42] and the adjust link [35] on each side is 0.02 in. (0.05 cm) or less (Figure 401).

NOTE: Maximum of two washers [75] on each side of the attach beam [42].

2) Put the drive rod [34] in its position on the attach beam [42].

3) Install the bolt [67], washer [68], washer [70], two washers [72] and nut [73].

4) Tighten the nut [73]:

a) Lubricate the threads of bolt [67] with grease, D00633.

b) Tighten the nut [73] to 175 ±25 in-lb (19.8 ±2.9 N·m).

5) Install the pin [74].

(c) Connect the adjust link [35] to the aft fairing [2]:

1) Put the adjust link [35] in its location on the aft fairing [2] with the washer [65], washer [66], washer [56], bushing [61] and bushing [62].

a) Install the same number of washers [65] and washers [56] in the same location as you removed.

2) Install the bolt [63], washer [64], washer [58] and nut [59].

3) Measure the clearance between the washer [58] and the flange on the bushing.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) If the clearance is not 0.010 in. (0.25 mm) to 0.025 in. (0.64 mm), change the location or the number of the washers [65] and washers [56]:
   a) Remove the nut [59], washer [58], washer [65], washer [56], washer [64], bolt [63], bushing [61] and bushing [62].
   b) Change the number or location of the washers [65] and washers [56].
      NOTE: These types of washers are made in different thicknesses. It may be necessary to choose a similar washer with a different thickness to achieve the proper gap.
   c) Install the bushing [61], bushing [62], bolt [63], washer [64], washers [65], washers [56], washer [58] and nut [59].
   d) Make sure the clearance between the washer [58] and the flange on the bushing [57] is in the limit of 0.010 in. (0.25 mm) to 0.025 in. (0.64 mm).
5) Install the pin [60] in the nut [59].

(d) Connect the adjust rod [43] to the aft fairing [2]:
1) Install the bushing [52], bolt [50], washer [51], washer [53] and nut [54] to attach the adjust rod [43] to the aft fairing [2].
2) Install the pin [55] in the nut [54].

SUBTASK 27-51-18-420-003

(2) Install the aft fairing [2]:

(a) Connect the jumper wires [23]:
1) Lift the forward end of the aft fairing [2] until you can put the jumper wires [23] on the studs.
2) Install the washers [12] and nuts [11] to attach the jumper wires [23].
   NOTE: The jumper wires from the forward fairing are attached to the same stud. You may need to remove the washers [12] and nuts [11] before you can install the jumper wires [23].
3) Apply sealant, A02315, to the nuts [11].

(b) Connect the forward end of the aft fairing [2] to the transmission attach fitting [10]:
1) Lift the forward end of the aft fairing [2] until it aligns with the transmission attach fitting [10].
2) Lubricate the pivot bolt [16] with grease, D00633, or grease, D00013.
3) Install the bushing [18], pivot bolt [16], washer [17], washer [19] and nut [20].
4) Lubricate the nut [20] with grease, D00633.
   a) Tighten the nut [20] to a torque tool set-point of 545 in-lb (61.6 N·m).

(c) Connect the aft end of the aft fairing [2]:
1) Move the attach beam [42] until it aligns with the flap track [6].
2) Lubricate the bolt [36] with grease, D00633, or grease, D00013.
3) Install the bushing [38], bolt [36], washer [37], washer [39] and nut [40].
4) Lubricate the threads of the bolt [36] with grease, D00633.
5) Tighten the nut [40] to 545 ±105 in-lb (61.6 ±11.9 N·m).
6) Install the pin [41] in the nut [40].
7) Align the drive rod [34] with the main flap [33].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

8) Install the bushing [29], bolt [27], washer [28], washer [30] and nut [31].

9) Install the pin [32] in the nut [31].

SUBTASK 27-51-18-820-002

(3) Do this task: Inboard Flap Support Fairing Adjustment, TASK 27-51-18-820-801.

SUBTASK 27-51-18-410-001

(4) Install the access cover [15] and access cover [21] on the forward end of the aft fairing [2]:

(a) These are the panels:

Number	Name/Location
542CL	Flap Support No. 3, Access Cover
542CR	Flap Support No. 3, Access Cover
642CL	Flap Support No. 6, Access Cover
642CR	Flap Support No. 6, Access Cover

(b) Put the washers [76], access cover [15] and access cover [21] in their locations on the aft aft fairing [2].

NOTE: The washers [76] are installed under the access cover [15] and access cover [21].

(c) Install the bolts [14] that attach the access cover [15] and access cover [21].

SUBTASK 27-51-18-010-003

(5) Install the tailcone [26] on the aft fairing [2]:

(a) Put the tailcone [26] in its location on the aft fairing [2].

(b) Install the bolts [25] that attach the tailcone [26].

(c) Fill and aerodynamically fair the clearance between the tailcone [26] and the aft fairing [2] with sealant, A02315.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-18-440-002

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(2) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

INBOARD FLAP SUPPORT FAIRING - ADJUSTMENT/TEST

1. General

A. This procedure has a task to do the adjustment of the outboard flap support fairings for the inboard flap.

TASK 27-51-18-820-801

2. Inboard Flap Support Fairing Adjustment

(Figure 501)

A. General

(1) This task is applicable to the flap support fairing at supports No. 3 and 6.

B. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)

27-51-18-400-801	Inboard Flap Support Forward Fairing Installation (P/B 401)

C. Consumable Materials

Reference	Description	Specification
A02315	Sealant - Low Density, Synthetic Rubber. 2 Part	BMS5-142 Type II
C00259	Coating - Chemical And Solvent Resistant Finish, Corrosion Inhibiting Primer	BMS10-11 Type I

D. Location Zones

Zone	Area
542	Left Wing - Fairing Flap Support No. 3
642	Right Wing - Fairing Flap Support No. 6

E. Prepare for the Adjustment

SUBTASK 27-51-18-860-001

(1) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-18-040-003

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Inboard Flap Outboard Aft Fairing Adjustment

SUBTASK 27-51-18-220-001

(1) Measure the clearance between the top surface of the aft fairing [3] and the aft edge of the inboard flap [1].

(a) Measure the clearance at the aft edge of the inboard flap [1] to the aft fairing [3].

(b) Make sure the clearance is in the limit of 0.2884 ±0.0500 in. (7.325 ±1.270 mm).

1) Make sure the aft seal [5] is compressed 20 to 40 percent.

(c) Make sure the clearance is approximately the same on the inboard and outboard sides of the aft fairing [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Measure the clearance between the inboard and outboard sides of the aft fairing [3] to the lower surface of the wing and inboard flap [1].

1) Make sure the clearance is in the limit of 0.6000 in. (15.240 mm) to 0.3000 in. (7.620 mm).

2) Do adjustment below to achieve a continuous trailing edge seal compression of 0.02 in. (0.51 mm) to 0.07 in. (1.78 mm).

SUBTASK 27-51-18-820-003

(2) If the clearance is not in the limit, or if it is not the same on the inboard and outboard sides, adjust the position of the aft fairing [3]:

(a) Remove the bolts [6] and remove the tail cone [4] from the aft fairing [3].

(b) If the clearance is not the same on the inboard and outboard sides, adjust the length of the adjust rod [11]:

1) Loosen the locknuts [10] on the adjust rod [11].

2) Adjust the length of the adjust rod [11] until the clearance is the same on the inboard and outboard sides of the aft fairing [3].

3) Tighten the locknuts [10] on the adjust rod [11] to 95 in-lb (10.7 N·m) - 160 in-lb (18.1 N·m).

4) Install lockwire on the locknuts [10].

(c) If the clearance is not in the limit, adjust the length of the drive rod [8]:

1) Loosen the locknuts [7] on the drive rod [8].

2) Adjust the length of the drive rod [8] until the clearance is in the limit.

3) Tighten the locknuts [7] on the drive rod [8] to 95 in-lb (10.7 N·m) - 160 in-lb (18.1 N·m).

4) Install lockwire on the locknuts [7].

(d) Make sure the clearance is in the limit and it is the same on the inboard and outboard sides of the aft fairing [3].

SUBTASK 27-51-18-220-002

(3) Make sure the seals [18] on the sides of the aft fairing [3] are compressed evenly against the lower surface of the inboard flap [1].

SUBTASK 27-51-18-820-004

(4) If the seals [18] are not compressed evenly against the lower surface of the inboard flap [1], adjust the position of the seals [18]:

(a) Remove the pin [17], nut [16], washer [15], washer [13], bolt [12] and bushing [14] that attach the drive rod [8] to the inboard flap [1].

(b) Lower the aft end of the aft fairing [3] to get access to the fasteners for the seals [18].

(c) Loosen the nuts [19] on the retainer [20].

(d) Move the seal [18] and the retainer [20].

1) Make sure you move the seal [18] and the retainer [20] together as a unit.

(e) Tighten the nuts [19] that hold the retainer [20].

(f) Lift the aft end of the aft fairing [3] to align the drive rod [8] with the inboard flap [1].

(g) Install the bushing [14], bolt [12], washer [13], washer [15] and nut [16].

(h) Install the pin [17] in the nut [16].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Inboard Flap Outboard Forward Fairing Adjustment

SUBTASK 27-51-18-220-003

(1) Measure the mismatch between the forward fairing [2] and the aft fairing [3].

(a) Measure the mismatch on the inboard side and on the bottom of the forward fairing [2].

(b) Make sure the mismatch is in the limit of 0.03 in. (0.76 mm) to -0.01 in. (-0.25 mm).

NOTE: A positive (+) mismatch is when the forward fairing [2] extends past the aft fairing [3]. A negative (-) mismatch is when the aft fairing [3] extends past the forward fairing [2].

SUBTASK 27-51-18-220-004

(2) Make sure the seals [26] on the sides of the forward fairing [2] are compressed evenly against the lower surface of the wing.

SUBTASK 27-51-18-020-006

(3) If the mismatch is not in the limit or if the seals [26] are not compressed evenly, do this task: Inboard Flap Support Forward Fairing Removal, TASK 27-51-18-000-801.

SUBTASK 27-51-18-820-005

(4) If the mismatch between the forward fairing [2] and the aft fairing [3] is not in the limit, then adjust the position of the forward fairing [2]:

(a) If the mismatch is not in the limit on the inboard side of the forward fairing [2], adjust the position of the fairing attach fitting [24]:

1) Loosen the bolts [23] that attach the fairing attach fitting [24] to the transmission attach fitting [21].

2) Move the fairing attach fitting [24] inboard or outboard to get the mismatch in the limit.

3) Tighten the bolts [23] to 97 in-lb (11 N·m) - 103 in-lb (12 N·m).

(b) If the mismatch is not in the limit on the bottom of the forward fairing [2], change the thickness of the shims [25].

1) Apply primer, C00259, to the mating surfaces of the shims [25] and the fairing attach fitting [24].

(c) Fill and aerodynamically fair between the forward fairing [2] and the wing skin.

SUBTASK 27-51-18-820-006

(5) If the seals [26] are not compressed evenly against the lower surface of the wing, adjust the position of the seals [26]:

(a) Loosen the nuts [27] on the retainer [28].

(b) Move the seal [26] and the retainer [28].

1) Make sure you move the seal [26] and the retainer [28]] together as a unit.

(c) Tighten the nuts [27] that hold the retainer [28] to 24 in-lb (3 N·m) - 26 in-lb (3 N·m).

SUBTASK 27-51-18-420-004

(6) If you removed the forward fairing [2], do this task: Inboard Flap Support Forward Fairing Installation, TASK 27-51-18-400-801.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-18-010-004

(1) Install the tail cone [4] on the aft fairing [3]:

(a) Put the tail cone [4] in its location on the aft fairing [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Install the bolts [6] that attach the tail cone [4].

(c) Fill and aerodynamically fair the clearance between the tail cone [4] and the aft fairing [3] with sealant, A02315.

SUBTASK 27-51-18-440-003

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

——— END OF TASK ———

OUTBOARD TRAILING EDGE FLAP - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of outboard trailing edge flap

(2) An installation of outboard trailing edge flap

(3) A removal of outboard trailing edge flap seal

(4) An installation of outboard trailing edge flap seal.

B. This procedure includes the removal and installation of the main flap with the aft flap. You can remove and install the main flap with the aft flap either removed or installed. For procedures to remove and install the aft flap only, refer to OUTBOARD AFT FLAP - REMOVAL/INSTALLATION, PAGEBLOCK 27-51-22/401.

C. The outboard main flap and aft flap together weigh approximately 388 lb (176 kg). The main flap alone weighs approximately 341 lb (155 kg).

D. Several people are necessary to support the flap during flap replacement and manual flap extension and retraction.

TASK 27-51-21-000-801

SUBTASK 27-51-21-010-001

(1) Do this task: Outboard Flap Outboard Support Aft Fairing Removal, TASK 27-51-28-000-803.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-21-010-002

(2) Do this task: Outboard Flap Inboard Support Aft Fairing Removal, TASK 27-51-28-000-805.

F. Outboard Trailing Edge Flap Removal

SUBTASK 27-51-21-010-006

(1) Manually retract the trailing edge flap enough to get access to the bolt [43] and bolt [33A] (TASK 27-51-00-980-801).

NOTE: During the manual operation of the trailing edge flap it is not necessary to do trailing edge flap system reactivation.

SUBTASK 27-51-21-010-007

(2) On the inboard track [53], remove the bolt [43], nut [45], and washers [44] under the bolt [43] (View H, Figure 401).

NOTE: The roller can block access to the bolt and therefore it is recommended to remove this bolt before extending flaps to the stops on the jackscrews.

SUBTASK 27-51-21-010-008

(3) On the outboard track [41], remove the bolt [33A], nut [35], and washers [34] under the bolt [33A] (View F, Figure 401).

NOTE: The roller can block access to the bolt and therefore it is recommended to remove this bolt before extending flaps to the stops on the jackscrews.

SUBTASK 27-51-21-010-009

(4) Extend the trailing edge flap to the stops on the jackscrews (Trailing Edge Flap System Manual Operation, TASK 27-51-00-980-801).

SUBTASK 27-51-21-020-001

(5) Disconnect the skew control rod [3] from the inboard and outboard carriage [13]:

(a) Remove the nut [18], washer [17], bushing [16], washer [15], and bolt [14] that attach the skew control rod [3] to the carriage [13].

(b) Move the skew control rod [3] away from the carriage [13].

SUBTASK 27-51-21-020-002

(6) Disconnect the aft flap drive rods [11] from the inboard and outboard drive rod attach fittings [10]:

(a) Remove the nut [8], washer [7], washer [5], bolt [4], and bushing [6] that attach the aft flap drive rod [11] to the drive rod attach fitting [10].

NOTE: The aft flap will move down approximately 2 in. (51 mm) when you remove the bolts.

(b) Move the aft flap drive rod [11] away from the drive rod attach fittings [10].

SUBTASK 27-51-21-010-003

(7) Remove the leading edge skin panel [55] from the main flap [1] forward of the inboard carriage [13]:

(a) These are the panels:

Number	Name/Location
567BT	Flap, Forward Carriage Bearing And Fitting
667BT	Flap, Forward Carriage Bearing And Fitting

(b) Remove the bolts [56] that attach the leading edge skin panel [55].

(c) Remove the leading edge skin panel [55] from the main flap [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-21-480-001

(8) Install the sling [72] (sling, SPL-1729) on the main flap [1] (Figure 402):

(a) Remove the bolts [74] at the inboard end and outboard ends of the main flap [1].

NOTE: The bolts are located along the rear spar, above the inboard and outboard carriages.

(b) Remove the bolts [75] at the front spar on the main flap [1].

(c) Install the sling fittings [71] in the location of the bolts [74] and bolts [75].

(d) Connect the sling [72] (sling, SPL-1729) to the 30 foot height (2000 lb capacity) lift crane, STD-1095.

(e) Use the sling [72] (sling, SPL-1729) to hold the weight of the outboard flap.

SUBTASK 27-51-21-020-003

(9) Remove the stop fittings from the flap tracks (Figure 401):

(a) On the outboard track [41], remove the roller stop [32], roller stop [42], and fairing attach fitting [36]:

1) Remove the nuts [40], washers [39], washers [38], and bolts [37] that attach the roller stop [32], roller stop [42], and fairing attach fitting [36] to the outboard track [41].

2) Remove the roller stop [32] and roller stop [42] from the outboard track [41].

3) Remove the nuts [35], washers [34] under the bolts [33], and bolts [33] that attach the fairing attach fitting [36] to the outboard track [41].

4) Remove the fairing attach fitting [36] from the outboard track [41].

(b) On the inboard track [53], remove the roller stop [46], roller stop [54], and fairing attach fitting [51]:

1) Remove the nuts [50], washers [49], washers [48], and bolts [47] that attach the roller stop [46], roller stop [54], and fairing attach fitting [51] to the inboard track [53].

2) Remove the roller stop [46] and roller stop [54] from the inboard track [53].

3) Remove the nuts [45], washers [44] under the bolts [52], and bolts [52] that attach the fairing attach fitting [51] to the inboard track [53].

4) Remove the fairing attach fitting [51] from the inboard track [53].

SUBTASK 27-51-21-020-004

(10) Remove the main flap [1]:

(a) Hold the weight of the main flap [1] with the sling [72] (sling, SPL-1729).

(b) Disconnect the carriages [13] from the gimbals [20]:

1) Install a support to hold the ballscrews [19] and gimbals [20] when they are disconnected from the carriages [13].

2) Remove the nuts [24], washers [23], and bolts [22] from the carriages [13].

3) Remove the inboard carriage bushings [27] and outboard carriage bushings [21] from the gimbals [20] and carriages [13].

(c) Move the gimbals [20] away from the carriages [13].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

BE CAREFUL WHEN YOU LOWER THE FLAP TO THE GROUND. YOU CAN CAUSE DAMAGE TO THE TRAILING EDGE OF THE FLAP.

(d) Use the sling [72] (sling, SPL-1729) and 30 foot height (2000 lb capacity) lift crane, STD-1095, to move the main flap [1] aft and down away from the tracks.

SUBTASK 27-51-21-220-001

(11) Measure and record the thickness of the shims [95] at the outboard carriage [96] and inboard carriage [101] (Figure 403).

NOTE: You will use this dimension during the installation.

——— END OF TASK ———

G. Prepare for the Installation

SUBTASK 27-51-21-220-002

(1) If you will install a different flap than the one you removed, do a check of the thickness of the shims [95] on the inboard carriage [101] and outboard carriage [96].

NOTE: There is no mismatch, or alignment dimension to fixed structure that the flap is adjusted to meet. The flap shims [95] can be changed from the nominal dimension to meet lateral trim tolerances.

(a) Make sure that the thickness of the shims [95] is the same as it was on the previous flap.

1) If you do not know the original thickness of the shims [95], change the thickness to the nominal dimension.

NOTE: The left hand flap carriage shim pack thicknesses are 0.188 in. (4.78 mm) and the right hand flap carriage shim pack thicknesses are 0.313 in. (7.95 mm).

SUBTASK 27-51-21-820-001

(2) If the shims [95] are not the correct thickness, then change the thickness of the shims [95] on the inboard carriage [101] and outboard carriage [96].

(a) At the outboard carriage [96], change the thickness of the shims [95]:

1) Remove the nuts [94], washers [93], and bolts [92] that attach the aft link fitting [91] to the outboard carriage [96].

2) Add or remove shims [95] between the aft link fitting [91] and outboard carriage [96] to get the correct shim thickness.

3) Apply sealant, A00247, to the mating surfaces of the shims [95].

4) Put the shims [95] in their location between the aft link fitting [91] and outboard carriage [96].

NOTE: The left hand flap carriage shim pack thicknesses are 0.188 in. (4.78 mm), the right hand flap carriage shim pack thicknesses are 0.313 in. (7.95 mm).

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

5) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [92].

6) Install the bolts [92], washers [93], and nuts [94] that attach the aft link fitting [91] to the outboard carriage [96].

(b) At the inboard carriage [101], change the thickness of the shims [95]:

1) Remove the nuts [100], washers [99], and bolts [98] that attach the aft link fitting [97] to the inboard carriage [101].

2) Add or remove shims [95] between the aft link fitting [97] and inboard carriage [101] to get the correct shim thickness.

3) Apply sealant, A00247, to the mating surfaces of the shims [95].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Put the shims [95] in their location between the aft link fitting [97] and inboard carriage [101].

NOTE: The left hand flap carriage shim pack thicknesses are 0.188 in. (4.78 mm), the right hand flap carriage shim pack thicknesses are 0.313 in. (7.95 mm).

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

5) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [98].

6) Install the bolts [98], washers [99], and nuts [100] that attach the aft link fitting [97] to the inboard carriage [101].

SUBTASK 27-51-21-020-005

(3) Remove the outboard deflection control roller assembly [29] from the rib [28] (Figure 401):

(a) Remove these access panels, below the roller assembly [29]:

Number	Name/Location
571AB	Lower Outboard Fixed Trailing Edge Access Panel at Deflector Rib
671AB	Lower Outboard Fixed Trailing Edge Access Panel

(b) Remove the bolts [30] and washers [31] that attach the deflection control roller assembly [29] to the rib [28].

(c) Remove the deflection control roller assembly [29] from the rib [28].

SUBTASK 27-51-21-010-004

(4) If it is installed, remove the leading edge skin panel [55] from the main flap [1] forward of the inboard carriage [13]:

NOTE: This panel comes very close to the outboard track when you engage the inboard carriage.

(a) These panels are:

Number	Name/Location
567BT	Flap, Forward Carriage Bearing And Fitting
667BT	Flap, Forward Carriage Bearing And Fitting

(b) Remove the bolts [56] that attach the leading edge skin panel [55].

(c) Remove the leading edge skin panel [55] from the main flap [1].

SUBTASK 27-51-21-020-006

(5) Make sure that the stop fittings are not installed on the flap tracks.

SUBTASK 27-51-21-480-002

(6) If it is not installed, install the sling [72] (sling, SPL-1729) on the main flap [1] (Figure 402):

(a) Remove the bolts [75] at the front spar on the main flap [1].

(b) Remove the bolts [74] at the inboard end and outboard ends of the main flap [1].

NOTE: The bolts are located along the rear spar, above the inboard and outboard carriages.

(c) Install the sling fittings [71] in the location of the bolts [74] and bolts [75].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Connect the sling [72] (sling, SPL-1729) to the 30 foot height (2000 lb capacity) lift crane, STD-1095.

H. Outboard Trailing Edge Flap Installation

SUBTASK 27-51-21-420-001

(1) Install the main flap [1] (Figure 401):

> **CAUTION** BE VERY CAREFUL WHEN YOU LIFT THE OUTBOARD FLAP FROM THE GROUND. YOU CAN CAUSE DAMAGE TO THE TRAILING EDGE OF THE FLAP.

(a) Use the sling [72] (sling, SPL-1729) and 30 foot height (2000 lb capacity) lift crane, STD-1095, to move the main flap [1] up into its position aft of the main tracks.

(b) If the aft flap [2] is installed, make sure that it is in the extended position.

(c) Engage the rollers on the carriages [13] with the outboard track [41] and inboard track [53].

1) Engage the rollers for the outboard carriage [13] with the outboard track [41] before you engage the rollers for the inboard carriage [13].

NOTE: The installation is easier if the rollers for the outboard carriage start to engage the outboard track before the rollers for the inboard carriage.

(d) Use the sling [72] (sling, SPL-1729) to move the main flap [1] up and forward on the flap tracks until the carriages [13] align with the gimbals [20].

(e) Connect the carriages [13] to the gimbals [20]:

1) Remove the support from the ballscrew [19] and move the gimbal [20] to its position in the carriage [13].

2) On the left wing, make sure that the ball returns [25] on the ballscrew nuts [26] are outboard.

3) On the right wing, make sure that the ball returns [25] on the ballscrew nut [26] are inboard.

NOTE: This is the recommended position for maintenance.

(f) Install the carriage bushing [21] and carriage bushing [27] to attach the gimbal [20] to the carriage [13].

> **CAUTION** MAKE SURE THAT THE CARRIAGE BUSHINGS ALIGN WITH THE CARRIAGE BEFORE YOU INSTALL THE BOLTS. IF THEY DO NOT ALIGN, THE THREADS ON THE BOLTS CAN CAUSE DAMAGE TO THE CARRIAGE BUSHINGS.

(g) Turn the carriage bushing [21] and carriage bushing [27] in the carriage [13] to make sure that the groove aligns with the bolt hole.

(h) Install the bolts [22], washers [23], and nuts [24] to hold the carriage bushing [21] and carriage bushing [27] in the carriage [13].

(i) Tighten the nuts [24] to 70 ±5 in-lb (8 ±1 N·m) more than the run-on torque.

SUBTASK 27-51-21-420-002

(2) Install the stop fittings on the flap tracks:

(a) On the outboard track [41], install the roller stop [32], roller stop [42], and fairing attach fitting [36]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

1) Apply Cor-Ban 27L Compound, G50237, to the mating surfaces of the fairing attach fitting [36], roller stop [32], and roller stop [42].
2) Put the roller stop [32], roller stop [42], and fairing attach fitting [36] in their positions on the outboard track [41].
   a) Make sure that the roller stop [32] and roller stop [42] touch the web of the outboard track [41].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

3) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [33] and bolts [37].
4) Install the bolts [37], washers [38], washers [39], and nuts [40] that attach the roller stop [32], roller stop [42], and fairing attach fitting [36] to the outboard track [41].
5) Apply Cor-Ban 27L Compound, G50237, for faying surface sealing for the roller stop [32], roller stop [42], and fairing attach fitting [36] to the outboard track [41].
6) Install the bolts [33], nuts [35], and washers [34] under the bolts [33] that attach the fairing attach fitting [36] to the outboard track [41].
   a) Install the washers [34] with the countersunk outside diameter against the outboard track [41].

      NOTE: Do not install the bolt [33A] with its washers and nut this time. The roller can block access to the bolt [33A].
7) Apply Cor-Ban 27L Compound, G50237, for faying surface sealing for the fairing attach fitting [36] to the outboard track [41].

(b) On the inboard track [53], install the roller stop [46], roller stop [54], and fairing attach fitting [51]:

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

1) Apply Cor-Ban 27L Compound, G50237, to the mating surfaces of the fairing attach fitting [51], roller stop [46], and roller stop [54].
2) Put the roller stop [46], roller stop [54], and fairing attach fitting [51] in their positions on the inboard track [53].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure that the roller stop [46] and roller stop [54] touch the web of the inboard track [53].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

3) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [47], bolts [52], and bolt [43].

4) Install the bolts [47], washers [48], washers [49], and nuts [50] that attach the roller stop [46], roller stop [54], and fairing attach fitting [51] to the inboard track [53].

5) Apply Cor-Ban 27L Compound, G50237, for faying surface sealing for the roller stop [46], roller stop [54], and fairing attach fitting [51] to the inboard track [53].

6) Install the bolts [52], nuts [45], and washers [44] under the bolt [52] that attach the fairing attach fitting [51] to the inboard track [53].

a) Install the washers [44] with the countersunk outside diameter against the inboard track [53].

NOTE: Do not install the bolt [43] with its washers and nut this time. The roller can block access to the bolt [43].

7) Apply Cor-Ban 27L Compound, G50237, for faying surface sealing for the fairing attach fitting [51] to the inboard track [53].

SUBTASK 27-51-21-080-001

(3) Remove the sling [72] (sling, SPL-1729) from the main flap [1] (Figure 402):

(a) Disconnect the sling [72] (sling, SPL-1729) from the 30 foot height (2000 lb capacity) lift crane, STD-1095.

(b) Disconnect the sling [72] (sling, SPL-1729) from the sling fittings [71].

(c) Remove the sling fittings [71] from the main flap [1].

(d) Apply compound, C00528, to the holes for the bolts [74] and bolts [75] in the main flap [1].

(e) Install the bolts [74] at the inboard and outboard ends of the main flap [1].

(f) Install the bolts [75] at the front spar of the main flap [1].

SUBTASK 27-51-21-410-001

(4) Install the leading edge skin panel [55] on the main flap [1] forward of the inboard carriage [13]:

(a) These panels are:

Number	Name/Location
567BT	Flap, Forward Carriage Bearing And Fitting
667BT	Flap, Forward Carriage Bearing And Fitting

(b) Put the leading edge skin panel [55] in its location on the leading edge of the main flap [1].

(c) Apply compound, C00528, to the holes for the bolts [56].

(d) Install the bolts [56] to attach the leading edge skin panel [55].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Apply sealant, A00247, to fill all of the clearances around the leading edge skin panel [55] that are more than 0.05 in. (1.27 mm).

SUBTASK 27-51-21-420-003

(5) Connect the aft flap drive rods [11] to the drive rod attach fitting [10] (Figure 401):

(a) Move the aft flap drive rod [11] to its position on the drive rod attach fitting [10].

(b) Apply a layer of grease, D00633, to the inside of the bushing [6] and shank of the bolt [4].

(c) Install the bushing [6], bolt [4], and washer [5] to attach the aft flap drive rod [11] to the drive rod attach fitting [10].

1) Install the bolt [4] with the head on the inboard side.

(d) Carefully clean the grease, D00633, from the threads of the bolt [4].

(e) Install the washer [7] and nut [8] on the bolt [4].

(f) Tighten the nut [8] to 50 in-lb (5.6 N·m) to 80 in-lb (9.0 N·m).

(g) Install the pin [9] in the nut [8].

SUBTASK 27-51-21-420-004

(6) Connect the skew control rods [3] to the inboard carriage [13] and outboard carriage [13]:

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [14].

(b) Move the skew control rod [3] to its position on the carriage [13].

(c) Install the bolts [14], washers [15], bushings [16], washers [17], and nuts [18] that attach the skew control rods [3] to the carriages [13].

1) Install the bolts [14] with the heads toward the center of the track.

SUBTASK 27-51-21-010-010

(7) Manually retract the trailing edge flap enough to get access to the holes for the bolt [43] and bolt [33A] (TASK 27-51-00-980-801).

SUBTASK 27-51-21-420-010

(8) On the inboard track [53], install the bolt [43], nut [45], and washers [44] under the bolt [43] (View H, Figure 401).

SUBTASK 27-51-21-420-011

(9) On the outboard track [41], install the bolt [33A], nut [35], and washers [34] under the bolt [33A] (View F, Figure 401).

SUBTASK 27-51-21-440-005

(10) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-21-820-002

(11) Do this task: Outboard Trailing Edge Flap Adjustment, TASK 27-51-21-820-801.

NOTE: This task will include the installation of the deflection control roller assembly and fairings.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-21-410-002

(1) Install these access panels, below the roller assembly [29]:

Number	Name/Location
571AB	Lower Outboard Fixed Trailing Edge Access Panel at Deflector Rib
671AB	Lower Outboard Fixed Trailing Edge Access Panel

SUBTASK 27-51-21-440-001

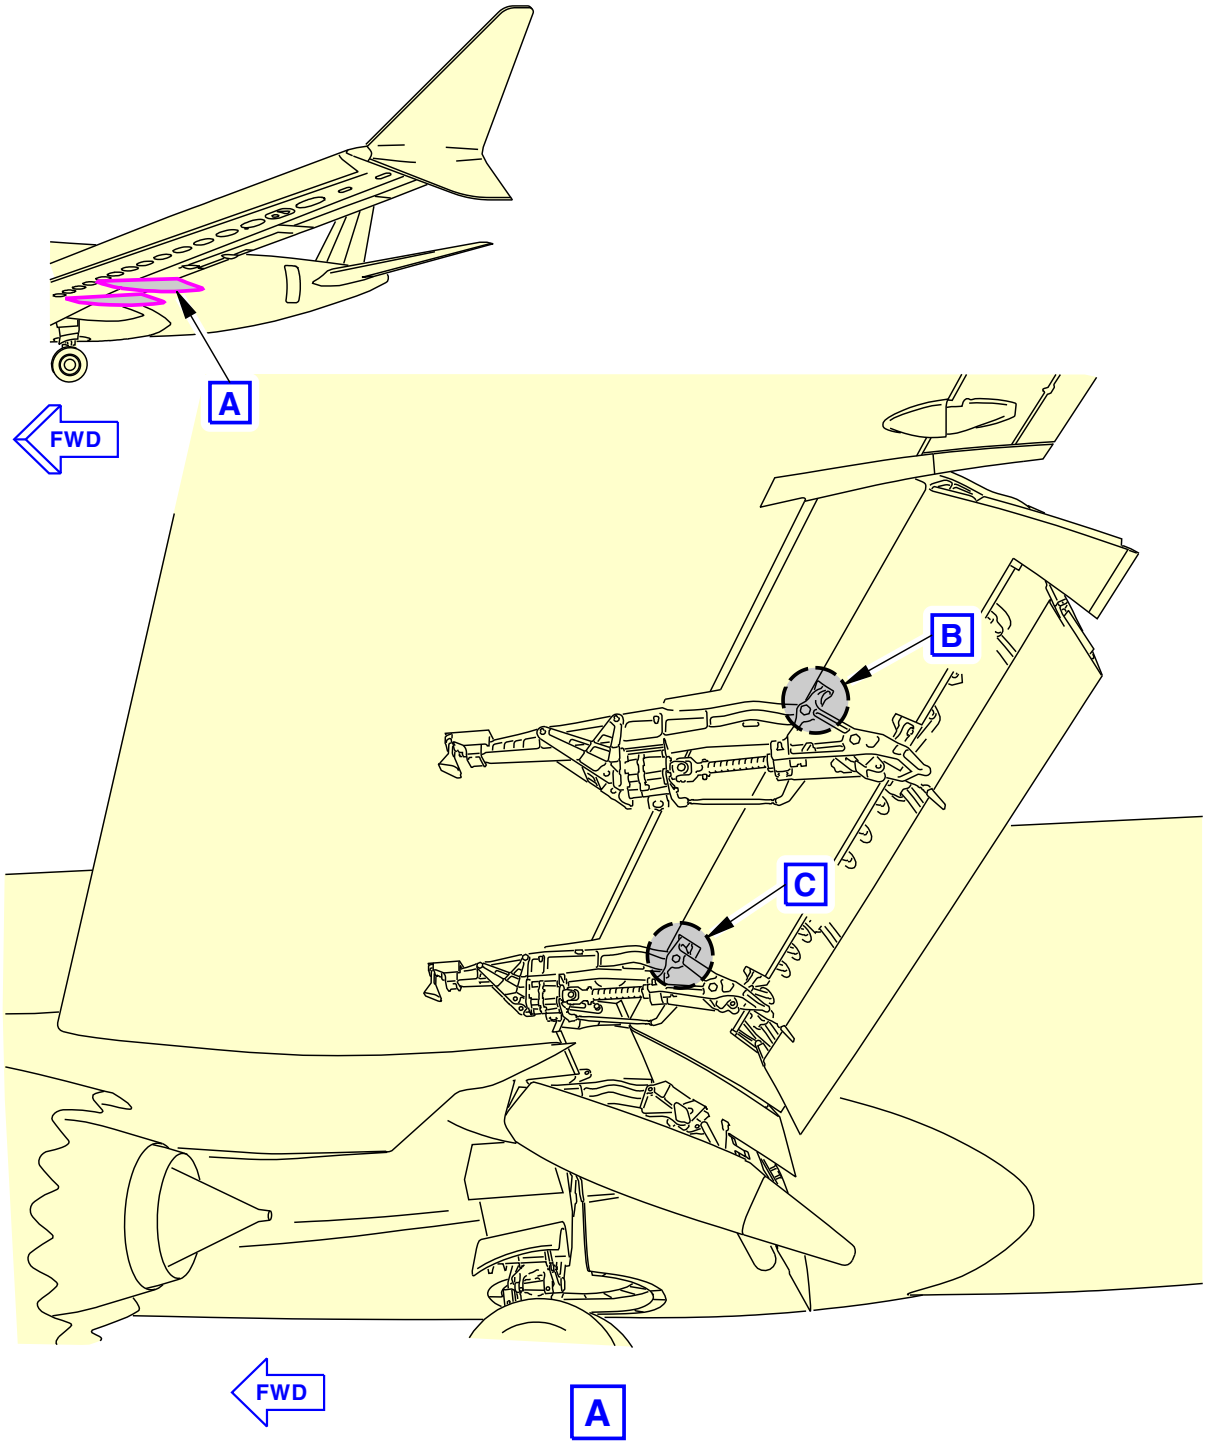
(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-21-860-002

(3) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details



2412886 S00061531495_V1

Outboard Trailing Edge Flap Shim Adjustment

TASK 27-51-21-000-802

4. Outboard Trailing Edge Flap Outer Seal Removal

(Figure 404)

A. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)
27-51-00-860-803	Extend the Trailing Edge Flaps (P/B 201)
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

B. Location Zones

Zone	Area
567	Left Wing - Outboard Flap
667	Right Wing - Outboard Flap

C. Prepare for the Removal

SUBTASK 27-51-21-860-008

(1) Extend the trailing edge flaps to the 15-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-21-040-003

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

D. Outboard Trailing Edge Flap Outer Seal Removal

WARNING MAKE SURE THAT THE GROUND LOCKS ARE INSTALLED IN ALL OF THE LANDING GEAR. WITHOUT THE GROUND LOCKS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

SUBTASK 27-51-21-480-003

(1) If the downlock pins are not installed in the nose and main landing gear, do applicable steps in this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-21-020-008

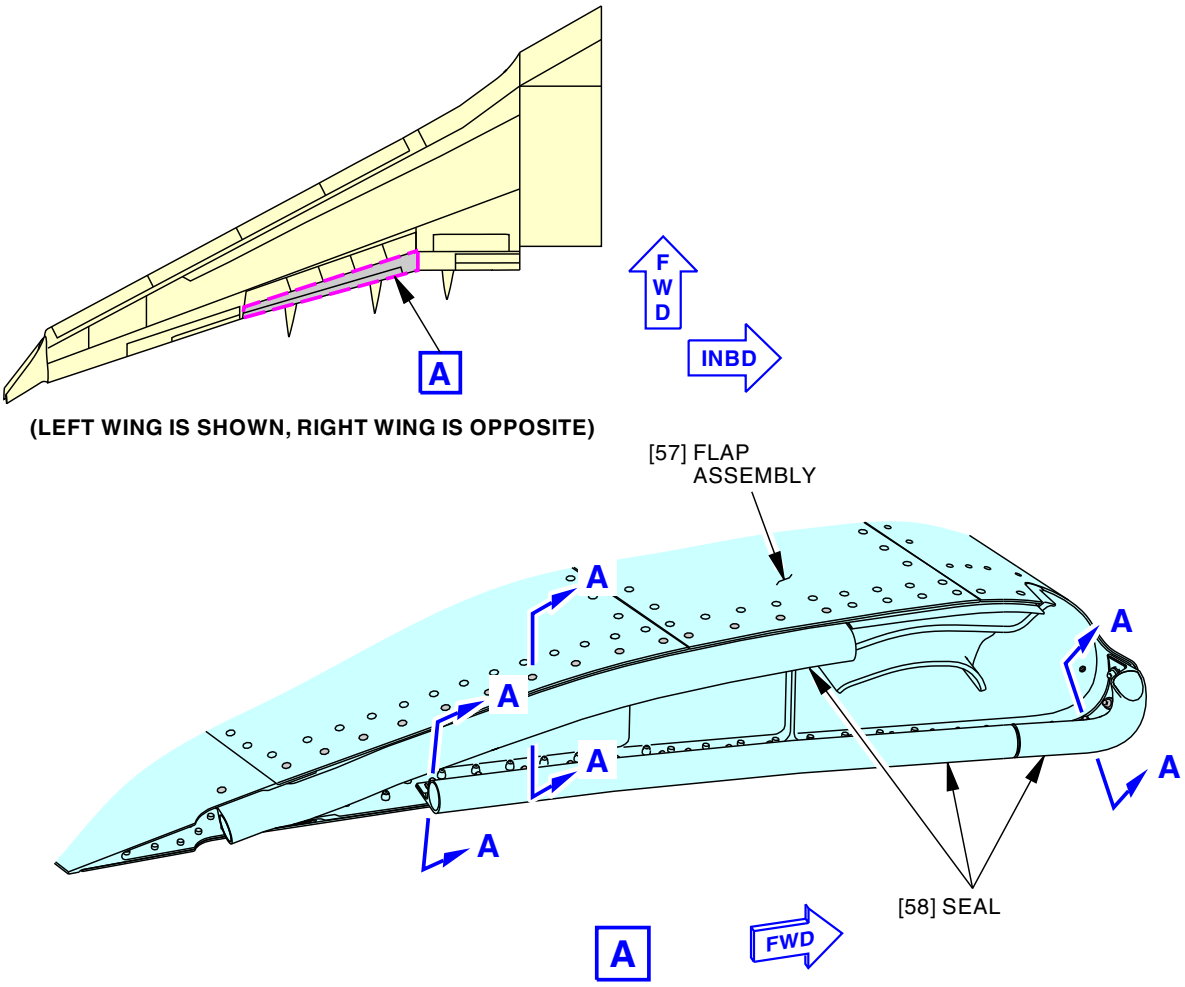
(2) Do these steps to remove the seal [58]:

(a) Remove the screws [62] and seal retainer [65] that attach the seal [58] to the flap assembly [57].

(b) Remove the seal [58] from the flap assembly [57].

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details



Outboard Trailing Edge Flap Outer Seal Installation
Figure 404/27-51-21-990-808

A00027	Adhesive - Silicone Rubber, 1 Part, RTV	BAC5010 Type 60

C. Location Zones

Zone	Area
567	Left Wing - Outboard Flap
667	Right Wing - Outboard Flap

D. Outboard Trailing Edge Flap Outer Seal Installation

SUBTASK 27-51-21-420-005

(1) Do these steps to install the seal [58].

(a) Put the seal [58] on the flap assembly [57].

(b) Apply adhesive, A00027, between the forward and lower seal [58].

(c) Install the screws [62] and seal retainer [65] that attach the seal [58] to the flap assembly [57].

(d) Tighten the screws [62].

NOTE: Tighten the fastener until the seal [58] starts to visibly compress and clamps to the seal retainer.

E. Put the Airplane Back to Its Condition

SUBTASK 27-51-21-440-003

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-21-860-009

(2) Retract the flaps to the retracted position (TASK 27-51-00-860-804).

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD TRAILING EDGE FLAP - ADJUSTMENT/TEST

1. General

A. This procedure has this task:

(1) An adjustment of the outboard trailing edge flap.

TASK 27-51-21-820-801

2. Outboard Trailing Edge Flap Adjustment

(Figure 501, Figure 502, Figure 503, and Figure 504)

A. General

(1) This task includes the adjustment of the main flap with the aft flap either removed or installed.

(2) The adjustment instructions included in this task are included in the Rigging Diagram - Inbd and Outbd Flaps, Wing Trailing Edge 113A3017.

E. Access Panels

Number	Name/Location
571AB	Lower Outboard Fixed Trailing Edge Access Panel at Deflector Rib
671AB	Lower Outboard Fixed Trailing Edge Access Panel

F. Prepare for the Adjustment

SUBTASK 27-51-21-860-003

(1) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-21-040-002

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-21-010-005

(3) Remove the aft fairings from the flap supports:

(a) Do this task: Outboard Flap Outboard Support Aft Fairing Removal, TASK 27-51-28-000-803.

(b) Do this task: Outboard Flap Inboard Support Aft Fairing Removal, TASK 27-51-28-000-805.

SUBTASK 27-51-21-020-007

(4) Remove the outboard deflection control roller assembly [2] from the rib [1] (Figure 501):

(a) Remove or open the applicable access panels below the deflection control roller assembly:

Number	Name/Location
571AB	Lower Outboard Fixed Trailing Edge Access Panel at Deflector Rib
671AB	Lower Outboard Fixed Trailing Edge Access Panel

(b) Remove the bolts [3] and washers [4] that attach the deflection control roller assembly [2] to the rib [1].

(c) Remove the deflection control roller assembly [2] from the rib [1].

G. Outboard Trailing Edge Flap Adjustment

NOTE: There is no mismatch, or alignment dimension to fixed structure that the flap is adjusted to meet. The flap shims can be changed from the nominal to meet lateral trim tolerances.

SUBTASK 27-51-21-220-003

(1) If a different flap was installed, adjust the thickness of the shims [65] to the same thickness as the original flap.

NOTE: The thickness of the shims on the original flap may have been adjusted for lateral trim (TASK 27-09-71-820-801).

(a) If the original thickness of the shims [65] is unknown, change the thickness to the nominal dimension.

NOTE: The nominal thickness of the shims is 0.188 in. (4.78 mm) left wing, 0.313 in. (7.95 mm) right wing.

SUBTASK 27-51-21-210-001

(2) On the inboard and outboard carriages [43], make sure that three of the four main track rollers [44] touch the flap track [45] (Figure 502).

NOTE: If three of the four main track rollers cannot touch the flap track, it is permitted for the two forward rollers, or the two aft rollers to touch.

SUBTASK 27-51-21-820-003

(3) If it is necessary, adjust the position of the main flap [6] (Figure 503):

NOTE: To adjust the position of the main flap, the thickness of the shims will be changed at the aft link fitting [61] and aft link fitting [67] on the inboard and outboard carriages.

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(d) At the outboard carriage [66], change the thickness of the shims [65]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Remove the nuts [64], washers [63], and bolts [62] that attach the aft link fitting [61] to the outboard carriage [66].
2) Add or remove shims [65] between the aft link fitting [61] and outboard carriage [66] to get the correct shim thickness.
3) Apply sealant, A00247, to the mating surfaces of the shims [65].
4) Put the shims [65] in their location between the aft link fitting [61] and outboard carriage [66].

   NOTE: The nominal thickness of the shims is 0.188 in. (4.78 mm) left wing, 0.313 in. (7.95 mm) right wing. The maximum thickness of the shims is 0.50 in. (12.70 mm). The minimum thickness of the shims is 0.00 in. (0.00 mm).

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

5) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [62].
6) Install the bolts [62], washers [63], and nuts [64] that attach the aft link fitting [61] to the outboard carriage [66].

(e) At the inboard carriage [71], change the thickness of the shims [65]:

1) Remove the nuts [70], washers [69], and bolts [68] that attach the aft link fitting [67] to the inboard carriage [71].
2) Add or remove shims [65] between the aft link fitting [67] and inboard carriage [71] to get the correct shim thickness.
3) Apply sealant, A00247, to the mating surfaces of the shims [65].
4) Put the shims [65] in their location between the aft link fitting [67] and inboard carriage [71].

   NOTE: The nominal thickness of the shims is 0.188 in. (4.78 mm) left wing, 0.313 in. (7.95 mm) right wing. The maximum thickness of the shims is 0.50 in. (12.70 mm). The minimum thickness of the shims is 0.00 in. (0.00 mm).

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

5) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [68].
6) Install the bolts [68], washers [69], and nuts [70] that attach the aft link fitting [67] to the inboard carriage [71].

(f) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(g) Retract the trailing edge flaps to the retracted position (TASK 27-51-00-860-804).

(h) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) On the inboard and outboard carriages [43], make sure that a minimum of three main track rollers [44] touch the flap track [45].

NOTE: If three of the four main track rollers cannot touch the flap track, it is permitted for the two forward rollers, or the two aft rollers to touch.

(j) If a minimum of the main track rollers [44] do not touch, add or remove the shims [65] again.

SUBTASK 27-51-21-820-004

(4) Install and adjust the outboard deflection control roller assembly [2] (Figure 501):

(a) When the outboard deflection control roller assembly [2] is adjusted, make sure that the flaps are in the retracted position.

(b) Put the deflection control roller assembly [2] in its location on the rib [1].

(c) Apply Cor-Ban 27L Compound, G50237, to the holes in the rib [1] for the bolts [3].

(d) Loosely install the bolts [3] and washers [4] that attach the deflection control roller assembly [2] to the rib [1].

(e) Move the deflection control roller assembly [2] until the upper roller [8] touches the upper surface of the deflection control track [5].

(f) Tighten the bolts [3] to the torque tool set point of 75 in-lb (8.5 N·m).

(g) Extend the trailing edge flaps, do these steps:

1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

2) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(h) Measure the distance from the outboard edge of the deflection control track [5] to the outboard edge of the rollers [8].

(i) Retract the trailing edge flaps, do these steps:

1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

2) Retract the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-804).

3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(j) If the distance is not in the limit of 0.00 in. (0.0 mm) to 0.06 in. (1.5 mm), adjust the position of the rollers [8]:

NOTE: The rollers must not be over the edge of the deflection control track [5].

1) Remove the bolts [3] and washers [4] that attach the deflection control roller assembly [2] to the rib [1].

2) Remove the nuts [12], bushings [11], bushings [9], and rollers [8] from the deflection control roller assembly [2].

3) Change the position of the bushings [9] or bushings [11] to adjust the position of the rollers [8].

4) Install the rollers [8], bushings [9], bushings [11], and nuts [12] on the deflection control roller assembly [2].

5) Tighten the nuts [12] to the torque tool set point of 400 in-lb (45.2 N·m).

6) Put the deflection control roller assembly [2] in its location on the rib [1].

7) Apply Cor-Ban 27L Compound, G50237, to the holes in the rib [1] for the bolts [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

8) Loosely install the bolts [3] and washers [4] that attach the deflection control roller assembly [2] to the rib [1].

9) Move the deflection control roller assembly [2] until the rollers [8] touch the upper surface of the deflection control track [5].

10) Tighten the bolts [3] to the torque tool set point of 75 in-lb (8.5 N·m).

(k) Extend the trailing edge flaps, do these steps:

1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

2) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(l) Measure the clearance between the deflection control track [5] and rub pad [10] on the deflection control roller assembly [2].

(m) Retract the trailing edge flaps, do these steps:

1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

2) Retract the trailing edge flaps to the retraction position (TASK 27-51-00-860-804).

3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(n) If the clearance is not in the limit of 0.1248 ±0.0500 in. (3.17 ±1.27 mm), adjust the position of the rub pad [10]:

1) Remove the bolts [3] and washers [4] that attach the deflection control roller assembly [2] to the rib [1].

2) Remove the nuts [15], washers [14], fillers [7], bolts [13], and rub pad [10] from the deflection control roller assembly [2].

3) Add or remove fillers [7] to the rub pad [10].

NOTE: For each removed filler, install two additional washers under the nut. For each additional installed filler, remove two washers from under the nut.

4) Install the bolts [13], fillers [7], rub pad [10], washers [14], and nuts [15] on the deflection control roller assembly [2].

5) Put the deflection control roller assembly [2] in its location on the rib [1].

6) Apply Cor-Ban 27L Compound, G50237, to the holes in the rib [1] for the bolts [3].

7) Loosely install the bolts [3] and washers [4] that attach the deflection control roller assembly [2] to the rib [1].

8) Move the deflection control roller assembly [2] until the rollers [8] touch the upper surface of the deflection control track [5].

9) Tighten the bolts [3] to the torque tool set point of 75 in-lb (8.5 N·m).

(o) Install or close the applicable access panels below the deflection control roller assembly:

Number	Name/Location
571AB	Lower Outboard Fixed Trailing Edge Access Panel at Deflector Rib
671AB	Lower Outboard Fixed Trailing Edge Access Panel

SUBTASK 27-51-21-860-004

(5) Extend the trailing edge flaps to do a check of the roller [22] (Figure 501):

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-21-860-005

(6) Adjust the roller [22] for the outboard flap:

(a) Use the manual or alternate system to retract trailing edge flaps until the roller [22] engages the deflection control track [16] (TASK 27-51-00-860-804).

NOTE: While the flaps are retracted, monitor the roller to see if the outboard flap deflects when it engages the deflection control track.

(b) Make sure that the deflection control track [16] touches the upper surface of the roller [22].

(c) If the flap deflects when the roller [22] engages the deflection control track [16], or if the deflection control track [16] does not touch the upper surface of the roller [22], adjust the roller [22]:

1) Extend the trailing edge flaps to get access to the roller [22] (TASK 27-51-00-860-803).

2) Remove the bolt [19] and washer [18] that hold the retainer [17] and retainer [26] to the deflection control rib [27].

3) Remove the retainer [17] for the outboard eccentric bushing [23].

4) Remove the pin [20] and loosen the nut [21] on the bolt [24].

5) Turn the outboard eccentric bushing [23] to change the position of the roller [22].

a) Make sure that the position of the roller [25] is not changed.

6) Install the retainer [17] for the outboard eccentric bushing [23].

7) Install the bolt [19] and washer [18] that hold the retainer [17] and retainer [26].

8) Tighten the nut [21] to the minimum amount necessary to install the pin [20].

SUBTASK 27-51-21-860-006

(7) Retract the trailing edge flaps to the retracted position:

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Retract the trailing edge flaps to the retracted position (TASK 27-51-00-860-804).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-21-220-004

(8) Measure the mismatch between the lower surface of the main flap [6] and lower fixed panels [41] (Figure 502).

(a) Make sure that the mismatch is in the limit of 0.00 ±0.06 in. (0.00 ±1.52 mm).

SUBTASK 27-51-21-820-005

(9) If the mismatch is not in the limit, adjust the position of the lower fixed panels [41] (Figure 504):

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(d) Adjust the applicable links [92] for the lower fixed panels [41]:

1) Remove the nut [97], washer [96], washer [95], washer [94], and bolt [93] that attach the link [92] to the lower fixed panel [41].

2) Loosen the nut [91] and adjust the length of the link [92].

a) Make sure that the threads through the inspection hole in the links [92] are seen.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Install the bolt [93], washer [94], washer [95], washer [96], and nut [97] to attach the link [92] to the lower fixed panel [41].

4) Tighten the nuts [91] on the links [92].

(e) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(f) Retract the trailing edge flaps to the retracted position (TASK 27-51-00-860-804).

(g) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(h) Make sure that the mismatch between the lower surface of the main flap [6] and lower fixed panels [41] is in the limits.

SUBTASK 27-51-21-220-005

(10) Make sure that the seals [42] on the lower fixed panels [41] are compressed against the leading edge of the main flap [6] (Figure 502).

SUBTASK 27-51-21-820-006

(11) If the seals [42] are not compressed against the main flap [6], adjust the position of the seals [42] (Figure 504):

(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

(b) Extend the trailing edge flaps to the get access to the seals [42] (TASK 27-51-00-860-803).

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(d) Loosen the bolts [98] that attach the seals [42] to the lower fixed panel [41].

(e) Adjust the position of the seals [42].

1) Adjust the seals [42] to achieve 15% to 30% seal compression of the bulb portion of the seal only.

(f) Tighten the bolts [98] that attach the seals [42].

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-21-410-005

(1) Install the aft fairings on the flap supports:

(a) Do this task: Outboard Flap Outboard Support Aft Fairing Installation, TASK 27-51-28-400-803.

(b) Do this task: Outboard Flap Inboard Support Aft Fairing Installation, TASK 27-51-28-400-805.

SUBTASK 27-51-21-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-21-860-007

(3) Retract the trailing edge flaps to the retracted position (TASK 27-51-00-860-804).

END OF TASK

OUTBOARD AFT FLAP - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Outboard aft flap removal

(2) Outboard aft flap installation.

B. An outboard aft flap weighs approximately 50 lb (23 kg).

TASK 27-51-22-000-801

2. Outboard Aft Flap Removal

(Figure 401)

D. Prepare for the Removal

SUBTASK 27-51-22-010-001

(1) Do one of the following steps to gain access to the aft flap assembly:

(a) Remove the applicable outboard flap outboard and inboard support aft fairing:

1) Do this task: Outboard Flap Outboard Support Aft Fairing Removal, TASK 27-51-28-000-803.

2) Do this task: Outboard Flap Inboard Support Aft Fairing Removal, TASK 27-51-28-000-805.

(b) Open the access panels on the support aft fairing:

1) Open the applicable access panels:

(TASK 27-51-28-000-803)

Number	Name/Location
544DR	Flap Support No. 1 Access Door
644DL	Flap Support No. 8, Access Door

2) Open the applicable access panels:

(TASK 27-51-28-000-805)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Number	Name/Location
543DR	Flap Support No. 2 Access Door
643DL	Flap Support No. 7, Access Door

SUBTASK 27-51-22-860-001

(2) If the trailing edge flaps are not in the fully extended position, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

NOTE: The aft flap can also be removed at the fully retracted position if necessary.

SUBTASK 27-51-22-040-001

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

E. Outboard Aft Flap Removal

SUBTASK 27-51-22-020-001

WARNING SUPPORT THE AFT FLAP ASSEMBLY IN ITS POSITION WHEN YOU DISCONNECT THE RODS. THE AFT FLAP ASSEMBLY WILL MOVE AFT WHEN THE RODS ARE DISCONNECTED. THIS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(1) Disconnect the aft flap [2] from the rods [11]:

(a) Hold the aft flap [2] so it cannot move aft when you disconnect the rods [11].

(b) Remove the pins [8], nuts [7], washers [6], washers [4], bolts [3] and bushings [5] that attach the rods [11] to the aft flap [2].

(c) Move the rods [11] down, away from the aft flap [2].

SUBTASK 27-51-22-010-003

(2) Remove the coverplate [22] for the outboard roller [21]:

(a) Remove the bolts [23] that attach the coverplate [22].

(b) Remove the coverplate [22] from the main flap [1].

SUBTASK 27-51-22-020-002

(3) Remove the aft flap [2]:

NOTE: The aft flap weighs approximately 50 lb (23 kg).

(a) Support the aft flap [2].

(b) Carefully move the aft flap [2] aft, until it stops.

(c) At the outboard aft flap track [13], remove the pin [35], nut [34], washer [33], washer [31], bolt [30] and bushing [32] that attach the aft flap track [13] to the aft flap [2].

WARNING SUPPORT THE AFT FLAP ASSEMBLY WHEN THE BOLTS ARE REMOVED. WHEN THE LAST BOLTS ARE REMOVED, THE AFT FLAP ASSEMBLY CAN TURN FREELY ON THE ROLLERS. THIS CAN CAUSE INJURY TO PERSONNEL AND DAMAGE TO THE EQUIPMENT.

(d) At the remaining aft flap tracks [14] and aft flap track [64], do these steps:

1) At aft flap tracks [14], remove the pins [41], nuts [40], washers [39], washers [37], bolts [36] and bushings [38] that attach the aft flap tracks [14] to the aft flap [2].

2) At aft flap track [64], remove the pin [70], nut [69], washer [68], bushing [67], washer [66] and bolt [65] that attach the aft flap track [64] to the aft flap [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Move the aft flap track [64], aft flap tracks [14] and aft flap track [13] forward, away from the aft flap [2].

(f) Move the trailing edge of the aft flap [2] down, until it is perpendicular to the main flap [1] and disengage the rollers [21] from the outboard programming track [20] and the inboard programming track [28].

TASK 27-51-22-400-801

3. Outboard Aft Flap Installation

NOTE: The sum of the lengths of external repairs to the inboard aft flap trailing edge wedge and the outboard aft flap trailing edge wedge assemblies must be less than or equal to 24 inches. A single repair that includes both the upper and lower surfaces is counted only once against the spanwise total.

G. Outboard Aft Flap Installation

SUBTASK 27-51-22-820-001

(1) If you will not install the same aft flap [2] and main flap [1], make sure that the inboard and outboard rollers [21] are in the nominal position (Figure 401):

(a) The outboard roller [21] is in the nominal position when the locking cutout [27] is 81.8 ±10.0 degrees from the lower cutout [26] on the cartridge [18].

(b) The inboard roller [21] is in the nominal position when the locking cutout [27] is 83.6 ±10.0 degrees from the lower cutout [26] on the cartridge [29].

(c) If the rollers [21] are not in the nominal position, adjust the position of the rollers [21]:

(d) Remove the nut [24], washer [25] and washer [15] from the roller [21].

(e) Disengage the locking washer [16] from the locking washer [17].

(f) Turn eccentric bushing [19] until the roller [21] is in the nominal position.

(g) Engage the locking washer [16] with the locking washer [17].

(h) Install the washer [15], washer [25] and nut [24] on the roller [21].

(i) Tighten the nut [24] to 95 in-lb (10.7 N·m) to 110 in-lb (12.4 N·m).

(j) Bend a minimum of 2 tabs of the washer [25] to hold the nut [24] in its position.

SUBTASK 27-51-22-010-004

(2) If it is installed on the main flap [1], remove the coverplate [22] for the outboard roller [21]:

(a) Remove the bolts [23] that attach the coverplate [22].

(b) Remove the coverplate [22] from the main flap [1].

SUBTASK 27-51-22-420-001

(3) Make sure that the aft flap track [13] and aft flap tracks [14] are installed on the main flap [1]. To install the aft flap tracks, do this task: Outboard Aft Flap Track Installation, TASK 27-51-26-400-801.

SUBTASK 27-51-22-420-002

(4) Install the aft flap [2]:

NOTE: The aft flap can also be installed at the fully retracted and extended positions. Installation of the aft flap at full extension will require extra protection of the aft flap trailing edge and adjacent flap fairing tail cones from damage. At full extension the flap and fairings are very close together.

(a) Hold the aft flap [2] below and approximately perpendicular to the main flap [1].

(b) Engage the inboard roller [21] with the inboard programming track [28].

(c) Engage the outboard roller [21] with the outboard programming track [20].

(d) Lift the trailing edge of the aft flap [2] and hold it in its usual position.

(e) Connect the aft flap [2] to the aft flap track [13], aft flap tracks [14] and aft flap track [64]:

1) Move the aft flap track [13], aft flap tracks [14] and aft flap track [64] to align with the aft flap [2].

2) Apply grease, D00633 to the shank of the bolt [30], bolts [36], bolt [65] and the inside of the bushing [32], bushings [38] and bushing [67].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure that you do not get grease, D00633 on the threads of the bolt [30], bolts [36] and bolt [65].

3) Install the bushing [67], bolt [65] and washer [66] that attach the aft flap track [64] to the aft flap [2].

4) Install the bushings [38], bolts [36] and washers [37] that attach the aft flap tracks [14] to the aft flap [2].

5) Install the bushing [32], bolt [30] and washer [31] that attach the aft flap track [13] to the aft flap [2].

6) Carefully clean all of the grease, D00633 from the threads of the bolts [36], bolt [30] and bolt [65].

7) On the outboard aft flap track [13], install the washer [33] and nut [34] on the bolt [30].

8) Tighten the nut [34] to 50 in-lb (5.6 N·m) to 80 in-lb (9.0 N·m).

9) Install the pin [35] in the nut [34].

10) On the aft flap tracks [14], install the washers [39] and nuts [40] on the bolts [36].

11) Tighten the nut [40] to 100 in-lb (11.3 N·m) to 150 in-lb (16.9 N·m).

12) Install the pins [41] in the nuts [40].

13) On the aft flap track [64], install the washer [68] and nut [69] on the bolt [65].

14) Tighten the nut [69] to 160 in-lb (18.1 N·m) to 240 in-lb (27.1 N·m).

15) Install the pin [70] in the nut [69].

SUBTASK 27-51-22-420-003

(5) Connect the aft flap [2] to the rods [11]:

WARNING SUPPORT THE AFT FLAP ASSEMBLY IN ITS POSITION WHEN YOU DISCONNECT THE RODS. THE AFT FLAP ASSEMBLY WILL MOVE AFT WHEN THE RODS ARE DISCONNECTED. THIS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(a) Move the aft aft flap [2] until it aligns with the rods [11].

(b) Apply grease, D00633 to the shank of the bolts [3] and the inside of the bushings [5].

1) Make sure that you do not get grease, D00633 on the threads of the bolts [3].

(c) Install the bushings [5], bolts [3] and washers [4] to attach the rods [11] to the aft aft flap [2].

1) Make sure that the heads of the bolts [3] are inboard.

(d) Carefully clean all of the grease, D00633 from the threads of the bolts [3].

(e) Install the nuts [7] and washers [6] on the bolts [3].

(f) Tighten the nuts [7] to 50 in-lb (5.6 N·m) to 80 in-lb (9.0 N·m).

(g) Install the pins [8] in the nuts [7].

H. Outboard Aft Flap Adjustment

SUBTASK 27-51-22-480-001

(1) Install the rig pins, (rigging pin kit, SPL-1585) in the rig pin holes in the inboard and outboard bellcranks [12] and the flap carriages [10].

(a) If it is necessary, move the aft flap [2] or the main flap [1] until you can install the rig pins.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-22-220-001

(2) At the inboard and outboard ends of the aft flap [2], measure the mismatch between the trailing edge of the aft flap [2] and the main flap [1] (Views D and E) (Figure 402).

(a) If the trailing edge flaps are not fully retracted, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-22-820-002

(3) If the mismatch at the inboard and outboard ends of the aft flap [2] is not in the limit of 0.00 ±0.06 in. (0.00 ±1.52 mm), then adjust the length of the applicable rod [11] (Figure 401):

(a) Loosen the nuts [9] on the rod [11].

(b) If you cannot get access to the nuts [9], extend the aft flap [2]:

1) Remove the rig pins from the bellcranks [12] and the flap carriages [10].

2) Extend the aft flap [2], until you can get access to the nuts [9]. To extend the flaps, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

(c) Turn the applicable rod [11] until the mismatch is in the limit at the inboard and outboard ends of the aft flap [2].

NOTE: For each 1/4 turn of the rod [11], the trailing edge of the aft flap [2] will move approximately 0.04 in. (1.02 mm).

(d) Tighten the nuts [9] on the rod [11].

(e) Install lockwire on the nut [9].

(f) If you extended the aft flap [2] to get access to the nuts [9], then do these steps:

1) Retract the aft flap [2] until you can install the rig pins in the bellcranks [12] and the flap carriages [10]. To retract the flap, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

2) Install the rig pins in the bellcranks [12] and the flap carriages [10].

(g) Make sure that the mismatch at the inboard and outboard ends of the aft flap [2] is in the limit.

SUBTASK 27-51-22-980-001

(4) Support the aft flap [2] to make sure that the rollers [21] touch the bottom surface of the programming tracks and the aft rollers for the four inner aft flap tracks touch the top surface of the tracks.

NOTE: This is the position the rollers will be in with airloads applied to the flap.

SUBTASK 27-51-22-220-002

(5) At the inboard and outboard ends of the aft flap [2], measure the vertical alignment at the trailing edge of the aft flap [2] and the main flap [1] (Views B-B and C-C) (Figure 402).

(a) If the vertical alignment of the trailing edge is not in the limit of 0.00 ±0.10 in. (0.00 ±2.54 mm), then adjust the roller [21] for the inboard or outboard programming tracks.

NOTE: If the trailing edge flaps are not fully retracted, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-22-220-003

(6) At the lower cove panels on the main flap [1], measure the mismatch between the aft flap [2] and the main flap [1] (View B)Figure 402.

(a) If the mismatch is not in the limit of 0.00 ±0.06 in. (0.00 ±1.52 mm), then adjust the rollers [21] for the inboard and outboard programming tracks.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-22-820-003

(7) If it is necessary, adjust the rollers [21] for the applicable inboard and outboard programming tracks (Figure 401):

(a) If you cannot get the aft flap [2] vertical alignment and the lower surface mismatch in the limits, make sure that the vertical alignment is in the limit.

(b) Remove the rig pins from the bellcranks [12] and the flap carriages [10].

(c) Extend the aft flap [2], until you can get access to the rollers [21]. To extend the flaps, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

(d) Remove the nut [24], washer [25] and washer [15] from the roller [21].

(e) Disengage the locking washer [16] from the locking washer [17].

(f) Turn eccentric bushing [19], until the vertical alignment and the lower surface mismatch are in the limits.

NOTE: If you turn the eccentric bushing [19] 90 degrees, it will move the trailing edge of the aft flap [2] approximately 0.05 in. (1.27 mm).

(g) Engage the locking washer [16] with locking washer [17].

(h) Install the washer [15], washer [25] and nut [24] on the roller [21].

(i) Tighten the nut [24] to 95 in-lb (11 N·m) to 110 in-lb (12 N·m).

(j) Bend the tabs of the washer [25] to hold the nut [24] in its position.

(k) Retract the aft flap [2] until you can install the rig pins in the bellcranks [12] and the flap carriages [10]. To retract the flap, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

(l) Install the rig pins in the bellcranks [12] and the flap carriages [10].

(m) Make sure that the vertical alignment and the lower surface mismatch are in the limits.

SUBTASK 27-51-22-980-002

(8) Support the aft flap [2] to make sure that the rollers [21] touch the bottom surface of the programming tracks and the aft rollers for the aft flap tracks touch the top surface of the tracks.

NOTE: This is the position the rollers will be in with airloads applied to the aft flap [2].

SUBTASK 27-51-22-410-001

(9) Install the coverplate [22] for the outboard roller [21] on the main flap [1]:

(a) Put the coverplate [22] in its position on the main flap [1].

(b) Install the bolts [23] that attach the coverplate [22].

SUBTASK 27-51-22-220-004

(10) Measure the clearance between the main flap [1] and the upper surface of the aft flap [2] (View C) (Figure 402).

(a) Measure the clearance at all of the cove panel supports [51] and at the aft flap roller fittings [60].

(b) If the trailing edge flaps are not fully retracted, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-22-220-005

(11) Make sure that the rub strip [50] and teflon coating on the upper surface of the aft flap [2] are not damaged (View C) (Figure 402).

(a) If the rub strip [50] is damaged or missing, then do this task: Bonded Phenolic or Stainless Steel Rub Pad Repair (Heat Source Available), TASK 51-71-00-340-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) If the teflon coating is damaged, then do this task: Apply The Abrasion-Resistant Teflon Finish, BMS 10-86 Type I, TASK 51-21-81-370-801.

SUBTASK 27-51-22-820-004

(12) If the clearance between the main flap [1] and the aft flap [2] is not in the limit of 0.0100 +0.1000 / -0.0050 in. (0.2540 +2.5400 / -0.1270 mm), then change the thickness of the shims [58] on the cove panel support [51] or the shims [59] on the aft flap roller fittings [60].

(a) Remove the rig pins from the bellcranks [12] and the flap carriages [10].

(b) Extend the aft flap [2], until you can get access to the fasteners for the shims [58] and shims [59]. To extend the flaps, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

(c) If it is necessary, change the thickness of the shims [58] on the cove panel supports [51]:

1) Remove the nuts [57], washers [56] and bolts [55] that attach the cove panels [52] to the cove panel support [51].

2) Remove the shim [58] from the cove panel support [51] and the cove panel [52].

3) Change the thickness of the shim [58].

NOTE: The maximum permitted thickness of the shim [58] is 0.05 in. (1.27 mm).

4) Apply sealant, A00247 to the mating surfaces of the shim [58].

5) Put the shim [58] in its position between the cove panel support [51] and the cove panel [52].

6) Install the bolts [55], washers [56] and nuts [57].

(d) If it is necessary, change the thickness of the shims [59] on the aft flap roller fittings [60]:

1) Remove the nuts [63], washers [62] and bolts [61] that attach the cove panel [52] to the aft flap roller fitting [60].

2) Remove the shims [59] from the aft flap roller fitting [60] and the cove panel [52].

3) Change the thickness of the shims [59].

NOTE: The maximum permitted thickness of the shims [59] is 0.05 in. (1.27 mm).

4) Apply sealant, A00247 to the mating surfaces of the shims [59].

5) Put the shims [59] in their position between the aft flap roller fitting [60] and the cove panel [52].

6) Install the bolts [61], washers [62] and nuts [63].

7) If it is necessary, trim the excess shim [59] that extends past the aft flap roller fitting [60].

(e) Retract the aft flap [2] until you can install the rig pins in the bellcranks [12] and the flap carriages [10]. To retract the flap, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

(f) Install the rig pins in the bellcranks [12] and the flap carriages [10].

(g) Make sure that the clearance between the main flap [1] and the upper surface of the aft flap [2] is in the limit.

SUBTASK 27-51-22-220-006

(13) Measure the deflection of the upper cove panel [52] of the main flap [1] at the inboard and outboard ends of the aft flap [2]:

NOTE: The aft flap [2] can push up on the upper cove panel [52] and cause the panel to deflect.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Make sure that the deflection is a maximum of 0.200 in. (5.08 mm).

SUBTASK 27-51-22-220-007

(14) Make sure that the seals on the aft lower surface of the main flap [1] are in the correct position:

(a) Measure the distance between the aft edge of the seal [54] and the seam on the lower surface of the aft flap [2] (View A-A).

NOTE: This distance is called DIMENSION Y.

(b) At the inboard end of the aft flap [2], make sure that DIMENSION Y is 5.76 ±0.10 in. (146.30 ±2.54 mm).

(c) At the inboard side of the inboard flap support, make sure that DIMENSION Y is 5.57 ±0.10 in. (141.48 ±2.54 mm).

(d) At the outboard side of the inboard flap support, make sure that DIMENSION Y is 5.46 ±0.10 in. (138.68 ±2.54 mm).

(e) At the inboard side of the outboard flap support, make sure that DIMENSION Y is 4.61 ±0.10 in. (117.09 ±2.54 mm).

(f) At the outboard side of the outboard flap support, make sure that DIMENSION Y is 4.46 ±0.10 in. (113.28 ±2.54 mm).

(g) At the outboard end of the aft flap, make sure that DIMENSION Y is 4.06 ±0.10 in. (103.12 ±2.54 mm).

SUBTASK 27-51-22-820-005

(15) If the position of the seals [54] are not in the limits, adjust the position of the seals [54]:

(a) Remove the rig pins from the bellcranks [12] and the flap carriages [10].

(b) Extend the aft aft flap [2], until you can get access to the fasteners for the seals [54]. To extend the flaps, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

(c) Adjust the position of the applicable seal [54]:

1) Loosen the bolts [53] that attach the seal [54].

2) Move the seal [54] forward or aft.

3) Tighten the bolts [53].

(d) Retract the aft aft flap [2] until you can install the rig pins in the bellcranks [12] and the flap carriages [10]. To retract the flap, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

(e) Install the rig pins in the bellcranks [12] and the flap carriages [10].

(f) Make sure that the distance between the seals [54] and the aft flap [2] are in the limit.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-22-080-001

(1) Remove the rig pins from the bellcranks [12] and the flap carriages [10].

SUBTASK 27-51-22-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-22-410-002

(3) If the outboard support aft fairing removed, do this task: Outboard Flap Outboard Support Aft Fairing Installation, TASK 27-51-28-400-803.

SUBTASK 27-51-22-410-003

(4) If the inboard support aft fairing removed, do this task: Outboard Flap Inboard Support Aft Fairing Installation, TASK 27-51-28-400-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-22-410-004

(5) If it is open, close the access panels:

(a) Close these access panels:

(TASK 27-51-28-400-803)

Number	Name/Location
544DR	Flap Support No. 1 Access Door
644DL	Flap Support No. 8, Access Door

(b) Close these access panels:

(TASK 27-51-28-400-805)

Number	Name/Location
543DR	Flap Support No. 2 Access Door
643DL	Flap Support No. 7, Access Door

SUBTASK 27-51-22-860-002

(6) Retract the trailing edge flaps to the retracted position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

OUTBOARD AFT FLAP - INSPECTION/CHECK

1. General

A. This procedure contains a task to do an inspection of the attachment points for the outboard aft flap. The attachment points are the aft flap drive rods and the aft flap tracks.

TASK 27-51-22-200-801

2. Outboard Aft Flap Inspection

(Figure 601)

A. References

D. Procedure

SUBTASK 27-51-22-020-003

(1) Do this task: Outboard Aft Flap Removal, TASK 27-51-22-000-801.

SUBTASK 27-51-22-020-004

(2) Use these tools to do a check for wear on the part of the outboard aft flap:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-51-22-020-005

(3) Examine the parts of the outboard aft flap (Table 601):

(a) Remove the parts that you will measure.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are not in tolerance, replace or repair the parts.

OUTBOARD FLAP CARRIAGES - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the outboard carriage for the outboard flap

(2) An installation of the outboard carriage for the outboard flap

(3) A removal of the inboard carriage for the outboard flap

(4) An installation of the inboard carriage for the outboard flap.

TASK 27-51-23-000-801

2. Outboard Flap Carriage Removal (Selection)

A. Procedure

SUBTASK 27-51-23-000-001

(1) Do one of these tasks to remove the applicable outboard flap carriage:

(a) Do this task:Outboard Flap Outboard Carriage Removal, TASK 27-51-23-000-802.

(b) Do this task:Outboard Flap Inboard Carriage Removal, TASK 27-51-23-000-803.

——— END OF TASK ———

TASK 27-51-23-400-801

3. Outboard Flap Carriage Installation (Selection)

A. Procedure

SUBTASK 27-51-23-400-001

(1) Do one of these tasks to install the applicable outboard flap carriage:

(a) Do this task:Outboard Flap Outboard Carriage Installation, TASK 27-51-23-400-802.

(b) Do this task:Outboard Flap Inboard Carriage Installation, TASK 27-51-23-400-803.

——— END OF TASK ———

TASK 27-51-23-000-802

4. Outboard Flap Outboard Carriage Removal

(Figure 401)

A. General

(1) This task is applicable to the flap carriages at flap supports No. 1 and 8.

D. Prepare for the Removal

SUBTASK 27-51-23-040-001

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-23-020-001

(2) Do this task: Outboard Trailing Edge Flap Removal, TASK 27-51-21-000-801.

E. Outboard Flap Outboard Carriage Removal

SUBTASK 27-51-23-020-002

(1) Remove the pin [14], nut [13], washer [12], washer [10], bolt [9], and bushing [11] that attach the aft flap pushrod [16] to the aft flap [3].

SUBTASK 27-51-23-020-003

(2) Remove the bellcrank [19] from the carriage assembly [1]:

NOTE: You can remove the aft flap drive rod and aft flap pushrod with the bellcrank.

(a) Remove the nuts [28], washers [27], bolt [20], and bolt [26] that attach the rubcap [17] to the bellcrank [19].

(b) Remove the pin [25], nut [24], washer [23], washer [22], and bolt [21] that attach the bellcrank [19] to the carriage assembly [1].

(c) Measure and record the distance between the center of the bolt hole in the adjustment fitting [54] and bellcrank [19].

NOTE: This distance is referred to as Dimension A. This dimension will be used during the installation of the bellcrank.

SUBTASK 27-51-23-980-001

(3) Manually extend the aft flap [3] away from the main flap [2].

SUBTASK 27-51-23-010-001

(4) Remove the leading edge skin panel [33] from the main flap [2] forward of the carriage assembly [1]:

(a) Remove the bolts [34] that attach the leading edge skin panel [33].

(b) Remove the leading edge skin panel [33] from the main flap [2].

SUBTASK 27-51-23-020-004

(5) Remove the pin [8], nut [7], washers [6], washer [5], and bolt [4] that attach the failsafe link [15] to the carriage assembly [1].

(a) Move the failsafe link [15] away from the carriage assembly [1].

SUBTASK 27-51-23-020-005

(6) Remove the carriage assembly [1] from the main flap [2]:

(a) Remove the pin [53], nut [52], washers [51], bushing [50], washer [49], and bolt [48] that attach the aft link [35] to the aft link fitting [47].

(b) Remove the pin [38], nut [36], and washer [37] that attach the aft link [35] to the main flap [2].

(c) Remove the aft link [35] from the aft link fitting [47] and main flap [2].

(d) Remove the pin [32], nut [30], and washer [31] that attach the forward end of the carriage assembly [1] to the main flap [2].

(e) Move the carriage assembly [1] forward, away from the main flap [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-23-020-006

(7) If it is necessary, remove the pin [45], nut [42], washer [43], and washer [44] that attach the failsafe link [15] to the main flap [2].

SUBTASK 27-51-23-020-007

(8) If it is necessary, remove the aft link fitting [47] from the carriage assembly [1]:

(a) Remove the nuts [41], washers [40], and bolts [39] that attach the aft link fitting [47] to the carriage assembly [1].

(b) Measure and record the thickness of the shims [46].

TASK 27-51-23-400-802

5. Outboard Flap Outboard Carriage Installation

(Figure 401)

A. General

(1) This task is applicable to the flap carriages at flap supports No. 1 and 8.

B. References

Reference	Title

567	Left Wing - Outboard Flap
644	Right Wing - Fairing Flap Support No. 8
667	Right Wing - Outboard Flap

F. Outboard Flap Outboard Carriage Installation

SUBTASK 27-51-23-020-024

(1) Inspect the rub pads [125] for wear.

(a) If the rub pads [125] are worn greater than 50%, the rub pads [125] will need to be replaced.

SUBTASK 27-51-23-020-008

(2) If it is installed, remove the aft link [35] from the carriage assembly [1].

(a) Remove the pin [53], nut [52], washers [51], bushing [50], washer [49], and bolt [48] that attach the aft link [35] to the aft link fitting [47].

SUBTASK 27-51-23-420-001

(3) If it is not installed, install the aft link fitting [47] on the carriage assembly [1]:

(a) Apply sealant, A00247, to the mating surfaces of the shims [46].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Put the shims [46] in their location between the aft link fitting [47] and carriage assembly [1].

1) Use the same thickness of shims that were removed.

NOTE: The maximum total thickness of the shims is 0.5 in. (12.7 mm). The minimum total thickness of the shims is 0.0 in. (0.0 mm).

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(c) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [39].

(d) Install the bolts [39], washers [40], and nuts [41] to attach the aft link fitting [47] to the carriage assembly [1].

SUBTASK 27-51-23-420-002

(4) Install the outboard carriage assembly [1] on the main flap [2]:

(a) Put the carriage assembly [1] in its location on the main flap [2], with the forward spindle on the main flap [2] through the forward bearing [29].

(b) Install the washer [31] and nut [30] that attach the forward end of the carriage assembly [1] to the main flap [2].

(c) Tighten the nut [30] to 440 in-lb (50 N·m) - 650 in-lb (73 N·m).

(d) Install the pin [32] in the nut [30].

(e) Install the aft link [35] on the main flap [2] and aft link fitting [47]:

1) Put the aft link [35] in its position on the main flap [2].

a) Make sure that the lubrication fittings on the aft link [35] are on the aft side.

2) Install the bolt [48], washer [49], bushing [50], washers [51], and nut [52] that attach the aft link [35] to the aft link fitting [47].

3) Install the pin [53] in the nut [52].

4) Install the washer [37] and nut [36] that attach the aft link [35] to the main flap [2].

5) Tighten the nut [36] to 700 in-lb (79 N·m) - 920 in-lb (104 N·m).

6) Install the pin [38] in the nut [36].

SUBTASK 27-51-23-420-003

(5) If it is not installed, install the failsafe link [15] on the main flap [2]:

(a) Put the failsafe link [15] in its position on the main flap [2].

1) Make sure that the slot on the failsafe link [15] is down.

(b) Install the washer [44], washer [43], and nut [42] to attach the failsafe link [15] to the main flap [2].

NOTE: Additional washers may be needed, up to a maximum of three to get the proper alignment of the pin [45] to the nut [42].

(c) Tighten the nut [42] to 220 in-lb (25 N·m) - 280 in-lb (32 N·m).

(d) Install the cotter pin [45] in the nut [42].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-23-420-004

(6) Connect the failsafe link [15] to the carriage assembly [1]:

(a) Apply compound, C00528, to the holes in the carriage assembly [1] for the bolt [4].

(b) Install the bolt [4], washer [5], washers [6], and nut [7] that connect the failsafe link [15] to the carriage assembly [1].

NOTE: Bold direction is optional, bolt head forward is preferred.

(c) Tighten the nut [7].

1) Measure the self locking torque value and continue to torque the nut [7] until a sharp increase of 11 ±1 in-lb (1 ±0 N·m) above that value.

2) If it is necessary to align the nearest cotter pin slot, loosen the nut [7].

(d) Install the pin [8] in the nut [7].

SUBTASK 27-51-23-410-001

(7) Install the leading edge skin panel [33] on the main flap [2] forward of the carriage assembly [1]:

(a) Put the leading edge skin panel [33] in its location on the leading edge of the main flap [2].

(b) Apply compound, C00528, to the holes for the bolts [34].

(c) Install the bolts [34] to attach the leading edge skin panel [33].

(d) Apply sealant, A00247, to fill all of the clearances around the leading edge skin panel [33] that are more than 0.05 in. (1.27 mm).

SUBTASK 27-51-23-420-005

(8) Install the bellcrank [19] on the carriage assembly [1]:

(a) Make sure that the bellcrank [19] is the correct length:

NOTE: The length of the bellcrank can be changed to adjust for lateral trim problems.

1) Measure the distance between the center of the bolt hole in the adjustment fitting [54] and bellcrank [19].

NOTE: This distance is referred to as Dimension A.

2) Make sure that the Dimension A on the bellcrank [19] you will install is the same as the bellcrank [19] that you removed.

NOTE: The nominal dimension of the outboard bellcrank is 13.74 in. (349.00 mm).

3) If the bellcrank [19] is not the correct length, adjust the bellcrank [19]:

a) Loosen the nuts [55] on the adjustment fitting [54] until the locking washer [56] is disengaged from the bellcrank [19].

b) Change the position of the adjustment fitting [54].

c) Engage the locking washer [56] with the bellcrank [19].

d) Tighten the nuts [55] on the adjustment fitting [54].

e) Install MS20995C47 lockwire, G50356, on the nuts [55].

(b) Apply grease, D00633, to the shank of the bolt [21].

1) Make sure that you do not get grease, D00633, on the threads of the bolt [21].

(c) Put the bellcrank [19] in its position on the carriage assembly [1].

(d) Install the bolt [21] and washer [22] that attach the bellcrank [19] to the carriage assembly [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Carefully clean all of grease, D00633, from the threads of the bolt [21].

(f) Install the nut [24] and washer [23] on the bolt [21].

(g) Tighten the nut [24] to 1100 in-lb (124 N·m) - 1500 in-lb (169 N·m).

(h) Install the pin [25] in the nut [24].

(i) Attach the rubcap [17] to the bellcrank [19] with the bolt [20], bolt [26], washers [27], and nuts [28].

SUBTASK 27-51-23-420-006

(9) Connect the aft flap pushrod [16] to the aft flap [3]:

(a) Apply grease, D00633, to the shank of the bolt [9] and inside of the bushing [11].

1) Make sure that you do not get grease, D00633, on the threads of the bolt [9].

(b) Install the bushing [11], bolt [9], and washer [10] to attach the aft flap pushrod [16] to the aft flap [3].

1) Make sure that the head of the bolt [9] is inboard.

(c) Carefully clean all of grease, D00633, from the threads of the bolt [9].

(d) Install the nut [13] and washer [12] on the bolt [9].

(e) Tighten the nut [13] to 50 in-lb (6 N·m) - 80 in-lb (9 N·m).

(f) Install the pin [14] in the nut [13].

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-23-420-007

(1) Do this task: Outboard Trailing Edge Flap Installation, TASK 27-51-21-400-801.

SUBTASK 27-51-23-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

END OF TASK

TASK 27-51-23-000-803

6. Outboard Flap Inboard Carriage Removal

(Figure 402)

A. General

(1) This task is applicable to the flap carriages at flap supports No. 2 and 7.

B. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)

567	Left Wing - Outboard Flap
643	Right Wing - Fairing Flap Support No. 7
667	Right Wing - Outboard Flap

D. Prepare for the Removal

SUBTASK 27-51-23-040-002

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-23-020-009

(2) Do this task: Outboard Trailing Edge Flap Removal, TASK 27-51-21-000-801.

E. Outboard Flap Inboard Carriage Removal

SUBTASK 27-51-23-020-010

(1) Remove the pin [82], nut [81], washer [80], washer [78], bolt [77], and bushing [79] that attach the aft flap pushrod [84] to the aft flap [3].

SUBTASK 27-51-23-020-011

(2) Remove the bellcrank [85] from the carriage assembly [71]:

NOTE: You can remove the aft flap drive rod and aft flap pushrod with the bellcrank.

(a) Remove the nuts [96], washers [95], bolt [88], and bolt [94] that attach the rubcap [86] to the bellcrank [85].

(b) Remove the pin [93], nut [92], washer [91], washer [90], and bolt [89] that attach the bellcrank [85] to the carriage assembly [71].

(c) Measure and record the distance between the center of the bolt hole in the adjustment fitting [122] and bellcrank [85].

NOTE: This distance is referred to as Dimension A. This dimension will be used during the installation of the bellcrank.

SUBTASK 27-51-23-980-002

(3) Manually extend the aft flap [3] away from the main flap [2].

SUBTASK 27-51-23-010-002

(4) Remove the leading edge skin panel [100] from the main flap [2] forward of the carriage assembly [71]:

(a) Remove the bolts [101] that attach the leading edge skin panel [100].

(b) Remove the leading edge skin panel [100] from the main flap [2].

SUBTASK 27-51-23-020-012

(5) Remove the nut [75], washer [74], washer [73], and bolt [72] that attach the failsafe link [83] to the carriage assembly [71].

(a) Move the failsafe link [83] away from the carriage assembly [71].

SUBTASK 27-51-23-020-013

(6) Remove the carriage assembly [71] from the main flap [2]:

(a) Remove the pin [121], nut [120], washers [119], bushing [118], washer [117], and bolt [116] that attach the aft link [103] to the aft link fitting [115].

(b) Remove the pin [106], nut [104], and washer [105] that attach the aft link [103] to the main flap [2].

(c) Remove the aft link [103] from the aft link fitting [115] and main flap [2].

(d) Remove the pin [99], nut [97], and washer [98] that attach the forward end of the carriage assembly [71] to the main flap [2].

(e) Move the carriage assembly [71] forward, away from the main flap [2].

SUBTASK 27-51-23-020-014

(7) If it is necessary, remove the pin [110], nut [107], washer [108], and washer [109] that attach the failsafe link [83] to the main flap [2].

SUBTASK 27-51-23-020-015

(8) If it is necessary, remove the aft link fitting [115] from the carriage assembly [71]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the nuts [113], washers [112], and bolts [111] that attach the aft link fitting [115] to the carriage assembly [71].

(b) Measure and record the thickness of the shims [114].

END OF TASK

F. Outboard Flap Inboard Carriage Installation

SUBTASK 27-51-23-020-025

(1) Inspect the rub pads [125] for wear.

(a) If the rub pads [125] are worn greater than 50%, the rub pads [125] will need to be replaced.

SUBTASK 27-51-23-020-016

(2) If it is installed, remove the aft link [103] from the carriage assembly [71].

(a) Remove the pin [121], nut [120], washers [119], bushing [118], washer [117], and bolt [116] that attach the aft link [103] to the aft link fitting [115].

SUBTASK 27-51-23-420-008

(3) If it is not installed, install the aft link fitting [115] on the carriage assembly [71]:

(a) Apply sealant, A00247, to the mating surfaces of the shims [114].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Put the shims [114] in their location between the aft link fitting [115] and carriage assembly [71].

1) Use the same thickness of shims [114] that you removed.

NOTE: The maximum total thickness of the shims is 0.5 in. (12.7 mm). The minimum total thickness of the shims is 0.0 in. (0.0 mm).

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(c) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [111].

(d) Install the bolts [111], washers [112], and nuts [113] to attach the aft link fitting [115] to the carriage assembly [71].

SUBTASK 27-51-23-420-009

(4) Install the inboard carriage assembly [71] on the main flap [2]:

(a) Put the carriage assembly [71] in its location on the main flap [2], with the forward spindle through the forward bearing [102].

(b) Install the washer [98] and nut [97] to attach the forward end of the carriage assembly [71] to the main flap [2].

(c) Tighten the nut [97] to 440 in-lb (50 N·m) - 650 in-lb (73 N·m).

(d) Install the pin [99] in the nut [97].

(e) Install the aft link [103] on the main flap [2] and aft link fitting [115]:

1) Put the aft link [103] in its position on the main flap [2].

a) Make sure that the lubrication fittings on the aft link [103] are on the aft side.

2) Install the bolt [116], washer [117], bushing [118], washers [119], and nut [120] that attach the aft link [103] to the aft link fitting [115].

3) Install the pin [121] in the nut [120].

4) Install the washer [105] and nut [104] that attach the aft link [103] to the main flap [2].

5) Tighten the nut [104] to 700 in-lb (79 N·m) - 920 in-lb (104 N·m).

6) Install the pin [106] in the nut [104].

SUBTASK 27-51-23-420-010

(5) If it is not installed, install the failsafe link [83] on the main flap [2]:

(a) Put the failsafe link [83] in its position on the main flap [2].

1) Make sure that the slot on the failsafe link [83] is up.

(b) Install the washer [109], washer [108], and nut [107] to attach the failsafe link [83] to the main flap [2].

(c) Tighten the nut [107] to 220 in-lb (25 N·m) - 280 in-lb (32 N·m).

(d) Install the pin [110] in the nut [107].

SUBTASK 27-51-23-420-011

(6) Connect the failsafe link [83] to the carriage assembly [71]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Apply compound, C00528, to the holes in the carriage assembly [71] for the bolt [72].

(b) Install the bolt [72], washer [73], washers [74], and nut [75] that connect the failsafe link [83] to the carriage assembly [71].

NOTE: Bolt direction is optional; bolt head forward is preferred.

(c) Tighten the nut [75].

1) Measure the self locking torque value and continue to torque the nut [75] until a sharp increase of 11 ±1 in-lb (1 ±0 N·m) above that value.

2) If it is necessary to align the nearest cotter pin slot, loosen the nut [75].

(d) Install the pin [76] in the nut [75].

SUBTASK 27-51-23-410-002

(7) Install the leading edge skin panel [100] on the main flap [2] forward of the carriage assembly [71]:

(a) Put the leading edge skin panel [100] in its location on the leading edge of the main flap [2].

(b) Apply compound, C00528, to the holes for the bolts [101].

(c) Install the bolts [101] to attach the leading edge skin panel [100].

(d) Apply sealant, A00247, to fill all of the clearances around the leading edge skin panel [100] that are more than 0.05 in. (1.27 mm).

SUBTASK 27-51-23-420-012

(8) Install the bellcrank [85] on the carriage assembly [71]:

(a) Make sure that the bellcrank [85] is the correct length:

NOTE: The length of the bellcrank can be changed to adjust for lateral trim problems.

1) Measure the distance between the center of the bolt hole in the adjustment fitting [122] and bellcrank [85].

NOTE: This distance is referred to as Dimension A.

2) Make sure that the Dimension A on the bellcrank [85] you will install is the same as the bellcrank [85] that you removed.

NOTE: The nominal dimension of the inboard bellcrank is 14.5605 in. (369.837 mm).

3) If the bellcrank [85] is not the correct length, adjust the bellcrank [85]:

a) Loosen the nuts [123] on the adjustment fitting [122] until the locking washer [124] is disengaged from the bellcrank [85].

b) Change the position of the adjustment fitting [122].

c) Engage the locking washer [124] with the bellcrank [85].

d) Tighten the nuts [123] on the adjustment fitting [122].

e) Install MS20995C47 lockwire, G50356, on the nuts [123].

(b) Apply grease, D00633, to the shank of the bolt [89].

1) Make sure that you do not get grease, D00633, on the threads of the bolt [89].

(c) Put the bellcrank [85] in its position on the carriage assembly [71].

(d) Install the bolt [89] and washer [90] to attach the bellcrank [85] to the carriage assembly [71].

(e) Carefully clean all of grease, D00633, from the threads of the bolt [89].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Install the nut [92] and washer [91] on the bolt [89].

(g) Tighten the nut [92] to 1100 in-lb (124 N·m) - 1500 in-lb (169 N·m).

(h) Install the pin [93] in the nut [92].

(i) Attach the rubcap [86] to the bellcrank [85] with the bolt [88], bolt [94], washer [95], and nut [96].

SUBTASK 27-51-23-420-013

(9) Connect the aft flap pushrod [84] to the aft flap [3]:

(a) Apply grease, D00633, to the shank of the bolt [77] and inside of the bushing [79].

1) Make sure that you do not get grease, D00633, on the threads of the bolt [77].

(b) Install the bushing [79], bolt [77], and washer [78] to attach the aft flap pushrod [84] to the aft flap [3].

1) Make sure that the head of the bolt [77] is inboard.

(c) Carefully clean all of grease, D00633, from the threads of the bolt [77].

(d) Install the nut [81] and washer [80] on the bolt [77].

(e) Tighten the nut [81] to 50 in-lb (6 N·m) - 80 in-lb (9 N·m).

(f) Install the pin [82] in the nut [81].

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-23-420-014

(1) Do this task: Outboard Trailing Edge Flap Installation, TASK 27-51-21-400-801.

SUBTASK 27-51-23-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD FLAP CARRIAGES - INSPECTION/CHECK

1. General

A. This procedure contains the task to do an inspection of the carriages for the inboard trailing edge flaps.

TASK 27-51-23-200-801

2. Outboard Flap Carriage Inspection (Selection)

A. Procedure

SUBTASK 27-51-23-200-001

(1) Do one of these tasks to inspect the applicable outboard flap carriage:

(a) Do this task:Outboard Flap Outboard Carriage Inspection, TASK 27-51-23-200-802.

(b) Do this task:Outboard Flap Inboard Carriage Inspection, TASK 27-51-23-200-803.

——— END OF TASK ———

TASK 27-51-23-200-802

3. Outboard Flap Outboard Carriage Inspection

(Figure 601)

A. General

(1) This task gives wear limits for the outboard carriage on the outboard flap.

(2) This task is applicable to the carriages at flap supports No. 1 and 8.

644	Right Wing - Fairing Flap Support No. 8

E. Procedure

SUBTASK 27-51-23-020-017

(1) Do this task: Outboard Flap Outboard Carriage Removal, TASK 27-51-23-000-802.

SUBTASK 27-51-23-020-023

(2) Inspect the rub pads [18] for wear.

(a) If the rub pads [18] are worn greater than 50%, they will need to be replaced.

SUBTASK 27-51-23-020-018

(3) Use these tools to do a check for wear on the part of the outboard flap outboard carriage:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-23-020-019

(4) Examine the parts of the outboard flap outboard carriage (Table 601):

(a) Remove the parts that you will measure.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are not in tolerance, replace or repair the parts.

E. Procedure

SUBTASK 27-51-23-020-020

(1) Do this task: Outboard Flap Inboard Carriage Removal, TASK 27-51-23-000-803.

SUBTASK 27-51-23-020-026

(2) Inspect the rub pads [18] for wear.

(a) If the rub pads [18] are worn greater than 50%, they will need to be replaced.

SUBTASK 27-51-23-020-021

(3) Use these tools to do a check for wear on the part of the outboard flap inboard carriage:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-51-23-020-022

(4) Examine the parts of the outboard flap inboard carriage (Table 602):

(a) Remove the parts that you will measure.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are not in tolerance, replace or repair the parts.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD AFT FLAP ACTUATING MECHANISM - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Outboard aft flap actuating mechanism removal

(2) Outboard aft flap actuating mechanism installation.

B. The aft flap actuating mechanisms includes the bellcranks, the forward pushrod and the aft pushrod.

TASK 27-51-24-000-801

2. Outboard Aft Flap Actuating Mechanism Removal

(Figure 401)

A. General

(1) This task is applicable to the aft flap actuating mechanism on the inboard flap support and the outboard flap support on the outboard flap.

27-51-28-000-805	Outboard Flap Inboard Support Aft Fairing Removal (P/B 401)

C. Location Zones

Zone	Area
567	Left Wing - Outboard Flap
667	Right Wing - Outboard Flap

D. Prepare for the Removal

SUBTASK 27-51-24-860-001

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-24-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-24-010-001

(3) Remove the applicable fairing from the outboard flap:

(a) Do this task: Outboard Flap Outboard Support Aft Fairing Removal, TASK 27-51-28-000-803.

(b) Do this task: Outboard Flap Inboard Support Aft Fairing Removal, TASK 27-51-28-000-805.

E. Outboard Aft Flap Actuating Mechanism Removal

SUBTASK 27-51-24-020-001

(1) Remove the pin [24], nut [23], washer [22], washer [20], bolt [19] and bushing [21] that attach the aft rod assembly [2] to the aft flap [1].

NOTE: When you disconnect the aft rod assembly [2] from the aft flap [1], the aft flap [1] can move a small distance.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-24-020-002

(2) Remove the pin [15], nut [14], washer [13], washer [11], bolt [10] and bushing [12] that attach the forward rod assembly [16] to the drive rod attach fitting [9].

SUBTASK 27-51-24-020-003

(3) Remove the pin [8], nuts [7], washers [6], bushings [5], washers [4] and bolts [3] that attach the aft rod assembly [2] and the forward rod assembly [16] to the bellcrank assembly [17].

SUBTASK 27-51-24-020-004

(4) Remove the bellcrank assembly [17] from the flap carriage [18]:

(a) Remove the nuts [26] and washers [27] from the bolts [28] that attach the rubcap [25] to the bellcrank assembly [17].

(b) Remove the pin [33], nut [32], washer [31], washer [30] and bolt [29] that attach the bellcrank assembly [17] to the flap carriage [18].

(c) Measure and record the distance between the center of the bolt hole in the adjustment fitting [36] and the bellcrank assembly [17].

NOTE: This distance is referred to as Dimension A.

667	Right Wing - Outboard Flap

G. Prepare for the Installation

SUBTASK 27-51-24-820-001

(1) Make sure the bellcrank assembly [17] is the correct length:

NOTE: The length of the bellcrank assembly [17] can be changed to adjust for lateral trim problems.

(a) Measure the distance between the center of the bolt hole in the adjustment fitting [36] and the bellcrank assembly [17].

NOTE: This distance is referred to as Dimension A.

(b) Make sure the Dimension A on the bellcrank assembly [17] you will install is the same as the bellcrank assembly [17] that you removed.

NOTE: The nominal dimension of the inboard bellcrank assembly [17] is 14.56 in. (36.98 cm). The nominal dimension of the outboard bellcrank assembly [17] is 13.74 in. (34.90 cm).

1) If the inboard and outboard bellcrank assembly [17] are not at the nominal length, they should both be the same distance from the nominal dimension.

(c) If the bellcrank assembly [17] is not the correct length, adjust the bellcrank assembly [17]:

1) Loosen the nuts [35] on the adjustment fitting [36] until the locking washer [34] is disengaged from the bellcrank assembly [17].

2) Change the position of the adjustment fitting [36].

3) Engage the locking washer [34] with the bellcrank assembly [17].

4) Tighten the nuts [35] on the adjustment fitting [36].

5) Install MS20995C47 lockwire, G50356 on the nut [35].

H. Outboard Aft Flap Actuating Mechanism Installation

SUBTASK 27-51-24-420-001

(1) Install the bellcrank assembly [17] on the flap carriage [18]:

(a) Apply grease, D00633 to the shank of the bolt [29].

NOTE: Make sure you do not get grease, D00633 on the threads of the bolt [29].

(b) Install the bolts [28] in the bellcrank assembly [17].

(c) Put the bellcrank assembly [17] in its position on the flap carriage [18].

(d) Install the bolt [29] and washer [30] that attach the bellcrank assembly [17] to the flap carriage [18].

(e) Carefully clean all of the grease, D00633 from the threads of the bolt [29].

(f) Install the washer [31] and nut [32] on the bolt [29].

(g) Tighten the nut [32] to 760 in-lb (85.9 N·m) to 840 in-lb (94.9 N·m).

(h) Install the pin [33] in the nut [32].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) Attach the rubcap [25] to the bellcrank assembly [17] with the washers [27] and nuts [26].

SUBTASK 27-51-24-420-002

(2) Connect the aft rod assembly [2] and the forward rod assembly [16] to the bellcrank assembly [17]:

(a) Apply grease, D00633 to the shank of the bolts [3] and the inside of the bushings [5].

1) Make sure you do not get grease, D00633 on the threads of the bolts [3].

(b) Install the bolts [3], washers [4] and bushings [5] to attach the aft rod assembly [2] and the forward rod assembly [16] to the bellcrank assembly [17].

1) Make sure the heads of the bolts [3] are inboard.

(c) Carefully clean all of the grease, D00633 from the threads of the bolts [3].

(d) Install the washers [6] and nuts [7] on the bolts [3].

(e) Tighten the nuts [7] to 65 in-lb (7.3 N·m) to 100 in-lb (11.3 N·m).

(f) Install the pins [8] in the nuts [7].

SUBTASK 27-51-24-420-003

(3) Connect the forward rod assembly [16] to the drive rod attach fitting [9]:

(a) Apply grease, D00633 to the shank of the bolt [10] and the inside of the bushing [12].

1) Make sure you do not get grease, D00633 on the threads of the bolt [10].

(b) Install the bushing [12], bolt [10] and washer [11] to attach the forward rod assembly [16] to the drive rod attach fitting [9].

1) Make sure the head of the bolt [10] is inboard.

(c) Carefully clean all of the grease, D00633 from the threads of the bolt [10].

(d) Install the washer [13] and nut [14] on the bolt [10].

(e) Tighten the nut [14] to 65 in-lb (7.3 N·m) to 100 in-lb (11.3 N·m).

(f) Install the pin [15] in the nut [14].

SUBTASK 27-51-24-420-004

(4) Connect the aft rod assembly [2] to the aft flap [1]:

(a) Apply grease, D00633 to the shank of the bolt [19] and the inside of the bushing [21].

1) Make sure you do not get grease, D00633 on the threads of the bolt [19].

(b) Install the bushing [21], bolt [19] and washer [20] to attach the aft rod assembly [2] to the aft flap [1].

1) Make sure the head of the bolt [19] is inboard.

(c) Carefully clean all of the grease, D00633 from the threads of the bolt [19].

(d) Install the washer [22] and nut [23] on the bolt [19].

(e) Tighten the nut [23] to 65 in-lb (7.3 N·m) to 100 in-lb (11.3 N·m).

(f) Install the pin [24] in the nut [23].

I. Aft Flap Drive Mechanism Adjustment

SUBTASK 27-51-24-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-24-860-002

(2) Retract the trailing edge flaps to the retracted position. To retract them, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-24-480-001

(3) Install the rig pin from the rigging pin kit, SPL-1585 (F70207–88) in the rig pin holes in the bellcrank assembly [17] and the flap carriage [18] (Figure 402).

(a) If it is necessary, move the aft flap [1] or the main flap until you can install the rig pins.

SUBTASK 27-51-24-220-001

(4) Measure the mismatch at the between the aft flap [1] and the main flap at the inboard and outboard ends of the aft flap [1].

SUBTASK 27-51-24-820-002

(5) If the mismatch at the inboard and outboard ends of the aft flap [1] is not in the limit of 0.00 ±0.06 in. (0.00 ±1.52 mm), then adjust the length of the applicable aft rod assembly [2]:

(a) Remove the MS20995C41 lockwire, G00440 and loosen the nuts [51] on the aft rod assembly [2].

(b) Turn the applicable aft rod assembly [2] until the mismatch is in the limit at the inboard and outboard ends of the aft flap [1].

NOTE: For each 1/4 turn of the aft rod assembly [2], the trailing edge of the aft flap [1] will move approximately 0.04 in. (1.016 mm).

(c) Tighten the nuts [51] on the aft rod assembly [2].

(d) Install MS20995C41 lockwire, G00440 (Optional - MS20995C32 lockwire, G01048) on the nuts [51].

SUBTASK 27-51-24-080-001

(6) Remove the rig pin from the bellcrank assembly [17].

J. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-24-410-001

(1) Install the aft fairings on the flap supports:

(a) Do this task: Outboard Flap Outboard Support Aft Fairing Installation, TASK 27-51-28-400-803.

(b) Do this task: Outboard Flap Inboard Support Aft Fairing Installation, TASK 27-51-28-400-805.

SUBTASK 27-51-24-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-24-860-003

(3) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

OUTBOARD FLAP TRACKS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Outboard flap track removal (selection)

(2) Outboard flap track installation (selection)

(3) Outboard flap outboard track removal

(4) Outboard flap outboard track installation

(5) Outboard flap inboard track removal

(6) Outboard flap inboard track installation.

TASK 27-51-25-000-801

2. Outboard Flap Track Removal (Selection)

A. Location Zones

Zone	Area

D. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
644	Right Wing - Fairing Flap Support No. 8

E. Prepare for the Removal

SUBTASK 27-51-25-860-001

(1) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-25-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-25-010-001

(3) Remove the fairings for the outboard track on the outboard flap:

(a) Do this task: Outboard Flap Outboard Support Forward Fairing Removal, TASK 27-51-28-000-802.

(b) Do this task: Outboard Flap Outboard Support Aft Fairing Removal, TASK 27-51-28-000-803.

SUBTASK 27-51-25-020-001

(4) Do this task: Outboard Trailing Edge Flap Removal, TASK 27-51-21-000-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-25-020-002

(5) Do this task: Outboard Flap Outboard Skew Mechanism Removal, TASK 27-59-02-000-801.

SUBTASK 27-51-25-020-003

(6) Do this task: Outboard Flap Outboard Transmission Removal, TASK 27-51-41-000-802.

F. Outboard Flap Outboard Track Removal

SUBTASK 27-51-25-860-002

(1) Make sure that you support the flap track while you disconnect it.

NOTE: The outboard track for the outboard flap weighs approximately 110 lb (50 kg)).

SUBTASK 27-51-25-480-001

(2) If you will use the adapter, SPL-1733, install it on the flap track [1]:

(a) Install the adapter, SPL-1733, on the flap track [1] approximately 33 in. (838 mm) aft of the track attach fitting.

(b) Put a low profile hydraulic jack, COM-1568, below the adapter, SPL-1733, to support the flap track [1].

SUBTASK 27-51-25-020-004

(3) Remove the nut [15], washers [14], washer [12], and bolt [13] to disconnect the jumper wire [16] from the flap track [1].

SUBTASK 27-51-25-020-005

(4) Disconnect the forward end of the flap track [1]:

(a) Remove the bolts [18] and washers [17] that attach the failsafe fitting [19] to the track attach fitting.

(b) Remove the pin [23], nut [22], washer [21], and fuse pin [20] from the forward end of the flap track [1].

SUBTASK 27-51-25-020-006

(5) Disconnect the aft end of the flap track [1] from the structure:

(a) Remove the nut [6], washer [5], washer [4], and bolt [3] that attach the outboard side of the flap track [1] to the structure.

(b) Remove the nut [7], washer [8], washer [10], and bolt [11] that attach the inboard side of the flap track [1] to the structure.

(c) Measure the thickness of the shim [9].

1) Make sure to mark the track with this measurement data.

NOTE: This measurement data for the removal and replacement of the flap tracks [1] is an important step to obtain ample free movement in the fuse pin joint at the forward end of the flap track [1] and return of the flaps to former operating condition.

SUBTASK 27-51-25-020-007

(6) If you will install a new flap track [1], remove the transmission attach fitting [2] from the flap track [1]:

(a) Remove the pins [25], nuts [26], washers [24], and bolts [27] that attach the transmission attach fitting [2] to the flap track [1].

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
COM-1568	Jack - Hydraulic, General Low Profile Part #: B67563 Supplier: 36251 Part #: HW93718 Supplier: 28047 Opt Part #: W93718 Supplier: 36251
SPL-1733	Adapter - Hoist, Removal/Installation, Flap Track Part #: C27040-29 Supplier: 81205 Opt Part #: C27040-1 Supplier: 81205

D. Consumable Materials

Reference	Description	Specification
A00247	Sealant - Pressure And Environmental - Chromate Type	BMS5-95
D00633	Grease - Aircraft General Purpose	BMS3-33

E. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
644	Right Wing - Fairing Flap Support No. 8

F. Outboard Flap Outboard Track Installation

SUBTASK 27-51-25-420-001

(1) If it is not installed, install the transmission attach fitting [2]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Put the transmission attach fitting [2] in its location on the flap track [1].

(b) Install the bolts [27], washers [24] and nuts [26] that attach the transmission attach fitting [2] to the flap track [1].

(c) Install the new pins [25] in the nuts [26].

SUBTASK 27-51-25-480-002

(2) If you will use the adapter, SPL-1733, install it on the flap track [1]:

(a) Install the adapter, SPL-1733, on the flap track [1] approximately 33 in. (84 cm) aft of the track attach fitting.

(b) Put a low profile hydraulic jack, COM-1568, below the adapter, SPL-1733, to support the flap track [1].

SUBTASK 27-51-25-420-002

(3) Install the flap track [1]:

(a) If it is not installed, install the shim [9] on the structure:

1) Make sure that the shim [9] is the same thickness as the shim [9] that you removed.

NOTE: The original thickness of the shim [9] is on a marker on the structure.

NOTE: If it is necessary to replace the flap track with a new unit, a new shim [9] may need to be made and should be marked and checked after the nuts are torqued that attach the flap track [1] to the structure.

2) Apply sealant, A00247, to the mating surface of the shim [9] and the structure.

3) Put the shim [9] in its position.

4) Apply a fillet seal of sealant, A00247, around the shim [9].

(b) Attach the aft end of the flap track [1] to the structure:

1) Lift the flap track [1] to its location on the structure.

2) Install the bolt [11], washer [10], washer [8] and nut [7] that attaches the inboard side of the flap track [1] to the structure.

3) Install the bolt [3], washer [4], washer [5] and nut [6] that attaches the outboard side of the flap track [1] to the structure.

(c) Attach the forward end of the flap track [1]:

1) Apply grease, D00633, to the outside of the fuse pin [20] and the inside of the bushings.

2) Install the fuse pin [20] that attaches the forward end of the flap track [1] to the track attach fitting.

(d) Tighten the nut [7] to a torque tool set point of 1800 in-lb (203 N·m).

(e) Tighten the nut [6] to a torque tool set point of 1300 in-lb (147 N·m).

(f) Make sure you can turn the fuse pin [20] in the joint with a maximum of 10 in-lb (1 N·m).

NOTE: You can push up on the forward end of the flap track [1] to take the weight off the fuse pin [20] when you measure the torque.

(g) Install the washer [21] and nut [22] on the fuse pin [20].

(h) Tighten the nut [22] to 110 in-lb (12 N·m) - 130 in-lb (15 N·m).

(i) Loosen the nut [22] to align the hole for the pin [23].

(j) Install the new pin [23] in the nut [22].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-25-420-003

(4) Install the failsafe fitting [19] on the track attach fitting:

(a) Put the failsafe fitting [19] in its location on the track attach fitting.

(b) Install the bolts [18] and washers [17] to attach the failsafe fitting [19].

SUBTASK 27-51-25-480-003

(5) If it is necessary, remove the adapter, SPL-1733, from the flap track [1].

SUBTASK 27-51-25-020-008

(6) Install the bolt [13], washer [12], washers [14] and nut [15] to connect the jumper wire [16] to the flap track [1].

SUBTASK 27-51-25-420-004

(7) Do this task: Outboard Flap Outboard Transmission Installation, TASK 27-51-41-400-802.

SUBTASK 27-51-25-420-005

(8) Do this task: Outboard Trailing Edge Flap Installation, TASK 27-51-21-400-801.

SUBTASK 27-51-25-420-006

(9) Do this task: Outboard Flap Outboard Skew Mechanism Installation, TASK 27-59-02-400-801.

SUBTASK 27-51-25-820-001

(10) Do this task: Outboard Trailing Edge Flap Adjustment, TASK 27-51-21-820-801.

SUBTASK 27-51-25-820-002

(11) Do this task: Flap Skew Detection System Adjustment, TASK 27-59-00-820-801.

SUBTASK 27-51-25-640-001

(12) Do this task: Outboard Flap Outboard Flap Track Lubrication, TASK 12-22-51-640-816.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-25-410-001

(1) Install the fairings for the outboard track on the outboard flap:

(a) Do this task: Outboard Flap Outboard Support Aft Fairing Installation, TASK 27-51-28-400-803.

(b) Do this task: Outboard Flap Outboard Support Forward Fairing Installation, TASK 27-51-28-400-802.

SUBTASK 27-51-25-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-25-860-003

(3) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

——— END OF TASK ———

TASK 27-51-25-000-803

6. Outboard Flap Inboard Track Removal

(Figure 402)

A. General

(1) This task is applicable to the flap tracks at flap supports No. 2 and 7.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
643	Right Wing - Fairing Flap Support No. 7

E. Prepare for the Removal

SUBTASK 27-51-25-860-004

(1) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-25-040-002

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-25-010-002

(3) Remove the fairings for the inboard track on the outboard flap:

(a) Do this task: Outboard Flap Inboard Support Forward Fairing Removal, TASK 27-51-28-000-804.

(b) Do this task: Outboard Flap Inboard Support Aft Fairing Removal, TASK 27-51-28-000-805.

SUBTASK 27-51-25-020-009

(4) Do this task: Outboard Trailing Edge Flap Removal, TASK 27-51-21-000-801.

SUBTASK 27-51-25-020-010

(5) Do this task: Outboard Flap Inboard Skew Mechanism Removal, TASK 27-59-02-000-802.

SUBTASK 27-51-25-020-011

(6) Do this task: Outboard Flap Inboard Transmission Removal, TASK 27-51-41-000-803.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Outboard Flap Inboard Track Removal

SUBTASK 27-51-25-860-005

(1) Make sure that you support the flap track [41] while you disconnect it.

SUBTASK 27-51-25-480-004

(2) If you will use the adapter, SPL-1733, install it on the flap track [41]:

(a) Install the adapter, SPL-1733, on the flap track [41] approximately 33 in. (84 cm) aft of the track attach fitting.

(b) Put a low profile hydraulic jack, COM-1568, below the adapter, SPL-1733, to support the flap track [41].

SUBTASK 27-51-25-020-012

(3) Remove the nut [56], washer [55], washer [54], washer [53] and bolt [52] to disconnect the jumper wire [57] from the flap track [41].

SUBTASK 27-51-25-020-013

(4) Disconnect the forward end of the flap track [41]:

(a) Remove the bolts [59] and washers [58] that attach the failsafe fitting [60] to the track attach fitting.

(b) Remove the pin [64], nut [63], washer [62] and fuse pin [61] from the forward end of the flap track [41].

SUBTASK 27-51-25-020-014

(5) Disconnect the aft end of the flap track [41] from the structure:

(a) Remove the nut [46], washer [45], washer [44] and bolt [43] that attach the outboard side of the flap track [41] to the structure.

(b) Remove the nut [47], washer [48], washer [50] and bolt [51] that attach the inboard side of the flap track [41] to the structure.

(c) Measure the thickness of the shim [49].

1) Make sure to mark the track with this measurement data.

NOTE: This measurement data for the removal and replacement of the flap tracks [41] is an important step to get ample free movement in the fuse pin joint at the forward end of the flap track [41] and return of the flaps to former operating condition.

SUBTASK 27-51-25-020-015

(6) If you will install a new flap track [41], remove the transmission attach fitting [42] from the flap track [41]:

(a) Remove the pins [68], nuts [67], washers [66] and bolts [65] that attach the transmission attach fitting [42] to the flap track [41].

G. Outboard Flap Inboard Track Installation

SUBTASK 27-51-25-420-007

(1) If it is not installed, install the transmission attach fitting [42]:

(a) Put the transmission attach fitting [42] in its location on the flap track [41].

(b) Install the bolts [65], washers [66], and nuts [67] that attach the aft end of the transmission attach fitting [42] to the flap track [41].

(c) Install the new pins [68] in the nuts [67].

SUBTASK 27-51-25-480-005

(2) If you will use the adapter, SPL-1733, install it on the flap track [41]:

(a) Install the adapter, SPL-1733, on the flap track [41] approximately 33 in. (838 mm) aft of the track attach fitting.

(b) Put a low profile hydraulic jack, COM-1568, below the adapter, SPL-1733, to support the flap track [41].

SUBTASK 27-51-25-420-008

(3) Install the flap track [41]:

(a) If it is not installed, install the shim [49] on the structure:

1) Make sure the shim [49] is the same thickness as the shim [49] that you removed.

NOTE: The original thickness of the shim [49] is on a marker on the structure.

NOTE: If it is necessary to replace the flap track [41] with a new unit, a new shim [49] may need to be made and should be marked and checked after the nuts are torqued that attach the flap track to the structure.

2) Apply sealant, A00247, to the mating surface of the shim [49] and the structure.

3) Put the shim [49] in its position.

4) Apply a fillet seal of sealant, A00247, around the shim [49].

(b) Attach the aft end of the flap track [41] to the structure:

1) Lift the flap track [41] to its location on the structure.

2) Install the bolt [51], washer [50], washer [48], and nut [47] that attaches the inboard side of the flap track [41] to the structure.

3) Install the bolt [43], washer [44], washer [45], and nut [46] that attaches the outboard side of the flap track [41] to the structure.

NOTE: You can install the bolt [43] with the head down. The washer [45] is installed adjacent to the flap track [41].

(c) Attach the forward end of the flap track [41]:

1) Apply grease, D00633, to the outside of the fuse pin [61] and the inside of the bushings.

2) Install the fuse pin [61] that attaches the forward end of the flap track [41] to the track attach fitting.

(d) Tighten the nut [47] to a torque tool set point of 2300 in-lb (260 N·m).

(e) Tighten the nut [46] to a torque tool set point of 1800 in-lb (203 N·m).

(f) Make sure you can turn the fuse pin [61] in the joint with a maximum of 10 in-lb (1 N·m).

NOTE: You can push up on the forward end of the flap track [41] to take the weight off the fuse pin [61] when you measure the torque.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Install the washer [62] and nut [63] on the fuse pin [61].

(h) Tighten the nut [63] to 330 in-lb (37 N·m) - 350 in-lb (40 N·m).

(i) Loosen the nut [63] to align the hole for the pin [64].

(j) Install the new pin [64] in the nut [63].

SUBTASK 27-51-25-420-009

(4) Install the failsafe fitting [60] on the track attach fitting:

(a) Put the failsafe fitting [60] in its location on the track attach fitting.

(b) Install the bolts [59] and washers [58] to attach the failsafe fitting [60].

SUBTASK 27-51-25-480-006

(5) If it is necessary, remove the adapter, SPL-1733, from the flap track [41].

SUBTASK 27-51-25-020-016

(6) Install the bolt [52], washer [53], washer [54], washer [55], and nut [56] to connect the jumper wire [57] to the flap track [41].

SUBTASK 27-51-25-420-010

(7) Do this task: Outboard Flap Inboard Transmission Installation, TASK 27-51-41-400-803.

SUBTASK 27-51-25-420-011

(8) Do this task: Outboard Trailing Edge Flap Installation, TASK 27-51-21-400-801.

SUBTASK 27-51-25-420-012

(9) Do this task: Outboard Flap Inboard Skew Mechanism Installation, TASK 27-59-02-400-802.

SUBTASK 27-51-25-820-003

(10) Do this task: Outboard Trailing Edge Flap Adjustment, TASK 27-51-21-820-801.

SUBTASK 27-51-25-820-004

(11) Do this task: Flap Skew Detection System Adjustment, TASK 27-59-00-820-801.

SUBTASK 27-51-25-640-002

(12) Do this task: Outboard Flap Inboard Flap Track Lubrication, TASK 12-22-51-640-815.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-25-410-002

(1) Install the fairings for the inboard track on the outboard flap:

(a) Do this task: Outboard Flap Inboard Support Aft Fairing Installation, TASK 27-51-28-400-805.

(b) Do this task: Outboard Flap Inboard Support Forward Fairing Installation, TASK 27-51-28-400-804.

SUBTASK 27-51-25-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-25-860-006

(3) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD FLAP TRACKS - INSPECTION/CHECK

1. General

A. This procedure contains tasks to do inspections of the flap tracks for the outboard trailing edge flaps.

TASK 27-51-25-200-801

2. Outboard Flap Track Inspection (Selection)

A. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
544	Left Wing - Fairing Flap Support No. 1
643	Right Wing - Fairing Flap Support No. 7
644	Right Wing - Fairing Flap Support No. 8

B. Outboard Flap Track Inspection (Selection)

SUBTASK 27-51-25-200-001

(1) Do one of these tasks to inspect the applicable outboard flap track:

(a) Do this task: Outboard Flap Outboard Track Inspection, TASK 27-51-25-200-802.

(b) Do this task: Outboard Flap Inboard Track Inspection, TASK 27-51-25-200-803.

——— END OF TASK ———

TASK 27-51-25-200-802

3. Outboard Flap Outboard Track Inspection

(Figure 601)

A. General

(1) This task gives wear limits for the outboard track on the outboard flap.

(2) this task is applicable to the flap tracks at flap supports No. 1 and 8.

B. References

Reference	Title

E. Outboard Flap Outboard Track Inspection

SUBTASK 27-51-25-020-017

(1) Do this task: Outboard Flap Outboard Track Removal, TASK 27-51-25-000-802.

SUBTASK 27-51-25-020-018

(2) Use these tools to do a check for wear on the part of the outboard flap outboard track:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-51-25-020-019

(3) Examine the parts of the outboard flap outboard track (Table 601):

(a) Remove the parts that you will measure.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096, or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are not in tolerance, replace or repair the parts.

Table 601/27-51-25-993-801

NAME OF THE PARTS THAT ARE IN CONTACT	DIM.	DIAMETER DESIGN LIMITS		WEAR LIMITS	
		MINIMUM inches/mm	MAXIMUM inches/mm	PERMITTED MAXIMUM I.D./ MINIMUM O.D. OF WORN PART	MAXIMUM SERVICE CLEARANCE inches/mm

TASK 27-51-25-200-803

4. Outboard Flap Inboard Track Inspection

(Figure 602)

A. General

(1) This task gives wear limits for the inboard track on the outboard flap.

(2) This task is applicable to the flap tracks at flap supports No. 2 and 7.

B. References

E. Outboard Flap Inboard Track Inspection

SUBTASK 27-51-25-020-020

(1) Do this task: Outboard Flap Inboard Track Removal, TASK 27-51-25-000-803.

SUBTASK 27-51-25-020-021

(2) Use these tools to do a check for wear on the part of the inboard flap inboard track:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-51-25-020-022

(3) Examine the parts of the inboard flap inboard track (Table 602):

(a) Remove the parts that you will measure.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096, or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions.

(d) If the parts are not in tolerance, replace or repair the parts.

OUTBOARD AFT FLAP TRACKS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the aft flap tracks for the outboard flap

(2) An installation of the aft flap tracks for the outboard flap.

B. There are four aft flap tracks on the outboard flaps. You can use this procedure to remove and install one or more of the aft flap tracks. If you remove more than two aft flap tracks, it is necessary to remove the aft flap from the main flap.

TASK 27-51-26-000-801

2. Outboard Aft Flap Track Removal

(Figure 401)

27-51-22-000-801	Outboard Aft Flap Removal (P/B 401)

B. Location Zones

Zone	Area
567	Left Wing - Outboard Flap
667	Right Wing - Outboard Flap

C. Prepare for the Removal

SUBTASK 27-51-26-020-001

(1) If it is necessary to remove more than two aft flap tracks, remove the aft flap [2], do this task: Outboard Aft Flap Removal, TASK 27-51-22-000-801.

SUBTASK 27-51-26-860-001

WARNING

IF YOU REMOVE ONE OR TWO AFT FLAP TRACKS WITH THE AFT FLAP ATTACHED TO THE MAIN FLAP, MAKE SURE THE INBOARD AND OUTBOARD AFT FLAP PROGRAMMING ROLLERS REMAIN ENGAGED IN THEIR RELATED PROGRAMMING TRACKS. ROLLERS CAN BECOME DISENGAGED FROM THE PROGRAMMING TRACKS AND CAN CAUSE INJURY TO PERSONNEL AND DAMAGE THE AFT FLAP FAIRING.

(2) If it is necessary to remove one or two aft flap tracks, extend the trailing edge flaps to the 40-unit position, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-26-040-001

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

D. Outboard Aft Flap Track Removal

SUBTASK 27-51-26-020-002

(1) For the outboard aft flap track No. 1 [3], remove the cotter pin [12], nut [11], washer [10], washer [8], bolt [7], and bushing [9] that attach the aft flap track No. 1 [3] to the aft flap [2] (View A, Figure 401).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-26-020-003

(2) For the aft flap track No. 2 [4], aft flap track No. 3 [5], or aft flap track No. 4 [6], remove the cotter pin [18], nut [17], washer [16], washer [14], bolt [13], and bushing [15] that attach the aft flap track No. 2 [4], aft flap track No. 3 [5], or aft flap track No. 4 [6] to the aft flap [2] (View B, Figure 401).

SUBTASK 27-51-26-020-004

(3) Remove the aft flap track assembly from the main flap [1] (View D, Figure 401):

NOTE: The flap track assemblies at each of the track positions are similar in assembly. The rib aft track support, aft flap track, and rub plate assembly part numbers are specific to each of the track positions.

(a) Remove lockwire, bolts [19], and washers [20] that attach the cartridge assemblies [21] to the track support rib [22] on the main flap [1] (View E, Figure 401).

(b) Retain the barrel nuts [19A] and retainer clips [20A] in the aft flap rib support.

NOTE: If the barrel nuts and retainer clips come out, mark their location and keep them for installation later.

(c) Remove the cartridge assemblies [21] from the track support rib [22].

NOTE: There are four cartridge assemblies in the track support rib at each track position.

(d) Remove lockwire, bolts [101], and washers [102] that attach the left rub plate assembly [110] and right rub plate assembly [111] to the track support rib [22] (View F, Figure 401).

(e) Carefully remove the aft flap track together with left rub plate assembly [110] and right rub plate assembly [111] from the track support rib [22].

SUBTASK 27-51-26-000-001

(4) Remove the down stop from the forward end of the aft flap track assembly (View D, Figure 401).

(a) Remove the bolt [26], washer [27], washer [29], bushings [28], and nut [30] from the aft flap track.

F. Outboard Aft Flap Track Installation

SUBTASK 27-51-26-420-001

(1) If the downstop is not installed on the applicable aft flap track, do these steps:

(a) Install the bolt [26], bushings [28], washer [27], washer [29], and nut [30] on the aft flap track.

(b) Tighten the nut [30] the minimum amount to necessary to hold the bushings [28] tight.

SUBTASK 27-51-26-420-002

(2) Install the aft flap track assembly in the main flap [1] (View D, Figure 401):

NOTE: The flap track assemblies at each of the track positions are similar in assembly. The rib aft track support, aft flap track, and rub plate assembly part numbers are specific to each of the track positions.

(a) Insert the left rub plate assembly [110] and right rub plate assembly [111] into the sides of the aft flap track with the nutlock plates facing inward to the centerline of the track.

(b) Carefully place the aft track together with the rub plates in its position in the track support rib [22] of the main flap [1].

(c) Install the bolts [101], washers [102] that attach the left rub plate assembly [110] and right rub plate assembly [111] to either side of the track support rib [22] (View F, Figure 401).

(d) Install MS20995C32 lockwire, G01048, on the bolts [101] at each side of the track.

(e) Apply a layer of grease, D00633, to the outside of the cartridge assemblies [21] and inside diameter of the track support rib [22].

(f) Put the cartridge assemblies [21] in position in the track support rib [22].

NOTE: Install the forward cartridge assembly first so that you can access the barrel nuts and retainer clips if it is necessary.

(g) If the barrel nuts [19A] and retainer clips [20A] did not remain in the rib support, install them in the track support rib [22] before installing the attaching bolts [19] (View E, Figure 401).

(h) Install the bolts [19] and washers [20] that attach the cartridge assemblies [21] to the track support rib [22] (View E, Figure 401).

1) Install MS20995C32 lockwire, G01048, on the bolts [19] at each of the cartridge assemblies [21].

SUBTASK 27-51-26-420-003

WARNING MAKE SURE THAT YOU ENGAGE THE INBOARD-AND-OUTBOARD AFT FLAP-PROGRAMMING-ROLLERS IN THEIR RELATED PROGRAMMING TRACKS. ROLLERS CAN DISENGAGE FROM THE PROGRAMMING TRACKS AND CAN CAUSE INJURY TO PERSONNEL AND DAMAGE THE AFT FLAP FAIRING.

(3) If the aft flap [2] is installed, connect the applicable aft flap track to the aft flap [2]:

(a) Connect the aft flap track No. 1 [3] to the aft flap [2]:

1) Move the aft flap track No. 1 [3] until it aligns with the aft flap [2].

2) Apply grease, D00633, to the shank of the bolt [7] and inside of the bushing [9].

a) Make sure that there is no grease, D00633, on the threads of the bolt [7].

3) Install the bushing [9], bolt [7], and washer [8] that attach the aft flap track No. 1 [3] to the aft flap [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Carefully clean all of grease, D00633, from the threads of the bolt [7].
5) Install the washer [10] and nut [11] on the bolt [7].
6) Tighten the nut [11] to 65 ±15 in-lb (7.3 ±1.7 N·m).
7) Install the cotter pin [12] in the nut [11].

(b) Connect the aft flap track No. 2 [4] or aft flap track No. 3 [5] to the aft flap [2]:
1) Move the applicable aft flap track until it aligns with the aft flap [2].
2) Apply grease, D00633, to the shank of the bolt [13] and inside of the bushing [15].
a) Make sure that there is no grease, D00633, on the threads of the bolt [13].
3) Install the bushing [15], bolt [13], and washer [14] that attach the aft flap track No. 2 [4] or aft flap track No. 3 [5] to the aft flap [2].
4) Carefully clean all of grease, D00633, from the threads of the bolt [13].
5) Install the washer [16] and nut [17] on the bolt [13].
6) Tighten the nut [17] to 125 ±25 in-lb (14.1 ±2.8 N·m).
7) Install the cotter pin [18] in the nut [17].

(c) Connect the aft flap track No. 4 [6] to the aft flap [2]:
1) Move the applicable aft flap track until it aligns with the aft flap [2].
2) Apply grease, D00633, to the shank of the bolt [13] and inside of the bushing [15].
a) Make sure that there is no grease, D00633, on the threads of the bolt [13].
3) Install the bushing [15], bolt [13], and washer [14] that attach the aft flap track No. 4 [6] to the aft flap [2].
4) Carefully clean all of grease, D00633, from the threads of the bolt [13].
5) Install the washer [16] and nut [17] on the bolt [13].
6) Tighten the nut [17] to 200 ±40 in-lb (22.6 ±4.5 N·m).
7) Install the cotter pin [18] in the nut [17].

SUBTASK 27-51-26-420-004

(4) If it is not installed, install the aft flap [2] (TASK 27-51-22-400-801).

SUBTASK 27-51-26-640-001

(5) Lubricate the cartridge assemblies [21] and cartridge assemblies [25] with grease, D00633 (TASK 12-22-51-640-812).

SUBTASK 27-51-26-860-002

(6) If the trailing edge flaps are not in the retracted position, retract the flaps (TASK 27-51-00-860-804):
(a) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.
(b) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.
(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

G. Outboard Aft Flap Adjustment

SUBTASK 27-51-26-480-001

(1) On the inboard and outboard flap supports, install the rig pins (rigging pin kit, SPL-1585) in the rig pin holes in the bellcrank [51] and flap carriage (Figure 402).
(a) If it is necessary, move the aft flap [2] or main flap [1] until you can install the rig pins.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-26-980-001

(2) Support the aft flap [2] to make sure that the programming rollers touch the bottom surface of the programming tracks and aft rollers for the aft flap tracks touch the top surface of the tracks.

NOTE: This is the position the rollers will be in with airloads applied to the flap.

SUBTASK 27-51-26-220-001

(3) Measure the clearance between the main flap [1] and upper surface of the aft flap [2] (View C, Figure 402).

(a) Measure the clearance at all of the cove panel supports [52] and at the track support ribs [22].

SUBTASK 27-51-26-220-002

(4) Make sure that the rub strip [50] and Teflon coating on the upper surface of the aft flap [2] are not damaged (View C, Figure 402).

(a) If the rub strip [50] is damaged or missing, do this task: Bonded Phenolic or Stainless Steel Rub Pad Repair (Heat Source Available), TASK 51-71-00-340-801.

(b) If the Teflon coating is damaged, do this task: Apply The Abrasion-Resistant Teflon Finish, BMS 10-86 Type I, TASK 51-21-81-370-801.

SUBTASK 27-51-26-820-001

(5) If the clearance between the main flap [1] and aft flap [2] is not in the limit of 0.010 +0.100 / -0.005 in. (0.254 +2.540 / -0.127 mm), change the thickness of the shims [61] on the cove panel support [52] or the shims [61] on the track support ribs [22].

(a) Remove the rig pins from the bellcranks [51].

(b) Extend the aft flap [2], until you can get access to the fasteners for the shim [57] and shims [61] (TASK 27-51-00-860-803).

(c) If it is necessary, change the thickness of the shims [61] on the cove panel supports [52] as follows:

1) Remove the nuts [56], washers [55], and bolts [54] that attach the cove panel [53] to the cove panel support [52].

2) Remove the shim [57] from the cove panel support [52] and cove panel [53].

3) Change the thickness of the shim [57].

NOTE: The maximum permitted thickness of the shim is 0.050 in. (1.270 mm).

4) Apply sealant, A00247, to the mating surfaces of the shim [57].

5) Put the shim [57] in its position between the cove panel support [52] and cove panel [53].

6) Install the bolts [54], washers [55], and nuts [56].

(d) If it is necessary, change the thickness of the shims [61] on the track support rib [22] as follows:

1) Remove the nuts [60], washers [59], and bolts [58] that attach the cove panel [53] to the track support rib [22].

2) Remove the shims [61] from the track support rib [22] and cove panel [53].

3) Change the thickness of the shims [61].

NOTE: The maximum permitted thickness of the shim is 0.050 in. (1.270 mm).

4) Apply sealant, A00247, to the mating surfaces of the shims [61].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

5) Put the shims [61] in their position between the track support rib [22] and cove panel [53].

6) Install the bolts [58], washers [59], and nuts [60].

7) If it is necessary, trim the excess shim [61] that extends past the track support rib [22].

(e) Retract the aft flap [2] until you can install the rig pins in the bellcranks [51] (TASK 27-51-00-860-804).

(f) Install the rig pins in the bellcranks [51].

(g) Make sure that the clearance between the main flap [1] and upper surface of the aft flap [2] is in the limit.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-26-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-26-860-003

(2) Use the primary system to extend and retract the flaps (TASK 27-51-00-860-801).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD FLAP SUPPORT FAIRINGS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) For the outboard flap support on the outboard flap:

(a) A removal of the forward fairing.

(b) An installation of the forward fairing.

(c) A removal of the aft fairing.

(d) An installation of the aft fairing.

(2) For the inboard flap support on the outboard flap:

(a) A removal of the forward fairing.

(b) An installation of the forward fairing.

(c) A removal of the aft fairing.

(d) An installation of the aft fairing.

TASK 27-51-28-000-801

2. Outboard Flap Support Fairings Removal (Selection)

A. Procedure

SUBTASK 27-51-28-000-001

(1) Do one of these tasks to remove the applicable outboard flap support fairing:

(a) Do this task:Outboard Flap Outboard Support Forward Fairing Removal, TASK 27-51-28-000-802.

(b) Do this task:Outboard Flap Outboard Support Aft Fairing Removal, TASK 27-51-28-000-803.

(c) Do this task:Outboard Flap Inboard Support Forward Fairing Removal, TASK 27-51-28-000-804.

(d) Do this task:Outboard Flap Inboard Support Aft Fairing Removal, TASK 27-51-28-000-805.

——— END OF TASK ———

TASK 27-51-28-400-801

3. Outboard Flap Support Fairings Installation (Selection)

A. Procedure

SUBTASK 27-51-28-400-001

(1) Do one of these tasks to install the applicable outboard flap support fairing:

(a) Do this task:Outboard Flap Outboard Support Forward Fairing Installation, TASK 27-51-28-400-802.

(b) Do this task:Outboard Flap Outboard Support Aft Fairing Installation, TASK 27-51-28-400-803.

(c) Do this task:Outboard Flap Inboard Support Forward Fairing Installation, TASK 27-51-28-400-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Do this task:Outboard Flap Inboard Support Aft Fairing Installation, TASK 27-51-28-400-805.

——— END OF TASK ———

TASK 27-51-28-000-802

4. Outboard Flap Outboard Support Forward Fairing Removal

(Figure 401)

A. General

(1) This task is applicable to the forward fairing on the No. 1 and No. 8 flap supports.

B. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)

C. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
644	Right Wing - Fairing Flap Support No. 8

D. Procedure

SUBTASK 27-51-28-040-001

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-28-020-001

(2) Remove the forward fairing [1]:

(a) Remove the bolts [6] that attach the forward end of the forward fairing [1].

(b) Support the forward fairing [1] and remove the bolts [4] and washers [5] that attach the forward fairing [1] to the fairing attach fitting [13].

(c) Lower the forward fairing [1] until you can get access to the nuts [11] on the jumper wires [22].

(d) Remove the nuts [11] and washers [12] that attach the jumper wires [22].

(e) Remove the jumper wires [22] from the studs.

(f) Remove the forward fairing [1].

SUBTASK 27-51-28-020-002

(3) If it is necessary, remove the fairing attach fitting [13]:

(a) Remove the lockwire, bolts [8] and washers [9] that attach the fairing attach fitting [13] to the transmission attach fitting [10].

544	Left Wing - Fairing Flap Support No. 1
644	Right Wing - Fairing Flap Support No. 8

F. Outboard Flap Outboard Support Forward Fairing Installation

SUBTASK 27-51-28-420-001

(1) If it is not installed, install the fairing attach fitting [13] on the transmission attach fitting [10].

(a) Apply primer, C00259, to the mating surfaces of the shim [24].

(b) Put the fairing attach fitting [13] and shim [24] in their location on the transmission attach fitting [10].

(c) Apply compound, C00528, to the holes for the bolts [8].

(d) Install the bolts [8] and washers [9] to attach the fairing attach fitting [13] to the transmission attach fitting [10].

(e) Install lockwire between the bolts [8] and fairing attach fitting [13].

SUBTASK 27-51-28-420-002

(2) Install the forward fairing [1].

(a) Connect the jumper wires [22] as follows:

1) Lift the forward fairing [1] until you can put the jumper wires [22] on the studs.

2) Install the washers [12] and nuts [11] to attach the jumper wires [22].

3) Apply sealant, A02315, to the nuts [11].

(b) Apply primer, C00259, to the mating surfaces of the shims [21] and shim [23].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) If previously removed, put the shims [21] or shim [23] in its position.

(d) Apply compound, C00528, to the holes for the bolts [4] and bolts [6].

(e) Install the bolts [4] and washers [5] to attach the forward fairing [1] to the fairing attach fitting [13].

1) Tighten the bolts [4] to 90 in-lb (10.2 N·m) - 125 in-lb (14.1 N·m).

(f) Install the bolts [6] to attach the forward end of the forward fairing [1].

1) Tighten the bolts [6] to 73 in-lb (8.25 N·m) - 77 in-lb (8.70 N·m).

SUBTASK 27-51-28-820-001

(3) Do this task: Outboard Flap Outboard Support Fairing Adjustment, TASK 27-51-28-820-801.

NOTE: The aft fairing must be installed and adjusted before you can do the adjustment of the forward fairing.

SUBTASK 27-51-28-390-001

(4) Fill the clearance between the front of the forward fairing [1] and the lower surface of the wing with sealant, A02315.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-28-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

——— END OF TASK ———

TASK 27-51-28-000-803

6. Outboard Flap Outboard Support Aft Fairing Removal

(Figure 401)

A. General

(1) This task is applicable to the aft fairing on the No. 1 and No. 8 flap supports.

B. References

Reference	Title

644CR	Flap Support No. 8, Access Cover
644DL	Flap Support No. 8, Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Procedure

SUBTASK 27-51-28-860-001

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

NOTE: If you cannot extend the flaps, it will be necessary to open the access door [34] on the aft fairing [2].

SUBTASK 27-51-28-010-001

(2) If it is necessary, open the access door [34] on the aft fairing [2]:

(a) These are the doors:

Number	Name/Location
544DR	Flap Support No. 1 Access Door
644DL	Flap Support No. 8, Access Door

(b) Remove the bolts [65] that attach the access door [34] to the aft fairing [2].

(c) Loosen the screw [66] on the access door [34].

NOTE: The screw [66] has a cotter pin installed on the inboard side.

(d) Turn the access door [34] around the screw [66].

SUBTASK 27-51-28-040-002

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-28-010-002

(4) Remove the access cover [3] and access cover [20] from the forward end of the aft fairing [2]:

(a) These are the covers:

Number	Name/Location
544CL	Flap Support No. 1 Access Cover
544CR	Flap Support No. 1 Access Cover
644CL	Flap Support No. 8, Access Cover
644CR	Flap Support No. 8, Access Cover

(b) Remove the bolts [14] and washers [70] that attach the access cover [3] and access cover [20] to the aft fairing [2].

(c) Remove the access cover [3] and access cover [20].

SUBTASK 27-51-28-020-003

(5) Remove the aft fairing [2]:

(a) Support the aft fairing [2].

(b) Disconnect the aft end of the aft fairing [2]:

1) Remove the pin [31], nut [30], washer [29], washer [27], bolt [26] and bushing [28] that attach the drive rod [32] to the carriage [25].

2) Remove the pin [40], nut [39], washer [38], washer [36], bolt [35] and bushing [37] that attach the attach beam [33] to the flap track [7].

(c) Disconnect the forward end of the aft fairing [2]:

1) Remove the nut [19] and washer [18] from the pivot bolt [15].

2) Remove the pivot bolt [15], washer [16] and bushing [17] that attach the aft fairing [2] to the transmission attach fitting [10].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Lower the aft fairing [2] until you can get access to the nuts [11] on the jumper wires [22].

NOTE: The jumper wires for the forward fairing and aft fairing are attached at the same stud. If the forward fairing has been removed (Outboard Flap Outboard Support Forward Fairing Removal, TASK 27-51-28-000-802), then the jumper wires [22] may have already been removed.

(e) Remove the nuts [11] and washers [12] that attach the jumper wires [22].

(f) Remove the jumper wires [22] from the studs.

(g) Lower the aft fairing [2].

SUBTASK 27-51-28-020-004

(6) If you will install a new aft fairing [2], remove the fairing drive linkage from the aft fairing [2]:

NOTE: The fairing drive linkage includes the drive rod [32], adjust link [41], adjust rod [42] and the attach beam [33].

(a) Remove the pin [48], nut [47], washer [46], washer [44], bolt [43] and bushing [45] that attach the adjust rod [42] to the aft fairing [2].

(b) Remove the adjust link [41] from the aft fairing [2]:

1) Remove the pin [56], nut [57] and washer [58] from the bolt [62].

2) Remove the bolt [62], washer [63] and washers [55].

a) Make a note of the thickness and location of the washers [55] and adjust as necessary to achieve the proper gap.

3) Remove the bushing [60] and bushing [61] from the aft fairing [2].

(c) Remove the pin [54], nut [53], washer [52], washer [50], bolt [49] and bushing [51] that attach the adjust link [41] to the attach beam [33].

(d) Remove the pin [31], nut [30], washer [29], washer [27], bolt [26] and bushing [28] that attach the drive rod [32] to the attach beam [33].

(e) Remove the pin [48], nut [47], washer [46], washer [44], bolt [43] and bushing [45] that attach the adjust rod [42] to the adjust link [41].

SUBTASK 27-51-28-010-003

(7) If it is necessary, remove the tailcone assembly [67] from the aft fairing [2]:

(a) Remove the bolts [68] that attach the tailcone assembly [67] to the aft fairing [2].

(b) Remove the tailcone assembly [67] from the aft fairing [2].

END OF TASK

TASK 27-51-28-400-803

7. Outboard Flap Outboard Support Aft Fairing Installation

(Figure 401)

A. General

(1) This task is applicable to the aft fairing on the No. 1 and No. 8 flap supports.

G. Outboard Flap Outboard Support Aft Fairing Installation

SUBTASK 27-51-28-020-005

(1) If the fairing drive linkage is not installed on the aft fairing [2], do these steps:

NOTE: The fairing drive linkage includes the drive rod [32], adjust link [41], adjust rod [42] and the attach beam [33].

(a) Connect the adjust rod [42] to the adjust link [41]:

1) Install the bushing [45], bolt [43], washer [44], washer [46] and nut [47] that attach the adjust rod [42] to the adjust link [41].

NOTE: For the left wing, install the bolt [43] with the head on the same side of the adjust link [41] as the bushing [45]. For the right wing, install the bolt [43] with the head on the opposite side of the adjust link [41] as the bushing [45].

2) Install the pin [48] in the nut [47].

(b) Connect the adjust link [41] to the attach beam [33]:

1) Put the adjust link [41] in its position on the attach beam [33].

2) Install the bushing [51], bolt [49], washer [50], washer [52] and nut [53] to attach the adjust link [41] to the attach beam [33].

3) Tighten the nut [53]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Lubricate the bolt [49] with grease, D00633.

b) Tighten the nut [53] to 240 in-lb (27 N·m) to 300 in-lb (34 N·m).

4) Install the pin [54] in the nut [53].

(c) Connect the drive rod [32] to the attach beam [33]:

1) Put the drive rod [32] in its position on the attach beam [33].

2) Install the bushing [28], bolt [26], washer [27], washer [29] and nut [30] to attach the drive rod [32] to the attach beam [33].

3) Install the pin [31] in the nut [30].

(d) Connect the adjust link [41] to the aft fairing [2]:

1) Put the adjust link [41] in its location on the aft fairing [2] with the washers [55], bushing [60] and bushing [61].

a) Install the same number of washers [55] in the same location as you removed them.

2) Install the bolt [62], washer [63], washer [58] and nut [57].

3) Tighten the nut [57]:

a) Lubricate the bolt [62] with grease, D00633.

b) Tighten the nut [57] to 240 in-lb (27 N·m) to 300 in-lb (34 N·m).

4) Measure the clearance between the washer [58] and the flange on the flanged bushing [59].

5) If the clearance is not 0.010 in. (0.254 mm) to 0.025 in. (0.635 mm), change the location of the washers [55]:

a) Remove the nut [57], washer [58], washers [55], washer [63], bolt [62], bushing [60] and bushing [61].

b) Change the number or location of the washers [55].

c) Install the bushing [60], bushing [61], bolt [62], washer [63], washers [55], washer [58] and nut [57].

d) Make sure the clearance between the washer [58] and the flange on the flanged bushing [59] is in the limit of 0.010 in. (0.254 mm) to 0.025 in. (0.635 mm).

e) Lubricate the bolt [62] with grease, D00633.

f) Tighten the nut [57] to 240 in-lb (27 N·m) to 300 in-lb (34 N·m).

6) Install the pin [56] in the nut [57].

(e) Connect the adjust adjust rod [42] to the aft fairing [2]:

1) Install the bushing [45], bolt [43], washer [44], washer [46] and nut [47] that attach the adjust rod [42] to the aft fairing [2].

2) Install the pin [48] in the nut [47].

SUBTASK 27-51-28-420-003

(2) Install the aft fairing [2]:

(a) Connect the jumper wires [22]:

1) Lift the forward end of the aft fairing [2] until you can put the jumper wires [22] on the studs.

NOTE: The jumper wires for the forward fairing also attach to the studs.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure that the jumper wires for the forward fairing are installed on the studs.

2) Install the washers [12] and nuts [11] to attach the jumper wires [22].

3) Apply sealant, A02315 to the nuts [11].

(b) Connect the forward end of the aft fairing [2] to the transmission attach fitting [10]:

1) Lift the forward end of the aft fairing [2] until it aligns with the transmission attach fitting [10].

2) Install the bushing [17], pivot bolt [15], washer [18], washer [16] and nut [19].

3) Tighten the nut [19]:

a) Lubricate the pivot bolt [15] with grease, D00633.

b) Tighten the nut [19] to 1000 in-lb (113 N·m) to 1200 in-lb (136 N·m).

(c) Connect the aft end of the aft fairing [2]:

1) Move the attach beam [33] until it aligns with the flap track [7].

2) Install the bushing [37], bolt [35], washer [36], washer [38] and nut [39].

3) Tighten the nut [39]:

a) Lubricate the bolt [35] with grease, D00633.

b) Tighten the nut [39] to 440 in-lb (50 N·m) to 650 in-lb (73 N·m).

4) Install the pin [40] in the nut [39].

5) Align the drive rod [32] with the carriage [25].

6) Install the bushing [28], bolt [26], washer [27], washer [29] and nut [30].

a) Install the bolt [26] with the head on the outboard side.

7) Install the pin [31] in the nut [30].

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-28-440-002

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-28-860-002

(2) Retract the flaps to the retracted position. To retract them, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-28-820-002

(3) Do this task: Outboard Flap Outboard Support Fairing Adjustment, TASK 27-51-28-820-801.

SUBTASK 27-51-28-410-001

(4) Install the access cover [3] and access cover [20] on the forward end of the aft fairing [2]:

(a) These are the covers:

Number	Name/Location
544CL	Flap Support No. 1 Access Cover
544CR	Flap Support No. 1 Access Cover
644CL	Flap Support No. 8, Access Cover
644CR	Flap Support No. 8, Access Cover

(b) Put the access cover [3] and access cover [20] in their locations on the aft fairing [2].

(c) Install the bolts [14] that attach the access cover [3] and access cover [20].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-28-410-002

(5) If it is open, close the access door [34] on the aft fairing [2]:

(a) These are the doors:

Number	Name/Location
544DR	Flap Support No. 1 Access Door
644DL	Flap Support No. 8, Access Door

(b) Turn the access door [34] around the screw [66] until it is in its position.

(c) Install the bolts [65] that attach the access door [34] to the aft fairing [2].

(d) Tighten the screw [66] on the access door [34].

SUBTASK 27-51-28-410-003

(6) If it is not installed, install the tailcone assembly [67] on the aft fairing [2]:

(a) Put the tailcone assembly [67] in its location on the aft fairing [2].

(b) Install the bolts [68] that attach the tailcone assembly [67].

(c) Fill and aerodynamically fair the clearance between the tailcone assembly [67] and the aft fairing [2] with sealant, A02315.

——— END OF TASK ———

TASK 27-51-28-000-804

8. Outboard Flap Inboard Support Forward Fairing Removal

(Figure 402)

A. General

(1) This task is applicable to the forward fairing on the No. 2 and No. 7 flap supports.

B. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)

C. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
643	Right Wing - Fairing Flap Support No. 7

D. Procedure

SUBTASK 27-51-28-040-003

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-28-020-006

(2) Remove the forward fairing [81]:

(a) Remove the bolts [86] that attach the forward end of the forward fairing [81].

(b) Remove the bolts [84] and washers [85] that attach the forward fairing [81] to the fairing attach fitting [95].

NOTE: Support the forward fairing [81] when you remove the bolts [84].

(c) Lower the forward fairing [81] until you can get access to the nuts [92] on the jumper wires [103].

(d) Remove the nuts [92] and washers [93] that attach the jumper wires [103].

(e) Remove the jumper wires [103] from the studs.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Remove the forward fairing [81].

SUBTASK 27-51-28-020-007

(3) If it is necessary, remove the fairing attach fitting [95]:

(a) Remove the lockwire, bolts [89] and washers [90] that attach the fairing attach fitting [95] to the transmission attach fitting [91].

F. Forward Fairing Installation

SUBTASK 27-51-28-420-004

(1) If it is not installed, install the fairing attach fitting [95] on the transmission attach fitting [91].

(a) Apply primer, C00259, to the mating surfaces of the shim [88].

(b) Put the fairing attach fitting [95] and shim [88] in their location on the transmission attach fitting [91].

(c) Apply compound, C00528, to the holes for the bolts [89].

(d) Install the bolts [89] and washers [90] to attach the fairing attach fitting [95].

(e) Install lockwire between the bolts [89] and fairing attach fitting [95].

SUBTASK 27-51-28-420-005

(2) Install the forward fairing [81].

(a) Connect the jumper wire [103] as follows:

1) Lift the forward fairing [81] until you can put the jumper wires [103] on the studs.

2) Install the washers [93] and nuts [92] to attach the jumper wires [103].

3) Apply sealant, A02315, to the nuts [92].

(b) Apply primer, C00259, to the mating surfaces of the shims [96] and shim [104].

(c) If previously removed, put the shims [96] or shim [104] in its position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Apply compound, C00528, to the holes for the bolt [84] and bolts [86].

(e) Install the bolts [84] and washers [85] to attach the forward fairing [81] to the fairing attach fitting [95].

1) Tighten the bolts [84] to 90 in-lb (10.2 N·m) - 125 in-lb (14.1 N·m).

(f) Install the bolts [86] to attach the forward end of the forward fairing [81].

1) Tighten the bolts [86] to 73 in-lb (8.25 N·m) - 77 in-lb (8.70 N·m).

SUBTASK 27-51-28-820-003

(3) Do this task: Outboard Flap Inboard Support Fairing Adjustment, TASK 27-51-28-820-802.

NOTE: The aft fairing must be installed and adjusted before you can do the adjustment of the forward fairing.

SUBTASK 27-51-28-390-002

(4) Fill the clearance between the front of the forward fairing [81] and the lower surface of the wing with sealant, A02315.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-28-440-003

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

END OF TASK

TASK 27-51-28-000-805

10. Outboard Flap Inboard Support Aft Fairing Removal

(Figure 402)

A. General

(1) This task is applicable to the aft fairing at flap supports No. 2 and 7.

B. References

Reference	Title

643CR	Flap Support No. 7, Access Cover
643DL	Flap Support No. 7, Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Procedure

SUBTASK 27-51-28-860-003

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

NOTE: If you cannot extend the flaps, it will be necessary to open the access door [113] on the aft fairing [82].

SUBTASK 27-51-28-010-004

(2) If it is necessary, open the access door [113] on the aft fairing [82]:

(a) These are the doors:

Number	Name/Location
543DR	Flap Support No. 2 Access Door
643DL	Flap Support No. 7, Access Door

(b) Remove the bolts [145] that attach the access door [113] to the aft fairing [82].

(c) Loosen the pin [146] on the access door [113].

NOTE: The screw [146] has a cotter pin installed on the inboard side.

(d) Turn the access door [113] around the pin [146].

SUBTASK 27-51-28-040-004

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-28-010-005

(4) Remove the access cover [83] and access cover [102] from the forward end of the aft fairing [82]:

(a) These are the covers:

Number	Name/Location
543CL	Flap Support No. 2 Access Cover
543CR	Flap Support No. 2 Access Cover
643CL	Flap Support No. 7, Access Cover
643CR	Flap Support No. 7, Access Cover

(b) Remove the bolts [94] and washers [149] that attach the access cover [83] and access cover [102] to the aft fairing [82].

(c) Remove the access cover [83] and access cover [102].

SUBTASK 27-51-28-020-008

(5) Remove the aft fairing [82]:

(a) Support the aft fairing [82].

(b) Disconnect the aft end of the aft fairing [82]:

1) Remove the pin [111], nut [110], washer [109], washer [107], bolt [106] and bushing [108] that attach the drive rod [112] to the carriage [105].

2) Remove the pin [119], nut [118], washer [117], washer [115], bolt [114] and bushing [116] that attach the end of the attach beam [134] to the flap track [87].

(c) Disconnect the forward end of the aft fairing [82]:

1) Remove the nut [101] and washer [100] from the pivot bolt [97].

2) Remove the pivot bolt [97], washer [98] and bushing [99] that attach the aft fairing [82] to the transmission attach fitting [91].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Lower the aft fairing [82] until you can get access to the nuts [92] on the jumper wires [103].

NOTE: The jumper wires for the forward fairing and the aft fairing are attached at the same stud. If the forward fairing has been removed (Outboard Flap Outboard Support Forward Fairing Removal, TASK 27-51-28-000-802), then the jumper wires [103] may have already been removed.

(e) Remove the nuts [92] and washers [93] that attach the jumper wires [103].

(f) Remove the jumper wires [103] from the studs.

(g) Lower the aft fairing [82].

SUBTASK 27-51-28-020-009

(6) If you will install a new aft fairing [82], remove the fairing drive linkage from the aft fairing [82]:

NOTE: The fairing drive linkage includes the drive rod [112], adjust link [120], adjust rod [121] and the attach beam [134].

(a) Remove the pin [127], nut [126], washer [125], washer [123], bolt [122] and bushing [124] that attach the adjust rod [121] to the aft fairing [82].

(b) Remove the adjust link [120] from the aft fairing [82]:

1) Remove the pin [136], nut [137] and washer [138] from the bolt [142].

2) Remove the bolt [142], washer [143] and washers [135].

NOTE: Make a note of the thickness and location of the washers [135].

3) Remove the bushing [140] and bushing [141] from the aft fairing [82].

(c) Remove the pin [133], nut [132], washer [131], washer [129], bolt [128] and bushing [130] that attach the adjust link [120] to the attach beam [134].

(d) Remove the pin [111], nut [110], washer [109], washer [107], bolt [106] and bushing [108] that attach the drive rod [112] to the attach beam [134].

(e) Remove the pin [127], nut [126], washer [125], washer [123], bolt [122] and bushing [124] that attach the adjust rod [121] to the adjust link [120].

SUBTASK 27-51-28-010-006

(7) If it is necessary, remove the tailcone assembly [147] from the aft fairing [82]:

(a) Remove the bolts [148] that attach the tailcone assembly [147] to the aft fairing [82].

(b) Remove the tailcone assembly [147] from the aft fairing [82].

END OF TASK

TASK 27-51-28-400-805

11. Outboard Flap Inboard Support Aft Fairing Installation

(Figure 402)

A. General

(1) This task is applicable to the aft fairing at flap supports No. 2 and 7.

G. Outboard Flap Inboard Support Aft Fairing Installation

SUBTASK 27-51-28-020-010

(1) If the fairing drive linkage is not installed on the aft fairing [82], do these steps:

NOTE: The fairing drive linkage includes the drive rod [112], adjust link [120], adjust rod [121] and the attach beam [134].

(a) Connect the adjust rod [121] to the adjust link [120]:

1) Install the bushing [124], bolt [122], washer [123], washer [125] and nut [126] that attach the adjust rod [121] to the adjust link [120].

NOTE: For the left wing, install the bolt [122] with the head on the same side of the adjust link [120] as the bushing [124]. For the right wing, install the bolt [122] with the head on the opposite side of the adjust link [120] as the bushing [124].

2) Install the pin [127] in the nut [126].

(b) Connect the adjust link [120] to the attach beam [134]:

1) Put the adjust link [120] in its position on the attach beam [134].

2) Install the bushing [130], bolt [128], washer [129], washer [131] and nut [132] to attach the adjust link [120] to the attach beam [134].

3) Tighten the nut [132]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Lubricate the bolt [128] with grease, D00633.

b) Tighten the nut [132] to 240 in-lb (27 N·m) - 300 in-lb (34 N·m).

4) Install the pin [133] in the nut [132].

(c) Connect the drive rod [112] to the attach beam [134]:

1) Put the drive rod [112] in its position on the attach beam [134].

2) Install the bushing [108], bolt [106], washer [107], washer [109] and nut [110] to attach the drive rod [112] to the attach beam [134].

3) Install the pin [111] in the nut [110].

(d) Connect the adjust link [120] to the aft fairing [82]:

1) Put the adjust link [120] in its location on the aft fairing [82] with the washers [135], bushing [140] and bushing [141].

a) Install the same number of washers [135] in the same location as you removed them.

2) Install the bolt [142], washer [143], washer [138] and nut [137].

3) Tighten the nut [137]:

a) Lubricate the bolt [142] with grease, D00633.

b) Tighten the nut [137] to 240 in-lb (27 N·m) - 300 in-lb (34 N·m).

4) Measure the clearance between the washer [138] and the flange on the flanged bushing [139].

5) If the clearance is not 0.010 in. (0.25 mm) to 0.025 in. (0.64 mm), change the number or location of the washers [135]:

a) Remove the nut [137], washer [138], washers [143], washers [135], bolt [142], bushing [141] and bushing [140].

b) Change the number or location of the washers [135].

c) Install the bushing [140], bushing [141], bolt [142], washer [143], washers [135], washer [138] and nut [137].

d) Make sure that the clearance between the washer [138] and the flange on the flanged bushing [139] is in the limit of 0.010 in. (0.254 mm) to 0.025 in. (0.635 mm).

e) Lubricate the bolt [142] with grease, D00633.

f) Tighten the nut [137] to 240 in-lb (27 N·m) - 300 in-lb (34 N·m).

6) Install the cotter pin [136] in the nut [137].

(e) Connect the adjust rod [121] to the aft fairing [82]:

1) Install the bushing [124], bolt [122], washer [123], washer [125] and nut [126] that attach the adjust rod [121] to the aft fairing [82].

2) Install the pin [127] in the nut [126].

SUBTASK 27-51-28-420-006

(2) Install the aft fairing [82]:

(a) Connect the jumper wires [103]:

1) Lift the forward end of the aft fairing [82] until you can put the jumper wires [103] on the studs.

NOTE: The jumper wires for the forward fairing also attach to the studs.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure that the jumper wires for the forward fairing are installed on the studs.

2) Install the washers [93] and nuts [92] to attach the jumper wires [103].

3) Apply sealant, A02315 to the nuts [92].

(b) Connect the forward end of the aft fairing [82] to the transmission attach fitting [91]:

1) Lift the forward end of the aft fairing [82] until it aligns with the transmission attach fitting [91].

2) Install the bushing [99], pivot bolt [97], washer [98], washer [100] and nut [101].

3) Tighten the nut [101]:

a) Lubricate the pivot bolt [97] with grease, D00633.

b) Tighten the nut [101] to 1000 in-lb (113 N·m) - 1200 in-lb (136 N·m).

(c) Connect the aft end of the aft fairing [82]:

1) Move the attach beam [134] until it aligns with the flap track [87].

2) Install the bushing [116], bolt [114], washer [115], washer [117] and nut [118].

3) Tighten the nut [118]:

a) Lubricate the bolt [114] with grease, D00633.

b) Tighten the nut [118] to 700 in-lb (79 N·m) - 920 in-lb (104 N·m).

4) Install the pin [119] in the nut [118].

5) Align the drive drive rod [112] with the carriage [105].

6) Install the bushing [108], bolt [106], washer [107], washer [109] and nut [110].

a) Install the bolt [106] with the head on the outboard side.

7) Install the pin [111] in the nut [110].

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-28-440-004

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-28-860-004

(2) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-28-820-004

(3) Do this task: Outboard Flap Inboard Support Fairing Adjustment, TASK 27-51-28-820-802.

SUBTASK 27-51-28-410-004

(4) Install the access cover [83] and access cover [102] on the forward end of the aft fairing [82]:

(a) These are the covers:

Number	Name/Location
543CL	Flap Support No. 2 Access Cover
543CR	Flap Support No. 2 Access Cover
643CL	Flap Support No. 7, Access Cover
643CR	Flap Support No. 7, Access Cover

(b) Put the access cover [83] and access cover [102] in their locations on the aft fairing [82].

(c) Install the bolts [94] that attach the access cover [83] and access cover [102].

SUBTASK 27-51-28-410-005

(5) If it is open, close the access door [113] on the aft fairing [82]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) These are the doors:

Number	Name/Location
543DR	Flap Support No. 2 Access Door
643DL	Flap Support No. 7, Access Door

(b) Turn the access door [113] around the pin [146] until it is in its position.

(c) Install the bolts [145] that attach the access door [113] to the aft fairing [82].

(d) Tighten the pin [146] on the access door [113].

SUBTASK 27-51-28-410-006

(6) If it is not installed, install the tailcone assembly [147] on the aft fairing [82]:

(a) Put the tailcone assembly [147] in its location on the aft fairing [82].

(b) Install the bolts [148] that attach the tailcone assembly [147].

(c) Fill and aerodynamically fair the clearance between the tailcone assembly [147] and the aft fairing [82] with sealant, A02315.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD FLAP SUPPORT FAIRINGS - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) Outboard flap support fairings adjustment (selection)

(2) Adjustment of the outboard flap support fairing for the outboard flap

(3) Adjustment of the inboard flap support fairing for the outboard flap.

TASK 27-51-28-800-801

2. Outboard Flap Support Fairings Adjustment (Selection)

A. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
544	Left Wing - Fairing Flap Support No. 1
643	Right Wing - Fairing Flap Support No. 7
644	Right Wing - Fairing Flap Support No. 8

B. Outboard Flap Support Fairings Adjustment (Selection)

SUBTASK 27-51-28-820-005

(1) Do one of these tasks to adjust the applicable outboard flap support fairing:

(a) Do this task: Outboard Flap Outboard Support Fairing Adjustment, TASK 27-51-28-820-801.

(b) Do this task: Outboard Flap Inboard Support Fairing Adjustment, TASK 27-51-28-820-802.

——— END OF TASK ———

TASK 27-51-28-820-801

3. Outboard Flap Outboard Support Fairing Adjustment

(Figure 501)

A. General

(1) This task is applicable to the fairings at flap supports No. 1 and 8.

B. References

Reference	Title

C00259	Coating - Chemical And Solvent Resistant Finish, Corrosion Inhibiting Primer	BMS10-11 Type I

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
644	Right Wing - Fairing Flap Support No. 8

E. Access Panels

Number	Name/Location
544DR	Flap Support No. 1 Access Door
644DL	Flap Support No. 8, Access Door

F. Prepare for the Adjustment

SUBTASK 27-51-28-860-005

(1) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-28-040-005

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

G. Outboard Flap Outboard Support Aft Fairing Adjustment

SUBTASK 27-51-28-480-001

(1) Apply a 150 lb (68 kg) weight to preload the aft fairing [4]:

(a) Put a strap across the top of the aft fairing [4] at the line of fasteners for the tailcone [5].

(b) Attach a 150 lb (68 kg) weight to the strap.

1) Make sure that the weight is evenly applied to the inboard and outboard sides of the aft fairing [4].

SUBTASK 27-51-28-820-006

(2) Move the preload pads [7] away from the aft flap [1] as follows:

NOTE: It is necessary to move the preload pads to correctly measure the clearance between the aft flap and the aft fairing.

(a) Loosen the bolts [8] that attach the preload pads [7] to the aft fairing [4].

(b) Move the preload pads [7] away from the lower surface of the aft flap [1].

SUBTASK 27-51-28-220-001

(3) Measure the clearance between the top surface of the aft fairing [4] and the aft edge of the aft flap [1].

(a) Measure the clearance at the aft edge of the aft flap [1] to the aft fairing [4].

(b) Make sure that the clearance is in the limit of 0.2884 ±0.0500 in. (7.33 ±1.27 mm).

(c) Make sure that the clearance is approximately the same on the inboard and outboard sides of the aft fairing [4].

(d) Measure the clearance between the inboard and outboard sides of the aft fairing to the lower surface of the wing and flap.

1) Make sure that the clearance is in the limit of 0.6000 in. (15.2400 mm) to 0.3000 in. (7.6200 mm) seal adjustment to achieve a continuous compression of 0.02 to 0.07.

SUBTASK 27-51-28-820-007

(4) If the clearance is not in the limit, or if it is not the same on the inboard and outboard sides, then adjust the position of the aft fairing [4]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) On the side of the aft fairing open the applicable access panels:

Number	Name/Location
544DR	Flap Support No. 1 Access Door
644DL	Flap Support No. 8, Access Door

(b) If the clearance is not the same on the inboard and outboard sides, adjust the length of the adjust rod [21]:

1) Remove the weight from the aft fairing [4].
2) Remove the pin [15], nut [14], washer [13], washer [11], bolt [10], and bushing [12] that attach the drive rod [17] to the carriage [9].
   a) Support the aft fairing [4] when you remove the bolt [10].
3) Lower the aft end of the aft fairing [4] to get access to the adjust rod [21].
4) Loosen the locknuts [20] on the adjust rod [21].
5) Adjust the length of the adjust rod [21] until the clearance is the same on the inboard and outboard sides of the aft fairing [4].
6) Tighten the locknuts [20] on the adjust rod [21].
7) Install the lockwire on the locknuts [20].
8) Lift the aft end of the aft fairing [4] and align the drive rod [17] with the carriage [9].
9) Install the bushing [12], bolt [10], washer [11], washer [13], and nut [14] to attach the drive rod [17] to the carriage [9].
   a) Install the bolt [10] with the head on the outboard side.
10) Install the cotter pin [15] in the nut [14].

(c) If the clearance is not in the limit, adjust the length of the drive rod [17]:

1) Loosen the locknuts [16] on the drive rod [17].
2) Adjust the length of the drive rod [17] until the clearance is in the limit.
3) Tighten the locknuts [16] on the drive rod [17].
4) Install the lockwire on the locknuts [16].

(d) Make sure that the clearance is in the limit and that it is the same on the inboard and outboard sides of the aft fairing [4].

SUBTASK 27-51-28-820-008

(5) Adjust the position of the preload pads [7]:

(a) With the 150 lb (68 kg) weight applied to the aft fairing [4], move the preload pads [7] up until they touch the lower surface of the aft flap [1].

(b) Tighten the bolts [8] to 90 in-lb (10.2 N·m) - 125 in-lb (14.1 N·m) that attach the preload pads [7].

SUBTASK 27-51-28-080-001

(6) Remove the 150 lb (68 kg) weight and the strap from the aft fairing [4].

SUBTASK 27-51-28-210-001

(7) Make sure that the seals [6] on the sides of the aft fairing [4] are compressed 10 to 25 percent against the lower surface of the flap.

SUBTASK 27-51-28-820-009

(8) If the seals [6] are not compressed correctly against the lower surface of the flap, adjust the position of the seals [6]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the pin [15], nut [14], washer [13], washer [11], bolt [10], and bushing [12] that attach the drive rod [17] to the carriage [9].

(b) Lower the aft end of the aft fairing [4] to get access to the fasteners for the seals [6].

(c) Loosen the nut [18] on the retainer [19].

(d) Move the seal [6] and retainer [19].

1) Make sure that you move the seal [6] and retainer [19] together as a unit.

(e) Tighten the nut [18] on the retainer [19].

(f) Lift the aft end of the aft fairing [4] and align the drive rod [17] with the carriage [9].

(g) Install the bushing [12], bolt [10], washer [11], washer [13], and nut [14] to attach the drive rod [17] to the carriage [9].

1) Install the bolt [10] with the head on the outboard side.

(h) Install the cotter pin [15] in the nut [14].

SUBTASK 27-51-28-410-007

(9) On the side of the aft fairing close the applicable access panels:

Number	Name/Location
544DR	Flap Support No. 1 Access Door
644DL	Flap Support No. 8, Access Door

H. Outboard Flap Outboard Forward Fairing Adjustment

SUBTASK 27-51-28-220-002

(1) Measure the mismatch between the forward fairing [3] and aft fairing [4].

(a) Measure the mismatch on the inboard side and on the bottom of the forward fairing [3].

(b) Make sure that the mismatch is in the limit of 0.03 in. (0.76 mm) to -0.01 in. (-0.25 mm).

NOTE: A positive (+) mismatch is when the forward fairing extends past the aft fairing. A negative (-) mismatch is when the aft fairing extends past the forward fairing.

SUBTASK 27-51-28-220-003

(2) Make sure that the seals [26] on the sides of the forward fairing [3] are compressed 10 to 25 percent against the lower surface of the main flap [2].

SUBTASK 27-51-28-020-011

(3) If the mismatch is not in the limit or if the seals [26] are not compressed correctly, do this task: Outboard Flap Outboard Support Forward Fairing Removal, TASK 27-51-28-000-802.

SUBTASK 27-51-28-820-010

(4) If the mismatch between the forward fairing [3] and aft fairing [4] is not in the limit, then adjust the position of the forward fairing [3]:

(a) If the mismatch is not in the limit on the inboard side of the forward fairing [3], then adjust the position of the fairing attach fitting [24]:

1) Loosen the bolts [23] that attach the fairing attach fitting [24] to the transmission attach fitting [22].

2) Move the fairing attach fitting [24] inboard or outboard to get the mismatch in the clearance.

3) Tighten the bolts [23].

4) Install the lockwire on the bolts [23].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) If the mismatch is not in the limit on the bottom of the forward fairing [3], change the thickness of the shims [25].

1) Apply primer, C00259, to the mating surfaces of the shim [25] and fairing attach fitting [24].

2) Fill and aerodynamically fair between the forward fairing and wing skin.

SUBTASK 27-51-28-820-011

(5) If the seals [26] are not compressed evenly against the lower surface of the main flap [2], then adjust the position of the seals [26]:

(a) Loosen the nuts [27] on the retainer [28].

(b) Move the seal [26] and retainer [28].

(c) Tighten the nuts [27] that hold the retainer [28].

SUBTASK 27-51-28-420-007

(6) If you removed the forward fairing [3], do this task: Outboard Flap Outboard Support Forward Fairing Installation, TASK 27-51-28-400-802.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-28-440-005

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

——— END OF TASK ———

E. Access Panels

Number	Name/Location
543DR	Flap Support No. 2 Access Door
643DL	Flap Support No. 7, Access Door

F. Prepare for the Adjustment

SUBTASK 27-51-28-860-006

(1) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-28-040-006

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

G. Outboard Flap Inboard Support Aft Fairing Adjustment

SUBTASK 27-51-28-480-002

(1) Apply a 150 lb (68 kg) weight to preload the aft fairing [44]:

(a) Put a strap across the top of the aft fairing [44] at the line of fasteners for the tailcone [45].

(b) Attach a 150 lb (68 kg) weight to the strap.

1) Make sure that the weight is evenly applied to the inboard and outboard sides of the aft fairing [44].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-28-820-012

(2) Move the preload pads [59] away from the aft flap [41] as follows:

NOTE: It is necessary to move the preload pads to correctly measure the clearance between the aft flap and aft fairing.

(a) Loosen the bolts [58] that attach the preload pads [59] to the aft fairing [44].

(b) Move the preload pad [59] away from the lower surface of the aft flap [41].

SUBTASK 27-51-28-220-004

(3) Measure the clearance between the top surface of the aft fairing [44] and the aft edge of the aft flap [41].

(a) Measure the clearance at the aft edge of the aft flap [41] to the aft fairing [44].

(b) Make sure that the clearance is in the limit of 0.2884 ±0.0500 in. (7.33 ±1.27 mm).

(c) Make sure that the clearance is approximately the same on the inboard and outboard sides of the aft fairing [44].

(d) Measure the clearance between the inboard and outboard sides of the aft fairing to the lower surface of the wing and flap.

1) Make sure that the clearance is in the limit of 0.6000 in. (15.2400 mm) to 0.3000 in. (7.6200 mm) seal adjustment to achieve a continuous compression of 0.02 to 0.07.

SUBTASK 27-51-28-820-013

(4) If the clearance is not in the limit, or if it is not the same on the inboard and outboard sides, then adjust the position of the aft fairing [44]:

(a) On the side of the aft fairing open the applicable access panels:

Number	Name/Location
543DR	Flap Support No. 2 Access Door
643DL	Flap Support No. 7, Access Door

(b) If the clearance is not the same on the inboard and outboard sides, adjust the length of the adjust rod [60]:

1) Remove the weight from the aft fairing [44].

2) Remove the pin [55], nut [54], washer [53], washer [51], bolt [50], and bushing [52] that attach the drive rod [57] to the carriage [49].

a) Support the aft fairing [44] when you remove the bolt [50].

3) Lower the aft end of the aft fairing [44] to get access to the adjust rod [60].

4) Loosen the locknuts [61] on the adjust rod [60].

5) Adjust the length of the adjust rod [60] until the clearance is the same on the inboard and outboard sides of the aft fairing [44].

6) Tighten the locknuts [61] on the adjust rod [60].

7) Install the lockwire on the locknuts [61].

8) Lift the aft end of the aft fairing [44] and align the drive rod [57] with the carriage [49].

9) Install the bushing [52], bolt [50], washer [51], washer [53], and nut [54] to attach the drive rod [57] to the carriage [49].

a) Install the bolt [50] with the head on the outboard side.

10) Install the cotter pin [55] in the nut [54].

(c) If the clearance is not in the limit, adjust the length of the drive rod [57]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Loosen the locknuts [56] on the drive rod [57].
2) Adjust the length of the drive rod [57] until the clearance is in the limit.
3) Tighten the locknuts [56] on the drive rod [57].
4) Install the lockwire on the locknuts [56].

(d) Make sure that the clearance is in the limit and that it is the same on the inboard and outboard sides of the aft fairing [44].

SUBTASK 27-51-28-820-014

(5) Adjust the position of the preload pads [59]:

(a) With the 150 lb (68 kg) weight applied to the aft fairing [44], move the preload pads [59] up until they touch the lower surface of the aft flap [41].

(b) Tighten the bolts [58] to 90 in-lb (10.2 N·m) - 125 in-lb (14.1 N·m) that attach the preload pads [59].

SUBTASK 27-51-28-080-002

(6) Remove the weight from the aft fairing [44].

SUBTASK 27-51-28-210-002

(7) Make sure that the seals [6] on the sides of the aft fairing [44] are compressed 10 to 25 percent against the lower surface of the flap.

SUBTASK 27-51-28-820-015

(8) If the seals [47] are not compressed correctly against the lower surface of the flap, adjust the position of the seals [47]:

(a) Remove the pin [55], nut [54], washer [53], washer [51], bolt [50], and bushing [52] that attach the drive rod [57] to the carriage [49].

(b) Lower the aft end of the aft fairing [44] to get access to the fasteners for the seals [47].

(c) Loosen the nuts [46] on the retainer [48].

(d) Move the seal [47] and retainer [48].

1) Make sure that you move the seal [47] and retainer [48] together as a unit.

(e) Tighten the nuts [46] on the retainer [48].

(f) Lift the aft end of the aft fairing [44] to align the drive rod [57] with the carriage [49].

(g) Install the bushing [52], bolt [50], washer [51], washer [53], and nut [54] to attach the drive rod [57] to the carriage [49].

1) Install the bolt [50] with the head on the outboard side.

(h) Install the cotter pin [55] in the nut [54].

SUBTASK 27-51-28-410-008

(9) On the side of the aft fairing close the applicable access panels:

Number	Name/Location
543DR	Flap Support No. 2 Access Door
643DL	Flap Support No. 7, Access Door

H. Outboard Flap Inboard Forward Fairing Adjustment

SUBTASK 27-51-28-220-005

(1) Measure the mismatch between the forward fairing [43] and aft fairing [44].

(a) Measure the mismatch on the inboard side and on the bottom of the forward fairing [43].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Make sure that the mismatch is in the limit of 0.03 in. (0.76 mm) to -0.01 in. (-0.25 mm).

NOTE: A positive (+) mismatch is when the forward fairing extends past the aft fairing. A negative (-) mismatch is when the aft fairing extends past the forward fairing.

SUBTASK 27-51-28-220-006

(2) Make sure that the seals [66] on the sides of the forward fairing [43] are compressed 10 to 25 percent against the lower surface of the main flap [42].

SUBTASK 27-51-28-020-012

(3) If the mismatch is not in the limit or if the seals [66] are not compressed correctly, do this task: Outboard Flap Inboard Support Forward Fairing Removal, TASK 27-51-28-000-804.

SUBTASK 27-51-28-820-016

(4) If the mismatch between the forward fairing [43] and aft fairing [44] is not in the limit, then adjust the position of the forward fairing [43]:

(a) If the mismatch is not in the limit on the inboard side of the forward fairing [43], adjust the position of the fairing attach fitting [64]:

1) Loosen the bolts [63] that attach the fairing attach fitting [64] to the transmission attach fitting [62].

2) Move the fairing attach fitting [64] inboard or outboard to get the mismatch in the clearance.

3) Tighten the bolts [63].

4) Install the lockwire on the bolts [63].

(b) If the mismatch is not in the limit on the bottom of the forward fairing [43], change the thickness of the shims [65].

1) Apply primer, C00259, to the mating surfaces of the shim [65] and fairing attach fitting [64].

(c) Fill and aerodynamically fair between the forward fairing and the wing skin.

SUBTASK 27-51-28-820-017

(5) If the seals [66] are not compressed evenly against the lower surface of the main flap [42], adjust the position of the seal [66]:

(a) Loosen the nuts [67] on the retainer [68].

(b) Move the seal [66] and retainer [68].

(c) Tighten the nuts [67] that hold the retainer [68].

SUBTASK 27-51-28-420-008

(6) If you removed the forward fairing [43], do this task: Outboard Flap Inboard Support Forward Fairing Installation, TASK 27-51-28-400-804.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-28-440-006

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

——— END OF TASK ———

INBOARD FLAP TRANSMISSIONS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Inboard Flap Transmission Removal (Selection)

(2) Inboard Flap Transmission Installation (Selection)

(3) Inboard Flap Outboard Transmission Removal

(4) Inboard Flap Outboard Transmission Installation

(5) Inboard Flap Inboard Transmission Removal

(6) Inboard Flap Inboard Transmission Installation.

TASK 27-51-31-000-801

2. Inboard Flap Transmission Removal (Selection)

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
541	Left Wing - Fairing Flap Support No. 4
542	Left Wing - Fairing Flap Support No. 3
553	Left Wing - Inboard Flap
641	Right Wing - Fairing Flap Support No. 5
642	Right Wing - Fairing Flap Support No. 6
653	Right Wing - Inboard Flap

B. Inboard Flap Transmission Removal (Selection)

SUBTASK 27-51-31-000-001

(1) Do one of these tasks to remove the applicable inboard flap transmission:

(a) Do this task: Inboard Flap Outboard Transmission Removal, TASK 27-51-31-000-802.

(b) Do this task: Inboard Flap Inboard Transmission Removal, TASK 27-51-31-000-803.

——— END OF TASK ———

TASK 27-51-31-400-801

3. Inboard Flap Transmission Installation (Selection)

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
541	Left Wing - Fairing Flap Support No. 4
542	Left Wing - Fairing Flap Support No. 3
553	Left Wing - Inboard Flap
641	Right Wing - Fairing Flap Support No. 5
642	Right Wing - Fairing Flap Support No. 6
653	Right Wing - Inboard Flap

ECCN 9E991 BOEING PROPRIETARY - See title page for details

B. Inboard Flap Transmission Installation (Selection)

SUBTASK 27-51-31-400-001

(1) Do one of these tasks to install the applicable inboard flap transmission:

(a) Do this task: Inboard Flap Outboard Transmission Installation, TASK 27-51-31-400-802.

(b) Do this task: Inboard Flap Inboard Transmission Installation, TASK 27-51-31-400-803.

——— END OF TASK ———

TASK 27-51-31-000-802

4. Inboard Flap Outboard Transmission Removal

(Figure 401)

A. General

(1) This task is applicable to the transmissions at flap supports No. 3 and 6.

B. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)

27-51-00-980-801	Trailing Edge Flap System Manual Operation (P/B 201)
27-51-18-000-802	Inboard Flap Support Aft Fairing Removal (P/B 401)
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

C. Location Zones

Zone	Area
542	Left Wing - Fairing Flap Support No. 3
553	Left Wing - Inboard Flap
642	Right Wing - Fairing Flap Support No. 6
653	Right Wing - Inboard Flap

D. Prepare for the Removal

SUBTASK 27-51-31-860-001

(1) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-31-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-31-040-001

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-31-010-001

(4) Do this task: Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Inboard Flap Outboard Transmission Removal

SUBTASK 27-51-31-980-001

(1) Manually extend the trailing edge flaps to the downstop on the ballscrew (TASK 27-51-00-980-801).

SUBTASK 27-51-31-020-001

(2) Disconnect the torque tubes [1] from the transmission [4]:

(a) Remove the lockwire and screws [3] that attach the coupling sleeves [2] to the splined couplings [5] on the torque tubes [1].

(b) Move the coupling sleeves [2] off the splined couplings [5].

SUBTASK 27-51-31-020-002

CAUTION

MAKE SURE THAT YOU HOLD THE BALLSCREW WHILE YOU DISCONNECT IT. IF THE U-JOINT IS ALLOWED TO SUPPORT THE WEIGHT OF THE BALLSCREW, THIS WILL CAUSE DAMAGE TO THE U-JOINT.

(3) Disconnect the ballscrew [6] with the gimbal [14] from the carriage [8]:

(a) Install a support to hold the ballscrew [6] when it is disconnected from the carriage [8].

(b) Remove the nuts [11], washers [12], and bolts [7] that attach the carriage bushing [9] and carriage bushing [13] to the carriage [8].

(c) Remove the carriage bushing [9] and carriage bushing [13] from the carriage [8].

(d) Move the gimbal [14] away from the carriage [8].

SUBTASK 27-51-31-020-003

(4) Disconnect the ballscrew [6] from the yoke [16] on the transmission [4]:

(a) Remove the nuts [20], washers [19], washers [18], and bolts [17] that attach the ballscrew [6] to the yoke [16].

(b) Remove the ballscrew [6] from the yoke [16].

1) You can turn the ballscrew [6] and the gimbal [14] to remove the ballscrew [6].

(c) Remove the ballscrew [6] with the gimbal [14].

SUBTASK 27-51-31-020-004

(5) Remove the transmission [4]:

NOTE: The transmission [4] weighs approximately 50 lb (23 kg)

(a) Support the transmission [4] while you disconnect the transmission attach fitting [15] from the sideplates.

(b) Remove the nuts [24], washers [23], washers [22], and bolts [21] that attach the transmission attach fitting [15] to the sideplates.

(c) Carefully lower the transmission [4].

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Inboard Flap Outboard Transmission Installation

SUBTASK 27-51-31-420-001

(1) Install the transmission [4]:

NOTE: The transmission [4] weighs approximately 50 lb (23 kg).

(a) Use sealant, A00247, to fay seal the mating surface of the transmission attach fitting [15] and the sideplates.

(b) Carefully lift the transmission [4] and put the transmission attach fitting [15] in position on the sideplates.

(c) Install the bolts [21], washers [22], washers [23], and nuts [24] to attach the transmission attach fitting [15] to the side plates.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Tighten the nuts [24] to a torque tool setpoint of 410 in-lb (46.3 N·m).

(d) Wait a minimum of ten minutes and tighten the nuts [24] again.

SUBTASK 27-51-31-420-002

(2) Connect the ballscrew [6] to the yoke [16] on the transmission [4]:

(a) Turn the ballscrew nut [28] until it is at the forward end of the ballscrew [6].

(b) Apply a layer of grease, D00633, to the mating surfaces of the yoke [16] and the ballscrew [6].

(c) Put the ballscrew [6] into the yoke [16].

(d) Apply a layer of grease, D00633, to the shank and threads of the bolts [17].

(e) Install the bolts [17], washers [18], washers [19], and nuts [20] to attach the ballscrew [6] to the yoke [16].

(f) Make sure that the ballscrew [6] is installed correctly in the yoke [16]:

1) Turn the transmission [4] until the nut [29] on the U-joint [26] is up.

2) Turn the ballscrew nut [28] until the upstop is 180° from the upstop [27] on the yoke [16].

3) If the ball returns [10] on the ballscrew nut [28] are not in the correct position, then change the position of the ballscrew [6] as follows:

NOTE: On transmission No. 3, the ball returns [10] should be on the outboard side. On transmission No. 6, the ball returns [10] should be on the inboard side.

a) Remove the nuts [20], washers [19], washers [18], and bolts [17] that attach the ballscrew [6] to the yoke [16].

b) Turn the ballscrew [6] 180° in the yoke [16].

c) Install the bolts [17], washers [18], washers [19], and nuts [20].

(g) Tighten the nuts [20].

SUBTASK 27-51-31-420-003

(3) Connect the ballscrew [6] with the gimbal [14] to the carriage [8] as follows:

(a) Move the gimbal [14] to the downstop on the ballscrew [6].

NOTE: On transmission No. 3, the ball returns [10] on the ballscrew nut [28] should be on the outboard side. On transmission No. 6, the ball returns [10] on the ballscrew nut [28] should be on the inboard side.

(b) Move the carriage [8] to align with the gimbal [14].

(c) Install the carriage bushing [9] and carriage bushing [13] to attach the gimbal [14] to the carriage [8].

(d) Install the bolts [7], washers [12], and nuts [11] that attach the carriage bushing [9] and carriage bushing [13] to the gimbal [14].

(e) Tighten the nuts [11] to 65 in-lb (7.3 N·m) - 75 in-lb (8.5 N·m) more than the run-on torque.

SUBTASK 27-51-31-420-004

(4) Connect the torque tubes [1] to the transmission [4]:

(a) Apply grease, D00633, to the coupling sleeves [2].

(b) Put the splined couplings [5] in the coupling sleeves [2].

(c) Install the screws [3] to attach the torque tubes [1] to the transmission [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Install lockwire on the screws [3].

SUBTASK 27-51-31-640-001

(5) Apply grease, D00633, to the end of the plunger on the torque trip indicator [25] and push it down around the sides of the plunger.

NOTE: Not all transmissions have a torque trip indicator [25] installed.

SUBTASK 27-51-31-640-002

(6) Lubricate the transmission [4], ballscrew [6], and gimbal [14] (TASK 12-22-51-640-803).

SUBTASK 27-51-31-210-001

(7) Make sure that the torque trip indicator [25] on the transmission [4] is set.

NOTE: Not all transmissions have a torque trip indicator [25].

SUBTASK 27-51-31-820-001

(8) Do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-31-410-001

(1) Do this task: Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802.

SUBTASK 27-51-31-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-31-860-002

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Supply hydraulic system B power (TASK 29-11-00-860-801).

SUBTASK 27-51-31-860-003

(4) Use the primary system to retract the flaps to the retracted position (TASK 27-51-00-860-801).

SUBTASK 27-51-31-860-004

(5) Use the primary system to extend and retract the flaps (TASK 27-51-00-860-801).

SUBTASK 27-51-31-210-002

(6) Make sure that the torque trip indicator [25] on the transmission [4] is set.

NOTE: Not all transmissions have a torque trip indicator [25].

SUBTASK 27-51-31-860-005

(7) Remove hydraulic system B power (TASK 29-11-00-860-805).

END OF TASK

TASK 27-51-31-000-803

6. Inboard Flap Inboard Transmission Removal

(Figure 402)

A. General

(1) This task is applicable to the transmissions at flap supports No. 4 and 5.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

27-51-00-980-801	Trailing Edge Flap System Manual Operation (P/B 201)
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
541	Left Wing - Fairing Flap Support No. 4
641	Right Wing - Fairing Flap Support No. 5

D. Prepare for the Removal

SUBTASK 27-51-31-860-006

(1) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-31-480-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-31-040-002

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

E. Inboard Flap Inboard Transmission Removal

SUBTASK 27-51-31-980-002

(1) Manually extend the trailing edge flaps to the downstop on the ballscrew (TASK 27-51-00-980-801).

SUBTASK 27-51-31-020-005

(2) Remove the U-joint assembly [70]:

(a) Remove the bolts [66], washers [67], and nuts [68] that attach the U-joint assembly [70] to the transmission [49] and the tee angle gearbox [69].

(b) Remove the U-joint assembly [70] from the transmission [49].

SUBTASK 27-51-31-020-006

CAUTION MAKE SURE THAT YOU HOLD THE BALLSCREW WHILE YOU DISCONNECT IT. IF THE U-JOINT IS ALLOWED TO SUPPORT THE WEIGHT OF THE BALLSCREW, THIS WILL CAUSE DAMAGE TO THE U-JOINT.

(3) Disconnect the ballscrew [42] with the gimbal [43] from the carriage [47]:

(a) Install a support to hold the ballscrew [42] when it is disconnected from the carriage [47].

(b) Remove the nuts [44], washers [45], and bolts [41] that attach the carriage bushings [46] to the carriage [47].

(c) Remove the carriage bushings [46] from the carriage [47].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Move the gimbal [43] away from the carriage [47].

SUBTASK 27-51-31-020-007

(4) Disconnect the ballscrew [42] from the yoke [53] on the transmission [49]:

(a) Remove the nuts [59], washers [58], washers [57], and bolts [56] that attach the ballscrew [42] to the yoke [53].

(b) Remove the ballscrew [42] from the yoke [53].

1) You can turn the ballscrew [42] and the gimbal [43] to get access to remove the ballscrew [42].

(c) Remove the ballscrew [42] with the gimbal [43].

SUBTASK 27-51-31-020-008

(5) Remove the transmission [49]:

NOTE: The transmission [49] weighs approximately 50 lb (23 kg).

(a) Support the transmission [49] while you disconnect it from the transmission attach fitting [51].

(b) Remove the nuts [63], washers [62], washers [61], bolts [60], bolt [64], and bolt [65] that attach the transmission [49] to the transmission attach fitting [51].

(c) Carefully remove the transmission [49].

F. Inboard Flap Inboard Transmission Installation

SUBTASK 27-51-31-420-005

(1) Install the transmission [49]:

NOTE: The transmission [49] weighs approximately 50 lb (23 kg).

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a thin layer of Cor-Ban 27L Compound, G50237, to the mating surface of the transmission [49] and the transmission attach fitting [51].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply a layer of Cor-Ban 27L Compound, G50237, to the bolt holes in the transmission [49].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(c) Apply a layer of Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [60], bolt [64] and bolt [65].

(d) Carefully lift the transmission [49] to its position on the transmission attach fitting [51].

(e) Install the bolts [60], bolt [64], bolt [65], washers [61], washers [62], and nuts [63] to attach the transmission [49] to the transmission attach fitting [51].

1) Tighten the nuts [63] to a torque tool setpoint of 500 in-lb (56 N·m) - 550 in-lb (62 N·m).

SUBTASK 27-51-31-420-006

(2) Connect the ballscrew [42] to the yoke [53] on the transmission [49] as follows:

(a) Turn the ballscrew nut [55] until it is at the forward end of the ballscrew [42].

(b) Apply a layer of grease, D00633, to the mating surfaces of the yoke [53] and the ballscrew [42].

(c) Put the ballscrew [42] into the yoke [53].

(d) Apply a layer of grease, D00633, to the shank and threads of the bolts [56].

(e) Install the bolts [56], washers [57], washers [58], and nuts [59] to attach the ballscrew [42] to the yoke [53].

(f) Make sure that the ballscrew [42] is installed correctly in the yoke [53] as follows:

1) Turn the transmission [49] until the nut [50] on the U-joint [52] is up.

2) Turn the ballscrew nut [55] until the upstop is 180° from the upstop [54] on the yoke [53].

3) If the ball returns on the ballscrew nut [55] are not in the correct position, then change the position of the ballscrew [42] as follows:

NOTE: On transmission No. 4, the ball returns should be on the outboard side. On transmission No. 5, the ball returns should be on the inboard side.

a) Remove the nuts [59], washers [58], washers [57], and bolts [56] that attach the ballscrew [42] to the yoke [53].

b) Turn the ballscrew [42] 180° in the yoke [53].

c) Install the bolts [56], washers [57], washers [58], and nuts [59].

(g) Tighten the nuts [59].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-31-420-007

(3) Connect the ballscrew [42] with the gimbal [43] to the carriage [47] as follows:

(a) Move the gimbal [43] to the downstop on the ballscrew [42].

NOTE: On transmission No. 4, the ball returns on the ballscrew nut [55] should be on the outboard side. On transmission No. 5, the ball returns on the ballscrew nut [55] should be on the inboard side.

(b) Move the carriage [47] to align with the gimbal [43].

(c) Install the carriage bushings [46] to attach the gimbal [43] to the carriage [47].

(d) Install the bolts [41], washers [45], and nuts [44] that attach the carriage bushings [46] to the carriage [47].

(e) Tighten the nuts [44] to 65 in-lb (7.3 N·m) - 75 in-lb (8.5 N·m) more than the run-on torque.

SUBTASK 27-51-31-420-008

(4) Install the U-joint assembly [70]:

(a) Put the U-joint assembly [70] in its position between the transmission [49] and the tee angle gearbox [69].

(b) Install the bolts [66], washers [67], and nuts [68] that attach the U-joint assembly [70] to the transmission [49] and the tee angle gearbox [69].

SUBTASK 27-51-31-640-003

(5) Apply grease, D00633, to the end of the plunger on the torque trip indicator [48] and push it down around the sides of the plunger.

NOTE: Not all transmissions have a torque trip indicator.

SUBTASK 27-51-31-640-004

(6) Lubricate the transmission [49] and ballscrew [42] (TASK 12-22-51-640-802).

SUBTASK 27-51-31-210-003

(7) Make sure that the torque trip indicator [48] on the transmission [49] is set.

NOTE: Not all transmissions have a torque trip indicator installed.

SUBTASK 27-51-31-820-002

(8) Do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-31-440-002

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-31-860-007

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Supply B hydraulic system B power (TASK 29-11-00-860-801).

SUBTASK 27-51-31-860-008

(3) Use the primary system to retract the flaps to the retracted position (TASK 27-51-00-860-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-31-860-009

(4) Use the primary system to extend and retract the flaps (TASK 27-51-00-860-801).

SUBTASK 27-51-31-210-004

(5) Make sure that the torque trip indicator [48] on the transmission [49] is set.

NOTE: Not all transmissions have torque trip indicator installed.

SUBTASK 27-51-31-860-010

(6) Remove hydraulic system B power (TASK 29-11-00-860-805).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

INBOARD FLAP BALLSCREWS AND GIMBALS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Inboard Flap Ballscrew and Gimbal Removal (Selection)

(2) Inboard Flap Ballscrew and Gimbal Installation (Selection)

(3) Inboard Flap Outboard Ballscrew and Gimbal Removal

(4) Inboard Flap Outboard Ballscrew and Gimbal Installation

(5) Inboard Flap Inboard Ballscrew and Gimbal Removal

(6) Inboard Flap Inboard Ballscrew and Gimbal Installation.

TASK 27-51-32-000-801

2. Inboard Flap Ballscrew and Gimbal Removal (Selection)

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
541	Left Wing - Fairing Flap Support No. 4
542	Left Wing - Fairing Flap Support No. 3
553	Left Wing - Inboard Flap
641	Right Wing - Fairing Flap Support No. 5
642	Right Wing - Fairing Flap Support No. 6
653	Right Wing - Inboard Flap

B. Inboard Flap Ballscrew and Gimbal Removal (Selection)

SUBTASK 27-51-32-000-001

(1) Do one of these tasks to remove the applicable inboard flap ballscrew and gimbal:

(a) Do this task: Inboard Flap Outboard Ballscrew and Gimbal Removal, TASK 27-51-32-000-802.

(b) Do this task: Inboard Flap Inboard Ballscrew and Gimbal Removal, TASK 27-51-32-000-803.

——— END OF TASK ———

TASK 27-51-32-400-801

3. Inboard Flap Ballscrew and Gimbal Installation (Selection)

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
541	Left Wing - Fairing Flap Support No. 4
542	Left Wing - Fairing Flap Support No. 3
553	Left Wing - Inboard Flap
641	Right Wing - Fairing Flap Support No. 5
642	Right Wing - Fairing Flap Support No. 6
653	Right Wing - Inboard Flap

ECCN 9E991 BOEING PROPRIETARY - See title page for details

B. Inboard Flap Ballscrew and Gimbal Installation (Selection)

SUBTASK 27-51-32-400-001

(1) Do one of these tasks to install the applicable inboard flap ballscrew and gimbal:

(a) Do this task: Inboard Flap Outboard Ballscrew and Gimbal Installation, TASK 27-51-32-400-802.

(b) Do this task: Inboard Flap Inboard Ballscrew and Gimbal Installation, TASK 27-51-32-400-803.

——— END OF TASK ———

TASK 27-51-32-000-802

4. Inboard Flap Outboard Ballscrew and Gimbal Removal

(Figure 401)

A. General

(1) This task is applicable to the ballscrew and gimbal at flap supports No. 3 and 6.

B. References

Reference	Title
27-51-00-980-801	Trailing Edge Flap System Manual Operation (P/B 201)
27-51-18-000-802	Inboard Flap Support Aft Fairing Removal (P/B 401)
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

C. Location Zones

Zone	Area
542	Left Wing - Fairing Flap Support No. 3
553	Left Wing - Inboard Flap
642	Right Wing - Fairing Flap Support No. 6
653	Right Wing - Inboard Flap

D. Prepare for the Removal

SUBTASK 27-51-32-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Make sure that the downlock pins are in the nose and main landing gears (TASK 32-00-01-480-801).

SUBTASK 27-51-32-010-001

(2) Do this task: Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802.

E. Inboard Flap Outboard Ballscrew and Gimbal Removal

SUBTASK 27-51-32-980-001

(1) Manually extend the trailing edge flaps to the downstop on the ballscrew (TASK 27-51-00-980-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-32-020-001

CAUTION MAKE SURE THAT YOU HOLD THE BALLSCREW WHILE YOU DISCONNECT IT. IF THE U-JOINT IS ALLOWED TO SUPPORT THE WEIGHT OF THE BALLSCREW, THIS WILL CAUSE DAMAGE TO THE U-JOINT.

(2) Disconnect the ballscrew [1] with the gimbal [12] from the carriage [3] as follows:

(a) Install a support to hold the ballscrew [1] when it is disconnected from the carriage [3].

(b) Remove the nuts [9], washers [10], and bolts [2] that attach the carriage bushing [4] and carriage bushing [11] to the carriage [3].

(c) Remove the carriage bushing [4] and carriage bushing [11] from the carriage [3].

(d) Move the gimbal [12] away from the carriage [3].

SUBTASK 27-51-32-020-002

(3) Disconnect the ballscrew [1] from the yoke [17] on the transmission [15] as follows:

(a) Remove the nuts [21], washers [20], washers [19], and bolts [18] that attach the ballscrew [1] to the yoke [17].

(b) Remove the ballscrew [1] from the yoke [17].

NOTE: You can turn the ballscrew [1] and the gimbal [12] to remove the ballscrew [1].

(c) Remove the ballscrew [1] with the gimbal [12].

SUBTASK 27-51-32-020-003

(4) If it is necessary, remove the gimbal [12] from the ballscrew nut [22]:

(a) Remove the bolts [13], washers [6], and collars [7] that attach the gimbal bushings [8] to the gimbal [12].

(b) Remove the gimbal [12] from the ballscrew nut [22].

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Inboard Flap Outboard Ballscrew and Gimbal Installation

SUBTASK 27-51-32-420-001

(1) If you removed it, install the gimbal [12] on the ballscrew nut [22]:

(a) Apply grease, D00633 to the inside and outside mating surfaces of the gimbal bushings [8].

(b) Apply grease, D00633 to the outside surfaces of the gimbal bushings [8].

(c) Put the gimbal [12] in its location on the ballscrew nut [22].

(d) Install the gimbal bushings [8] through the gimbal [12] on the ballscrew nut [22].

(e) Install the bolts [13], washers [6], and collars [7] that attach the gimbal bushings [8] to the gimbal [12].

SUBTASK 27-51-32-420-002

(2) Connect the ballscrew [1] to the yoke [17] on the transmission [15]:

(a) Turn the ballscrew nut [22] until it is at the forward end of the ballscrew [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Apply a layer of grease, D00633 to the mating surfaces of the yoke [17] and the ballscrew [1].

(c) Put the ballscrew [1] into the yoke [17].

(d) Apply a layer of grease, D00633 to the shank and threads of the bolts [18].

(e) Install the bolts [18], washers [19], washers [20], and nuts [21] to attach the ballscrew [1] to the yoke [17].

(f) Make sure that you install the ballscrew [1] correctly in the yoke [17] as follows:

1) Turn the transmission [15] until the nut [24] on the U-joint [16] is up.

2) Turn the ballscrew nut [22] until the upstop is 180° from the upstop [23] on the yoke [17].

3) If the ball return [5] on the ballscrew nut [22] are not in the correct position, then change the position of the ballscrew [1]:

NOTE: On transmission No. 3, the ball returns [5] on the ballscrew nut [22] should be on the outboard side. On transmission No. 6, the ball returns [5] on the ballscrew nut [22] should be on the inboard side.

a) Remove the nuts [21], washers [20], washers [19], and bolts [18] that attach the ballscrew [1] to the yoke [17].

b) Turn the ballscrew [1] 180° in the yoke [17].

c) Install the bolts [18], washers [19], washers [20], and nuts [21].

(g) Tighten the nuts [21].

SUBTASK 27-51-32-420-003

(3) Connect the ballscrew [1] with the gimbal [12] to the carriage [3] as follows:

(a) Move the gimbal [12] to the downstop on the ballscrew [1].

NOTE: On transmission No. 3, the ball returns [5] on the ballscrew nut [22] should be on the outboard side. On transmission No. 6, the ball returns [5] on the ballscrew nut [22] should be on the inboard side.

(b) Move the carriage [3] to align with the gimbal [12].

(c) Apply grease, D00633 to the inside and outside surfaces of the carriage bushing [4] and carriage bushing [11].

(d) Apply grease, D00633 to the outside surfaces of the carriage bushing [4] and carriage bushing [11].

(e) Install the carriage bushing [4] and carriage bushing [11] to attach the gimbal [12] to the carriage [3].

(f) Install the bolts [2], washers [10], and nuts [9] that attach the carriage bushing [4] and carriage bushing [11] to the carriage [3].

(g) Tighten the nuts [9] to 65 in-lb (7.3 N·m) to 75 in-lb (8.5 N·m) more than the run-on torque.

SUBTASK 27-51-32-210-001

(4) Make sure that the torque trip indicator [14] on the transmission [15] is set.

SUBTASK 27-51-32-640-001

(5) Apply grease, D00633 to the end of the plunger on the torque trip indicator [14] and push it down around the sides of the plunger.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-32-640-002

(6) Lubricate the transmission [15], ballscrew [1] and gimbal [12] (TASK 12-22-51-640-803).

SUBTASK 27-51-32-820-001

(7) Do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-32-410-001

(1) Do this task: Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802.

SUBTASK 27-51-32-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-32-860-002

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Supply system B hydraulic power (TASK 29-11-00-860-801).

SUBTASK 27-51-32-860-003

(4) Retract the flaps with the primary system (TASK 27-51-00-860-801).

SUBTASK 27-51-32-860-004

(5) Use the primary system to extend and retract the flaps (TASK 27-51-00-860-801).

SUBTASK 27-51-32-210-002

(6) Make sure that the torque trip indicator [14] on the transmission [15] is set.

SUBTASK 27-51-32-860-005

(7) Remove system B hydraulic power (TASK 29-11-00-860-805).

——— END OF TASK ———

TASK 27-51-32-000-803

6. Inboard Flap Inboard Ballscrew and Gimbal Removal

(Figure 402)

A. General

(1) This task is applicable to the ballscrew and gimbal at flap supports No. 4 and 5.

D. Prepare for the Removal

SUBTASK 27-51-32-860-006

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-32-480-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-32-040-002

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

E. Inboard Flap Inboard Ballscrew and Gimbal Removal

SUBTASK 27-51-32-980-002

(1) Manually extend the trailing edge flaps to the downstop on the ballscrew. To extend them, do this task: Trailing Edge Flap System Manual Operation, TASK 27-51-00-980-801.

SUBTASK 27-51-32-020-004

CAUTION MAKE SURE THAT YOU HOLD THE BALLSCREW WHILE YOU DISCONNECT IT. IF THE U-JOINT IS ALLOWED TO SUPPORT THE WEIGHT OF THE BALLSCREW, THIS WILL CAUSE DAMAGE TO THE U-JOINT.

(2) Disconnect the ballscrew [44] with the gimbal [45] from the carriage [49]:

(a) Install a support to hold the ballscrew [44] when it is disconnected from the carriage [49].

(b) Remove the nuts [46], washers [47], and bolts [50] that attach the carriage bushings [48] to the carriage [49].

(c) Remove the carriage bushings [48] from the carriage [49].

(d) Move the gimbal [45] away from the carriage [49].

SUBTASK 27-51-32-020-005

(3) Disconnect the ballscrew [44] from the yoke [56] on the transmission [53]:

(a) Remove the nuts [62], washers [61], washers [60], and bolts [59] that attach the ballscrew [44] to the yoke [56].

(b) Remove the ballscrew [44] from the yoke [56].

NOTE: You can turn the ballscrew [44] and the gimbal [45] to remove the ballscrew [44].

(c) Remove the ballscrew [44] with the gimbal [45].

SUBTASK 27-51-32-020-006

(4) If it is necessary, remove the gimbal [45] from the ballscrew nut [58]:

(a) Remove the bolts [43], washers [41], and collars [51] that attach the gimbal bushings [42] to the gimbal [45].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the gimbal [45] from the ballscrew nut [58].

F. Inboard Flap Inboard Ballscrew and Gimbal Installation

SUBTASK 27-51-32-420-004

(1) If you removed it, install the gimbal [45] on the ballscrew nut [58]:

(a) Put the gimbal [45] in its location on the ballscrew nut [58].

(b) Install the gimbal bushings [42] through the gimbal [45] on the ballscrew nut [58].

(c) Install the bolts [43], washers [41], and washers [41] to attach the gimbal bushing [42] to the gimbal [45].

SUBTASK 27-51-32-420-005

(2) Connect the ballscrew [44] to the yoke [56] on the transmission [53]:

(a) Turn the ballscrew nut [58] until it is at the forward end of the ballscrew [44].

(b) Apply a layer of grease, D00633 to the mating surfaces of the yoke [56] and the ballscrew [44].

(c) Put the ballscrew [44] into the yoke [56].

(d) Apply a layer of grease, D00633 to the shank and threads of the bolts [59].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Install the bolts [59], washers [60], washers [61], and nuts [62] to attach the ballscrew [44] to the yoke [56].

(f) Make sure that the ballscrew [44] is installed correctly in the yoke [56]:

1) Turn the transmission [53] until the nut [54] on the U-joint [55] is up.

2) Turn the ballscrew nut [58] until the upstop is 180° from the upstop [57] on the yoke [56].

3) If the ball returns on the ballscrew nut [58] are not in the correct position, then change the position of the ballscrew [44]:

NOTE: On transmission No. 4, the ball returns on the ballscrew nut [58] should be on the outboard side. On transmission No. 5, the ball returns on the ballscrew nut [58] should be on the inboard side.

a) Remove the nuts [62], washers [61], washers [60], and bolts [59] that attach the ballscrew [44] to the yoke [56].

b) Turn the ballscrew [44] 180° in the yoke [56].

c) Install the bolts [59], washers [60], washers [61], and nuts [62].

(g) Tighten the nuts [62].

SUBTASK 27-51-32-420-006

(3) Connect the ballscrew [44] with the gimbal [45] to the carriage [49]:

(a) Move the gimbal [45] to the downstop on the ballscrew [44].

NOTE: On transmission No. 4, the ball returns on the ballscrew nut [58] should be on the outboard side. On transmission No. 5, the ball returns on the ballscrew nut [58] shold be on the inboard side.

(b) Move the carriage [49] to align with the gimbal [45].

(c) Install the carriage bushings [48] to attach the gimbal [45] to the carriage [49].

(d) Install the bolts [50], washers [47], and nuts [46] that attach the carriage bushing [48] to the carriage [49].

(e) Tighten the nuts [46] to 65 in-lb (7.3 N·m) to 75 in-lb (8.5 N·m) more than the run-on torque.

SUBTASK 27-51-32-210-003

(4) Make sure that the torque trip indicator [52] on the transmission [53] is set.

SUBTASK 27-51-32-640-003

(5) Apply grease, D00633 to the end of the plunger on the torque trip indicator [52] and push it down around the sides of the plunger.

SUBTASK 27-51-32-640-004

(6) Lubricate the transmission [53] and ballscrew [44], do this task: Inboard Flap Inboard Ballscrew Lubrication, TASK 12-22-51-640-802.

SUBTASK 27-51-32-820-002

(7) Do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-32-440-002

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-32-860-007

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-32-860-008

(3) Use the primary system to retract the flaps to the retracted position. To retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-32-860-009

(4) Use the primary system to extend and retract the flaps. To extend and retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-32-210-004

(5) Make sure that the torque trip indicator [52] on the transmission [53] is set.

SUBTASK 27-51-32-860-010

(6) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

INBOARD FLAP BALLSCREWS AND GIMBALS - INSPECTION/CHECK

1. General

A. This procedure has these tasks:

(1) Inboard Flap Outboard Ballscrew Inspection

(2) Inboard Flap Inboard Ballscrew Inspection

(3) Inboard Flap Outboard Carriage Bushing and Gimbal Bushing Inspection

(4) Inboard Flap Inboard Carriage Bushing and Gimbal Bushing Inspection

(5) Inboard Flap Inboard Ballscrew Detailed Lubrication Inspection

(6) Inboard Flap Outboard Ballscrew Detailed Lubrication Inspection.

TASK 27-51-32-220-801

2. Inboard Flap Outboard Ballscrew Inspection

(Figure 601)

A. General

(1) This task is applicable to the ballscrew at flap supports No. 3 and 6.

(2) There are two methods that you can use to apply a load to the ballscrew nut to measure the movement on the ballscrew. This procedure gives instructions for each method.

(a) You can push up on the trailing edge of the flap to apply the load.

(b) You can use the lever and clamp tool to apply the load to the ballscrew nut.

(3) It is not necessary to use the two methods to apply the load.

D. Location Zones

Zone	Area
542	Left Wing - Fairing Flap Support No. 3
553	Left Wing - Inboard Flap
642	Right Wing - Fairing Flap Support No. 6
653	Right Wing - Inboard Flap

E. Prepare for the Inspection

SUBTASK 27-51-32-860-011

(1) Extend the trailing edge flaps to the “40” position (TASK 27-51-00-860-803).

SUBTASK 27-51-32-480-003

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not in the nose and main landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-32-040-003

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Inboard Flap Outboard Ballscrew Backlash Check Without the Lever and Clamp Tool

SUBTASK 27-51-32-480-004

(1) Install the dial indicator assembly on the ballscrew as follows:

NOTE: The dial indicator assembly is a part of the tester, SPL-1753.

(a) Put the dial indicator assembly on the ballscrew.

NOTE: Make sure that the pointer touches the forward end of the ballscrew nut.

(b) Put the strap around the ballscrew to help hold the dial indicator assembly on the ballscrew.

(c) Adjust the dial indicator to zero.

SUBTASK 27-51-32-220-001

(2) Measure the backlash of the ballscrew and ballscrew nut as follows:

(a) Push up on the outboard trailing edge end of the inboard flap.

NOTE: This will apply a load to the ballscrew nut, and move it forward on the ballscrew.

(b) Use the dial indicator to measure the movement of the ballscrew nut.

NOTE: The movement of the ballscrew nut is the backlash.

(c) Do the above steps a total of five times to make sure that the movement of the dial indicator is repeatable.

(d) Make sure that the backlash is not more than 0.0073 in. (0.185 mm).

SUBTASK 27-51-32-960-001

(3) If the backlash is more than 0.0073 in. (0.185 mm), do these steps:

(a) Do this task: Inboard Flap Outboard Ballscrew and Gimbal Removal, TASK 27-51-32-000-802.

(b) Replace the ballscrew assembly.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Do this task: Inboard Flap Outboard Ballscrew and Gimbal Installation, TASK 27-51-32-400-802.

SUBTASK 27-51-32-080-001

(4) Remove the dial indicator assembly from the ballscrew.

SUBTASK 27-51-32-440-003

(5) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-32-860-012

(6) Retract the trailing edge flaps to the “0” position (TASK 27-51-00-860-804).

G. Inboard Flap Outboard Ballscrew Backlash Check with the lever and clamp tool

SUBTASK 27-51-32-020-007

(1) Do this task: Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802.

SUBTASK 27-51-32-860-013

(2) Set the trailing edge flaps to the “15” position (TASK 27-51-00-860-803 or TASK 27-51-00-860-804).

SUBTASK 27-51-32-040-004

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-32-480-005

(4) Install the lever and clamp tool of the tester, SPL-1753 on the ballscrew:

(a) Put the lever and clamp tool in its position on the ballscrew aft of the ballscrew nut.

(b) Make sure that the load surfaces of the lever and clamp tool touch the aft side of the ballscrew nut.

(c) Tighten the clamp-up bolt to 200 in-lb (22.6 N·m) - 300 in-lb (33.9 N·m).

(d) Make sure that the handles of the lever and clamp tool are in the relaxed position.

SUBTASK 27-51-32-480-006

(5) Install the dial indicator assembly of the tester, SPL-1753 on the ballscrew:

(a) Put the dial indicator assembly on the ballscrew.

(b) Make sure that the pointer touches the forward end of the ballscrew nut.

(c) Put the strap around the ballscrew to help hold the dial indicator assembly on the ballscrew.

(d) Adjust the dial indicator to zero.

SUBTASK 27-51-32-220-002

(6) Measure the backlash of the ballscrew and ballscrew nut as follows:

(a) Move the handles of the lever and clamp tool together until the dial indicator stops.

NOTE: This will apply a load to the ballscrew nut, and move it forward on the ballscrew.

(b) Use the dial indicator to measure the movement of the ballscrew nut.

NOTE: The movement of the ballscrew nut is the backlash.

(c) Do the above steps a total of five times to make sure that the movement of the dial indicator is repeatable.

SUBTASK 27-51-32-960-002

(7) If the backlash is more than 0.007 in. (0.178 mm), do these steps:

(a) Do this task: Inboard Flap Outboard Ballscrew and Gimbal Removal, TASK 27-51-32-000-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Replace the ballscrew assembly.

(c) Do this task: Inboard Flap Outboard Ballscrew and Gimbal Installation, TASK 27-51-32-400-802.

SUBTASK 27-51-32-080-002

(8) Remove the dial indicator assembly and the lever and clamp tool from the ballscrew.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-32-410-002

(1) If you removed the fairing, do this task: Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802.

SUBTASK 27-51-32-440-005

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-32-860-014

(3) Retract the trailing edge flaps to the “0” position (TASK 27-51-00-860-804).

SUBTASK 27-51-32-020-008

(4) If the downlock pins are not necessary, do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

TASK 27-51-32-220-802

3. Inboard Flap Inboard Ballscrew Inspection

(Figure 602)

A. General

(1) This task is applicable to the ballscrew and gimbal at flap supports No. 4 and 5.

(2) There are two methods that you can use to apply a load to the ballscrew nut to measure the movement on the ballscrew. This procedure gives instructions for each method.

(a) You can push up on the trailing edge of the flap to apply the load.

(b) You can use the lever and clamp tool to apply the load to the ballscrew nut.

(3) It is not necessary to use the two methods to apply the load.

E. Prepare for the Inspection

SUBTASK 27-51-32-860-015

(1) Extend the trailing edge flaps to the “40” position (TASK 27-51-00-860-803).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-32-480-007

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not in the nose and main landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-32-040-005

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Inboard Flap Inboard Ballscrew Backlash Check Without the Lever and Clamp Tool

SUBTASK 27-51-32-480-008

(1) Install the dial indicator assembly of the tester, SPL-1753 on the ballscrew:

(a) Put the dial indicator assembly on the ballscrew as follows:

1) Make sure that the pointer touches the forward end of the ballscrew nut.

(b) Put the strap around the ballscrew to help hold the dial indicator assembly on the ballscrew.

(c) Adjust the dial indicator to zero.

SUBTASK 27-51-32-220-003

(2) Measure the backlash of the ballscrew and ballscrew nut as follows:

(a) Push up on the inboard trailing edge end of the inboard flap.

NOTE: This will apply a load to the ballscrew nut, and move it forward on the ballscrew.

(b) Use the dial indicator to measure the movement of the ballscrew nut.

NOTE: The movement of the ballscrew nut is the backlash.

(c) Do the above steps a total of five times to make sure that the movement of the dial indicator is repeatable.

(d) Make sure that the backlash is not more than 0.007 in. (0.178 mm).

SUBTASK 27-51-32-960-003

(3) If the backlash is more than 0.007 in. (0.178 mm), replace the ballscrew assembly as follows:

(a) Do this task: Inboard Flap Inboard Ballscrew and Gimbal Removal, TASK 27-51-32-000-803.

(b) Replace the ballscrew assembly.

(c) Do this task: Inboard Flap Inboard Ballscrew and Gimbal Installation, TASK 27-51-32-400-803.

SUBTASK 27-51-32-080-003

(4) Remove the dial indicator assembly from the ballscrew.

SUBTASK 27-51-32-440-006

(5) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-32-860-016

(6) Move the trailing edge flaps to the fully retracted position (TASK 27-51-00-860-804).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Inboard Flap Inboard Ballscrew Backlash Check With The Lever And Clamp Tool

SUBTASK 27-51-32-000-002

(1) Do this task: Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802.

SUBTASK 27-51-32-440-007

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-32-860-017

(3) Retract the trailing edge flaps to the 15-unit position (TASK 27-51-00-860-804).

SUBTASK 27-51-32-040-006

(4) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-32-480-009

(5) Install the lever and clamp tool of the tester, SPL-1753 on the ballscrew as follows:

(a) Put the lever and clamp tool in its position on the ballscrew aft of the ballscrew nut.

(b) Make sure that the load surfaces of the lever and clamp tool touch the aft side of the ballscrew nut.

(c) Tighten the clamp-up bolt to 200 in-lb (22.6 N·m) - 300 in-lb (33.9 N·m).

(d) Make sure that the handles of the lever and clamp tool are in the relaxed position.

SUBTASK 27-51-32-480-010

(6) Install the dial indicator assembly of the tester, SPL-1753 on the ballscrew as follows:

(a) Put the dial indicator assembly on the ballscrew.

(b) Make sure that the pointer touches the forward end of the ballscrew nut.

(c) Put the strap around the ballscrew to help hold the dial indicator assembly on the ballscrew.

(d) Adjust the dial indicator to zero.

SUBTASK 27-51-32-220-004

(7) Measure the backlash of the ballscrew and ballscrew nut as follows:

(a) Move the handles of the lever and clamp tool together until the dial indicator stops.

NOTE: This will apply a load to the ballscrew nut, and move it forward on the ballscrew.

(b) Use the dial indicator to measure the movement of the ballscrew nut.

NOTE: The movement of the ballscrew nut is the backlash.

(c) Do the above steps a total of five times to make sure that the movement of the dial indicator is repeatable.

(d) Make sure that the backlash is not more than 0.0073 in. (0.185 mm).

SUBTASK 27-51-32-960-004

(8) If the backlash is more than 0.0073 in. (0.185 mm), replace the ballscrew assembly as follows:

(a) Do this task: Inboard Flap Inboard Ballscrew and Gimbal Removal, TASK 27-51-32-000-803.

(b) Replace the ballscrew assembly.

(c) Do this task: Inboard Flap Inboard Ballscrew and Gimbal Installation, TASK 27-51-32-400-803.

SUBTASK 27-51-32-080-004

(9) Remove the dial indicator assembly and the lever and clamp tool from the ballscrew.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-32-400-002

(1) If you removed the fairing, do this task: Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802.

SUBTASK 27-51-32-440-008

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-32-860-018

(3) Move the trailing edge flaps to the fully retracted position (TASK 27-51-00-860-804).

SUBTASK 27-51-32-020-009

(4) If the downlock pins are not necessary, do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

C. Tools/Equipment

Reference	Description
STD-4872	Gage - Feeler (0.002 - 0.010 inch)

D. Location Zones

Zone	Area
542	Left Wing - Fairing Flap Support No. 3
553	Left Wing - Inboard Flap
642	Right Wing - Fairing Flap Support No. 6
653	Right Wing - Inboard Flap

E. Prepare for the Inspection

SUBTASK 27-51-32-860-019

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-32-480-011

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

(2) Make sure that the downlock pins are in the nose and main landing gears (TASK 32-00-01-480-801).

SUBTASK 27-51-32-040-007

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Inboard Flap Outboard Gimbal Bushing and Carriage Bushing Freeplay Check

SUBTASK 27-51-32-000-003

(1) Do this task: Inboard Flap Support Aft Fairing Removal, TASK 27-51-18-000-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-32-220-005

(2) Measure the gimbal bushing freeplay as follows:

(a) Push up (Y - axis) on the ballscrew.

NOTE: This will apply a load on the ballscrew nut and move it up.

(b) Measure between the ballnut flange and the gimbal bushing with a feeler gage, STD-4872 or equivalent.

NOTE: The movement of the ballscrew nut is the freeplay.

(c) Make sure that the freeplay is not less than 0.040 in. (1.02 mm) or more than 0.080 in. (2.03 mm).

NOTE: The freeplay tolerance for the gimbal bushing is 0.040 in. (1.02 mm) to 0.080 in. (2.03 mm).

SUBTASK 27-51-32-220-006

(3) Measure the carriage bushing freeplay as follows:

(a) Push left or right (X-axis) on the ballscrew.

NOTE: This will apply a load on the gimbal and move it to one side.

(b) Measure between the carriage flange and the carriage bushing with a feeler gage, STD-4872 or equivalent.

NOTE: The movement of the gimbal is the freeplay.

(c) Make sure that the freeplay is not less than 0.040 in. (1.02 mm) or more than 0.080 in. (2.03 mm).

NOTE: The freeplay tolerance for the carriage bushing is 0.040 in. (1.02 mm) to 0.080 in. (2.03 mm).

SUBTASK 27-51-32-960-007

(4) If the carriage or gimbal bushing freeplay is less than 0.040 in. (1.02 mm) or more than 0.080 in. (2.03 mm), do these steps:

(a) Do this task: Inboard Flap Outboard Ballscrew and Gimbal Removal, TASK 27-51-32-000-802.

(b) Replace the worn carriage or gimbal bushing.

(c) Do this task: Inboard Flap Outboard Ballscrew and Gimbal Installation, TASK 27-51-32-400-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-32-400-003

(1) If you removed the fairing, do this task: Inboard Flap Support Aft Fairing Installation, TASK 27-51-18-400-802.

SUBTASK 27-51-32-860-020

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-32-020-010

(3) If the downlock pins are not necessary, do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

——— END OF TASK ———

E. Prepare for the Inspection

SUBTASK 27-51-32-860-022

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-32-480-012

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

(2) Make sure that the downlock pins are in the nose and main landing gears (TASK 32-00-01-480-801).

SUBTASK 27-51-32-040-008

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Inboard Flap Inboard Carriage Bushing and Gimbal Bushing Inspection

SUBTASK 27-51-32-220-007

(1) Measure the gimbal bushing freeplay as follows:

(a) Push up (Y-axis) on the ballscrew.

NOTE: This will apply a load on the ballscrew nut and move it up.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Measure between the ballnut flange and the gimbal bushing with a feeler gage, STD-4872 or equivalent.

NOTE: The movement of the ballscrew nut is the freeplay.

(c) Make sure that the freeplay is not less than 0.040 in. (1.02 mm) or more than 0.080 in. (2.03 mm).

NOTE: The freeplay tolerance for the gimbal bushing is 0.040 in. (1.02 mm) to 0.080 in. (2.03 mm).

SUBTASK 27-51-32-220-008

(2) Measure the carriage bushing freeplay as follows:

(a) Push left or right (X-axis) on the ballscrew.

NOTE: This will apply a load on the gimbal and move it to one side.

(b) Measure between the carriage flange and the carriage bushing with a feeler gage, STD-4872 or equivalent.

NOTE: The movement of the gimbal is the freeplay.

(c) Make sure that the freeplay is not less than 0.040 in. (1.02 mm) or more than 0.080 in. (2.03 mm).

NOTE: The freeplay tolerance for the carriage bushing is 0.040 in. (1.02 mm) to 0.080 in. (2.03 mm).

SUBTASK 27-51-32-960-005

(3) If the carriage or gimbal bushing freeplay is less than 0.040 in. (1.02 mm) or more than 0.080 in. (2.03 mm), do these steps:

(a) Do this task: Inboard Flap Inboard Ballscrew and Gimbal Removal, TASK 27-51-32-000-803.

(b) Replace the worn bushing.

(c) Do this task: Inboard Flap Inboard Ballscrew and Gimbal Installation, TASK 27-51-32-400-803.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-32-440-011

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-32-020-011

(2) If the downlock pins are not necessary, do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

E. Prepare for the Lubrication Inspection

SUBTASK 27-51-32-040-009

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Inboard Flap Inboard Ballscrew Lubrication Inspection

SUBTASK 27-51-32-640-005

(1) This table supplies data for the subsequent lubrication and inspection steps:

Table 601/27-51-32-993-801 Inboard Flap Inboard Ballscrew Servicing

Item No.	Nomenclature	Lubricant	Method of Application	Number of Locations
-	No. 4 Ballscrew Nut (No. 5 Ballscrew Nut is Equivalent)	grease, D00633	Zerk	1

SUBTASK 27-51-32-640-006

(2) Lubricate and examine the ballscrew nut as follows:

(a) Remove the old grease and dirt on and around the ballscrew nut and grease vent with a lint-free cloth, G01043 or equivalent.

CAUTION

DO NOT USE GREASE GUN PRESSURE IN EXCESS OF 36 PSI (2.5 BAR). EXCESSIVE GREASE GUN NOZZLE PRESSURE AND FLOW RATE CAN DAMAGE THE SEALS.

(b) Lubricate the ballscrew nut with grease, D00633 as follows:

NOTE: The ballscrew nut has two grease fittings. It is only necessary to lubricate one of them.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Make sure that clean grease comes out from the grease vent.

   NOTE: Clean grease must come out through the grease vent. This will make sure that the used grease has been flushed out.

2) If the clean grease does not comes out from the vent, replace the ballscrew assembly on or before the next interval inspection (PAGEBLOCK 27-51-32/401).

3) Make sure that grease does not freely come out through the ballscrew nut seal.

   NOTE: It is acceptable for a small quantity of grease to come out through the ballscrew nut seal.

4) If the grease freely comes through the ballscrew nut seal, then replace the ballscrew assembly on or before the next interval inspection (PAGEBLOCK 27-51-32/401).

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-32-440-009

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

653	Right Wing - Inboard Flap

E. Prepare for the Lubrication Inspection

SUBTASK 27-51-32-860-024

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-32-040-010

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Inboard Flap Outboard Ballscrew and Gimbal Lubrication

SUBTASK 27-51-32-640-007

(1) This table supplies data for the subsequent lubrication and inspection step:

Table 602/27-51-32-993-802 Inboard Flap Outboard Ballscrew Servicing

Item No.	Nomenclature	Lubricant	Method of Application	Number of Locations
-	No. 3 Ballscrew Nut (No. 6 Ballscrew Nut is Equivalent)	grease, D00633	Zerk	1

SUBTASK 27-51-32-640-008

(2) Do these steps for the ballscrew nut lubrication and inspection:

(a) Remove the old grease and dirt on and around the ballscrew nut and grease vent with a lint-free cloth, G01043 or equivalent.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION DO NOT USE GREASE GUN PRESSURE IN EXCESS OF 36 PSI (2.5 BAR). EXCESSIVE GREASE GUN NOZZLE PRESSURE AND FLOW RATE CAN DAMAGE THE SEALS.

(b) Lubricate the ballscrew nut with grease, D00633 as follows:

NOTE: The ballscrew nut has two grease fittings. It is only necessary to lubricate one of them.

1) Make sure that clean grease comes out from the grease vent.

NOTE: Clean grease must come out through the grease vent. This will make sure that the used grease has been flushed out.

2) If the clean grease does not comes out from the vent, then replace the ballscrew assembly on or before the next interval inspection (PAGEBLOCK 27-51-32/401).

3) Make sure that grease does not freely come out through the ballscrew nut seal.

NOTE: It is acceptable for a small quantity of grease to come out through the ballscrew nut seal.

4) If the grease freely comes through the ballscrew nut seal, then replace the ballscrew assembly on or before the next interval inspection (PAGEBLOCK 27-51-32/401).

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-32-440-010

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-32-860-025

(2) Retract the trailing edge flaps to the UP position. To retract them, do this task: (Retract the Trailing Edge Flaps, TASK 27-51-00-860-804).

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD FLAP TRANSMISSIONS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Outboard flap transmission removal (selection)

(2) Outboard flap transmission installation (selection)

(3) Outboard flap outboard transmission removal

(4) Outboard flap outboard transmission installation

(5) Outboard flap inboard transmission removal

(6) Outboard flap inboard transmission installation.

TASK 27-51-41-000-801

2. Outboard Flap Transmission Removal (Selection)

A. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
544	Left Wing - Fairing Flap Support No. 1
567	Left Wing - Outboard Flap
643	Right Wing - Fairing Flap Support No. 7
644	Right Wing - Fairing Flap Support No. 8
667	Right Wing - Outboard Flap

B. Outboard Flap Transmission Removal (Selection)

SUBTASK 27-51-41-000-001

(1) Do one of these tasks to remove the applicable outboard flap transmission:

(a) Do this task: Outboard Flap Outboard Transmission Removal, TASK 27-51-41-000-802.

(b) Do this task: Outboard Flap Inboard Transmission Removal, TASK 27-51-41-000-803.

——— END OF TASK ———

TASK 27-51-41-400-801

3. Outboard Flap Transmission Installation (Selection)

A. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
544	Left Wing - Fairing Flap Support No. 1
567	Left Wing - Outboard Flap

644	Right Wing - Fairing Flap Support No. 8
667	Right Wing - Outboard Flap

B. Outboard Flap Transmission Installation (Selection)

SUBTASK 27-51-41-400-001

(1) Do one of these tasks to install the applicable outboard flap transmission:

(a) Do this task: Outboard Flap Outboard Transmission Installation, TASK 27-51-41-400-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Do this task: Outboard Flap Inboard Transmission Installation, TASK 27-51-41-400-803.

——— END OF TASK ———

TASK 27-51-41-000-802

4. Outboard Flap Outboard Transmission Removal

(Figure 401)

A. General

(1) This task is applicable to the transmissions at flap supports No. 1 and 8.

B. References

Reference	Title
27-51-00-980-801	Trailing Edge Flap System Manual Operation (P/B 201)
27-51-28-000-803	Outboard Flap Outboard Support Aft Fairing Removal (P/B 401)

C. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
567	Left Wing - Outboard Flap
644	Right Wing - Fairing Flap Support No. 8
667	Right Wing - Outboard Flap

D. Prepare for the Removal

SUBTASK 27-51-41-010-001

(1) Do this task: Outboard Flap Outboard Support Aft Fairing Removal, TASK 27-51-28-000-803.

E. Outboard Flap Outboard Transmission Removal

SUBTASK 27-51-41-980-001

(1) Manually extend the trailing edge flaps to the downstop on the ballscrew (TASK 27-51-00-980-801).

SUBTASK 27-51-41-020-001

(2) Do this task: Flap Position Transmitter Removal, TASK 27-58-01-000-801.

SUBTASK 27-51-41-020-002

(3) Disconnect the torque tube [9] from the transmission [4]:

(a) Remove the lockwire and screws [11] that attach the coupling sleeve [8] to the splined coupling [10] on the torque tube [9].

(b) Move the coupling sleeve [8] off the splined coupling [10].

SUBTASK 27-51-41-020-003

(4) Disconnect the aft flap drive rod [6] from the drive rod attach fitting [37]:

(a) Remove the pin [36], nut [35], washer [34], washer [32], bolt [31] and bushing [33] that attach the aft flap drive rod [6] to the drive rod attach fitting [37].

(b) Move the aft flap drive rod [6] away from the drive rod attach fitting [37].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-41-020-004

CAUTION MAKE SURE THAT YOU HOLD THE BALLSCREW WHILE YOU DISCONNECT IT. IF THE U-JOINT IS ALLOWED TO SUPPORT THE WEIGHT OF THE BALLSCREW, THIS WILL CAUSE DAMAGE TO THE U-JOINT.

(5) Disconnect the ballscrew [2] with the gimbal [13] from the carriage [1]:

NOTE: When you disconnect the ballscrew [2] from the carriage [1], the outboard flap can move a small distance to the downstop on the flap track.

(a) Remove the nuts [15], washers [16] and bolts [17] from the carriage [1].

(b) Remove the inboard carriage bushing [20] and the outboard carriage bushing [14] from the gimbal [13] and the carriage [1].

(c) Move the ballscrew [2] and gimbal [13] away from the carriage [1].

SUBTASK 27-51-41-020-005

(6) Disconnect the ballscrew [2] from the yoke [5] on the transmission [4]:

(a) Remove the nuts [24], washers [22], washers [23] and bolts [21] that attach the ballscrew [2] to the yoke [5].

(b) Remove the ballscrew [2] from the yoke [5].

NOTE: You can turn the ballscrew [2] and the gimbal [13] to get access to remove the ballscrew [2].

(c) Remove the ballscrew [2] with the gimbal [13].

SUBTASK 27-51-41-020-006

WARNING GET SUFFICIENT AID FROM OTHER PERSONNEL AND EQUIPMENT TO HOLD THE COMPONENT DURING THE REMOVAL, AND INSTALLATION. THE COMPONENT IS HEAVY. THIS WILL PREVENT INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(7) Remove the transmission [4]:

NOTE: It is not necessary to do this step if the transmission attach fitting [3] will remain on the sideplate.

NOTE: The transmission [4] weighs approximately 50 lb (23 kg).

(a) Remove the bolts [38] that attach the wires to the wire bracket [26].

(b) Hold the transmission [4] while you disconnect the transmission attach fitting [3] from the sideplates.

(c) Remove the nuts [30], washers [29], washers [28] and bolts [27] that attach the transmission attach fitting [3] to the sideplates.

(d) Carefully lower the transmission [4] and the wire bracket [26].

SUBTASK 27-51-41-020-012

(8) Remove the transmission [4] from the transmission attach fitting [3]:

(a) Hold the transmission [4] while you disconnect it from the transmission attach fitting [3].

(b) Remove the nuts [45], washers [44], washers [43], bolts [42], and wire bracket [26] from the transmission [4].

(c) Remove the nuts [45], washers [44], washers [43], bolt [46], bolt [47], and drive rod attach fitting [37] from the transmission [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Remove the transmission [4] from the transmission attach fitting [3].

F. Outboard Flap Outboard Transmission Installation

SUBTASK 27-51-41-420-012

(1) Install the transmission [4] to the transmission attach fitting [3]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a thin layer of Cor-Ban 27L Compound, G50237, to the mating surfaces of the transmission [4], transmission attach fitting [3], drive rod attach fitting [37], and wire bracket [26].

(b) Apply a layer of Cor-Ban 27L Compound, G50237, to the bolt holes in the transmission [4] and the shank and threads of the top two bolts [42], bottom bolt [46] and bolt [47].

(c) Hold the transmission [4] in position on the transmission attach fitting [3].

(d) Put the bolts [42], washers [43], and wire bracket [26] in position on the transmission [4].

(e) Install the bolts [42], washers [43], washers [44], nuts [45], and the wire bracket [26] to the transmission [4].

(f) Put the bolt [46], bolt [47], washers [43], and the drive rod attach fitting [37] in position on the transmission [4].

(g) Install the bolt [46], bolt [47], washers [43], washers [44], nuts [45], and the drive rod attach fitting [37] to the transmission [4].

(h) Tighten the nuts [45] to 394 in-lb (44.5 N·m) - 425 in-lb (48.0 N·m).

SUBTASK 27-51-41-420-001

WARNING

BE CAREFUL WHEN YOU MOVE THE COMPONENT. THE COMPONENT IS HEAVY. INJURIES TO PERSONS CAN OCCUR.

(2) Install the transmission [4]:

NOTE: This step is not necessary if the transmission attach fitting [3] remained on the sideplate.

NOTE: The transmission [4] weighs approximately 50 lb (23 kg).

(a) Apply a thin layer of sealant, A00247, to the mating surfaces of the transmission [4] and the sideplates.

(b) Apply a layer of sealant, A00247, to the bolt holes in the transmission [4] and the shank and threads of the bolts [27].

(c) Carefully lift the transmission [4] and position the transmission attach fitting [3] on the sideplates.

(d) Install the bolts [27], washers [28], washers [29], and nuts [30].

(e) Tighten the nuts [30] to 220 in-lb (25 N·m) - 410 in-lb (46 N·m).

1) When applicable, re-tighten the nuts [30] to 220 in-lb (25 N·m) - 410 in-lb (46 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(f) Apply a layer of Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [38].

(g) Install the bolts [38] to attach the wires to the wire bracket [26].

SUBTASK 27-51-41-420-002

(3) Connect the ballscrew [2] to the yoke [5] on the transmission [4]:

(a) Turn the ballscrew nut [19] until it is at the forward end of the ballscrew [2].

(b) Apply a layer of grease, D00633, to the mating surfaces of the yoke [5] and the ballscrew [2].

(c) Put the ballscrew [2] into the yoke [5].

(d) Apply a layer of grease, D00633, to the shank and threads of the bolts [21].

(e) Install the bolts [21], washers [22], washers [23] and nuts [24] to attach the ballscrew [2] to the yoke [5].

(f) Make sure the ballscrew [2] is installed correctly in the yoke [5]:

1) Turn the transmission [4] until the nut [40] on the U-joint [25] is down.

2) Turn the ballscrew nut [19] until the upstop is 180° from the upstop [41] on the yoke [5].

3) If the ball returns [18] on the ballscrew nut [19] are not on the outboard side, change the position of the ballscrew [2]:

a) Remove the nuts [24], washers [23], washers [22] and bolts [21] that attach the ballscrew [2] to the yoke [5].

b) Turn the ballscrew [2] 180° in the yoke [5].

c) Install the bolts [21], washers [22], washers [23] and nuts [24].

(g) Tighten the nuts [24] to 100 in-lb (11.3 N·m) to 120 in-lb (13.6 N·m) more than the run-on torque.

SUBTASK 27-51-41-420-003

(4) Connect the ballscrew [2] with the gimbal [13] to the carriage [1]:

(a) Move the gimbal [13] aft on the ballscrew [2] until it is at the down stop [7].

(b) On transmission No. 1, make sure the ball returns [18] on the ballscrew nut [19] are outboard and the grease vent is on the lower side.

(c) On transmission No. 8, make sure the ball returns [18] on the ballscrew nut [19] are inboard and the grease vent is on the lower side.

NOTE: This is the recommended position for maintenance.

(d) Lift the outboard flap until the carriage [1] aligns with the gimbal [13].

(e) Install the carriage bushing [14] and carriage bushing [20] to attach the gimbal [13] to the carriage [1].

(f) Install the bolts [17], washers [16] and nuts [15] to hold the carriage bushing [14] and carriage bushing [20] in the carriage [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Tighten the nuts [15] to 65 in-lb (7.3 N·m) to 75 in-lb (8.5 N·m) more than the run-on torque.

SUBTASK 27-51-41-420-004

(5) Connect the aft flap drive rod [6] to the drive rod attach fitting [37]:

(a) Put the aft flap drive rod [6] in its position in the drive rod attach fitting [37].

(b) Apply a layer of grease, D00633, to the inside of the bushing [33] and the shank of the bolt [31].

(c) Install the bushing [33], bolt [31] and washer [32] to attach the aft flap drive rod [6] to the drive rod attach fitting [37].

(d) Carefully clean the grease, D00633, from the threads of the bolt [31].

(e) Install the washer [34] and nut [35] on the bolt [31].

(f) Tighten the nut [35] to 65 in-lb (7.3 N·m) to 100 in-lb (11.3 N·m).

(g) Install the pin [36] in the nut [35].

SUBTASK 27-51-41-420-005

(6) Connect the torque tube [9] to the transmission [4]:

(a) Apply grease, D00633, to the coupling sleeve [8].

(b) Put the splined coupling [10] in the coupling sleeve [8].

(c) Install the screws [11] to attach the torque tube [9] to the transmission [4].

(d) Install MS20995NC32 lockwire, G50347 on the screws [11].

SUBTASK 27-51-41-420-006

(7) Do this task: Flap Position Transmitter Installation, TASK 27-58-01-400-801.

SUBTASK 27-51-41-640-001

(8) Apply grease, D00633, to the end of the plunger on the torque trip indicator [12] and push it down around the sides of the plunger.

NOTE: Not all transmissions have a torque trip indicator installed.

SUBTASK 27-51-41-210-001

(9) Make sure the torque trip indicator [12] on the transmission [4] is set.

NOTE: Not all transmissions have a torque trip indicator installed.

SUBTASK 27-51-41-640-002

(10) Lubricate the transmission [4], ballscrew [2] and gimbal [13] (TASK 12-22-51-640-805).

SUBTASK 27-51-41-820-001

(11) Do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-41-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-41-860-002

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Supply hydraulic system B power (TASK 29-11-00-860-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-41-860-003

(3) Use the primary system to retract the flaps to the retracted position (TASK 27-51-00-860-801).

SUBTASK 27-51-41-860-004

(4) Use the primary system to extend and retract the flaps (TASK 27-51-00-860-801).

SUBTASK 27-51-41-210-002

(5) Make sure the torque trip indicator [12] on the transmission [4] is set.

NOTE: Not all transmissions have torque trip indicator installed.

SUBTASK 27-51-41-210-003

(6) Make sure the flap position indicator on the center instrument panel shows the UP position.

SUBTASK 27-51-41-860-005

(7) Remove hydraulic system B power (TASK 29-11-00-860-805).

SUBTASK 27-51-41-410-001

(8) Do this task: Outboard Flap Outboard Support Aft Fairing Installation, TASK 27-51-28-400-803.

——— END OF TASK ———

TASK 27-51-41-000-803

6. Outboard Flap Inboard Transmission Removal

(Figure 402)

A. General

(1) This task is applicable to the transmissions at flap supports No. 2 and 7.

B. References

Reference	Title
27-51-00-980-801	Trailing Edge Flap System Manual Operation (P/B 201)
27-51-28-000-805	Outboard Flap Inboard Support Aft Fairing Removal (P/B 401)

C. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
567	Left Wing - Outboard Flap
643	Right Wing - Fairing Flap Support No. 7
667	Right Wing - Outboard Flap

D. Prepare for the Removal

SUBTASK 27-51-41-010-002

(1) Do this task: Outboard Flap Inboard Support Aft Fairing Removal, TASK 27-51-28-000-805.

E. Outboard Flap Inboard Transmission Removal

SUBTASK 27-51-41-980-002

(1) Manually extend the trailing edge flaps to the downstop on the ballscrew (TASK 27-51-00-980-801).

SUBTASK 27-51-41-020-007

(2) Disconnect the torque tubes [68] from the transmission [64]:

(a) Remove the screws [70] that attach the coupling sleeves [67] to the splined couplings [69] on the torque tubes [68].

(b) Move the coupling sleeves [67] off the splined couplings [69].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-41-020-008

(3) Disconnect the aft flap drive rod [66] from the drive rod attach fitting [96]:

(a) Remove the nut [94], washer [93], washer [91], bolt [90] and bushing [92] that attach the aft flap drive rod [66] to the drive rod attach fitting [96].

(b) Move the aft flap drive rod [66] away from the drive rod attach fitting [96].

SUBTASK 27-51-41-020-009

CAUTION

MAKE SURE THAT YOU HOLD THE BALLSCREW WHILE YOU DISCONNECT IT. IF THE U-JOINT IS ALLOWED TO SUPPORT THE WEIGHT OF THE BALLSCREW, THIS WILL CAUSE DAMAGE TO THE U-JOINT.

(4) Disconnect the ballscrew [62] with the gimbal [72] from the carriage [61]:

NOTE: When you disconnect the ballscrew [62] from the carriage [61], the outboard flap can move a small distance to the downstop on the flap track.

(a) Remove the nut [74], washer [75] and bolt [76] from the carriage [61].

(b) Remove the inboard carriage bushing [79] and outboard carriage bushing [73] from the gimbal [72] and the carriage [61].

(c) Move the ballscrew [62] and gimbal away from the carriage [61].

SUBTASK 27-51-41-020-010

(5) Disconnect the ballscrew [62] from the yoke [65] on the transmission [64]:

(a) Remove the nuts [83], washers [82], washers [81] and bolts [80] that attach the ballscrew [62] to the yoke [65].

(b) Remove the ballscrew [62] from the yoke [65].

NOTE: You can turn the ballscrew [62] and the gimbal [72] to get access to remove the ballscrew [62].

(c) Remove the ballscrew [62] with the gimbal [72].

SUBTASK 27-51-41-020-011

WARNING

BE CAREFUL WHEN YOU MOVE THE COMPONENT. THE COMPONENT IS HEAVY. INJURIES TO PERSONS CAN OCCUR.

(6) Remove the transmission [64]:

NOTE: It is not necessary to do this step if the transmission attach fitting [63] will remain on the sideplate.

NOTE: The transmission [64] weighs approximately 50 lb (23 kg).

(a) Remove the bolts [97] that attach the wires to the wire bracket [85].

(b) Hold the transmission [64] while you disconnect the transmission attach fitting [63] from the sideplates.

(c) Remove the nuts [89], washers [88], washers [87] and bolts [86] that attach the transmission attach fitting [63] to the sideplates.

(d) Carefully lower the transmission [64] and the wire bracket [85].

SUBTASK 27-51-41-020-013

(7) Remove the transmission [64] from the transmission attach fitting [63]:

(a) Hold the transmission [64] while you disconnect it from the transmission attach fitting [63].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the nuts [104], washers [103], washers [102], bolts [101], and wire bracket [85] from the transmission [64].

(c) Remove the nuts [104], washers [103], washers [102], bolt [105], bolt [106], and drive rod attach fitting [96] from the transmission [64].

(d) Remove the transmission [64] from the transmission attach fitting [63].

F. Outboard Flap Inboard Transmission Installation

SUBTASK 27-51-41-420-013

(1) Install the transmission [64] to the transmission attach fitting [63]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a thin layer of Cor-Ban 27L Compound, G50237 to the mating surface of the transmission [64], transmission attach fitting [63], drive rod attach fitting [96], and wire bracket [85].

(b) Apply a layer of Cor-Ban 27L Compound, G50237 to the bolt holes in the transmission [64] and the shank and threads of the top two bolts [101], bottom bolt [105] and bolt [106].

(c) Hold the transmission [64] in position on the transmission attach fitting [63].

(d) Put the bolts [101], washers [102], and wire bracket [85] in position on the transmission [64].

(e) Install the bolts [101], washers [102], washers [103], nuts [104], and the wire bracket [85] to the transmission [64].

(f) Put the bolt [105], bolt [106], washers [102], and the drive rod attach fitting [96] in position on the transmission [64].

(g) Install the bolt [105], bolt [106], washers [102], washers [103], nuts [104], and the drive rod attach fitting [96] to the transmission [64].

(h) Tighten the nuts [104] to 394 in-lb (44.5 N·m) - 425 in-lb (48.0 N·m).

SUBTASK 27-51-41-420-007

WARNING

BE CAREFUL WHEN YOU MOVE THE COMPONENT. THE COMPONENT IS HEAVY. INJURIES TO PERSONS CAN OCCUR.

(2) Install the transmission [64]:

NOTE: This step is not necessary if the transmission attach fitting [63] remained on the sideplate.

NOTE: The transmission [64] weighs approximately 50 lb (23 kg).

(a) Apply a thin layer of sealant, A00247, to the mating surfaces of the transmission [64] and the sideplates.

(b) Apply a layer of sealant, A00247, to the bolt holes in the transmission [64] and the shank and threads of the bolts [86].

(c) Carefully lift the transmission [64] to its position on the transmission attach fitting [63] on the sideplates.

(d) Install the bolts [86], washers [87], washers [88], and nuts [89].

(e) Tighten the nuts [89] to 350 in-lb (40 N·m) - 410 in-lb (46 N·m).

1) When applicable, re-tighten the nuts [89] to 350 in-lb (40 N·m) - 410 in-lb (46 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(f) Apply a layer of Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [97].

(g) Install the bolts [97] to attach the wires to the wire bracket [85].

SUBTASK 27-51-41-420-008

(3) Connect the ballscrew [62] to the yoke [65] on the transmission [64]:

(a) Turn the ballscrew nut [78] until it is at the forward end of the ballscrew [62].

(b) Apply a layer of grease, D00633, to the mating surfaces of the yoke [65] and the ballscrew [62].

(c) Put the ballscrew [62] into the yoke [65].

(d) Apply a layer of grease, D00633, to the shank and threads of the bolts [80].

(e) Install the bolts [80], washers [81], washers [82] and nuts [83] to attach the ballscrew [62] to the yoke [65].

(f) Make sure the ballscrew [62] is installed correctly in the yoke [65]:

1) Turn the transmission [64] until the nut [99] on the U-joint [84] is down.

2) Turn the ballscrew nut [78] until the upstop is 180° from the upstop [100] on the yoke [65].

3) If the ball returns [77] on the ballscrew nut [78] are not on the outboard side, change the position of the ballscrew [62]:

a) Remove the nuts [83], washers [82], washers [81] and bolts [80] that attach the ballscrew [62] to the yoke [65].

b) Turn the ballscrew [62] 180° in the yoke [65].

c) Install the bolts [80], washers [81], washers [82] and nuts [83].

(g) Tighten the nuts [83] to 100 in-lb (11.3 N·m) to 120 in-lb (13.6 N·m) more than the run-on torque.

SUBTASK 27-51-41-420-009

(4) Connect the ballscrew [62] with the gimbal [72] to the carriage [61]:

(a) Move the gimbal [72] aft on the ballscrew [62] until it is at the downstop.

(b) On transmission No. 2, make sure the ball returns [77] on the ballscrew nut [78] are outboard and the grease vent is on the lower side.

(c) On transmission No. 7, make sure the ball returns [77] on the ballscrew nut [78] are inboard and the grease vent is on the lower side.

NOTE: This is the recommended position for maintenance.

(d) Lift the outboard flap until the carriage [61] aligns with the gimbal [72].

(e) Install the carriage bushing [73] and carriage bushing [79] to attach the gimbal [72] to the carriage [61].

(f) Install the bolts [76], washers [75] and nuts [74] to hold the carriage bushing [73] and carriage bushing [79] in the carriage [61].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Tighten the nuts [74] to 65 in-lb (7.3 N·m) to 75 in-lb (8.5 N·m) more than the run on torque.

SUBTASK 27-51-41-420-010

(5) Connect the aft flap drive rod [66] to the drive rod attach fitting [96]:

(a) Put the aft flap drive rod [66] in its position in the drive rod attach fitting [96].

(b) Apply a layer of grease, D00633, to the inside of the bushing [92] and the shank of the bolt [90].

(c) Install the bushing [92], bolt [90] and washer [91] to attach the aft flap drive rod [66] to the drive rod attach fitting [96].

(d) Carefully clean the grease, D00633, from the threads of the bolt [90].

(e) Install the washer [93] and nut [94] on the bolt [90].

(f) Tighten the nut [94] to 65 in-lb (7.3 N·m) - 100 in-lb (11.3 N·m).

(g) Install the pin [95] in the nut [94].

SUBTASK 27-51-41-420-011

(6) Connect the torque tubes [68] to the transmission [64]:

(a) Apply grease, D00633, to the coupling sleeves [67].

(b) Put the splined couplings [69] in the coupling sleeves [67].

(c) Install the screws [70] to attach the torque tubes [68] to the transmission [64].

(d) Install MS20995NC32 lockwire, G50347 on the screws [70].

SUBTASK 27-51-41-640-003

(7) Lubricate the transmission [64], ballscrew [62] and gimbal [72] (TASK 12-22-51-640-804).

SUBTASK 27-51-41-640-004

(8) Apply grease, D00633, to the end of the plunger on the torque trip indicator [71] and push it down around the sides of the plunger.

NOTE: Not all transmissions have a torque trip indicator installed.

SUBTASK 27-51-41-210-004

(9) Make sure that the torque trip indicator [71] on the transmission [64] is set.

NOTE: Not all transmissions have a torque trip indicator installed.

SUBTASK 27-51-41-820-002

(10) Do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-41-410-002

(1) Do this task: Outboard Flap Inboard Support Aft Fairing Installation, TASK 27-51-28-400-805.

SUBTASK 27-51-41-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-41-860-007

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Supply system B hydraulic system B power (TASK 29-11-00-860-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-41-860-008

(4) Use the primary system to retract the flaps to the retracted position (TASK 27-51-00-860-801).

SUBTASK 27-51-41-860-009

(5) Use the primary system to extend and retract the flaps (TASK 27-51-00-860-801).

SUBTASK 27-51-41-210-005

(6) Make sure the torque trip indicator [71] on the transmission [64] is set.

NOTE: Not all transmissions have torque trip indicator.

SUBTASK 27-51-41-210-006

(7) Make sure that the flap position indicator on the center instrument panel shows the UP position.

SUBTASK 27-51-41-860-010

(8) Remove hydraulic system B power (TASK 29-11-00-860-805).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD FLAP BALLSCREWS AND GIMBALS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Outboard flap ballscrew and gimbal removal (selection)

(2) Outboard flap ballscrew and gimbal installation (selection)

(3) Removal of the outboard ballscrew and gimbal for the outboard flap

(4) Installation of the outboard ballscrew and gimbal for the outboard flap

(5) Removal of the inboard ballscrew and gimbal for the outboard flap

(6) Installation of the inboard ballscrew and gimbal for the outboard flap.

TASK 27-51-42-000-801

2. Outboard Flap Ballscrew and Gimbal Removal (Selection)

A. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
544	Left Wing - Fairing Flap Support No. 1
567	Left Wing - Outboard Flap
643	Right Wing - Fairing Flap Support No. 7
644	Right Wing - Fairing Flap Support No. 8
667	Right Wing - Outboard Flap

B. Outboard Flap Ballscrew and Gimbal Removal (Selection)

SUBTASK 27-51-42-000-001

(1) Do one of these tasks to remove the applicable outboard flap ballscrew and gimbal:

(a) Do this task: Outboard Flap Outboard Ballscrew and Gimbal Removal, TASK 27-51-42-000-802.

(b) Do this task: Outboard Flap Inboard Ballscrew and Gimbal Removal, TASK 27-51-42-000-803.

——— END OF TASK ———

TASK 27-51-42-400-801

3. Outboard Flap Ballscrew and Gimbal Installation (Selection)

A. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
544	Left Wing - Fairing Flap Support No. 1
567	Left Wing - Outboard Flap
643	Right Wing - Fairing Flap Support No. 7
644	Right Wing - Fairing Flap Support No. 8
667	Right Wing - Outboard Flap

B. Outboard Flap Ballscrew and Gimbal Installation (Selection)

SUBTASK 27-51-42-400-001

(1) Do one of these tasks to install the applicable outboard flap ballscrew and gimbal:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Do this task: Outboard Flap Outboard Ballscrew and Gimbal Installation, TASK 27-51-42-400-802.

(b) Do this task: Outboard Flap Inboard Ballscrew and Gimbal Installation, TASK 27-51-42-400-803.

——— END OF TASK ———

TASK 27-51-42-000-802

4. Outboard Flap Outboard Ballscrew and Gimbal Removal

(Figure 401)

A. General

(1) This task is applicable to the ballscrew and gimbal at flap supports No. 1 and 8.

B. References

Reference	Title

C. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
567	Left Wing - Outboard Flap
644	Right Wing - Fairing Flap Support No. 8
667	Right Wing - Outboard Flap

D. Prepare for the Removal

SUBTASK 27-51-42-010-001

(1) Do this task: Outboard Flap Outboard Support Aft Fairing Removal, TASK 27-51-28-000-803.

E. Outboard Flap Outboard Ballscrew and Gimbal Removal

SUBTASK 27-51-42-980-001

(1) Manually extend the trailing edge flaps to the downstop on the ballscrew (TASK 27-51-00-980-801).

SUBTASK 27-51-42-020-001

CAUTION MAKE SURE THAT YOU HOLD THE BALLSCREW WHILE YOU DISCONNECT IT. IF THE U-JOINT IS ALLOWED TO SUPPORT THE WEIGHT OF THE BALLSCREW, THIS WILL CAUSE DAMAGE TO THE U-JOINT.

(2) Disconnect the ballscrew [2] with the gimbal [14] from the carriage [1]:

NOTE: When you disconnect the ballscrew [2] from the carriage [1], the outboard flap can move a small distance to the downstop on the flap track.

(a) Remove the nut [8], washer [7] and bolt [6] from the carriage [1].

(b) Remove the inboard carriage bushing [9] and outboard carriage bushing [15] from the gimbal [14] and the carriage [1].

(c) Move the ballscrew [2] and gimbal [14] away from the carriage [1].

SUBTASK 27-51-42-020-002

(3) Disconnect the ballscrew [2] from the yoke [4] on the transmission [3]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the nuts [19], washers [18], washers [17] and bolts [16] that attach the ballscrew [2] to the yoke [4].

(b) Remove the ballscrew [2] from the yoke [4].

NOTE: You can turn the ballscrew [2] and the gimbal [14] to get access to remove the ballscrew [2].

(c) Remove the ballscrew [2] with the gimbal [14].

SUBTASK 27-51-42-020-003

(4) If it is necessary, remove the gimbal [14] from the ballscrew nut [13]:

(a) Remove the bolts [12], washers [11] and collars [10] that attach the gimbal bushings [5] to the gimbal [14].

(b) Remove the gimbal [14] from the ballscrew nut [13].

F. Outboard Flap Outboard Ballscrew and Gimbal Installation

SUBTASK 27-51-42-420-001

(1) If you removed it, install the gimbal [14] on the ballscrew nut [13]:

(a) Apply grease, D00633 to the inside and outside mating surfaces of the gimbal bushings [5].

(b) Apply grease, D00633 to the outside surfaces of the gimbal bushings [5].

(c) Put the gimbal [14] in its location on the ballscrew nut [13].

(d) Install the gimbal bushings [5] through the gimbal [14] on the ballscrew nut [13].

(e) Install the bolts [12], washers [11] and collars [10] to attach the gimbal bushings [5] to the gimbal [14].

SUBTASK 27-51-42-420-002

(2) Connect the ballscrew [2] to the yoke [4] on the transmission [3]:

(a) Turn the ballscrew nut [13] until it is at the forward end of the ballscrew [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Apply a layer of grease, D00633 to the mating surfaces of the yoke [4] and the ballscrew [2].

(c) Put the ballscrew [2] into the yoke [4].

(d) Apply a layer of grease, D00633 to the shank and threads of the bolts [16].

(e) Install the bolts [16], washers [17], washers [18] and nuts [19] to attach the ballscrew [2] to the yoke [4].

(f) Make sure the ballscrew [2] is installed correctly in the yoke [4]:

1) Turn the transmission [3] until the nut [21] on the U-joint [20] is down.

2) Turn the ballscrew nut [13] until the upstop is 180° from the upstop [22] on the yoke [4].

3) If the ball returns on the ballscrew nut [13] are not on the outboard side, change the position of the ballscrew [2]:

a) Remove the nuts [19], washers [18], washers [17] and bolts [16] that attach the ballscrew [2] to the yoke [4].

b) Turn the ballscrew [2] 180° in the yoke [4].

c) Install the bolts [16], washers [17], washers [18] and nuts [19].

(g) Tighten the nuts [19].

SUBTASK 27-51-42-420-003

(3) Connect the ballscrew [2] with the gimbal [14] to the carriage [1]:

(a) Move the gimbal [14] aft on the ballscrew [2] until it is at the downstop.

(b) On transmission No. 1, make sure the ball returns on the ballscrew nut [13] are on the outboard side.

(c) On transmission No. 8, make sure the ball returns on the ballscrew nut [13] are on the inboard side.

(d) Apply grease, D00633 to the outside surfaces of the carriage bushing [9] and carriage bushing [15]

(e) Lift the outboard flap until the carriage [1] aligns with the gimbal [14].

(f) Install the carriage bushing [9] and carriage bushing [15] to attach the gimbal [14] to the carriage [1].

(g) Install the bolts [6], washers [7] and nuts [8] to hold the carriage bushing [9] and carriage bushing [15] in the carriage [1].

(h) Tighten the nuts [8] to 65 in-lb (7.3 N·m) to 75 in-lb (8.5 N·m) more than the run on torque.

SUBTASK 27-51-42-640-001

(4) Lubricate the transmission [3], ballscrew [2] and gimbal [14]. To lubricate them, do this task: Outboard Flap Outboard Ballscrew and Gimbal Lubrication, TASK 12-22-51-640-805.

SUBTASK 27-51-42-820-001

(5) Do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-42-410-001

(1) Do this task: Outboard Flap Outboard Support Aft Fairing Installation, TASK 27-51-28-400-803.

SUBTASK 27-51-42-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-42-860-002

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-42-860-003

(4) Use the primary system to retract the flaps to the retracted position. To retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-42-860-004

(5) Use the primary system to extend and retract the flaps. To extend and retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-42-860-005

(6) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

TASK 27-51-42-000-803

6. Outboard Flap Inboard Ballscrew and Gimbal Removal

(Figure 402)

A. General

(1) This task is applicable to the ballscrew and gimbal at flap supports No. 2 and 7.

B. References

Reference	Title

D. Prepare for the Removal

SUBTASK 27-51-42-010-002

(1) Do this task: Outboard Flap Inboard Support Aft Fairing Removal, TASK 27-51-28-000-805.

E. Outboard Flap Inboard Ballscrew and Gimbal Removal

SUBTASK 27-51-42-980-002

(1) Manually extend the trailing edge flaps to the downstop on the ballscrew (TASK 27-51-00-980-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-42-020-004

CAUTION: MAKE SURE THAT YOU HOLD THE BALLSCREW WHILE YOU DISCONNECT IT. IF THE U-JOINT IS ALLOWED TO SUPPORT THE WEIGHT OF THE BALLSCREW, THIS WILL CAUSE DAMAGE TO THE U-JOINT.

(2) Disconnect the ballscrew [42] with the gimbal [54] from the carriage [41]:

NOTE: When you disconnect the ballscrew [42] from the carriage [41], the outboard flap can move a small distance to the downstop on the flap track.

(a) Remove the nut [48], washer [47] and bolt [46] from the carriage [41].

(b) Remove the inboard carriage bushing [49] and outboard carriage bushing [55] from the gimbal [54] and the carriage [41].

(c) Move the ballscrew [42] and gimbal [54] away from the carriage [41].

SUBTASK 27-51-42-020-005

(3) Disconnect the ballscrew [42] from the yoke [44] on the transmission [43]:

(a) Remove the nuts [59], washers [58], washers [57] and bolts [56] that attach the ballscrew [42] to the yoke [44].

(b) Remove the ballscrew [42] from the yoke [44].

NOTE: You can turn the ballscrew [42] and the gimbal [54] to get access to remove the ballscrew [42].

(c) Remove the ballscrew [42] with the gimbal [54].

SUBTASK 27-51-42-020-006

(4) If it is necessary, remove the gimbal [54] from the ballscrew nut [53]:

(a) Remove the bolts [52], washers [51] and collars [50] that attach the gimbal bushings [45] to the gimbal [54].

(b) Remove the gimbal bushings [45] from the ballscrew nut [53].

END OF TASK

SUBTASK 27-51-42-420-004

(1) If you removed it, install the gimbal [54] on the ballscrew nut [53]:

(a)

Apply grease, D00633 to the inside and outside mating surfaces of the gimbal bushings [45].

(b) Apply grease, D00633 to the outside surfaces of the gimbal bushing [45].

(c) Put the gimbal [54] in its location on the ballscrew nut [53].

(d) Install the gimbal bushings [45] through the gimbal [54] on the ballscrew nut [53].

(e) Install the bolts [52], washers [51] and collars [50] to attach the gimbal bushings [45] to the gimbal [54].

SUBTASK 27-51-42-420-005

(2) Connect the ballscrew [42] to the yoke [44] on the transmission [43]:

(a) Turn the ballscrew nut [53] until it is at the forward end of the ballscrew [42].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Apply a layer of grease, D00633 to the mating surfaces of the yoke [44] and the ballscrew [42].

(c) Put the ballscrew [42] into the yoke [44].

(d) Apply a layer of grease, D00633 to the shank and threads of the bolts [56].

(e) Install the bolts [56], washers [57], washers [58] and nuts [59] to attach the ballscrew [42] to the yoke [44].

(f) Make sure the ballscrew [42] is installed correctly in the yoke [44]:

1) Turn the transmission [43] until the nut [61] on the U-joint [60] is down.

2) Turn the ballscrew nut [53] until the upstop is 180° from the upstop [62] on the yoke [44].

3) If the ball returns on the ballscrew nut [53] are not on the outboard side, change the position of the ballscrew [42]:

NOTE: On transmission No. 2, the ball returns [63] on the ballscrew nut [53] should be on the outboard side. On transmission No. 7, the ball returns [63] on the ballscrew nut [53] should be on the inboard side.

a) Remove the nuts [59], washers [58], washers [57] and bolts [56] that attach the ballscrew [42] to the yoke [44].

b) Turn the ballscrew [42] 180° in the yoke [44].

c) Install the bolts [56], washers [57], washers [58] and nuts [59].

(g) Tighten the nuts [59].

SUBTASK 27-51-42-420-006

(3) Connect the ballscrew [42] with the gimbal [54] to the carriage [41]:

(a) Move the gimbal [54] aft on the ballscrew [42] until it is at the downstop.

NOTE: On transmission No. 2, the ball returns [63] on the ballscrew nut [53] should be on the outboard side. On transmission No. 7, the ball returns [63] on the ballscrew nut [53] should be on the inboard side.

(b) Apply grease, D00633 to the outside surfaces of the carriage bushing [49] and carriage bushing [55].

(c) Lift the outboard flap until the carriage [41] aligns with the gimbal [54].

(d) Install the carriage bushing [49] and carriage bushing [55] to attach the gimbal [54] to the carriage [41].

(e) Install the bolts [46], washers [47] and nuts [48] to hold the carriage bushing [49] and carriage bushing [55] in the carriage [41].

(f) Tighten the nuts [48] to 65 in-lb (7.3 N·m) to 75 in-lb (8.5 N·m) more than the run on torque.

SUBTASK 27-51-42-640-002

(4) Lubricate the transmission [43], ballscrew [42] and gimbal [54]. To lubricate them, do this task: Outboard Flap Inboard Ballscrew and Gimbal Lubrication, TASK 12-22-51-640-804.

SUBTASK 27-51-42-820-002

(5) Do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-42-410-002

(1) Do this task: Outboard Flap Inboard Support Aft Fairing Installation, TASK 27-51-28-400-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-42-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-42-860-007

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-42-860-008

(4) Use the primary system to retract the flaps to the retracted position. To retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-42-860-009

(5) Use the primary system to extend and retract the flaps. To extend and retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-42-860-010

(6) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD FLAP BALLSCREWS AND GIMBALS - INSPECTION/CHECK

1. General

A. This procedure has these tasks:

(1) A check of the backlash in the outboard ballscrew on the outboard flap

(2) A check of the backlash in the inboard ballscrew on the outboard flap

(3) An outboard flap inboard ballscrew detailed lubrication inspection

(4) An outboard flap outboard ballscrew detailed lubrication inspection

TASK 27-51-42-220-801

2. Outboard Flap Outboard Ballscrew Inspection

(Figure 601)

A. General

(1) This task is applicable to the ballscrew and ballscrew nut at flap supports No. 1 and 8.

(2) There are two methods that you can use to apply a load to the ballscrew nut to measure the movement on the ballscrew. This procedure gives instructions for each method.

(a) You can push up on the trailing edge of the flap to apply the load.

(b) You can use the lever and clamp tool to apply the load to the ballscrew nut.

(3) It is not necessary to use the two methods to apply the load.

E. Prepare for the Inspection

SUBTASK 27-51-42-860-011

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-42-040-003

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Outboard Flap Outboard Ballscrew Backlash Check Without the Lever and Clamp Tool

NOTE: With this method, you manually push on the trailing edge of the flap to apply the load to the ballscrew nut.

SUBTASK 27-51-42-480-001

(1) Install the dial indicator assembly on the ballscrew:

NOTE: The dial indicator assembly is a part of the tester, SPL-1753.

(a) Put the dial indicator assembly on the ballscrew.

1) Make sure the pointer touches the forward end of the ballscrew nut.

(b) Put the strap around the ballscrew to help hold the dial indicator assembly on the ballscrew.

(c) Adjust the dial indicator to zero.

SUBTASK 27-51-42-220-001

(2) Measure the backlash of the ballscrew and ballscrew nut:

(a) Push up on the outboard trailing edge of the outboard flap.

NOTE: This will apply a load to the ballscrew nut, and move it forward on the ballscrew.

(b) Use the dial indicator to measure the movement of the ballscrew nut.

NOTE: The movement of the ballscrew nut is the backlash.

(c) Do these steps a total of five times to make sure the movement of the dial indicator is repeatable.

SUBTASK 27-51-42-960-001

(3) If the backlash is more than 0.007 in. (0.178 mm), then replace the ballscrew assembly.

These are the tasks:

Outboard Flap Outboard Ballscrew and Gimbal Removal, TASK 27-51-42-000-802,

Outboard Flap Outboard Ballscrew and Gimbal Installation, TASK 27-51-42-400-802.

SUBTASK 27-51-42-080-001

(4) Remove the dial indicator assembly from the ballscrew.

SUBTASK 27-51-42-440-003

(5) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-42-860-012

(6) Retract the trailing edge flaps to the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Outboard Flap Outboard Ballscrew Backlash Check With the Lever and Clamp Tool

NOTE: With this method, you use the lever and clamp tool to apply the load to the ballscrew nut.

SUBTASK 27-51-42-010-003

(1) Do this task: Outboard Flap Outboard Support Aft Fairing Removal, TASK 27-51-28-000-803.

SUBTASK 27-51-42-440-004

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-42-860-013

(3) Retract the trailing edge flaps to the 15-unit position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-42-040-004

(4) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-42-480-002

(5) Install the lever and clamp tool on the ballscrew:

NOTE: The lever and clamp tool is a part of the tester, SPL-1753.

(a) Put the lever and clamp tool in its position on the ballscrew aft of the ballscrew nut.

NOTE: Make sure the load surfaces of the lever and clamp tool touch the aft side of the ballscrew nut.

(b) Tighten the clamp-up bolt to 200 in-lb (22.6 N·m) to 300 in-lb (33.9 N·m).

NOTE: Make sure the handles of the lever and clamp tool are in the relaxed position.

SUBTASK 27-51-42-480-003

(6) Install the dial indicator assembly on the ballscrew:

NOTE: The dial indicator assembly is a part of the tester, SPL-1753.

(a) Put the dial indicator assembly on the ballscrew.

NOTE: Make sure the pointer touches the forward end of the ballscrew nut.

(b) Put the strap around the ballscrew to help hold the dial indicator assembly on the ballscrew.

(c) Adjust the dial indicator to zero.

SUBTASK 27-51-42-220-002

(7) Measure the backlash of the ballscrew and ballscrew nut:

(a) Move the handles of the lever and clamp tool together until the dial indicator stops.

NOTE: This will apply a load to the ballscrew nut, and move it forward on the ballscrew.

(b) Use the dial indicator to measure the movement of the ballscrew nut.

NOTE: The movement of the ballscrew nut is the backlash.

(c) Do these steps a total of five times to make sure the movement of the dial indicator is repeatable.

SUBTASK 27-51-42-960-002

(8) If the backlash is more than 0.007 in. (0.178 mm), then replace the ballscrew assembly.

These are the tasks:

Outboard Flap Outboard Ballscrew and Gimbal Removal, TASK 27-51-42-000-802,

Outboard Flap Outboard Ballscrew and Gimbal Installation, TASK 27-51-42-400-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-42-080-002

(9) Remove the dial indicator assembly and the lever and clamp tool from the ballscrew.

SUBTASK 27-51-42-410-003

(10) Do this task: Outboard Flap Outboard Support Aft Fairing Installation, TASK 27-51-28-400-803.

SUBTASK 27-51-42-440-005

(11) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-42-860-014

(12) Retract the trailing edge flaps to the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

TASK 27-51-42-220-802

3. Outboard Flap Inboard Ballscrew Inspection

(Figure 601)

A. General

(1) This task is applicable to the ballscrew and ballscrew nut at flap supports No. 2 and 7.

(2) There are two methods that you can use to apply a load to the ballscrew nut to measure the movement on the ballscrew. This procedure gives instructions for each method.

(a) You can push up on the trailing edge of the flap to apply the load.

(b) You can use the lever and clamp tool to apply the load to the ballscrew nut.

(3) It is not necessary to use the two methods to apply the load.

E. Prepare for the Inspection

SUBTASK 27-51-42-860-015

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-42-040-005

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Outboard Flap Inboard Ballscrew Backlash Check Without the Lever and Clamp Tool

NOTE: With this method, you manually push on the trailing edge of the flap to apply the load to the ballscrew nut.

SUBTASK 27-51-42-480-004

(1) Install the dial indicator assembly on the ballscrew:

NOTE: The dial indicator assembly is a part of the tester, SPL-1753.

(a) Put the dial indicator assembly on the ballscrew.

1) Make sure the pointer touches the forward end of the ballscrew nut.

(b) Put the strap around the ballscrew to help hold the dial indicator assembly on the ballscrew.

(c) Adjust the dial indicator to zero.

SUBTASK 27-51-42-220-003

(2) Measure the backlash of the ballscrew and ballscrew nut:

(a) Push up on the inboard trailing edge end of the outboard flap.

NOTE: This will apply a load to the ballscrew nut, and move it forward on the ballscrew.

(b) Use the dial indicator to measure the movement of the ballscrew nut.

NOTE: The movement of the ballscrew nut is the backlash.

(c) Do these steps a total of five times to make sure the movement of the dial indicator is repeatable.

SUBTASK 27-51-42-960-003

(3) If the backlash is more than 0.007 in. (0.178 mm), then replace the ballscrew assembly.

These are the tasks:

Outboard Flap Inboard Ballscrew and Gimbal Removal, TASK 27-51-42-000-803,

Outboard Flap Inboard Ballscrew and Gimbal Installation, TASK 27-51-42-400-803.

SUBTASK 27-51-42-080-003

(4) Remove the dial indicator assembly from the ballscrew.

SUBTASK 27-51-42-440-006

(5) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-42-860-016

(6) Retract the trailing edge flaps to the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

G. Outboard Flap Inboard Ballscrew Backlash Check With the Lever and Clamp Tool

NOTE: With this method, you use the lever and clamp tool to apply the load to the ballscrew nut.

SUBTASK 27-51-42-010-004

(1) Do this task: Outboard Flap Inboard Support Aft Fairing Removal, TASK 27-51-28-000-805.

SUBTASK 27-51-42-860-017

(2) Retract the trailing edge flaps to the 15-unit position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-42-040-006

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-42-480-005

(4) Install the lever and clamp tool on the ballscrew:

NOTE: The lever and clamp tool is a part of the tester, SPL-1753.

(a) Put the lever and clamp tool in its position on the ballscrew aft of the ballscrew nut.

NOTE: Make sure the load surfaces of the lever and clamp tool touch the aft side of the ballscrew nut.

(b) Tighten the clamp-up bolt to 200 in-lb (22.6 N·m) to .

NOTE: Make sure the handles of the lever and clamp tool are in the relaxed position.

SUBTASK 27-51-42-480-006

(5) Install the dial indicator assembly on the ballscrew:

NOTE: The dial indicator assembly is a part of the tester, SPL-1753.

(a) Put the dial indicator assembly on the ballscrew.

NOTE: Make sure the pointer touches the forward end of the ballscrew nut.

(b) Put the strap around the ballscrew to help hold the dial indicator assembly on the ballscrew.

(c) Adjust the dial indicator to zero.

SUBTASK 27-51-42-220-004

(6) Measure the backlash of the ballscrew and ballscrew nut:

(a) Move the handles of the lever and clamp tool together until the dial indicator stops.

NOTE: This will apply a load to the ballscrew nut, and move it forward on the ballscrew.

(b) Use the dial indicator to measure the movement of the ballscrew nut.

NOTE: The movement of the ballscrew nut is the backlash.

(c) Do these steps a total of five times to make sure the movement of the dial indicator is repeatable.

SUBTASK 27-51-42-960-004

(7) If the backlash is more than 0.007 in. (0.178 mm), then replace the ballscrew assembly.

These are the tasks:

Outboard Flap Inboard Ballscrew and Gimbal Removal, TASK 27-51-42-000-803,

Outboard Flap Inboard Ballscrew and Gimbal Installation, TASK 27-51-42-400-803.

SUBTASK 27-51-42-080-004

(8) Remove the dial indicator assembly and the lever and clamp tool from the ballscrew.

SUBTASK 27-51-42-410-004

(9) Do this task: Outboard Flap Inboard Support Aft Fairing Installation, TASK 27-51-28-400-805.

SUBTASK 27-51-42-440-007

(10) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-42-860-018

(11) Retract the trailing edge flaps to the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-51-42-200-801

4. Outboard Flap Inboard Ballscrew Detailed Lubrication Inspection

(Figure 602)

NOTE: This procedure is a scheduled maintenance task.

567	Left Wing - Outboard Flap
643	Right Wing - Fairing Flap Support No. 7
667	Right Wing - Outboard Flap

D. Prepare for the Lubrication Inspection

SUBTASK 27-51-42-860-019

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-42-040-007

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

E. Outboard Flap Inboard Ballscrew Lubrication Inspection

(Table 601)

SUBTASK 27-51-42-640-003

(1) This table supplies data for the subsequent lubrication and inspection steps:

Table 601/27-51-42-993-801 Outboard Flap Inboard Ballscrew Servicing

Item No.	Nomenclature	Lubricant	Method of Application	Number of Locations
-	No. 2 Ballscrew Nut (No. 7 Ballscrew Nut is Equivalent)	grease, D00633	Zerk	1

SUBTASK 27-51-42-640-004

(2) Do these steps for the ballscrew nut lubrication and inspection:

(a) Remove the old grease and dirt on and around the ballscrew nut and grease vent with a lint-free cloth, G01043 or equivalent.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

DO NOT USE GREASE GUN PRESSURE IN EXCESS OF 36 PSI (2.5 BAR). EXCESSIVE GREASE GUN NOZZLE PRESSURE AND FLOW RATE CAN DAMAGE THE SEALS.

(b) Lubricate the ballscrew nut with grease, D00633.

NOTE: The ballscrew nut has two grease fittings. It is only necessary to lubricate one of them.

1) Make sure that clean grease comes out from the grease vent.

NOTE: Clean grease must come out through the grease vent. This will make sure that the used grease has been flushed out.

a) If the clean grease does not comes out from the vent, then replace the ballscrew assembly on or before the next interval inspection (OUTBOARD FLAP BALLSCREWS AND GIMBALS - REMOVAL/INSTALLATION, PAGEBLOCK 27-51-42/401).

2) Make sure that grease does not freely come out through the ballscrew nut seal.

NOTE: It is acceptable for a small quantity of grease to come out through the ballscrew nut seal.

a) If the grease freely comes through the ballscrew nut seal, then replace the ballscrew assembly on or before the next interval inspection (OUTBOARD FLAP BALLSCREWS AND GIMBALS - REMOVAL/INSTALLATION, PAGEBLOCK 27-51-42/401)

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-42-440-008

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-42-860-020

(2) Retract the trailing edge flaps to the UP position. To retract them, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

27-51-00-860-803	Extend the Trailing Edge Flaps (P/B 201)
27-51-00-860-804	Retract the Trailing Edge Flaps (P/B 201)
27-51-42 P/B 401	OUTBOARD FLAP BALLSCREWS AND GIMBALS - REMOVAL/INSTALLATION

B. Consumable Materials

Reference	Description	Specification
D00633	Grease - Aircraft General Purpose	BMS3-33
G01043	Cloth - Lint-free	

C. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
567	Left Wing - Outboard Flap
644	Right Wing - Fairing Flap Support No. 8
667	Right Wing - Outboard Flap

D. Prepare for the Lubrication Inspection

SUBTASK 27-51-42-860-021

(1) Extend the trailing edge flaps to the 40-unit position, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-42-040-008

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

E. Outboard Flap Outboard Ballscrew and Gimbal Lubrication

(Table 602)

SUBTASK 27-51-42-640-005

(1) This table supplies data for the subsequent lubrication and inspection steps:

Table 602/27-51-42-993-802 Outboard Flap Outboard Ballscrew and Gimbal Servicing

Item No.	Nomenclature	Lubricant	Method of Application	Number of Locations
-	No. 1 Ballscrew Nut (No. 8 Ballscrew Nut is Equivalent)	grease, D00633	Zerk	1

SUBTASK 27-51-42-640-006

(2) Do these steps for the ballscrew nut lubrication and inspection:

(a) Remove the old grease and dirt on and around the ballscrew nut and grease vent with a lint-free cloth, G01043 or equivalent.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

DO NOT USE GREASE GUN PRESSURE IN EXCESS OF 36 PSI (2.5 BAR). EXCESSIVE GREASE GUN NOZZLE PRESSURE AND FLOW RATE CAN DAMAGE THE SEALS.

(b) Lubricate the ballscrew nut with grease, D00633.

NOTE: The ballscrew nut has two grease fittings. It is only necessary to lubricate one of them.

1) Make sure that clean grease comes out from the grease vent.

NOTE: Clean grease must come out through the grease vent. This will make sure that the used grease has been flushed out.

a) If the clean grease does not comes out from the vent, then replace the ballscrew assembly on or before the next interval inspection (OUTBOARD FLAP BALLSCREWS AND GIMBALS - REMOVAL/INSTALLATION, PAGEBLOCK 27-51-42/401).

2) Make sure that grease does not freely come out through the ballscrew nut seal.

NOTE: It is acceptable for a small quantity of grease to come out through the ballscrew nut seal.

a) If the grease freely comes through the ballscrew nut seal, then replace the ballscrew assembly on or before the next interval inspection (OUTBOARD FLAP BALLSCREWS AND GIMBALS - REMOVAL/INSTALLATION, PAGEBLOCK 27-51-42/401)

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-42-440-009

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-42-860-022

(2) Retract the trailing edge flaps to the UP position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

FLAP POWER DRIVE UNIT (PDU) - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the flap Power Drive Unit (PDU)

(2) An installation of the flap PDU

(3) A replacement of the flap PDU manual drive shearout

(4) A removal of the flap PDU seal

(5) An installation of the flap PDU seal.

TASK 27-51-51-000-801

2. Flap Power Drive Unit (PDU) Removal

(Figure 401)

A. General

(1) You can remove and install the flap power drive unit (PDU) with the hydraulic and electric motors either removed or installed. This task gives the instructions to remove the PDU with the hydraulic and electric motors installed.

B. References

Reference	Title

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

E. Prepare for the Removal

SUBTASK 27-51-51-860-001

(1) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-51-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-51-040-001

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-51-860-002

(4) Remove the pressure from the system B hydraulic reservoir (TASK 29-09-00-860-802).

F. Flap Power Drive Unit Removal

SUBTASK 27-51-51-860-003

(1) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

SUBTASK 27-51-51-020-001

(2) Disconnect the electrical connector [18] from the electric motor [19].

SUBTASK 27-51-51-020-002

(3) Disconnect the hydraulic line [1], hydraulic lines [69], and case drain line [20] from the hydraulic motor [22].

(a) Disconnect the hydraulic lines [1] and hydraulic lines [69].

(b) Install a caps/plugs, STD-14686, on hydraulic lines [1] and hydraulic lines [69].

(c) Disconnect the case drain line [20].

(d) Install a cap/plug, STD-14686, on the case drain line [20].

(e) Install a caps/plugs, STD-14686, in the ports on the hydraulic motor [22].

SUBTASK 27-51-51-020-003

(4) Remove the nut [17], washer [16], and screw [15] that attach the jumper wire [13] to the electrical connector [18].

SUBTASK 27-51-51-010-001

(5) Remove the lower pan [25] from the flap control unit [23].

(a) Remove the screws [24] that attach the lower pan [25] to the flap control unit [23].

(b) Remove the lower pan [25].

SUBTASK 27-51-51-480-002

(6) Install the flap actuator rig pin, from the rigging pin kit, SPL-1585, through the cam follower arm [27] and valve cam [26].

(a) Use a rig pin, F70207-116, SPL-12421.

SUBTASK 27-51-51-480-003

(7) Install the clamp set, SPL-1726, on the torque tubes [12] on both sides of the flap power drive unit [21].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-51-020-004

(8) Disconnect the torque tubes [12] from the flap power drive unit [21].

(a) Remove the lockwire from the screws [35].

(b) Remove the screws [35] that attach the coupling sleeves [36] to the splined couplings [37] on the torque tubes [12].

(c) Move the coupling sleeves [36] off the splined couplings [37].

SUBTASK 27-51-51-020-005

(9) Disconnect the cables [6] from the cables [2] on the flap control unit [23].

NOTE: The lower cables are WFFA and upper cables are WFFB.

(a) Install a label on the cables [2] to identify them.

(b) Remove the locking clips [3] from the turnbuckles [4].

(c) Disconnect the turnbuckles [4].

SUBTASK 27-51-51-020-006

(10) Remove the flap power drive unit [21].

(a) Remove the nuts [10], washers [9], washers [8], bolts [14], and bolt [7] that attach the flap power drive unit [21] to the structure.

(b) Remove the flap power drive unit [21].

SUBTASK 27-51-51-020-007

(11) If it is necessary, remove the cables [6] from the flap power drive unit [21].

(a) Remove and discard the cotter pins [33] that attach the cable [6] to the cable drum [34].

(b) Manually turn the output shaft one or more revolutions in the each direction.

(c) Remove the cables [6] from the cable drum [34].

END OF TASK

G. Flap Power Drive Unit Installation

SUBTASK 27-51-51-860-005

(1) Make sure that the flaps are in the retracted position.

SUBTASK 27-51-51-420-001

(2) If the cables [6] are not installed, install the cables [6] on the flap power drive unit [21], do these steps:

(a) Put the cables [6] in their position on the cable drum [34].

(b) Manually turn the output shaft of one or more revolutions in the each direction.

(c) Install the new cotter pins [33] to attach the cable [6] to the cable drum [34].

SUBTASK 27-51-51-820-001

(3) Make sure that the cables [6] and cable drum [34] are in the correct position, do these steps:

(a) Turn the flap power drive unit [21] until the black rig marks on the cable drum [34] align with the white cable guard [11] on the flap power drive unit [21].

(b) Make sure that the lower cable [6] wraps around the cable drum [34] 2 to 2 1/2 turns.

NOTE: This is cable WFFA.

(c) Make sure that the upper cable [6] wraps around the cable drum [34] 0 to 1/2 turns.

NOTE: This is cable WFFB.

SUBTASK 27-51-51-420-002

(4) Install the flap power drive unit [21], do these steps:

(a) Put the flap power drive unit [21] in its position on the structure.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237 (recommended), to the shank and threads of the bolt [7] and bolts [14].

(c) Install the bolt [7], bolts [14], washers [8], washers [9], and nuts [10] to attach the flap power drive unit [21].

SUBTASK 27-51-51-420-003

(5) Connect the cables [6] to the cables [2] for the flap control unit [23], do these steps:

(a) Connect the cables [2] and cables [6] at the turnbuckles [4].

(b) Remove the labels from the cables [2].

(c) Tighten the cables [2] to 125 ±10 lbf (556 ±45 N).

NOTE: This is an initial cable tension. The cables will be adjusted to their final tension during the trailing edge flap control system adjustment.

1) Use the low tension cable tensiometer, COM-1553, to measure the tension of the cables [2].

(d) Install the locking clips [3] on the turnbuckles [4].

SUBTASK 27-51-51-420-004

(6) Connect the torque tubes [12] to the flap power drive unit [21], do these steps:

NOTE: Do not turn the torque tubes more than 5 spline teeth, in either direction, to the nearest position where the bolt holes align at the torque tube coupling connection. Do not turn the PDU at this step.

(a) Apply grease, D00633, to the coupling sleeve [36].

(b) Put the splined couplings [37] in the coupling sleeves [36].

(c) Install the screws [35] to attach the coupling sleeves [36] to the splined couplings [37].

(d) Install MS20995C32 lockwire, G01048, on the screws [35].

SUBTASK 27-51-51-420-005

(7) Connect the jumper wire [13] for the electric motor [19], do these steps:

(a) Install the screw [15], washers [16], and nut [17] that attach the jumper wire [13].

(b) Measure the electrical bonding resistance between the jumper wire [13] and electric motor [19] (SWPM 20-20-00).

NOTE: When you measure the resistance, the probe can be closer than 0.25 in. (6.4 mm) to the jumper terminal.

1) Use an intrinsically safe approved bonding meter, COM-1550.

2) Make sure that the resistance is less than 0.0004 ohm (0.4 milliohm).

(c) Put a fillet seal of sealant, A02315, or sealant, A00247, around the two ends of the screw [15].

SUBTASK 27-51-51-080-001

(8) Remove the clamp set, SPL-1726, from the torque tubes [12].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-51-420-006

(9) Connect the hydraulic line [1], hydraulic lines [69], and case drain line [20] to the hydraulic motor [22], do these steps:

(a) Remove the caps/plugs, STD-14686, from the ports on the hydraulic motor [22].

(b) Remove the caps/plugs, STD-14686, from the hydraulic line [1] and hydraulic lines [69].

(c) Connect the hydraulic line [1] and hydraulic lines [69] to the hydraulic motor [22].

(d) Remove the cap from the case drain line [20].

(e) Connect the case drain line [20] to the flap power drive unit [21].

(f) Tighten the B-nut on hydraulic line [1] to 270 ±14 in-lb (31 ±2 N·m).

(g) Tighten the B-nuts on hydraulic lines [69] to 500 ±25 in-lb (56 ±3 N·m).

SUBTASK 27-51-51-420-007

(10) Connect the electrical connector [18] to the electric motor [19].

SUBTASK 27-51-51-610-002

(11) Do this task: Trailing Edge Flap Power Drive Unit Servicing, TASK 12-22-51-610-801.

SUBTASK 27-51-51-820-002

(12) Do this task: Trailing Edge Flap Control System Adjustment and Test, TASK 27-51-00-820-801.

NOTE: This adjustment will include the final adjustment of the cables WFFA and WFFB.

SUBTASK 27-51-51-080-002

(13) Remove the rig pin, F70207-116, SPL-12421, from the flap control unit [23].

SUBTASK 27-51-51-820-003

(14) Do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

SUBTASK 27-51-51-640-001

(15) Lubricate the torque tube couplings (TASK 12-22-51-640-801).

SUBTASK 27-51-51-410-001

(16) Install the lower pan [25] on the flap control unit [23], do these steps:

(a) Put the lower pan [25] in its location on the flap control unit [23].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply a layer of Cor-Ban 27L Compound, G50237, to the shank and threads of the screws [24].

(c) Install the screws [24] to attach the lower pan [25].

SUBTASK 27-51-51-860-006

(17) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-51-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-51-720-001

(2) Do this task: Flap Power Drive Unit Functional Test, TASK 27-51-51-720-801.

——— END OF TASK ———

TASK 27-51-51-960-801

4. Flap Power Drive Unit Manual Drive Shearout Replacement

(Figure 401)

A. General

(1) The manual drive input on the flap power drive unit has a shearout feature. The shearout is designed to break if too much torque is applied to the manual drive.

B. References

Reference	Title

134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

G. Prepare for the Removal

SUBTASK 27-51-51-040-002

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-51-860-007

(2) Remove system B hydraulic power (TASK 29-11-00-860-805).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Flap Power Drive Unit Manual Drive Shearout Replacement

SUBTASK 27-51-51-010-002

(1) Remove the manual drive cover [5] from the flap power drive unit [21]:

(a) Remove the bolts [29] and washers [28] that attach the manual drive cover [5].

(b) Remove the manual drive cover [5] from the flap power drive unit [21].

SUBTASK 27-51-51-020-008

(2) Remove the shearout [31] from the flap power drive unit [21]:

(a) Install a screw, STD-1281, in the threaded part of the shearout [31].

(b) Pull on the screw, STD-1281, to remove the shearout [31] with the retainer [32] from the flap power drive unit [21].

NOTE: It will take approximately 30 lbf (133 N) to remove the shearout [31].

SUBTASK 27-51-51-420-008

(3) Install a new shearout [31] in the flap power drive unit [21]:

(a) Put a new retainer [32] on the shearout [31].

(b) Apply grease, D00633, to the splines on the shearout [31].

(c) Use a 3/8-inch square drive to push the shearout [31] in the flap power drive unit [21] until you feel the retainer [32] engage.

SUBTASK 27-51-51-710-001

(4) Use the manual drive to extend and retract the trailing edge flaps (TASK 27-51-00-980-801).

SUBTASK 27-51-51-410-002

(5) Install the manual drive cover [5] on the flap power drive unit [21]:

(a) Apply fluid, D00467, to the new packing [30] on the manual drive cover [5].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237, to the mating surface of the manual drive cover [5] and the flap power drive unit [21].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(c) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [29].

(d) Put the manual drive cover [5] and the new packing [30] on the flap power drive unit [21].

(e) Install the bolts [29] and washers [28] to attach the manual drive cover [5].

SUBTASK 27-51-51-440-002

(6) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-51-51-000-802

5. Flap Power Drive Unit (PDU) Seal Removal

(Figure 401, Figure 402)

A. General

(1) This procedure is applicable to the input and output seals on the Power Drive Unit (PDU) at the attachment of the hydraulic motor, electric motor, and torque tubes.

B. References

Reference	Title

32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1726	Clamp Set - Trailing Edge Flap Torque Tube Part #: C27022-1 Supplier: 81205
SPL-5384	Wrench - Coupling Sleeve Flap Actuation Part #: C27041-1 Supplier: 81205
STD-203	Container - Oil Resistant, 1 U.S.-Gal (3.8 l)

D. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

E. Prepare for the Removal

SUBTASK 27-51-51-480-004

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-51-040-003

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-51-860-008

(3) Remove the pressure from the system B hydraulic reservoir (TASK 29-09-00-860-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Input Seal Removal

SUBTASK 27-51-51-010-003

(1) To replace the seal [53] for the hydraulic motor [22], remove the hydraulic motor [22] from the flap power drive unit [21] (TASK 27-51-52-000-801).

SUBTASK 27-51-51-010-004

(2) To replace the seal [53] for the electric motor [19], remove the electric motor [19] from the flap power drive unit [21] (TASK 27-51-53-000-801).

SUBTASK 27-51-51-680-001

(3) Drain the fluid from the flap power drive unit [21]:

(a) Put a 1 U.S.-gal (3.81 l) oil resistant container, STD-203, below the drain port to catch the fluid.

(b) Remove the lockwire, drain plug [51], and packing [52] from the drain port.

1) Discard the packing [52].

(c) Wait for the fluid to drain from the flap power drive unit [21].

SUBTASK 27-51-51-020-009

(4) Remove and discard the seal [53] from the flap power drive unit [21]:

(a) Remove the screws [55] and retainer [54] from the shaft [68] on the flap power drive unit [21].

CAUTION USE CAUTION WHEN YOU REMOVE THE SEAL FROM THE POWER DRIVE UNIT. YOU CAN SCRATCH THE PINION GEAR SHAFT, OR THE PDU HOUSING. SCRATCHES, OR OTHER DAMAGE CAN CAUSE FLUID LEAKS THROUGH THE NEW SEAL.

(b) Carefully remove and discard the seal [53] from the flap power drive unit [21].

G. Output Seal Removal

SUBTASK 27-51-51-000-001

(1) To replace the seal [56] for the output shaft, remove the torque tube [12] from the flap power drive unit [21]:

(a) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

(b) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

(c) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

(d) Remove the pressure from the system B hydraulic reservoir (TASK 29-09-00-860-802 or TASK 29-09-00-860-802).

(e) Install the clamp set, SPL-1726, on the torque tubes [12] on both sides of the flap power drive unit [21].

(f) Disconnect the torque tubes [12] from the flap power drive unit [21]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Remove the lockwire and screws [35] that attach the coupling sleeves [36] to the splined couplings [37] on the torque tubes [12].

2) Move the coupling sleeves [36] off the splined couplings [37].

SUBTASK 27-51-51-680-002

(2) Drain the fluid from the flap power drive unit [21]:

(a) Put a 1 U.S.-gal (3.81 l) oil resistant container, STD-203, below the drain port to catch the fluid.

(b) Remove the drain plug [51] and packing [52] from the drain port.

1) Discard the packing [52].

(c) Wait for the fluid to drain from the flap power drive unit [21].

SUBTASK 27-51-51-020-010

(3) Remove and discard the seals [56] from the flap power drive unit [21]:

(a) Remove the coupling sleeves [65]:

1) Use the coupling sleeve wrench, SPL-5384, to hold the coupling sleeves [65] while you remove the bolts [67] and packings [66].

2) Remove the coupling seals [63], coupling halves [64], coupling sleeves [65], and seal shields [62].

3) Remove the bolts [61], washers [60], retainers [59], and seal rings [57] from the flap power drive unit [21].

CAUTION USE SOFT TOOLS TO REMOVE THE SEALS OR SEAL RINGS FROM THE COMPONENT. HARD TOOLS CAN CAUSE DAMAGE TO THE COMPONENT MATING SURFACES AND LEAKAGE CAN OCCUR.

4) Remove and discard the seals [56] and packings [58] from the flap power drive unit [21].

END OF TASK

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

G. Input Seal Installation

SUBTASK 27-51-51-020-011

(1) Install the new seal [53] on the flap power drive unit [21]:

(a) Make sure that the new seal [53] and the mating surfaces on the flap power drive unit [21] are clean.

(b) Lubricate the new new seal [53] and the mating surfaces on the flap power drive unit [21] with fluid, D00070.

(c) Install the new seal [53] in the flap power drive unit [21].

NOTE: You can use the retainer [54] to protect the seal lip and to get the correct seal depth.

1) Make sure that you protect the seal lip of the new seal [53] when it is installed.

NOTE: While the new seal [53] is being installed, the splines on the shaft can cause damage to the new seal [53].

2) Insert the new seal [53] to a depth of 0.32 in. (8.13 mm) - 0.33 in. (8.38 mm).

(d) To install the plain retainer [54], do these steps:

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

1) Apply a layer of Cor-Ban 27L Compound, G50237 to the flange of the retainer [54] and to the shank and threads of the screws [55].

2) Install the retainer [54] and the screws [55] on the flap power drive unit [21].

(e) To install the retainer [54] with the excluder seal (and O-ring), do these steps:

1) Apply a layer of corrosion inhibiting material, G50136 to the flange of the retainer [54] and to the shank and threads of the screws [55].

2) Make sure that the seal bore in the flap power drive unit [21] is clean.

3) Lubricate the seal bore in the flap power drive unit [21] with Christo-lube MCG111 grease, D50011.

4) Lubricate the excluder seal lips (and O-ring) on the retainer [54] with Christo-lube MCG111 grease, D50011.

(f) Install the retainer [54] and the screws [55] on the flap power drive unit [21].

SUBTASK 27-51-51-410-003

(2) If you removed the electric motor [19], do this task: Flap Electric Motor Installation, TASK 27-51-53-400-801.

SUBTASK 27-51-51-410-004

(3) If you removed the hydraulic motor [22], do this task: Flap Hydraulic Motor Installation, TASK 27-51-52-400-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-51-680-003

(4) Install the drain plug [51] in the flap power drive unit [21]:

(a) Lubricate the new new packing [52] with fluid, D00467.

(b) Install the drain plug [51] and the new packing [52] in the drain port.

(c) Tighten the drain plug [51] to 110 in-lb (12.43 N·m) - 130 in-lb (14.69 N·m) more than the run-on torque.

(d) Install lockwire on the drain plug [51].

SUBTASK 27-51-51-610-001

(5) Fill the flap power drive unit [21] with fluid, D00467 (TASK 12-22-51-610-801).

SUBTASK 27-51-51-790-001

(6) Make sure that there are no hydraulic leaks from the flap power drive unit [21]:

(a) Do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(b) Operate the flaps full up to full down a minimum of 3 cycles while you do a check for leaks from the new PDU seal.

H. Output Seal Installation

SUBTASK 27-51-51-420-009

(1) Install the new seal [56] on the flap power drive unit [21]:

(a) Make sure that the new seal [56] and the mating surfaces on the flap power drive unit [21] are clean.

(b) Lubricate the new packing [58] with fluid, D00467.

(c) Install the new packing [58] in the seal ring [57].

(d) Install the seal ring [57] and the new packing [58] on the output shaft of the flap power drive unit [21].

(e) Lubricate the new seal [56] and the mating surfaces on the flap power drive unit [21] with fluid, D00070.

(f) Install the new seal [56] in the flap power drive unit [21].

NOTE: You can use the retainer [59] to protect the seal lip and to get the correct seal depth.

(g) Insert the new seal [56] to a depth of 0.17 in. (4.32 mm) - 0.18 in. (4.57 mm).

SUBTASK 27-51-51-410-005

(2) Install the coupling sleeve [65] on the flap power drive unit [21]:

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a thin layer of Cor-Ban 27L Compound, G50237 to the flange of the retainer [59] and to the shank and threads of the bolts [61].

(b) Install the retainer [59], washers [60], and bolts [61] on the flap power drive unit [21]

(c) Fill the space between the seal ring [57] and retainer [59] with grease, D00633.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Install the seal shield [62], flat side outboard, on the retainer [59].

(e) Install the coupling seal [63] on the coupling half [64].

(f) Apply grease, D00633, to the splines of the coupling sleeve [65].

(g) Install the coupling half [64] on the flap power drive unit [21].

(h) Lubricate the new packing [66] on the bolt [67] with grease, D00633.

(i) Apply grease, D00633, under the head of the bolt [67].

(j) Install the bolt [67] and the new packing [66] in the output shaft of the flap power drive unit [21].

(k) Use the coupling sleeve wrench, SPL-5384, to hold the coupling sleeve [65] and tighten the bolt [67] to 600 in-lb (67.79 N·m) - 720 in-lb (81.35 N·m) more than the run-on torque.

SUBTASK 27-51-51-680-004

(3) Install the drain plug [51] in the flap power drive unit [21]:

(a) Lubricate the new new packing [52] with fluid, D00467.

(b) Install the drain plug [51] and the new packing [52] in the drain port.

(c) Tighten the drain plug [51] to 110 in-lb (12.43 N·m) - 130 in-lb (14.69 N·m) more than the run-on torque.

(d) Install lockwire on the drain plug [51].

SUBTASK 27-51-51-610-003

(4) Fill the flap power drive unit [21] with fluid, D00467 (TASK 12-22-51-610-801).

SUBTASK 27-51-51-790-002

(5) Make sure that there are no hydraulic leaks from the flap power drive unit [21]:

(a) Do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(b) Operate the flaps full up to full down a minimum of 3 cycles while you do a check for leaks from the new PDU seal.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-51-440-003

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP POWER DRIVE UNIT - ADJUSTMENT/TEST

1. General

A. This procedure has a functional test of the flap power drive unit.

TASK 27-51-51-720-801

2. Flap Power Drive Unit Functional Test

(Figure 501)

A. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Location Zones

Zone	Area
117	Electrical and Electronics Compartment - Left
118	Electrical and Electronics Compartment - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

D. Prepare for the Test

SUBTASK 27-51-51-010-005

(1) To get access to the main equipment center, do this step:

(a) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-51-51-860-010

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Supply system B hydraulic power (TASK 29-11-00-860-801).

(a) Do not use the EMDP for this test.

NOTE: The EMDP does not create enough pressure to meet the extend and retract time limits.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Flap Power Drive Unit Functional Test

SUBTASK 27-51-51-730-001

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do a test of the primary operation of the trailing edge flaps:

(a) Move the flap control lever to the UP position and wait for the flaps to reach the UP position.

(b) Do one of these methods to show the flap position sensor and skew sensor inputs to the FSEU:

1) On the FSEU BITE display (Method 1):

a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?

b) Push the down arrow until OTHER FUNCTNS? shows on the display.

c) Push the YES button to select OTHER FUNCTNS? on the FSEU.

d) Push the down arrow until I/O MONITOR? shows on the display.

e) Push the YES button to select I/O MONITOR? on the menu.

f) Push the down arrow until SYNCHRO INPUTS? shows on the display.

g) Push the YES button to select SYNCRO INPUTS? from the menu.

2) On the MAX Display System (MDS) (Method 2):

a) Push the SYS button on the Multifunction Display Panel (MFP).

b) Select the Maint button on the MENU bar at the top right of the System Page.

c) Push the SEL button on the SELECTOR knob.

d) Turn the SELECTOR knob to select MAINT DATA PGS on the Maintenance menu.

e) Move the cursor down and then select the ATA 27 FLIGHT CONTROL DISPLAY button below the REAL column on the MAINT DATA PGS menu.

(c) Make sure that the inputs for the sensors are in the limits shown in Table 501 or Table 502 for the UP position.

1) For Method 1, push the arrow keys on the FSEU to step through the sensor values.

Table 501/27-51-51-993-802

Display (Sensor)	FSEU Sensor Value Range (Flap Position)		
	UP	1-Unit	40-Units
LVR POS	-2.8 to 2.8	13.8 to 21.4	105.4 to 110.9
L FL POS	-3.7 to 1.8	34.5 to 40.8	267.1 to 273.3
R FL POS	-3.7 to 1.8	34.5 to 40.8	267.1 to 273.3
F1 SKEW	295.7 to 311.0	12.2 to 29.1	224.4 to 242.1
F2 SKEW	330.5 to 346.0	60.9 to 78.1	279.2 to 296.9
F3 SKEW	0.0 to 13.2	82.9 to 99.2	288.7 to 305.5

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 501/27-51-51-993-802 (Continued)

Display (Sensor)	FSEU Sensor Value Range (Flap Position)		
	UP	1-Unit	40-Units
F4 SKEW	332.8 to 346.9	24.3 to 40.0	265.1 to 282.1
F5 SKEW	13.1 to 27.2	320.0 to 336.7	77.9 to 94.9
F6 SKEW	346.8 to 360.0	260.8 to 277.1	54.5 to 71.3
F7 SKEW	14.0 to 29.5	281.9 to 299.1	63.1 to 80.8
F8 SKEW	49.0 to 64.3	330.9 to 347.8	117.9 to 135.6

2) For Method 2, observe the sensor values on the MDS.

Table 502/27-51-51-993-803

Display (Sensor)	MDS Sensor Value Range (Flap Position)		
	UP	1-Unit	40-Units
LVR POS	-2.8 to 2.8	13.8 to 21.4	105.4 to 110.9
L FL POS	-3.7 to 1.8	34.5 to 40.8	267.1 to 273.3
R FL POS	-3.7 to 1.8	34.5 to 40.8	267.1 to 273.3
F1 SKEW	-64.3 to -49	12.2 to 29.1	224.4 to 242.1
F2 SKEW	-29.5 to -14	60.9 to 78.1	279.2 to 296.9
F3 SKEW	0.0 to 13.2	82.9 to 99.2	288.7 to 305.5
F4 SKEW	-27.2 to -13.1	24.3 to 40.0	265.1 to 282.1
F5 SKEW	-27.2 to -13.1	24.3 to 40.0	265.1 to 282.1
F6 SKEW	0.0 to 13.2	82.9 to 99.2	288.7 to 305.5
F7 SKEW	-29.5 to -14	60.9 to 78.1	279.2 to 296.9
F8 SKEW	-64.3 to -49	12.2 to 29.1	224.4 to 242.1

(d) Move the flap control lever to the 1-unit position to extend the flaps.

(e) Make sure that the inputs for the sensors are in the limits shown in Table 501 or Table 502 for the 1-unit position.

1) For Method 1, push the arrow keys on the FSEU to step through the sensor values.

2) For Method 2, observe the sensor values on the MDS.

(f) Move the flap control lever to the 40-unit position to extend the flaps.

1) Measure the time it takes for the trailing edge flaps to extend from the 1-unit position to the 40-unit position.

(g) Make sure that the time it takes for the flaps to extend is 22 to 27 seconds.

(h) Make sure that the inputs for the sensors are in the limits shown in Table 501 or Table 502 for the 40-unit position.

1) For Method 1, push the arrow keys on the FSEU to step through the sensor values.

2) For Method 2, observe the sensor values on the MDS.

(i) Move the flap control lever to the 1-unit position to retract the flaps.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Measure the time it takes for the trailing edge flaps to retract from the 40-unit position to the 1-unit position.

(j) Make sure that the time it takes for the flaps to retract is 22 to 27 seconds.

(k) Move the flap control lever to the UP position to retract the flaps.

SUBTASK 27-51-51-720-002

(2) Do a test of the power supply for the flap electric motor:

(a) Move the flap control lever to the 1-unit position to extend the flaps.

(b) Make sure that the pointers on the flap position indicator are in the 1-unit white band.

(c) Open this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

(d) Move the ALTERNATE FLAPS ARM switch to the ARM position.

(e) Move and hold the ALTERNATE FLAPS CONTROL switch in the UP position for 5 seconds.

NOTE: With the circuit breaker open, the electric motor will not operate.

(f) Make sure that the flaps do not retract.

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(g) Move and hold the ALTERNATE FLAPS CONTROL switch in the DOWN position for 5 seconds.

NOTE: The leading edge slats will extend.

(h) Make sure that the trailing edge flaps do not extend.

(i) Close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

SUBTASK 27-51-51-720-003

(3) Do a test of the time necessary to retract the flaps with the alternate system:

(a) Move and hold the ALTERNATE FLAPS CONTROL switch in the UP position until the flaps stop.

(b) Make sure that the time necessary to retract the flaps is 47 to 58 seconds.

(c) Make sure that the pointers on the flap position indicator are in the UP white band.

SUBTASK 27-51-51-860-011

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Move the flap control lever to the UP position to retract the flaps.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-51-860-012

(1) For Method 1, push the ON/OFF button on the front panel of the FSEU to turn it off.

SUBTASK 27-51-51-860-014

(2) For Method 2, push the SYS button on the MFP to put the displays back to normal.

SUBTASK 27-51-51-410-006

(3) For the main equipment center, do this task:

(a) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-51-51-860-013

(4) Remove system B hydraulic power (TASK 29-11-00-860-805).

——— END OF TASK ———

FLAP HYDRAULIC MOTOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Flap Hydraulic Motor Removal

(2) Flap Hydraulic Motor Installation.

B. The flap hydraulic motor is installed on the flap power drive unit (PDU) in the main landing gear wheel well.

TASK 27-51-52-000-801

2. Flap Hydraulic Motor Removal

(Figure 401)

A. References

Reference	Title
29-09-00-860-802	Hydraulic Reservoirs Depressurization (P/B 201)

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

D. Prepare for the Removal

SUBTASK 27-51-52-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-52-860-001

(2) Remove the pressure from the system B hydraulic reservoir (TASK 29-09-00-860-802).

E. Flap Hydraulic Motor Removal

SUBTASK 27-51-52-020-001

(1) Disconnect the hydraulic lines:

(a) Disconnect hydraulic line [1] and hydraulic lines [13] from the hydraulic motor [3].

(b) Install caps/plugs, STD-14686, on hydraulic line [1] and hydraulic lines [13].

(c) Install caps/plugs, STD-14686, in the ports on the hydraulic motor [3].

SUBTASK 27-51-52-020-002

(2) Remove the hydraulic motor [3]:

(a) Remove the bolts [6] and washers [7] that attach the hydraulic motor [3] to the power drive unit [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the hydraulic motor [3] from the power drive unit [2].

SUBTASK 27-51-52-020-003

(3) If you will install a new hydraulic motor [3], remove the reducers [4], elbow [9], check valve [11], packings [5], and packing [12] from the hydraulic motor [3].

——— END OF TASK ———

F. Flap Hydraulic Motor Installation

SUBTASK 27-51-52-420-001

(1) If you will install a new hydraulic motor [3], install the reducers [4], elbow [9], check valve [11], packings [5], packing [12]:

(a) Apply MCS 352B fluid, D00054, or hydraulic fluid, D00153, to the new packings [5] and packing [12].

(b) Install the packings [5] and the reducers [4] in the hydraulic motor [3].

1) Tighten the reducers [4] to 550 in-lb (62 N·m)-600 in-lb (68 N·m).

(c) Install the packing [12] and the check valve [11] in the hydraulic motor [3].

1) Tighten the check valve [11] to 155 in-lb (18 N·m)-165 in-lb (19 N·m).

(d) Install the elbow [9] in the check valve [11].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-52-420-002

(2) Install the hydraulic motor [3]:

(a) Apply grease, D00633, to the splines on the output shaft [8] of the hydraulic motor [3]:

(b) Fill the space between the hydraulic motor [3] and the power drive unit [2] with grease, D00633.

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(c) Apply a thin layer of Cor-Ban 27L Compound, G50237 to the mating surface of the hydraulic motor [3] and the power drive unit [2].

(d) Put the hydraulic motor [3] in its location on the power drive unit [2].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(e) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [6].

(f) Install the bolts [6] and washers [7] to attach the hydraulic motor [3].

(g) Tighten the bolts [6] to 105 ±10 in-lb (11.9 ±1.2 N·m) .

SUBTASK 27-51-52-420-003

(3) Connect hydraulic line [1] and hydraulic lines [13] to the hydraulic motor [3]:

(a) Remove the caps/plugs, STD-14686, from the hydraulic lines [1].

(b) Remove the caps/plugs, STD-14686, from the ports on the hydraulic motor [3].

(c) Install the hydraulic line [1] and hydraulic lines [13] in the hydraulic motor [3].

(d) Tighten the B-nut on hydraulic line [1] to 270 ±14 in-lb (31 ±2 N·m).

(e) Tighten the B-nuts on hydraulic lines [13] to 500 ±25 in-lb (56 ±3 N·m).

G. Flap Hydraulic Motor Installation Test

SUBTASK 27-51-52-860-002

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power (TASK 29-11-00-860-801).

SUBTASK 27-51-52-710-001

(2) Use the primary system to extend and retract the flaps (TASK 27-51-00-860-801).

SUBTASK 27-51-52-210-001

(3) Make sure that there are no hydraulic leaks from the hydraulic motor [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-52-860-003

(1) Remove system B hydraulic power (TASK 29-11-00-860-805).

SUBTASK 27-51-52-610-001

(2) If it is necessary, fill the system B hydraulic reservoir (TASK 12-12-00-610-801).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP ELECTRIC MOTOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the flap electric motor

(2) An installation of the flap electric motor.

B. The flap electric motor is installed on the flap Power Drive Unit (PDU) in the main wheel well.

C. The flap electric motor weighs approximately 16 lb (7.3 kg).

TASK 27-51-53-000-801

2. Flap Electric Motor Removal

(Figure 401)

A. References

Reference	Title
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

SWPM 20-60-03	Special Protection of Electrical Connectors

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

C. Prepare for the Removal

SUBTASK 27-51-53-480-002

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

(1) Make sure that the downlock pins are installed on the nose and main landing gear (TASK 32-00-01-480-801).

SUBTASK 27-51-53-860-001

(2) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

D. Flap Electric Motor Removal

SUBTASK 27-51-53-860-002

(1) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

SUBTASK 27-51-53-020-001

(2) Disconnect the electrical connector [5] from the flap electric motor [2].

(a) If it is necessary, examine the connector for corrosion.

NOTE: This step is also done in the installation task.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) If there is corrosion, correct the problem (SWPM 20-60-03).

SUBTASK 27-51-53-020-002

(3) Remove the flap electric motor [2]:

(a) Remove the screw [8], washers [9], and nut [10] that attach the jumper wire [7] to the flap electric motor [2].

(b) Remove lockwire from the bolts [4] and discard.

NOTE: Observe the orientation of the bolts for installation.

(c) Remove the bolts [4] and washers [3] that attach the flap electric motor [2] to the power drive unit [1].

(d) Remove the flap electric motor [2] from the power drive unit [1].

——— END OF TASK ———

F. Flap Electric Motor Installation

SUBTASK 27-51-53-860-003

(1) Make sure that this circuit breaker is open and has safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

SUBTASK 27-51-53-420-001

(2) Install the flap electric motor [2]:

(a) Apply a layer of grease, D00633, to the splined shaft [6] on the flap electric motor [2].

(b) Fill the area between the flap electric motor [2] and power drive unit [1] with grease, D00633.

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(c) Apply a thin layer of Cor-Ban 27L Compound, G50237, to the mating surface of the flap electric motor [2] and power drive unit [1].

(d) Put the flap electric motor [2] in its position on the power drive unit [1].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(e) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [4].

(f) Install the bolts [4] and washers [3] to attach the flap electric motor [2] to the power drive unit [1].

1) Make sure to install the bolts [4] in the correct orientation (Figure 401).

(g) Tighten the bolts [4] to 50 in-lb (5.6 N·m) - 60 in-lb (6.8 N·m) more than the run-on torque.

(h) Install MS20995C32 lockwire, G01048, on the bolts [4] using the double twist method.

SUBTASK 27-51-53-420-002

(3) Connect the jumper wire [7] to the flap electric motor [2]:

(a) Install the screw [8], washers [9], and nut [10] to attach the jumper wire [7].

(b) Measure the electrical bonding resistance between the jumper wire [7] and flap electric motor [2] (SWPM 20-20-00).

NOTE: When you measure the resistance, the probe can be closer than 0.25 in. (6.40 mm) to the jumper terminal.

1) Use an intrinsically safe approved bonding meter, COM-1550.

2) Make sure that the resistance is 0.0004 ohm (0.4 milliohm) or less.

(c) Put a fillet of sealant, A02315, or sealant, A00247, around the two ends of the screw [8].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-53-210-001

(4) Before the electrical connector [5] connection, examine the connector for corrosion.

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS THAT USE DEICING FLUID WHICH CONTAINS POTASSIUM FORMATE. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(a) If there was corrosion, correct the problem (SWPM 20-60-03).

(b) Apply D5026NS or ZC-026 compound, G50171, to the connector (SWPM 20-60-03).

SUBTASK 27-51-53-420-003

(5) Connect the electrical connector [5] to the flap electric motor [2].

SUBTASK 27-51-53-610-001

(6) Service the flap electric motor [2] (TASK 12-22-51-610-805).

G. Flap Electric Motor Installation Test

SUBTASK 27-51-53-860-005

(1) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

SUBTASK 27-51-53-710-001

(2) Use the alternate system to extend and retract the flaps (TASK 27-51-00-860-802).

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-53-080-001

(1) Remove the downlock pins in the nose and main landing gear (TASK 32-00-01-080-801).

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TEE ANGLE GEARBOX - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Tee Angle Gearbox Removal

(2) Tee Angle Gearbox Installation.

B. The tee angle gearbox is installed on the bulkhead aft of the inboard transmissions for the inboard flap.

TASK 27-51-55-000-801

2. Tee Angle Gearbox Removal

(Figure 401)

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

D. Prepare for the Removal

SUBTASK 27-51-55-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-55-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

E. Tee Angle Gearbox Removal

SUBTASK 27-51-55-020-001

(1) Disconnect the torque tubes [13] from the tee angle gearbox [1]:

(a) Install a clamp set, SPL-1726 on the torque tube [13] outboard of the tee angle gearbox [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the lockwires and screws [3] that attach the coupling sleeves [2] to the splined couplings [14].

(c) Move the coupling sleeves [2] off the splined couplings [14].

SUBTASK 27-51-55-020-002

(2) Remove the U-joint assembly [8]:

(a) Remove the nuts [12], washers [11], and bolts [10] that attach the U-joint assembly [8] to the transmission [9] and the tee angle gearbox [1].

(b) Remove the U-joint assembly [8].

(c) Remove the wire bundle from the bracket on the tee angle gearbox [1].

SUBTASK 27-51-55-020-003

(3) Remove the tee angle gearbox [1]:

(a) Remove the nuts [7], washers [6], washers [5], and bolts [4] that attach the tee angle gearbox [1] to the structure.

(b) Remove the tee angle gearbox [1].

F. Tee Angle Gearbox Installation

SUBTASK 27-51-55-420-001

(1) Install the tee angle gearbox [1] as follows:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [4].

(b) Put the tee angle gearbox [1] in its position on the structure.

(c) Install the bolts [4], washers [5], washers [6], and nuts [7] to attach the tee angle gearbox [1].

SUBTASK 27-51-55-420-002

(2) Install the U-joint assembly [8] as follows:

(a) Put the U-joint assembly [8] in its position between the transmission [9] and the tee angle gearbox [1].

(b) Install the bolts [10], washers [11], and nuts [12] that attach the U-joint assembly [8] to the transmission [9] and the tee angle tee angle gearbox [1].

(c) Install the wire bundle on the wire bundle bracket on the tee angle gearbox [1].

SUBTASK 27-51-55-420-003

(3) Connect the torque tubes [13] to the tee angle gearbox [1] as follows:

(a) Apply grease, D00633, to the coupling sleeves [2].

(b) Put the splined couplings [14] in the coupling sleeves [2].

(c) Install the screws [3] to attach the torque tubes [13] to the tee angle gearbox [1].

(d) Install lockwire on the screws [3].

(e) Remove the clamp set, SPL-1726, from the torque tube [13] outboard of the tee angle gearbox [1].

SUBTASK 27-51-55-820-001

(4) If the torque tubes [13] moved, while they were disconnected, do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

SUBTASK 27-51-55-640-001

(5) Lubricate the torque tubes [13], U-joint assembly [8], and tee angle gearbox [1] as follows:

(a) Lubricate the torque tubes [13] (TASK 12-22-51-640-801).

(b) Lubricate the U-joint assembly [8] and the tee angle gearbox [1] (TASK 12-22-51-640-806).

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-55-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-55-860-001

(2) Do this task: Supply Electrical Power, TASK 24-22-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-55-860-002

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Supply system B hydraulic power (TASK 29-11-00-860-801).

SUBTASK 27-51-55-710-001

(4) Use the primary system to extend the flaps to the 40-unit position (TASK 27-51-00-860-801).

(a) Make sure that the pointers for the flap position indicators are in the 40-unit white band.

SUBTASK 27-51-55-710-002

(5) Use the primary system to retract the flaps to the UP position (TASK 27-51-00-860-801).

(a) Make sure that the pointers for the flap position indicators are in the UP white band.

SUBTASK 27-51-55-860-003

(6) Remove system B hydraulic power (TASK 29-11-00-860-805).

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

MLG BEAM ANGLE GEARBOX - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Main Landing Gear Beam Angle Gearbox Removal

(2) Main Landing Gear Beam Angle Gearbox Installation.

B. The main landing gear beam angle gearbox is installed on the main landing gear beam between the transmissions for the inboard flap.

TASK 27-51-56-000-801

2. Main Landing Gear Beam Angle Gearbox Removal

(Figure 401)

653	Right Wing - Inboard Flap

D. Prepare for the Removal

SUBTASK 27-51-56-860-001

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-56-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

E. MLG Beam Angle Gearbox Removal

SUBTASK 27-51-56-020-001

(1) Disconnect the torque tubes [10] from the angle gearbox [1]:

(a) Install clamp set, SPL-1726 on the torque tube [10] outboard of the angle gearbox [1].

(b) Remove the lockwire and screws [3] that attach the coupling sleeves [4] to the splined couplings [2].

(c) Move the coupling sleeves [4] off the splined couplings [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-56-020-002

(2) Remove the angle gearbox [1]:

(a) Remove the nuts [8], washers [7], washer [6], and bolts [5] that attach the angle gearbox [1] to the main landing gear beam [9].

(b) Remove the angle gearbox [1].

F. MLG Beam Angle Gearbox Installation

SUBTASK 27-51-56-420-001

(1) Install the angle gearbox [1]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a layer of Cor-Ban 27L Compound, G50237, to the mating surface of the angle gearbox [1] and the main landing gear beam [9].

(b) Put the angle gearbox [1] in its position on the main landing gear beam [9].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(c) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [5].

(d) Install the bolts [5], washers [6], washers [7],and nuts [8] to attach the angle gearbox [1] to the main landing gear beam [9].

SUBTASK 27-51-56-420-002

(2) Connect the torque tubes [10] to the angle gearbox [1]:

(a) Apply grease, D00633, to the coupling sleeves [4].

(b) Put the splined couplings [2] in the coupling sleeves [4].

(c) Install the screws [3] to attach the torque tubes [10] to the angle gearbox [1].

(d) Install lockwire on the screws [3].

(e) Remove the clamp set, SPL-1726, from the torque tubes [10] outboard of the angle gearbox [1].

SUBTASK 27-51-56-820-001

(3) If the torque tubes [10] moved, while they were disconnected, do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

SUBTASK 27-51-56-600-001

(4) Lubricate the torque tubes [10] (TASK 12-22-51-640-801).

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-56-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-56-710-001

(2) Use the primary system to retract the flaps to the UP position (TASK 27-51-00-860-801).

NOTE: Make sure that the pointers for the flap position indicators are in the UP white band.

SUBTASK 27-51-56-710-002

(3) Use the primary system to extend the flaps to the 40-unit position (TASK 27-51-00-860-801).

NOTE: Make sure that the pointers for the flap position indicators are in the 40-unit white band.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-56-860-002

(4) Use the primary system to retract the flaps to the UP position (TASK 27-51-00-860-801).

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SEAL RIB ANGLE GEARBOX - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Seal rib angle gearbox removal

(2) Seal rib angle gearbox installation.

B. The seal rib angle gearbox is installed between the seal ribs between the inboard and outboard flap.

TASK 27-51-57-000-801

2. Seal Rib Angle Gearbox Removal

(Figure 401)

A. References

(1) Install the seal rib angle gearbox [5]:

(a) Put the seal rib angle gearbox [5] in its position on the rib [10].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [6].

(c) Install the bolts [6], washers [7], washers [8] and nuts [9] to attach the seal rib angle gearbox [5] to the rib [10].

SUBTASK 27-51-57-420-002

(2) Connect the torque tubes [3] to the seal rib angle gearbox [5]:

(a) Apply grease, D00633, to the coupling sleeves [1].

(b) Put the splined couplings [2] in the coupling sleeves [1].

(c) Install the screws [4] to attach the torque tubes [3] to the seal rib angle gearbox [5].

(d) Install lockwire on the screws [4].

(e) Remove the clamp set, SPL-1726, from the torque tubes [3] outboard of the seal rib angle gearbox [5].

SUBTASK 27-51-57-820-001

(3) If the torque tubes [3] moved while they were disconnected, do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

SUBTASK 27-51-57-640-001

(4) Lubricate the torque tubes [3] (TASK 12-22-51-640-801).

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-57-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-57-710-001

(2) Use the primary system to extend the flaps to the 40-unit position (TASK 27-51-00-860-801).

(a) Make sure the pointers for the flap position indicators are in the 40-unit white band.

SUBTASK 27-51-57-710-002

(3) Use the primary system to retract the flaps to the UP position (TASK 27-51-00-860-801).

(a) Make sure the pointers for the flap position indicators are in the UP white band.

SUBTASK 27-51-57-410-001

(4) Below the seal rib angle gearbox [5], do the applicable step:

(a) Install this access panel:

Number	Name/Location
561AB	Midspan Fixed Trailing Edge Access Panel - WBL 224

(b) Close this access panel:

Number	Name/Location
661AB	Midspan Fixed Trailing Edge Access Panel - WBL 224

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP TORQUE TUBES - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Flap torque tube removal (selection)

(2) Flap torque tube installation (selection)

(3) Outboard wing flap torque tube removal

(4) Outboard wing flap torque tube installation

(5) Inboard wing flap torque tube removal

(6) Inboard wing flap torque tube installation

(7) Wheel well flap torque tubes removal

(8) Wheel well flap torque tubes installation.

TASK 27-51-58-000-801

2. Flap Torque Tube Removal (Selection)

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
550	Subzone - Left Wing: Trailing Edge, Aft of Rear Spar, Inbd of Outboard Trailing Edge Flap
553	Left Wing - Inboard Flap
561	Left Wing - Rear Spar to Trailing Edge, Outboard Of Inboard Flap, Inboard of Fixed Trailing Edge
567	Left Wing - Outboard Flap
650	Subzone - Right Wing: Trailing Edge, Aft of Rear Spar, Inboard of Outboard Trailing Edge Flap
653	Right Wing - Inboard Flap
661	Right Wing - Rear Spar to Trailing Edge, Outboard of Inboard Flap, Inboard of Fixed Trailing Edge
667	Right Wing - Outboard Flap

B. Flap Torque Tube Removal (Selection)

SUBTASK 27-51-58-000-001

(1) Do one of these tasks to remove the applicable flap torque tube:

(a) Do this task: Outboard Wing Flap Torque Tube Removal, TASK 27-51-58-000-802.

(b) Do this task: Inboard Wing Flap Torque Tube Removal, TASK 27-51-58-000-803.

(c) Do this task: Wheel Well Flap Torque Tube Removal, TASK 27-51-58-000-804.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-51-58-400-801

3. Flap Torque Tube Installation (Selection)

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
550	Subzone - Left Wing: Trailing Edge, Aft of Rear Spar, Inbd of Outboard Trailing Edge Flap
553	Left Wing - Inboard Flap
561	Left Wing - Rear Spar to Trailing Edge, Outboard Of Inboard Flap, Inboard of Fixed Trailing Edge
567	Left Wing - Outboard Flap
650	Subzone - Right Wing: Trailing Edge, Aft of Rear Spar, Inboard of Outboard Trailing Edge Flap
653	Right Wing - Inboard Flap
661	Right Wing - Rear Spar to Trailing Edge, Outboard of Inboard Flap, Inboard of Fixed Trailing Edge
667	Right Wing - Outboard Flap

B. Flap Torque Tube Installation (Selection)

SUBTASK 27-51-58-400-001

(1) Do one of these tasks to install the applicable flap torque tube.

(a) Do this task: Outboard Wing Flap Torque Tube Installation, TASK 27-51-58-400-802.

(b) Do this task: Inboard Wing Flap Torque Tube Installation, TASK 27-51-58-400-803.

(c) Do this task: Wheel Well Flap Torque Tube Installation, TASK 27-51-58-400-804.

——— END OF TASK ———

TASK 27-51-58-000-802

4. Outboard Wing Flap Torque Tube Removal

(Figure 401)

A. General

(1) This task is applicable to the torque tubes outboard of the seal rib angle gearbox.

27-51-00-860-803	Extend the Trailing Edge Flaps (P/B 201)

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1726	Clamp Set - Trailing Edge Flap Torque Tube Part #: C27022-1 Supplier: 81205

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Location Zones

Zone	Area
561	Left Wing - Rear Spar to Trailing Edge, Outboard Of Inboard Flap, Inboard of Fixed Trailing Edge
567	Left Wing - Outboard Flap
661	Right Wing - Rear Spar to Trailing Edge, Outboard of Inboard Flap, Inboard of Fixed Trailing Edge
667	Right Wing - Outboard Flap

E. Prepare for the Removal

SUBTASK 27-51-58-860-001

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-58-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Outboard Wing Flap Torque Tube Removal

SUBTASK 27-51-58-480-001

(1) Install the clamp set, SPL-1726 on the torque tubes inboard and outboard of the applicable torque tube (Figure 402):

NOTE: The clamp set can be used to stop inadvertent movement of the flap drive system while the torque tubes are disconnected. If the flap drive system moves, then it will be necessary to do the flap drive system adjustment.

(a) Put the clamp assembly in its location on the applicable torque tube.

(b) Turn the knob to tighten the clamp assembly on the torque tube.

(c) Turn the rod until it touches the structure to make sure the clamp assembly does not turn.

SUBTASK 27-51-58-020-001

(2) Remove the applicable torque tube guard [10]:

(a) Remove the nuts [9], washers [8] and the bolts [7], bolts [11] or bolts [12] that attach the torque tube guard [10].

(b) Remove the torque tube guard [10] from the torque tube.

SUBTASK 27-51-58-020-002

(3) Remove the tube assembly [1], tube assembly [2] or tube assembly [3]:

(a) Remove the lockwire for the screws [6].

(b) Remove the screws [6] that attach the coupling sleeves [5] to the splined couplings [4].

(c) Move the coupling sleeves [5] off the splined couplings [4].

(d) Remove the tube assembly [1], tube assembly [2] or tube assembly [3].

667	Right Wing - Outboard Flap

G. Outboard Wing Flap Torque Tube Installation

SUBTASK 27-51-58-420-001

(1) Install the tube assembly [1], tube assembly [2] or tube assembly [3]:

(a) Apply grease, D00633, to the coupling sleeves [5].

(b) Put the tube assembly [1], tube assembly [2] or tube assembly [3] in its position.

(c) Put the coupling sleeves [5] on the splined couplings [4].

(d) Install the screws [6] to attach the coupling sleeves [5] to the splined couplings [4].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Install the lockwire or safety cable on the screws [6].

SUBTASK 27-51-58-080-001

(2) Remove the clamp set, SPL-1726, from the torque tubes.

SUBTASK 27-51-58-420-002

(3) Install the applicable torque tube guard [10]:

(a) Put the torque tube guard [10] on the torque tube.

(b) Install the bolts [7], bolts [11], or bolts [12], washers [8] and nuts [9] that attach the torque tube guard [10].

SUBTASK 27-51-58-820-001

(4) If a torque tube turned while the torque tubes were disconnected, do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-58-640-001

(1) For the applicable torque tube, do this task: Trailing Edge Flap Torque Tube and Torque Tube Support Lubrication, TASK 12-22-51-640-801.

SUBTASK 27-51-58-440-001

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-58-710-001

(3) Use the primary system to retract the flaps (TASK 27-51-00-860-801).

(a) Make sure the pointers for the flap position indicators are in the UP white band.

SUBTASK 27-51-58-710-002

(4) Use the primary system to extend the flaps to the 40-unit position (TASK 27-51-00-860-801).

(a) Make sure the pointers for the flap position indicators are in the 40-unit white band.

SUBTASK 27-51-58-710-003

(5) Use the primary system to retract the flaps (TASK 27-51-00-860-801).

——— END OF TASK ———

TASK 27-51-58-000-803

6. Inboard Wing Flap Torque Tube Removal

(Figure 403)

A. General

(1) This task is applicable to the torque tubes inboard of the seal rib angle gearbox and outboard of the Tee angle gearbox.

B. References

Reference	Title

650	Subzone - Right Wing: Trailing Edge, Aft of Rear Spar, Inboard of Outboard Trailing Edge Flap
653	Right Wing - Inboard Flap

E. Prepare for the Removal

SUBTASK 27-51-58-860-002

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-58-480-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-58-040-002

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Inboard Wing Flap Torque Tube Removal

SUBTASK 27-51-58-480-003

(1) Install the clamp set, SPL-1726 on the torque tubes inboard and outboard of the applicable torque tube (Figure 402):

NOTE: The clamp set can be used to stop inadvertent movement of the flap drive system while the torque tubes are disconnected. If the flap drive system moves, then it will be necessary to do the flap drive system adjustment.

(a) Put the clamp assembly in its location on the applicable torque tube.

(b) Turn the knob to tighten the clamp assembly on the torque tube.

(c) Turn the rod until it touches the structure to make sure the clamp assembly does not turn.

SUBTASK 27-51-58-020-003

(2) For tube assembly [32] or tube assembly [33], remove the applicable torque tube guard [37]:

NOTE: The tube assembly [31] does not have a torque tube guard [37].

(a) Remove the nuts [36], washers [35], bolts [34] or bolts [38] that attach the torque tube guard [37].

(b) Remove the torque tube guard [37] from the torque tube.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-58-020-004

(3) Remove the tube assembly [31], tube assembly [32] or tube assembly [33]:

(a) Remove the lockwire or safety cable from the screws [6].

(b) Remove the screws [6] that attach the coupling sleeves [5] to the splined couplings [4].

(c) Move the coupling sleeves [5] off the splined couplings [4].

(d) Remove the tube assembly [31], tube assembly [32] or tube assembly [33].

G. Inboard Wing Flap Torque Tube Installation

SUBTASK 27-51-58-420-003

(1) Install the tube assembly [31], tube assembly [32] or tube assembly [33]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Apply grease, D00633 to the coupling sleeves [5].

(b) Put the tube assembly [31], tube assembly [32] or tube assembly [33] in its position.

(c) Put the coupling sleeves [5] on the splined couplings [4].

(d) Install the screws [6] to attach the coupling sleeves [5] to the splined couplings [4].

(e) Install the lockwire or the safety cable on the screws [6].

SUBTASK 27-51-58-080-002

(2) Remove the clamp set, SPL-1726 from the torque tubes.

SUBTASK 27-51-58-420-004

(3) For tube assembly [32] or tube assembly [33], install the applicable torque tube guard [37]:

(a) Put the torque tube guard [37] on the torque tube.

(b) Install the bolts [34], or bolts [38], washers [35] and nuts [36] that attach the torque tube guard [37].

SUBTASK 27-51-58-820-002

(4) If a torque tube turned while the torque tubes were disconnected, do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-58-640-002

(1) For the applicable torque tube, do this task: Trailing Edge Flap Torque Tube and Torque Tube Support Lubrication, TASK 12-22-51-640-801.

SUBTASK 27-51-58-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-58-710-004

(3) Use the primary system to retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(a) Make sure the pointers for the flap position indicators are in the UP white band.

SUBTASK 27-51-58-710-005

(4) Use the primary system to extend the flaps to the 40-unit position, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(a) Make sure the pointers for the flap position indicators are in the 40-unit white band.

SUBTASK 27-51-58-710-006

(5) Use the primary system to retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-58-080-005

(6) Remove the downlock pins from the nose and main landing gear, do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

——— END OF TASK ———

TASK 27-51-58-000-804

8. Wheel Well Flap Torque Tube Removal

(Figure 404)

A. General

(1) This task is applicable to the torque tubes in the wheel well between the Tee angle gearboxes.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Prepare for the Removal

SUBTASK 27-51-58-480-004

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-58-040-003

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Wheel Well Flap Torque Tube Removal

SUBTASK 27-51-58-480-005

(1) Install the clamp set, SPL-1726 on a torque tube outboard of the applicable torque tube (Figure 402):

NOTE: The clamp set can be used to stop inadvertent movement of the flap drive system while the torque tubes are disconnected. If the flap drive system moves, then it will be necessary to do the flap drive system adjustment.

(a) Put the clamp assembly in its location on the applicable torque tube.

(b) Turn the knob to tighten the clamp assembly on the torque tube.

(c) Turn the rod until it touches the structure to make sure the clamp assembly does not turn.

SUBTASK 27-51-58-020-005

(2) Remove the torque tube guard [52]:

(a) Remove the nuts [55] , washers [54] and bolts [53] that attach the torque tube guard [52].

(b) Remove the torque tube guard [52] from the tube assembly [51].

SUBTASK 27-51-58-020-006

(3) Remove the tube assembly [51]:

(a) Remove the lockwire or safety cable from the screws [6].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the screws [6] that attach the coupling sleeves [5] to the splined couplings [4].

(c) Move the coupling sleeves [5] off the splined couplings [4].

(d) Remove the tube assembly [51].

TASK 27-51-58-400-804

9. Wheel Well Flap Torque Tube Installation

(Figure 404)

A. General

(1) This task is applicable to the torque tubes in the wheel well between the Tee angle gearboxes.

B. References

Reference	Title

D00633	Grease - Aircraft General Purpose	BMS3-33

E. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
51	Tube assembly	27-51-58-03-060	SIA ALL

F. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

G. Wheel Well Flap Torque Tube Installation

SUBTASK 27-51-58-420-005

(1) Install the tube assembly [51]:

(a) Apply grease, D00633 to the coupling sleeves [5].

(b) Put the tube assembly [51] in its position.

(c) Put the coupling sleeves [5] on the splined couplings [4].

(d) Install the screws [6] to attach the coupling sleeves [5] to the splined couplings [4].

(e) Install the lockwire or the safety cable on the screws [6].

SUBTASK 27-51-58-080-003

(2) Remove the clamp set, SPL-1726 from the torque tubes.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-58-420-006

(3) Install the torque tube guard [52]:

(a) Put the torque tube guard [52] on the tube assembly [51].

(b) Install the bolts [53], washers [54] and nuts [55] that attach the torque tube guard [52].

SUBTASK 27-51-58-820-003

(4) If a torque tube turned while the torque tubes were disconnected, do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-58-640-003

(1) For the applicable torque tube, do this task: Trailing Edge Flap Torque Tube and Torque Tube Support Lubrication, TASK 12-22-51-640-801.

SUBTASK 27-51-58-440-003

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-58-710-007

(3) Use the primary system to extend the flaps to the 40-unit position, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(a) Make sure the pointers for the flap position indicators are in the 40-unit white band.

SUBTASK 27-51-58-710-008

(4) Use the primary system to retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(a) Make sure the pointers for the flap position indicators are in the UP white band.

SUBTASK 27-51-58-080-004

(5) Remove the downlock pins from the nose and main landing gear, do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP TORQUE TUBES - INSPECTION/CHECK

1. General

A. This procedure contains the following task:

- Flap Torque Tube Inspection

TASK 27-51-58-200-801

2. Flap Torque Tube - Inspection

(Figure 601)

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
550	Subzone - Left Wing: Trailing Edge, Aft of Rear Spar, Inbd of Outboard Trailing Edge Flap
553	Left Wing - Inboard Flap
561	Left Wing - Rear Spar to Trailing Edge, Outboard Of Inboard Flap, Inboard of Fixed Trailing Edge
567	Left Wing - Outboard Flap
650	Subzone - Right Wing: Trailing Edge, Aft of Rear Spar, Inboard of Outboard Trailing Edge Flap
653	Right Wing - Inboard Flap
661	Right Wing - Rear Spar to Trailing Edge, Outboard of Inboard Flap, Inboard of Fixed Trailing Edge
667	Right Wing - Outboard Flap

E. Prepare for the Inspection

SUBTASK 27-51-58-860-003

(1) Install the ground locks in the nose and main landing gear (TASK 32-00-01-480-801).

SUBTASK 27-51-58-860-004

(2) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

SUBTASK 27-51-58-040-004

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

F. Torque Tube Inspection

SUBTASK 27-51-58-480-006

(1) Install the clamp set, SPL-1726, on the torque tubes inboard and outboard of the applicable torque tube (TASK 27-51-58-000-802):

NOTE: The clamp set can be used to stop inadvertent movement of the flap drive system while the torque tubes are disconnected. If the flap drive system moves, then it will be necessary to do the flap drive system adjustment.

(a) Put the clamp assembly in its location on the applicable torque tube.

(b) Turn the knob to tighten the clamp assembly on the torque tube.

(c) Turn the rod until it touches the structure to make sure the clamp assembly does not turn.

SUBTASK 27-51-58-220-001

(2) Examine the flap torque tube splined couplers (Figure 601).

(a) Remove the torque tube guards, if it is applicable.

(b) Remove the three screws that attach the coupling sleeve to the spline coupling on the opposite end of the torque tube.

(c) Move the coupling sleeve off the torque tube spline to disconnect the torque tube.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Measure the angular backlash between the units coupling half and coupling sleeve.

1) Move the torque tube axially, the full length of the sleeve, to find the point of maximum backlash.

NOTE: Since the wear on the coupler will not be uniform, the torque tube is moved axially.

2) Make sure the angular backlash is 2 degrees or less.

(e) If the angular backlash is not in tolerance, replace the applicable unit:

- Torque Tube Assembly (PAGEBLOCK 27-51-58/401)
- Inboard Flap Transmission (PAGEBLOCK 27-51-31/401)
- Outboard Flap Transmission (PAGEBLOCK 27-51-41/401)
- Flap Power Drive Unit (PDU) (PAGEBLOCK 27-51-51/401)
- Tee Angle Gearbox (PAGEBLOCK 27-51-55/401)
- MLG Beam Angle Gearbox (PAGEBLOCK 27-51-56/401)
- Seal Rib Angle Gearbox (PAGEBLOCK 27-51-57/401)

(f) If the angular backlash is in tolerance, attach the coupling sleeve:

1) Apply a layer of the grease, D00633 (recommended), or grease, D00013 (alternate), on the splines of the coupling sleeve.

2) Engage the coupling sleeve with the coupling.

3) Install the three screws to attach the coupling sleeve.

4) Install the MS20995NC32 lockwire, G01912 (recommended), or safety cable kit, G50375 (alternate), on the heads of the screws.

(g) Remove the clamp set, SPL-1726, from the torque tubes.

(h) Install the torque tube guards, if it is applicable.

(i) Do a check to make sure that the torque tube has free axial movement.

SUBTASK 27-51-58-220-002

(3) Examine the center sleeve bearings:

(a) Measure the radial depth of the worn areas at the center sleeve bearing.

1) Make sure that the worn area is less than 0.080 in. (2.03 mm) maximum radial depth on the sleeve.

NOTE: This limit applies to torque tubes that use either phenolic or CRES torque tube center bearings.

(b) Replace the torque tube if it is not in the limits (PAGEBLOCK 27-51-58/401).

SUBTASK 27-51-58-220-003

(4) Examine the torque tube for loose rivets:

(a) Make sure there is no movement between the end fitting and the tube.

1) If there is movement between the end fitting and the tube, do one of these procedures:

2) Replace any torque tube which shows movement between the end fitting and the torque tube (PAGEBLOCK 27-51-58/401).

3) Repair any torque tube which shows movement between the end fitting and the torque tube (PAGEBLOCK 27-51-58/401).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-58-640-004

(1) For the applicable torque tube, do this task: Trailing Edge Flap Torque Tube and Torque Tube Support Lubrication, TASK 12-22-51-640-801.

SUBTASK 27-51-58-440-004

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-58-710-009

(3) Use the primary system to retract the flaps (TASK 27-51-00-860-801).

(a) Make sure the pointers for the flap position indicators are in the UP white band.

SUBTASK 27-51-58-710-010

(4) Use the primary system to extend the flaps to the 40-unit position (TASK 27-51-00-860-801).

(a) Make sure the pointers for the flap position indicators are in the 40-unit white band.

SUBTASK 27-51-58-710-011

(5) Use the primary system to retract the flaps (TASK 27-51-00-860-801).

SUBTASK 27-51-58-020-007

(6) Remove the ground locks in the nose and main landing gear (TASK 32-00-01-080-801).

FLAP TORQUE TUBE SUPPORT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the flap torque tube support

(2) An installation of the flap torque tube support.

TASK 27-51-59-000-801

2. Flap Torque Tube Support Removal

(Figure 401)

A. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)
27-51-00-860-803	Extend the Trailing Edge Flaps (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1726	Clamp Set - Trailing Edge Flap Torque Tube Part #: C27022-1 Supplier: 81205

C. Location Zones

Zone	Area
561	Left Wing - Rear Spar to Trailing Edge, Outboard Of Inboard Flap, Inboard of Fixed Trailing Edge
567	Left Wing - Outboard Flap
661	Right Wing - Rear Spar to Trailing Edge, Outboard of Inboard Flap, Inboard of Fixed Trailing Edge
667	Right Wing - Outboard Flap

D. Prepare for the Removal

SUBTASK 27-51-59-860-001

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-51-59-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

E. Flap Torque Tube Support Removal

SUBTASK 27-51-59-020-001

(1) Disconnect the torque tubes [4] from the support assembly [6]:

(a) Install clamp set, SPL-1726 on the torque tubes [4] inboard and outboard of the support assembly [6].

(b) Remove the lockwire [16] and the screws [5] that attach the coupling sleeves [3] to the splined couplings [1].

(c) Move the coupling sleeves [3] off the splined couplings [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-59-020-002

(2) Remove the torque tube support assembly [6]:

(a) Remove the nuts [15], washers [14], washers [13] and bolts [12] that attach the support assembly [6] to the spoiler actuator support [2].

(b) Remove the nuts [11], washers [10], washers [8], bolts [7] and bushings [9] that attach the support assembly [6] to the spoiler actuator support [2].

(c) Remove the support assembly [6].

667	Right Wing - Outboard Flap

F. Flap Torque Tube Support Installation

SUBTASK 27-51-59-420-001

(1) Install the torque tube support assembly [6]:

(a) Put the support assembly [6] in its position on the spoiler actuator support [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [7] and bolts [12].

(c) Install the bolts [12], washers [13], washers [14] and nuts [15] to attach the left side of the support assembly [6] to the spoiler actuator support [2].

(d) Install the bushings [9], bolts [7], washers [8], washers [10] and nuts [11] to attach the right side of the support assembly [6] to the spoiler actuator support [2].

SUBTASK 27-51-59-420-002

(2) Connect the torque tubes [4] to the support assembly [6]:

(a) Apply grease, D00633, to the coupling sleeves [3].

(b) Put the splined couplings [1] in the coupling sleeves [3].

(c) Install the screws [5] to attach the torque tubes [4] to the support assembly [6].

(d) Install lockwire [16] on the screws [5].

(e) Remove the clamp set, SPL-1726, from the torque tubes [4] inboard and outboard of the support assembly [6].

SUBTASK 27-51-59-820-001

(3) If the torque tubes [4] turned while they were disconnected, do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

SUBTASK 27-51-59-640-001

(4) Lubricate the torque tubes [4] and the support assembly [6] (TASK 12-22-51-640-801).

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-59-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-59-860-002

(2) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP CONTROL UNIT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Flap Control Unit Removal

(2) Flap Control Unit Installation.

B. The flap control unit includes the flap control valves for the leading edge and the trailing edge, the control linkage, follow-up linkage, and the flap limit switch cams.

C. The flap limit switches are installed on the flap control unit. It is necessary to remove the flap limit switches from the flap control unit.

TASK 27-51-61-000-801

2. Flap Control Unit Removal

(Figure 401, Figure 402)

D. Prepare for the Removal

SUBTASK 27-51-61-860-001

(1) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-61-860-002

(2) Remove the pressure from the system B hydraulic reservoir, do this task: Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-61-860-003

(3) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF

SUBTASK 27-51-61-480-001

WARNING MAKE SURE THAT YOU INSTALL THE DOWNLOCK PINS ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-61-010-001

(5) Remove the floor panel to get access to the top of the flap control unit assembly [9], do this task: Passenger Cabin Floor Panel Removal, TASK 53-21-00-000-801

(Figure 401).

NOTE: The floor panel is located between stations 706 and 727B on the right side of the airplane.

E. Flap Control Unit Removal

SUBTASK 27-51-61-020-001

(1) Disconnect the cable assembly WFA [1] and cable assembly WFB [1] from the quadrant [5].

(a) Open this access panel:

Number	Name/Location
112A	Forward Access Door

(b) To get access to the turnbuckles [3], do this task:

Open this access panel:

(Nose Wheel Well Access Panels Removal, TASK 53-14-01-020-801)

Number	Name/Location
114AC	Fwd Nose Wheel Well Upper Access Panel

(c) Remove the locking clips [2] and loosen the turnbuckles [3] on the cable assembly WFA [1] and cable assembly WFB [1].

(d) Remove the pin [8], pin [6], and spacers [7] from the quadrant [5].

(e) Remove the straps [10] that attach the cable assembly WFA [1] and cable assembly WFB [1] to the quadrant [5].

(f) Remove the pins [4] that attach the cable assembly WFA [1] and cable assembly WFB [1] to the quadrant [5].

(g) Remove the cable assembly WFA [1] and cable assembly WFB [1] from the quadrant [5].

SUBTASK 27-51-61-020-002

(2) Remove the quadrant [5] from the flap control unit assembly [9].

(a) Remove the nut [11] and washer [17] that attach the quadrant [5] to the flap control unit assembly [9].

(b) Remove the quadrant [5] from the flap control unit assembly [9].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-61-020-003

(3) Remove the flap limit switches [39] from the flap control unit assembly [9] (Figure 402).

NOTE: It is not necessary to disconnect the wires for the flap limit switches [39].

(a) Remove the screws [40], washers [56], and switch cover [31] from the flap control unit assembly [9].

(b) For the Flap UP limit switch, S245, Flap Up limit switch, S1051, and Flap DOWN limit switch, S246, do this task: Flap Limit Switch Removal, TASK 27-51-63-000-801.

(c) For the Landing Warning Switch, S138, do this task: Flap Landing Warning Switch Removal, TASK 31-51-01-000-801.

SUBTASK 27-51-61-020-004

(4) Disconnect the cable WFFA [48] and cable WFFB [48] at the turnbuckles [50].

NOTE: It is necessary to remove the cable WFFA [48] and the cable WFFB [48] with the flap control unit assembly [9].

(a) Remove the locking clips [49] and disconnect the turnbuckles [50] on the cable WFFA [48] and cable WFFB [48].

(b) Put a label on the cable WFFA [48] and the cable WFFB [48] to identify them.

SUBTASK 27-51-61-020-005

(5) Disconnect the electrical connector [33] from the trailing edge control valve [34].

SUBTASK 27-51-61-020-006

(6) Disconnect the hydraulic lines.

(a) Disconnect hydraulic line [27], hydraulic line [28], hydraulic line [29], hydraulic line [30], and hydraulic line [32] from the trailing edge control valve [34].

(b) Disconnect hydraulic line [23], hydraulic line [24], hydraulic line [25], and hydraulic line [26] from the leading edge control valve [35].

SUBTASK 27-51-61-020-007

(7) Remove the flap control unit assembly [9].

(a) Remove the bolts [15] and washers [14] from above the flap control unit assembly [9] (Figure 401).

(b) Remove the bolts [41] and washers [42] from below the flap control unit assembly [9] (Figure 402).

(c) Remove the flap control unit assembly [9].

END OF TASK

Number	Name/Location
112A	Forward Access Door
114AC	Fwd Nose Wheel Well Upper Access Panel

G. Prepare for the Installation

SUBTASK 27-51-61-820-001

(1) Install the rig pin [38] in the flap control unit assembly [9] (Figure 402).

NOTE: This will make sure that the flap control unit assembly [9] is in the adjusted position.

(a) Remove the screws [36], washers [55], and lower pan [37] from the flap control unit assembly [9].

(b) Install the rig pin [38] through the cam follower arm and valve cam.

1) Use rig pin, F70207-116, SPL-12421, from rigging pin kit, SPL-1585.

SUBTASK 27-51-61-420-001

(2) If they are not installed, install the cable WFFA [48] and cable WFFB [48] on the flap control unit assembly [9] as follows:

(a) Remove the bolts [45], washers [46], and drum guard [44] from the flap control unit assembly [9].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Put the cable WFFA [48] and cable WFFB [48] in their location on the cable drum [43].

1) Wrap the cable WFFA [48] around the cable drum [43] 1/2 turns.

2) Wrap the cable WFFB [48] around the cable drum [43] 1 1/2 turn.

(c) Install the cotter pins [47] to hold the cable WFFA [48] and cable WFFB [48] on the cable drum [43].

(d) Put the drum guard [44] in its location on the flap control unit assembly [9].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(e) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [45].

(f) Install the bolts [45] and washers [46] to attach the drum guard [44].

H. Flap Control Unit Installation

SUBTASK 27-51-61-420-002

(1) Install the flap control unit assembly [9].

(a) Make sure that the area around four of the seven holes for the bolts [15] on the flap control unit assembly [9] is clean for electrical bonding.

(b) Apply a layer of sealant, A00247, to the mating surface of the flap control unit assembly [9] and the structure.

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(c) Apply a layer of Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [41].

(d) Lift the flap control unit assembly [9] to its position.

(e) Install the bolts [41] and washers [42] to attach the flap control unit assembly [9].

(f) Install the bolts [15] and washers [14] from above to attach the flap control unit assembly [9] (Figure 401).

(g) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the resistance between the flap control unit assembly [9] and the structure is 0.008 ohm (8 milliohms) or less.

(h) Apply a bead of sealant, A02315, to the heads of the bolt [15].

SIA 006-014

SUBTASK 27-51-61-320-001

(2) Make sure that the clearance between the gusset of the flap control unit assembly [9] and the head of the fastener is not less than 0.010 in. (0.254 mm) (Figure 403).

(a) If the clearance is less than 0.010 in. (0.254 mm), do the following steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SIA 006-014 (Continued)

CAUTION REMOVE MINIMUM MATERIAL WHEN YOU BLEND THE GUSSET OF THE FLAP CONTROL UNIT. DO NOT EXTEND THE BLEND AROUND THE GUSSET. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT CAN OCCUR.

1) Use 240 grit or finer abrasive paper, G50077, on the gusset of the flap control unit assembly [9] to achieve a minimum clearance of 0.010 in. (0.254 mm).
2) Apply coating, C00064, to the reduced gusset of the flap control unit assembly [9].
3) Apply two coats of primer, C00259, to the reduced gusset of the flap control unit assembly [9].
4) Apply sealant, A00247, to the reduced gusset of the flap control unit assembly [9].

SIA ALL

SUBTASK 27-51-61-420-003

(3) Install the quadrant [5] on the flap control unit assembly [9] (Figure 401).
   (a) Put the quadrant [5] in its position on the input shaft [12] for the flap control unit assembly [9].
   (b) Apply grease, D00633, to the threads on the input shaft [12].
   (c) Install the washer [17] and nut [11] on the input shaft [12].
   (d) Tighten the nut [11] to 250 in-lb (28.2 N·m) - 300 in-lb (33.9 N·m) more than the run-on torque.

SUBTASK 27-51-61-420-004

(4) Connect the cable assembly WFA [1] and cable assembly WFB [1] to the quadrant [5].
   (a) Put the flap control lever [18] in the rigged position.
      1) Put a 0.190 ±0.005 in. (4.826 ±0.127 mm) thick rigging block between the detent pin on the flap control lever [18] and the upstop on the detent plate.
         a) Make sure that the rigging block does not go into the flap UP detent.
      2) Install a clamp to hold the quadrant [5] against the aft side of the stop [13] on the flap control unit assembly [9].
   (b) Put the cable assembly WFA [1] and cable assembly WFB [1] in its position on the quadrant [5].

      NOTE: The cable assembly WFA [1] and the cable assembly WFB [1] attaches to the quadrant [5] in two locations. There is a loop of cable that goes through the straps [10].

   (c) Install the pins [4] and straps [10] to attach the cable assembly WFA [1] and cable assembly WFB [1] to the quadrant [5].
   (d) Install the pin [6], spacers [7], and pin [8] on the quadrant [5].
   (e) Use a cable tensionmeter, STD-6394, to adjust the turnbuckles [3] to tighten the cable assembly WFA [1] and cable assembly WFB [1] until the tension is 275 ±15 lb (125 ±7 kg).

      NOTE: You will adjust the cable assembly WFA [1] and the cable assembly WFB [1] to the final tension and remove the tools from the flap control unit during the flap control unit adjustment procedure.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-61-420-005

(5) Connect the hydraulic lines (Figure 402).

(a) Remove the plugs from the ports of the leading edge control valve [35] and trailing edge control valve [34].

(b) Remove the caps/plugs, STD-14686, from the hydraulic lines.

(c) Connect hydraulic line [23], hydraulic line [24], hydraulic line [25], and hydraulic line [26] to the leading edge control valve [35].

1) Tighten the B-nuts on the hydraulic line [23], hydraulic line [24], and hydraulic line [25] to 500 ±25 in-lb (56 ±3 N·m).

2) Tighten the B-nut on the hydraulic line [26] to 280 ±14 in-lb (32 ±2 N·m).

(d) Connect the hydraulic line [27], hydraulic line [28], hydraulic line [29], hydraulic line [30], and hydraulic line [32] to the trailing edge control valve [34].

1) Tighten the B-nuts on the hydraulic line [27] and hydraulic line [32] to 500 ±25 in-lb (56 ±3 N·m).

2) Tighten the B-nuts on the hydraulic line [29] and hydraulic line [30] to 270 ±14 in-lb (31 ±2 N·m).

3) Tighten the B-nut on the hydraulic line [28] to 280 ±14 in-lb (32 ±2 N·m).

SUBTASK 27-51-61-210-001

(6) Before you connect the electrical connector [33], examine the connector for corrosion.

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS WHERE DEICING FLUID THAT CONTAIN POTASSIUM FORMATE IS USED. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(a) If there was corrosion, correct the problem (SWPM 20-60-03).

(b) Apply the D5026NS or ZC-026 compound, G50171, to the connector (SWPM 20-60-03).

SUBTASK 27-51-61-420-006

(7) Connect the electrical connector [33] to the trailing edge control valve [34].

SUBTASK 27-51-61-420-007

(8) Connect the cable WFFA [48] and cable WFFB [48] at the turnbuckles [50].

(a) Make sure that the flap power drive unit [54] is in the rigged position.

1) Make sure that the black rig mark on the cable drum [52] extends past the white cable guard [53] a minimum of 0.03 in. (0.76 mm) on each side.

WARNING

DO NOT RETRACT THE POWER DRIVE UNIT PAST THE RIG MARK IN THE UP DIRECTION. YOU CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

2) If the power drive unit [54] is not in the rigged position, use the manual drive to move the power drive unit [54].

(b) Connect the cable WFFA [48] and cable WFFB [48] to the cables [51] at the turnbuckles [50].

NOTE: Cable WFFA is the lower cable [51].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Use a cable tensionmeter, STD-6394, to adjust the turnbuckles [50] to tighten the cable WFFA [48] and cable WFFB [48] until the tension is 125 ±10 lbf (556 ±45 N).

NOTE: You will adjust the cable WFFA [48] and the cable WFFB [48] to the final tension during the flap control system adjustment procedure.

SUBTASK 27-51-61-820-002

(9) Do this task: Trailing Edge Flap Control System Adjustment and Test, TASK 27-51-00-820-801.

NOTE: This task includes the adjustment of the cables, the removal of the rig pin and the clamp from the flap control unit assembly [9] and the removal of the rigging tool from the flap control lever.

SUBTASK 27-51-61-420-008

(10) Install the locking clips [2] on the turnbuckles [3] for cable assembly WFA [1] and cable assembly WFB [1] (Figure 401).

SUBTASK 27-51-61-420-009

(11) Install the locking clips [49] on the turnbuckles [50] for cable WFFA [48] and cable WFFB [48] (Figure 402).

SUBTASK 27-51-61-420-010

(12) Install the flap limit switches [39] in the flap control unit assembly [9] as follows:

(a) For the Landing Warning Switch, S138, do this task: Flap Landing Warning Switch Installation, TASK 31-51-01-400-801.

(b) For the Flap UP limit switch, S245, Flap DOWN limit switch, S246, and Flap UP limit switch, S1051, do this task: Flap Limit Switch Installation, TASK 27-51-63-400-801.

SUBTASK 27-51-61-420-011

(13) Do the adjustment of the flap limit switches [39] in the flap control unit assembly [9] as follows:

(a) For the Landing Warning Switch, S138, do this task: Flap Landing Warning Switch Adjustment and Test, TASK 31-51-01-820-801.

(b) For the Flap UP limit switch, S245, Flap DOWN limit switch, S246, and Flap UP limit switch, S1051, do this task: Flaps Limit Switch Adjustment, TASK 27-51-63-820-801.

SUBTASK 27-51-61-410-001

(14) Close this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-51-61-410-005

(15) Close this access panel:

(Nose Wheel Well Access Panels Installation, TASK 53-14-01-420-801, Cabin Pressure Leak Test, TASK 05-51-91-790-801)

Number	Name/Location

SUBTASK 27-51-61-860-004

(16) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-61-730-001

(17) Do this task: Trailing Edge Flap System Test, TASK 27-51-00-730-801.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-61-410-002

(1) Install the lower pan [37] on the flap control unit assembly [9].

(a) Put the lower pan [37] in its location on the flap control unit assembly [9].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the screws [36].

(c) Install the washers [55] and screws [36] to attach the lower pan [37].

SUBTASK 27-51-61-410-003

(2) Install the switch cover [31] on the flap control unit assembly [9].

(a) Put the switch cover [31] in its location on the flap control unit assembly [9].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the screws [40].

(c) Install the washers [56] and screws [40] to attach the switch cover [31].

SUBTASK 27-51-61-410-004

(3) Install the floor panel above the flap control unit assembly [9] (TASK 53-21-00-400-801).

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP CONTROL QUADRANT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Flap control quadrant removal

(2) Flap control quadrant installation.

TASK 27-51-62-000-801

2. Flap Control Quadrant Removal

(Figure 401)

53-14-01-020-801	Nose Wheel Well Access Panels Removal (P/B 401)
53-21-00-000-801	Passenger Cabin Floor Panel Removal (P/B 401)

B. Location Zones

Zone	Area
114	Area Above and Outboard of Nose Landing Gear Wheel Well - Right
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
240	Subzone - Passenger Compartment - Body Station 663.75 to Body Station 1016.00

C. Access Panels

Number	Name/Location
112A	Forward Access Door
114AC	Fwd Nose Wheel Well Upper Access Panel

D. Prepare for the Removal

SUBTASK 27-51-62-860-001

(1) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-62-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-62-040-001

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-62-010-001

(4) Remove the floor panel to get access to the top of the flap control unit [9], do this task: Passenger Cabin Floor Panel Removal, TASK 53-21-00-000-801.

NOTE: The floor panel is located between stations 706 and 727B on the right side of the airplane.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Flap Control Quadrant Removal

SUBTASK 27-51-62-020-001

(1) Disconnect the cable assembly WFA [1] and cable assembly WFB [1] from the quadrant [5].

(a) To get access to the turnbuckles [3], do this task:

Open this access panel:

Number	Name/Location
112A	Forward Access Door

or remove this access panel:

Number	Name/Location
114AC	Fwd Nose Wheel Well Upper Access Panel

1) Do this task: Nose Wheel Well Access Panels Removal, TASK 53-14-01-020-801.

(b) Remove the locking clips [2] and loosen the turnbuckles [3] on the cable assembly WFA [1] and cable assembly WFB [1].

(c) Remove the pin [8], pin [6], and the two spacers [7] from the quadrant [5].

(d) Remove the straps [10] that attach the cable assembly WFA [1] and cable assembly WFB [1] to the quadrant [5].

(e) Remove the pins [4] that attach the cable assembly WFA [1] and cable assembly WFB [1] to the quadrant [5].

(f) Remove the cable assembly WFA [1] cable assembly WFB [1] from the quadrant [5].

SUBTASK 27-51-62-020-002

(2) Remove the quadrant [5] from the flap control unit [9].

(a) Remove the nut [11] and washer [15] that attach the quadrant [5] to the flap control unit [9].

(b) Remove the quadrant [5] from the flap control unit [9].

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Flap Control Quadrant Installation

SUBTASK 27-51-62-820-001

(1) Install the rig pin [18] in the flap control unit [9].

NOTE: This will make sure the flap control unit [9] is in the adjusted position.

(a) Remove the screws [16] and washers [21], and the lower pan [17] from the flap control unit [9].

(b) Install the rig pin [18] through the cam follower arm and the valve cam.

1) Use rig pin, F70207-116, SPL-12421, from the rigging pin kit, SPL-1585.

SUBTASK 27-51-62-420-001

(2) Install the quadrant [5] on the flap control unit [9].

(a) Put the quadrant [5] in its position on the input shaft [12] for the flap control unit [9].

(b) Apply grease, D00633, to the threads on the input shaft [12].

(c) Install the washer [15] and nut [11] on the input shaft [12].

(d) Tighten the nut [11] to 250 in-lb (28.2 N·m) to 300 in-lb (33.9 N·m) more than the run-on torque.

SUBTASK 27-51-62-420-002

(3) Connect the cable assembly WFA [1] and cable assembly WFB [1] to the quadrant [5].

(a) Put the flap control lever [19] in the rigged position:

1) Put a 0.19 in. (4.83 mm) thick rigging block [20] between the detent pin on the flap control lever [19] and the upstop on the detent plate.

NOTE: Make sure that rigging block [20] does not go into the flap UP detent.

2) Install a clamp to hold the quadrant [5] against the aft side of the stop [13] on the flap control unit [9].

(b) Put the cable assembly WFA [1] and cable assembly WFB [1] in its position on the quadrant [5].

NOTE: The cable assembly WFA [1] and cable assembly WFB [1] attaches to the quadrant [5] in two locations. There is a loop of cable that goes through the straps [10].

(c) Install the pins [4] and straps [10] to attach the cable assembly WFA [1] and cable assembly WFB [1] to the quadrant [5].

(d) Install the pin [6], spacers [7], and pin [8] on the quadrant [5].

(e) Use the turnbuckles [3] to tighten the cable assembly WFA [1] and cable assembly WFB [1] until the tension is 275 ±15 lb (125 ±7 kg).

NOTE: You will adjust the cable assembly WFA [1] and cable assembly WFB [1] to the final tension and remove the tools from the flap control unit during the flap control system adjustment procedure.

SUBTASK 27-51-62-820-002

(4) Do this task: Trailing Edge Flap Control System Adjustment and Test, TASK 27-51-00-820-801.

NOTE: This task includes the removal of the rig pin and the clamp from the flap control unit [9] and the removal of the rigging tool from the flap control lever.

SUBTASK 27-51-62-420-003

(5) Install the locking clips [2] on the turnbuckles [3] for cable assembly WFA [1] and cable assembly WFB [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-62-410-001

(1) Install the lower pan [17] on the flap control unit [9]:

(a) Put the lower pan [17] in its location on the flap control unit [9].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the screws [16].

(c) Install the washers [21] and screws [16] to attach the lower pan [17].

SUBTASK 27-51-62-410-002

(2) To get access to the turnbuckles [3], do this task:

Close this access panel:

Number	Name/Location
112A	Forward Access Door

or install this access panel:

Number	Name/Location
114AC	Fwd Nose Wheel Well Upper Access Panel

(a) Do this task: Nose Wheel Well Access Panels Installation, TASK 53-14-01-420-801.

(b) Do this task: Cabin Pressure Leak Test, TASK 05-51-91-790-801.

SUBTASK 27-51-62-410-003

(3) Install the floor panel above the flap control unit [9], do this task: Passenger Cabin Floor Panel Installation, TASK 53-21-00-400-801.

SUBTASK 27-51-62-080-001

(4) If the downlock pins are installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Removal, TASK 32-00-01-080-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP LIMIT SWITCHES - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Flap Limit Switch Removal

(2) Flap Limit Switch Installation.

B. This procedure is applicable to these switches on the flap control unit:

(1) S245 TE Flaps UP Switch

(2) S246 TE Flaps DOWN Switch

(3) S1051 TE Flaps UP Switch

C. The S138 Landing Warning Switch is also installed on the flap control unit. The removal procedure is covered in (TASK 31-51-01-000-801).

TASK 27-51-63-000-801

2. Flap Limit Switch Removal

(Figure 401)

A. General

(1) This task is applicable to the TE Flaps UP switch, S245, the TE Flaps DOWN switch, S246 and the TE Flaps UP switch S1051.

B. References

Reference	Title

SUBTASK 27-51-63-010-001

(2) Remove the switch cover [8] from the flap control unit [1]:

(a) Remove the screws [7] and washers [21] that attach the switch cover [8].

(b) Remove the switch cover [8] from the flap control unit [1].

SUBTASK 27-51-63-860-003

(3) Disconnect the electrical connectors [6] from the applicable limit switch:

SUBTASK 27-51-63-020-001

(4) Use FCU limit switch wrench, SPL-4962 to remove the limit switch [9]:

(a) Remove the roller guide lock ring [12] from the roller guide [11].

(b) Remove the roller guide [11] from the limit switch [9].

(c) Remove the nut [13] and washer [14] from the limit switch [9].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Remove the limit switch [9] with the nut [13] and washer [15] from the flap control unit [1].

(e) Put the nut [13], washer [14], roller guide [11], and the roller guide lock ring [12] on the limit switch [9] to keep the parts together.

SUBTASK 27-51-63-020-002

(5) Use FCU limit switch wrench, SPL-4962 to remove the limit switch [10]:

(a) Remove the roller guide lock ring [17] from the roller guide [16].

(b) Remove the roller guide [16] from the limit switch [10].

(c) Remove the nut [18] and washer [19] from the limit switch [10].

(d) Remove the limit switch [10] with the nut [18] and washer [20] from the flap control unit [1].

(e) Put the nut [18], washer [19], roller guide [16], and the roller guide lock ring [17] on the limit switch [10] to keep the parts together.

G. Flap Limit Switch Installation

SUBTASK 27-51-63-420-001

(1) Use FCU limit switch wrench, SPL-4962 to install the limit switch [9]:

(a) Remove the roller guide lock ring [12], roller guide [11], nut [13], and washer [14] from the limit switch [9].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Put the limit switch [9] with the washer [15] and nut [13] in its location on the flap control unit [1].

1) Install the outer nut [13] with three threads showing as a good start point.

NOTE: The tang washer [15] points in the direction of the flap control unit.

(c) Install the washer [14] and nut [13] to hold the limit switch [9] in its position.

(d) Put the roller guide [11] in its position on the limit switch [9].

(e) Install the roller guide lock ring [12] to hold the roller guide [11] in its position.

SUBTASK 27-51-63-420-002

(2) Use FCU limit switch wrench, SPL-4962 to install the limit switch [10]:

(a) Remove the roller guide lock ring [17], roller guide [16], nut [18], and washer [19] from the limit switch [10].

(b) Put the limit switch [10] with the washer [20] and nut [18] in its location on the flap control unit [1].

1) Install the outer nut [18] with three threads showing as a good start point.

NOTE: The tang washer [20] points in the direction of the flap control unit.

(c) Install the washer [19] and nut [18] to hold the limit switch [10] in its position.

(d) Put the roller guide [16] in its position on the limit switch [10].

(e) Install the roller guide lock ring [17] to hold the roller guide [16] in its position.

SUBTASK 27-51-63-760-001

(3) Measure resistance between the limit switch and the flap control unit [1] with a intrinsically safe approved bonding meter, COM-1550.

(a) Make sure that the resistance between the limit switch and the flap control unit [1] is less than 2.5 milliohms.

SUBTASK 27-51-63-860-004

(4) Attach the electrical wires for the limit switch:

(a) Connect the connectors [6] to the switches at the flap control unit [1].

SUBTASK 27-51-63-860-005

(5) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-1

SUBTASK 27-51-63-820-001

(6) Adjust the applicable limit switch [9] or limit switch [10]. To adjust the limit switch, do this task: Flaps Limit Switch Adjustment, TASK 27-51-63-820-801.

SUBTASK 27-51-63-420-003

(7) Install lockwire on the nuts [18] for the limit switch [10].

SUBTASK 27-51-63-420-004

(8) Install lockwire on the nuts [13] for the limit switch [9].

SUBTASK 27-51-63-410-001

(9) Install the switch cover [8] on the flap control unit [1]:

(a) Put the switch cover [8] in its location on the flap control unit [1].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the screws [7].

(c) Install the washer [21] and screws [7] that attach the switch cover [8].

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-63-440-001

(1) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-51-63-720-001

(2) Do the applicable test of the limit switch:

(a) For the TE Flap UP switch [9], S245, do this task: Flaps UP Limit Switch, S245 Functional Test, TASK 27-51-63-720-801.

(b) For the TE Flap Down switch [10], S246, do this task: Flaps DOWN Limit Switch, S246 Functional Test, TASK 27-51-63-720-802.

(c) For the TE Flap UP switch [9], S1051, do this task: Flaps UP Limit Switch, S1051 Operational Test, TASK 27-51-63-710-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP LIMIT SWITCHES - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) Flaps Limit Switch Adjustment

(2) Flaps UP Limit Switch, S245 Functional Test

(3) Flaps DOWN Limit Switch, S246 Functional Test

(4) Flaps UP Limit Switch, S1051 Operational Test.

TASK 27-51-63-820-801

2. Flaps Limit Switch Adjustment

(Figure 501)

A. General

(1) This task is applicable to the TE Flaps UP switch, S245, the TE Flaps DOWN switch, S246, and the TE Flaps UP switch, S1051.

(2) The flap drive system and the cables must be correctly adjusted before you do this task.

E. Prepare for the Adjustment

SUBTASK 27-51-63-860-006

(1) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-63-480-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-63-040-002

(3) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-51-63-010-002

(4) Remove the switch cover [3] from the flap control unit [1]:

(a) Remove the screws [2] and washers [11] that attach the switch cover [3].

(b) Remove the switch cover [3] from the flap control unit [1].

F. Flaps UP Limit Switch S245 Adjustment

SUBTASK 27-51-63-860-007

(1) Move the trailing edge flaps until the Dimension X on the Number 4 or 5 ballscrew is 0.79 ±0.03 in. (20.07 ±0.77 mm) (TASK 27-51-00-860-803).

NOTE: You will only extend the trailing edge flaps a small distance to get to this position. Do not disconnect the torque tubes from the power drive unit to extend the flaps.

SUBTASK 27-51-63-820-002

(2) Adjust the position of the Flaps UP limit switch [4], S245:

(a) Loosen the nuts [8] on the limit switch [4].

(b) Remove the MS20995C32 lockwire, G01048, from the nuts [8] (TASK 20-10-44-000-801).

(c) Turn the inner nut [8] on the limit switch [4] so that the switch roller moves away from the cam [6].

NOTE: It is necessary to move the limit switch [4] away from the cam [6] for the first part of the adjustment. There will be no continuity through the switch pins 'A' and 'C' when the switch operates.

(d) Do a check for no continuity between pin 12 and ground at connector D46044P.

NOTE: There will be no continuity between pins 'A' and 'C' on the limit switch [4] while not depressed against the cam [6].

(e) Turn the inner nut [8] on the limit switch [4] so that the switch roller moves toward the cam [6].

NOTE: Move the limit switch [4] toward the cam [6] until there is continuity through the switch pins 'A' and 'C'.

(f) Do a check for continuity between pin 12 and ground at connector D46044P.

NOTE: There will be no continuity between pins 'A' and 'C' on the limit switch [4] until it is depressed against the cam [6].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Turn the inner nut [8] on the limit switch [4] so that the switch roller moves away from the cam [6] and there is no continuity through the pins.

(h) Make sure that the limit switch [4] is in the correct position:

1) Pull the cable [12] WFFB to the side to turn the cam [6] slightly in the extend direction.

NOTE: Pull on the cable to deflect it approximately 1.2 in. (30.48 mm). Cable WFFB cable [12] is the upper cable between the flap power drive unit and the flap control unit [1].

2) Make sure that there is continuity between the pins.

3) Pull the cable [12] WFFA to the side to turn the cam [6] slightly in the retract direction.

NOTE: Pull on the cable to deflect it approximately 1.2 in. (30.48 mm). Cable WFFA cable [12] is the lower cable between the flap power drive unit and the flap control unit [1].

4) Make sure that there is no continuity between the pins.

5) Adjust the nuts [8] until the limit switch [4] is in the correct position.

(i) Tighten the nuts [8] on the limit switch [4].

(j) Install MS20995C32 lockwire, G01048, on the nuts [8] (TASK 20-10-44-400-801).

(k) Fillet seal the switch between the switch body and the wall of the flap control unit [1] with sealant, A02315.

SUBTASK 27-51-63-730-001

(3) Do the test of the Flaps UP limit switch [4], S245 (TASK 27-51-63-720-801).

G. Flaps UP Limit Switch S1051 Adjustment

SUBTASK 27-51-63-860-008

(1) Move the trailing edge flaps until the Dimension X on the Number 4 or 5 ballscrew is 1.18 ±0.03 in. (29.97 ±0.76 mm) (TASK 27-51-00-860-803).

NOTE: This position is approximately 1 1/2 turn of the ballscrew from the upstop. Do not disconnect the torque tubes from the power drive unit to extend the flaps.

SUBTASK 27-51-63-820-003

(2) Adjust the position of the Flaps UP limit switch [4], S1051:

(a) Remove the MS20995C32 lockwire, G01048, from the nuts [8] (TASK 20-10-44-000-801).

(b) Loosen the nuts [8] on the limit switch [4].

(c) Turn the inner nut [8] on the limit switch [4] so that the switch roller moves away from the cam [6].

NOTE: It is necessary to move the limit switch [4] away from the cam [6] for the first part of the adjustment. There will be no continuity through the switch pins 'A' and 'C'.

(d) Do a check for no continuity between pins 5 and 15 at connector D46040P.

NOTE: There will be no continuity between pins 'A' and 'C' on the limit switch [4] while not depressed against the cam [6].

(e) Turn the inner nut [8] on the limit switch [4] so that the switch roller moves toward the cam [6].

NOTE: Move the limit switch [4] toward the cam [6] until there is continuity through the switch pins 'A' and 'C'.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Do a check for continuity between pin 5 and 15 at connector D46040P.

NOTE: There will be no continuity between pins 'A' and 'C' on the limit switch [4] until depressed against the cam [6].

(g) Turn the inner nut [8] on the limit switch [4] so that the switch roller moves away from the cam [6] and there is no continuity through the pins.

(h) Make sure that the limit switch [4] is in the correct position:

1) Pull the cable [12] WFFB to the side to turn the cam [6] slightly in the extend direction.

NOTE: Pull on the cable to deflect it approximately 1.2 in. (30.48 mm). Cable WFFB cable [12] is the upper cable between the flap power drive unit and the flap control unit [1].

2) Make sure that there is continuity between the pins.

3) Pull the cable [12] WFFA to the side to turn the cam [6] slightly in the retract direction.

NOTE: Pull on the cable to deflect it approximately 1.2 in. (30.48 mm). Cable WFFA cable [12] is the lower cable between the flap power drive unit and the flap control unit [1].

4) Make sure that there is no continuity between the pins.

5) Adjust the nuts [8] until the limit switch [4] is in the correct position.

(i) Tighten the nuts [8] on the limit switch [4].

(j) Install MS20995C32 lockwire, G01048, on the nuts [8] (TASK 20-10-44-400-801).

(k) Fillet seal the switch between the switch body and the wall of the flap control unit [1] with sealant, A02315.

SUBTASK 27-51-63-730-002

(3) Do the test of the Flaps UP limit switch [4], S1051 (TASK 27-31-00-700-802).

SUBTASK 27-51-63-710-001

(4) Do the test of the Flaps UP limit switch [4], S1051 (TASK 29-22-00-710-801).

SUBTASK 27-51-63-710-002

(5) Do a test of the ram air door function:

(a) Put the L PACK and R PACK switches to the OFF position.

(b) Make sure that the applicable air conditioning pack is OFF for more than 30 minutes.

WARNING MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE TRAILING EDGE FLAPS, AND THE LEADING EDGE FLAPS AND SLATS. THESE SURFACES WILL MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(c) Extend the trailing edge flaps to the 1-unit position (TASK 27-51-00-860-803).

(d) Disconnect the D15832 (D15836) connector from the left (right) flow control and shutoff valve.

WARNING OBEY THE PROCEDURE THAT PUTS THE AIRPLANE IN THE AIR MODE. IF YOU DO THE PROCEDURE INCORRECTLY, INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT CAN OCCUR.

(e) Do this task: Put the Airplane in the Air Mode, TASK 32-09-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Make sure that the ram air deflector door closes.

(g) Retract the trailing edge flaps to full up position (TASK 27-51-00-860-804).

(h) Make sure that the left (right) ram air inlet doors close.

(i) Remove the electrical connector D3916 (D3918) from the left (right) ram air temp sensor.

NOTE: The actuator will retract when the connector is removed.

(j) Make sure that the left (right) ram air inlet doors open.

(k) Reconnect the D3916 (D3918) connector from the left (right) ram air temperature sensor.

(l) Reconnect the D15832 (D15836) connector to the left (right) flow control valve.

(m) Do this task: Return the Airplane to the Ground Mode, TASK 32-09-00-860-802.

H. Flaps Down Limit Switch S246 Adjustment

SUBTASK 27-51-63-860-009

(1) Move the trailing edge flaps until the Dimension X on the Number 4 or 5 ballscrew is 11.9 ±0.0 in. (302.26 ±0.76 mm) (TASK 27-51-00-860-803).

NOTE: The trailing edge flaps will be in approximately the 40-unit position. Do not disconnect the torque tubes from the power drive unit to extend the flaps.

SUBTASK 27-51-63-820-004

(2) Adjust the position of the Flaps DOWN limit switch [5], S246:

NOTE: It is necessary to move the limit switch [5] away from the cam for the adjustment. There should not be any continuity through the switch pins 1 and 3 when the flaps are approximately in the 40-unit position.

(a) Loosen the nuts [10] on the limit switch [5].

(b) Remove the MS20995C32 lockwire, G01048, from the nuts [10] (TASK 20-10-44-000-801).

(c) Use the nuts [10] to adjust the position of the limit switch [5] until the switch is depressed against the cam [6] and there is continuity between pins 1 and 3 of the limit switch [5].

(d) Carefully loosen the inside nut [10], and then tighten the outside nut [10] to move the limit switch [5] away from the cam [6] until there is no continuity through the pins.

(e) Make sure that the limit switch [5] is in the correct position:

1) Pull the cable [12] WFFA to the side to turn the cam [6] slightly in the retract direction.

NOTE: Pull on the cable to deflect it approximately 1.2 in. (30.48 mm). WFFA cable [12] is the lower cable between the flap power drive unit and the flap control unit [1].

2) Make sure that there is continuity between the pins.

3) Pull the cable [12] WFFB to the side to turn the cam [6] slightly in the extended direction.

NOTE: Pull on the cable to deflect it approximately 1.2 in. (30.48 mm). WFFB cable [12] is the upper cable between the flap power drive unit and the flap control unit [1].

4) Make sure that there is no continuity between the pins.

5) Adjust the nuts [10] until the limit switch [5] is in the correct position.

(f) Tighten the nuts [10] on the limit switch [5], 15 in-lb (2 N·m) to 45 in-lb (5 N·m)).

(g) Install the MS20995C32 lockwire, G01048, on the nuts [10] (TASK 20-10-44-400-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(h) Fillet seal with sealant, A02315

SUBTASK 27-51-63-730-003

(3) Do the test of the Flaps DOWN limit switch [5], S246 (TASK 27-51-63-720-802).

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-63-410-002

(1) Install the switch cover [3] on the flap control unit [1]:

(a) Put the switch cover [3] in its location on the flap control unit [1].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the screws [2].

(c) Install the washers [11] and screws [2] that attach the switch cover [3].

SUBTASK 27-51-63-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

117A	Electronic Equipment Access Door

E. Prepare for the Functional Test

SUBTASK 27-51-63-010-003

(1) To get access to the Electronic Equipment Center, do this step:

(a) Open this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-51-63-860-011

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Supply system B hydraulic power (TASK 29-11-00-860-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Flaps UP Limit Switch, S245 Functional Test

SUBTASK 27-51-63-860-012

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Move the flap control lever to the 1-unit position.

(a) Wait for the flaps and slats to move to the 1-unit position.

SUBTASK 27-51-63-710-003

(2) Move the ALTERNATE FLAPS ARM switch to the ARM position.

SUBTASK 27-51-63-710-004

(3) Move the ALTERNATE FLAPS control switch to the UP position and hold it until the trailing edge flaps stop moving.

SUBTASK 27-51-63-740-001

(4) Use the FSEU to do a check of the position of the trailing edge flaps:

(a) Push the ON/OFF button on the front panel of the FSEU to turn the display on.

NOTE: The display will show EXISTING FAULTS?.

(b) Push the down arrow until OTHER FUNCTNS? shows on the display.

(c) Push the YES button to select OTHER FUNCTNS? on the FSEU.

(d) Push the down arrow until I/O MONITOR? shows on the display.

(e) Push the YES button to select I/O MONITOR? from the menu.

(f) Push the down arrow until SYNCRO INPUTS? shows on the display.

(g) Push the YES button to select SYNCHRO INPUTS? from the menu.

(h) Push the down arrow to find the L FL POS and R FL POS indications on the menu.

(i) Make sure that the L FL POS and R FL POS indications are in the limit of -1.2 to 4.7.

(j) Push the ON/OFF button on the front panel of the FSEU to turn the front panel display off.

SUBTASK 27-51-63-860-013

(5) Move the flap control lever to the UP position to agree with the position of the flaps.

SUBTASK 27-51-63-710-005

(6) Move the ALTERNATE FLAPS ARM switch to the OFF position.

SUBTASK 27-51-63-720-002

(7) Align the air data inertial reference system (TASK 34-21-00-820-802 or TASK 34-21-00-820-801 or TASK 34-21-00-820-803).

(a) Do a test of the stall management yaw damper (SMYD) function of the S245 flap limit switch.

(b) Push the ON/OFF button on the SMYD 1 and 2 BITE panel to turn on the BITE display.

(c) Make sure that the SMYD BITE display shows EXISTING FAULTS?.

(d) Push the down arrow button to the selection GROUND TESTS?.

(e) Push the YES button.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Push the down arrow button to the selection DISCRETE INPUTS?.

(g) Push the YES button.

(h) Push the down arrow button as necessary until the display shows FLAP UP = UP.

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(i) Move the flap control lever to the 1-unit position.

1) Wait for the flaps and slats to move to the 1-unit position.

(j) Make sure that the SMYD BITE display shows FLAP UP = NOT UP.

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(k) Move the flap control lever to the UP position.

(l) Make sure that the SMYD BITE display shows FLAP UP = UP.

(m) Push the ON/OFF button on the SMYD 1 and 2 BITE panel to turn off the BITE display.

SUBTASK 27-51-63-720-003

(8) Do this task:Stabilizer Trim Motor Test, TASK 27-41-71-700-801.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-63-860-014

(1) Remove system B hydraulic power (TASK 29-11-00-860-805).

SUBTASK 27-51-63-940-001

(2) Close this access door:

SUBTASK 27-51-63-010-004

(1) To get access to the Electronic Equipment Center, do this step:

(a) Open this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-51-63-860-016

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Supply system B hydraulic power (TASK 29-11-00-860-801).

F. Flaps DOWN Limit Switch, S246 Test

SUBTASK 27-51-63-860-017

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Move the flap control lever to the 30-unit position.

(a) Wait for the flaps to move to the 30-unit position.

SUBTASK 27-51-63-710-006

(2) Move the ALTERNATE FLAPS ARM switch to the ARM position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-63-860-018

(3) Move the flap control lever to the 40-unit position.

(a) Make sure that the flaps do not move when you move the flap control lever.

SUBTASK 27-51-63-710-007

(4) Move the ALTERNATE FLAPS control switch to the DOWN position and hold it until the trailing edge flaps stop moving.

SUBTASK 27-51-63-740-002

(5) Use the FSEU to do a check of the position of the trailing edge flaps:

(a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?

(b) Push the down arrow until OTHER FUNCTNS? shows on the display.

(c) Push the YES button to select OTHER FUNCTNS? on the FSEU.

(d) Push the down arrow until I/O MONITOR? shows on the display.

(e) Push the YES button to select I/O MONITOR? from the menu.

(f) Push the down arrow until SYNCHRO INPUTS? shows on the display.

(g) Push the YES button to select SYNCHRO INPUTS? from the menu.

(h) Push the down arrow to find the L FL POS and R FL POS indications.

(i) Make sure that the L FL POS and R FL POS indications are in the limit of 259.9 to 270.3.

(j) Push the ON/OFF button on the front panel of the FSEU to turn the front panel display off.

SUBTASK 27-51-63-710-008

(6) Move the ALTERNATE FLAPS ARM switch to the OFF position.

SUBTASK 27-51-63-860-019

(7) Move the flap control lever to the UP position to retract the flaps.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-63-860-020

(1) Remove system B hydraulic power (TASK 29-11-00-860-805).

SUBTASK 27-51-63-940-002

(2) Close this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

——— END OF TASK ———

TASK 27-51-63-710-801

5. Flaps UP Limit Switch, S1051 Operational Test

(Figure 502)

A. General

(1) This task is applicable to the operational test of the Power Transfer Unit (PTU), related to the TE Flaps UP Limit Switch, S1051.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

B. References

211	Flight Compartment - Left
212	Flight Compartment - Right

D. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

E. Prepare for the Operational Test

SUBTASK 27-51-63-010-005

(1) To get access to the Electronic Equipment Center, do this step:

(a) Open this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-51-63-210-001

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(2) Make sure that the flaps are fully UP.

SUBTASK 27-51-63-860-022

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(3) Pressurize the hydraulic reservoirs (TASK 29-09-00-860-801).

SUBTASK 27-51-63-210-002

(4) Make sure that the two Stall Warning Vanes (AOA) are at the ZERO position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-63-860-023

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(5) Pressurize hydraulic system A (TASK 29-11-00-860-801).

SUBTASK 27-51-63-860-024

(6) Put the airplane in the air mode (TASK 32-09-00-860-801).

(a) Make sure that the PTU does not operate.

NOTE: When the airplane is in the air mode, the engines in operation will increase to flight idle speed.

F. Flaps UP Limit Switch, S1051 Operational Test

SUBTASK 27-51-63-440-003

WARNING WHEN YOU OPEN THE P91 AND P92 PANELS, MAKE SURE THAT THE OUTER DOOR STAYS AS OPEN AS POSSIBLE. IF THE OUTER DOOR TURNS IN, THE ATTACHED DOOR COMPONENTS COULD TOUCH THE INNER DOOR COMPONENTS. THIS CAN CAUSE AN ARC CONDITION WHEN YOU SUPPLY POWER. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT AND INJURY TO PERSONNEL CAN OCCUR.

WARNING MAKE SURE THAT YOU DO NOT TOUCH THE CONDUCTORS IN THE P91 AND P92 PANELS. BE CAREFUL WHEN YOU GET ACCESS TO THE CIRCUIT BREAKERS ON THE INNER SIDE OF THE P91 AND P92 PANELS (ROW F). IF IT IS POSSIBLE, REMOVE AIRPLANE ELECTRICAL POWER FIRST. THE P91 AND P92 PANELS HAVE HIGH VOLTAGES AND CURRENTS. ELECTRICAL VOLTAGE AND CURRENT CAN KILL YOU OR CAUSE INJURIES.

(1) Remove the safety tag and close this circuit breaker:

Power Distribution Panel Number 2, P92

Row	Col	Number	Name
F	2	C01449	STANDBY HYDRAULIC PUMP

SUBTASK 27-51-63-860-032

(2) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	15	C01081	HYDRAULIC SYSTEM PTU VALVE CONT 1
A	16	C01085	HYDRAULIC SYSTEM PTU VALVE CONT 2

SUBTASK 27-51-63-710-009

(3) In the Flight Compartment, on the P5 overhead panel, put the ALTERNATE FLAPS arm switch in the ARM position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-63-710-010

(4) On the P5 overhead panel, hold the ALTERNATE FLAPS control switch to the DOWN position until the flaps position indication shows flaps 1.

NOTE: The Leading Edge (LE) slats will extend to the Full Extend position. The LE flaps will extend to the Extend position.

SUBTASK 27-51-63-860-025

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(5) Move the Flap Control Lever to the 1-unit detent.

SUBTASK 27-51-63-710-011

(6) Put the ALTERNATE FLAPS arm switch in the OFF position.

(a) Make sure that the PTU operates.

NOTE: The LE slats will retract to the Extend position. The LE flaps will remain at the Extend position.

SUBTASK 27-51-63-710-012

(7) Put the ALTERNATE FLAPS arm switch in the ARM position.

SUBTASK 27-51-63-710-013

(8) Move the ALTERNATE FLAPS control switch to the UP position until the TE flaps are fully retracted.

(a) Make sure that the TE flaps are fully retracted.

(b) Make sure that the PTU does not operate.

SUBTASK 27-51-63-710-014

(9) Put the ALTERNATE FLAPS arm switch in the OFF position.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-63-860-026

(1) Remove the power from hydraulic system A (TASK 29-11-00-860-805).

SUBTASK 27-51-63-860-027

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(2) Move the Flap Control lever to the 0-unit detent.

SUBTASK 27-51-63-860-028

(3) Pressurize hydraulic system B (TASK 29-11-00-860-801).

(a) Make sure that the LE flaps and LE slats fully retract.

SUBTASK 27-51-63-860-029

(4) Remove power from hydraulic system B (TASK 29-11-00-860-805).

SUBTASK 27-51-63-860-030

(5) Put the airplane in the ground mode (TASK 32-09-00-860-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-63-410-003

(6) Close this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TRAILING EDGE FLAP CONTROL VALVE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the trailing edge flap control valve

(2) An installation of the trailing edge flap control valve

(3) A removal of the flap load limiter solenoid valve

(4) An installation of the flap load limiter solenoid valve.

B. The trailing edge flap control valve is installed on the flap control unit in the main wheel well.

TASK 27-51-65-000-801

2. Trailing Edge Flap Control Valve Removal

(Figure 401)

A. References

Reference	Title
27-51-00-860-804	Retract the Trailing Edge Flaps (P/B 201)
29-09-00-860-802	Hydraulic Reservoirs Depressurization (P/B 201)
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

B. Location Zones

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

C. Prepare for the Removal

SUBTASK 27-51-65-860-001

(1) If the trailing edge flaps are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-51-65-860-002

(2) Remove the pressure from the system B hydraulic reservoir, do this task: Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

SUBTASK 27-51-65-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

D. Trailing Edge Flap Control Valve Removal

SUBTASK 27-51-65-860-003

(1) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF

SUBTASK 27-51-65-010-001

(2) Remove the lower pan [11] from the flap control unit [1]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the screws [10] and washers [23] that attach the lower pan [11] to the flap control unit [1].

(b) Remove the lower pan [11] from the flap control unit [1].

SUBTASK 27-51-65-480-002

(3) Install the rig pin [14], F70207-116 through the cam follower arm [13] and the valve cam [12]:

SUBTASK 27-51-65-020-001

(4) Remove the flap control valve [6]:

(a) Disconnect hydraulic line [2], hydraulic line [24], tee-fitting [25], and hydraulic line [27] from the flap control valve [6].

1) Install caps on hydraulic line [2], hydraulic line [24], tee-fitting [25], and hydraulic line [27] .

2) Install plugs in the hydraulic ports of the flap control valve [6].

(b) Disconnect the electrical connector [3] from the flap control valve [6].

(c) Disconnect the flap control valve [6] from the cam follower arm [13]:

1) Remove the plug [9] from the forward side of the flap control unit [1].

2) Remove the bolt [15], washer [16], bushings [17], washer [26], and nut [18] that attach the flap control valve [6] to the cam follower arm [13].

(d) Remove the bolts [7] and washers [8] that attach the flap control valve [6] to the flap control unit [1].

(e) Remove the flap control valve [6] from the flap control unit [1].

SUBTASK 27-51-65-020-002

(5) If a new flap control valve [6] will be installed, remove the union [5], union [28], unions [29], and packings [4].

E. Trailing Edge Flap Control Valve Installation

SUBTASK 27-51-65-420-001

(1) If they are not installed, install the union [5], union [28], unions [29], and packings [4] in the ports of the flap control valve [6]:

(a) Apply hydraulic fluid, D00153, or MCS 352B fluid, D00054, to the new packings [4].

(b) Put the packings [4], union [5], union [28], and unions [29] in their location on the flap control valve [6].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-65-420-002

(2) Install the flap control valve [6] in the flap control unit [1]:

(a) Put the flap control valve [6] in its location on the flap control unit [1].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [7].

(c) Install the bolts [7] and washers [8] to attach the flap control valve [6].

(d) Install lockwire on the bolts [7].

(e) Connect the flap control valve [6] to the cam follower arm [13]:

1) Apply grease, D00633, to the inside of the bushings [17].

2) Install the bushings [17], washer [16], bolt [15], washer [26], and nut [18] that attach the flap control valve [6] to the cam follower arm [13].

3) Install the plug [9] on the forward side of the flap control unit [1].

4) Apply a bead of sealant, A00247, around the plug [9].

(f) Connect hydraulic line [2], hydraulic line [24], tee-fitting [25], and hydraulic line [27] to the flap control valve [6]:

1) Remove the caps from hydraulic line [2], hydraulic line [24], tee-fitting [25], and hydraulic line [27].

2) Remove the plugs from the hydraulic ports on the flap control valve [6].

3) Connect hydraulic line [2] and hydraulic line [27] to the flap control valve [6].

a) Tighten the B-nuts on hydraulic line [2] and hydraulic line [27] to 500 ±25 in-lb (56 ±3 N·m).

4) Connect the tee-fitting [25] to the flap control valve [6].

a) Tighten the tee-fitting [25] to 500 ±25 in-lb (56 ±3 N·m).

5) Connect hydraulic line [24] to the flap control valve [6].

a) Tighten the B-nut on hydraulic line [24] to 280 ±14 in-lb (32 ±2 N·m).

(g) Before you connect the electrical connector [3], examine the connector for corrosion (TASK 20-60-07-910-802).

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS WHERE DEICING FLUID THAT CONTAIN POTASSIUM FORMATE IS USED. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(h) Apply D5026NS or ZC-026 compound, G50171, to the connector (SWPM 20-60-03).

(i) Connect the electrical connector [3] to the flap control valve [6].

(j) Apply Ardrox AV25 compound, G50170, to the external surface of the electrical connector [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-65-080-001

(3) Remove the rig pin [14], F70207-116 from the flap control unit [1]:

SUBTASK 27-51-65-860-004

(4) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF

SUBTASK 27-51-65-860-005

(5) Use the primary system to extend and retract the trailing edge flaps.

(a) To extend and retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-65-210-001

(6) Make sure that there are no hydraulic leaks from the flap control valve [6].

SUBTASK 27-51-65-820-001

(7) Do this task: Trailing Edge Flap Control Valve Adjustment, TASK 27-51-65-820-801.

SUBTASK 27-51-65-820-005

(8) Do this task: Trailing Edge Flap System Test, TASK 27-51-00-730-801.

SUBTASK 27-51-65-820-006

(9) Do this task: Trailing Edge Flap Load Relief System BITE Test, TASK 27-51-00-740-803.

SUBTASK 27-51-65-410-001

(10) Install the lower pan [11] on the flap control unit [1]:

(a) Put the lower pan [11] in its location on the flap control unit [1].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the screws [10].

(c) Install the washers [23] and screws [10] to attach the lower pan [11] to the flap control unit [1].

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-65-610-001

(1) Service the system B hydraulic reservoir, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-51-65-000-802

4. Flap Load Limiter Solenoid Valve Removal

(Figure 401)

D00054	Fluid - Hydraulic Assembly Lubricant - MCS 352B (Formerly Monsanto MCS 352B)	
D00153	Fluid - Hydraulic Fluid, Fire Resistant (Interchangeable And Intermixable With BMS 3-11 Type V)	BMS3-11 Type IV
G50347	Lockwire - MS20995NC32, Monel - 0.032 Inch (0.8128 mm) Diameter	NASM20995

C. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
19	Gasket	27-51-65-01A-020	SIA ALL
21	Solenoid valve	27-51-65-01A-155	SIA ALL
		27-51-65-01A-160	SIA ALL
22	Packing	27-51-65-01A-015	SIA ALL

D. Location Zones

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

E. Procedure

SUBTASK 27-51-65-420-003

(1) Install solenoid valve [21] in the flap control valve [6]:

(a) Apply hydraulic fluid, D00153, or MCS 352B fluid, D00054 to the new packing [22].

(b) Put the packing [22] and gasket [19] in their locations on the solenoid valve [21].

(c) Put the solenoid valve [21] in its position on the flap control valve [6].

1) Inspect the connector for corrosion, If there is corrosion, refer to the SWPM 20-60-03 to correct the problem.

2) Make sure that the electrical connector on the solenoid valve [21] engages the electrical connector in the flap control valve [6].

(d) Install the screws [20] to attach the solenoid valve [21] to the flap control valve [6].

(e) Tighten the screws [20] to 25 in-lb (2.8 N·m) to 35 in-lb (4.0 N·m).

(f) Install MS20995NC32 lockwire, G50347 on the screws [20].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-65-860-009

(2) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF

SUBTASK 27-51-65-860-010

(3) Use the primary system to extend and retract the flaps. To extend and retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-65-210-002

(4) Make sure that there are no hydraulic leaks from the flap control valve [6].

SUBTASK 27-51-65-720-001

(5) Do this task: Trailing Edge Flap Load Relief System BITE Test, TASK 27-51-00-740-803.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-65-610-002

(1) Service the system B hydraulic reservoir. To service the reservoir, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TRAILING EDGE FLAP CONTROL VALVE - ADJUSTMENT/TEST

1. General

A. Trailing Edge Flap Control Valve Adjustment.

TASK 27-51-65-820-801

2. Trailing Edge Flap Control Valve Adjustment

(Figure 501)

A. References

Reference	Title
27-51-00-860-801	Trailing Edge Flap System Operation With Primary Control (P/B 201)

29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1585	Kit - Rigging Pin Part #: F70207-151 Supplier: 81205

C. Consumable Materials

Reference	Description	Specification
G01048	Lockwire - MS20995C32, Corrosion Resistant Steel - 0.032 Inch (0.8128 mm) Diameter	NASM20995
G50237	Compound - Corrosion Inhibiting, Non-drying - Cor-Ban 27L	BMS3-38

D. Location Zones

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

E. Prepare for the Adjustment

SUBTASK 27-51-65-860-011

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) Supply hydraulic power to hydraulic system B (TASK 29-11-00-860-801).

SUBTASK 27-51-65-860-012

(2) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-801).

SUBTASK 27-51-65-860-013

(3) Retract the trailing edge flaps to the UP position (TASK 27-51-00-860-801).

(a) Wait a minimum of 2 minutes before you remove the hydraulic power.

NOTE: The flaps can move a small distance during this time.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-65-860-014

(4) Remove hydraulic power from hydraulic system B (TASK 29-11-00-860-805).

F. Adjustment of the Trailing Edge Flap Control Valve

SUBTASK 27-51-65-010-003

(1) Remove the lower pan [10] from the flap control unit [1]:

(a) Remove the five screws [11] and five washers [21] that attach the lower pan [10] to the flap control unit [1].

(b) Remove the lower pan [10] from the flap control unit [1].

SUBTASK 27-51-65-820-002

(2) Do a check of the adjustment of the flap control valve [4]:

NOTE: This will make sure that the flap power drive unit and flap control unit move to the correct position when you retract the flaps.

(a) Make sure that you can easily install the rig pin [14], F70207-116, from the rigging pin kit, SPL-1585, through the cam follower arm [13] and valve cam [12].

(b) Make sure that the black rig mark on the cable drum [18] for the flap power drive unit [20] extends past the cable guard [19] a minimum of 0.03 in. (0.8 mm) on each side.

SUBTASK 27-51-65-820-003

(3) If you cannot easily install the rig pin [14], F70207-116, from the rigging pin kit, SPL-1585, or if the flap power drive unit [20] is not in the correct position, then adjust the flap control valve [4]:

(a) Remove the, MS20995C32 lockwire, G01048, from the nut [16] and nut [17].

(b) Loosen the nut [16] and nut [17] on the adjustable sleeve [9].

(c) Turn the adjustable sleeve [9] to change the position of the rod end [8].

NOTE: This will change the alignment of the valve slide and the index surface on the flap control valve.

(d) Tighten the nut [16] and nut [17] on the adjustable sleeve [9].

1) Make sure that the distance between the center of the rod end [8] and nut [17] is less than 0.94 in. (23.9 mm).

2) Make sure that the distance between the nut [16] and hex on the adjustable sleeve [9] is less than 0.19 in. (4.8 mm).

CAUTION

MAKE SURE THAT YOU REMOVE THE HYDRAULIC POWER BEFORE YOU DISCONNECT THE ROD END FROM THE SUMMING LEVER. IF YOU DISCONNECT THE ROD END WITH HYDRAULIC POWER ON, YOU CAN CAUSE DAMAGE TO THE FLAP CONTROL UNIT.

(e) If it is necessary, disconnect the rod end [8] from the summing lever [2]:

NOTE: It is necessary to disconnect the rod end if you cannot adjust the flap control valve while the adjustable sleeve is in the limits.

1) Remove the nut [7], washer [6], and bolt [5] that attach the rod end [8] to the summing lever [2].

2) Change the position of the adjustable sleeve [9].

3) Install the bolt [5], washer [6], and nut [7] to attach the rod end [8] to the summing lever [2].

(f) Tighten the nut [16] and nut [17].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Install, MS20995C32 lockwire, G01048, on the nut [16], nut [17] and adjustable sleeve [9].

SUBTASK 27-51-65-080-002

(4) Remove the rig pin [14], rigging pin kit, SPL-1585, from the cam follower arm [13] and valve cam [12].

SUBTASK 27-51-65-860-015

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Supply hydraulic power to hydraulic system B (TASK 29-11-00-860-801).

SUBTASK 27-51-65-860-016

(6) Extend and retract the trailing edge flaps five times (TASK 27-51-00-860-801).

(a) Wait a minimum of 2 minutes before you remove the hydraulic power.

NOTE: The flaps can move a small distance during this time.

SUBTASK 27-51-65-860-017

(7) Remove hydraulic power from hydraulic system B (TASK 29-11-00-860-805).

SUBTASK 27-51-65-820-004

(8) Do a check of the adjustment of the flap control valve [4] again:

(a) Make sure that the black rig mark on the cable drum [18] for the flap power drive unit [20] extends past the cable guard [19] a minimum of 0.03 in. (0.8 mm) on each side.

(b) Make sure that you can easily install the rig pin [14] through the cam follower arm [13] and the valve cam [12].

SUBTASK 27-51-65-480-004

(9) If you cannot easily install the rig pin [14], or if the flap power drive unit [20] is not in the correct position, then adjust the trailing edge flap control valve [4] again.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-65-080-003

(1) Remove the rig pin [14] from the cam follower arm [13] and valve cam [12].

SUBTASK 27-51-65-410-002

(2) Install the lower pan [10] on the flap control unit [1]:

(a) Put the lower pan [10] in its location on the flap control unit [1].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply, Cor-Ban 27L Compound, G50237, to the shank and threads of the screws [11].

(c) Install the five washers [21] and five screws [11] to attach the lower pan [10] to the flap control unit [1].

END OF TASK

TRAILING EDGE FLAP CONTROL VALVE - REPAIRS

1. General

A. This procedure has this task:

(1) Trailing Edge Flap Control Valve Internal Leakage Repair.

B. You can use this procedure if there is too much internal leakage in the control valve. This procedure can reduce the internal leakage by approximately one-half. It is not necessary to remove the control valve from the airplane to do this procedure.

TASK 27-51-65-360-801

2. Trailing Edge Flap Control Valve Internal Leakage Repair

(Figure 801)

D. Location Zones

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

E. Procedure

SUBTASK 27-51-65-480-005

WARNING MAKE CERTAIN LANDING GEAR DOWNLOCK PINS ARE INSTALLED TO PREVENT INADVERTENT RETRACTION OF LANDING GEAR, AND POSSIBLE INJURY TO PERSONNEL.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-65-860-018

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(2) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-65-860-019

(3) Extend the trailing edge flaps to the 40-unit position. To extend the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

SUBTASK 27-51-65-860-020

(4) Retract the trailing edge flaps to the UP position. To retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

(a) Wait a minimum of 2 minutes before you remove the hydraulic power. The flaps can move a small distance during this time.

SUBTASK 27-51-65-860-021

(5) Remove the pressure from the system B hydraulic reservoir. To remove the pressure, do this task: Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

SUBTASK 27-51-65-360-001

(6) Turn the sleeve [2] on the flap control valve assembly [3] 45 degrees.

NOTE: This will move the eroded parts of the flap control valve slide [9] with respect to the rectangular slots in the sleeve [2].

SUBTASK 27-51-65-860-022

(7) Move the flap control lever to the 40-unit detent.

SUBTASK 27-51-65-860-023

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(8) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-51-65-860-024

(9) Move the flap control lever to the UP position to retract the flaps.

SUBTASK 27-51-65-720-002

(10) Do this test of the flap control valve assembly [3]:

(a) Fully extend and retract the trailing edge flaps five times. To extend and retract the flaps, do this task: Trailing Edge Flap System Operation With Primary Control, TASK 27-51-00-860-801.

1) Wait a minimum of 2 minutes before you remove the hydraulic power. The flaps can move a small distance during this time.

(b) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Remove the lower pan [4] from the flap control unit [1]:

1) Remove the screw [5] that attach the lower pan [4] to the flap control unit [1].

2) Remove the lower pan [4] from the flap control unit [1].

(d) Do a check of the adjustment of the flap control valve assembly [3]:

NOTE: This will make sure that the flap power drive unit [12] and the flap control unit [1] moved to the correct position when you retracted the flaps.

1) Make sure that you can easily install the rig pin [8], F70207-116 from the rigging pin kit, SPL-1585 through the cam follower arm [7] and the valve cam [6].

2) Make sure that the black rig mark on the cable drum [10] for the flap power drive unit [12] extends past the cable guard [11] a minimum of 0.03 in. (0.76 mm) on each side.

(e) If you cannot install the rig pin [8], or if the flap power drive unit [12] is not in the correct position, then, do this task: Trailing Edge Flap Control Valve Adjustment, TASK 27-51-65-820-801.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-65-080-004

(1) Remove the rig pin [8] from the cam follower arm [7] and the valve cam [6].

SUBTASK 27-51-65-410-003

(2) Install the lower pan [4] on the flap control unit [1]:

(a) Put the lower pan [4] in its location on the flap control unit [1].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the screws [5].

(c) Install the screws [5] to attach the lower pan [4] to the flap control unit [1].

TRAILING EDGE FLAP FLOW LIMITER - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Trailing Edge Flap Flow Limiter Removal

(2) Trailing Edge Flap Flow Limiter Installation.

TASK 27-51-67-000-801

2. Trailing Edge Flap Flow Limiter Removal

Figure 401

A. General

(1) This task includes the steps to remove the flow limiter for the trailing edge flaps.

B. References

Reference	Title
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left

D. Prepare for the Removal

SUBTASK 27-51-67-860-001

WARNING OBEY THE PROCEDURE FOR THE INSTALLATION OF THE DOWNLOCK PINS. IF YOU MOVE THE CONTROL LEVER FOR THE LANDING GEAR TO THE UP POSITION, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-51-67-860-002

(2) Make sure that there is no hydraulic power on system B. To remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

E. Flap Flow Limiter Removal

SUBTASK 27-51-67-020-001

(1) Remove the flap flow limiter [1]:

(a) Disconnect the hydraulic line [4] from the flap flow limiter [1].

(b) Install caps and plugs on the hydraulic line [4] and ports.

(c) Loosen the nut [3] to disconnect the flap flow limiter [1] on the priority valve [2].

(d) Remove the flap flow limiter [1] from the airplane.

END OF TASK

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left

D. Trailing Edge Flap Flow Limiter Installation

SUBTASK 27-51-67-420-001

(1) Install the flap flow limiter [1]:

(a) Connect the flap flow limiter [1] to the priority valve [2].

(b) Hold the flap flow limiter [1] and priority valve [2] in their position.

1) The flow direction arrow on the flap flow limiter [1] must agree with the 'REGULATED' arrow on the pressure bulkhead.

(c) Tighten the nut [3] to 900 ±45 in-lb (102 ±5 N·m).

(d) Connect the hydraulic line [4] to the flap flow limiter [1].

(e) Tighten the B-nut on the hydraulic line [4] to 500 ±25 in-lb (56 ±3 N·m).

E. Flap Flow Limiter Post-Installation Test

SUBTASK 27-51-67-710-001

(1) To pressurize hydraulic system B, do this task: (TASK 29-11-00-860-801).

SUBTASK 27-51-67-700-001

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED, AND IN THE STOWED POSITION, OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Move the flap control lever to the 40-unit position.

SUBTASK 27-51-67-790-001

(3) Examine the hydraulic fittings of the flap flow limiter [1] for leakage.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-51-67-860-003

(1) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-51-67-860-004

(2) To remove pressure from hydraulic system B, do this task: (TASK 29-11-00-860-805).

SUBTASK 27-51-67-610-001

(3) If it is necessary to service the hydraulic reservoirs, do this task: (TASK 12-12-00-610-801).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP POSITION TRANSMITTERS AND INDICATORS - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Flap Position Indicating System - Deactivation

(2) Flap Position Indicating System - Activation

TASK 27-58-00-040-801

2. Flap Position Indicating System - Deactivation

A. General

(1) This task will deactivate these components in the flap position indicating system:

- Left Flap Position Transmitter
- Right Flap Position Transmitter

B. Location Zones

Zone	Area
212	Flight Compartment - Right
544	Left Wing - Fairing Flap Support No. 1
644	Right Wing - Fairing Flap Support No. 8

C. Flap Position Transmitters and Indicators - Deactivation

SUBTASK 27-58-00-860-002

(1) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
C	5	C01041	AFCS SYS A SNSR EXC AC

CAPT Electrical System Panel, P18-2

FLAP POSITION TRANSMITTER - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the flap position transmitter

(2) An installation of the flap position transmitter.

B. The flap position transmitters are installed on the outboard end of transmissions No. 1 and 8.

C. The flap position transmitters include additional syncros that are used in the autopilot and the stall management systems.

TASK 27-58-01-000-801

2. Flap Position Transmitter Removal

(Figure 401)

A. References

Reference	Title

B. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
644	Right Wing - Fairing Flap Support No. 8

C. Prepare for the Removal

SUBTASK 27-58-01-860-001

(1) Extend the trailing edge flaps to the 40-unit position (TASK 27-51-00-860-803).

SUBTASK 27-58-01-040-002

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-58-01-860-003

(3) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

D. Flap Position Transmitter Removal

SUBTASK 27-58-01-860-004

(1) For the left flap position transmitter [2], T427, do this step:

(a) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
C	5	C01041	AFCS SYS A SNSR EXC AC

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	4	C01207	SMYD-2 SNSR EXC AC

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-58-01-860-005

(2) For the right flap position transmitter [2], T428, do this step:

(a) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	6	C01205	SMYD-1 SNSR EXC AC

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
C	2	C01042	AFCS SYS B SNSR EXC AC

SUBTASK 27-58-01-980-001

(3) Manually extend the trailing edge flaps until the ballscrew nut [14] touches the downstop [12] on the ballscrew [13] on transmission No. 4 or No. 5 (TASK 27-51-00-980-801).

NOTE: This is the flaps extend overtravel stop position.

NOTE: If a flap position transmitter is inadvertently removed when the flaps are in a position other than at the ballscrew downstop, the flap position transmitter will not be in the rig position. The flap position transmitter is in the rigged (adjusted) position if the rig marks are visible and aligned in both windows of the flap position transmitter.

NOTE: If any components or installations between the torque tubes and transmissions [7] or in the control stand are removed and re-installed or replaced after rigging (adjustment) has been completed, then applicable re-rigging (re-adjustment) is necessary.

SUBTASK 27-58-01-020-001

(4) Disconnect the electrical connector [1] from the flap position transmitter [2].

(a) After the electrical connector [1] disconnection, examine the electrical connector [1] for corrosion.

NOTE: The inspection of the electrical connector can be done after the removal step or before the installation step of the electrical connector. This is an operator option.

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES WHERE DEICING FLUID THAT CONTAINS POTASSIUM FORMATE OR POTASSIUM ACETATE IS USED. ALSO, DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTORS ARE IN A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(b) If there was corrosion, refer to SWPM 20-60-03 to correct the problem.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-58-01-020-002

(5) Remove the flap position transmitter [2]:

NOTE: The flap position transmitter is in the rigged (adjusted) position if the rig marks are visible and aligned in both windows of the flap position transmitter.

NOTE: If a flap position transmitter is inadvertently removed when the flaps are in a position other than at the ballscrew downstop, the flap position transmitter will not be in the rig position.

(a) Remove the bolt [3], washer [4], and washer [6] that attaches the jumper wire [5] and flap position transmitter [2] to the transmission [7].

(b) Remove the bolts [11] and washers [10] that attach the flap position transmitter [2] to the transmission [7].

(c) Remove the flap position transmitter [2] from the transmission [7].

(d) Remove the packing [9] from the transmission [7].

1) Discard the packing [9].

(e) Install the rig lock mechanism to the flap position transmitter [2].

END OF TASK

9	Packing	27-58-01-02-160	SIA ALL

E. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
644	Right Wing - Fairing Flap Support No. 8

F. Flap Position Transmitter Installation

SUBTASK 27-58-01-090-001

(1) Remove the rig lock mechanism from the flap position transmitter [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-58-01-210-001

(2) Make sure that the ballscrew nut [14] touches the downstop [12] on the ballscrew [13] on transmission No. 4 or No. 5.

NOTE: If a flap position transmitter is inadvertently removed when the flaps are in a position other than at the ballscrew downstop, the flap position transmitter will not be in the rig position. The flap position transmitter is in the rigged (adjusted) position if the rig marks are visible and aligned in both windows of the flap position transmitter.

NOTE: If any components or installations between the torque tubes and transmissions [7] or in the control stand are removed and re-installed or replaced after rigging (adjustment) has been completed, then applicable re-rigging (re-adjustment) is necessary.

(a) If the ballscrew nuts [14] do not touch the downstops [12], manually extend the flaps (TASK 27-51-00-980-801).

SUBTASK 27-58-01-420-001

(3) Install the flap position transmitter [2]:

(a) Do not turn the shaft for the flap position transmitter [2].

NOTE: When the flap position transmitter is not installed, a lock holds the input shaft [8]. The lock is disengaged when you install the flap position transmitter.

(b) Make sure that the two rig marks on the flap position transmitter [2] are visible and aligned in the flap position transmitter [2] window.

NOTE: The alignment marks in the rig indicator windows must align before installation. If they do not, you must push on the shaft lock and turn the shaft until the alignment marks are aligned. To do this, it may be necessary to turn the shaft up to 800 turns (over 4,460 revolutions).

(c) Apply Christo-lube MCG111 grease, D50011, to the new packing [9].

1) Install the new packing [9] in the transmission [7].

(d) Apply Christo-lube MCG111 grease, D50011, to the splines on the input shaft [8] for the flap position transmitter [2].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(e) Apply Cor-Ban 27L Compound, G50237, to the mating surface of the flap position transmitter [2] and the transmission [7].

CAUTION

PUT THE FLAP POSITION TRANSMITTER [2] IN ITS POSITION WITHOUT BINDING OR TURNING THE INPUT SHAFT [8] UNTIL THE MATING SURFACES TOUCH. AFTER THE MATING SURFACES TOUCH, YOU CAN TURN THE TRANSMITTER TO ALIGN THE BOLT HOLES. IF YOU TURN OR BIND THE INPUT SHAFT BEFORE THE MATING SURFACES TOUCH, YOU CAN CAUSE DAMAGE TO THE INPUT SHAFT.

(f) Put the flap position transmitter [2] in its location on the transmission [7].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(g) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [11].

CAUTION MAKE SURE THAT THERE IS NO CLEARANCE BETWEEN THE TRANSMITTER AND THE TRANSMISSION. IF YOU TIGHTEN THE BOLTS WITH CLEARANCE, YOU CAN CAUSE DAMAGE TO THE TRANSMITTER.

(h) Install the bolts [11] and washers [10] that attach the flap position transmitter [2].

(i) Put the jumper wire [5] in its position on the flap position transmitter [2].

(j) Make sure that the jumper wire [5] does not touch cables, wires or the structure.

(k) Install the bolt [3], washer [4], and washer [6] that attach the jumper wire [5] to the flap position transmitter [2].

(l) Measure the electrical bonding resistance between the jumper wire [5] and flap position transmitter [2].

1) Use intrinsically safe approved bonding meter, COM-1550.

2) Make sure that the bonding resistance between the jumper wire [5] and flap position transmitter [2] is less than 0.008 ohm (8 milliohms).

SUBTASK 27-58-01-210-002

(4) If the electrical connector [1] was not examined in the removal task, do these steps:

NOTE: The inspection of the electrical connector can be done after the removal step or before the installation step of the electrical connector. This is an operator option.

(a) Before the electrical connector [1] connection, examine the electrical connector [1] for corrosion.

WARNING DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS WHERE DEICING FLUID THAT CONTAIN POTASSIUM FORMATE IS USED. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(b) If there was corrosion, refer to SWPM 20-60-03 to correct the problem.

SUBTASK 27-58-01-800-001

(5) Apply D5026NS or ZC-026 compound, G50171, to the electrical connector [1] (SWPM 20-60-03).

SUBTASK 27-58-01-420-002

(6) Connect the electrical connector [1] to the flap position transmitter [2].

SUBTASK 27-58-01-860-006

(7) For the left flap position transmitter [2], T427, do this step:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
C	5	C01041	AFCS SYS A SNSR EXC AC

F/O Electrical System Panel, P6-1

Row	Col	Number	Name

SUBTASK 27-58-01-860-007

(8) For the right flap position transmitter [2], T428, do this step:

(a) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	6	C01205	SMYD-1 SNSR EXC AC

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
C	2	C01042	AFCS SYS B SNSR EXC AC

SUBTASK 27-58-01-440-001

(9) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

G. Flap Position Transmitter Installation Test

SUBTASK 27-58-01-860-009

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power (TASK 29-11-00-860-801).

SUBTASK 27-58-01-860-010

(2) Move the flap control lever to the UP position to retract the trailing edge flaps.

(a) Wait for the trailing edge flaps to move to the retracted position.

SUBTASK 27-58-01-210-003

(3) Make sure that the pointers on the flap position indicator are in the UP white band.

SUBTASK 27-58-01-710-001

(4) If it is necessary, do this task: Flap Position Transmitter Adjustment and Test, TASK 27-58-01-820-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-58-01-700-001

(5) Do the Flight Control Computer (FCC) Built-In-Test Equipment (BITE) library test No.34 - Flaps (TASK 22-11-00-740-804).

NOTE: For the Left Flap Position transmitter perform the test for FCC A and for the Right Flap Position transmitter perform the test for FCC B.

SUBTASK 27-58-01-700-002

(6) Do a check of the flap sensor (TASK 27-32-00-740-803).

NOTE: For the Left Flap Position transmitter perform the test for Stall Management Yaw Damper (SMYD) 2 and for the Right Flap Position transmitter perform the test for SMYD 1.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-58-01-860-011

(1) Remove system B hydraulic power (TASK 29-11-00-860-805).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP POSITION TRANSMITTER - ADJUSTMENT/TEST

1. General

A. This procedure has a task to adjust the trailing edge flap position transmitters.

B. The flap position transmitters are installed on the outboard end of transmissions No. 1 and 8.

C. The flap position transmitters include additional syncros that are used in the autopilot and the stall management systems.

TASK 27-58-01-820-801

2. Flap Position Transmitter Adjustment and Test

(Figure 501)

A. General

(1) This task uses the Flap/Slat Electronics Unit (FSEU) to adjust the flap position transmitters.

(2) This task should only be used in the situation where the adjustment of a flap position transmitter has been changed during the installation process.

(a) This adjustment is not as accurate as the installation process of a new flap position transmitter due to these reasons:

1) The reliance on the ability of the trailing edge flap drive system to accurately drive the flaps to the 15-unit position.

2) The reliance on the tolerances of the particular flap position transmitter at the 15-unit position.

3) The reliance on the ability of the FSEU to read the flap position transmitter at the 15-unit position.

(b) The flap position transmitter is capable of being used on the left and right wings. Because of this, it is necessary to be careful not to set the position transmitter at the incorrect 15-unit position. If the flap position transmitter is set at the incorrect position for the wing it is on, it will appear to operate backward.

644	Right Wing - Fairing Flap Support No. 8

D. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Prepare for the Adjustment

SUBTASK 27-58-01-860-013

(1) Make sure the system B hydraulic power is off (TASK 29-11-00-860-805).

SUBTASK 27-58-01-420-003

(2) If the flap position transmitter is not installed, then install it (TASK 27-58-01-400-801).

F. Flap Position Transmitter Adjustment

SUBTASK 27-58-01-010-001

(1) To get access to the FSEU in the main equipment center, do this step:

(a) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-58-01-730-001

(2) Use the FSEU to read the sensor inputs from the applicable flap position transmitter to the FSEU:

(a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?

(b) Push the down arrow until OTHER FUNCTNS? shows on the display.

(c) Push the YES button to select OTHER FUNCTNS? on the FSEU.

(d) Push the down arrow until I/O MONITOR? shows on the display.

(e) Push the YES button to select I/O MONITOR? from the menu.

(f) Push the down arrow until SYNCRO INPUTS? shows on the display.

(g) Push the YES button to select SYNCHRO INPUTS? from the menu.

(h) Push the down arrow until the applicable L FL POS, or R FL POS shows on the display.

NOTE: The FSEU will continue to show the applicable left or right position transmitter output.

NOTE: If you do not push any buttons for five minutes, the display will turn off. To keep the display active, push the down arrow and then the up arrow buttons occasionally.

SUBTASK 27-58-01-860-014

WARNING MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE TRAILING EDGE FLAPS, AND THE LEADING EDGE FLAPS AND SLATS. THESE SURFACES WILL MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(3) Move the ALTERNATE FLAPS ARM switch on the P5 panel to arm the alternate control system.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-58-01-860-015

CAUTION

WAIT A MINIMUM OF 15 SECONDS AFTER THE FLAPS STOP BEFORE YOU USE THE ALTERNATE SYSTEM TO MOVE THE FLAPS AGAIN. YOU CAN CAUSE DAMAGE TO THE FLAP ALTERNATE MOTOR.

(4) Move the ALTERNATE FLAPS control switch to UP or DOWN to move the trailing edge flaps until the L FL POS or R FL POS indication on the FSEU is approximately 180 degrees.

NOTE: This is an initial position for the flaps. The position of the flaps will be set more accurately in subsequent steps.

SUBTASK 27-58-01-860-016

(5) Move the ALTERNATE FLAPS control switch to DOWN to make sure the indication on the FSEU increases.

(a) If the indication decreases, the flap position transmitter is installed on the wrong wing.

SUBTASK 27-58-01-860-017

(6) Move the trailing edge flaps until the L FL POS or R FL POS indication is at 180.0 ±0.4 degrees.

NOTE: You can use the manual drive on the flap power drive unit, or the alternate flaps control to move the flaps.

(a) To use the manual drive to move the flaps, do this task: Trailing Edge Flap System Manual Operation, TASK 27-51-00-980-801.

(b) To use the alternate flaps control, move the ALTERNATE FLAPS control switch until the indication is in the limit.

SUBTASK 27-58-01-860-018

(7) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2

SUBTASK 27-58-01-860-019

WARNING

MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE TRAILING EDGE FLAPS, AND THE LEADING EDGE FLAPS AND SLATS. THESE SURFACES WILL MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(8) Move the ALTERNATE FLAPS ARM switch to the OFF position to disarm the alternate control system.

SUBTASK 27-58-01-020-003

(9) Remove the flap position transmitter from the airplane (TASK 27-58-01-000-801).

NOTE: Do not move the flaps to the extended position to remove the position transmitter. Be careful not to move the shaft on the position transmitter when you remove it.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-58-01-860-020

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(10) Supply system B hydraulic power (TASK 29-11-00-860-801).

NOTE: You can use the ACMP to pressurize the hydraulic system.

SUBTASK 27-58-01-860-021

(11) Move the flap control lever to the 15-unit position to move the trailing edge flaps.

(a) Wait for the trailing edge flaps to move to the 15 unit position.

SUBTASK 27-58-01-860-022

(12) Remove system B hydraulic power (TASK 29-11-00-860-805).

SUBTASK 27-58-01-860-023

(13) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2

SUBTASK 27-58-01-420-004

(14) Install the flap position transmitter (TASK 27-58-01-400-801).

NOTE: Do not move the flaps to the extended position to install the position transmitter. Be careful not to move the shaft on the position transmitter more than necessary when you install it.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-58-01-010-002

(1) To close the main equipment center, do this step:

(a) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

END OF TASK

FLAP SKEW DETECTION SYSTEM - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) An adjustment of the mechanisms for the flap skew detection system.

(2) A functional test of the flap skew detection system.

TASK 27-59-00-820-801

2. Flap Skew Detection System Adjustment

(Figure 501, Figure 502)

A. General

(1) This task includes the adjustment of the flap skew mechanisms on all of the flap supports.

(2) It is not necessary to install the flap skew sensors on the flap skew mechanism when you do the adjustment.

B. References

Reference	Title

G. Prepare for the Adjustment

SUBTASK 27-59-00-480-004

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-59-00-040-002

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-59-00-980-001

(3) Manually extend the flaps until the ballscrew nuts touch the downstops on the ballscrews (Figure 501).

NOTE: The ballscrew nut for transmission No. 4 or 5 will touch first.

(a) To manually extend the flaps, do this task: Trailing Edge Flap System Manual Operation, TASK 27-51-00-980-801.

H. Flap Skew Mechanism Adjustment

SUBTASK 27-59-00-820-001

(1) If the ballscrew nut for the applicable flap support does not touch the downstop, do these steps (Figure 501):

(a) For the flap position transmitters on the left and right wings, do this task: Flap Position Transmitter Removal, TASK 27-58-01-000-801.

NOTE: If you do not remove the flap position transmitters before you disconnect the torque tubes, they will become incorrectly adjusted.

(b) Disconnect the torque tube [3] from the transmission:

1) Install a clamp set, SPL-1726, on a torque tube [3] outboard of the transmission.
2) Remove the screws [2] that attach the coupling sleeve [1] to the splined coupling [4].
3) Move the coupling sleeve [1] off the splined coupling [4].
4) Move the torque tube [3] away from the transmission.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION

DO NOT MOVE ONE END OF A FLAP MORE THAN 1.4 INCHES (35.5 MILLIMETERS) OF BALLSCREW TRAVEL MORE THAN THE OTHER END. YOU CAN CAUSE THE FLAP TO SKEW TO MUCH. THIS CAN CAUSE DAMAGE TO THE FLAP.

(c) Use a coupling sleeve wrench, SPL-5384, on one of the couplings on the transmission to extend the transmission until the ballscrew nut touches the downstop on the ballscrew.

SUBTASK 27-59-00-220-001

(2) Measure the mismatch between the crank arm [23] and the flat side of the rigging flange [21] on the sensor input assembly [22] (Figure 502).

SUBTASK 27-59-00-820-002

(3) If the mismatch between the crank arm [23] and the rigging flange [21] is not in the limit of 0.005 in. (0.127 mm) to 0.015 in. (0.381 mm), then adjust the length of the skew control rod [24]:

NOTE: The crank arm [23] must be past the rigging flange [21].

(a) To make a large adjustment to the length of the skew control rod [24], do these steps:

1) Loosen the nut [26].
2) Remove the nut [33], washer [32], bushing [31], washer [30], and the bolt [29] that attach the rod end [34] to the crank arm [23].
3) Turn the adjustment sleeve [27] with the rod end [34] in the skew control rod [24] to adjust the length of the skew control rod [24].

NOTE: Make sure that the threads of the adjustment sleeve [27] cover a minimum of half the inspection hole in the skew control rod [24].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

4) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolt [29].
5) Put the skew control rod [24] in its position in the crank arm [23].
6) Install the bolt [29], washer [30], bushing [31], washer [32], and nut [33] to attach the skew control rod [24] to the crank arm [23].
   a) Install the bolt [29] with the head toward the center of the flap track.

(b) To make a small adjustment to the length of the skew control rod [24], do these steps:

1) Loosen the nut [26] and nut [35].
2) Turn the adjustment sleeve [27] in the skew control rod [24] with the rod end [34] attached to the crank arm [23].
   a) Make sure that the threads of the adjustment sleeve [27] cover a minimum of half the inspection hole in the skew control rod [24].
   b) Make sure that the threads of the rod end [34] cover a minimum of half the inspection hole in the adjustment sleeve [27].

(c) Torque the nut [26] to 125 in-lb (14.1 N·m) - 175 in-lb (19.8 N·m).

(d) Torque the nut [35] to 30 in-lb (3.4 N·m) - 50 in-lb (5.6 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(e) Make sure that the mismatch between the crank arm [23] and the rigging flange [21] is in the limit.

(f) Install MS20995NC32 lockwire, G50347, or optional safety cable between the nut [35] and the locking key [28].

(g) Install MS20995NC32 lockwire, G50347, or optional safety cable between the nut [26] and the locking key [25].

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-59-00-820-003

(1) If it was necessary to disconnect the torque tubes from the transmission, adjust the flap drive system (Figure 501).

NOTE: You will connect the torque tube [3] to the transmission and install the flap position transmitters in the adjustment procedure.

(a) To adjust the flap drive system, do this task: Trailing Edge Flap Drive System Adjustment, TASK 27-51-00-820-802.

SUBTASK 27-59-00-440-002

(2) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-59-00-860-003

(3) Retract the trailing edge flaps to the retracted position. Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

212	Flight Compartment - Right

D. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

E. Prepare for the Test

SUBTASK 27-59-00-010-001

(1) To get access to the main equipment center, do this step:

(a) Open this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

F. Flap Skew Detection System Functional Test

SUBTASK 27-59-00-860-005

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize the hydraulic system B (TASK 29-11-00-860-801).

NOTE: The EMDP will not supply sufficient hydraulic power for the flap retraction time limit.

SUBTASK 27-59-00-860-006

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LE AND TE FLAPS AND FLAP-DRIVE MECHANISMS. THE FLAPS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Move the flap control lever to the UP position and wait for the flaps to go to the UP position.

(a) Make sure that the pointers on the flap position indicator are in the UP white band.

SUBTASK 27-59-00-730-001

(3) Do a check of the skew sensor inputs to the FSEU:

(a) Do one of these methods to show the skew sensor inputs to the FSEU:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) On the FSEU BITE display (Method 1):
   a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.
      NOTE: The display will show EXISTING FAULTS?
   b) Push the down arrow until OTHER FUNCTNS? shows on the display.
   c) Push the YES button to select OTHER FUNCTNS? on the FSEU.
   d) Push the down arrow until I/O MONITOR? shows on the display.
   e) Push the YES button to select I/O MONITOR? on the menu.
   f) Push the down arrow until SYNCHRO INPUTS? shows on the display.
   g) Push the YES button to select SYNCRO INPUTS? from the menu.
2) On the MAX display system (Method 2):
   a) Push the SYS button on the Multifunction Display Panel (MFP).
   b) Select the Maint button on the MENU bar at the top right of the System Page.
   c) Push the SEL button on the SELECTOR knob.
   d) Turn the SELECTOR knob to select MAINT DATA PGS on the Maintenance menu.
   e) Move the cursor down and then select the ATA 27 FLIGHT CONTROL DISPLAY button below the REAL column on the MAINT DATA PGS menu.

(b) Make sure that the inputs for the skew sensors are in the limits for the UP position (Table 501 or Table 502).
1) For Method 1, push the down arrow key on the FSEU to step through the sensor values.

Table 501/27-59-00-993-804

Display (Sensor)	FSEU Sensor Value Range (Flap Position)		
	UP	15-Units	40-Units
LVR POS	-2.8 to 2.8	61.4 to 68.3	105.4 to 110.9
L FL POS	-3.7 to 1.8	176.1 to 185.0	267.1 to 273.3
R FL POS	-3.7 to 1.8	176.1 to 185.0	267.1 to 273.3
F1 SKEW	295.7 to 311.0	117.8 to 135.6	224.4 to 242.1
F2 SKEW	330.5 to 346.0	171.0 to 188.6	279.2 to 296.9
F3 SKEW	0.0 to 13.2	185.2 to 201.8	288.7 to 305.5
F4 SKEW	332.8 to 346.9	147.3 to 164.6	265.1 to 282.1
F5 SKEW	13.1 to 27.2	195.4 to 212.7	77.9 to 94.9
F6 SKEW	346.8 to 360.0	158.2 to 174.8	54.5 to 71.3
F7 SKEW	14.0 to 29.5	171.4 to 189.0	63.1 to 80.8
F8 SKEW	49.0 to 64.3	224.4 to 242.2	117.9 to 135.6

2) For Method 2, observe the sensor values on the MAX Display System (MDS).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 502/27-59-00-993-806

Display (Sensor)	MDS Sensor Value Range (Flap Position)		
	UP	15-Units	40-Units
LVR POS	-2.8 to 2.8	61.4 to 68.3	105.4 to 110.9
L FL POS	-3.7 to 1.8	176. 1 to 185.0	267.1 to 273.3
R FL POS	-3.7 to 1.8	176. 1 to 185.0	267.1 to 273.3
F1 SKEW	-64.3 to -49	117.8 to 135.6	224.4 to 242.1
F2 SKEW	-29.5 to -14	171.0 to 188.6	279.2 to 296.9
F3 SKEW	0.0 to 13.2	185.2 to 201.8	288.7 to 305.5
F4 SKEW	-27.2 to -13.1	147.3 to 164.6	265.1 to 282.1
F5 SKEW	-27.2 to -13.1	147.3 to 164.6	265.1 to 282.1
F6 SKEW	0.0 to 13.2	185.2 to 201.8	288.7 to 305.5
F7 SKEW	-29.5 to -14	171.0 to 188.6	279.2 to 296.9
F8 SKEW	-64.3 to -49	117.8 to 135.6	224.4 to 242.1

(c) Move the flap control lever to the 15-unit position to extend the flaps.

(d) Make sure that the pointers on the flap position indicator are in the 15-unit white band.

(e) Make sure that the inputs for the skew sensors are in the limits shown in Table 501 or Table 502 for the 15-unit position.

1) For Method 1, push the down arrow key on the FSEU to step through the sensor values.

2) For Method 2, observe the sensor values on the MDS.

(f) Move the flap control lever to the 40-unit position to extend the flaps.

(g) Make sure that the pointers on the flap position indicator are in the 40-unit white band.

(h) Make sure that the inputs for the skew sensors are in the limits shown in Table 501 or Table 502 for the 40-unit position.

1) For Method 1, push the down arrow key on the FSEU to step through the sensor values.

2) For Method 2, observe the sensor values on the MDS.

(i) Move the flap control lever to the 1-unit position to retract the flaps.

(j) For Method 1, push the ON/OFF button on the front panel of the FSEU to turn it off.

(k) For Method 2, push the SYS button on the MFP to put the displays back to normal.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-59-00-860-007

(1) Move the flap control lever to the UP position to retract the flaps.

SUBTASK 27-59-00-410-001

(2) For the main equipment center, do this step:

(a) Close this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-59-00-860-008

(3) Remove the pressure from the hydraulic system B (TASK 29-11-00-860-805).

END OF TASK

FLAP SKEW SENSORS - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Outboard Flap Outboard Skew Sensor Removal

(2) Outboard Flap Outboard Skew Sensor Installation

(3) Outboard Flap Inboard Skew Sensor Removal

(4) Outboard Flap Inboard Skew Sensor Installation

(5) Inboard Flap Outboard Skew Sensor Removal

(6) Inboard Flap Outboard Skew Sensor Installation

(7) Inboard Flap Inboard Skew Sensor Removal

(8) Inboard Flap Inboard Skew Sensor Installation.

B. There are eight flap skew sensors on the trailing edge flaps. One at each of the flap supports.

TASK 27-59-01-000-801

2. Outboard Flap Outboard Skew Sensor Removal

(Figure 201)

A. General

(1) This task is applicable to the flap skew sensors installed on flap supports No. 1 and 8.

B. References

Reference	Title

A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-01-020-001

(4) Disconnect the electrical connector [8] from the flap skew sensor [5].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-01-020-002

(5) Remove the flap skew sensor [5]:

(a) Remove the bolt [4], washer [3], and washer [1] that attach the jumper wire [2] to the flap skew sensor [5].

(b) Remove the bolts [6] and washers [7] that attach the flap skew sensor [5] to the sensor input assembly [10].

(c) Remove and discard packing [9].

(d) Remove the flap skew sensor [5] from the sensor input assembly [10].

E. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
5	Flap skew sensor	27-59-01-05-175	SIA ALL
9	Packing	27-59-01-05-180	SIA ALL

F. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
644	Right Wing - Fairing Flap Support No. 8

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Procedure

SUBTASK 27-59-01-860-003

(1) Make sure that these circuit breakers are open:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-01-420-001

(2) Install the flap skew sensor [5]:

(a) Apply grease, D00633 to the new packing [9].

(b) Install the new packing [9] on the flap skew sensor [5].

(c) Apply grease, D00633 to the shaft of the flap skew sensor [5] and the splines on the sensor input assembly [10].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(d) Apply a thin layer of Cor-Ban 27L Compound, G50237 to the mating surface of the flap skew sensor [5] and the sensor input assembly [10].

(e) Engage the shaft on the flap skew sensor [5] with the sensor input assembly [10].

NOTE: The shaft has a missing tooth on the splines.

(f) Engage the alignment pin on the sensor input assembly [10] with the hole in the flap skew sensor [5].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(g) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [6].

(h) Install the bolts [6] and washers [7] to attach the flap skew sensor [5].

(i) Install the bolt [4], washer [3], and washer [1] to attach the jumper wire [2] to the flap skew sensor [5].

(j) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the bonding resistance between the flap skew sensor [5] and the jumper wire [2] is less than 8 Milliohms.

(k) Apply a bead of sealant, A02315 or sealant, A00247 to the head of the bolt [4].

SUBTASK 27-59-01-210-001

(3) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS THAT USE DEICING FLUID WHICH CONTAINS POTASSIUM FORMATE. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-01-800-001

(4) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

SUBTASK 27-59-01-420-002

(5) Connect the electrical connector [8] to the flap skew sensor [5].

SUBTASK 27-59-01-860-004

(6) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-01-440-001

(7) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-59-01-860-005

(8) Retract the trailing edge flaps to the UP position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-59-01-730-001

(9) Do this task: Flap Skew Detection System Functional Test, TASK 27-59-00-730-801.

——— END OF TASK ———

TASK 27-59-01-000-802

4. Outboard Flap Inboard Skew Sensor Removal

(Figure 202)

A. General

(1) This task is applicable to the flap skew sensors installed on flap supports No. 2 and 7.

B. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)

SWPM 20-60-03	SPECIAL PROTECTION OF ELECTRICAL CONNECTORS

C. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
643	Right Wing - Fairing Flap Support No. 7

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Procedure

SUBTASK 27-59-01-860-006

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-59-01-040-002

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-59-01-860-007

(3) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-01-020-003

(4) Disconnect the electrical connector [38] from the flap skew sensor [35].

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-01-020-004

(5) Remove the flap skew sensor [35]:

(a) Remove the bolt [34], washer [33], and washer [31] that attach the jumper wire [32] to the flap skew sensor [35].

(b) Remove the bolts [36] and washers [37] that attach the flap skew sensor [35] to the sensor input assembly [39].

(c) Remove and discard packing [40].

(d) Remove the flap skew sensor [35] from the sensor input assembly [39].

(g) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [64].

(h) Install the bolts [64] and washers [63] to attach the flap skew sensor [67].

(i) Install the bolt [65], washer [66], and washer [69] to attach the jumper wire [68] to the flap skew sensor [67].

(j) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the bonding resistance between the flap skew sensor [67] and the jumper wire [68] is less than 8 Milliohms.

(k) Apply a bead of sealant, A02315 or sealant, A00247 to the head of the bolt [65].

SUBTASK 27-59-01-210-003

(3) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS WHERE DEICING FLUID THAT CONTAIN POTASSIUM FORMATE IS USED. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-01-800-003

(4) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

SUBTASK 27-59-01-420-006

(5) Connect the electrical connector [62] to the flap skew sensor [67].

SUBTASK 27-59-01-860-014

(6) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-01-440-003

(7) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-59-01-860-015

(8) Retract the trailing edge flaps to the UP position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-59-01-730-003

(9) Do this task: Flap Skew Detection System Functional Test, TASK 27-59-00-730-801.

——— END OF TASK ———

TASK 27-59-01-000-804

8. Inboard Flap Inboard Skew Sensor Removal

(Figure 204)

A. General

(1) This task is applicable to the flap skew sensors installed on flap supports No. 4 and 5.

B. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)

D. Procedure

SUBTASK 27-59-01-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-59-01-040-004

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-59-01-860-016

(3) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-01-020-007

(4) Disconnect the electrical connector [93] from the flap skew sensor [100].

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-01-020-008

(5) Remove the flap skew sensor [100]:

(a) Remove the bolt [99], washer [98], and washer [96] that attach the jumper wire [97] to the flap skew sensor [100].

(b) Remove the bolts [91] and washers [92] that attach the flap skew sensor [100] to the sensor input assembly [94].

(c) Remove and discard packing [95].

(d) Remove the flap skew sensor [100] from the sensor input assembly [94].

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Procedure

SUBTASK 27-59-01-860-017

(1) Make sure that these circuit breakers are open:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-01-420-007

(2) Install the flap skew sensor [100]:

(a) Apply grease, D00633 to the new packing [95].

(b) Install the new packing [95] on the flap skew sensor [100].

(c) Apply grease, D00633 to the shaft of the flap skew sensor [100] and the splines on the sensor input assembly [94].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(d) Apply a thin layer of Cor-Ban 27L Compound, G50237 to the mating surface of the flap skew sensor [100] and the sensor input assembly [94].

(e) Engage the shaft on the flap skew sensor [100] with the sensor input assembly [94].

NOTE: The shaft has a missing tooth on the splines.

(f) Engage the alignment pin on the sensor input assembly [94] with the hole in the flap skew sensor [100].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(g) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [91].

(h) Install the bolts [91] and washers [92] to attach the flap skew sensor [100].

(i) Install the bolt [99], washer [98], and washer [96] to attach the jumper wire [97] to the flap skew sensor [100].

(j) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the bonding resistance between the flap skew sensor [100] and the jumper wire [97] is less than 8 Milliohms.

(k) Apply a bead of sealant, A02315 or sealant, A00247 to the head of the bolt [99].

SUBTASK 27-59-01-210-004

(3) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS WHERE DEICING FLUID THAT CONTAIN POTASSIUM FORMATE IS USED. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-01-800-004

(4) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

SUBTASK 27-59-01-420-008

(5) Connect the electrical connector [93] to the flap skew sensor [100].

SUBTASK 27-59-01-860-018

(6) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-01-440-004

(7) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-59-01-860-019

(8) Retract the trailing edge flaps to the UP position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-59-01-730-004

(9) Do this task: Flap Skew Detection System Functional Test, TASK 27-59-00-730-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLAP SKEW MECHANISM - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Outboard Flap Outboard Skew Mechanism Removal

(2) Outboard Flap Outboard Skew Mechanism Installation

(3) Outboard Flap Inboard Skew Mechanism Removal

(4) Outboard Flap Inboard Skew Mechanism Installation

(5) Inboard Flap Outboard Skew Mechanism Removal

(6) Inboard Flap Outboard Skew Mechanism Installation

(7) Inboard Flap Inboard Skew Mechanism Removal

(8) Inboard Flap Inboard Skew Mechanism Installation.

B. There are eight flap skew mechanisms and sensors for the trailing edge flaps. One at each of the flap supports.

C. The flap skew mechanisms include a sensor input assembly and a control rod.

TASK 27-59-02-000-801

2. Outboard Flap Outboard Skew Mechanism Removal

(Figure 201)

A. General

(1) This task is applicable to the flap skew mechanisms installed on flap supports No. 1 and 8.

(2) You can remove the flap skew mechanism with the flap skew sensor [13] either removed or installed. This task shows the removal with the flap skew sensor [13] installed.

B. References

Reference	Title

C. Location Zones

Zone	Area
544	Left Wing - Fairing Flap Support No. 1
644	Right Wing - Fairing Flap Support No. 8

D. Procedure

SUBTASK 27-59-02-860-001

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-59-02-040-001

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-59-02-860-002

(3) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-02-020-001

(4) Disconnect the electrical connector [14] from the flap skew sensor [13].

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-02-020-002

(5) Remove the nuts [20], washers [19], bushings [18], washers [17], and bolts [16] that attach the control rod [21] to the crank arm [15] and to the carriage [22].

SUBTASK 27-59-02-020-003

(6) Remove the sensor input assembly [2]:

(a) Remove the nut [7], washer [6], washer [5], washer [4], and bolt [3] that attach the sensor input assembly [2] and the jumper wire [8] to the flap track [1].

(b) Remove the nuts [12], washers [11], washers [10], and bolts [9] that attach the sensor input assembly [2] to the flap track [1].

(c) Remove the sensor input assembly [2] from the flap track [1].

END OF TASK

G. Procedure

SUBTASK 27-59-02-420-001

(1) Install the sensor input assembly [2]:

> **WARNING** USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a layer of Cor-Ban 27L Compound, G50237 to the mating surface of the sensor input assembly [2] and the flap track [1].

> **WARNING** USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolt [9].

(c) Put the sensor input assembly [2] in its location on the flap track [1].

(d) Install the bolts [9], washers [10], washers [11], and nuts [12] that attach the sensor input assembly [2] to the flap track [1].

(e) Install the bolt [3], washer [4], washer [5], washer [6], and nut [7] to attach the jumper wire [8] and the sensor input assembly [2] to the flap track [1].

NOTE: Install the washer [5] under the jumper wire [8].

(f) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the bonding resistance between the flap track [1] and the jumper wire [8] is less than 8 Milliohms.

(g) Apply a bead of sealant, A02315 or sealant, A00247 around the bolt [3] and the nut [7].

SUBTASK 27-59-02-420-002

(2) Install the control rod [21]:

> **WARNING** USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [16].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Put the control rod [21] in its position between the carriage [22] and the crank arm [15].

NOTE: Make sure that the adjustable end of the control rod [21] attaches to the crank arm [15].

(c) Install the bolts [16], washers [17], bushings [18], washers [19], and nuts [20] to attach the control rod [21].

NOTE: Install the bolts [16] with the heads toward the center of the flap track [1].

SUBTASK 27-59-02-820-001

(3) Do this task: Flap Skew Detection System Adjustment, TASK 27-59-00-820-801.

SUBTASK 27-59-02-420-003

(4) If the flap skew sensor [13] is not installed, do this task: Outboard Flap Outboard Skew Sensor Installation, TASK 27-59-01-400-801.

SUBTASK 27-59-02-210-001

(5) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(a) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES WHERE DEICING FLUID THAT CONTAINS POTASSIUM FORMATE OR POTASSIUM ACETATE IS USED. ALSO, DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTORS ARE IN A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-02-800-001

(6) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

SUBTASK 27-59-02-420-004

(7) Connect the electrical connector [14] to the flap skew sensor [13].

SUBTASK 27-59-02-860-004

(8) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-02-440-001

(9) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-59-02-860-005

(10) Retract the trailing edge flaps to the UP position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-59-02-730-001

(11) Do this task: Flap Skew Detection System Functional Test, TASK 27-59-00-730-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-59-02-000-802

4. Outboard Flap Inboard Skew Mechanism Removal

(Figure 202)

A. General

(1) This task is applicable to the flap skew mechanisms installed on flap supports No. 2 and 7.

(2) You can remove the flap skew mechanism with the flap skew sensor [53] either removed or installed. This task shows the removal with the flap skew sensor [53] installed.

B. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)

C. Location Zones

Zone	Area
543	Left Wing - Fairing Flap Support No. 2
643	Right Wing - Fairing Flap Support No. 7

D. Procedure

SUBTASK 27-59-02-860-006

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-59-02-040-002

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-59-02-860-007

(3) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-02-020-004

(4) Disconnect the electrical connector [54] from the flap skew sensor [53].

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-02-020-005

(5) Remove the nuts [60], washers [59], bushings [58], washers [57], and bolts [56] that attach the control rod [61] to the crank arm [55] and to the carriage [62].

SUBTASK 27-59-02-020-006

(6) Remove the sensor input assembly [42]:

(a) Remove the nut [47], washer [46], washer [45], washer [44], and bolt [43] that attach the sensor input assembly [42] and the jumper wire [48] to the flap track [41].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the nuts [52], washers [51], washers [50], and bolts [49] that attach the sensor input assembly [42] to the flap track [41].

(c) Remove the sensor input assembly [42] from the flap track [41].

END OF TASK

G. Procedure

SUBTASK 27-59-02-420-005

(1) Install the sensor input assembly [42]:

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a layer of Cor-Ban 27L Compound, G50237 to the mating surface of the sensor input assembly [42] and the flap track [41].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [49].

(c) Put the sensor input assembly [42] in its location on the flap track [41].

(d) Install the bolts [49], washers [50], washers [51] and nuts [52] that attach the sensor input assembly [42] to the flap track [41].

(e) Install the bolt [43], washer [44], washer [45], washer [46] and nut [47] to attach the jumper wire [48] and the sensor input assembly [42] to the flap track [41].

NOTE: Install the washer [45] under the jumper wire [48].

(f) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the bonding resistance between the flap track [41] and the jumper wire [48] is less than 8 Milliohms.

(g) Apply a bead of sealant, A02315 or sealant, A00247 around the bolt [43] and the nut [47].

SUBTASK 27-59-02-420-006

(2) Install the control rod [61]:

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [56].

(b) Put the control rod [61] in its position between the carriage [62] and the crank arm [55].

NOTE: Make sure that the adjustable end of the control rod [61] attaches to the crank arm [55].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Install the bolts [56], washers [57], bushings [58], and nuts [60] to attach the control rods [61].

NOTE: Install the bolts [56] with the heads toward the center of the flap track [41].

SUBTASK 27-59-02-820-002

(3) Do this task: Flap Skew Detection System Adjustment, TASK 27-59-00-820-801.

SUBTASK 27-59-02-420-007

(4) If the flap skew sensor [53] is not installed, do this task: Outboard Flap Inboard Skew Sensor Installation, TASK 27-59-01-400-802.

SUBTASK 27-59-02-210-002

(5) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(a) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

WARNING

IF YOU USE THE AIRPLANE IN AREAS WHERE DEICING FLUID (THAT CONTAINS POTASSIUM FORMATE OR POTASSIUM ACETATE) IS NECESSARY, THEN DO THE STEPS BELOW. ALSO, DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTORS ARE IN A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT. IF YOU DO NOT DO THESE STEPS, DAMAGE TO EQUIPMENT OR INJURY CAN OCCUR.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-02-800-002

(6) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

SUBTASK 27-59-02-420-008

(7) Connect the electrical connector [54] to the flap skew sensor [53].

SUBTASK 27-59-02-860-009

(8) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-02-440-002

(9) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-59-02-860-010

(10) Retract the trailing edge flaps to the UP position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-59-02-730-002

(11) Do this task: Flap Skew Detection System Functional Test, TASK 27-59-00-730-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-59-02-000-803

6. Inboard Flap Outboard Skew Mechanism Removal

(Figure 203)

A. General

(1) This task is applicable to the flap skew mechanisms installed on flap supports No. 3 and 6.

(2) You can remove the flap skew mechanism with the flap skew sensor [83] either removed or installed. This task shows the removal with the flap skew sensor [83] installed.

B. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)

C. Location Zones

Zone	Area
542	Left Wing - Fairing Flap Support No. 3
642	Right Wing - Fairing Flap Support No. 6

D. Procedure

SUBTASK 27-59-02-860-011

(1) Extend the trailing edge flaps to the 40-unit position. To extend them, do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-59-02-040-003

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-59-02-860-012

(3) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-02-020-007

(4) Disconnect the electrical connector [82] from the flap skew sensor [83].

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-02-020-008

(5) Remove the nuts [97], washers [96], bushings [95], washers [94] and bolts [93] that attach the control rod [92] to the crank arm [98] and to the carriage [91].

SUBTASK 27-59-02-020-009

(6) Remove the sensor input assembly [81]:

(a) Remove the nut [89], washer [88], washer [87], washer [86] and bolt [85] that attach the sensor input assembly [81] and the jumper wire [84] to the flap track [90].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the nuts [102], washers [101], washers [100] and bolts [99] that attach the sensor input assembly [81] to the flap track [90].

(c) Remove the sensor input assembly [81] from the flap track [90].

G. Procedure

SUBTASK 27-59-02-420-009

(1) Install the sensor input assembly [81]:

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a layer of Cor-Ban 27L Compound, G50237 to the mating surface of the sensor input assembly [81] and the flap track [90].

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [99].

(c) Put the sensor input assembly [81] in its location on flap track [90].

(d) Install the bolts [99], washers [100], washers [101], and nuts [102] that attach the sensor input assembly [81] to the flap track [90].

(e) Install the bolt [85], washer [87], washer [88], and nut [89] to attach the jumper wire [84] and the sensor input assembly [81] to the flap track [90].

NOTE: Install the washer [87] under the jumper wire [84].

(f) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the bonding resistance between the flap track [90] and the jumper wire [84] is less than 8 Milliohms.

(g) Apply a bead of sealant, A02315sealant, A00247 or around the bolt [85] and the nut [89].

SUBTASK 27-59-02-420-010

(2) Install the control rod [92]:

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [93].

(b) Put the control rod [92] in its position between the carriage [91] and the crank arm [98].

NOTE: Make sure that the adjustable end of the control rod [92] attaches to the crank arm [98].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Install the bolts [93], washers [94], bushings [95], washers [96], and nuts [97] to attach the control rod [92].

NOTE: Install the bolt [93] that attaches the control rod [92] to the crank arm with the head toward the center of the flap track [90]. Install the bolt [93] that attaches the control rod [92] to the carriage [91] with the head away from the center of the flap track [90].

SUBTASK 27-59-02-820-003

(3) Do this task: Flap Skew Detection System Adjustment, TASK 27-59-00-820-801.

SUBTASK 27-59-02-420-011

(4) If the flap skew sensor [83] is not installed, do this task: Inboard Flap Outboard Skew Sensor Installation, TASK 27-59-01-400-803.

SUBTASK 27-59-02-210-003

(5) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(a) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

WARNING

IF YOU USE THE AIRPLANE IN AREAS WHERE DEICING FLUID (THAT CONTAINS POTASSIUM FORMATE OR POTASSIUM ACETATE) IS NECESSARY, THEN DO THE STEPS BELOW. ALSO, DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTORS ARE IN A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT. IF YOU DO NOT DO THESE STEPS, DAMAGE TO EQUIPMENT OR INJURY CAN OCCUR.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-02-800-003

(6) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

SUBTASK 27-59-02-420-012

(7) Connect the electrical connector [82] to the flap skew sensor [83].

SUBTASK 27-59-02-860-014

(8) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-02-440-003

(9) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-59-02-860-015

(10) Retract the trailing edge flaps to the UP position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-59-02-730-003

(11) Do this task: Flap Skew Detection System Functional Test, TASK 27-59-00-730-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-59-02-000-804

8. Inboard Flap Inboard Skew Mechanism Removal

(Figure 204)

A. General

(1) This task is applicable to the flap skew mechanisms installed on flap supports No. 4 and 5.

(2) You can remove the flap skew mechanism with the flap skew sensor [121] either removed or installed. This task shows the removal with the flap skew sensor [121] installed.

B. References

Reference	Title
27-51-00-040-801	Trailing Edge Flap System Deactivation (P/B 201)

541	Left Wing - Fairing Flap Support No. 4
641	Right Wing - Fairing Flap Support No. 5

D. Procedure

SUBTASK 27-59-02-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-59-02-040-004

(2) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-59-02-860-016

(3) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-59-02-020-010

(4) Disconnect the electrical connector [123] from the flap skew sensor [121].

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-59-02-020-011

(5) Remove the nuts [134], washers [133], bushings [132], washers [131], and bolts [130] that attach the control rod [129] to the crank arm [137] and to the carriage [135].

SUBTASK 27-59-02-020-012

(6) If the flap skew sensor [121] is installed, remove the bolt [138], washer [139], and washer [140] that attach the jumper wire [128] to the flap skew sensor [121].

SUBTASK 27-59-02-020-013

(7) Remove the sensor input assembly [122]:

(a) Remove the nuts [127], washers [126], washers [125], and bolts [124] that attach the sensor input assembly [122] to the flap track [136].

(b) Remove the sensor input assembly [122] from the flap track [136].

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
COM-1550	Bonding Meter - Approved, Intrinsically Safe (Approved for use in Class I, Divisions I & II hazardous (classified) locations. Outside these hazardous locations, COM-614 can be used in lieu of COM-1550). Part #: 620LK Supplier: 1CRL2 Part #: M1 Supplier: 3AD17 Part #: M1B Supplier: 3AD17 Part #: T477W (C15292) Supplier: 06659

D. Consumable Materials

Reference	Description	Specification
A00247	Sealant - Pressure And Environmental - Chromate Type	BMS5-95
A02315	Sealant - Low Density, Synthetic Rubber. 2 Part	BMS5-142 Type II
G50171	Compound - Corrosion Inhibiting Compound, Interior Application - D5026NS or ZC-026	
G50237	Compound - Corrosion Inhibiting, Non-drying - Cor-Ban 27L	BMS3-38

E. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
121	Flap skew sensor	27-59-01-03-175	SIA ALL
129	Control rod	27-59-02-05-040	SIA ALL
137	Crank arm	27-59-02-03-095	SIA ALL

F. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
541	Left Wing - Fairing Flap Support No. 4
641	Right Wing - Fairing Flap Support No. 5

G. Procedure

SUBTASK 27-59-02-420-013

(1) Install the sensor input assembly [122]:

> **WARNING** USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a layer of Cor-Ban 27L Compound, G50237 to the mating surface of the sensor input assembly [122] and the flap track [136].

> **WARNING** USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [124].

(c) Put the sensor input assembly [122] in its location on the flap track [136].

(d) Install the bolts [124], washers [125], washers [126], and nuts [127] that attach the sensor input assembly [122] to the flap track [136].

SUBTASK 27-59-02-420-014

(2) Install the control rod [129]:

> **WARNING** USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply Cor-Ban 27L Compound, G50237 to the shank and threads of the bolts [130].

(b) Put the control rod [129] in its position between the carriage [135] and the crank arm [137].

NOTE: Make sure that the adjustable end of the control rod [129] attaches to the crank arm [137].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Install the bolts [130], washers [131], bushings [132], washers [133], and nuts [134] to attach the control rod [129].

NOTE: Install the bolt [130] that attaches the control rod [129] to the carriage [135] with the head away from the center of the flap track [136]. You can install the bolt [130] that attaches the control rod [129] to the crank arm [137] with the head in either direction.

SUBTASK 27-59-02-820-004

(3) Do this task: Flap Skew Detection System Adjustment, TASK 27-59-00-820-801.

SUBTASK 27-59-02-020-014

(4) If the flap skew sensor [121] is installed, connect the jumper wire [128] to the flap skew sensor [121].

(a) Install the bolt [138], washer [139], and washer [140] to attach the jumper wire [128] to the flap skew sensor [121].

(b) With the electrical bonding intrinsically safe approved bonding meter, COM-1550, make sure that the bonding resistance between the flap skew sensor [121] and the jumper wire [128] is less than 8 Milliohms.

(c) Apply a bead of sealant, A02315 or sealant, A00247 to the head of the bolt [138].

SUBTASK 27-59-02-420-015

(5) If the flap skew sensor [121] is not installed, do this task: Inboard Flap Inboard Skew Sensor Installation, TASK 27-59-01-400-804.

SUBTASK 27-59-02-210-004

(6) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(a) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES WHERE DEICING FLUID THAT CONTAINS POTASSIUM FORMATE OR POTASSIUM ACETATE IS USED. ALSO, DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTORS ARE IN A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-59-02-800-004

(7) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

SUBTASK 27-59-02-420-016

(8) Connect the electrical connector [123] to the flap skew sensor [121].

SUBTASK 27-59-02-860-018

(9) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-59-02-440-004

(10) Do this task: Trailing Edge Flap System Reactivation, TASK 27-51-00-440-801.

SUBTASK 27-59-02-860-019

(11) Retract the trailing edge flaps to the UP position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-59-02-730-004

(12) Do this task: Flap Skew Detection System Functional Test, TASK 27-59-00-730-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SPOILER CONTROL SYSTEM - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Apply Pressure to the Spoiler Hydraulic Systems A and B

(2) Shut Down the Spoiler Hydraulic systems A and B

(3) Depressurization of the Spoiler Hydraulic Systems A and B

(4) Pressurization of the Spoiler Hydraulic Systems A and B to its Usual Condition

TASK 27-61-00-040-801

2. Spoiler Control System - Deactivation

(Figure 201)

A. General

(1) Use this task to deactivate the spoiler control system.

B. References

211	Flight Compartment - Left
212	Flight Compartment - Right

E. Spoiler Control Deactivation

SUBTASK 27-61-00-860-001

(1) Set the SPOILER A and B switches on the forward overhead panel P5 to the OFF position.

(a) Put the DO NOT OPERATE tag, STD-858, on the SPOILER A and B switches.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-00-860-002

(2) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

SUBTASK 27-61-00-860-003

(4) Set the ELEC 2, HYD PUMPS A and the ELEC 1, HYD PUMPS B switches on the forward overhead panel P5 to the OFF position.

SUBTASK 27-61-00-870-001

(5) Operate the rudder pedals to decrease the remaining hydraulic system pressure.

SUBTASK 27-61-00-860-004

(6) If necessary to open a hydraulic line, release pressure from the reservoir for the applicable hydraulic system (TASK 29-09-00-860-802).

SUBTASK 27-61-00-480-001

(7) Install the flight controls lock assembly [2] (Figure 201):

(a) Disconnect the electrical conector [3] from the spoiler shutoff valve at the flight controls hydraulic modules A and B.

(b) After you disconnect the electrical conectors [3], examine them for corrosion (TASK 20-60-07-910-802).

NOTE: The inspection of the electrical conector [3] can be done after the removal step or before the installation step of the electrical conector [3]. This is an operator option.

(c) Put the manual override lever [4] at the two spoiler shutoff valves [1] in the position 2 (OFF position).

(d) Install the locks, SPL-1675, on the two spoiler shutoff valves.

1) Install the detent pin [5].

SUBTASK 27-61-00-210-001

(8) Spoiler Control System - Tryout

NOTE: This tryout is to make sure that the spoiler control system is in zero energy state.

(a) Do these steps to check the spoiler control system:

1) Turn the Captain's control wheel a minimum of 4 units.

2) Make sure that there is no movement from the spoiler and wheel forces are higher than usual.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Move the Captain's control wheel back to the neutral position.

4) Install DO NOT OPERATE tags, STD-858, on the Captain's and the First Officer's control wheels.

(b) Make sure the locks, SPL-1675, are installed on the two spoiler shutoff valves.

END OF TASK

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

D. Procedure

SUBTASK 27-61-00-860-009

CAUTION

DO NOT OPERATE SYSTEM A OR B HYDRAULIC PUMPS FOR MORE THAN TWO MINUTES WITHOUT FUEL IN THE FUEL TANKS. THE NO. 1 (FOR SYSTEM A) AND NO. 2 (FOR SYSTEM B) FUEL TANKS MUST HAVE A MINIMUM OF 250 GALLONS (1675 POUNDS/760 KILOGRAMS) OF FUEL IN THEM. IF THERE IS NOT SUFFICIENT FUEL IN THE FUEL TANKS, THE HYDRAULIC FLUID WILL BECOME TOO HOT.

(1) Make sure the No. 1 and No. 2 fuel tanks each have 250 gallons (1675 pounds/760 kilograms) of fuel in them.

SUBTASK 27-61-00-210-002

(2) Make sure the hydraulic reservoirs are full (TASK 12-12-00-610-801).

SUBTASK 27-61-00-860-010

(3) Make sure that this circuit breaker is closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-61-00-860-011

(4) Set the parking brake.

SUBTASK 27-61-00-480-002

WARNING

MAKE SURE THAT YOU INSTALL THE DOWNLOCKS ON THE NOSE AND MAIN LANDING GEAR. WITHOUT THE DOWNLOCKS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE THE EQUIPMENT.

(5) Install the ground lock assemblies in the nose gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-00-860-012

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Pressurize the spoiler hydraulic systems A and B:

(a) Set the ELEC 2, HYD PUMPS A or ELEC 1, HYD PUMPS B switch on the forward overhead panel to the ON position.

(b) To pressurize the hydraulic system A, set the SPOILER A switch on the forward overhead panel to the ON position.

(c) To pressurize the hydraulic system B, set the SPOILER B switch on the forward overhead panel to the ON position.

END OF TASK

TASK 27-61-00-840-801

5. Shut Down the Spoiler Hydraulic Systems A and B

(Figure 202)

A. General

(1) This procedure shut downs the spoiler hydraulic systems A and B but does not remove the head pressure.

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

C. Procedure

SUBTASK 27-61-00-860-013

(1) Set the ELEC 2, HYD PUMPS A and the ELEC 1, HYD PUMPS B switches on the forward overhead panel to the OFF position.

SUBTASK 27-61-00-860-014

(2) Set the SPOILER A and B switches on the forward overhead panel to the OFF position.

——— END OF TASK ———

TASK 27-61-00-800-802

6. Depressurization of the Spoiler Hydraulic Systems A and B

(Figure 202, Figure 203)

A. General

(1) This procedure removes the head pressure from the spoiler hydraulic systems A and B and locks the system out.

B. References

Reference	Title

E. Depressurize the Spoiler Hydraulic Systems A and B

SUBTASK 27-61-00-860-015

(1) Put the SPOILER A and B switches on the forward overhead panel to the OFF position.

(a) Install the DO NOT OPERATE tag, STD-858.

SUBTASK 27-61-00-860-016

(2) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-61-00-860-017

(3) Set the ELEC 2, HYD PUMPS A and the ELEC 1, HYD PUMPS B switches on the forward overhead panel to the OFF position.

SUBTASK 27-61-00-870-002

(4) Operate the rudder pedals to decrease the remaining hydraulic system pressure.

SUBTASK 27-61-00-860-018

(5) If it is necessary to open a hydraulic line, you must release pressure from the reservoir for the applicable hydraulic system (Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802).

SUBTASK 27-61-00-480-003

(6) Install the flight controls hydraulic module locks (Figure 203):

(a) Disconnect the electrical connector from the spoiler shutoff valve at the flight controls hydraulic modules A and B.

(b) After you disconnect the electrical connector(s), examine the connector(s) for corrosion (TASK 20-60-07-910-802).

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(c) Put the manual override lever at the two spoiler shutoff valves in the position 2 (OFF position).

(d) Install the lock, SPL-1675 on the two spoiler shutoff valves.

1) Install the detent pins.

END OF TASK

TASK 27-61-00-840-802

7. Pressurization of the Spoiler Hydraulic Systems A and B to its Usual Condition

(Figure 202, Figure 203)

A. General

(1) This procedure unlocks the spoiler hydraulic systems A and B and applies the hydraulic pressure back to the system.

B. References

Reference	Title
20-60-07-910-802	Inspection, Cleaning and Sealing of Electrical Connectors (P/B 201)

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1675	Assembly - Lock, Flight Controls (used on valve p/n 10-60581-2 and 10-60581-3) Part #: F80049-65 Supplier: 81205 Opt Part #: F80049-56 Supplier: 81205
STD-858	Tag - DO NOT OPERATE

D. Consumable Materials

Reference	Description	Specification
G50171	Compound - Corrosion Inhibiting Compound, Interior Application - D5026NS or ZC-026	

E. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

F. Procedure

SUBTASK 27-61-00-080-004

(1) Remove the flight controls hydraulic module locks from the spoiler shutoff valves.

(a) Remove the detent pins.

(b) Remove the lock, SPL-1675 from the two spoiler shutoff valves.

(c) Put the manual override lever at the two spoiler shutoff valves in the position 1 (ON position).

(d) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

(e) Connect the electrical connector to the spoiler shutoff valve at the spoiler hydraulic modules A and B. (Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-00-860-019

(2) Set the SPOILER A and B switches on the forward overhead panel to the ON position.

(a) Remove the DO NOT OPERATE tag, STD-858.

SUBTASK 27-61-00-860-020

(3) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-61-00-860-021

(4) Pressurize the hydraulic reservoirs (Hydraulic Reservoirs Pressurization, TASK 29-09-00-860-801).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SPOILER CONTROL SYSTEM - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

- Spoiler Control System Operational Test

NOTE: This test can be used to quickly give the status of the spoiler control system. This test can be done without special tools or equipment

- Flight Spoiler Adjustment

NOTE: This task has the adjustment of the clearance between the flight spoilers and the flaps.

- Flight Spoiler System Test

NOTE: This is a test of the operation of the flight spoilers No. 2, 3, 4, 5, 8, 9, 10, and 11.

- Spoiler Manual Operation Test

B. The Fly-By-Wire spoiler control system gives lateral control and speed brake signals to the flight spoiler actuators through the Spoiler Control Electronics (SCE). The speed brake signals also control the ground spoilers through the Ground Spoiler Control Module (GSCM).

C. You must not use the decals installed on the aileron control wheels during the adjustment or the test of the spoiler control system. The decals are for flight crew use only.

TASK 27-61-00-710-801

2. Spoiler Control System Operational Test

A. References

Reference	Title
27-62-00-800-801	Apply Pressure to the Speed Brake Hydraulic Systems A and B (P/B 201)
27-62-00-840-801	Shut Down the Speed Brake Hydraulic Systems A and B (P/B 201)

B. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

C. Prepare for the Test

SUBTASK 27-61-00-860-022

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

D. Spoiler Control System Operational Test

SUBTASK 27-61-00-020-001

(1) Turn the captain's aileron control wheel fully clockwise.

(a) Make sure that the No. 8, 9, 10, and 11 flight spoilers move to the up position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-00-020-002

(2) Turn the captain's aileron control wheel fully counterclockwise.

(a) Make sure that the No. 2, 3, 4 and 5 flight spoilers move to the up position.

SUBTASK 27-61-00-020-003

(3) Turn the captain's aileron control wheel to the neutral position.

(a) Make sure that the flight spoilers move to the retracted position.

SUBTASK 27-61-00-020-004

(4) Move the speed brake lever from the DOWN position to the UP position.

(a) Make sure that the flight spoilers and ground spoilers move to the UP position.

SUBTASK 27-61-00-020-005

(5) Move the speed brake lever from the UP position to the DOWN position.

(a) Make sure that the flight spoilers and ground spoilers move to the retracted position.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-00-410-001

(1) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

——— END OF TASK ———

TASK 27-61-00-820-802

3. Flight Spoiler Adjustment

663	Right Wing - Spoiler No. 9
664	Right Wing - Spoiler No. 10
665	Right Wing - Spoiler No. 11

E. Prepare for the Adjustment

SUBTASK 27-61-00-860-025

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT

CAUTION DO NOT EXTEND OR RETRACT THE TRAILING EDGE FLAPS WITH THE SPOILERS IN THE DOWN POSITION BEFORE YOU ADJUST THE SPOILER ACTUATORS. DAMAGE MAY OCCUR TO THE TRAILING EDGE FLAPS OR SPOILERS.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-61-00-860-026

(2) Put the speedbrake lever in the UP position.

SUBTASK 27-61-00-860-027

(3) Make sure that the captain's and first officer's control wheels are in the neutral position.

(a) Do not touch or move the captain's and first officer's control wheels with the rig pins installed.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-00-480-004

(4) With the flight spoilers [54] up and control wheels at neutral, make sure that you can easily install these rig pins from the rigging pin kit, SPL-1585 (Figure 501):

(a) A/S-4 in the aileron bus drums.

(b) A/S-15 in the aileron trim actuator.

SUBTASK 27-61-00-080-005

(5) Remove all rig pins.

SUBTASK 27-61-00-860-028

(6) Make sure that the trailing edge flaps are in the retracted position.

(a) If they are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-61-00-860-029

(7) Move the speed brake lever to the DOWN position.

(a) Make sure that the flight spoilers [54] do not run into the flaps.

SUBTASK 27-61-00-040-001

(8) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

SUBTASK 27-61-00-040-002

(9) If the hydraulic power is not available, do these steps to move the flight spoiler Power Control Unit (PCU)s manually:

(a) Push down gently on the flight spoiler [54], to bottom out the flight spoiler PCU.

1) Make sure that apply even pressure along the ribs of the flight spoiler [54] to prevent damage to the spoiler panel.

F. Flight Spoiler Adjustment

SUBTASK 27-61-00-860-030

(1) Measure the clearance (Dimension X) between the trailing edge of the spoiler panels and flaps near the centerline of the flight spoiler actuators [53].

(a) Make sure that the clearance (Dimension X) between the flight spoilers [54] and flaps are within the limits in Table 501:

Table 501/27-61-00-993-808

REDUCED SPOILERS GAPS		
DIMENSION X (Figure 502)		
SPOILERS	MINIMUM	MAXIMUM
2, 11	0.070 in. (1.78 mm)	0.130 in. (3.30 mm)
3, 10	0.080 in. (2.03 mm)	0.140 in. (3.56 mm)
SIA 003		
3	0.080 in. (2.03 mm)	0.142 in. (3.61 mm)
SIA 004, 005		
3	0.080 in. (2.03 mm)	0.260 in. (6.60 mm)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SIA 004, 005 (Continued)

Table 501/27-61-00-993-808 (Continued)

REDUCED SPOILERS GAPS		
SIA ALL		
4, 9	0.030 in. (0.76 mm)	0.090 in. (2.29 mm)
5, 8	0.030 in. (0.76 mm)	0.090 in. (2.29 mm)

NOTE: Temperature differences between the upper and lower surfaces of the wing can have a significant effect on the spoiler gaps. If the upper surface is warmer, as is often the case when the airplane is sitting in the sun, the gaps will become smaller.

(b) Measure the clearance aft of the actuator rod end [56].

NOTE: A larger or smaller clearance is permitted at other locations along the flight spoiler [54].

SUBTASK 27-61-00-860-031

(2) If the clearances (Dimension X) between the spoiler panels and flaps are not in the limits, adjust the clearance:

(a) Make a record of the clearance.

(b) Lift the flight spoiler [54] and extend the flaps to get access to the flight spoiler actuator [53]:

1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

2) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

3) Move the speed brake lever to the UP position to lift the flight spoilers [54].

4) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

5) Move the speed brake lever to the DOWN position.

NOTE: This will release the hydraulic pressure from the spoiler actuators.

6) Move the speed brake lever to the UP position.

NOTE: The speedbrake lever is set to the UP position as a safety precaution.

(c) Loosen the check nut [55] on the actuator rod end [56].

(d) Turn the piston rod on the flight spoiler actuator [53] to adjust the clearance between the flight spoilers [54] and flaps.

NOTE: Turning the piston rod by one serration of the locking device will change the spoiler gap by approximately 0.006 in. (0.152 mm).

(e) Tighten the check nut [55] to 100 in-lb (11.3 N·m) - 200 in-lb (22.6 N·m) temporarily.

(f) Do a check of the adjustment:

1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

2) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

3) Slowly move the speed brake lever to the DOWN position.

4) Make sure the clearances between the flight spoilers [54] and flaps are within the tolerances.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) If the clearances do not meet the values shown in Table 501, repeat the adjustment steps above.

5) Turn the control wheel fully in the clockwise direction.

a) Make sure that flight spoilers [54] No. 2, 3, 4, and 5 do not move down.

b) If the spoilers move down, go back to the start of the task.

NOTE: You do not need to do a check of the fit of the rig pins a second time.

6) Turn the control wheel back to neutral to retract the flight spoilers [54].

7) Turn the control wheel fully in the counterclockwise direction.

a) Make sure that flight spoilers [54] No. 8, 9, 10, and 11 do not move down.

b) If the flight spoilers [54] move down, go back to the start of the task.

NOTE: You do not need to do a check of the fit of the rig pins a second time.

(g) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

(h) Move the speed brake lever to the full up position to lift the flight spoilers [54].

(i) Clean all grease from the piston rod and actuator rod end [56] threads with solvent, B00062, or solvent, B00184.

(j) Apply a layer of the corrosion preventive D5026NS or ZC-026 compound, G50171, to the threads of the actuator rod end [56].

(k) Tighten the check nut [55] to 275 ±25 in-lb (31.1 ±2.9 N·m) .

(l) Install the MS20995NC32 lockwire, G01912, on the check nut [55] with double twist method (TASK 20-10-44-400-801).

(m) Fully seal the check nut [55] with sealant, A00247.

SUBTASK 27-61-00-820-006

(3) Do this task: Flight Spoiler System Test, TASK 27-61-00-730-801.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-00-860-032

(1) If it is necessary, move the speed brake lever to the DOWN position to lower the spoilers.

SUBTASK 27-61-00-860-033

(2) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-61-00-860-035

(3) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Prepare for the Test

NOTE: This test may be done for all actuators or for one or more symmetrical pairs (2 & 11, 3 & 10, 4 & 9, or 5 & 8). If a single actuator or panel was replaced, do the test for both actuators in the symmetrical pair. It is not necessary to make measurements or observations for the actuators not being tested.

SUBTASK 27-61-00-480-005

(1) Make sure that the rig pin A/S-15 from the rigging pin kit, SPL-1585, fits freely in the aileron trim actuator located in the Main Landing Gear wheel well (Figure 27-11-00-990-803).

(a) Remove the rig pin A/S-15 from the aileron trim actuator.

SUBTASK 27-61-00-730-001

(2) Do this task: Flight Spoiler Test, TASK 27-61-45-730-805.

SUBTASK 27-61-00-860-037

(3) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	9	C00440	FLIGHT CONTROL AUTO SPEED BRAKE
B	11	C04040	GROUND SPOILER CONTROL
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

SUBTASK 27-61-00-860-038

(5) Make sure that the speedbrake lever is in the DOWN position.

SUBTASK 27-61-00-020-015

(6) Remove the map holder assembly from the captain's control wheel.

SUBTASK 27-61-00-820-007

(7) Install the mount, SPL-1670, and the protractor, SPL-1680, on the captain's aileron control wheel.

NOTE: As an alternative to the protractor, SPL-1680, the CAPT CTRL WHL or SCE FO CTRL WHL can be used as readings for the Control Wheel position throughout this test. They are located on the FLIGHT CONTROLS page from the MAINT DATA PGS on the forward display.

SUBTASK 27-61-00-860-039

(8) Adjust the protractor, SPL-1680, to zero.

(a) In addition to the protractor, SPL-1680, use the readings of the FLT SPLRS on the FLIGHT CONTROLS page on the forward display In the subsequent test.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-00-480-006

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(9) Do this task: Apply Pressure to the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-801.

SUBTASK 27-61-00-730-002

(10) Cycle the Captain's control wheel through its full travel at least six times.

(a) Center the Captain's control wheel.

SUBTASK 27-61-00-820-008

(11) Install the protractor, COM-1691, on the flight spoilers 2, 3, 4, 5, 8, 9, 10 and 11.

NOTE: This test may be completed with multiple protractors used to measure the spoiler panel movement. If multiple protractors are used for the spoiler panels, the "zero" measurement must be verified with the spoiler panels DOWN before each measurement.

SUBTASK 27-61-00-820-009

(12) Adjust the protractors, COM-1691, to zero.

E. Flight Spoiler System Test

SUBTASK 27-61-00-820-010

(1) Turn the control wheel to 87 (+10, -1) degrees in the counterclockwise direction and hold.

(a) Make sure that the spoilers No. 4 and No. 5 are up 35-39 degrees.

(b) Make sure that spoiler No. 3 is up 30-34 degrees.

(c) Make sure that the spoiler No. 2 is up 30-34 degrees.

(d) Make sure that the spoilers No. 8, No. 9, No. 10 and No. 11 are in the fully down position.

(e) If the spoiler panel is not within the spoiler position limits stated, adjust the gap for spoiler No. 2, 3, 4 and 5 (TASK 27-61-00-820-802).

SUBTASK 27-61-00-860-040

(2) Do these steps to center the Captain's control wheel:

(a) Turn the Captain's control wheel in the counterclockwise direction to more than 87 degrees.

(b) Slowly turn the Captain's control wheel in the clockwise direction until it is in the neutral or zero position.

(c) Make sure that all flight spoilers are down.

(d) Shake-out and center the Captain's control wheel.

SUBTASK 27-61-00-820-022

(3) Turn the control wheel to 87 (+10, -1) degrees in the clockwise direction and hold.

(a) Make sure that the spoilers No. 8 and No. 9 are up 35-39 degrees.

(b) Make sure that spoiler No. 10 is up 30-34 degrees.

(c) Make sure that the spoiler No. 11 is up 30-34 degrees.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Make sure that the spoilers No. 2, No. 3, No. 4, and No. 5 are in the fully down position.

(e) If the spoiler panel is not within the spoiler position limits stated, adjust the gap for spoiler No. 2, 3, 4 and 5 (Flight Spoiler Adjustment, TASK 27-61-00-820-802).

SUBTASK 27-61-00-820-023

(4) Do these steps to center the Captain's control wheel:

(a) Turn the Captain's control wheel in the clockwise direction to more than 87 degrees.

(b) Slowly turn the Captain's control wheel in the counterclockwise direction until it is in the neutral or zero position.

(c) Make sure that all flight spoilers are down.

(d) Shake-out and center the Captain's control wheel.

SUBTASK 27-61-00-730-003

(5) Do these steps to do a check of the spoiler operation with one system hydraulic power:

(a) Put the SPOILER A switch on the forward overhead panel to the OFF position.

NOTE: This will turn off the pressure from Hydraulic System A.

(b) Move the speedbrake lever to the FULL UP position.

(c) Make sure that the flight spoiler panels No. 3, 5, 8, and 10 are FULL UP.

NOTE: If the Hydraulic System A is still pressurized, the ground spoiler panels No. 1, 6, 7, and 12 will also be in the FULL UP position.

(d) Make sure that the spoiler panels No. 2, 4, 9, and 11 are in the FULL DOWN position.

(e) Move the speedbrake lever to the DOWN position.

(f) On the forward overhead panel, put the SPOILER A switch ON.

(g) On the forward overhead panel, put the SPOILER B switch to OFF.

(h) Move the speedbrake lever to the FULL UP position.

(i) Make sure that the flight spoiler panels No. 2, 4, 9, and 11 are in the FULL UP position.

NOTE: If the Hydraulic System A is still pressurized, the ground spoiler panels No. 1, 6, 7, and 12 will also be in the FULL UP position.

(j) Make sure that the flight spoiler panels No. 3, 5, 8, and 10 are FULL DOWN.

(k) Move the speedbrake lever to the DOWN position.

(l) Make sure that all spoiler panels are in the FULL DOWN position.

(m) On the forward overhead panel, put the SPOILER B switch to ON.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-00-860-041

(1) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

SUBTASK 27-61-00-420-004

(2) Install the map holder assembly to the captain's control wheel.

SUBTASK 27-61-00-020-008

(3) Remove the mount, SPL-1670, and the protractor, SPL-1680, from the captain's aileron control wheel.

SUBTASK 27-61-00-020-009

(4) Remove the protractor, COM-1691, from the spoilers No. 2, 3, 4, 5, 8, 9, 10 and 11.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

665	Right Wing - Spoiler No. 11

D. Prepare for the Test

SUBTASK 27-61-00-860-049

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-00-860-051

(2) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	9	C00440	FLIGHT CONTROL AUTO SPEED BRAKE
B	11	C04040	GROUND SPOILER CONTROL
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Make sure that these circuit breakers are closed:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

SUBTASK 27-61-00-860-052

(4) Move the speed brake lever to the DOWN position.

SUBTASK 27-61-00-860-053

(5) Put the ailerons in the neutral position.

SUBTASK 27-61-00-480-011

(6) Install the protractor, COM-1691, on spoilers 1, 6, 7 and 12.

SUBTASK 27-61-00-820-013

(7) Adjust the protractor, COM-1691, to zero.

SUBTASK 27-61-00-860-054

(8) Make sure spoilers No. 1, 6, 7, and 12 are in the fully down position.

E. Spoiler Manual Operation Test

SUBTASK 27-61-00-020-010

(1) Move the speed brake lever aft until spoilers No. 1, 6, 7 and 12 move to the up position.

(a) Make sure the speed lever is 29 +/-2 degrees (2.78 in. (70.61 mm) +/- 0.20 in. (5.08 mm)), measured along the indicator surface aft of the DOWN position.

SUBTASK 27-61-00-020-011

(2) Move the speed brake lever forward until spoilers No. 1, 6, 7 and 12 retract.

(a) Make sure the speed lever is 21 +/-4 degrees (2 in. (50.8 mm) +/- 0.4 in. (10.2 mm)), measured along the indicator surface aft of the DOWN position.

SUBTASK 27-61-00-710-001

(3) Move the speed brake control lever to the DOWN and LOCKED position.

(a) Adjust the protractor, COM-1691, to zero degrees on the spoiler No. 1.

1) Note the position of the protractor on the spoiler panel.

NOTE: The protractor will need to be in the same location when you measure the spoiler panel in the UP position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Do not adjust the protractor, COM-1691, measure and record the DOWN position of the spoilers No. 6, 7 and 12.

1) Record the position of the protractor on each spoiler panel.

NOTE: The protractor will need to be in the same location when you measure the spoiler panel in the UP position.

2) Record the +/- value measurement on the protractor, COM-1691.

NOTE: This value will be used to calculate total spoiler panel travel.

SUBTASK 27-61-00-020-012

(4) Move the speed brake control lever to the UP position.

(a) Do not adjust the protractor, COM-1691, measure and record the UP position of the spoilers No. 1, 6, 7 and 12.

1) Place the protractor, COM-1691, on the same location that was used when the DOWN position was measured.

2) Record the +/- value measurement on the protractor, COM-1691.

NOTE: This value will be used to calculate total spoiler panel travel.

(b) To calculate the total travel for spoiler panels No. 1, 6, 7 and 12, do this step:

1) Subtract the DOWN position measurement from the FULL UP measurement.

(c) Make sure that the spoiler No. 1 is up 60 +/-2 degrees.

(d) Make sure that the spoiler No. 6 is up 60 +/-2 degrees.

(e) Make sure that the spoiler No. 7 is up 60 +/-2 degrees.

(f) Make sure that the spoiler No. 12 is up 60 +/-2 degrees.

(g) Make sure that there is no more than 2 degrees difference between spoiler panel No. 1 and 12.

(h) Make sure that there is no more than 2 degrees difference between spoiler panel No. 6 and 7.

(i) Put the speedbrake lever to the DOWN and LOCKED position.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-00-860-055

(1) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

SUBTASK 27-61-00-080-007

(2) Remove the protractor, COM-1691, from the spoilers No. 1, 6, 7, and 12.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLIGHT SPOILER - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the flight spoilers

(2) An installation of the flight spoilers.

TASK 27-61-11-000-801

2. Flight Spoiler Removal

(Figure 401)

A. General

(1) This task for the left wing spoilers 2, 3, 4, and 5 is applicable to the right wing spoilers 8, 9, 10, and 11.

E. Prepare for the Removal

SUBTASK 27-61-11-860-002

WARNING

MAKE SURE THAT ALL PERSONS AND EQUIPMENT ARE CLEAR OF CONTROL SURFACES, CABLES, AND LANDING GEAR AREAS. PRESSURIZATION OF A HYDRAULIC SYSTEM CAN MOVE CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS. MOVEMENT OF CONTROL SURFACES, CABLES, LANDING GEAR, AND LANDING GEAR DOORS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-61-11-860-003

(2) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-61-11-860-004

(3) Put the speed brake lever in the UP position to lift the spoilers.

SUBTASK 27-61-11-480-001

(4) Install the actuator lock set, SPL-14632, on the actuator for the applicable flight spoiler.

SUBTASK 27-61-11-860-005

(5) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

F. Flight Spoiler Removal

SUBTASK 27-61-11-020-001

(1) For the flight spoiler no. 2 [1], do these steps:

(a) Remove the nut [7] and washers [6] to disconnect the bonding jumper [14] from the structure.

1) Discard the nut [7] and washers [6].

(b) Remove the nut [23] and washer [22] to disconnect the bonding jumper [21] from the structure.

1) Discard the nut [23] and washer [22].

(c) Disconnect the spoiler actuator [5] from the spoiler no. 2 [1] (TASK 27-61-51-000-801).

(d) Remove the cotter pin [13], nut [12], washer [11], bushing [10], washer [9], and bolt [8].

(e) Remove the cotter pin [29], nut [28], washer [27], bushings [26], washer [25], and bolt [24].

(f) Remove the cotter pin [20], nut [19], washer [18], bushing [17], washer [16], and bolt [15].

(g) Remove the flight spoiler no. 2 [1] from the airplane.

SUBTASK 27-61-11-020-002

(2) For the flight spoiler no. 3 [2], spoiler no. 4 [3], or spoiler no. 5 [4], do these steps:

(a) Remove the nut [32] and washers [31] to disconnect the bonding jumper [39] from the structure.

1) Discard the nut [32] and washers [31].

(b) Remove the nut [60] and washers [59] to disconnect the bonding jumper [52] from the structure.

1) Discard the nut [60] and washers [59].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Disconnect the spoiler actuator [30] from the spoiler no. 3 [2], spoiler no. 4 [3], or spoiler no. 5 [4] (TASK 27-61-51-000-801).

(d) Remove the cotter pin [38], nut [37], washer [36], bushing [35], washer [34], and bolt [33].

(e) Remove the cotter pin [58], nut [57], washer [56], bushing [55], washer [54], and bolt [53].

(f) Remove the cotter pin [45], nut [44], washer [43], bushing [42], washer [41], and bolt [40].

(g) Remove the cotter pin [51], nut [50], washer [49], bushings [48], washer [47], and bolt [46].

(h) Remove the flight spoiler no. 3 [2], spoiler no. 4 [3], or spoiler no. 5 [4] from the airplane.

G. Flight Spoiler Installation

SUBTASK 27-61-11-420-001

(1) To install the flight spoiler no. 2 [1], do these steps (View B, Figure 401), (TASK 20-10-44-400-801):

(a) Put the flight spoiler no. 2 [1] in its position on the airplane.

(b) Install the bolt [15] with head inboard, washer [16], bushing [17], washer [18], nut [19], and cotter pin [20].

(c) Install the bolt [24] with head outboard, washer [25], bushings [26], washer [27], nut [28], and cotter pin [29].

(d) Install the bolt [8] with head outboard, washer [9], bushing [10], washer [11], nut [12], and cotter pin [13].

(e) Connect the rod end of the spoiler actuator [5] to flight spoiler no. 2 [1] (TASK 27-61-51-400-801).

(f) Install the new nut [7] and new washers [6] to connect the bonding jumper [14] to the structure.

1) Use cotton wiper, G00034, moist in solvent, B00184, to clean the mating surfaces of the airplane structure, nut [7], washers [6], and bonding jumper [14].

2) Install the nut [7], washers [6], and bonding jumper [14].

3) Tighten the nut [7] to 28 in-lb (3 N·m) - 35 in-lb (4 N·m).

4) Measure the electrical resistance between bonding jumper [14] and airplane structure (SWPM 20-20-00).

a) Use a non-intrinsically safe bonding meter, COM-614.

b) Make sure that the electrical bonding resistance is 0.001 ohm (1.0 milliohm) or less.

5) Apply a fillet seal with sealant, A50337, sealant, A50231, or sealant, A50359, to cover the nut [7], washers [6], and bonding jumper [14].

(g) Install the new nut [23] and new washer [22] to connect the bonding jumper [21] to the structure.

1) Use cotton wiper, G00034, moist in solvent, B00184, to clean the mating surfaces of the airplane structure, nut [23], washer [22], and bonding jumper [21].

2) Apply sealant, A50155, sealant, A50110, sealant, A50296, or sealant, A50231, to the mating surfaces of the ground stud, nut [23], washer [22], and bonding jumper [21].

3) Install the nut [23], washer [22], and bonding jumper [21].

4) Tighten the nut [23] to 28 in-lb (3 N·m) - 35 in-lb (4 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure that there is squeeze out around all the interfaces of each component.

5) Measure the electrical resistance between bonding jumper [21] and airplane structure (SWPM 20-20-00).

a) Use a non-intrinsically safe bonding meter, COM-614.

b) Make sure that the electrical bonding resistance is 0.001 ohm (1.0 milliohm) or less.

SUBTASK 27-61-11-420-002

(2) To install the flight spoiler no. 3 [2], spoiler no. 4 [3], or spoiler no. 5 [4], do these steps (View F, Figure 401), (TASK 20-10-44-400-801):

(a) Put the flight spoiler in its position on the airplane.

(b) Install the bolt [46], washer [47], bushings [48], washer [49], nut [50], and cotter pin [51].

NOTE: For the spoiler no. 3 [2], the bolt [46] head is outboard.

NOTE: For the spoiler no. 4 [3] and spoiler no. 5 [4], the bolt [46] head is inboard.

(c) Install the bolt [40], washer [41], bushing [42], washer [43], nut [44], and cotter pin [45].

NOTE: For the spoiler no. 3 [2], the bolt [40] head is inboard.

NOTE: For the spoiler no. 4 [3] and spoiler no. 5 [4], the bolt [40] head is outboard.

(d) Install the bolt [53] (with head inboard), washer [54], bushing [55], washer [56], nut [57], and cotter pin [58].

(e) Install the bolt [33] (with head outboard), washer [34], bushing [35], washer [36], nut [37], and cotter pin [38].

(f) Connect the rod end of the spoiler actuator [30] to flight spoiler no. 3 [2] (TASK 27-61-51-400-801).

(g) Install the new nut [32] and new washers [31] to connect the bonding jumper [39] to the structure.

1) Use cotton wiper, G00034, moist in solvent, B00184, to clean the mating surfaces of the airplane structure, nut [32], washers [31], and bonding jumper [39].

2) Install the nut [32], washers [31], and bonding jumper [39].

3) Tighten the nut [32] to 28 in-lb (3 N·m) - 35 in-lb (4 N·m).

4) Measure the electrical resistance between bonding jumper [39] and airplane structure (SWPM 20-20-00).

a) Use a non-intrinsically safe bonding meter, COM-614.

b) Make sure that the electrical bonding resistance is 0.001 ohm (1.0 milliohm) or less.

5) Apply a fillet seal with sealant, A50337, sealant, A50231, or sealant, A50359, to cover the nut [32], washers [31], and bonding jumper [39].

(h) Install the new nut [60] and new washers [59] to connect the bonding jumper [52] to the structure.

1) Use cotton wiper, G00034, moist in solvent, B00184, to clean the mating surfaces of the airplane structure, nut [60], washers [59], and bonding jumper [52].

2) Install the nut [60], washers [31], and bonding jumper [39].

3) Tighten the nut [60] to 28 in-lb (3 N·m) - 35 in-lb (4 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Measure the electrical resistance between bonding jumper [52] and airplane structure (SWPM 20-20-00).
   a) Use a non-intrinsically safe bonding meter, COM-614.
   b) Make sure that the electrical bonding resistance is 0.001 ohm (1.0 milliohm) or less.
5) Apply a fillet seal with sealant, A50337, sealant, A50231, or sealant, A50359, to cover the mating surface of the nut [60], washers [59], and bonding jumper [52].

SUBTASK 27-61-11-080-001

(3) Remove the actuator lock set, SPL-14632, from the applicable flight spoiler actuator.

SUBTASK 27-61-11-720-002

(4) To unlatch the SPOILER ACTUATOR status message, do this task: Flight Spoiler Test, TASK 27-61-45-730-805.

NOTE: The SPOILER ACTUATOR status message can be latched when the spoilers are locked in the up position.

H. Flight Spoiler Installation Test

SUBTASK 27-61-11-860-006

(1) Do this task: Pressurization of the Spoiler Hydraulic Systems A and B to its Usual Condition, TASK 27-61-00-840-802.

SUBTASK 27-61-11-860-007

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Do this task: Apply Pressure to the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-801.

SUBTASK 27-61-11-860-008

(3) Move the speed brake lever to the DOWN position to lower the spoilers.

SUBTASK 27-61-11-860-009

(4) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-61-11-860-010

(5) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

SUBTASK 27-61-11-820-001

(6) Do this task: Flight Spoiler Adjustment, TASK 27-61-00-820-802.

SUBTASK 27-61-11-720-001

(7) Do this task: Flight Spoiler System Test, TASK 27-61-00-730-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SPOILER SHUTOFF VALVE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the spoiler shutoff valve

(2) An installation of the spoiler shutoff valve

(3) A removal of the spoiler shutoff valve motor

(4) An installation of the spoiler shutoff valve motor.

B. The spoiler shutoff valve and the flight controls shutoff valve are parts of the flight controls hydraulic module.

TASK 27-61-12-000-801

2. Spoiler Shutoff Valve Removal

(Figure 401)

A. General

(1) This task gives the instructions to remove the spoiler shutoff valve assembly.

(2) The spoiler shutoff valve assembly contains the spoiler shutoff valve motor [7] and the spoiler shutoff valve [12].

B. References

Reference	Title

212	Flight Compartment - Right

E. Prepare for the Spoiler Shutoff Valve Removal

SUBTASK 27-61-12-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all of the landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-12-860-003

(2) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

F. Spoiler Shutoff Valve Removal

SUBTASK 27-61-12-020-001

(1) Do these steps to remove the spoiler shutoff valve assembly:

(a) Disconnect the electrical connector [1] from the spoiler shutoff valve motor [7].

(b) Remove the lockwire from the bolts [4].

(c) Put a 5 gallon (19 liter) container, STD-1154, below the spoiler shutoff valve assembly to receive hydraulic fluid.

(d) Remove the bolts [4] and washers [5] that attach the spoiler shutoff valve assembly to the flight controls hydraulic module housing [2].

(e) Carefully lift the spoiler shutoff valve assembly directly up to remove it from the flight controls hydraulic module housing [2].

(f) Put a cover on the flight controls hydraulic module housing [2] to keep contamination out of the open valve hole.

F. Spoiler Shutoff Valve Installation

SUBTASK 27-61-12-420-001

(1) If the spoiler shutoff valve [12] does not have the packing [9], the two backup rings [8], the packing [11], and the two backup rings [10] installed, then do these steps:

(a) Apply hydraulic fluid, D00153, to the packing [9], the two backup rings [8], the packing [11], and the two backup rings [10].

(b) Install the packing [9], the two backup rings [8], the packing [11], and the two backup rings [10] to the spoiler shutoff valve [12].

SUBTASK 27-61-12-420-002

(2) Carefully install the spoiler shutoff valve assembly in the flight controls hydraulic module housing [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Install the four bolts [4] and the four washers [5] to attach the spoiler shutoff valve assembly to the flight controls hydraulic module housing [2].

(b) Tighten each bolt [4] from 30 in-lb (3 N·m) to 40 in-lb (5 N·m).

(c) Install the new MS20995NC32 lockwire, G50347, on the four bolts [4].

(d) Do this task for the electrical connector [1]: Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802.

(e) Connect the electrical connector [1] to the spoiler shutoff valve motor [7].

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-12-860-004

(1) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-61-12-610-001

(2) If it is necessary to do the servicing of the hydraulic reservoirs, then do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-61-12-730-001

(3) Do this task: Spoiler Shutoff Valve Test, TASK 27-61-12-400-803.

——— END OF TASK ———

TASK 27-61-12-000-802

4. Spoiler Shutoff Valve Motor Removal

(Figure 401)

A. General

(1) This task gives the instructions to remove the spoiler shutoff valve motor.

B. References

Reference	Title
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

C. Location Zones

Zone	Area

211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Spoiler Shutoff Valve Motor Removal

SUBTASK 27-61-12-480-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all of the landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-12-860-005

(2) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

E. Spoiler Shutoff Valve Motor Removal

SUBTASK 27-61-12-020-002

(1) Do these steps to remove the spoiler shutoff valve motor [7]:

(a) Disconnect the electrical connector [1] from the spoiler shutoff valve motor [7].

(b) Set the manual override lever on the spoiler shutoff valve motor [7] to position 2.

(c) Remove the lockwire from the screws [6].

(d) Remove the screws [6] that attach the spoiler shutoff valve motor [7] to the spoiler shutoff valve [12].

(e) Remove the spoiler shutoff valve motor [7] from the spoiler shutoff valve [12].

SUBTASK 27-61-12-020-003

(2) If you will install the new spoiler shutoff valve motor [7], remove the name plate [13] from the spoiler shutoff valve motor [7].

(a) Keep the name plate [13] for the subsequent installation.

NOTE: The motor name plate is for the spoiler shutoff valve assembly accountability/traceability and will be installed on a new spoiler shutoff valve motor.

——— END OF TASK ———

TASK 27-61-12-400-802

5. Spoiler Shutoff Valve Motor Installation

(Figure 401)

A. General

(1) This task gives the instructions to install the spoiler shutoff valve motor.

B. References

212	Flight Compartment - Right

F. Spoiler Shutoff Valve Motor Installation

SUBTASK 27-61-12-420-004

(1) If you replace the spoiler shutoff valve motor [7], install the removed name plate [13] on a new spoiler shutoff valve motor [7].

SUBTASK 27-61-12-420-003

(2) Do these steps to install the spoiler shutoff valve motor [7]:

(a) Make sure that the manual override lever that is on the spoiler shutoff valve motor [7] is set to position 2.

(b) Put the spoiler shutoff valve motor [7] on the spoiler shutoff valve [12].

(c) Engage the spoiler shutoff valve motor [7] with the spoiler shutoff valve [12] cam.

(d) Install the screws [6].

(e) Install the MS20995NC32 lockwire, G50347, on the screws [6].

(f) Do this task for the electrical connector [1]: Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802.

(g) Connect the electrical connector [1] to the spoiler shutoff valve motor [7].

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-12-860-006

(1) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-61-12-730-002

(2) Do this task: Spoiler Shutoff Valve Test, TASK 27-61-12-400-803.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SPOILER SHUTOFF VALVE - ADJUSTMENT/TEST

1. General

A. This procedure has this task:

(1) A test of the spoiler shutoff valve.

TASK 27-61-12-400-803

2. Spoiler Shutoff Valve Test

(Figure 501, Figure 502)

A. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Prepare for the Operational Test

SUBTASK 27-61-12-860-008

(1) Make sure that this circuit breaker is closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-61-12-860-009

(2) To pressurize hydraulic systems A and B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

D. Spoiler Shutoff Valve Test

SUBTASK 27-61-12-720-001

(1) Do the test of the spoiler shutoff valve [1]:

(a) Move the two SPOILER switches, on the P5-3 flights control panel, to the OFF position and then to the ON position (Figure 501).

(b) Make sure that the manual override levers [2] of the two spoiler shutoff valves [1] are in position 1 (Figure 502).

(c) Move one of the two aileron control wheels to bleed the hydraulic system.

(d) Make sure that there is no leakage of hydraulic fluid at the spoiler shutoff valves [1].

(e) Move the aileron control wheel to make sure that the flight spoilers operate correctly.

(f) Set the two SPOILER switches to the OFF position.

(g) Make sure that the manual override levers [2] of the two spoiler shutoff valves [1] are in position 2.

(h) Move the aileron control wheel to make sure that the flight spoilers do not operate.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-12-860-010

(1) Set the SPOILER switches to the ON position.

SUBTASK 27-61-12-820-001

(2) Make sure that the manual override levers [2] of the two spoiler shutoff valves [1] are in position 1 (Figure 502).

SUBTASK 27-61-12-860-011

(3) To remove power from hydraulic systems A and B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

D. Prepare for the Removal

SUBTASK 27-61-15-860-002

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-801.

SUBTASK 27-61-15-860-003

(2) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-61-15-860-004

(3) Put the speed brake lever in the UP position to lift the spoilers.

SUBTASK 27-61-15-480-001

(4) Install the actuator lock set, SPL-14632 on the actuator for the applicable flight spoiler.

SUBTASK 27-61-15-860-005

(5) Do this task: Depressurization of the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-802.

SUBTASK 27-61-15-020-001

(6) Do this task: Flight Spoiler Removal, TASK 27-61-11-000-801.

E. Flight Spoiler Hinge Link Removal

SUBTASK 27-61-15-020-002

(1) Do these steps to remove the spoiler hinge link [5] from spoiler no. 2 [1], spoiler no. 3 [2], spoiler no. 4 [3] or spoiler no. 5 [4]:

(a) Remove pins [11], nuts [10], washers [9], bushings [8], washers [7] and bolts [6].

(b) Remove the spoiler hinge link [5] from the airplane.

E. Flight Spoiler Hinge Link Installation

SUBTASK 27-61-15-420-001

(1) Install the bolts [6], washers [7], bushings [8], washers [9], nuts [10] and new pins [11] to install the spoiler hinge link [5].

SUBTASK 27-61-15-860-006

(2) Make sure hydraulic power is not on. To remove it, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-15-080-001

(3) Remove the actuator lock set, SPL-14632 from the applicable flight spoiler actuator.

SUBTASK 27-61-15-860-007

(4) Do this task: Pressurization of the Spoiler Hydraulic Systems A and B to its Usual Condition, TASK 27-61-00-840-802.

SUBTASK 27-61-15-860-008

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Do this task: Apply Pressure to the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-801.

SUBTASK 27-61-15-860-009

(6) Move the speed brake lever to the DOWN position to lower the spoilers.

SUBTASK 27-61-15-860-010

(7) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-61-15-860-011

(8) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

SUBTASK 27-61-15-820-001

(9) Do this task: Flight Spoiler Adjustment, TASK 27-61-00-820-802.

SUBTASK 27-61-15-720-001

(10) Do this task: Flight Spoiler System Test, TASK 27-61-00-730-801.

——— END OF TASK ———

CONTROL WHEEL POSITION TRANSDUCER - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the control wheel position transducer.

(2) An installation of the control wheel position transducer.

TASK 27-61-44-000-801

2. Control Wheel Position Transducer Removal

(Figure 401)

NOTE: This procedure is a scheduled maintenance task.

A. References

Reference	Title

D. Prepare for the Removal

SUBTASK 27-61-44-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all of the landing gear, then do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-61-44-860-001

(2) Do this task: Pressure from the Aileron Hydraulic Systems A and B - Deactivation, TASK 27-11-00-860-801.

SUBTASK 27-61-44-860-002

(3) Do this task: Remove Electrical Power, TASK 24-22-00-860-802.

SUBTASK 27-61-44-860-003

(4) Open this access panel:

Number	Name/Location
112A	Forward Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Control Wheel Position Transducer Removal

SUBTASK 27-61-44-020-001

(1) Do these steps to remove the control wheel position transducer [1]:

(a) Remove the bolt [3], the bolt [4], the four washers [5], the two nuts [6], and the three clamps [2].

(b) Disconnect the P1 connector, the P2 connector, and the P3 connector.

(c) Remove the four nuts [7] and the four washers [8].

(d) Remove the control wheel position transducer [1].

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
211	Flight Compartment - Left
212	Flight Compartment - Right

E. Access Panels

Number	Name/Location
112A	Forward Access Door

F. Control Wheel Position Transducer Installation

SUBTASK 27-61-44-420-001

(1) Do these steps to install the control wheel position transducer [1] as follows:

(a) Apply a thin layer of grease, D00633, to the splines of the control wheel position transducer [1].

(b) Align the spline indexes and put the control wheel position transducer [1] in its position.

(c) Install the four washers [8] and the four nuts [7] that attach the control wheel position transducer [1] to the plate.

(d) Tighten the four nuts [7] to 35 ±1 in-lb (4.0 ±0.2 N·m).

(e) For the P1, P2, and P3 connectors, do this task: Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802.

(f) Connect the P1, P2, and P3 connectors to their applicable ports.

(g) Install the bolt [3], the bolt [4], the four washers [5], the two nuts [6], and the three clamps [2].

G. Control Wheel Position Transducer Adjustment

SUBTASK 27-61-44-820-002

(1) Do these steps to adjust the control wheel position transducer [1]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Make sure that there are no faults that are related to the first officer wheel position transducer.

1) If there is fault, do this task: First Officer's Wheel Transducer Test, TASK 27-61-45-730-803.

(b) Use the Onboard Maintenance System (OMS) to show the Flight Controls Maintenance Data page (MAINT DATA PGS).

(c) Find the data indications for the SCE FO CTRL WHL, RVDT A, B, and C.

(d) To adjust the aileron system, do this task: Aileron Cables Adjustment, TASK 27-11-00-820-801.

(e) Loosen the four nuts [7] that attach the control wheel position transducer [1] to the plate.

(f) Make sure that you can turn the control wheel position transducer [1] clockwise and counterclockwise.

(g) Turn the control wheel position transducer [1] until the data indications for all three RVDT channels are 0.00 +/-0.5 degrees.

(h) Tighten the four nuts [7] that attach the control wheel position transducer [1] to the plate to 35 ±1 in-lb (4.0 ±0.2 N·m).

(i) Make sure that all three RVDT channels continue to be 0.00 +/-0.5 degrees.

(j) Turn the control wheel clockwise.

1) Make sure that the data indications of the RVDT channels are positive values.

(k) Turn the control wheel counterclockwise.

1) Make sure that the data indications of the RVDT channels are negative values.

(l) Turn the control wheel clockwise and counterclockwise many times.

(m) Put the control wheel in the neutral position.

(n) To adjust the aileron system, do this task: Aileron Cables Adjustment, TASK 27-11-00-820-801.

(o) Make sure that all three RVDT channels are 0.00 +/-0.5 degrees.

H. Control Wheel Position Transducer Test

SUBTASK 27-61-44-730-001

(1) Do this task: First Officer's Wheel Transducer Test, TASK 27-61-45-730-803.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-44-410-001

(1) Close this access panel:

Number	Name/Location
112A	Forward Access Door

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SPOILER CONTROL ELECTRONICS - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Spoiler Control Electronics (SCE) software installation with the Onboard Network System (ONS)

(2) SCE software configuration check.

TASK 27-61-45-470-801

2. SCE Software Installation with Onboard Network System

A. General

(1) This task gives the steps to install the Operational Program Software (OPS) into the Spoiler Control Electronics (SCE), M02940.

(2) Loading the software to the SCE on the airplane is accomplished in the flight deck by using the Portable Maintenance Device (PMD) or the multifunction display (MFD) to access the Onboard Network System (ONS) load function.

(3) The SCE is made up of 3 independent Digital Processing Lanes (DPL). Each lane (DPL 1, DPL 2 and DPL 3) will require independent enabling in order to load software, only one lane can be loaded at a time.

(4) The airplane must be on the ground with the engines shutdown before you can do the software installation.

B. References

Reference	Title
46-13-00-470-801	LRU Software Parts Installation (P/B 201)
46-13-02-710-801	Onboard Maintenance Function Ground Test (P/B 201)
IFIM and do the applicable procedure(s)	Interactive Fault Isolation Manual

C. Location Zones

Zone	Area
212	Flight Compartment - Right

D. SCE Software Installation with Onboard Network System

SUBTASK 27-61-45-860-034

(1) Make sure that the SYSTEM SELECT switch on the P61 panel is set to NORMAL.

SUBTASK 27-61-45-470-001

(2) Load the required software into SCE Lanes 1, 2 and 3. Do this task: LRU Software Parts Installation, TASK 46-13-00-470-801.

NOTE: Do not cycle circuit breakers C04032 and C04033 before loading software into Lanes 1, 2 and 3. Cycling of circuit breakers C04032 and C04033 before loading software in all three lanes can result in appearance of an incompatible software fault and SCE removal after three load attempts.

(a) One software part is loaded at a time:

1) For SCE Lane 1, load DPL 1 OPS

2) For SCE Lane 2, load DPL 2 OPS

3) For SCE Lane 3, load DPL 3 OPS

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-45-710-005

CAUTION

MAKE SURE THAT YOU USE A RELIABLE POWER SOURCE DURING SCE SOFTWARE INSTALLATION. DO NOT DO THE OPS LOAD AT THE SAME TIME WITH OTHER TASKS. SOME TASKS CAN CAUSE A POWER INTERRUPT AND CAN CAUSE OPS LOAD FAILURE. IF THE OPS LOAD TO A SINGLE-LANE FAILS MORE THAN TWICE, REPLACE THE SCE.

(3) If the OPS load to a lane fails twice, look in the display unit for SCE or NSF faults (TASK 46-13-02-710-801).

NOTE: SCE software installation is power sensitive. Power interrupts can cause the OPS load to fail. A failed SCE OPS load attempt occurs when the software upload is in progress and a power interrupt occurs during specific times.

(a) If it is necessary, use the IFIM and do the applicable procedure(s) to troubleshoot and correct any SCE or NSF faults that you find.

SUBTASK 27-61-45-700-001

(4) Do this task to verify the software was loaded: SCE Configuration Check, TASK 27-61-45-750-801.

——— END OF TASK ———

TASK 27-61-45-750-801

3. SCE Configuration Check

A. General

(1) This procedure gives the steps to verify the Operational Program Software (OPS) software installed in each of 3 SCE Lanes.

(2) The aircraft must be on the ground before you can perform this task.

B. References

Reference	Title
46-13-00-710-802	System Configuration Check (P/B 201)

C. Location Zones

Zone	Area
212	Flight Compartment - Right

D. Procedure

SUBTASK 27-61-45-700-002

(1) Do a check of the each SCE Lane software. Do this task: System Configuration Check, TASK 46-13-00-710-802.

(a) Record and verify that each software part number is correct.

1) Check SCE Lane 1, SCE Lane 2 and SCE Lane 3.

2) If a software part number is not correct, software installation is required. Do this task: SCE Software Installation with Onboard Network System, TASK 27-61-45-470-801.

3) If all software part numbers are correct, then continue.

——— END OF TASK ———

A. This procedure has these tasks:

(1) Spoiler Control Electronics Self Test

(2) Speedbrake Lever Transducer Test

(3) First Officer's Wheel Transducer Test

(4) Ground Spoiler Control Module Replacement Test

(5) Flight Spoiler Test.

TASK 27-61-45-730-801

2. Spoiler Control Electronics Self Test

NOTE: This procedure is a scheduled maintenance task.

A. References

Reference	Title
34-21-00-710-801	Air Data Inertial Reference System - Operational Test (P/B 501)
46-13-02-710-801	Onboard Maintenance Function Ground Test (P/B 201)
IFIM and do the applicable procedure(s)	Interactive Fault Isolation Manual

B. Location Zones

Zone	Area
212	Flight Compartment - Right

C. Prepare for the Test

SUBTASK 27-61-45-860-008

(1) Make sure the ADIRU is on and operational (TASK 34-21-00-710-801).

NOTE: Some faults may occur and prevent the test from operating. The ADIRU must be on and operational to reset these faults.

SUBTASK 27-61-45-860-046

(2) Set the LIGHTS switch on the captain's main instrument panel, P1, to BRT.

D. Spoiler Control Electronics (SCE) Self Test

SUBTASK 27-61-45-740-002

(1) Do these steps to do the SCE Self Test (TASK 46-13-02-710-801):

NOTE: When the Onboard Maintenance Function (OMF) instructions call for Hydraulic Power, Hydraulic Power must be controlled at the source, i.e. Pumps or Ground Service. Flight Controls A and B, and Spoilers A and B switches on the P5 panel should remain ON.

NOTE: When the OMF instructions call for the removal of Hydraulic Power, monitor the A & B system pressures, and wait until System A and B pressures drop below 200 psi before continuing.

(a) Set the GND TEST switch on the P61-4 panel to ENABLE.

(b) Push the SYS button in the MFD section of the Multi Function Panel.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Use the SELECTOR on the Multi Function Panel to make these selections:

NOTE: If the Speed Brake Lever is in the ARMED, FLIGHT DETENT, or UP positions, the Speed Brake Lever may retract to the DOWN position when starting the ground test.

- MAINT
- ONBD MAINT
- LINE MAINT
- GROUND TESTS
- 27 - Spoiler Control
- Operational Test
- SCE Test
- CONTINUE

(d) Follow the on-screen instructions and then select the rectangular CONTINUE button.

(e) Use the SELECTOR on the Multi Function Panel to make this selection:

- START TEST

(f) Make sure that when the test is complete, there are no faults and you see the TEST CONDITION: PASS message.

1) If you see TEST CONDITION: FAILED, go to IFIM and do the applicable procedure(s).

2) If you do additional tests on the Multi Function Panel, select the NEW TEST button.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-45-860-009

(1) Set the GND TEST switch to NORM.

SUBTASK 27-61-45-860-010

(2) Set the IRS R and IRS L switches on the IRS Mode Select Unit, located on the P5 panel, to the OFF position.

——— END OF TASK ———

TASK 27-61-45-730-802

3. Speedbrake Lever Transducer Test

NOTE: This procedure is a scheduled maintenance task.

IFIM and do the applicable procedure(s)	Interactive Fault Isolation Manual

B. Location Zones

Zone	Area
212	Flight Compartment - Right

ECCN 9E991 BOEING PROPRIETARY - See title page for details

C. Prepare for the Test

SUBTASK 27-61-45-860-048

(1) Make sure that the airplane has weight on wheels.

SUBTASK 27-61-45-860-013

(2) Make sure the ADIRU is on and operational (TASK 34-21-00-710-801).

NOTE: Some faults may occur and prevent the test from running. The ADIRU must be on and operational to reset these faults.

D. Speedbrake Lever Transducer Test

SUBTASK 27-61-45-730-002

(1) Do these steps to do the speedbrake lever transducer test (TASK 46-13-02-710-801):

NOTE: When the Onboard Maintenance Function (OMF) instructions call for Hydraulic Power, Hydraulic Power must be controlled at the source, i.e. Pumps or Ground Service. Flight Controls A and B, and Spoilers A and B switches on the P5 panel should remain ON.

NOTE: When the OMF instructions call for the removal of Hydraulic Power, monitor the A & B system pressures, and wait until System A and B pressures drop below 200 psi before continuing.

(a) Set the GND TEST switch on the P61-4 panel to ENABLE.

(b) Push the SYS button in the MFD section of the Multi Function Panel.

(c) Use the SELECTOR on the Multi Function Panel to make these selections:

NOTE: If the Speed Brake Lever is in the ARMED, FLIGHT DETENT, or UP positions, the Speed Brake Lever may retract to the DOWN position when starting the ground test.

- MAINT
- ONBD MAINT
- LINE MAINT
- GROUND TESTS
- 27 - Spoiler Control
- Operational Test
- Speedbrake Lever
- CONTINUE

(d) Follow the on-screen instructions and then select the rectangular CONTINUE button.

(e) Use the SELECTOR on the Multi Function Panel to make this selection:

- CONTINUE
- START TEST

(f) Make sure that when the test is complete, there are no faults and you see the TEST CONDITION: PASS message.

1) If you see TEST CONDITION: FAILED, go to IFIM and do the applicable procedure(s).

2) If you do additional tests on the Multi Function Panel, select the NEW TEST button.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-45-860-014

(1) Set the GND TEST switch to NORM.

SUBTASK 27-61-45-860-015

(2) Set the IRS R and IRS L switches on the IRS Mode Select Unit, located on the P5 panel, to the OFF position.

——— END OF TASK ———

TASK 27-61-45-730-803

4. First Officer's Wheel Transducer Test

NOTE: This procedure is a scheduled maintenance task.

A. References

Reference	Title

46-13-02-710-801	Onboard Maintenance Function Ground Test (P/B 201)
IFIM and do the applicable procedure(s)	Interactive Fault Isolation Manual

B. Location Zones

Zone	Area
212	Flight Compartment - Right

C. Prepare for the Test

SUBTASK 27-61-45-860-047

(1) Make sure that the airplane has weight on wheels.

SUBTASK 27-61-45-860-019

(2) Make sure the ADIRU is on and operational (TASK 34-21-00-710-801).

NOTE: Some faults may occur and prevent the test from running. The ADIRU must be on and operational to reset these faults.

D. First Officer's Wheel Transducer Test

SUBTASK 27-61-45-710-001

(1) Do these steps to do the first officers wheel transducer test (TASK 46-13-02-710-801):

NOTE: When the Onboard Maintenance Function (OMF) instructions call for Hydraulic Power, Hydraulic Power must be controlled at the source, i.e. Pumps or Ground Service. Flight Controls A and B, and Spoilers A and B switches on the P5 panel should remain ON.

NOTE: When the OMF instructions call for the removal of Hydraulic Power, monitor the A & B system pressures, and wait until System A and B pressures drop below 200 psi before continuing.

(a) Set the GND TEST switch on the P61-4 panel to ENABLE.

(b) Push the SYS button in the MFD section of the Multi Function Panel.

(c) Use the SELECTOR on the Multi Function Panel to make these selections:

NOTE: If the Speed Brake Lever is in the ARMED, FLIGHT DETENT, or UP positions, the Speed Brake Lever may retract to the DOWN position when starting the ground test.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

- MAINT
- ONBD MAINT
- LINE MAINT
- GROUND TESTS
- 27 - Spoiler Control
- Operational Test
- Control Wheel
- CONTINUE

(d) Follow the on-screen instructions and then select the rectangular CONTINUE button.

NOTE: During the ground test, you only have to release the control wheel to allow the control wheel transducers to return to the neutral position. The control wheel may not be centred.

(e) Use the SELECTOR on the Multi Function Panel to make these selections:

- START TEST
- CONTINUE

(f) Make sure that when the test is complete, there are no faults and you see the TEST CONDITION: PASS message.

1) If you see TEST CONDITION: FAILED, go to IFIM and do the applicable procedure(s).

2) If you do additional tests on the Multi Function Panel, select the NEW TEST button.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-45-860-020

(1) Set the GND TEST switch to NORM.

SUBTASK 27-61-45-860-021

(2) Set the IRS R and IRS L switches on the IRS Mode Select Unit, located on the P5 panel, to the OFF position.

——— END OF TASK ———

TASK 27-61-45-730-804

5. Ground Spoiler Control Module Replacement Test

A. References

Reference	Title

IFIM and do the applicable procedure(s)	Interactive Fault Isolation Manual

B. Location Zones

Zone	Area
212	Flight Compartment - Right

ECCN 9E991 BOEING PROPRIETARY - See title page for details

C. Prepare for the Test

SUBTASK 27-61-45-860-025

(1) Make sure the ADIRU is on and operational (TASK 34-21-00-710-801).

NOTE: Some faults may occur and prevent the test from running. The ADIRU must be on and operational to reset these faults.

D. Ground Spoiler Control Module Replacement Test

SUBTASK 27-61-45-730-003

(1) Do these steps to do the ground spoiler control module replacement test (TASK 46-13-02-710-801):

NOTE: When the Onboard Maintenance Function (OMF) instructions call for Hydraulic Power, Hydraulic Power must be controlled at the source, i.e. Pumps or Ground Service. Flight Controls A and B, and Spoilers A and B switches on the P5 panel should remain ON.

NOTE: When the OMF instructions call for the removal of Hydraulic Power, monitor the A & B system pressures, and wait until System A and B pressures drop below 200 psi before continuing.

(a) Set the GND TEST switch on the P61-4 panel to ENABLE.

(b) Push the SYS button in the MFD section of the Multi Function Panel.

(c) Use the SELECTOR on the Multi Function Panel to make these selections:

NOTE: If the Speed Brake Lever is in the ARMED, FLIGHT DETENT, or UP positions, the Speed Brake Lever may retract to the DOWN position when starting the ground test.

- MAINT
- ONBD MAINT
- LINE MAINT
- GROUND TESTS

- System Test
- Ground Spoilers
- CONTINUE

(d) Follow the on-screen instructions and then select the rectangular CONTINUE button.

(e) Use the SELECTOR on the Multi Function Panel to make these selections:

- CONTINUE
- START TEST

(f) Follow the second set of on-screen instructions and then select the rectangular CONTINUE button.

(g) Make sure that when the test is complete, there are no faults and you see the TEST CONDITION: PASS message.

1) If you see TEST CONDITION: FAILED, go to IFIM and do the applicable procedure(s).

2) If you do additional tests on the Multi Function Panel, select the NEW TEST button.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-45-860-026

(1) Set the GND TEST switch to NORM.

SUBTASK 27-61-45-860-027

(2) Set the IRS R and IRS L switches on the IRS Mode Select Unit, located on the P5 panel, to the OFF position.

FLIGHT SPOILER ACTUATOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the flight spoiler actuator.

(2) An installation of the flight spoiler actuator.

(3) A removal of the electrohydraulic servo valve.

(4) An installation of the electrohydraulic servo valve.

B. In this procedure the flight spoiler actuator is referred to as the "actuator".

TASK 27-61-51-000-801

2. Flight Spoiler Actuator - Removal

(Figure 401)

A. General

(1) This task contains these procedures:

- Flight Spoiler Actuator - Removal
- Spoiler Actuator Filter - Removal.

(2) In this task the flight spoiler actuator is referred to as the “actuator”.

B. References

Reference	Title

664	Right Wing - Spoiler No. 10
665	Right Wing - Spoiler No. 11

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Prepare for the Removal

SUBTASK 27-61-51-860-002

(1) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-61-51-860-021

(2) Put the speed brake lever in the UP position to lift the flight spoilers [16].

SUBTASK 27-61-51-480-002

(3) Install the actuator lock set, SPL-14632, on the actuator [15] for the applicable flight spoiler [16].

SUBTASK 27-61-51-860-003

(4) Do this task: Depressurization of the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-802.

SUBTASK 27-61-51-862-001

(5) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	11	C04040	GROUND SPOILER CONTROL
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-61-51-860-023

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

F. Actuator Removal

SUBTASK 27-61-51-030-001

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. SUDDEN MOVEMENT CAN OCCUR WHEN YOU DISCONNECT THE OPPOSITE SPOILERS PCU-ELECTRICAL-CONNECTOR. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Disconnect the electrical connector [25] from the actuator [15].

SUBTASK 27-61-51-020-001

(2) For the spoilers No.2, 3, 4, 5, 8, 10, and 11, disconnect the hydraulic line [12] and hydraulic line [32] from the actuator [15], do these steps:

(a) Put a 5 gallon (19 liter) hydraulic fluid resistant container, STD-1110, below the actuator [15] to catch the hydraulic fluid.

(b) Disconnect the hydraulic line [12] and hydraulic line [32] from the actuator [15].

(c) Install plugs in the hydraulic line [12] and hydraulic line [32].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-51-020-017

(3) For the spoiler No.9, disconnect the hydraulic line [37], hydraulic line [38], and hydraulic line [39] from the actuator [15], do these steps:

(a) Put a 5 gallon (19 liter) hydraulic fluid resistant container, STD-1110, below the actuator [15] to catch the hydraulic fluid.

(b) Disconnection the hydraulic line [37], hydraulic line [38], and hydraulic line [39] from the actuator [15].

(c) Install plugs in the hydraulic line [37], hydraulic line [38], and hydraulic line [39].

SUBTASK 27-61-51-020-002

(4) Disconnect the actuator rod end [17] from the flight spoiler [16], do these steps:

(a) Remove the lockwire [23], bolt [1], washer [2], washer [4], and pin [5] from the rod end [17].

(b) Remove the nut [7], washer [6], and pin [3] that attach the actuator rod end [17] to the flight spoiler [16].

SUBTASK 27-61-51-020-003

(5) Disconnect the actuator [15] from the structure, do these steps:

(a) Remove the bolts [20] and washers [21].

(b) Remove the bolts [18] and washers [19].

SUBTASK 27-61-51-020-004

(6) Remove the actuator [15] from the airplane.

SUBTASK 27-61-51-480-001

(7) If it is necessary, for the spoilers No.2, 3, 4, 5, 8, 10, and 11, remove the elbow [35], elbow [36], union [13], union [33], O-ring [14], and O-ring [34] from the actuator [15].

(a) Install caps in the ports of the actuator [15].

SUBTASK 27-61-51-480-004

(8) If it is necessary, for the spoiler No.9, remove the tee fitting [40], union [41], O-ring [42], union [44], and O-ring [43] from the actuator [15].

(a) Install caps in the ports of the actuator [15].

G. Spoiler Actuator Filter Removal

SUBTASK 27-61-51-020-012

(1) For the spoilers No.2, 3, 4, 5, 8, 10, and 11, do these steps:

(a) Disconnect the hydraulic line [32] from the actuator [15].

1) Put a 5 gallon (19 liter) hydraulic fluid resistant container, STD-1110, below the flight actuator [15] to catch the hydraulic fluid.

2) Disconnect the hydraulic line [32] from the actuator [15].

3) Install the plug in the hydraulic line [32].

(b) Remove the elbow [36], union [13], and O-ring [14].

(c) Remove the washer [30] and filter [29].

SUBTASK 27-61-51-020-018

(2) For the spoiler No.9, do these steps:

(a) Disconnect the hydraulic line [38] from the actuator [15], do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Put a 5 gallon (19 liter) hydraulic fluid resistant container, STD-1110, below the actuator [15] to catch the hydraulic fluid.
2) Disconnect the hydraulic line [38] from the actuator [15].
3) Install the plug in the hydraulic line [38].

(b) Remove the union [44] and O-ring [43].

(c) Remove the washer [46] and filter [45].

END OF TASK

G. Actuator Installation

SUBTASK 27-61-51-420-001

(1) If it is necessary, for the spoilers No.2, 3, 4, 5, 8, 10, and 11, install the elbow [35], elbow [36], union [13], and union [33] in the actuator [15], do these steps:

(a) Apply hydraulic fluid, D00153, to the new O-ring [14] and O-ring [34].

(b) Remove the caps from the hydraulic ports.

(c) Install the O-ring [14], O-ring [34], union [13], union [33], elbow [35], and elbow [36] in the actuator [15].

SUBTASK 27-61-51-420-014

(2) If it is necessary, for the spoiler No.9, install the tee fitting [40], union [41], O-ring [42], O-ring [43], and union [44] in the actuator [15].

(a) Apply hydraulic fluid, D00153, to the new O-ring [42] and new O-ring [43].

(b) Remove the caps from the hydraulic ports.

(c) Install the tee fitting [40], O-ring [42], O-ring [43], union [41], and union [44] in the actuator [15].

SUBTASK 27-61-51-420-002

(3) Install the actuator [15], do these steps:

(a) For the spoilers No.2, 3, 4, 5, 8, 10, and 11, remove the plugs from the hydraulic line [12] and hydraulic line [32].

(b) For the spoiler No.9, remove the plugs from the hydraulic line [37], hydraulic line [38], and hydraulic line [39].

(c) Put the actuator [15] in its position.

1) For the spoilers No.2, 3, 4, 5, 8, 10, and 11, make sure that the hydraulic line [12] and hydraulic line [32] align with the fittings.

2) For the spoiler No.9, make sure that the hydraulic line [37], hydraulic line [38], and hydraulic line [39] align with the fittings.

(d) For the spoilers No.2, 3, 4, 5, 8, 10 ,and 11, loosely install the hydraulic line [12] and hydraulic line [32] to the actuator [15].

(e) For the spoiler No.9, loosely install the hydraulic line [37], hydraulic line [38], and hydraulic line [39] to the actuator [15].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Connect the actuator [15] to the structure:

1) Install the bolts [20] and washers [21].
2) Install the bolts [18] and washers [19].
3) Tighten the bolts [20] to 225 in-lb (25.4 N·m) - 275 in-lb (31.1 N·m).
4) Tighten the bolts [18] to 450 in-lb (50.8 N·m) - 550 in-lb (62.1 N·m).

(g) For the spoilers No.2, 3, 4, 5, 8, 10, and 11, tighten the B-nut on hydraulic line [12] to 170 ±9 in-lb (19 ±1 N·m).

(h) For the spoilers No.2, 3, 4, 5, 8, 10, and 11, tighten the B-nut on hydraulic line [32] to 270 ±14 in-lb (31 ±2 N·m).

(i) For the spoiler No.9, tighten the B-nut on the hydraulic line [37] and hydraulic line [39] to 170 ±9 in-lb (19 ±1 N·m)

(j) For the spoiler No.9, tighten the B-nut on the hydraulic line [38] to 270 ±14 in-lb (31 ±2 N·m)

(k) Connect the actuator rod end [17] to the flight spoiler [16]:

1) Apply a layer of grease, D00633, to the outer diameter of pin [3].
2) Install the pin [3], washer [6], and nut [7].
3) Tighten the nut [7] to 540 in-lb (61.0 N·m) to 660 in-lb (74.6 N·m).
4) Apply a thin coat of corrosion inhibiting material, G50136, to the shank of the bolt [1].
   a) Make sure that the threads of the bolt [1] are free of corrosion inhibiting material, G50136.
5) Install the bolt [1], washer [2], washer [4], pin [5].
   a) Tighten the bolt [1] to 30 in-lb (3.4 N·m) - 35 in-lb (4 N·m).
6) Install the lockwire [23] (MS20995NC32 lockwire, G50347) on pin [5] with double twist method.

SUBTASK 27-61-51-640-001

(4) Do this task: Flight Spoiler Actuator and Rod End Lubrication, TASK 12-22-61-600-802.

SUBTASK 27-61-51-910-001

(5) Do this task: Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802.

SUBTASK 27-61-51-430-001

(6) Connect the electrical connector [25] to the receptacle on the actuator [15].

H. Spoiler Actuator Filter Installation

SUBTASK 27-61-51-420-003

(1) For the spoilers No.2, 3, 4, 5, 8, 10, and 11, do these steps:

(a) Install the new filter [29] and washer [30].

(b) Install the elbow [36] and union [13] in the actuator [15], do these steps:

1) Apply hydraulic fluid, D00153, to a new O-ring [14].
2) Remove the cap from the hydraulic port.
3) Install the O-ring [14] and union [13] in the actuator [15].
   a) Tighten the union [13] to 215 in-lb (24.3 N·m) - 225 in-lb (25.4 N·m).

(c) Install the hydraulic line [32] to the actuator [15].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Tighten the B-nut on hydraulic line [32] to 270 ±14 in-lb (31 ±2 N·m).

SUBTASK 27-61-51-420-015

(2) For the spoiler No.9, do these steps:

(a) Install the new filter [45] and washer [46].

(b) Install the O-ring [43] and union [44] in the actuator [15], do these steps:

1) Apply hydraulic fluid, D00153, to a new O-ring [43].

2) Remove the cap from the hydraulic port.

3) Install the O-ring [43] and union [44] in the actuator [15].

a) Tighten the union [44] to 215 in-lb (24.3 N·m) - 225 in-lb (25.4 N·m).

(c) Install the hydraulic line [38] to the actuator [15].

(d) Tighten the B-nut on the hydraulic line [38] to 270 ±14 in-lb (31 ±2 N·m).

I. Flight Spoiler Test

SUBTASK 27-61-51-080-001

(1) Remove the actuator lock set, SPL-14632, from the actuator [15] for the applicable flight spoiler [16].

SUBTASK 27-61-51-860-004

(2) Do this task: Pressurization of the Spoiler Hydraulic Systems A and B to its Usual Condition, TASK 27-61-00-840-802.

SUBTASK 27-61-51-860-005

(3) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	11	C04040	GROUND SPOILER CONTROL
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-61-51-860-024

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

SUBTASK 27-61-51-860-006

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Do this task: Apply Pressure to the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-51-870-001

(6) Move the speed brake control lever through its full cycle to bleed the spoiler actuators.

SUBTASK 27-61-51-700-001

(7) Make sure that there are no leaks at the hydraulic lines.

SUBTASK 27-61-51-820-001

(8) Do this task: Flight Spoiler Adjustment, TASK 27-61-00-820-802.

SUBTASK 27-61-51-730-001

(9) Do this task: Flight Spoiler System Test, TASK 27-61-00-730-801.

J. Put the Airplane Back to Its Usual Condition

SUBTASK 27-61-51-860-007

(1) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-61-51-860-008

(2) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

SUBTASK 27-61-51-610-001

(3) If it is necessary, service the hydraulic reservoirs (TASK 12-12-00-610-801).

——— END OF TASK ———

TASK 27-61-51-000-802

4. Electrohydraulic Servo Valve (EHSV) - Removal

(Figure 402)

E. Prepare for the Removal

SUBTASK 27-61-51-860-013

(1) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-61-51-860-022

(2) Put the speed brake lever in the UP position to lift the flight spoilers.

SUBTASK 27-61-51-480-003

(3) Install the actuator lock set, SPL-14632, on the actuator [15] for the applicable flight spoiler.

SUBTASK 27-61-51-860-014

(4) Do this task: Depressurization of the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-802.

SUBTASK 27-61-51-860-015

(5) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	11	C04040	GROUND SPOILER CONTROL
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-61-51-860-026

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

F. Electrohydraulic Servo Valve (EHSV) Removal

SUBTASK 27-61-51-020-015

(1) Remove the MS20995C32 lockwire, G01048, and the screws [27].

SUBTASK 27-61-51-020-016

(2) Remove the electrohydraulic servo valve [26], packing [31] and gasket [28].

END OF TASK

F. Electrohydraulic Servo Valve (EHSV) Installation

SUBTASK 27-61-51-420-010

(1) Install the electrohydraulic servo valve [26], a new new packing [31] and the new gasket [28].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-61-51-420-011

(2) Install the screws [27] that attach the electrohydraulic servo valve [26].

(a) Tighten the screws [27] to 60 in-lb (6.8 N·m) to 70 in-lb (7.9 N·m).

SUBTASK 27-61-51-420-012

(3) Install the MS20995C32 lockwire, G01048, to the screws [27] (TASK 20-10-44-400-801).

G. Flight Spoiler Test

SUBTASK 27-61-51-080-002

(1) Remove the actuator lock set, SPL-14632, from the actuator [15] for the applicable flight spoiler.

SUBTASK 27-61-51-860-016

(2) Do this task: Pressurization of the Spoiler Hydraulic Systems A and B to its Usual Condition, TASK 27-61-00-840-802.

SUBTASK 27-61-51-860-017

(3) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	11	C04040	GROUND SPOILER CONTROL
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-61-51-860-025

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

SUBTASK 27-61-51-860-018

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Do this task: Apply Pressure to the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-801.

SUBTASK 27-61-51-870-004

(6) Move the speed brake control lever through its full cycle to bleed the spoiler actuators.

SUBTASK 27-61-51-700-002

(7) Make sure that there are no leaks at the electrohydraulic servo valve [26].

SUBTASK 27-61-51-730-004

(8) Do this task: Flight Spoiler System Test, TASK 27-61-00-730-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition.

SUBTASK 27-61-51-860-019

(1) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-61-51-860-020

(2) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

SUBTASK 27-61-51-610-002

(3) Service the hydraulic reservoirs if it is necessary. (TASK 12-12-00-610-801).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

FLIGHT SPOILER ACTUATOR - INSPECTION/CHECK

1. General

A. This task supplies the data for a dimensional inspection of the flight spoiler actuator.

B. This task does not remove or install the flight spoiler actuator, refer to the Flight Spoiler Actuator - Removal/Installation for procedures to remove and install the flight spoiler actuator.

TASK 27-61-51-200-801

2. Flight Spoiler Actuator Inspection

(Figure 601)

A. General

(1) This procedure gives wear limits and repair data for the flight spoiler actuators.

B. References

Reference	Title
27-61-51-000-801	Flight Spoiler Actuator - Removal (P/B 401)

E. Flight Spoiler Actuator Inspection

SUBTASK 27-61-51-020-005

(1) Remove the flight spoiler actuator to inspect it (TASK 27-61-51-000-801).

SUBTASK 27-61-51-020-006

(2) Use these tools to do a check for wear on the parts of the flight spoiler actuator:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-61-51-020-007

(3) Examine the parts of the flight spoiler actuator for worn areas:

(a) Remove the parts to be checked.

(b) Measure the parts as necessary with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096, or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Compare the dimensions you measured with the permitted wear dimensions in Table 601.

(d) If the parts are not in the tolerance, replace or repair the parts.

Table 601/27-61-51-993-801

NAME OF THE PARTS THAT ARE IN CONTACT	DIM.	DIAMETER DESIGN LIMITS		WEAR LIMITS	
		MINIMUM	MAXIMUM	PERMITTED MAXIMUM I.D./ MINIMUM O.D. OF WORN PART	MAXIMUM SERVICE DIAMETRIC CLEARANCE
#1 BUSHING	I.D.	0.7500 in. (19.050 mm)	0.7515 in. (19.088 mm)	0.7520 in. (19.101 mm)	0.0057 in. (0.145 mm)
#1 PIN	O.D.	0.7475 in. (18.987 mm)	0.7480 in. (18.999 mm)	0.7458 in. (18.943 mm)	
#2 BEARING	I.D.	0.7495 in. (19.037 mm)	0.7500 in. (19.050 mm)	0.7505 in. (19.063 mm)	0.0042 in. (0.107 mm)
#2 PIN	O.D.	0.7475 in. (18.987 mm)	0.7480 in. (18.999 mm)	0.7458 in. (18.943 mm)	

SUBTASK 27-61-51-020-008

(4) Reassemble the flight spoiler actuator, if it is necessary.

SUBTASK 27-61-51-020-009

(5) Install the flight spoiler actuator (TASK 27-61-51-400-801).

SPEED BRAKE CONTROL SYSTEM - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Apply Pressure to the Speed Brake Hydraulic Systems A and B

(2) Shut Down the Speed Brake Hydraulic Systems A and B

(3) Depressurization of the Speed Brake Hydraulic Systems A and B

(4) Pressurization of the Speed Brake Hydraulic Systems A and B to its Usual Condition

TASK 27-62-00-800-801

2. Apply Pressure to the Speed Brake Hydraulic Systems A and B

(Figure 201)

A. General

(1) This procedure starts the speed brake hydraulic systems A and B and applies pressure to the speed brake.

210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

D. Procedure

SUBTASK 27-62-00-860-010

CAUTION

DO NOT OPERATE SYSTEM A OR B HYDRAULIC PUMPS FOR MORE THAN TWO MINUTES WITHOUT FUEL IN THE FUEL TANKS. THE NO. 1 (FOR SYSTEM A) AND NO. 2 (FOR SYSTEM B) FUEL TANKS MUST HAVE A MINIMUM OF 250 GALLONS (1675 POUNDS/760 KILOGRAMS) OF FUEL IN THEM. IF THERE IS NOT SUFFICIENT FUEL IN THE FUEL TANKS, THE HYDRAULIC FLUID WILL BECOME TOO HOT.

(1) Make sure the No. 1 and No. 2 fuel tanks each have 250 gal (946 l) (1675 lb (760 kg)) of fuel in them.

SUBTASK 27-62-00-210-004

(2) Make sure the hydraulic reservoirs are full (TASK 12-12-00-610-801).

SUBTASK 27-62-00-860-011

(3) Make sure that this circuit breaker is closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-00-860-012

(4) Set the parking brake.

SUBTASK 27-62-00-480-002

WARNING MAKE SURE THAT THE GROUND LOCKS ARE INSTALLED IN ALL THE LANDING GEARS BEFORE YOU PRESSURIZE THE HYDRAULIC SYSTEM. WITHOUT THE GROUND LOCKS, THE LANDING GEARS CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Install the ground lock assemblies in the landing gear (TASK 32-00-01-480-801).

SUBTASK 27-62-00-860-013

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Pressurize the speed brake hydraulic systems A and B with one of these methods:

(a) Method 1:

1) Set the ELEC 2, HYD PUMPS A or ELEC 1, HYD PUMPS B switch on the forward overhead panel to the ON position.

2) To pressurize the hydraulic system A, set the SPOILER A switch on the forward overhead panel to the ON position.

3) To pressurize the hydraulic system B, set the SPOILER B switch on the forward overhead panel to the ON position.

(b) Method 2:

NOTE: The hydraulic cart is a more flexible alternative. It can vary the pressure of the hydraulic fluid. Also, it is not necessary to have a specified quantity of fuel for cooling in tanks.

1) Do this task to use a portable hydraulic cart to supply hydraulic pressure: Hydraulic System A or B Pressurization with a Portable Hydraulic Cart, TASK 29-11-00-860-802.

TASK 27-62-00-840-801

3. Shut Down the Speed Brake Hydraulic Systems A and B

(Figure 201)

A. General

(1) This procedure shut downs the speed brake hydraulic systems A and B but does not remove the head pressure.

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

C. Procedure

SUBTASK 27-62-00-860-014

(1) Set the ELEC 2, HYD PUMPS A and the ELEC 1, HYD PUMPS B switches on the forward overhead panel to the OFF position.

SUBTASK 27-62-00-860-015

(2) Set the SPOILER A and B switches on the forward overhead panel to the OFF position.

——— END OF TASK ———

TASK 27-62-00-800-802

4. Depressurization of the Speed Brake Hydraulic Systems A and B

(Figure 201, Figure 202)

A. General

(1) This procedure removes the head pressure from the speed brake hydraulic systems A and B and locks the system out.

B. References

Reference	Title

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

E. Procedure

SUBTASK 27-62-00-860-016

(1) Set the SPOILER A and B switches on the forward overhead panel to the OFF position.

(a) Install the DO NOT OPERATE tag, STD-858.

SUBTASK 27-62-00-860-017

(2) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-62-00-860-018

(3) Set the ELEC 2, HYD PUMPS A and the ELEC 1, HYD PUMPS B switches on the forward overhead panel to the OFF position.

SUBTASK 27-62-00-870-002

(4) Operate the rudder pedals to decrease the remaining hydraulic system pressure.

SUBTASK 27-62-00-860-019

(5) If it is necessary to open a hydraulic line, you must release pressure from the reservoir for the applicable hydraulic system. To release it, do this task: Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

SUBTASK 27-62-00-480-003

(6) Install the flight controls hydraulic module locks (Figure 202):

(a) Disconnect the electrical connector from the spoiler shutoff valve at the flight controls hydraulic modules A and B.

(b) After you disconnect the electrical connector(s), examine the connector(s) for corrosion (TASK 20-60-07-910-802).

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(c) Put the manual override lever at the two spoiler shutoff valves in the position 2 (OFF position).

(d) Install the lock, SPL-1675 on the two spoiler shutoff valves.

1) Install the lockpins.

END OF TASK

210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

F. Procedure

SUBTASK 27-62-00-080-004

(1) Remove the flight controls hydraulic module locks from the spoiler shutoff valves.

(a) Remove the lockpins.

(b) Remove the lock, SPL-1675 from the two spoiler shutoff valves.

(c) Put the manual override lever at the two spoiler shutoff valves in the position 1 (ON position).

(d) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

(e) Connect the electrical connector to the spoiler shutoff valve at the spoiler hydraulic modules A and B. (Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-00-860-020

(2) Set the SPOILER A and B switches on the forward overhead panel to the ON position.

(a) Remove the DO NOT OPERATE tag, STD-858.

SUBTASK 27-62-00-860-021

(3) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	12	C00204	FLIGHT CONTROL SHUTOFF VALVES SPOILER

SUBTASK 27-62-00-860-022

(4) Pressurize the hydraulic reservoirs. Hydraulic Reservoirs Pressurization, TASK 29-09-00-860-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SPEED BRAKE CONTROL SYSTEM - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

- Speed Brake Control System Operational Test
- Speed Brake Control Lever Adjustment
- Ground Spoiler Adjustment
- Speed Brake Lever Friction Test
- Spoiler Operation Time Test
- Speed Brake Throttle Switch Test
- Engine Throttle Switch (S1) Functional Test
- Speed Brake Antiskid Inoperative Test
- Speed Brake RTO Test
- Speed Brake Extended Light Test

TASK 27-62-00-710-801

2. Speed Brake Control System Operational Test

A. General

(1) Do this test to quickly give the status of the speed brake control system. Special tools or equipment are not necessary.

B. References

Reference	Title
27-62-00-800-801	Apply Pressure to the Speed Brake Hydraulic Systems A and B (P/B 201)
27-62-00-840-801	Shut Down the Speed Brake Hydraulic Systems A and B (P/B 201)

C. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

D. Procedure

SUBTASK 27-62-00-710-002

(1) Do the speed brake control system operational test:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

NOTE: When operating the speedbrakes on the ground with only the system A and B Electric Motor-Driven Pump (EMDP)s supplying power, the pump low pressure light may momentarily illuminate. This illumination and associated pressure drop should be considered normal as long as the pressure recovers within 10 seconds of initiating movement of the speedbrakes.

(b) Move the speed brake lever from the DOWN position to the UP position.

1) Make sure that the speed brakes move to the UP position.

(c) Move the speed brake lever from the UP position to the DOWN position.

1) Make sure that the speed brakes move to the retracted position.

(d) If necessary, move the flap lever to the FLAPS UP position.

(e) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

——— END OF TASK ———

TASK 27-62-00-820-801

3. Speed Brake Control Lever Adjustment

(Figure 501, Figure 502)

A. General

(1) Use this procedure to adjust the speed brake control lever.

B. References

Reference	Title
27-61-45-730-802	Speedbrake Lever Transducer Test (P/B 501)
46-13-02-700-805	Existing Faults Check (P/B 201)

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-14768	Rigging Lock - Four Degree Speedbrake Lever Part #: C27095-1 Supplier: 81205

D. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Access Panels

Number	Name/Location
112A	Forward Access Door

F. Prepare for the Speed Brake Control Lever Adjustment

SUBTASK 27-62-00-730-006

(1) Use the Onboard Maintenance Function (OMF) to make sure that there are no faults associated with the Speed Brake Lever Transducer (TASK 27-61-45-730-802).

(a) If there are faults, clear them with the Speed Brake Lever Test from the OMF system.

SUBTASK 27-62-00-730-007

(2) Use the MAX Display System (MDS) to bring up the Flight Controls Maintenance Data page (Figure 501).

NOTE: The Flight Controls Maintenance Data page will be used to do a check of the settings of the RVDT channels A, B and C.

(a) Find the readings for the SCE SPDBRK LVR POSN and the RVDT A, B and C channels.

G. Speed Brake Control Lever Adjustment

SUBTASK 27-62-00-860-201

(1) Do these steps to adjust the speed brake lever:

(a) Put the speed brake lever in the DOWN and LOCKED position.

(b) Make sure that the SPEEDBRAKES EXTENDED and SPEEDBRAKE DO NOT ARM lights do not come on.

(c) Put the speed brake lever to the ARMED position (Figure 502).

NOTE: The ARMED position is approximately 4 degrees aft of the DOWN detent position.

1) Install the rigging lock, SPL-14768, to hold the speed brake lever in the ARMED detent position.

2) Moving the speed brake lever without hydraulic power can latch the GROUND SPOILER CONTROL Status Message.

a) Do this task if the Status Message occurs: Existing Faults Check, TASK 46-13-02-700-805.

(d) Open this access door:

Number	Name/Location
112A	Forward Access Door

(e) Disconnect the actuator rod end bolt from the speed brake mechanical assembly.

(f) Make sure that the cam roller is centered in the ARMED detent position.

(g) Make sure that the speed brake lever is still in the ARMED position.

NOTE: The ARMED position is approximately 4 degrees aft of the DOWN detent position.

(h) Remove the lower cover plate on the control stand to get access to the lower control rod.

1) Remove the screws [2] and washers [3].

(i) Adjust the lower control rod so that all three RVDT channels are within 3.3 degrees and 4.3 degrees.

1) Tighten the checknut on the lower control rod to 65 in-lb (7.34 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure that the lower control rod end is visible and covers at least 50 percent of the inspection hole.

(j) Make sure that the cam roller is centered in the ARMED detent position.

(k) Make sure that the speed brake lever is still in the ARMED position.

NOTE: The ARMED position is approximately 4 degrees aft of the DOWN detent position.

(l) Make sure that the actuator assembly is in the retracted position.

(m) Adjust the rod end from the actuator assembly until it aligns with the clevis from the speed brake mechanical assembly.

1) Make sure that the rod end bolt can be freely inserted in the rod end and the clevis.

(n) Install and tighten the actuator rod end bolt with the bolt head facing inboard.

(o) Make sure that the cam roller is centered in the ARMED detent position.

(p) Remove the rigging lock, SPL-14768, from the speed brake lever.

(q) Put the speed brake lever in the DOWN and LOCKED position.

(r) Make sure that the roller is not centered in the ARMED detent position.

(s) Make sure that RVDT A, RVDT B and RVDT C channels are within 0.0 ± 1.0 degrees.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-00-410-004

(1) Close this access door:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-62-00-410-005

(2) Install the lower cover plate on the control stand.

(a) Install the screws [2] and washers [3].

——— END OF TASK ———

TASK 27-62-00-820-802

4. Ground Spoiler Adjustment

(Figure 503)

A. General

(1) There are two different sets of values for the spoiler gaps.

(a) One set - standard gaps.

(b) The other set - reduced gaps. Reduced gaps are for airplane drag reduction.

(2) You may use either the standard or the reduced gaps for any airplane. However, for each airplane, you must choose which set of values (standard gaps or reduced gaps) to use to adjust the spoilers.

(3) You must use only one set of values for each airplane.

(4) Do not use standard gaps on some spoilers and reduced gaps on other spoilers on the same airplane.

E. Prepare for the Adjustment

SUBTASK 27-62-00-860-032

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-00-866-003

(2) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-62-00-860-033

(3) Move the speed brake lever to the UP position to lift the spoilers.

SUBTASK 27-62-00-860-034

(4) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-62-00-860-035

(5) Move the speed brake lever to the DOWN position to lower the ground spoilers.

F. Ground Spoiler Adjustment

SUBTASK 27-62-00-860-036

(1) Measure the clearance (Dimension X) between the trailing edge of the spoiler panels and the flaps near the centerline of the spoiler actuators.

(2) Make sure the clearance (Dimension X) between the spoilers and the flaps are within the limits specified in the Spoilers Gaps Table.

(a) You do not need to check the clearance at the inboard actuator.

(b) Adjust the spoilers for one airplane to the values in only one table.

1) Do not adjust some spoilers to one table and other spoilers on the same airplane to a different table.

STANDARD SPOILERS GAPS		
DIMENSION X Figure 503		
SPOILERS	MINIMUM	MAXIMUM
1, 12	0.020 in. (0.508 mm)	0.120 in. (3.048 mm)
6, 7	0.030 in. (0.762 mm)	0.125 in. (3.175 mm)

REDUCED SPOILERS GAPS		
DIMENSION X Figure 503		
SPOILERS	MINIMUM	MAXIMUM
1, 12	0.030 in. (0.762 mm)	0.130 in. (3.302 mm)
6, 7	0.070 in. (1.78 mm)	0.090 in. (2.286 mm)

(3) Make sure there is clearance between the trailing edge of the spoiler panels and the flaps for the full span of the spoiler.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-00-860-037

(4) If the clearances (Dimension X) between the ground spoiler panels and the flaps are not in the limits, adjust the clearance.

(a) Make a record of the clearance.

(b) Lift the spoiler or extend the flaps to get access to the spoiler actuator:

1) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

2) Move the speed brake lever to the UP position to lift the spoilers.

3) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

(c) Loosen the checknut on the rod end of the ground spoiler actuator.

(d) Remove the locking key from the piston rod.

(e) Do these steps to adjust the Outboard Ground Spoilers (No. 1 and 12):

1) Turn the piston rod on the spoiler actuator to adjust the clearance between the spoiler and the flaps to the correct tolerance.

2) Temporarily torque the actuator check nut to 100 in-lb (11.3 N·m) to 200 in-lb (22.6 N·m).

3) Move the speedbrake lever to the UP position.

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

4) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

5) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

6) Move the speedbrake lever to the DOWN position.

7) Check the clearance at the trailing edge of the ground spoilers.

a) Make sure the clearance is within the limits (Figure 503).

8) If the clearance of the ground spoiler is not in the limits, do these steps to adjust the actuator.

a) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

b) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

c) Adjust the spoiler actuator again, as necessary.

9) If the clearance of the ground spoiler is in the limits, do these steps:

a) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

b) Move the speed brake lever to the UP position to extend the spoilers.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

c) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

d) Clean all grease from the piston rod and the rod end threads with solvent, B00184.

e) Apply a layer of the corrosion preventive D5026NS or ZC-026 compound, G50171, to the threads of the piston rod end.

f) Install the locking key in the actuator rod end.

g) Torque the checknut to 250 in-lb (28.25 N·m) - 300 in-lb (33.90 N·m).

h) Install the MS20995NC32 lockwire, G01912, on the checknut with double twist method.

i) Apply a bead of sealant, A00247, to the rod end checknut.

(f) Do these steps to adjust the Inboard Ground Spoilers (No. 6 and 7):

1) Turn the piston rod on the outboard spoiler actuator to adjust the clearance between the spoiler and the flaps to the correct tolerance.

2) Turn the piston rod on the inboard spoiler actuator until the pin that connects the rod end to the spoiler panel moves freely or is loose.

NOTE: Make sure there is no force fight between the inboard and outboard actuators.

3) Temporarily torque the actuator check nut to 100 in-lb (11.3 N·m) to 200 in-lb (22.6 N·m).

4) Move the speed brake lever to the UP position.

a) Moving the speed brake lever without hydraulic power can latch the GROUND SPOILER CONTROL Status Message.

<1> Do this task if the Status Message occurs: Existing Faults Check, TASK 46-13-02-700-805.

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

5) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

6) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

7) Move the speedbrake lever to the DOWN position.

8) Check the clearance at the trailing edge of the ground spoilers.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure the clearance is within the limits (Figure 503).

9) If the clearance of the ground spoiler is not in the limits, do these steps to adjust the actuator:

a) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

b) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

c) Adjust the spoiler actuator again, as necessary.

10) If the clearance of the ground spoiler is in the limits, do these steps:

a) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

b) Move the speed brake lever to the UP position to extend the spoilers.

<1> Moving the speed brake lever without hydraulic power can latch the GROUND SPOILER CONTROL Status Message.

<a> Do this task if the Status Message occurs: Existing Faults Check, TASK 46-13-02-700-805.

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

c) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

d) Clean all grease from the piston rod and the rod end threads with solvent, B00184.

e) Apply a layer of the corrosion preventive D5026NS or ZC-026 compound, G50171, to the threads of the piston rod end.

f) Torque the checknut to 600 in-lb (67.79 N·m) - 720 in-lb (81.35 N·m).

g) Install the MS20995NC32 lockwire, G01912, on the checknut with double twist method.

h) Apply a bead of sealant, A00247, to the rod end checknut.

SUBTASK 27-62-00-860-038

(5) If the clearances (Dimension X) between the ground spoiler panels and the flaps are within the limits, then continue.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-00-860-039

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-00-860-040

(2) Move the speed brake lever to the DOWN position to lower the spoilers if it is necessary.

SUBTASK 27-62-00-860-041

(3) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-62-00-860-042

(4) Do this task: Pressurization of the Speed Brake Hydraulic Systems A and B to its Usual Condition, TASK 27-62-00-840-802.

END OF TASK

TASK 27-62-00-800-803

5. Speed Brake Lever Friction Test

A. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
COM-1557	Gauge - Force Part #: DG-200 Supplier: 92456 Part #: FDIX 100 Supplier: 0BFD9 Part #: FDIX 50 Supplier: 0BFD9 Part #: LG-050 Supplier: 92456 Part #: LG-100 Supplier: 92456 Opt Part #: DPP-500G Supplier: 92456 Opt Part #: DPPH-150 Supplier: 92456 Opt Part #: DPPH-200 Supplier: 92456 Opt Part #: DPPH-50 Supplier: 92456 Opt Part #: FDI 100 Supplier: 0BFD9 Opt Part #: FDI 50 Supplier: 0BFD9 Opt Part #: FDV 100 Supplier: 0BFD9 Opt Part #: FDV 50 Supplier: 0BFD9

B. Consumable Materials

Reference	Description	Specification
D50116	Lubricant - Bonded Solid Film	BAC5811 Type 7 Class 1
D50117	Lubricant - Solid Film, Air Cured, Corrosion Inhibiting	MIL-L-23398 Type II

C. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

D. Prepare for the Speed Brake Lever Friction Test

SUBTASK 27-62-00-860-200

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

E. Speed Brake Lever Friction Test

SUBTASK 27-62-00-710-008

(1) Do these steps for the Speed Brake Lever Friction Test:

(a) Move the speed brake lever through the full range of travel in both directions.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Make sure that the clearance between the inboard face of the speed brake lever and edge of the light plate is between 0.01 in. (0.25 mm) to 0.10 in. (2.54 mm).

(c) Move the speed brake lever several times through the full range of travel in both directions.

(d) Make sure that the speed brake lever moves freely and there is no sign of binding or roughness between the detent positions.

SUBTASK 27-62-00-866-004

(2) Move the flaps to the FLAPS 1 or greater detent position.

SUBTASK 27-62-00-710-003

(3) Use the force gauge, COM-1557, to measure the fore and aft forces necessary to move the speed brake lever.

(a) Apply the force at the tip of the speed brake lever.

SUBTASK 27-62-00-710-004

(4) Move the speed brake lever to the ARMED DETENT position.

(5) Make sure that the forces necessary to move the speed brake lever are less than these force limits:

(a) From the ARMED DETENT position move the speed brake lever forward - 20 lbf (89 N).

(b) From the ARMED DETENT position move the speed brake lever aft - 20 lbf (89 N).

SUBTASK 27-62-00-710-005

(6) Move the speed brake lever to the FLIGHT DETENT position and make sure that the forces necessary to move the speed brake lever are less than these force limits:

(a) From the FLIGHT DETENT position move the speed brake lever forward - 26 lbf (116 N).

(b) From the FLIGHT DETENT position move the speed brake lever aft - 26 lbf (116 N).

SUBTASK 27-62-00-710-006

(7) Move the speed brake lever to the ARMED DETENT position.

(a) Move the speed brake lever aft to the FLIGHT DETENT position.

1) Make sure that the force necessary to move the speed brake lever does not exceed 20 lbf (89 N).

NOTE: Skewed-roller brake creates speed brake lever forces within the speed brake mechanism assembly. There is no on-airplane adjustment. Supplier must accomplish any adjustment.

SUBTASK 27-62-00-710-007

(8) Move the speed brake lever to the FLIGHT DETENT position.

(a) Move the speed brake lever aft to the UP position.

1) Make sure that the force necessary to move the speed brake lever does not exceed 28 lbf (125 N).

NOTE: Skewed-roller brake creates speed brake lever forces within the speed brake mechanism assembly. There is no on-airplane adjustment. Supplier must accomplish any adjustment.

SUBTASK 27-62-00-640-001

(9) Lubricate the speed brake lever if the forces required to move the speed brake lever are excessive.

(a) Fully extend the affected handle.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

CAUTION IF YOU DO NOT MASK THE HANDLES CORRECTLY, CONTAMINATION OF ADJACENT COMPONENTS CAN OCCUR. CONTAMINATION CAN CAUSE DAMAGE TO EQUIPMENT.

(b) Mask off the surrounding area to protect from over spray.

(c) Apply lubricant, D50116, or lubricant, D50117, to the sliding part of the speed brake lever.

1) Use an extension straw to allow spray in hard to reach areas.

NOTE: Allow to air dry if possible. The lubricant will dry within minutes; however, the coating will not be cured for several hours depending on the ambient temperature. The lubricant will cure within 6 hours at 77 ±3°F (25 ±2°C). 24 hours gives the best wear and corrosion protection.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-00-866-005

(1) Move the speed brake lever to the DOWN position.

SUBTASK 27-62-00-080-005

(2) Remove the force gauge, COM-1557, from the speed brake lever.

SUBTASK 27-62-00-860-199

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

END OF TASK

TASK 27-62-00-820-803

6. Spoiler Operation Time Test

(Figure 504)

C. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

D. Prepare for the Test

SUBTASK 27-62-00-860-048

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Use the Engine Driven Pump (EDP) or a ground service cart to pressurize the Speed Brake Hydraulic Systems A and B (TASK 29-11-00-860-801).

NOTE: The Electric Motor-Driven Pump (EMDP) flow rate is too low for the spoilers to operate in the permitted time.

SUBTASK 27-62-00-860-229

(2) Move the speedbrake lever several times through the complete range of travel at least six times.

SUBTASK 27-62-00-860-230

(3) Move the forward thrust levers No. 1 and 2 to the IDLE position.

SUBTASK 27-62-00-860-231

(4) Make sure that the ground spoilers are in the DOWN position.

SUBTASK 27-62-00-860-232

(5) Make sure that the speed brake lever is in the DOWN and LOCKED position.

SUBTASK 27-62-00-860-233

(6) Move one of the thrust levers to the FULL FORWARD position to retract the auto speed brake actuator.

SUBTASK 27-62-00-860-234

(7) Move the thrust lever to the idle position.

SUBTASK 27-62-00-860-235

(8) Make sure that the ANTI-SKID INOP light, on the P9 multifunction panel, is not on.

SUBTASK 27-62-00-860-236

(9) Set the autobrake select switch, on the P9 multifunction panel, to 1 position.

SUBTASK 27-62-00-860-237

(10) Make sure that the parking brake is released.

SUBTASK 27-62-00-010-007

(11) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

E. Spoiler Operation Time Test

SUBTASK 27-62-00-860-247

(1) Set GND TEST switch, on the P61-4 maintenance bite panel, to the ENABLE position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-00-860-238

(2) Set the EEC MAINT ENG 1 POWER switch and EEC MAINT ENG 2 POWER switch to the TEST position.

(a) Do this task: EEC Maintenance Power Selection, TASK 73-21-00-800-801-G00.

SUBTASK 27-62-00-860-248

(3) Make sure that the airplane is in ground mode (TASK 32-09-00-860-802).

SUBTASK 27-62-00-860-239

(4) Move the speedbrake lever to the ARMED position.

SUBTASK 27-62-00-860-240

(5) Move the TEST SELECTOR switch to the OUTBD position on the Antiskid/Autobrake Control Unit (AACU).

SUBTASK 27-62-00-860-241

(6) At the same time that you push and hold the ENABLE/VERIFY button, move the PRESS/TEST toggle switch up to the TEST position on the AACU.

(a) Make sure that the speed brake lever moves to the FULL UP position.

(b) Make sure that the all flight spoilers move from FULL DOWN to FULL UP position in 1.2 seconds or less.

(c) Release the ENABLE/VERIFY button and put the PRESS/TEST toggle switch to the OFF position.

SUBTASK 27-62-00-860-242

(7) Move the TEST SELECTOR switch to the NORM position on the AACU.

SUBTASK 27-62-00-860-243

(8) Move the No. 1 thrust lever to the FULL FORWARD position.

(a) Make sure that speed brake lever moves to the DOWN and LOCKED position.

(b) Make sure that all flight spoilers move from FULL UP to FULL DOWN position in one second or less.

SUBTASK 27-62-00-860-244

(9) Return the No. 1 thrust lever to the IDLE position.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-00-860-245

(1) Set the EEC MAINT ENG 1 POWER switch and EEC MAINT ENG 2 POWER switch to the NORM position.

(a) Do this task: EEC Maintenance Power Selection, TASK 73-21-00-800-801-G00.

SUBTASK 27-62-00-860-249

(2) Set the GND TEST switch, on the P61-4 maintenance bite panel, to the NORM position.

SUBTASK 27-62-00-410-006

(3) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-62-00-860-246

(4) Move the autobrake select switch, on the P9 multifunction panel, to OFF position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-00-866-007

(5) If necessary, move the flap lever to the FLAPS UP position.

SUBTASK 27-62-00-860-054

(6) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

SUBTASK 27-62-00-860-062

(10) Move one of the thrust levers to the full forward position to retract the speed brake actuator.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-00-860-063

(11) Move the thrust lever to the idle position.

SUBTASK 27-62-00-860-202

(12) Put the autobrake select switch located on the P9 multifunction panel to 1.

SUBTASK 27-62-00-860-064

(13) Make sure that the parking brake is released.

SUBTASK 27-62-00-010-001

(14) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

E. Speed Brake Throttle Switch Test

SUBTASK 27-62-00-860-065

NOTE: Throughout this test, the Speed Brake “ARMED” and “DO NOT ARM” lights indicate opposing conditions. They should never illuminate simultaneously. Therefore, only one light shall be specified unless both lights are off.

(1) Move the speed brake lever to the ARMED position.

(a) Make sure that the SPEED BRAKE ARMED light comes on.

SUBTASK 27-62-00-860-066

(2) Move the TEST SELECTOR switch to the INBD position on the Antiskid/Autobrake Control Unit (AACU).

SUBTASK 27-62-00-860-067

(3) Push the ENABLE/VERIFY button and move the toggle switch to the PRESS/TEST position on the AACU.

(a) Make sure that the spoilers and speed brake lever move to the UP position.

SUBTASK 27-62-00-860-068

WARNING MAKE SURE THAT YOU OPEN THE CIRCUIT BREAKER FOR THE WEATHER RADAR SYSTEM. THE FORWARD MOVEMENT OF A THRUST LEVER CAN CAUSE THE AUTOMATIC OPERATION OF THE SYSTEM. THE OPERATION OF THIS SYSTEM CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT IN THE AREA OF THE NOSE RADOME.

(4) Make sure that these circuit breakers are open and have safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	7	C01678	WEATHER RADAR RT RIGHT

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
D	13	C00120	WEATHER RADAR RT

SUBTASK 27-62-00-860-069

(5) Move the No. 1 thrust lever to the full forward position.

(a) Make sure that all spoilers move to the DOWN position.

(b) Make sure that the speed brake lever moves to the DOWN position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Make sure that the SPEED BRAKE ARMED and SPEED BRAKE DO NOT ARM lights are off.

SUBTASK 27-62-00-860-070

(6) Move the No. 1 thrust lever back to the idle position.

SUBTASK 27-62-00-860-071

(7) Release the ENABLE/VERIFY button and the PRESS/TEST switch on the AACU.

SUBTASK 27-62-00-860-072

(8) Do the test of the throttle switches again except move the TEST SELECTOR switch to the OUTBD position on the AACU and use the No. 2 thrust lever.

(a) Make sure that results are the same.

SUBTASK 27-62-00-860-073

(9) Move the TEST SELECTOR switch to the NORM position on the AACU.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-00-860-210

(1) Remove maintenance power to the EEC system (TASK 73-21-00-800-801-G00).

SUBTASK 27-62-00-860-213

(2) If necessary, move the flap lever to the FLAPS UP position.

SUBTASK 27-62-00-860-074

(3) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

SUBTASK 27-62-00-860-075

(4) Close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name

TASK 27-62-00-720-801

8. Engine Throttle Switch (S1) - Functional Test

A. References

Reference	Title
27-62-00-800-801	Apply Pressure to the Speed Brake Hydraulic Systems A and B (P/B 201)
27-62-00-840-801	Shut Down the Speed Brake Hydraulic Systems A and B (P/B 201)
32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)
32-09-00-860-802	Return the Airplane to the Ground Mode (P/B 201)
73-21-00-800-801-G00	EEC Maintenance Power Selection (P/B 201)

B. Location Zones

Zone	Area
118	Electrical and Electronics Compartment - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Prepare for Test

SUBTASK 27-62-00-860-218

(1) Make sure that the downlock pins are installed on the nose and main landing gear (TASK 32-00-01-480-801).

SUBTASK 27-62-00-860-219

(2) Make sure that the speed brake lever is in the DOWN and locked position.

(3) Make sure that the ground spoilers are in the fully DOWN position.

SUBTASK 27-62-00-860-220

WARNING

MAKE SURE THAT YOU OPEN THE CIRCUIT BREAKER FOR THE WEATHER RADAR SYSTEM. THE FORWARD MOVEMENT OF A THRUST LEVER CAN CAUSE THE AUTOMATIC OPERATION OF THE SYSTEM. THE OPERATION OF THIS SYSTEM CAN CAUSE SERIOUS INJURY TO PERSONS AND DAMAGE TO EQUIPMENT IN THE AREA OF THE NOSE RADOME.

(4) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	7	C01678	WEATHER RADAR RT RIGHT

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
D	13	C00120	WEATHER RADAR RT

SUBTASK 27-62-00-860-221

(5) Set GND TEST switch on the P61-4 maintenance bite panel to ENABLE position.

(6) Set the EEC MAINT ENG 1 POWER switch and EEC MAINT ENG 2 POWER switch to TEST.

(a) Do this task: EEC Maintenance Power Selection, TASK 73-21-00-800-801-G00.

SUBTASK 27-62-00-860-222

(7) Make sure that the airplane is in Ground Mode (TASK 32-09-00-860-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Do a test of the Engine Throttle Switch (S1)

SUBTASK 27-62-00-700-003

(1) Do these steps to activate the auto speed brake system:

WARNING KEEP PERSONS AND EQUIPMENT AWAY FROM ALL CONTROL SURFACES AND THE NOSE GEAR WHEN HYDRAULIC POWER IS SUPPLIED. THE AILERONS, ELEVATORS, RUDDER, FLAPS, SLATS, SPOILERS, AND THE NOSE GEAR ARE SUPPLIED WITH POWER BY THE HYDRAULIC SYSTEMS. INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT CAN OCCUR WHEN HYDRAULIC POWER IS SUPPLIED.

(a) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

(b) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

(c) Make sure that the forward thrust levers No. 1 and 2 are in the idle position.

(d) Move one of the forward thrust lever to the full forward position to retract the speed brake actuator.

(e) Move the forward thrust lever back to the idle position.

SUBTASK 27-62-00-860-214

(2) Set autobrake select switch on the P9 Multifunction (MFC) panel to 1.

(3) Verify the that ANTISKID INOP light on the MFC is not on.

SUBTASK 27-62-00-860-215

(4) Verify the parking brake is released.

SUBTASK 27-62-00-860-076

(5) Move the speed brake lever to the ARMED detent position.

NOTE: Throughout this test, the speedbrake “ARMED” and “DO NOT ARM” lights indicate opposing conditions. They should never illuminate simultaneously. Only one light should be specified unless both lights are off.

(a) Make sure that the SPEED BRAKE ARMED light comes on.

SUBTASK 27-62-00-860-077

(6) Do these steps to activate the M162 Antiskid/Autobrake Control Unit (AACU) to simulate wheel speed:

(a) Set the rotary switch on the M162 AACU to INBD position.

NOTE: The M162 AACU is on E1-3 shelf in the Electronic Equipment (EE) compartment.

(b) Push and hold the ENABLE/VERIFY switch on the M162 AACU.

(c) Push and hold the toggle switch on the M162 AACU to the PRESS/TEST position.

NOTE: The “DO NOT ARM” light may come on momentarily if ENABLE/VERIFY switch and toggle switch are not operated simultaneously.

SUBTASK 27-62-00-860-078

(7) Make sure that the flight spoilers and ground spoilers move to the full up position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-00-700-004

(8) Move the No. 1 forward thrust lever to the fully forward position.

(a) Make sure that the spoilers move to the retracted position.

(b) Make sure that the speed brake lever moves to the DOWN and locked position.

SUBTASK 27-62-00-860-079

(9) Release the ENABLE/VERIFY switch and the toggle switch.

(a) Make sure that the ARMED and the DO NOT ARM lights are off.

SUBTASK 27-62-00-860-081

(10) Move the No. 1 forward thrust lever back to the idle position.

SUBTASK 27-62-00-860-080

(11) Set the rotary switch on the M162 AACU to the NORM position.

SUBTASK 27-62-00-860-082

(12) Move the speed brake lever to the ARMED position.

(a) Make sure that the SPEED BRAKE ARMED light comes on.

SUBTASK 27-62-00-860-083

(13) Do these steps to activate the M162 AACU to simulate wheel speed:

(a) Set the rotary switch on the M162 AACU to position OUTBD.

NOTE: The M162 AACU is on E1-3 shelf in the EE compartment.

(b) Push and hold the ENABLE/VERIFY switch on the M162 AACU.

(c) Push and hold the toggle switch on the M162 AACU to the PRESS/TEST position.

NOTE: The “DO NOT ARM” light may come on momentarily if ENABLE/VERIFY switch and toggle switch are not operated simultaneously.

SUBTASK 27-62-00-860-084

(14) Make sure that the flight spoilers and ground spoilers move to the full up position.

SUBTASK 27-62-00-700-005

(15) Move the No. 2 forward thrust lever to the fully forward position.

(a) Make sure that the spoilers move to the retracted position.

(b) Make sure that the speed brake lever moves to the DOWN and locked position.

SUBTASK 27-62-00-860-085

(16) Release the ENABLE/VERIFY switch and the toggle switch.

(a) Make sure that the ARMED and the DO NOT ARM lights are off.

SUBTASK 27-62-00-860-086

(17) Set the rotary switch on the M162 AACU to the NORM position.

SUBTASK 27-62-00-860-087

(18) Move the No. 2 forward thrust lever back to the idle position.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-00-860-216

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	7	C01678	WEATHER RADAR RT RIGHT

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
D	13	C00120	WEATHER RADAR RT

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

SUBTASK 27-62-00-860-089

(2) If necessary, move the flap lever to the FLAPS UP position.

SUBTASK 27-62-00-860-090

(3) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

SUBTASK 27-62-00-860-217

(4) Set EEC MAINT ENG 1 POWER switch and the EEC MAINT ENG 2 POWER switch to NORM.

(a) Do this task: EEC Maintenance Power Selection, TASK 73-21-00-800-801-G00.

(5) Set GND TEST switch on the P61-4 maintenance bite panel to NORM position.

——— END OF TASK ———

TASK 27-62-00-820-805

9. Speed Brake Antiskid Inoperative Test

(Figure 504)

C. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Prepare for the Test

SUBTASK 27-62-00-860-093

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-00-860-095

(2) Move the thrust levers No. 1 and 2 to the IDLE position.

SUBTASK 27-62-00-860-096

(3) Make sure that the airplane is on its landing gear or compress the right main gear strut a minimum of 5 in. (127 mm).

SUBTASK 27-62-00-860-097

(4) Make sure that the ground spoilers are in the DOWN position.

SUBTASK 27-62-00-860-098

(5) Make sure that the speed brake lever is in the DOWN position.

SUBTASK 27-62-00-860-099

WARNING

MAKE SURE THAT YOU OPEN THE CIRCUIT BREAKER FOR THE WEATHER RADAR SYSTEM. THE FORWARD MOVEMENT OF A THRUST LEVER CAN CAUSE THE AUTOMATIC OPERATION OF THE SYSTEM. THE OPERATION OF THIS SYSTEM CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT IN THE AREA OF THE NOSE RADOME.

(6) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	7	C01678	WEATHER RADAR RT RIGHT

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
D	13	C00120	WEATHER RADAR RT

SUBTASK 27-62-00-860-100

(7) Move one of the thrust levers to the full forward position to retract the speed brake actuator.

SUBTASK 27-62-00-860-101

(8) Move the thrust lever to the IDLE position.

SUBTASK 27-62-00-010-002

(9) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-62-00-860-102

(10) Make sure that the parking brake is released.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Speed Brake Antiskid Inoperative Test

SUBTASK 27-62-00-860-103

(1) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
E	16	C00196	LANDING GEAR ANTISKID INBD

SUBTASK 27-62-00-860-104

NOTE: Throughout this test, the Speed Brake “ARMED” and “DO NOT ARM” lights indicate opposing conditions. They should never illuminate simultaneously. Therefore, only one light shall be specified unless both lights are off.

(2) Move the speed brake lever to the ARMED position.

(a) Make sure that the SPEED BRAKE ARMED light comes on.

SUBTASK 27-62-00-860-105

(3) Move the TEST SELECTOR switch to the INBD position on the Antiskid/Autobrake Control Unit (AACU).

SUBTASK 27-62-00-860-106

(4) On the AACU, push the ENABLE/VERIFY button and move the toggle switch to the TEST position and hold for a few seconds.

(a) Make sure that the SPEED BRAKE ARMED light stays on.

(b) Make sure that the spoilers do not move.

SUBTASK 27-62-00-860-108

(5) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-3

Row	Col	Number	Name
E	16	C00196	LANDING GEAR ANTISKID INBD

SUBTASK 27-62-00-860-109

D. Prepare for the Test

SUBTASK 27-62-00-860-224

(1) Supply maintenance power to the Engine Electronic Controller (EEC) (TASK 73-21-00-800-801-G00).

SUBTASK 27-62-00-860-142

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-00-860-144

(3) Move the engine 1 and 2 forward thrust levers to the idle position.

SUBTASK 27-62-00-860-145

(4) Make sure that the airplane is in ground mode (TASK 32-09-00-860-802).

SUBTASK 27-62-00-860-223

(5) Set GND TEST switch, on the P61-4 maintenance bite panel, to the ENABLE position.

SUBTASK 27-62-00-860-146

(6) Make sure that the ground spoilers are in the down position.

SUBTASK 27-62-00-860-147

(7) Make sure the speed brake lever is in the DOWN position.

SUBTASK 27-62-00-860-148

WARNING

MAKE SURE THAT YOU OPEN THE CIRCUIT BREAKER FOR THE WEATHER RADAR SYSTEM. THE FORWARD MOVEMENT OF A THRUST LEVER CAN CAUSE THE AUTOMATIC OPERATION OF THE SYSTEM. THE OPERATION OF THIS SYSTEM CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT IN THE AREA OF THE NOSE RADOME.

(8) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
D	13	C00120	WEATHER RADAR RT

SUBTASK 27-62-00-860-149

(9) Move one of the engine forward thrust levers to the full forward position to retract the auto speed brake actuator.

SUBTASK 27-62-00-860-150

(10) Move the engine forward thrust lever to the idle position.

SUBTASK 27-62-00-860-206

(11) Set the autobrake select switch, on the P9 multifunction panel, to the 1 position.

SUBTASK 27-62-00-210-007

(12) Make sure that the ANTI-SKID INOP light, on the P9 multifunction panel, is not on.

SUBTASK 27-62-00-860-151

(13) Make sure that the parking brake is released.

SUBTASK 27-62-00-010-003

(14) Open this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

E. Speed Brake RTO Test

NOTE: Throughout this test, the Speed Brake ARMED and DO NOT ARM lights show opposing conditions. They should never come on simultaneously. Therefore, only one light shall be specified unless both lights are off.

SUBTASK 27-62-00-860-154

WARNING

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE AREA AROUND THE THRUST REVERSERS. THE THRUST REVERSERS EXTEND AND RETRACT QUICKLY. INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT CAN OCCUR.

(1) Move the engine 1 reverse thrust lever to the reverse thrust position.

(a) Make sure that the SPEED BRAKE ARMED light comes on.

SUBTASK 27-62-00-860-155

(2) Set the TEST SELECTOR switch to the INBD position on the antiskid/autobrake control unit (AACU).

SUBTASK 27-62-00-860-156

(3) At the same time that you push and hold the ENABLE/VERIFY button, set the PRESS/TEST switch to the TEST position on the AACU.

NOTE: The SPEED BRAKE DO NOT ARM light will come on momentarily if you do not push the buttons at the same time.

(a) Make sure that the speed brake lever moves to the UP position.

(b) Make sure that the ground and flight spoilers move to the up position.

(c) Make sure that the SPEED BRAKE ARMED light stays on.

SUBTASK 27-62-00-860-250

(4) Release the ENABLE/VERIFY button.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-00-860-251

(5) Set the PRESS/TEST switch to the OFF position.

SUBTASK 27-62-00-860-160

(6) Move the engine 1 reverse thrust lever to the retract (stow) position.

SUBTASK 27-62-00-860-205

(7) Move the engine 1 forward thrust lever forward.

(a) Make sure that all the ground spoilers, flight spoilers, and speed brake lever move to the down position.

SUBTASK 27-62-00-860-252

(8) Move the engine 1 forward thrust lever to the idle position.

SUBTASK 27-62-00-860-161

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE AREA AROUND THE THRUST REVERSERS. THE THRUST REVERSERS EXTEND AND RETRACT QUICKLY. INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT CAN OCCUR.

(9) Move the engine 2 reverse thrust lever to the reverse thrust position.

(a) Make sure that the SPEED BRAKE ARMED light comes on.

SUBTASK 27-62-00-860-253

(10) Make sure that the TEST SELECTOR switch is set to the INBD position on the AACU.

SUBTASK 27-62-00-860-254

(11) At the same time that you push and hold the ENABLE/VERIFY button, set the PRESS/TEST switch to the TEST position on the AACU.

NOTE: The SPEED BRAKE DO NOT ARM light will come on momentarily if you do not push the buttons at the same time.

(a) Make sure that the speed brake lever moves to the UP position.

(b) Make sure that the ground and flight spoilers move to the up position.

(c) Make sure that the SPEED BRAKE ARMED light stays on.

SUBTASK 27-62-00-860-255

(12) Release the ENABLE/VERIFY button.

SUBTASK 27-62-00-860-256

(13) Set the PRESS/TEST switch to the OFF position.

SUBTASK 27-62-00-860-257

(14) Move the engine 2 reverse thrust lever to the retract (stow) position.

SUBTASK 27-62-00-860-258

(15) Move the engine 2 forward thrust lever forward.

(a) Make sure that all the ground spoilers, flight spoilers, and speed brake lever move to the down position.

SUBTASK 27-62-00-860-259

(16) Move the engine 2 forward thrust lever to the idle position.

SUBTASK 27-62-00-860-162

(17) Set the TEST SELECTOR switch to the NORM position on the AACU.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-00-860-228

(1) Set the autobrake select switch, on the P9 multifunction panel, to the OFF position.

SUBTASK 27-62-00-860-164

(2) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

SUBTASK 27-62-00-860-226

(3) Remove maintenance power from the EEC (TASK 73-21-00-800-801-G00).

SUBTASK 27-62-00-860-165

(4) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	7	C01678	WEATHER RADAR RT RIGHT

F/O Electrical System Panel, P6-1

TASK 27-62-00-820-808

11. Speed Brake Extended Light Test

A. General

(1) Ignore the SPEED BRAKE ARMED and SPEED BRAKE DO NOT ARM lights during this test. They may come on.

B. References

Reference	Title
27-51-00-860-804	Retract the Trailing Edge Flaps (P/B 201)
27-62-00-800-801	Apply Pressure to the Speed Brake Hydraulic Systems A and B (P/B 201)
27-62-00-840-801	Shut Down the Speed Brake Hydraulic Systems A and B (P/B 201)

C. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Prepare for the Test

SUBTASK 27-62-00-860-167

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. THE AILERONS, RUDDER, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-00-860-169

(2) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
B	4	C01384	RADIO NAVIGATION RADIO ALTM 1
E	5	C01009	ADIRU LEFT DC
E	7	C01007	ADIRU LEFT AC

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
A	16	C01385	RADIO NAVIGATION RADIO ALTM 2
C	14	C01008	ADIRU RIGHT AC
C	17	C01010	ADIRU RIGHT DC

E. Speed Brakes Extended Light Test

SUBTASK 27-62-00-860-170

(1) Move the flaps to the 15 unit position.

SUBTASK 27-62-00-860-171

(2) Move the speed brake lever to the ARMED position.

NOTE: The spoilers can move up during this step.

SUBTASK 27-62-00-860-172

(3) Make sure the SPEEDBRAKES EXTENDED light is off.

SUBTASK 27-62-00-860-173

(4) Move the speed brake lever 0.6 in. (15.2 mm) aft from the ARMED detent position .

NOTE: The spoilers can move up during this step.

SUBTASK 27-62-00-860-174

(5) Make sure the SPEEDBRAKES EXTENDED light turns on.

SUBTASK 27-62-00-860-175

(6) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-62-00-860-176

(7) Make sure the SPEEDBRAKES EXTENDED light is off.

SUBTASK 27-62-00-860-185

(8) Move the speed brake lever to the DOWN position.

NOTE: The spoilers can move down during this step.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-00-860-186

(9) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-00-860-187

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-1

Row	Col	Number	Name
B	4	C01384	RADIO NAVIGATION RADIO ALTM 1
E	5	C01009	ADIRU LEFT DC
E	7	C01007	ADIRU LEFT AC

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
A	16	C01385	RADIO NAVIGATION RADIO ALTM 2
C	14	C01008	ADIRU RIGHT AC
C	17	C01010	ADIRU RIGHT DC

SUBTASK 27-62-00-860-188

(2) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SPEED BRAKE CONTROL SYSTEM - INSPECTION/CHECK

1. General

A. This procedure has these inspection tasks:

(1) Speed Brake System Components

(2) Flight Spoiler and Ground Spoiler Actuators

TASK 27-62-00-210-801

2. Speedbrake System Components - Inspection

(Figure 601)

A. References

Reference	Title
27-62-22-000-801	Speedbrake Lever - Removal (P/B 401)
27-62-22-400-801	Speedbrake Lever - Installation (P/B 401)

B. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

C. Access Panels

Number	Name/Location
112A	Forward Access Door

D. Speedbrake System Components Inspection

SUBTASK 27-62-00-010-005

(1) To get access to the speedbrake control system components,

Open this access panel:

Number	Name/Location
112A	Forward Access Door

SUBTASK 27-62-00-210-005

(2) Do a general visual inspection of these items:

(a) Speedbrake Lever Assembly

1) Examine the speedbrake control lever for a loose fastener.

2) Remove the left upper side panel and the left lower side panel (Speedbrake Lever - Removal, TASK 27-62-22-000-801).

3) Examine the link assembly for loose fasteners.

4) Examine the attach points of the link assembly for signs that they do not move freely.

5) Make sure that cables or lines do not touch the speedbrake control lever or link assembly during movement.

6) Install the left upper side panel and the left lower side panel (Speedbrake Lever - Installation, TASK 27-62-22-400-801).

(b) Auto Speedbrake Actuator

1) Examine the auto speedbrake actuator and actuator rod end for loose fasteners.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Examine the attach points of the auto speedbrake actuator and actuator rod end for signs that they do not move freely.

(c) Lower Control Rod

1) Examine the lower control rod for loose fasteners.

2) Examine the attach points of the lower control rod for signs that they do not move freely.

SUBTASK 27-62-00-410-003

(3) Close this access panel:

Number	Name/Location
112A	Forward Access Door

D. Spoiler Actuator Inspection

SUBTASK 27-62-00-010-006

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-62-00-860-190

(2) Move the flap control lever to the 30-unit position to extend the flaps.

SUBTASK 27-62-00-860-191

(3) Move the speedbrake lever from the DOWN position to the UP position.

SUBTASK 27-62-00-860-192

(4) Attach a DO NOT OPERATE tag, STD-858, on the flap control lever and speedbrake lever.

SUBTASK 27-62-00-860-193

(5) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-62-00-210-006

(6) Do a general visual inspection of the spoiler actuators (Figure 602).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-00-860-194

(7) Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-62-00-860-195

(8) Remove a DO NOT OPERATE tag, STD-858, from the flap control lever and speedbrake lever.

SUBTASK 27-62-00-860-196

(9) Move the flap control lever to the UP position to retract the flaps.

SUBTASK 27-62-00-860-197

(10) Move the speedbrake lever from the UP position to the DOWN position.

(11) If the hydraulic power is not needed, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

INBOARD GROUND SPOILER - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the inboard ground spoiler

(2) An installation of the inboard ground spoiler

(3) A functional test of the inboard ground spoiler.

B. This procedure is applicable to the left and right inboard ground spoilers.

TASK 27-62-12-000-801

2. Inboard Ground Spoiler Removal

(Figure 401)

A. References

652	Right Wing - Spoiler No. 7

D. Prepare for the Removal

SUBTASK 27-62-12-860-001

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-12-860-002

(2) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-62-12-860-003

(3) Put the SPOILER A and SPOILER B switches to the OFF position to remove the hydraulic power from the flight spoilers.

NOTE: SPOILER A AND SPOILER B switches are on the P5-3 flight control panel.

SUBTASK 27-62-12-860-004

(4) Put the speed brake lever in the UP position to lift the ground spoilers.

SUBTASK 27-62-12-480-001

(5) Install the set, SPL-1744, for the applicable ground spoiler.

SUBTASK 27-62-12-860-005

(6) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

E. Inboard Ground Spoiler Removal

SUBTASK 27-62-12-020-001

(1) Disconnect the left inboard actuator [17] from the inboard ground spoiler [1] (TASK 27-62-71-000-801).

SUBTASK 27-62-12-020-002

(2) Disconnect the right inboard actuator [24] from the inboard ground spoiler [1] (TASK 27-62-71-000-801).

SUBTASK 27-62-12-020-003

(3) Remove the nut [10] and washer [8].

(a) Disconnect the bonding jumper [9] from the structure.

SUBTASK 27-62-12-020-004

(4) Remove the nut [31], washer [32], washer [33], washer [35], and bolt [36].

(a) Disconnect the bonding jumper [34].

SUBTASK 27-62-12-020-005

(5) Remove the inboard ground spoiler [1]:

(a) Remove the cotter pin [7], nut [6], washer [5], bushing [4], washer [3] and bolt [2] to disconnect the outboard hinge fitting.

(b) Remove the cotter pin [30], nut [29], washer [28], bushing [27], washer [26], and bolt [25] to disconnect the inboard hinge fitting.

(c) Remove the cotter pin [16], nut [15], washer [14], bushings [13], washer [12], and bolt [11] to disconnect the center left hinge fitting.

(d) Remove the cotter pin [23], nut [22], washer [21], bushing [20], washer [19], and bolt [18] to disconnect the center right hinge fitting.

(e) Remove the inboard ground spoiler [1] from the airplane.

END OF TASK

F. Inboard Ground Spoiler Installation

SUBTASK 27-62-12-420-001

(1) Install the inboard ground spoiler [1].

(a) Put the inboard ground spoiler [1] in its position on the airplane.

(b) Install the bolt [18] with the head outboard, washer [19], bushing [20], washer [21], nut [22], and new cotter pin [23] in the center right hinge fitting.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Install the bolt [11] with the head outboard, washer [12], bushings [13], washer [14], nut [15], and new cotter pin [16] in the center left hinge fitting.

(d) Install the bolt [25] with the head inboard, washer [26], bushing [27], washer [28], nut [29], and new cotter pin [30] in the inboard hinge fitting.

(e) Install the bolt [2] with the head outboard, washer [3], bushing [4], washer [5], nut [6], and new cotter pin [7] in the outboard hinge fitting.

(f) Install the washer [8] and nut [10] to connect the bonding jumper [9] to the structure.

1) Use cotton wiper, G00034, moist in solvent, B00184, to clean the mating surfaces of the airplane structure, nut [10], bonding jumper [9], and washer [8].

2) Method 1 (preferred). Apply sealant, A50110, or sealant, A50155, or sealant, A50231, or sealant, A50296, to the mating surfaces of the ground stud, nut [10], washer [8], and bonding jumper [9] (SWPM 20-20-10 Paragraph 4.D).

3) Install the bonding jumper [9], washer [8], and nut [10].

4) Tighten the nut [10] to 28 in-lb (3 N·m) - 35 in-lb (4 N·m).

a) Method 1. Make sure that there is squeeze out around all the interfaces of each component.

5) Measure the electrical resistance between the bonding jumper [9] and airplane structure (SWPM 20-20-00).

a) Use a non-intrinsically safe bonding meter, COM-614.

b) Make sure that the electrical bonding resistance is 0.001 ohm (1.0 milliohm) or less.

6) Method 2 (optional). Apply a fillet seal with sealant, A50337, or sealant, A50231, or sealant, A50359, to cover the nut [10], washer [8], and bonding jumper [9] (SWPM 20-20-10 Paragraph 4.C).

(g) Install the bolt [36], washer [35], washer [33], washer [32], and nut [31] to connect the bonding jumper [34] to the structure.

1) Clean the surface of the bolt [36], washer [35], bonding jumper [34], washer [33], washer [32], and nut [31] (SWPM 20-20-00, Paragraph 2A).

2) Use cotton wiper, G00034, moist in solvent, B00184, to final clean the mating surfaces of the airplane structure, bolt [36], washer [35], bonding jumper [34], washer [33], washer [32], and nut [31].

3) Method 1 (preferred). Apply sealant, A50110, or sealant, A50155, or sealant, A50231, or sealant, A50296, to the mating surfaces of the bolt [36], washer [35], bonding jumper [34], washer [33], washer [32], and nut [31] (SWPM 20-20-10 Paragraph 4.F).

4) Install the bolt [36], washer [35], bonding jumper [34], washer [33], washer [32], and nut [31] .

5) Tighten the nut [31] to 28 in-lb (3 N·m) - 35 in-lb (4 N·m).

a) Method 1. Make sure that there is squeeze out around all the interfaces of each component.

6) Measure the electrical resistance between the bonding jumper [34] and airplane structure (SWPM 20-20-00).

a) Use a non-intrinsically safe bonding meter, COM-614.

b) Make sure that the electrical bonding resistance is 0.001 ohm (1.0 milliohm) or less.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

7) Bend the bonding jumper [34] 45 ±5°arc (0.8 ±0.1 rad) away from the support (View F, Figure 401).

8) Method 2 (optional). Apply a fillet seal with sealant, A50337, or sealant, A50231, or sealant, A50359, to cover the bolt [36], washer [35], bonding jumper [34], washer [33], washer [32], and nut [31] (SWPM 20-20-10 Paragraph 4.E).

9) Manually apply finish with coating, C00064, or Bonderite M-CR 600 Aero coating, C50315.

a) Apply primer, C00175, and coating, C50075.

SUBTASK 27-62-12-980-001

(2) Move the inboard ground spoiler [1] through its full travel.

(a) Make sure that the inboard ground spoiler [1] moves freely.

SUBTASK 27-62-12-420-002

(3) Connect the rod end of the left inboard actuator [17] to the inboard ground spoiler [1] (TASK 27-62-71-400-801).

SUBTASK 27-62-12-420-003

(4) Connect the rod end of the right inboard actuator [24] to the inboard ground spoiler [1] (TASK 27-62-71-400-801).

SUBTASK 27-62-12-080-001

(5) Remove the set, SPL-1744.

SUBTASK 27-62-12-720-002

(6) To unlatch the SPOILER ACTUATOR status message, do this task: Ground Spoiler Control Module Functional Test, TASK 27-62-41-720-801.

NOTE: The SPOILER ACTUATOR status message can be latched when the spoilers are locked in the up position.

SUBTASK 27-62-12-860-006

(7) Do this task: Pressurization of the Speed Brake Hydraulic Systems A and B to its Usual Condition, TASK 27-62-00-840-802.

SUBTASK 27-62-12-860-007

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(8) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-12-860-008

(9) Move the speed brake lever to the DOWN position to lower the spoilers.

SUBTASK 27-62-12-860-013

(10) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-62-12-860-009

(11) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

SUBTASK 27-62-12-820-001

(12) Adjust the inboard ground spoilers (TASK 27-62-00-820-802).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-12-720-001

(13) Do this task: Inboard Ground Spoiler Functional Test, TASK 27-62-12-720-801.

END OF TASK

TASK 27-62-12-720-801

4. Inboard Ground Spoiler Functional Test

27-62-00-800-801	Apply Pressure to the Speed Brake Hydraulic Systems A and B (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
COM-1691	Protractor - Digital, Vertical or Horizontal Part #: 21465A82 Supplier: 3A054 Part #: 31-038-3 (Model Pro 360) Supplier: 1X822 Part #: 31-040-9 (Model Pro 3600) Supplier: 1X822 Part #: 950-317 (Model Pro 360) Supplier: 01EP7 Part #: 950-318 (Model Pro 3600) Supplier: 01EP7 Part #: KS5549 Supplier: 75245 Part #: KS6005 Supplier: 75245

C. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
552	Left Wing - Spoiler No. 6
652	Right Wing - Spoiler No. 7

D. Prepare for the Test

SUBTASK 27-62-12-860-010

(1) Do this task: Supply Electrical Power, TASK 24-22-00-860-801.

SUBTASK 27-62-12-860-011

WARNING

MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-12-480-002

(3) Install the protractor, COM-1691 on the inboard ground spoilers 6 and 7.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-12-820-002

(4) Adjust the protractor, COM-1691 to 0°arc (0 rad).

E. Inboard Ground Spoiler Functional Test

SUBTASK 27-62-12-020-006

(1) Move the speed brake lever to the UP position to lift the spoilers.

SUBTASK 27-62-12-020-007

(2) Make sure the spoilers No. 6 and 7 are 60 ±2°arc (1 ±0 rad) up from the retracted position.

SUBTASK 27-62-12-020-008

(3) Make sure the ground spoilers No. 6 and 7 align in the limit of 2°arc (0 rad).

SUBTASK 27-62-12-020-009

(4) Move the speed brake lever to the DOWN position to lower the spoilers.

SUBTASK 27-62-12-820-003

(5) Make sure the spoilers move to the fully retracted position.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-12-860-012

(1) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

SUBTASK 27-62-12-080-002

(2) Remove the protractor, COM-1691 from the spoilers No. 6 and 7.

——— END OF TASK ———

GROUND SPOILER HINGE LINK - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) The ground spoiler hinge links removal

(2) The ground spoiler hinge links installation.

B. This procedure is applicable to the left and right ground spoiler hinge links.

TASK 27-62-15-000-801

2. Ground Spoiler Hinge Link Removal

(Figure 401)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

D. Prepare for the Removal

SUBTASK 27-62-15-860-002

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-801.

SUBTASK 27-62-15-860-003

(2) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-62-15-860-004

WARNING

MAKE SURE THE SPOILER WILL REMAIN IN THE OPEN POSITION DURING INSTALLATION OF THE LOCK-SET. PUT ONE PERSON IN THE FLIGHT COMPARTMENT TO MONITOR THE SPOILER CONTROL LEVER. IF THE SPOILER CONTROL LEVER CHANGES POSITION, THE SPOILER PANEL COULD MOVE AND CAUSE INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(3) Put the speed brake lever in the UP position to lift the spoilers.

SUBTASK 27-62-15-480-001

(4) Install the set, SPL-1744 or the set, SPL-1743 on the actuator for the applicable ground spoiler.

SUBTASK 27-62-15-860-005

(5) Do this task: Depressurization of the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-802.

SUBTASK 27-62-15-020-001

(6) To remove the outboard ground spoiler hinge link, do this task: Outboard Ground Spoiler Removal, TASK 27-62-91-000-801.

SUBTASK 27-62-15-020-002

(7) To remove the inboard ground spoiler hinge links, do this task: Inboard Ground Spoiler Removal, TASK 27-62-12-000-801.

E. Ground Spoiler Hinge Link Removal

SUBTASK 27-62-15-020-003

(1) To remove the spoiler hinge link [5], spoiler hinge link [5A], spoiler hinge link [5B] or spoiler hinge link [5C], do these steps:

(a) Remove pins [11], nuts [10], washers [9], bushings [8], washers [7] and bolts [6].

(b) Remove ground spoiler hinge link from the airplane.

END OF TASK

E. Ground Spoiler Hinge Link Installation

SUBTASK 27-62-15-020-004

(1) To install the spoiler hinge link [5], spoiler hinge link [5A], spoiler hinge link [5B] or spoiler hinge link [5C], do these steps:

(a) Install the bolts [6], washers [7], bushings [8], washers [9], nuts [10] and new pins [11].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-15-400-001

(2) If you removed the outboard ground spoiler hinge link, do this task: Outboard Ground Spoiler Installation, TASK 27-62-91-400-801.

SUBTASK 27-62-15-400-002

(3) If you removed the inboard ground spoiler hinge links, do this task: Inboard Ground Spoiler Installation, TASK 27-62-12-400-801.

SUBTASK 27-62-15-860-006

(4) Make sure that hydraulic power is not on.

SUBTASK 27-62-15-080-001

(5) Remove set, SPL-1744, or the set, SPL-1743, from the applicable spoiler actuator.

SUBTASK 27-62-15-720-002

(6) Do this task to unlatch the SPOILER ACTUATOR status message: Ground Spoiler Control Module Functional Test, TASK 27-62-41-720-801.

NOTE: The SPOILER ACTUATOR status message can be latched when the spoilers are locked in the up position.

SUBTASK 27-62-15-860-007

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(7) Do this task: Apply Pressure to the Spoiler Hydraulic Systems A and B, TASK 27-61-00-800-801.

SUBTASK 27-62-15-860-008

(8) Move the speed brake lever to the DOWN position to lower the spoilers.

SUBTASK 27-62-15-860-009

(9) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-62-15-860-010

(10) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

SUBTASK 27-62-15-820-001

(11) Do this task: Ground Spoiler Adjustment, TASK 27-62-00-820-802.

SUBTASK 27-62-15-720-001

(12) Do this task: Outboard Ground Spoiler Test, TASK 27-62-91-000-802.

END OF TASK

SUBTASK 27-62-21-860-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) If the downlock pins are not installed on all landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-62-21-010-001

(4) Open this access panel:

Number	Name/Location
112A	Forward Access Door

E. Removal Procedure

SUBTASK 27-62-21-020-001

(1) Remove the speedbrake lever transducer [2] (Speedbrake Lever Transducer Removal, TASK 27-62-37-000-801).

SUBTASK 27-62-21-020-003

(2) Remove the pin [4], nut [5], washer [6] and bolt [7] that attach the actuator assembly [3] to the speedbrake mechanism [1].

SUBTASK 27-62-21-020-004

(3) Remove the nut [9], washer [10] and bolt [11] that attach the control rod [8] to the speedbrake mechanism [1].

SUBTASK 27-62-21-020-002

(4) Do these steps to remove the turnbuckle [12]:

(a) Remove the lockwire, nut [13], washer [14], bushing [15], washer [16] and bolt [17].

(b) Remove the nut [18], washer [19], washer [20] and bolt [21].

(c) Remove the turnbuckle [12].

SUBTASK 27-62-21-020-005

(5) Remove the speedbrake mechanism [1]:

(a) Remove the nuts [22], washers [23], washers [24] and bolts [25] that attach the speedbrake mechanism [1] to the structure.

(b) Remove the nuts [26], bushings [27], washers [28] and bolts [29] that attach the speedbrake mechanism [1] to the structure.

(c) Remove the speedbrake mechanism [1].

NOTE: The speedbrake mechanism [1] can be removed on the left side of the cable drum.

E. Speedbrake Mechanism Installation

SUBTASK 27-62-21-420-002

(1) Install the speedbrake mechanism [1]:

(a) Put the speedbrake mechanism [1] in position.

(b) Install the nuts [26], bushings [27], washers [28] and bolts [29] that attach the speedbrake mechanism [1] to the structure.

(c) Install the nuts [22], washers [23], washers [24] and bolts [25] that attach the speedbrake mechanism [1] to the structure.

SUBTASK 27-62-21-420-003

(2) Do these steps to attach the actuator assembly [3] to the speedbrake mechanism [1]:

(a) Put the actuator assembly [3] in its position on the speedbrake mechanism [1].

(b) Install the new pin [4], nut [5], washer [6], and bolt [7] that attach the actuator assembly [3] to the speedbrake mechanism [1].

1) Install bolt [7] with the bolt head inboard.

SUBTASK 27-62-21-420-004

(3) Do these steps to attach the control rod [8] to the speedbrake mechanism [1]:

(a) Put the control rod [8] in its position on the speedbrake mechanism [1].

(b) Install the nut [9], washer [10] and bolt [11] that attach the control rod [8] to the speedbrake mechanism [1].

SUBTASK 27-62-21-420-005

(4) Install the turnbuckle [12]:

(a) Put the aft end of the turnbuckle [12] in its position.

1) Install the bolt [21], washer [20], washer [19], and nut [18].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Put the forward end of the turnbuckle [12] in its position.

1) Install the bolt [17], washer [16], bushing [15], washer [14], nut [13] and lockwire.

SUBTASK 27-62-21-420-006

(5) Install the speedbrake lever transducer [2] (TASK 27-62-37-400-801).

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-21-860-004

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-2409	Dowel Set - Thrust Lever, Control Stand Part #: F80195-1 Supplier: 81205
SPL-2411	Tool Set - Control Stand Disassembly Part #: C76002-26 Supplier: 81205
STD-589	Mat - Protective Cover
STD-858	Tag - DO NOT OPERATE

C. Location Zones

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Removal

SUBTASK 27-62-22-040-001

(1) Do this task: Trailing Edge Flap System Deactivation, TASK 27-51-00-040-801.

SUBTASK 27-62-22-040-002

(2) Make sure that the left and right engine start switches are off and install DO NOT OPERATE tags, STD-858.

SUBTASK 27-62-22-040-003

(3) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
A	1	C00458	ENGINE 1 IGNITION RIGHT
A	3	C00153	ENGINE 1 IGNITION LEFT
A	4	C04008	ENGINE 1 ALTN PWR CHAN B
A	5	C04007	ENGINE 1 ALTN PWR CHAN A

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

SUBTASK 27-62-22-860-001

WARNING

MAKE SURE THAT YOU OPEN THE CIRCUIT BREAKERS FOR THE WEATHER RADAR SYSTEM. THE FORWARD MOVEMENT OF A THRUST LEVER CAN CAUSE THE AUTOMATIC OPERATION OF THE SYSTEM. THE OPERATION OF THIS SYSTEM CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(6) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	7	C01678	WEATHER RADAR RT RIGHT

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
D	13	C00120	WEATHER RADAR RT

SUBTASK 27-62-22-040-005

(7) Deactivate the speedbrakes and control lever on the control stand.

(a) Move the speedbrake control lever [22] to the DOWN position.

SUBTASK 27-62-22-010-001

(8) Do this task: Captain and First Officer Seat Removal, TASK 25-11-01-000-801.

SUBTASK 27-62-22-010-002

(9) Put a protective cover mat, STD-589, on the aft electronics panel P8.

NOTE: This will prevent damage to the switches and glass surfaces of the indicators and displays.

SUBTASK 27-62-22-010-003

(10) Remove control stand lightplates to get access to the speed brake lever (Figure 406).

(a) Remove the first officer stabilizer trim lightplate [60].

1) Remove the screws [64] that attach the first officer stabilizer trim lightplate [60].
2) Remove the nut [68] and lockwasher [69].
3) Remove the terminal lug and washer [70] from the stud on the lightplate.
4) Remove the lightplate.

(b) Remove the captain stabilizer trim lightplate [61].

1) Remove the screws [65] that attach the captain stabilizer trim lightplate [61].
2) Remove the nut [68] and lockwasher [69].
3) Remove the terminal lug and washer [70] from the stud on the lightplate.
4) Remove the lightplate.

(c) Remove the flap lever indicator lightplate [62].

1) Remove the screws [66] that attach the flap lever indicator lightplate [62].
2) Remove the nut [68] and lockwasher [69].
3) Remove the terminal lug and washer [70] from the stud on the lightplate.
4) Remove the lightplate.

(d) Remove the speed brake lightplate [63].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Remove the screws [67] that attach the speed brake lightplate [63].
2) Remove the nut [68] and lockwasher [69].
3) Remove the terminal lug and washer [70] from the stud on the lightplate.
4) Remove the lightplate.

SUBTASK 27-62-22-010-004

(11) Remove seal retainers and seals to get access to the speedbrake lever (Figure 407).

(a) To remove the left seal [80] and seal retainer [82], do the following steps:
1) Remove the screws [83].
2) Remove the seal retainer [82].
3) Remove the left seal [80].
4) Remove the spacer [81].

(b) To remove the right seal [84] and seal retainer [86], do the following steps:
1) Remove the screws [87].
2) Remove the seal retainer [86].
3) Remove the right seal [84].
4) Remove the spacer [85].

SUBTASK 27-62-22-020-001

(12) Remove covers and stops to get access to the control shaft components (Figure 408).

(a) To remove the forward thrust stop [90] and aft thrust stop [91], do the following steps:
1) Remove the fuel control knobs [6] and nuts [98].
2) Remove the screws [92].
3) Remove the forward thrust stop [90].
4) Remove the screws [93].
5) Remove the aft thrust stop [91].

(b) To remove the right side cover assembly [94], do the following steps:
1) Remove the screws [95].
2) Remove the right side cover assembly [94].

(c) To remove the left side cover assembly [96], do the following steps:
1) Remove the screws [97].
2) Remove the left side cover assembly [96].

SUBTASK 27-62-22-010-005

(13) To get access to the speedbrake control lever [22] on the control stand, do the following steps (Figure 401).

(a) Remove the bolt [8], washer [8A], and the right stabilizer trim wheel [7].
1) Keep the left stabilizer trim wheel [11] attached at this time, so you can turn the assembled levers during removal.

(b) Remove the screws [51] and upper right cover [21].

(c) Remove the screws [2] and left upper side panel [1].

(d) Remove the screws [2] and the left lower side panel [5].

(e) Remove the screws [2] and the right upper side panel [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Remove the screws [2] and the right lower side panel [4].

(g) To move the stabilizer trim switch panel [10] from the control stand, do the following steps:

1) Remove screws [9].

2) Apply masking tape to prevent damage to the surface of the stabilizer trim switch panel [10].

3) Move the stabilizer trim switch panel [10] on to the protective cover mat, STD-589.

E. Control Stand Components Removal

SUBTASK 27-62-22-020-002

(1) Disconnect the flap indicator assembly.

(a) Go to the right side of the control stand.

(b) Remove the nut [16], washer [14], and bolt [17] from the lower end of the link assembly [13].

(c) Safety the link assembly [13] to the control stand.

SUBTASK 27-62-22-020-003

(2) Disconnect the flap lever position synchro assembly.

(a) Remove the nut [18] and bolt [19] from the link assembly [20].

(b) Safety the link assembly [13] to the control stand.

SUBTASK 27-62-22-020-004

(3) Disconnect the stabilizer trim controls.

(a) Turn the left trim wheel until you find the link in the trim chain [31] (Figure 402).

NOTE: This will help if it becomes necessary to disconnect the trim chain [31] during installation.

(b) Safety the trim chain [31] to the stabilizer trim sprocket [32].

1) Do not remove the trim chain [31] from the stabilizer trim sprocket [32].

(c) Move to the forward bay below the flight compartment.

1) Release the tension from the stabilizer control chain (TASK 27-41-00-820-801).

SUBTASK 27-62-22-020-005

(4) Do these steps to remove the control shaft components (Figure 401):

(a) Remove the bolt [8], washer [8A], and left stabilizer trim wheel [11].

(b) Remove screws [50] and upper left cover [12].

(c) Carefully move the stabilizer trim stabilizer trim shaft [27] to the left side of the control stand and do these steps at the same time (Figure 402).

1) Remove the bearing [35].

2) Remove the clamp up bushing [36].

3) Catch and remove the bushing [33] and inside bearing [34] as the stabilizer trim shaft [27] is moved to the left.

NOTE: The bushing is between the inside bearing [34] and the stabilizer trim sprocket.

4) Catch and move the stabilizer trim sprocket [32] and trim chain [31].

5) Move the stabilizer trim shaft [27] to the left side until the stabilizer trim sprocket [32] is clear of the stabilizer trim shaft [27].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

6) Move the stabilizer trim sprocket [32] and trim chain [31] to the bottom of the control stand.

(d) If the inside bearing [34] did not fall out with the bushing [33], then reach inside the short shaft [37] from the left side and remove the inside bearing [34].

(e) Remove the stabilizer trim stabilizer trim shaft [27] from the control stand.

1) Remove the bearing [28].

2) Remove the long bushing [29].

3) Remove the clamp up bushing [30].

SUBTASK 27-62-22-020-006

(5) To remove the stabilizer trim chain guard [45], do the following steps (Figure 403):

(a) Remove the flap control switches [99], screws [100], and washers [103].

(b) Remove the clamps [104], screw [101], screw [102], and washers [103].

(c) Go to the opening where the stabilizer trim switch panel [10] for the stabilizer trim cutout is found.

(d) Use the 90 degree screwdriver from the tool set, SPL-2411, to hold the screw [44].

(e) Remove the nut [42], washer [43], and screw [44].

(f) Remove the upper center screw [39] and washer [38].

(g) Remove the forward screw [41] and washer [40].

(h) Remove the stabilizer trim chain guard [45].

F. Speedbrake Lever Removal

SUBTASK 27-62-22-030-001

(1) To disconnect the speedbrake control lever [22] from the link assembly [23], do the following steps (Figure 401):

(a) Remove the bolt [24], washer [25], and nut [26] from the speedbrake control lever [22].

SUBTASK 27-62-22-020-007

(2) To disconnect the lockwasher [47] and nut [48] from the long control shaft [46], do the following steps (Figure 404):

(a) Find the bent tab on the lockwasher [47].

(b) Use the lockwasher removal tool from the tool set, SPL-2411, to bend the tab.

(c) Bend the tab out of the notch in the nut [48].

(d) Put one control shaft wrench from the tool set, SPL-2411, on the left side of the long control shaft [46] to hold it in position.

(e) Put one control shaft nut wrench from the tool set, SPL-2411, in position and remove the nut [48] from the long control shaft [46].

(f) Remove and discard the lockwasher [47].

SUBTASK 27-62-22-020-008

(3) To remove the speedbrake control lever [22], do the following steps (Figure 404):

(a) Put the dowel set, SPL-2409, against the right side end of the long control shaft [46].

(b) Hit lightly (carefully tap) on the dowel.

NOTE: This will move the long control shaft off the control levers.

1) Move the dowel until the speedbrake control lever [22] is on the dowel.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Do not move the long control shaft [46] from this position.

NOTE: More movement will let the speedbrake control lever fall.

(d) Hold the speedbrake control lever [22] and move the dowel from the speedbrake control lever [22].

1) Stop the dowel movement when you can lift up the speedbrake control lever [22].

2) Make sure that the washers [49] are still held by the dowel and long control shaft [46].

(e) Remove the speedbrake control lever [22] through the top of the control stand.

(f) Make sure that the washers [49] do not fall into the control stand.

(g) Do not move the dowel from this position.

END OF TASK

G. Speedbrake Lever Installation

SUBTASK 27-62-22-420-001

(1) Do these steps to install the speedbrake control lever [22] on the control stand (Figure 404):

(a) Apply grease, D00013, to the inside of the speedbrake control lever [22].

(b) Apply a thin layer of grease, D00013, to each side of the washers [49].

NOTE: The application of grease, D00013, will help hold the washers to the speedbrake control lever.

(c) Hold the speedbrake control lever [22] and washers [49] in the correct position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Move the long control shaft [46] through the speedbrake control lever [22] and washers [49].

(e) Put the long control shaft [46] against the right side end of the dowel set, SPL-2409.

(f) Move the speedbrake control lever [22] forward and aft.

NOTE: The lever and washers must move freely when you move them from the dowel to the long control shaft.

(g) Move the long control shaft [46] and the dowel to the right until all the lever assemblies and washers [49] are on the long control shaft [46].

(h) Remove the dowel.

SUBTASK 27-62-22-420-002

(2) Do these steps to lock the speedbrake control lever [22]:

(a) Set the keyway on the long control shaft [46] at the top.

(b) Install a new lockwasher [47], but do not bend the tab at this time.

1) Align the key tab on the lockwasher [47] with the keyway on the long control shaft [46].

(c) Put one control shaft wrench from the tool set, SPL-2411, on the left side of the long control shaft [46] to hold it in position.

(d) Install the nut [48] as follows:

1) Use one control shaft nut wrench from the tool set, SPL-2411, to tighten the nut [48].

2) Tighten the nut [48] to 100 in-lb (11.3 N·m) - 150 in-lb (16.9 N·m).

SUBTASK 27-62-22-020-009

(3) Measure the gap after the lever is installed as follows (Figure 405):

(a) If the gap is not in the limits, follow the instructions in Table A to get the correct limits:

1) Use the applicable steps in the removal and installation tasks to adjust the washer [49] on the long control shaft [46].

SUBTASK 27-62-22-420-003

(4) After the speedbrake control lever [22] is set correctly, lock the assembly in its position as follows (Figure 404):

(a) Make sure that the nut [48] is tightened to 100 in-lb (11.3 N·m) - 150 in-lb (16.9 N·m).

(b) Bend the rim of the lockwasher [47] into one of the notches on the nut [48].

1) Use a chisel or the lockwasher break tool from the tool set, SPL-2411, to bend the rim of the lockwasher [47].

2) Make sure that the bend in the lockwasher [47] is not more than 0.15 in. (3.8 mm) into the notch on the nut [48].

SUBTASK 27-62-22-420-004

(5) Connect the speedbrake control lever [22] to the link assembly [23] as follows (Figure 401):

(a) Install the bolt [24], washer [25], and nut [26] in the speedbrake control lever [22] and link assembly [23].

H. Control Stand Components Installation

SUBTASK 27-62-22-020-010

(1) Do these steps to install the stabilizer trim chain guard [45] (Figure 403):

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Put the stabilizer trim chain guard [45] in its position.

(b) Install the upper center screw [39] and washer [38].

(c) Install the forward screw [41] and washer [40].

(d) Install the screw [44] through the thrust lever opening.

(e) Use the 90 degree screwdriver from the tool set, SPL-2411, to hold the screw [44].

(f) Install the nut [42] and washer [43].

(g) Install the clamps [104], screw [101], screw [102], and washers [103].

(h) Install the flap control switches [99], screws [100], and washers [103].

SUBTASK 27-62-22-020-011

(2) Do these steps to install the control shaft components (Figure 402):

(a) Install the clamp up bushing [30] and long bushing [29] on the stabilizer trim shaft [27].

1) Put the clamp up bushing [30] on the end with the longest splines.

(b) Put the inside bearing [34] into the inside end of the short shaft [37].

(c) Move the stabilizer trim shaft [27] into the control stand from the left side.

1) Put the end of the stabilizer trim shaft [27] with the longest splines in first.

(d) Move the stabilizer trim sprocket [32] and trim chain [31] up from the bottom of the control stand as follows:

1) Put the stabilizer trim sprocket [32] on the splined end of the stabilizer trim shaft [27].

2) Move the stabilizer trim shaft [27] through the stabilizer trim sprocket [32].

(e) Put the bushing [33] on the splined end of the stabilizer trim shaft [27].

1) Move the stabilizer trim shaft [27] through the bushing [33].

(f) Move the stabilizer trim shaft [27] through the inside bearing [34] until the end is moved out through the short shaft [37].

(g) Install the bearing [28] on the left side of the stabilizer trim shaft [27].

(h) Install the clamp up bushing [36] on the right side of the stabilizer trim shaft [27].

(i) Install the bearing [35] on the right side of the stabilizer trim shaft [27].

(j) Lightly tap the stabilizer trim shaft [27] from the left side.

1) Make sure that the assembled parts are tight and in the correct position.

SUBTASK 27-62-22-420-005

(3) Do these steps to activate and adjust the stabilizer trim assembly:

(a) Remove the temporary wire tie from the trim chain [31] and stabilizer trim sprocket [32].

(b) Adjust the stabilizer control chain (TASK 27-41-00-820-801).

SUBTASK 27-62-22-410-001

(4) Do these steps to connect the flap lever position synchro assembly (Figure 401):

(a) Put the link assembly [20] in the clevis for the flap lever position synchro assembly.

(b) Install the nut [18] and bolt [19].

SUBTASK 27-62-22-410-002

(5) Do this step to connect the flap indicator assembly:

(a) Install the bolt [17], washer [14], and nut [16] in the link assembly [13] and flap indicator assembly arm.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-22-420-006

(6) Install these covers on the control stand.

(a) Install the upper left cover [12].

(b) Install the screws [50].

(c) Install the upper right cover [21].

(d) Install the screws [51].

SUBTASK 27-62-22-010-006

(7) Install the control stand access covers.

(a) Install the left upper side panel [1] with the screws [2].

(b) Install the left lower side panel [5] with the screws [2].

(c) Install the right upper side panel [3] with the screws [2].

(d) Install the right lower side panel [4] with the screws [2].

SUBTASK 27-62-22-420-007

(8) Install the stabilizer trim wheel assemblies.

(a) Install the right stabilizer trim wheel [7] as follows.

1) Install the right bolt [8] and washer [8A].

2) Tighten the bolt [8] to 150 in-lb (16.9 N·m) - 170 in-lb (19.2 N·m)

(b) Install the left stabilizer trim wheel [11] as follows:

1) Set the crank of the left stabilizer trim wheel [11] 75 to 105 degrees away from the setting of the crank on the right stabilizer trim wheel [7].

NOTE: This can be set in either direction.

2) Install the left bolt [8] and washer [8A].

3) Tighten the bolt [8] to 150 in-lb (16.9 N·m) - 170 in-lb (19.2 N·m).

SUBTASK 27-62-22-200-001

(9) Do a visual check of the assembly as follows:

(a) Move each control through its usual range.

(b) Make sure that the electrical bundles do not touch parts.

SUBTASK 27-62-22-410-003

(10) Do these steps to install the stabilizer trim switch panel [10] for the stabilizer trim:

(a) Remove the masking tape from the stabilizer trim switch panel [10].

(b) Put the stabilizer trim switch panel [10] on the control stand.

(c) Install the screws [9].

SUBTASK 27-62-22-410-004

(11) Install these covers and stops on the control stand as follows (Figure 408):

(a) Do these steps to install the left side cover assembly [96]:

1) Install the left side cover assembly [96].

2) Install the screws [97].

(b) Do these steps to install the right side cover assembly [94]:

1) Install the right side cover assembly [94].

2) Install the screws [95].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Do these steps to install the forward thrust stop [90] and aft thrust stop [91]:

1) Install the aft thrust stop [91].
2) Install the screws [93].
3) Install the fuel control knobs [6] and nuts [98].
4) Install the forward thrust stop [90].
5) Install the screws [92].

SUBTASK 27-62-22-410-005

(12) Install these seal retainers and seals on the control stand as follows (Figure 407):

(a) Do these steps to install the left seal [80] and seal retainer [82]:

1) Install the spacer [81].
2) Install the left seal [80].
3) Install the seal retainer [82].
4) Install the screws [83].

(b) Do these steps to install the right seal [84] and seal retainer [86]:

1) Install the spacer [85].
2) Install the right seal [84].
3) Install the seal retainer [86].
4) Install the screws [87].

SUBTASK 27-62-22-410-006

(13) Install these control stand lightplates as follows (Figure 406):

(a) Do these steps to install the first officer stabilizer trim lightplate [60]:

1) Install the washer [70].
2) Connect the terminal lug on the stud attached to the first officer stabilizer trim lightplate [60].
3) Install the nut [68] and lockwasher [69].
4) Install the first officer stabilizer trim lightplate [60] on the control stand.
5) Install the screws [64] that attach the first officer stabilizer trim lightplate [60] to the control stand.

(b) Do these steps to install the captain stabilizer trim lightplate [61]:

1) Install the washer [70].
2) Connect the terminal lug on the stud attached to the captain stabilizer trim lightplate [61].
3) Install the nut [68] and lockwasher [69].
4) Install the captain stabilizer trim lightplate [61] on the control stand.
5) Install the screws [65] that attach the captain stabilizer trim lightplate [61] to the control stand.

(c) Do these steps to install the flap lever indicator lightplate [62]:

1) Install the washer [70].
2) Connect the terminal lug on the stud attached to the flap lever indicator lightplate [62].
3) Install the nut [68] and lockwasher [69].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Install the flap lever indicator lightplate [62] on the control stand.

5) Install the screws [66] that attach the flap lever indicator lightplate [62] to the control stand.

(d) Do these steps to install the speed brake lightplate [63]:

1) Install the washer [70].

2) Connect the terminal lug on the stud attached to the speed brake lightplate [63].

3) Install the nut [68] and lockwasher [69].

4) Install the speed brake lightplate [63] on the control stand.

5) Install the screws [67] that attach the speed brake lightplate [63] to the control stand.

SUBTASK 27-62-22-480-001

(14) Remove the protective cover mat, STD-589, from the aft electronics panel P8.

SUBTASK 27-62-22-410-007

(15) Do this task: Captain and First Officer Seat Installation, TASK 25-11-01-400-801.

I. Speedbrake Lever Installation Test

SUBTASK 27-62-22-720-001

(1) Do this task: Inboard Ground Spoiler Functional Test, TASK 27-62-12-720-801.

J. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-22-860-002

(1) Remove the safety tags and close these circuit breakers:

SUBTASK 27-62-31-860-014

(3) Put the speed brake lever in the DOWN position.

SUBTASK 27-62-31-860-015

(4) Set the STAB TRIM PRI Switch, S272, on the aft area of the control stand, to the CUTOUT position.

(a) Attach a DO NOT OPERATE tag, STD-858, to the switch.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-31-860-016

(5) Attach a DO NOT OPERATE tag, STD-858, to the stabilizer trim wheels.

SUBTASK 27-62-31-010-002

(6) To get access the auto speed brake actuator assembly [16].

Open this access panel:

Number	Name/Location
112A	Forward Access Door

F. Auto Speed Brake Actuator Removal

SUBTASK 27-62-31-020-006

(1) Disconnect the electrical connector [17] from the actuator assembly [16].

SUBTASK 27-62-31-020-007

(2) Remove the bolt [5], washer [6] and nut [8] then disconnect the bonding jumper [7].

SUBTASK 27-62-31-020-008

(3) Remove the pin [13], nut [12], washer [11] and bolt [10] that connect the actuator assembly [16] rod end to the brake housing clevis in the speed brake mechanical assembly [15].

SUBTASK 27-62-31-020-009

(4) Remove the lockwire or safety cable [3], washer [2] and bolt [1] that connect the actuator assembly [16] to the structure.

SUBTASK 27-62-31-020-010

(5) Remove the actuator assembly [16] from the airplane.

E. Access Panels

Number	Name/Location
112A	Forward Access Door

F. Auto Speed Brake Actuator Installation

SUBTASK 27-62-31-860-006

(1) Move the speed brake lever [18] to the flight detent position approximately 4 degrees aft of the DOWN position (Figure 401).

(a) Make sure that the cam roller is centered in the ARMED detent.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-31-480-001

(2) Install the rigging lock, SPL-14768, to hold the speed brake lever [18] at 4 degrees aft of the DOWN position.

SUBTASK 27-62-31-420-001

(3) Install the auto speed brake actuator assembly [16]:

(a) Place the auto speed brake actuator assembly [16] in position.

(b) Install the bolt [1], washer [2], and lockwire or safety cable [3] that attaches the actuator assembly [16] to the structure.

(c) Do these steps to put the actuator assembly [16] in the retracted position:

1) Use 28 VDC power supply, STD-686, or equivalent, to apply 28 VDC, positive to Pin 3 and a ground to Pin 1 in the socket used for electrical connector [17].

NOTE: The recommended electrical current limit value is 10A.

a) Use pin 1 as the ground.

NOTE: The pins on the actuator have numbers.

(d) Adjust the rod end fitting on the actuator assembly [16].

1) Remove the lockwire or safety cable on checknut [9].

2) Loosen the checknut [9] on the actuator assembly [16] rod end.

3) Adjust the actuator assembly [16] rod end until it aligns with the brake housing clevis in the speed brake mechanical assembly [15] to insert the bolt [10] freely.

4) Make sure that the cam roller is centered in the ARMED detent.

5) Install the bolt [10], washer [11], nut [12], and new pin [13] to attach the actuator assembly [16] rod end.

a) Make sure that the head of the bolt [10] is to the inboard side.

6) Tighten the checknut [9] on the actuator assembly [16] rod end to 45 in-lb (5.1 N·m) - 55 in-lb (6.2 N·m).

7) Install the lockwire or safety cable on checknut [9].

SUBTASK 27-62-31-080-001

(4) Remove the rigging lock, SPL-14768, from the speed brake lever [18].

SUBTASK 27-62-31-980-001

(5) Manually move the speed brake lever [18] through the full travel to make sure it moves freely.

SUBTASK 27-62-31-420-002

(6) Install the bonding jumper [7], do these steps:

(a) Clean the surfaces where the bonding jumper [7] will be attached.

(b) Install the bolt [5], washer [6], and nut [8] to attach the bonding jumper [7].

(c) Measure the electrical resistance between the actuator assembly [16] and structure (SWPM 20-20-00, Paragraph 21).

1) Use a non-intrinsically safe bonding meter, COM-614.

2) Make sure that the resistance is 0.0025 ohm (2.5 milliohms) or less.

SUBTASK 27-62-31-080-002

(7) Disconnect the 28 VDC power supply, STD-686, from the actuator assembly [16].

SUBTASK 27-62-31-420-003

(8) Install the electrical connector [17].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Auto Speed Brake Actuator Installation Test

SUBTASK 27-62-31-860-007

(1) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	9	C00440	FLIGHT CONTROL AUTO SPEED BRAKE
B	10	C00207	FLIGHT CONTROL STAB TRIM CONT

SUBTASK 27-62-31-860-008

(2) Do this task: Pressurization of the Speed Brake Hydraulic Systems A and B to its Usual Condition, TASK 27-62-00-840-802.

SUBTASK 27-62-31-720-001

(3) Do this task: Speed Brake Throttle Switch Test, TASK 27-62-00-820-804.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-31-860-009

(1) Set the STAB TRIM PRI Switch, S272, on the aft of the control stand to the NORMAL position.

(a) Remove the DO NOT OPERATE tags from the switch.

SUBTASK 27-62-31-860-010

(2) Remove the DO NOT OPERATE tags from the Stabilizer Trim Wheels.

SUBTASK 27-62-31-410-001

(3) Close this access panel:

Number	Name/Location
112A	Forward Access Door

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SPEED BRAKE REFUSED TAKEOFF (RTO) SWITCH - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the speed brake refused takeoff (RTO) switch S650.

(2) An installation of the speed brake refused takeoff (RTO) switch S650.

B. The speed brake refused takeoff switch (RTO) is installed in the left forward part of the control stand.

C. The speed brake refused takeoff switch (RTO) is operated by the movement of the reverse thrust levers in a reverse thrust direction. The RTO switch operates with an arm which lifts the speed brake lever out of the down detent to permit automatic extension of the speed brakes.

D. In this procedure the speed brake refused takeoff (RTO) switch is referred to as the "RTO switch".

TASK 27-62-32-000-801

2. Speed Brake Refused Takeoff (RTO) Switch Removal

(Figure 401)

A. Location Zones

Zone	Area
211	Flight Compartment - Left

B. Prepare for the Removal

SUBTASK 27-62-32-860-001

(1) Open this circuit breaker and install safety tag:

(4) Install the screws [1] and washers [2] to attach the cover plate [3] on the control stand.

E. Speed Brake Refused Takeoff (RTO) Switch Installation Test

SUBTASK 27-62-32-700-001

(1) Do this task: Speed Brake RTO Test, TASK 27-62-00-820-807.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SPEED BRAKE REFUSED TAKEOFF (RTO) SWITCH - ADJUSTMENT/TEST

1. General

A. This procedure has this task:

(1) An adjustment of the speed brake refused takeoff (RTO) switch S650.

TASK 27-62-32-820-801

2. Speed Brake Refused Takeoff (RTO) Switch Adjustment

(Figure 501)

A. Location Zones

Zone	Area
211	Flight Compartment - Left

B. Speed Brake Refused Takeoff (RTO) Switch Adjustment

SUBTASK 27-62-32-820-002

(1) Adjust the RTO switch [13]:

(a) Make sure that the thrust levers are at idle and the reverse thrust levers are down and stowed.

(b) Make sure that the speed brake lever is in the DOWN position.

(c) Loosen screw [9] and screw [10].

(d) Turn the RTO switch [13] as far aft as possible.

(e) Make sure that there is no continuity between pin 8 and 9 of the D5148J connector.

SIA 001, 002

(f) Move the left reverse thrust lever aft until there is a 0.0200 in. (0.5080 mm) to 0.0400 in. (1.0160 mm) clearance between the speed brake lever dog [4] and the detent plate assembly lip [5].

SIA 003-999

(g) Move the left reverse thrust lever aft until there is a 0.0100 in. (0.2540 mm) to 0.0300 in. (0.7620 mm) clearance between the speed brake lever dog [4] and the detent plate assembly lip [5].

SIA ALL

(h) Turn the RTO switch [13] until the roller [11] touches the actuator arm [12] and there is continuity between pins 8 and 9 of the D5148J connector.

(i) Tighten the screw [9] and screw [10].

(j) Slowly move the left thrust lever back to the down and stowed position.

1) Make sure that there is no continuity between pins 8 and 9.

(k) Slowly move the left thrust lever aft until there is continuity between pins 8 and 9.

SIA 001, 002

1) Make sure that the clearance between the speed brake lever dog [4] and the detent plate assembly lip [5] is 0.0200 in. (0.5080 mm) to 0.0400 in. (1.0160 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SIA 003-999

2) Make sure that the clearance between the speed brake lever dog [4] and the detent plate assembly lip [5] is 0.0100 in. (0.2540 mm) to 0.0300 in. (0.7620 mm).

SIA ALL

(l) Slowly move the left reverse thrust lever forward until there is no continuity between pins 8 and 9.

1) Make sure that the speed brake lever dog [4] is 0.0100 in. (0.2540 mm) above the detent plate assembly lip [5].

(m) Move the left reverse thrust lever to the down and stowed position.

1) Make sure that there is no continuity between pins 8 and 9.

(n) Slowly move and the right reverse thrust lever aft until there is continuity between pins 8 and 9.

SIA 001, 002

1) Make sure that the speed brake lever dog [4] is 0.0200 in. (0.5080 mm) to 0.0400 in. (1.0160 mm) above the detent plate assembly lip [5].

SIA 003-999

2) Make sure that the speed brake lever dog [4] is 0.0100 in. (0.2540 mm) to 0.0300 in. (0.7620 mm) above the detent plate assembly lip [5].

SIA ALL

(o) Slowly move the right reverse thrust lever forward until there is no continuity between pins 8 and 9.

1) Make sure that the speed brake lever dog [4] is 0.0100 in. (0.2540 mm) above the detent plate assembly lip [5].

(p) Move the right reverse thrust lever to the down and stowed position.

1) Make sure that there is no continuity between pins 8 and 9.

SPEEDBRAKE LEVER TRANSDUCER - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Speedbrake lever transducer removal.

(2) Speedbrake lever transducer installation.

(3) Speedbrake lever transducer adjustment.

TASK 27-62-37-000-801

2. Speedbrake Lever Transducer Removal

(Figure 401)

NOTE: This procedure is a scheduled maintenance task.

E. Access Panels

Number	Name/Location
112A	Forward Access Door

F. Speedbrake Lever Transducer Installation

SUBTASK 27-62-37-420-001

(1) Do these steps to install the speedbrake lever transducer [1]:

(a) Put the speedbrake lever [4] in the DOWN and LOCKED position.

(b) Put a thin film of grease, D00633, on the splines of the speedbrake lever transducer [1].

(c) Align the spline indexes and put the speedbrake lever transducer [1] in position.

(d) Install the bolts [2] and washers [3] that attach the speedbrake lever transducer [1] (TASK 20-50-11-910-801).

(e) Remove the dustcaps from the connectors and receptacles (TASK 20-40-12-000-803).

(f) Connect the P1 connector, P2 connector and P3 connector.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

G. Speedbrake Lever Transducer Installation Test

SUBTASK 27-62-37-860-013

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Remove the safety tags and close these circuit breakers:

Zone	Area
112	Area Forward of Nose Landing Gear Wheel Well
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Access Panels

Number	Name/Location
112A	Forward Access Door

E. Prepare for the Speedbrake Lever Transducer Adjustment

SUBTASK 27-62-37-860-006

(1) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	9	C00440	FLIGHT CONTROL AUTO SPEED BRAKE

SUBTASK 27-62-37-860-007

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) If the downlock pins are not installed on all landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-62-37-010-002

(3) Open this access door:

Number	Name/Location
112A	Forward Access Door

F. Speedbrake Lever Transducer Adjustment

SUBTASK 27-62-37-480-001

(1) Do these steps to retract the actuator assembly:

(a) Place the Speedbrake Lever in the DOWN and LOCKED position.

(b) Make sure that the SPEEDBRAKES EXTENDED light does not come on.

(c) Make sure that the SPEEDBRAKE DO NOT ARM light does not come on.

(d) Move the speedbrake lever to the ARMED position.

NOTE: The ARMED position is approximately 4 degrees aft of the DOWN position.

1) Moving the speedbrake lever without hydraulic power can latch the GROUND SPOILER CONTROL Status Message. Do this task if the Status Message occurs: Existing Faults Check, TASK 46-13-02-700-805.

SUBTASK 27-62-37-480-002

(2) Install the rigging lock, SPL-14768, to hold the speedbrake lever at 4 degrees aft of the DOWN position.

SUBTASK 27-62-37-200-001

(3) Make sure that the roller [10] is centered in the ARMED detent (Figure 402).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-37-820-003

(4) Do these steps to adjust the lower control rod [8] and the three Rotary Variable Displacement Transducer (RVDT) channels:

(a) Use the SEL knob on the Multi Function Panel to make the following selections:

1) MAINT DATA PGS

FLIGHT CONTROL

2) Monitor the RVDT A, B, C readings of the SCE SPDBRK LVR.

3) Adjust the lower control rod [8] so that all three RVDT channels are within 3.8 ± 0.5 degrees:

a) Remove the screws [5], washers [6] and lower cover plate [7] to get access to the lower control rod [8].

b) Loosen the checknut [9] and adjust the length of the lower control rod [8] so that all three RVDT channels are within 3.8 ± 0.5 degrees.

c) Tighten the checknut [9] to 45 in-lb (5 N·m) - 50 in-lb (6 N·m).

4) Make sure that the roller [10] is centered in the ARMED detent.

5) Remove the rigging lock, SPL-14768, from the speedbrake lever [4].

6) Move the speedbrake lever [4] to the Down and locked position.

7) Make sure that the roller [10] is not in the ARMED detent (Figure 402).

8) Make sure that the RVDT-1, RVDT-2 and RVDT-3 channels are within 0.0 ± 1.0 degrees.

9) Install the screws [5], washers [6] and lower cover plate [7].

G. Speedbrake Lever Transducer Adjustment Test

SUBTASK 27-62-37-820-004

(1) Do this task to align the IRU: Air Data Inertial Reference System - Alignment from the ISDU, TASK 34-21-00-820-802 or Air Data Inertial Reference System - Alignment from the FMC CDU, TASK 34-21-00-820-801 or Air Data Inertial Reference System - Automatic Alignment from the IRS MSU, TASK 34-21-00-820-803.

SUBTASK 27-62-37-750-001

(2) Do the Speedbrake Lever Transducer Test (TASK 27-61-45-730-802).

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-37-410-003

(1) If it is open, close this access door:

GROUND SPOILER CONTROL MODULE- REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Ground spoiler control module removal

(2) Ground spoiler control module installation

(3) Ground spoiler control module functional test

B. In this procedure the ground spoiler control valve is referred to as the "valve assy".

TASK 27-62-41-000-801

2. Ground Spoiler Control Module Removal

(Figure 401)

134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

D. Prepare for the Removal

SUBTASK 27-62-41-860-001

(1) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	9	C00440	FLIGHT CONTROL AUTO SPEED BRAKE
B	11	C04040	GROUND SPOILER CONTROL

SUBTASK 27-62-41-860-011

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

SUBTASK 27-62-41-860-003

(3) Remove the pressure from the speed brake hydraulic system A (TASK 29-11-00-860-805).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Make sure that the hydraulic pressure has been removed from the hydraulic pumps and/or portable hydraulic cart.

E. Ground Spoiler Control Module Removal

SUBTASK 27-62-41-020-001

(1) Do these steps to disconnect the hydraulic line [2], hydraulic line [3], hydraulc line [4], and hydraulic line [5] from the ground spoiler control module [1]:

(a) Put a 5 gallon (19 liter) hydraulic fluid resistant container, STD-1110, below the ground spoiler control module [1] to catch the hydraulic fluid.

(b) Disconnect the hydraulic line [2], hydraulic line [3], hydraulc line [4], and hydraulic line [5] from the ground spoiler control module [1].

(c) Install the plugs on the hydraulic line [2], hydraulic line [3], hydraulc line [4], and hydraulic line [5].

(d) Install the caps on the applicable hydraulic ports.

SUBTASK 27-62-41-020-002

(2) Disconnect connector [6], connector [7], connector [8], and connector [9].

SUBTASK 27-62-41-020-003

(3) Remove the bolts [12] and washers [13] that attach the ground spoiler control module [1].

SIA 008-999

SUBTASK 27-62-41-020-008

(4) Remove the bolt [22], washer [23], flat washer [24], bonding jumper [25], and flat washer [26].

SIA ALL

SUBTASK 27-62-41-020-004

(5) Remove the ground spoiler control module [1] from the airplane.

F. Ground Spoiler Control Module Installation

SUBTASK 27-62-41-420-001

(1) Do these step to install the ground spoiler control module [1]:

SIA 001-007

(a) Clean the surface of the mating surfaces of the airplane structure, bolts [12], washers [13], and ground spoiler control module [1] (SWPM 20-20-00, Paragraph 2A).

(b) Use cotton wiper, G00034, moist in solvent, B00184, to final clean the mating surfaces of the airplane structure, bolts [12], washers [13], and ground spoiler control module [1].

(c) Apply sealant, A50110, or sealant, A50155, or sealant, A50231, or sealant, A50296, to the mating surfaces of the bolts [12], washers [13], and ground spoiler control module [1].

(d) Put the ground spoiler control module [1] in its position.

(e) Install the bolts [12] and washers [13].

1) Make sure that there is squeeze out around all the interfaces of each component.

(f) Measure the electrical resistance between the ground spoiler control module [1] and airplane structure (SWPM 20-20-00).

1) Use a non-intrinsically safe bonding meter, COM-614.

2) Make sure that the electrical bonding resistance is 0.0005 ohms (0.5 milliohms) or less.

(g) Manually apply finish with Bonderite M-CR 600 Aero coating, C50315.

1) Apply two coats of primer, C00259.

(h) Make sure that all components are covered by sealant or finishes.

SIA 008-999

(i) Apply primer, C00175, to the mating surfaces of the ground spoiler control module [1] pads.

1) Do not force dry at temperature exceeding 160°F (71°C).

(j) Apply corrosion inhibiting material, G50136, on the mating surfaces of the mounting bracket.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SIA 008-999 (Continued)

(k) Clean the bolt [22], washer [23], flat washer [24], bonding jumper [25], flat washer [26], and ground spoiler control module [1] (SWPM 20-20-00, Paragraph 2A).

(l) Use cotton wiper, G00034, moist in solvent, B00184, to final clean the bolt [22], washer [23], flat washer [24], bonding jumper [25], flat washer [26], and ground spoiler control module [1].

(m) Apply sealant, A50110, or sealant, A50155, or sealant, A50231, or sealant, A50296, to the mating surfaces of the bolt [22], washer [23], flat washer [24], bonding jumper [25], flat washer [26], and ground spoiler control module [1].

(n) Apply a thin coat of corrosion inhibiting material, G50136, to the shank and threads of the bolts [12].

(o) Put the ground spoiler control module [1] in its position.

(p) Install the bolt [22], washer [23], flat washer [24], bonding jumper [25], flat washer [26], bolts [12], and washers [13].

(q) Tighten the bolt [22] to 63 in-lb (7 N·m) - 77 in-lb (9 N·m).

1) Make sure that there is squeeze out around all the interfaces of each component.

(r) Measure the electrical resistance between the ground spoiler control module [1] and airplane structure (SWPM 20-20-00).

1) Use a non-intrinsically safe bonding meter, COM-614.

2) Make sure that the electrical bonding resistance is 0.001 ohm (1 milliohm) or less.

(s) Manually apply finish with coating, C00064.

SIA ALL

(t) Remove the caps from the ports in the ground spoiler control module [1].

(u) Remove the plugs from the hydraulic line [2], hydraulic line [3], hydraulc line [4], and hydraulic line [5].

(v) Install the hydraulic line [2], hydraulic line [3], hydraulc line [4], and hydraulic line [5] to the ground spoiler control module [1].

1) Put the bundle/wire to get 0.5 in. (12.7 mm) minimum separation between wire and hydraulic tubing.

NOTE: The 0.5 in. (12.7 mm) minimum separation will prevent wear and fraying between the wire/bundle and hydraulic tubing.

(w) Tighten the B-nuts on hydraulic line [2], hydraulic line [3], hydraulc line [4], and hydraulic line [5] to 270 ±14 in-lb (31 ±2 N·m).

(x) Connect the connector [6], connector [7], connector [8], and connector [9] to the ground spoiler control module [1].

G. Ground Spoiler Control Module Installation Test

SUBTASK 27-62-41-720-002

(1) Do this task: Ground Spoiler Control Module Functional Test, TASK 27-62-41-720-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-41-860-004

(1) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	9	C00440	FLIGHT CONTROL AUTO SPEED BRAKE
B	11	C04040	GROUND SPOILER CONTROL

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT SPOILERS. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU OPEN/CLOSE THESE CIRCUIT BREAKERS. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-5

Row	Col	Number	Name
C	10	C04032	SPOILER CONTROL ELEC PWR A
C	12	C04033	SPOILER CONTROL ELEC PWR B

SUBTASK 27-62-41-860-005

(3) Put the speed brake system A back to the condition before the pressure removal (TASK 27-62-00-840-802).

END OF TASK

TASK 27-62-41-720-801

4. Ground Spoiler Control Module Functional Test

(Figure 401)

134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50

C. Ground Spoiler Control Module Functional Test

SUBTASK 27-62-41-860-008

(1) Pressurize speed brake hydraulic system A (TASK 29-11-00-860-801).

SUBTASK 27-62-41-210-001

(2) Examine the hydraulic connections on the ground spoiler control module [1] for leakage.

SUBTASK 27-62-41-860-009

(3) Remove the pressure from the speed brake hydraulic system A (TASK 29-11-00-860-805).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-41-730-001

(4) Do these steps for the ground spoiler test (Onboard Maintenance Function Ground Test, TASK 46-13-02-710-801):

(a) Put the GND TEST switch on the P61-4 panel to ENABLE.

(b) Push the SYS button in the MFD section of the Multi Function Panel.

(c) Use the SELECTOR on the Multi Function Panel to make these selections:

- MAINT
- ONBD MAINT
- LINE MAINT
- GROUND TESTS
- 27 - Spoiler Control
- System Test
- Ground Spoilers
- CONTINUE
- CONTINUE
- START TEST
- CONTINUE

(d) Follow the on-screen instructions and then select the CONTINUE button.

(e) Follow the second set of on-screen instructions and then select the CONTINUE button to complete the test.

SUBTASK 27-62-41-210-002

(5) Examine the hydraulic connections on the ground spoiler control module [1] for leakage.

SUBTASK 27-62-41-610-001

(6) Make sure that the hydraulic reservoirs are full (Hydraulic Reservoir Servicing, TASK 12-12-00-610-801).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

INBOARD GROUND SPOILER ACTUATOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Inboard ground spoiler actuator removal

(2) Inboard ground spoiler actuator installation

(3) Inboard ground spoiler actuator functional test.

B. In this procedure, the inboard ground spoiler actuator is referred to as the "actuator".

C. This procedure is applicable to the left and right inboard ground spoiler actuators.

TASK 27-62-71-000-801

2. Inboard Ground Spoiler Actuator Removal

(Figure 401)

A. General

(1) This task has the steps to remove the inboard ground spoiler actuator.

B. References

Reference	Title

C. Tools/Equipment

Reference	Description
STD-1110	Container - Hydraulic Fluid Resistant, 5 Gallon (19 Liter)

D. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
552	Left Wing - Spoiler No. 6
652	Right Wing - Spoiler No. 7

E. Prepare for the Removal

SUBTASK 27-62-71-860-002

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-71-860-003

(2) Put the SPOILER A and B switches in the OFF position to remove the hydraulic power from the flight spoilers.

NOTE: SPOILER A and B switches are on the flight control panel (P5-3).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-71-860-004

(3) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

SUBTASK 27-62-71-860-005

(4) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

F. Inboard Ground Spoiler Actuator Removal

SUBTASK 27-62-71-020-001

(1) Do these steps to disconnect the hydraulic lines [10] from the actuator [17]:

(a) Put a 5 gallon (19 liter) hydraulic fluid resistant container, STD-1110 below the actuator [17] to catch the hydraulic fluid.

(b) Disconnect the hydraulic lines [10] from the actuator [17].

(c) Install the plugs in the hydraulic lines [10].

SUBTASK 27-62-71-020-002

(2) Remove the pin [7], nut [6], washer [3], bushing [4], washer [5] and bolt [2] that attach the actuator [17] to the inboard ground spoiler [1].

SUBTASK 27-62-71-020-003

(3) Remove the pin [16], nut [15], washer [14], bushing [13], washer [12] and bolt [11] that attaches the actuator [17] to the structure.

SUBTASK 27-62-71-480-001

(4) Install caps in the hydraulic ports of the actuator [17].

END OF TASK

552	Left Wing - Spoiler No. 6
652	Right Wing - Spoiler No. 7

F. Inboard Ground Spoiler Actuator Installation

SUBTASK 27-62-71-420-001

(1) Install the actuator [17]:

(a) Remove the caps from the hydraulic ports of the actuator [17].

(b) Put the actuator [17] in its position and make sure that the hydraulic lines [10] align with the fittings.

(c) Connect the actuator [17] rod end to the inboard ground spoiler [1]:

1) Apply grease, D00633 to the bolt [2].

2) Install bolt [2] with the head outboard, washer [3], bushing [4], washer [5], nut [6] and pin [7].

3) Tighten nut to 450 in-lb (51 N·m) to 690 in-lb (78 N·m).

(d) Connect the actuator [17] to the structure:

1) Apply grease, D00633 to the bolt [11].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Install bolt [11] with the head outboard, washer [12], bushing [13], washer [14], nut [15] and pin [16].

3) Tighten nut to 450 in-lb (51 N·m) to 690 in-lb (78 N·m).

SUBTASK 27-62-71-420-002

(2) Connect the hydraulic lines [10] to the actuator [17]:

(a) Remove the plugs from the hydraulic lines [10].

(b) Connect the hydraulic lines [10] to the actuator [17].

(c) Tighten the B-nuts on the hydraulic lines [10] to 140 ±7 in-lb (16 ±1 N·m).

SUBTASK 27-62-71-860-006

(3) Do this task: Pressurization of the Speed Brake Hydraulic Systems A and B to its Usual Condition, TASK 27-62-00-840-802.

SUBTASK 27-62-71-860-007

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-71-870-001

(5) Move the speed brake control lever through its full cycle to bleed the spoiler actuators.

SUBTASK 27-62-71-700-001

(6) Make sure there are no leaks at the hydraulic lines.

SUBTASK 27-62-71-860-008

(7) Do the adjustment of the inboard ground spoiler actuator: Ground Spoiler Adjustment, TASK 27-62-00-820-802.

G. Inboard Ground Spoiler Actuator Installation Test

SUBTASK 27-62-71-820-001

(1) Do this task: Inboard Ground Spoiler Actuator Functional Test, TASK 27-62-71-700-801.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-71-860-009

(1) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-62-71-860-010

(2) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

SUBTASK 27-62-71-860-011

(3) Put the SPOILER A and B switches in the ON position.

SUBTASK 27-62-71-610-001

(4) Fill the hydraulic reservoirs if it is necessary. To fill, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-62-71-700-801

4. Inboard Ground Spoiler Actuator Functional Test

A. General

(1) This task has the steps to do a functional test of the inboard ground spoiler actuator.

B. References

Reference	Title

552	Left Wing - Spoiler No. 6
652	Right Wing - Spoiler No. 7

E. Prepare for the Test

SUBTASK 27-62-71-860-013

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-71-480-002

(2) Install the protractor, COM-1691, on the outboard edge of the inboard ground spoilers 6 and 7.

SUBTASK 27-62-71-820-002

(3) Adjust the protractor, COM-1691, to zero.

F. Inboard Ground Spoiler Actuator Functional Test

SUBTASK 27-62-71-020-004

(1) Move the speed brake lever to the UP position to lift the spoilers.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-71-020-005

(2) Make sure the spoilers No. 6 and 7 are 60 +/-2 degrees up from the retracted position.

SUBTASK 27-62-71-020-006

(3) Make sure the ground spoilers No. 6 and 7 align in the limit of 2 degrees.

SUBTASK 27-62-71-020-007

(4) Move the speed brake lever to the DOWN position to lower the spoilers.

SUBTASK 27-62-71-820-003

(5) Make sure the spoilers move to the fully retracted position.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-71-860-014

(1) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

SUBTASK 27-62-71-080-001

(2) Remove the protractor, COM-1691, from the spoilers No. 6 and 7.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD GROUND SPOILER - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the outboard ground spoilers

(2) An installation of the outboard ground spoilers

(3) A functional test of the outboard ground spoilers.

B. This procedure is applicable to the left and right outboard ground spoilers.

TASK 27-62-91-000-801

2. Outboard Ground Spoiler Removal

(Figure 401)

A. References

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
566	Left Wing - Spoiler No. 1
666	Right Wing - Spoiler No. 12

D. Prepare for the Removal

SUBTASK 27-62-91-860-002

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-91-860-003

(2) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-91-860-004

(3) Put the SPOILER A and SPOILER B switches to the OFF position to remove the hydraulic power from the flight spoilers.

NOTE: SPOILER A AND SPOILER B switches are on the P5-3 flight control panel.

SUBTASK 27-62-91-860-005

(4) Put the speed brake lever in the UP position to lift the ground spoilers.

SUBTASK 27-62-91-480-001

(5) Install the set, SPL-1743, for the applicable ground spoiler.

SUBTASK 27-62-91-860-006

(6) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

E. Outboard Ground Spoiler Removal

SUBTASK 27-62-91-020-001

(1) Disconnect the rod end of the spoiler actuator assembly [33] from the outboard ground spoiler [1] (TASK 27-62-94-000-801).

SUBTASK 27-62-91-020-002

(2) Remove the nut [2] and washer [3] to disconnect the bonding jumper [10] from the structure.

SUBTASK 27-62-91-020-003

(3) Remove the nut [30], washers [29], and bonding jumper [31] to disconnect the bonding jumper [32] from the structure.

(a) Discard the nut [30] and washers [29].

SUBTASK 27-62-91-020-009

(4) If it is necessary, loosen the skin panel fasteners above the center hinge bolt [11] and bolt [17].

SUBTASK 27-62-91-020-004

(5) Remove the outboard ground spoiler [1]:

(a) Remove the cotter pin [9], nut [8], washer [7], bushing [6], washer [5], and bolt [4] to disconnect the outboard hinge fitting.

(b) Remove the cotter pin [28], nut [27], washer [26], bushing [25], washer [24], and bolt [23] to disconnect the inboard hinge fitting.

(c) Remove the cotter pin [16], nut [15], washer [14], bushing [13], washer [12], and bolt [11] to disconnect the center outboard hinge fitting.

(d) Remove the cotter pin [22], nut [21], washer [20], bushings [19], washer [18], and bolt [17] to disconnect the center inboard hinge fitting.

(e) Remove the outboard ground spoiler [1] from the airplane.

666	Right Wing - Spoiler No. 12

F. Outboard Ground Spoiler Installation

SUBTASK 27-62-91-420-001

(1) Install the outboard ground spoiler [1]:

(a) If it is necessary, use this task during installation: Lockwire, Cotter Pins, and Lockrings - Installation, TASK 20-10-44-400-801.

(b) Put the outboard ground spoiler [1] in its position on the airplane.

(c) Install the bolt [17] with the head inboard, washer [18], bushings [19], washer [20], nut [21], and cotter pin [22] in the center inboard hinge fitting.

(d) Install the bolt [11] with the head outboard, washer [12], bushing [13], washer [14], nut [15], and cotter pin [16] in the center outboard hinge fitting.

(e) Install the bolt [23] with the head inboard, washer [24], bushing [25], washer [26], nut [27], and cotter pin [28] in the inboard hinge.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Install the bolt [4] with the head outboard, washer [5], bushing [6], washer [7], nut [8], and cotter pin [9] in the outboard hinge fitting.

(g) Install the washer [3] and nut [2] to connect the bonding jumper [10] to the structure.

1) Use cotton wiper, G00034, moist in solvent, B00184, to clean the mating surfaces of the airplane structure, nut [2], washer [3], and bonding jumper [10].

2) Method 1 (preferred). Apply sealant, A50110, sealant, A50155, sealant, A50231, or sealant, A50296, to the mating surfaces of the ground stud, nut [2], washer [3], and bonding jumper [10] (SWPM 20-20-10 Paragraph 4.D).

3) Install the bonding jumper [10], washer [3], and nut [2].

4) Tighten the nut [2] to 28 in-lb (3 N·m) - 35 in-lb (4 N·m).

a) Method 1. Make sure that there is squeeze out around all the interfaces of each component.

5) Measure the electrical resistance between the bonding jumper [10] and airplane structure (SWPM 20-20-00).

a) Use a non-intrinsically safe bonding meter, COM-614.

b) Make sure that the electrical bonding resistance is 0.001 ohm (1.0 milliohm) or less.

6) Method 2 (optional). Apply a fillet seal with sealant, A50337, sealant, A50231, or sealant, A50359, to cover the nut [2], washer [3], and bonding jumper [10] (SWPM 20-20-10 Paragraph 4.C).

(h) Install the new washers [29] and new nut [30] to connect the bonding jumper [31] and bonding jumper [32] to the structure.

1) Use cotton wiper, G00034, moist in solvent, B00184, to final clean the mating surfaces of the airplane structure, nut [30], washers [29], bonding jumper [31], and bonding jumper [32].

2) Install the nut [30], washers [29], bonding jumper [31], and bonding jumper [32].

3) Tighten the nut [30] to 28 in-lb (3 N·m) - 35 in-lb (4 N·m).

4) Measure the electrical resistance between the bonding jumper [32] and airplane structure (SWPM 20-20-00).

a) Use a non-intrinsically safe bonding meter, COM-614.

b) Make sure that the electrical bonding resistance is 0.001 ohm (1.0 milliohm) or less.

5) Apply a fillet seal with sealant, A50337, sealant, A50231, or sealant, A50359, to cover the nut [30], washers [29], bonding jumper [31], and bonding jumper [32] (SWPM 20-20-10 Paragraph 4.E).

6) Apply finish with primer, C00175, and coating, C50075.

SUBTASK 27-62-91-420-003

(2) If it is necessary, tighten the skin panel fasteners above the center hinge bolt [11] and bolt [17].

(a) Rotate the bolt [11] and bolt [17] to check the clearances between the cotter pin [16], cotter pin [22], and skin panel fasteners.

(b) If the cotter pin [16] and cotter pin [22] contact skin panel fasteners, flatten the head of the cotter pin [16] and cotter pin [22] as required to achieve the clearances.

NOTE: Visible defects in the cotter pins are acceptable.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-91-980-001

(3) Move the outboard ground spoiler [1] through its full travel.

(a) Make sure that the outboard ground spoiler [1] moves freely.

SUBTASK 27-62-91-420-002

(4) Connect the rod end for the spoiler actuator assembly [33] to the outboard ground spoiler [1] (TASK 27-62-94-400-801).

SUBTASK 27-62-91-860-007

(5) Make sure that hydraulic power is off.

SUBTASK 27-62-91-080-001

(6) Remove the set, SPL-1743.

(a) Inspect the lockwire and locking key for damage after the spoiler tool is removed.

SUBTASK 27-62-91-720-002

(7) Unlatch the SPOILER ACTUATOR status message, do this task: Ground Spoiler Control Module Functional Test, TASK 27-62-41-720-801.

NOTE: The SPOILER ACTUATOR status message can be latched when the spoilers are locked in the up position.

SUBTASK 27-62-91-860-008

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(8) Do this task: Pressurization of the Speed Brake Hydraulic Systems A and B to its Usual Condition, TASK 27-62-00-840-802.

SUBTASK 27-62-91-860-014

(9) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-91-860-009

(10) Move the speed brake lever to the DOWN position to lower the spoilers.

SUBTASK 27-62-91-860-013

(11) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-62-91-860-010

(12) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

SUBTASK 27-62-91-820-001

(13) Do this task: Ground Spoiler Adjustment, TASK 27-62-00-820-802.

SUBTASK 27-62-91-720-001

(14) Do this task: Outboard Ground Spoiler Test, TASK 27-62-91-000-802.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-62-91-000-802

4. Outboard Ground Spoiler Test

COM-1691	Protractor - Digital, Vertical or Horizontal Part #: 21465A82 Supplier: 3A054 Part #: 31-038-3 (Model Pro 360) Supplier: 1X822 Part #: 31-040-9 (Model Pro 3600) Supplier: 1X822 Part #: 950-317 (Model Pro 360) Supplier: 01EP7 Part #: 950-318 (Model Pro 3600) Supplier: 01EP7 Part #: KS5549 Supplier: 75245 Part #: KS6005 Supplier: 75245

C. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
566	Left Wing - Spoiler No. 1
666	Right Wing - Spoiler No. 12

D. Prepare for the Test

SUBTASK 27-62-91-860-012

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDERS, ELEVATORS, FLAPS, SLATS, SPOILERS, LANDING GEAR, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-91-480-002

(2) Install the protractor, COM-1691 on the outboard ground spoilers 1 and 12.

SUBTASK 27-62-91-820-002

(3) Adjust the protractor, COM-1691 to 0°arc (0 rad).

E. Outboard Ground Spoiler Functional Test

SUBTASK 27-62-91-020-005

(1) Move the speed brake lever to the UP position to lift the spoilers.

SUBTASK 27-62-91-020-006

(2) Make sure the spoilers No. 1 and 12 are 60 ±2°arc (1 ±0 rad) up from the retracted position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-91-020-007

(3) Make sure the ground spoilers No. 1 and 12 align in the limit of 2°arc (0 rad).

SUBTASK 27-62-91-020-008

(4) Move the speed brake lever to the DOWN position to lower the spoilers.

SUBTASK 27-62-91-820-003

(5) Make sure the spoilers move to the fully retracted position.

SUBTASK 27-62-91-410-001

(6) Put the Airplane Back to Its Usual Condition

(a) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

(b) Remove the protractor, COM-1691 from the spoilers No. 1 and 12.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD GROUND SPOILER ACTUATOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the outboard ground spoiler actuator.

(2) An installation of the outboard ground spoiler actuator.

B. In this procedure the outboard ground spoiler actuator is referred to as the "actuator".

TASK 27-62-94-000-801

2. Outboard Ground Spoiler Actuator Removal

(Figure 401)

A. References

Reference	Title
27-51-00-860-803	Extend the Trailing Edge Flaps (P/B 201)
27-62-00-800-801	Apply Pressure to the Speed Brake Hydraulic Systems A and B (P/B 201)
27-62-00-800-802	Depressurization of the Speed Brake Hydraulic Systems A and B (P/B 201)

B. Tools/Equipment

Reference	Description
STD-1110	Container - Hydraulic Fluid Resistant, 5 Gallon (19 Liter)

C. Location Zones

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
566	Left Wing - Spoiler No. 1
666	Right Wing - Spoiler No. 12

D. Prepare for the Removal

SUBTASK 27-62-94-860-002

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF ALL CONTROL SURFACES BEFORE YOU SUPPLY HYDRAULIC POWER. AILERONS, RUDDER, ELEVATORS, FLAPS, SPOILERS, SLATS, AND THRUST REVERSERS CAN MOVE QUICKLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-94-860-003

(2) Put the SPOILER A and B switches to the OFF position to remove the hydraulic power from the flight spoilers.

NOTE: SPOILER A and B switches are on the flight control panel (P5-3).

SUBTASK 27-62-94-860-004

(3) Put the speed brake lever in the UP position to lift the spoilers.

SUBTASK 27-62-94-860-005

(4) Do this task: Extend the Trailing Edge Flaps, TASK 27-51-00-860-803.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-94-860-006

(5) Do this task: Depressurization of the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-802.

E. Actuator Removal

SUBTASK 27-62-94-020-001

(1) Disconnect the piston rod end of the actuator [10] from the outboard ground spoiler [1]:

(a) Remove the pin [8], nut [7], washer [6], bushing [5], bushing [4], washer [19], washer [3] and the bolt [2] from the piston rod end.

SUBTASK 27-62-94-020-002

(2) Disconnect the hydraulic lines [9] from the actuator [10].

(a) Put a 5 gallon (19 liter) hydraulic fluid resistant container, STD-1110 below the actuator [10] to catch the hydraulic fluid.

(b) Disconnect the hydraulic lines [9] from the actuator [10].

(c) Turn the hydraulic lines [9] at the swivel joints to access the actuator [10].

(d) Install the plugs in the hydraulic lines [9].

SUBTASK 27-62-94-020-003

(3) Remove the bolts [13], washers [14], pillow blocks [11], and split ball bearings [12] from the structure.

SUBTASK 27-62-94-020-004

(4) Remove the actuator [10] from the airplane.

SUBTASK 27-62-94-860-001

(5) Remove the restrictor [18], packing [17], union [15] and packing [16] from the hydraulic ports of the actuator [10].

SUBTASK 27-62-94-480-001

(6) Install caps in the hydraulic ports of the actuator [10].

END OF TASK

Zone	Area
210	Subzone - Control Compartment - Body Station 178.00 to Body Station 259.50
566	Left Wing - Spoiler No. 1
666	Right Wing - Spoiler No. 12

E. Actuator Installation

SUBTASK 27-62-94-420-001

(1) Remove the caps from the hydraulic ports.

SUBTASK 27-62-94-640-001

(2) Apply MCS 352B fluid, D00054 or hydraulic fluid, D00153 to the packing [16], packing [17], union [15] and restrictor [18].

SUBTASK 27-62-94-420-004

(3) Install the packing [16], packing [17], union [15], and restrictor [18] in the hydraulic ports at the actuator [10].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-94-420-002

(4) Install the actuator [10]:

NOTE: Make sure that the actuator is installed with the actuator ports connected to the hydraulic lines that face towards the spoiler panel.

(a) Put the actuator [10] in its position and make sure the hydraulic lines [9] align with the fittings.

(b) Install pillow blocks [11] on the actuator [10]:

1) Apply grease, D00633 to the split ball bearings [12].

2) Assemble the split ball bearings [12].

3) Install split ball bearings [12] in pillow blocks [11].

4) Make sure the split ball bearings [12] move freely.

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

5) Apply Cor-Ban 27L Compound, G50237 to the bolts [13].

6) Install the bolts [13] and washers [14].

7) Tighten the bolts [13] to 141 in-lb (15.9 N·m) - 172 in-lb (19.4 N·m).

(c) Connect the piston rod to the ground outboard ground spoiler [1]:

1) Apply grease, D00633 to all surfaces of the bolt [2], bushing [4] and bushing [5].

2) Install the bolt [2], washer [3], washer [19], bushing [4], bushing [5], washer [6], nut [7], and pin [8] in the piston rod.

3) Tighten the nut [7] to 660 in-lb (74.6 N·m) - 780 in-lb (88.1 N·m).

SUBTASK 27-62-94-420-003

(5) Connect the hydraulic lines [9] to the actuator [10]:

(a) Remove the plugs from the hydraulic lines [9].

(b) Apply hydraulic fluid, D00153 or MCS 352B fluid, D00054 to the hydraulic fittings.

(c) Connect the hydraulic lines [9] to the union [15] and restrictor [18] on the actuator [10].

(d) Tighten the B-nuts on the hydraulic lines [9] to 140 ±7 in-lb (16 ±1 N·m).

SUBTASK 27-62-94-860-007

(6) Do this task: Pressurization of the Speed Brake Hydraulic Systems A and B to its Usual Condition, TASK 27-62-00-840-802.

SUBTASK 27-62-94-860-008

(7) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-94-870-001

(8) Move the speed brake control lever to bleed the spoiler actuators.

SUBTASK 27-62-94-700-001

(9) Make sure there is no leakage of hydraulic fluid at the actuator [10].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-62-94-820-001

(10) Do this task: Ground Spoiler Adjustment, TASK 27-62-00-820-802.

SUBTASK 27-62-94-820-002

(11) Do this task: Outboard Ground Spoiler Test, TASK 27-62-91-000-802.

F. Put the Airplane Back to Its Usual Condition.

SUBTASK 27-62-94-860-009

(1) Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-62-94-860-010

(2) Move the speed brake lever to the DOWN position to the lower the spoilers.

SUBTASK 27-62-94-860-011

(3) Do this task: Shut Down the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-840-801.

SUBTASK 27-62-94-860-012

(4) Put the SPOILER A and B switches in the ON position.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD GROUND SPOILER ACTUATOR - ADJUSTMENT/TEST

1. General

D. Prepare for the Test

SUBTASK 27-62-94-860-014

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Do this task: Apply Pressure to the Speed Brake Hydraulic Systems A and B, TASK 27-62-00-800-801.

SUBTASK 27-62-94-480-002

(2) Install the protractor, COM-1691 on the outboard ground spoilers 1 and 12.

SUBTASK 27-62-94-820-003

(3) Adjust the protractor, COM-1691 to zero.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Outboard Ground Spoiler Actuator Functional Test

SUBTASK 27-62-94-020-005

(1) Move the speed brake lever to the UP position to lift the spoilers.

SUBTASK 27-62-94-020-006

(2) Make sure the spoilers No. 1 and 12 are 60 +/-2 degrees up from the retracted position.

SUBTASK 27-62-94-020-007

(3) Make sure the ground spoilers No. 1 and 12 align in the limit of 2 degrees.

SUBTASK 27-62-94-020-008

(4) Move the speed brake lever to the DOWN position to lower the spoilers.

SUBTASK 27-62-94-820-004

(5) Make sure the spoilers move to the fully retracted position.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-62-94-410-001

(1) Do this task: Shut Down the Spoiler Hydraulic Systems A and B, TASK 27-61-00-840-801.

(2) Remove the protractor, COM-1691 from the spoilers No. 1 and 12.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

OUTBOARD GROUND SPOILER ACTUATOR - INSPECTION/CHECK

1. General

A. This task supplies the data for a dimensional inspection of the outboard ground spoiler actuator.

B. This task does not remove or install the outboard ground spoiler actuator, refer to the Outboard Ground Spoiler Actuator - Removal/Installation for procedures to remove and install the outboard ground spoiler actuator.

TASK 27-62-94-200-801

2. Outboard Ground Spoiler Actuator Inspection

(Figure 601)

A. General

(1) This procedure gives wear limits and repair data for the outboard ground spoiler actuator.

B. References

Reference	Title
27-62-94-000-801	Outboard Ground Spoiler Actuator Removal (P/B 401)
27-62-94-400-801	Outboard Ground Spoiler Actuator Installation (P/B 401)

C. Tools/Equipment

Reference	Description
STD-1096	Micrometer - Depth, 0-1 inch, Readable to 1/1000 inch
STD-1097	Caliper - Vernier, 0-6 inch, Readable to 1/1000 inch

D. Location Zones

Zone	Area
566	Left Wing - Spoiler No. 1
666	Right Wing - Spoiler No. 12

E. Procedure

SUBTASK 27-62-94-020-009

(1) Remove the outboard ground spoiler actuator. To remove it, do this task: Outboard Ground Spoiler Actuator Removal, TASK 27-62-94-000-801.

SUBTASK 27-62-94-020-010

(2) Use these tools to check for wear on the parts of the outboard ground spoiler actuator:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097

SUBTASK 27-62-94-020-011

(3) Examine the parts of the outboard ground spoiler actuator for worn areas:

(a) Remove the parts to be checked.

(b) Measure the bolts, bearing, and bushings as necessary with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions that follow.

(d) If the parts are not in the tolerance, replace the part as required.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 601/27-62-94-993-801 WEAR LIMITS TABLE

NAME OF THE PARTS THAT ARE IN CONTACT	DIM.	DIAMETER DESIGN LIMITS		WEAR LIMITS	
		MINIMUM inches/mm	MAXIMUM inches/mm	PERMITTED MAXIMUM I.D./ MINIMUM O.D. OF WORN PART	MAXIMUM SERVICE DIAMETRIC CLEARANCE
#1 BUSHING	I.D.	0.7500 in 19.05 mm	0.7515 in 19.09 mm	0.7535 in 19.14 mm	0.0050 in 0.13 mm
#1 BUSHING	O.D.	0.7485 in 19.01 mm	0.7490 in 19.02 mm	0.7470 in 18.97 mm	
#2 BUSHING	I.D.	0.6245 in 15.86 mm	0.6250 in 15.88 mm	0.6255 in 15.89 mm	0.0025 in 0.06 mm
#2 BOLT	O.D.	0.6230 in 15.82 mm	0.6240 in 15.85 mm	0.6226 in 15.81 mm	
#3 BEARING	I.D.	0.6245 in 15.86 mm	0.6250 in 15.88 mm	0.6255 in 15.89 mm	0.0025 in 0.06 mm
#3 BOLT	O.D.	0.6230 in 15.82 mm	0.6240 in 15.85 mm	0.6226 in 15.81 mm	

SUBTASK 27-62-94-020-012

(4) Install the outboard ground spoiler actuator. To install it, do this task: Outboard Ground Spoiler Actuator Installation, TASK 27-62-94-400-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE FLAP AND SLAT CONTROL SYSTEM - MAINTENANCE PRACTICES

1. General

A. This procedure contains these tasks for the leading edge (LE) flap and slat control system:

(1) A task to deactivate the leading edge flaps and slats

(2) A task to reactivate the leading edge flaps and slats

(3) A task to operate the leading edge flaps and slats with primary control

(4) A task to operate the leading edge flaps and slats with alternate control

(5) A task to extend the leading edge flaps and slats

(6) A task to retract the leading edge flaps and slats

(7) A task to install the leading edge flap and slat locks

(8) A task to remove the leading edge flap and slat locks

TASK 27-81-00-040-801

2. Leading Edge Flaps and Slats - Deactivation

(Figure 201, Figure 202, Figure 203)

A. General

WARNING	MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION	MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(1) Before you do maintenance on the leading edge flaps and slats, you must deactivate the leading edge control surfaces. This is to prevent injury to persons and damage to equipment because of accidental operation of the leading edge control surfaces.

192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Prepare for the Deactivation

SUBTASK 27-81-00-480-001

WARNING MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed in the nose and main landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801

SUBTASK 27-81-00-860-001

(2) Make sure the trailing edge flaps and the leading edge flaps and slats are in the retracted position. If they are not in the retracted position, do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-81-00-860-002

(3) If hydraulic systems A and B are pressurized, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-00-860-003

(4) If the standby hydraulic system is pressurized, do this task: Standby Hydraulic System Power Removal, TASK 29-21-00-000-802.

(5) Make sure the PSEU (Proximity Sensor Electronic Unit) is in GROUND MODE (Return the Airplane to the Ground Mode, TASK 32-09-00-860-802).

G. Deactivate the Leading Edge Flaps and Slats in the Retract (UP) Position

SUBTASK 27-81-00-860-004

(1) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

SUBTASK 27-81-00-860-005

(2) Make sure the ALTERNATE FLAPS ARM switch is in the OFF position.

SUBTASK 27-81-00-210-001

(3) Attach a DO-NOT-OPERATE tag on the flap control lever and the ALTERNATE FLAPS switches.

SUBTASK 27-81-00-860-006

(4) Move the manual override lever (handle) on the LE cruise depressurization valve to the OFF position (Figure 201):

(a) If the valve has a tab, then cut the tab from the valve (SB 27-1242). This will prevent possible personnel injury.

(b) Remove the lockwire from the manual override lever on the LE cruise depressurization valve.

(c) Move the manual override lever on the LE cruise depressurization valve to the OFF position.

NOTE: Do not force movement of the lever with tools.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) If you cannot move the manual override lever, use the FSEU to operate the LE cruise depressurization valve:

NOTE: Two persons will be necessary when the FSEU is used to operate the LE cruise depressurization valve.

a) To get access to the main equipment center, do this step:

Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

b) Do this task: Supply Electrical Power, TASK 24-22-00-860-801.

c) Make sure that this circuit breaker is closed:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

d) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?

e) Push the NO button until OTHER FUNCTNS? shows on the display.

f) Push the YES button to select OTHER FUNCTNS? on the FSEU.

g) Push the YES button to select SET OUTPUTS? from the OTHER FUNCTNS? menu.

h) Push the YES button to select LE DEPR VALVE? from the SET OUTPUTS? menu.

WARNING MAKE SURE THAT YOU MOVE THE MANUAL OVERRIDE HANDLE TO THE OFF POSITION AND INSTALL THE RIG PIN IN LESS THAN 75 SECONDS. THE FSEU WILL AUTOMATICALLY CHANGE THE POSITION OF THE VALVE AND THE OVERRIDE HANDLE AFTER 75 SECONDS. THE MANUAL OVERRIDE HANDLE CAN MOVE SUDDENLY AND CAUSE INJURY TO PERSONS.

i) Push the YES button at the SET ON? display.

NOTE: This will drive the valve to the closed position.

j) Move the manual override lever (handle) on the LE cruise depressurization valve to the OFF position.

NOTE: Do not force movement of the lever with tools.

k) If you still cannot move the manual override lever (handle) on the LE cruise depressurization valve, then do these steps :

<1> Move the flaps and slats to the fully retracted position, if necessary.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

<2> Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

<3> Move the flap control lever to the UP position to retract the flaps and slats (if not retracted).

<4> Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

<5> Use the FSEU to operate the valve again.

(d) Install the lockout pin, SPL-1746 in the manual override lever (handle) of the cruise depressurization valve to keep the handle in the OFF position.

(e) Attach a DO-NOT-REMOVE tag on the rig pin or lockout pin, SPL-1746.

SUBTASK 27-81-00-480-002

(5) Install the lock, SPL-1675 on the standby hydraulic module to prevent LE devices extension by the standby hydraulic system. Do the steps that follow:

(a) Disconnect the electrical connector from the leading edge standby drive shutoff valve.

(b) After you disconnect the electrical connector(s), examine the connector(s) for corrosion (TASK 20-60-07-910-802).

NOTE: The inspection of the electrical connector (s) can be done after the removal step or before the installation step of the electrical connector (s). This is an operator option.

(c) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

WARNING MAKE SURE THAT THE MANUAL OVERRIDE LEVER IS IN POSITION 1 TO PREVENT THE MOVEMENT OF THE LEADING EDGE SLATS. IF THE LEADING EDGE SLATS MOVE, DAMAGE TO AN OPEN THRUST REVERSER AND INJURIES TO PERSONNEL CAN OCCUR.

(d) Make sure the manual override lever (handle) at the leading edge standby drive shutoff valve is in the Position 1 (standby hydraulic power OFF).

NOTE: If the manual override lever at the leading edge standby drive shutoff valve is in position 2 and the standby hydraulic system is then pressurized, the leading edge slats will move to the full extend position. If the leading edge slats move damage to an open thrust reverser and injuries to personnel can occur.

WARNING MAKE SURE TO INSTALL THE GROUND LOCK ON THE STANDBY HYDRAULIC MODULE TO PREVENT ACCIDENTAL STANDBY SYSTEM OPERATION OF THE LEADING EDGE FLAPS AND SLATS. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(e) Install the lock, SPL-1675 on the standby hydraulic module.

(f) Install the lockpin.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Deactivate the Leading Edge Flaps and Slats in the Extend (Intermediate) Position

SUBTASK 27-81-00-860-007

(1) If the Leading Edge Flaps and Slats are not in the extend (intermediate) position, do any of these tasks to extend the leading edge devices, as needed: Per the Table 201 of the Leading Edge Flap and Slat System Operation With Primary Control, TASK 27-81-00-860-801, or the Leading Edge Flap and Slat System Operation With Alternate Control, TASK 27-81-00-860-802, or the Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

SUBTASK 27-81-00-860-008

(2) Remove hydraulic system power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-00-210-002

(3) Attach a DO-NOT-OPERATE tag on the flap control lever and the ALTERNATE FLAPS switches.

SUBTASK 27-81-00-080-001

WARNING MAKE SURE TO INSTALL THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS AND SLATS. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Install the lockout set, lockout set, SPL-1734 on the extended actuators of the leading edge flaps and slats.

SUBTASK 27-81-00-080-002

(5) Remove the lockwire from the manual override lever (handle) on the LE cruise depressurization valve (located in the main landing gear wheel well).

SUBTASK 27-81-00-860-009

(6) Move the manual override lever (handle) on the LE cruise depressurization valve to the OFF position.

NOTE: Do not force movement of the lever with tools. The lever should move with very little force. If the lever is tight, you may need hydraulic pressure and the FSEU (Flaps and Slats Electronic Unit) to relieve the pressure on the LE cruise depressurization valve.

SUBTASK 27-81-00-480-004

(7) Install the lockout pin, SPL-1746 in the manual override lever (handle) of the LE cruise depressurization valve to keep the lever in the OFF position.

(a) If the tool can not be easily installed then it is necessary to supply system B hydraulic power and then use the FSEU to relieve the pressure on the LE depressurization valve.

1) Use the FSEU procedure below but replace the selection of the LE UCM shutoff valve for the LE DEPR valve.

(b) Attach a DO-NOT-REMOVE tag on the lockout pin, SPL-1746 after installed in the LE cruise depressurization valve.

SUBTASK 27-81-00-010-001

(8) Remove this panel to get access to the LE UCM (uncommanded motion) shutoff valve.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Open this access panel:

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

SUBTASK 27-81-00-480-005

(9) Remove the lockwire from the manual override lever (handle) on the LE UCM shutoff valve (Figure 203).

(10) Move the manual override lever on the LE UCM shutoff valve to the UP (OFF) position.

NOTE: The lever should move with very little force. If the lever is tight, you may need hydraulic pressure and the FSEU (Flaps and Slats Electronic Unit) to release the pressure on the LE UCM SHUTOFF VALVE.

(a) If necessary, do the steps that follow:

1) Supply system B hydraulic power by doing this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

2) Use the FSEU to release the pressure on the LE UCM shutoff valve, as follows:

NOTE: Two persons will be necessary when the FSEU is used to release the pressure on the LE UCM shutoff valve.

a) Push the ON/OFF button.

b) EXISTING FAULTS.....press NO.

c) Press NO until OTHER FUNCTIONS.

d) OTHER FUNCTIONS....press YES.

e) SET OUTPUTS.....press YES.

f) Press NO until LE UCM SHUTOFF VALVE.

g) LE UCM SHUTOFF VALVE....press YES.

h) SET ON.....press YES.

i) Remove system B hydraulic power by doing this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(b) Move the LE UCM shutoff valve up.

1) Install the lockout pin, SPL-1746 through the lever (handle). The tool will keep the handle in the UP (OFF) position.

NOTE: You have 75 seconds to pin the valve from the time when the last YES was pushed on the FSEU.

(c) Attach a DO-NOT-REMOVE tag on the lockout pin, SPL-1746.

I. Deactivate the Leading Edge Flaps and Slats in the Full Extend Position

SUBTASK 27-81-00-480-006

(1) Install the lockout set, SPL-1734 on the actuators of the slats and flaps to prevent retraction of the leading edge devices with the steps that follow:

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(a) If the leading edge flaps and slats are not in the full extend (30-unit) position, do this task: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

WARNING

MAKE SURE TO INSTALL THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS AND SLATS. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(b) Install the lockout set, SPL-1734 on the extended actuators of the leading edge flaps and slats.

J. Leading Edge Flaps and Slats - Tryout

NOTE: This tryout is to make sure the leading edge flaps and slats are in a zero energy state.

SUBTASK 27-81-00-860-011

(1) Move the flap control lever to the ONE detent position.

(a) Make sure that the leading edge flap or slat does not move.

SUBTASK 27-81-00-860-012

(2) Move the flap control lever back to its initial flap position.

SUBTASK 27-81-00-860-103

(3) Put the ALTERNATE FLAPS ARM switch in the ARM position.

SUBTASK 27-81-00-860-013

(4) Move the ALTERNATE FLAPS CONTROL switch to the UP position for approximately one second and then to the DOWN position for approximately one second.

(a) Make sure that the leading edge flap or slat does not move.

SUBTASK 27-81-00-420-011

(5) Install the DO NOT OPERATE tag, STD-858 to the flap control lever and the ALTERNATE FLAPS control switch.

END OF TASK

Leading Edge Uncommanded Motion (UCM) Valve
Figure 203/27-81-00-990-803 (Sheet 2 of 2)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-81-00-440-801

3. Leading Edge Flaps and Slats - Activation

(Figure 201)

A. General

(1) If you do the deactivation procedure with the leading edge flaps and slats in the retract position, then do the steps to reactivate the leading edge flaps and slats in the retract position.

(2) If you do the deactivation procedure with the leading edge flaps and slats in the full extend position, then do the steps to reactivate the leading edge flaps and slats in the full extend position.

B. References

Reference	Title

C. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1675	Assembly - Lock, Flight Controls (used on valve p/n 10-60581-2 and 10-60581-3) Part #: F80049-65 Supplier: 81205 Opt Part #: F80049-56 Supplier: 81205
SPL-1734	Lockout Set - Leading Edge Slats and Krueger Flaps Actuators Part #: C27051-29 Supplier: 81205
SPL-1746	Pin - Lockout, L.E. Cruise Depressurization Valve Part #: C27038-6 Supplier: 81205
STD-858	Tag - DO NOT OPERATE

D. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

E. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

F. Reactivate the Leading Edge Flaps and Slats In the Retract (UP) Position

SUBTASK 27-81-00-020-008

(1) Remove the DO NOT OPERATE tag, STD-858 from the flap control lever and the ALTERNATE FLAPS control switch.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-00-080-003

(2) Remove the lock, SPL-1675 from the standby hydraulic module Figure 201:

(a) Remove the lockpin.

(b) Remove the lock, SPL-1675 from the standby hydraulic module.

(c) Make sure the override lever at the leading edge standby drive shutoff valve is in the position 1.

(d) Do this task: Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(e) Connect the electrical connector to the leading edge standby drive shutoff valve.

(f) Remove the DO-NOT-OPERATE tag from the ALTERNATE FLAPS arm switch.

SUBTASK 27-81-00-020-001

(3) Remove the DO-NOT-REMOVE tag with the lockout pin, SPL-1746 in the manual override lever on the LE cruise depressurization valve (Figure 201).

(a) Make sure the manual override lever moves from the OFF position to the ON position.

(b) Install lockwire on the manual override lever.

SUBTASK 27-81-00-020-003

(4) Remove the DO-NOT-OPERATE tags from the flap control lever and the ALTERNATE FLAPS switches.

SUBTASK 27-81-00-410-001

(5) If it is open, close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-81-00-710-001

(6) Do this task: Leading Edge Flap and Slat System Standby Actuation Operational Test, TASK 27-81-00-710-801

NOTE: The Leading Edge Flap and Slat System Standby Actuation Operational Test will make sure that the alternate control system is working correctly.

G. Reactivate the Leading Edge Flaps and Slats in the Extend (intermediate) Position

SUBTASK 27-81-00-020-004

(1) Remove the DO-NOT-REMOVE tag with the lockout pin, SPL-1746 in the manual override lever (handle) on the LE cruise depressurization valve(Figure 201).

NOTE: Do not force movement of the lever (handle) with tools. The lever should move with very little force. If the lever is tight, you may need hydraulic pressure and the FSEU (Flaps and Slats Electronic Unit) to relieve the pressure on the LE CRUISE DEPRESSURIZATION VALVE.

(a) If the lockout pin, SPL-1746 will not come out easily, then do the steps that follow:

1) If necessary, supply system B hydraulic power and then use the FSEU to relieve the pressure on the LE depressurization valve.

a) Use the FSEU procedure below but replace the selection of the LE UCM SHUTOFF VALVE for the LE DEPR VALVE.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Move the (LE cruise depressurization valve) manual override lever from the OFF position to the ON position.

(c) Install lockwire on the manual override lever on the LE cruise depressurization valve.

SUBTASK 27-81-00-020-005

(2) Remove the DO-NOT-REMOVE tag with the lockout pin, SPL-1746 in the manual override lever (handle) on the LE uncommanded motion (UCM) shutoff valve.

(a) Move the manual override lever on the UCM shutoff valve to the down (ON) position.

NOTE: The lever (handle) should move with very little force. If the handle is tight, you may need hydraulic pressure and the FSEU (Flaps and Slats Electronic Unit) to relieve the pressure on the LE UCM SHUTOFF VALVE.

(3) If the lockout pin, SPL-1746 will not come out easily, then do the steps that follow:

(a) Supply system B hydraulic power by doing this task: Leading Edge Flap and Slat System Operation With Primary Control, TASK 27-81-00-860-801.

(b) Use the FSEU to relieve the pressure on the LE UCM SHUTOFF VALVE, as follows:

1) Push the ON/OFF button.
2) EXISTING FAULTS.....press NO.
3) Press NO until OTHER FUNCTIONS.
4) OTHER FUNCTIONS....press YES.
5) SET OUTPUTS.....press YES.
6) Press NO until LE UCM SHUTOFF VALVE.
7) LE UCM SHUTOFF VALVE....press YES.
8) SET ON.....press YES.

(c) Remove the lockout pin, SPL-1746 from the LE UCM shutoff valve within 75 seconds of pushing YES on the FSEU.

1) If the pin will not come out easily, then repeat the steps above pressurizing the hydraulic system B before operating the FSEU.
2) Remove the B pressure after the valve has moved.

(d) Wait for the LE UCM shutoff valve lever (handle) to move down.

(e) Install the lockwire (per double twist method) when the LE UCM shutoff lever is in the down position.

SUBTASK 27-81-00-080-004

WARNING REMOVE THE LOCK FROM LEADING EDGE FLAP ACTUATOR CAREFULLY TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS. THE LEADING EDGE FLAPS CAN MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(4) Remove the lockout set, SPL-1734 from the extended actuators of the leading edge flaps and slats per Leading Edge Flap and Slat Locks Removal, TASK 27-81-00-080-801.

H. Reactivate the Leading Edge Flaps and Slats In the Full Extend Position

SUBTASK 27-81-00-080-005

(1) Remove the lockout set, SPL-1734 from the leading edge devices:

(a) If the hydraulic system B is pressurized, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING REMOVE THE LOCK FROM LEADING EDGE FLAP ACTUATOR CAREFULLY TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS. THE LEADING EDGE FLAPS CAN MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(b) Remove the lockout set, SPL-1734 from the extended actuators of the leading edge flaps and slats per Leading Edge Flap and Slat Locks Removal, TASK 27-81-00-080-801.

(c) Do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-860-014

(1) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

END OF TASK

TASK 27-81-00-860-801

4. Leading Edge Flap and Slat System Operation With Primary Control

A. General

(1) The primary control system uses the hydraulic system B to move the flaps and slats.

B. References

Reference	Title
29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Procedure

SUBTASK 27-81-00-860-015

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) To pressurize hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-81-00-860-017

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE MOVED AWAY FROM THE CONTROL SURFACES BEFORE YOU START MOVEMENT. THIS WILL PREVENT INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Move the flap control lever to the applicable detent position (Table 201).

Table 201/27-81-00-993-801 Leading Edge (LE) Flap and Slat Position

Flap Control Lever Detent Position	LE Flap Position	LE Slat Position
UP	Retract	Retract
1 thru 25	Full Extend	Extend
30 thru 40	Full Extend	Full Extend

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-860-018

(1) To remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

TASK 27-81-00-860-802

5. Leading Edge Flap and Slat System Operation With Alternate Control

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) The alternate control system uses electrical power to power the standby hydraulic system which moves the leading edge slats and flaps.

B. References

Reference	Title
24-22-00-860-801	Supply Electrical Power (P/B 201)
24-22-00-860-802	Remove Electrical Power (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Procedure

SUBTASK 27-81-00-860-019

(1) Do this task: Supply Electrical Power, TASK 24-22-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-00-860-020

WARNING	KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION	MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Move the ALTERNATE FLAPS ARM switch on the P5 panel to the ARM position.

SUBTASK 27-81-00-860-021

(3) Move the ALTERNATE FLAPS control switch to the DOWN position to extend the flaps and slats.

NOTE: The leading edge flaps and slats will not retract with alternate control.

SUBTASK 27-81-00-860-022

(4) Move the ALTERNATE FLAPS control switch to the OFF position.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-860-023

WARNING	MAKE SURE THE POSITION OF THE FLAPS AGREES WITH THE POSITION OF THE FLAP CONTROL LEVER. WHEN YOU SUPPLY HYDRAULIC POWER, THE FLAPS AND SLATS WILL MOVE AUTOMATICALLY TO THE POSITION OF THE FLAP CONTROL LEVER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Move the ALTERNATE FLAPS control switch until the flaps and slats are in the same position as the flap control lever or move the flap control lever to the position of the flaps and slats.

SUBTASK 27-81-00-860-024

(2) Move the ALTERNATE FLAPS control switch to the OFF position.

SUBTASK 27-81-00-860-025

(3) Move the ALTERNATE FLAPS ARM switch to the OFF position to disarm the alternate control system.

SUBTASK 27-81-00-860-026

(4) Do this task: Remove Electrical Power, TASK 24-22-00-860-802.

END OF TASK

TASK 27-81-00-860-803

6. Leading Edge Flaps and Slats Extension

A. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Procedure

SUBTASK 27-81-00-860-027

(1) Do one of these tasks to extend the leading edge flaps and slats:

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(a) To extend the flaps and slats with primary control, do this task: Leading Edge Flap and Slat System Operation With Primary Control, TASK 27-81-00-860-801.

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(b) To extend the flaps and slats with alternate control, do this task: Leading Edge Flap and Slat System Operation With Alternate Control, TASK 27-81-00-860-802.

END OF TASK

TASK 27-81-00-860-804

7. Leading Edge Flaps and Slats Retraction

A. General

(1) The leading edge flaps and slats will not retract with alternate control.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Procedure

SUBTASK 27-81-00-860-028

(1) To retract the flaps and slats with primary control, do this task: Leading Edge Flap and Slat System Operation With Primary Control, TASK 27-81-00-860-801.

——— END OF TASK ———

TASK 27-81-00-480-801

8. Leading Edge Flap and Slat Locks Installation

(Figure 201)

D. Leading Edge Flap and Slat Locks Installation

SUBTASK 27-81-00-860-100

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(1) If the leading edge flaps and slats are not in the full extend (30-unit) position, do this task: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

SUBTASK 27-81-00-860-101

(2) Make sure that the hydraulic power is removed (TASK 29-11-00-860-805).

SUBTASK 27-81-00-480-008

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Install the lock, SPL-1675, to prevent the movement of the leading edge devices by the standby hydraulic system (Figure 201).

(a) Make sure that the ALTERNATE FLAP ARM switch is in the OFF position.

(b) Attach the DO NOT OPERATE tag, STD-858, on the ALTERNATE FLAPS ARM switch.

(c) Disconnect the electrical connector from the leading edge standby drive shutoff valve.

(d) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(e) If there was corrosion, correct the problem (SWPM 20-60-03).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING MAKE SURE THAT THE MANUAL OVERRIDE LEVER IS IN POSITION 1 TO PREVENT THE MOVEMENT OF THE LEADING EDGE SLATS. IF THE LEADING EDGE SLATS MOVE, DAMAGE TO AN OPEN THRUST REVERSER AND INJURIES TO PERSONNEL CAN OCCUR.

(f) Make sure that the override lever at the leading edge standby drive shutoff valve is in the Position 1 (standby hydraulic power OFF).

WARNING MAKE SURE TO INSTALL THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS AND SLATS. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(g) Install the lock, SPL-1675, on the standby hydraulic module.

(h) Install the lockpin.

SUBTASK 27-81-00-480-007

(4) Install the lockout set, SPL-1734, to prevent retraction of the leading edge devices.

WARNING MAKE SURE TO INSTALL THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS AND SLATS. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Install the lockout set, SPL-1734, on the extended actuators of the leading edge flaps and slats.

END OF TASK

E. Leading Edge Flap and Slat Locks Removal

SUBTASK 27-81-00-080-006

(1) Remove the lockout set, SPL-1734 from the leading edge devices:

(a) If the hydraulic system B is pressurized, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

WARNING CAREFULLY REMOVE THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY IF YOU DO NOT REMOVE THE LOCKS CORRECTLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(b) Remove the lockout set, SPL-1734 from the extended actuators of the leading edge flaps and slats.

(c) Do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

SUBTASK 27-81-00-080-007

(2) Remove the lock, SPL-1675 from the standby hydraulic module (Figure 201):

(a) Remove the lockpin.

(b) Remove the lock, SPL-1675 from the standby hydraulic module.

(c) Make sure the override lever at the leading edge standby drive shutoff valve is in the position 1.

(d) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

2) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

(e) Apply the D5026NS or ZC-026 compound, G50171 to the connector (SWPM 20-60-03).

(f) Connect the electrical connector to the leading edge standby drive shutoff valve.

(g) Remove the DO-NOT-OPERATE tag from the ALTERNATE FLAPS arm switch.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE FLAP AND SLAT - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) An adjustment of the leading edge flaps

(2) An adjustment of the leading edge actuators

(3) An adjustment of the leading edge slats

(4) An operational test of the leading edge flaps and slats in primary mode

(5) A timing test of the leading edge flaps and slats in primary mode

(6) An operational test of the leading edge flaps and slats in standby mode

(7) A timing test of the leading edge flaps and slats in standby mode

(8) A test of the leading edge cruise depressurization system

(9) A test of the leading edge uncommanded motion protection system

(10) A test of the standby hydraulic system leading edge uncommanded motion

TASK 27-81-00-820-801

2. Leading Edge Flaps Adjustment

(Figure 501)

E. Prepare for the Adjustment

SUBTASK 27-81-00-860-029

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) To pressurize hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-81-00-860-030

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Move the flap control lever to the 1-unit detent position to extend the leading edge flaps.

SUBTASK 27-81-00-860-031

(3) To remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-00-480-009

WARNING INSTALL THE LOCK ON LEADING EDGE FLAP ACTUATOR CAREFULLY TO PREVENT THE ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS. THE LEADING EDGE FLAPS CAN MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(4) Install the lockout set, SPL-1734 on all the adjacent flaps that you will not adjust. To install the lockout set, do this task: Leading Edge Flap and Slat Locks Installation, TASK 27-81-00-480-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Leading Edge Flaps Adjustment

SUBTASK 27-81-00-860-032

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) Move the flap control lever to the UP detent to retract the leading edge flaps.

SUBTASK 27-81-00-220-001

(2) Do a check of the full extend angle of the leading edge flap 1 [1] and leading edge flap 2 [2].

(a) Attach a protractor, COM-1691 to the inboard edge of the leading edge flap 1 [1] or outboard edge of the leading edge flap 2 [2].

(b) Set the protractor, COM-1691 to zero with the leading edge flaps retracted.

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(c) Move the flap control lever to the 1-unit detent to extend the leading edge flap.

(d) Make sure the full extend angle of the leading edge flap 1 [1] or leading edge flap 2 [2] is 98 +/- 0.5 degrees.

1) If the full extend angle is out of tolerance, do these steps to adjust the rod end [8] of the flap actuator [7]:

a) Remove the pin [15], nut [14], washer [13], bushing [12], washer [11], and bolt [10] to disconnect the flap actuator [7] from the leading edge flap 1 [1] or leading edge flap 2 [2].

b) Loosen the nut [9] on the flap actuator [7].

c) Adjust the rod end [8] until you get the correct full extend angle.

NOTE: The limit for maximum adjustment is two full turns.

(e) Remove the protractor, COM-1691 from the inboard edge of the leading edge flap.

SUBTASK 27-81-00-220-002

(3) Make sure the mismatch between the inboardleading edge flap 2 [2] and the outboardleading edge flap 1 [1] is 0.000 ±0.040 in. (0.0 ±1.0 mm).

SUBTASK 27-81-00-860-033

(4) Apply preload at the flap bullnose to the leading edge flap 1 [1] or leading edge flap 2 [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Make sure the flap bullnose touches the leading edge flap 1 [1] or leading edge flap 2 [2].

NOTE: To apply the correct preload, the flap bullnose must first touch the leading edge flap.

1) If the flap bullnose does not touch the leading edge flap 1 [1] or leading edge flap 2 [2], adjust the length of the flap rod.

(b) Adjust the flap rod an additional 1/2 turn to apply the correct preload at the flap bullnose to the leading edge flap 1 [1] or leading edge flap 2 [2].

(c) Install MS20995NC32 lockwire, G01912 on the flap rod.

SUBTASK 27-81-00-860-034

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

SUBTASK 27-81-00-220-003

(6) Do a check of the mismatch at the forward edge of the leading edge flap 1 [1] or leading edge flap 2 [2].

(a) Make sure the mismatch is 0.000 +0.062 / -0.071 in. (0.0 +1.6 / -1.8 mm).

1) If it is necessary, adjust the mismatch dimension.

a) Loosen the nuts [3] to adjust the seal [4].

b) Adjust the seal [4] until you get the correct mismatch requirement.

c) Tighten the nuts [3].

SUBTASK 27-81-00-220-004

(7) Do a check of the gap and mismatch at the aft edge of the leading edge flap 1 [1] or leading edge flap 2 [2].

(a) Make sure the gap is 0.050 in. (1.3 mm) to 0.240 in. (6.1 mm).

(b) Make sure the mismatch is 0.000 +0.040 / -0.072 in. (0.0 +1.0 / -1.8 mm).

1) If the mismatch is out of tolerance, adjust the rod end [8] of the flap actuator [7] again.

SUBTASK 27-81-00-420-001

(8) If you made adjustment to the rod end [8] of the flap actuator [7], do these steps:

(a) Install the bolt [10], washer [11], bushing [12], washer [13] and nut [14] to connect the flap actuator [7] to the leading edge flap 1 [1] or leading edge flap 2 [2].

(b) Tighten the nut [14] to 660 in-lb (74.6 N·m) - 980 in-lb (110.7 N·m).

(c) Install the pin [15].

(d) Tighten the nut [9] to 550 in-lb (62.1 N·m) - 650 in-lb (73.4 N·m).

(e) Install the MS20995NC32 lockwire, G01912 on the nut [9].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-00-860-035

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(9) Extend the leading edge flaps to the 1-unit detent position with hydraulic power. To extend the leading edge flaps, do this task: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

SUBTASK 27-81-00-860-036

(10) Do a check of the flap panel clearances.

(a) For all but the aft 5 in. (127 mm) of the flap, make sure the gap between the outboard leading edge flap 1 [1] and the inboard leading edge flap 2 [2] is 0.060 in. (1.52 mm) to 0.150 in. (3.81 mm).

(b) For the aft 5 in. (127 mm) of the flap, make sure the gap between the outboard leading edge flap 1 [1] and the inboard leading edge flap 2 [2] is 0.06 in. (1.5 mm) to 0.25 in. (6.4 mm).

SUBTASK 27-81-00-210-003

(11) If the flap panel clearances are out of tolerance, do a check of the wing and flap panel for damage or deformation.

NOTE: This check is to make sure that the flap and the wing align correctly. There is no adjustment that you can do.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-080-008

WARNING CAREFULLY REMOVE THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY IF YOU DO NOT REMOVE THE LOCKS CORRECTLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Remove the lockout set, SPL-1734 from the leading flaps. To remove the lockout set, do this task: Leading Edge Flap and Slat Locks Removal, TASK 27-81-00-080-801.

SUBTASK 27-81-00-860-037

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(2) Do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

END OF TASK

TASK 27-81-00-820-802

3. Leading Edge Slat Actuator Adjustment

(Figure 502)

A. General

(1) You must adjust the leading edge slats with the wing unsupported outboard of the engine nacelle. You can adjust the leading edge slats with the airplane on the gear or on jacks inboard of the engine nacelle. The airplane must not have fuel on the outboard wing.

F. Slat Actuator Adjustment

SUBTASK 27-81-00-860-038

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) To pressurize hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-81-00-860-039

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Move the flap control lever to the 30-unit position to extend the leading edge slats to the full extend position.

SUBTASK 27-81-00-480-010

WARNING

INSTALL LEADING EDGE SLAT ACTUATOR LOCKS. LEADING EDGE SLATS CAN CAUSE INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(3) Install the lockout set, SPL-1734 on the adjacent leading edge slats. Do this task: Leading Edge Flap and Slat Locks Installation, TASK 27-81-00-480-801.

SUBTASK 27-81-00-860-040

(4) Move the flap control lever to the 1-unit position to retract the leading edge slat to the extend position.

NOTE: If the leading edge slat [31] is in the full extend position, the slat actuator [40] will be preloaded against the leading edge slat [31].

SUBTASK 27-81-00-860-041

(5) Remove power from hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-00-200-001

WARNING

DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(6) Keep the housing (can) assemblies of the slat main tracks clean and free of all unwanted objects (FOD) at all times.

SUBTASK 27-81-00-020-006

(7) Remove the slat actuator door [39] from the slat actuator [40]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the bolts [35], washers [36], washers [37], and nuts [38] that attach the slat actuator door [39] to the slat actuator [40].

(b) Remove the bolts [32], washers [33] and nuts [34] that attach the slat actuator door [39] and the bracket to the slat actuator [40].

(c) Remove the slat actuator door [39].

(d) Temporarily install the bolts [32], washers [33] and nuts [34] to attach the bracket to the slat actuator [40].

SUBTASK 27-81-00-020-007

(8) Disconnect the slat actuator [40] from the leading edge slat [31]:

(a) Remove the bolts [46] and washers [47] that attach the bolt retainer [48] to the leading edge slat [31].

(b) Remove the bolt retainer [48] from the leading edge slat [31].

WARNING MAKE SURE YOU HOLD THE LEADING EDGE SLAT IN ITS POSITION. THE LEADING EDGE SLAT CAN FALL TO THE FULL EXTEND POSITION. THIS CAN CAUSE INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(c) Hold the leading edge slat [31] while you remove the nut [43], washer [42], bushing [41], washer [49] and bolt [50].

SUBTASK 27-81-00-860-042

(9) Carefully let the leading edge slat [31] move down to the full extend position.

SUBTASK 27-81-00-200-002

(10) Make sure the downstop assembly is installed on the main tracks. (See Leading Edge Slat Installation, TASK 27-81-21-400-801)

SUBTASK 27-81-00-860-043

(11) Use hydraulic power to retract the slat actuator [40] to the extend position:

NOTE: This will permit you to install the bolt [50].

(a) Pressurize hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(b) Move the flap control lever to the 1-unit detent position to retract the slat actuator to the extend position.

(c) Remove power from hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-00-420-002

(12) Connect the slat actuator [40] to the leading edge slat [31]:

(a) Move the leading edge slat [31] until it aligns with the slat actuator [40].

(b) Install the bushing [41], bolt [50], washer [49], washer [42] and nut [43] to attach the slat actuator [40] to the leading edge slat [31].

1) The head of the bolt [50] must be on the outboard side of the slat actuator [40].

(c) Tighten the nut [43] to a setpoint of 820 in-lb (92.6 N·m) or the bolt [50] to a setpoint of 980 in-lb (110.7 N·m).

NOTE: The recommended method is to tighten the nut.

The optional method is to tighten the bolt.

(d) Install the bolt retainer [48]:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Apply compound, C00528 to the shank and threads of the bolts [46].

2) Install the bolts [46] and washers [47] to attach the bolt retainer [48].

SUBTASK 27-81-00-220-005

(13) With the slats correctly adjusted (rigged), do the step that follow:

(a) Apply hand load to the end of each slat assembly (as necessary) to make sure that preload exists.

(b) If no preload exists, do as follow:

1) Make sure that the possible under-travel dimension of the slat actuator does not exceed 0.0200 in. (0.5080 mm) maximum between the attach point at the rod end of the slat actuator and the clevis bores of the slat attach fittings.

NOTE: The under-travel dimension of the slat actuator indicates that there is no preload of the slat actuator in relationship to the slat actuator attach fitting.

a) If the dimension is greater than 0.0200 in. (0.5080 mm), make sure that the part numbers of the main track assemblies are correct.

NOTE: When the slat main tracks are incorrectly installed visual cues (excessive mismatches, misalignment, skew, etc.) will sometimes indicate a problem in advance depending on which slat is affected.

SUBTASK 27-81-00-420-003

(14) Install the slat actuator door [39] on the slat actuator [40]:

(a) Put the slat actuator door [39] in its position on the slat actuator [40].

(b) Remove the bolts [32], washers [33] and nuts [34] that attach the bracket to the slat actuator [40].

(c) Put the slat actuator door [39] in its position on the slat actuator [40].

(d) Install the bolt [32], washers [33] and nuts [34] that attach the slat actuator door [39] and bracket to the slat actuator [40].

(e) Install the bolts [35], washers [36], washers [37] and nuts [38] that attach the slat actuator door [39] to the slat actuator [40].

SUBTASK 27-81-00-200-003

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(15) Keep the housing (can) assemblies of the slat main tracks clean and free of all unwanted objects (FOD) at all time.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-080-009

WARNING REMOVE LEADING EDGE ACTUATOR LOCKS. LEADING EDGE SLATS CAN CAUSE INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) Do this task: Leading Edge Flap and Slat Locks Removal, TASK 27-81-00-080-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-00-860-044

(2) Do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

END OF TASK

TASK 27-81-00-820-803

4. Leading Edge Slats Adjustment

(Figure 503, Figure 504, and Figure 505)

A. General

(1) You must adjust the leading edge slats with the wing unsupported outboard of the engine nacelle. You can adjust the leading edge slats with the airplane on the gear or on jacks inboard of the engine nacelle. The airplane must not have fuel on the outboard wing.

(2) It is recommended that you do all the steps in this task, the full slat adjustment, for the most consistent and lowest drag adjustment.

(3) Where time and/or airplane condition do not support the use of the full slat adjustment, a minimum slat adjustment is permitted. Use of this minimum slat adjustment can result in increased drag compared with the full slat adjustment. In this task, all the steps that are not necessary for a minimum slat adjustment will be identified.

621YB	Lower Leading Edge Access Panel - Slat Station 470

SUBTASK 27-81-00-200-004

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(2) Keep the housing (can) assemblies of the slat main tracks clean and free of all unwanted objects (FOD) at all time.

SUBTASK 27-81-00-820-001

(3) Do a preliminary adjustment of the auxiliary track forward support:

(a) Install the preload shim assembly, that is part of the kit, SPL-1739, at the forward supports for the auxiliary tracks.

1) Remove the nuts [74] and washers [75] from the clevis [76].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Lift the auxiliary track [72] with the clevis [76] through the auxiliary track support.

3) Install the preload shim assembly, which is part of the kit, SPL-1739, and shim [77] on the clevis [76].

4) Put the clevis [76] back in its position on the auxiliary track support.

5) Install the washers [75] and nuts [74] on the clevis [76].

6) Make sure that two BACW10P390TF, Polytetraflouroethylene (Teflon) (PTFE) washers are installed in the clevis/auxiliary track/detent arm joint, if you disconnected it. Use the applicable Illustrated Part Catalog for the required washers at this location.

NOTE: If the washers are damaged or missing, stabilization of the detent arm is reduced and it is possible for the detent arm to be deflected laterally during slat extension or retraction and the possibility of misalignment between the detent arm and the detent roller increases.

NOTE: If the washers are damaged or missing, it may be possible for the roller to come out of the detent arm track, thus affecting the operation of the detent system. Also extreme misalignment of the slat roller attachment could move the slat down sensor target, causing fault indications or physical damage to the sensor itself.

SUBTASK 27-81-00-820-002

(4) Do a preliminary adjustment of the auxiliary track aft support:

NOTE: If a minimum slat adjustment is done, preliminary adjustment of the auxiliary track aft support is not necessary.

(a) Loosen the nut [90] on the locking bolt [91] at the upper aft auxiliary track.

(b) Loosen the jamnut [82].

(c) Loosen the nut [80] on the locking bolt [79].

(d) Turn the adjustment nut [81] of the auxiliary track aft support to get the required trailing edge clearance until the dimension A is as specified (Table 501).

NOTE: Optional. In order to adjust the auxiliary track aft support to the dimensions given in the table below, adjust the auxiliary track up until the slot in the aft upper corner of the track touches the locking bolt [91] at the upper aft auxiliary track

Table 501/27-81-00-993-802

Location	Dimension A	Dimension B (reference)
Slat 1 and 8 (Outbd)	0.830 in. (21.08 mm)	2.380 in. (60.45 mm)
Slat 1 and 8 (Inbd)	0.950 in. (24.13 mm)	2.500 in. (63.50 mm)
Slat 2 and 7 (Outbd)	0.950 in. (24.13 mm)	2.500 in. (63.50 mm)
Slat 2 and 7 (Inbd)	1.450 in. (36.83 mm)	3.000 in. (76.20 mm)
Slat 3 and 6 (Outbd)	1.450 in. (36.83 mm)	3.000 in. (76.20 mm)
Slat 3 and 6 (Inbd)	1.450 in. (36.83 mm)	3.000 in. (76.20 mm)
Slat 4 and 5 (Outbd)	1.500 in. (38.10 mm)	3.050 in. (77.47 mm)
Slat 4 and 5 (Inbd)	2.100 in. (53.34 mm)	3.650 in. (92.71 mm)

(e) Tighten the nut [80] by hand on the locking bolt [79].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Temporarily tighten the jamnut [82].

NOTE: Do not install lockwire on the jam nut.

(g) Temporarily tighten the upper aft auxiliary track locking bolt [91].

SUBTASK 27-81-00-820-003

(5) Do a preliminary adjustment of the upstop pad (View C, Figure 503):

(a) Remove the retainers [85], nuts [86], and bolts [89].

(b) Add shims [87] under each of the stop pads [88].

NOTE: The total shim thickness will be 0.060 +0.005 / -0.002 in. (1.52 +0.13 / -0.05 mm).

(c) Install the bolts [89], nuts [86], and retainers [85].

SUBTASK 27-81-00-820-004

(6) Do a preliminary adjustment of the endstop pad (View C, Figure 503):

NOTE: If you do a minimum slat adjustment, preliminary adjustment of the endstop pad is not necessary.

(a) Remove the retainers [85], nuts [86], and bolts [89].

(b) Add shims [87] under each of the stop pads [88].

NOTE: The total shim thickness will be 0.060 +0.005 / -0.002 in. (1.52 +0.13 / -0.05 mm).

(c) Apply Cor-Ban 27L Compound, G50237, or corrosion inhibiting material, G50136, to the bolts [89].

(d) Install the bolts [89], nuts [86], and retainers [85].

1) Tighten the bolts [89] to 16 in-lb (1.8 N·m) - 20 in-lb (2.3 N·m).

SUBTASK 27-81-00-820-005

(7) Do a preliminary adjustment of the detent arm preload (Views C-C and D-D, Figure 503):

NOTE: If you do a minimum slat adjustment, preliminary adjustment of the detent arm preload is not necessary.

NOTE: When measuring the 0.100 in. (2.54 mm) minimum clearance between the torsion rod [109] and shoulder bolt [105], the detent arm [78] must be flush and in contact with the shoulder bolt [105]. This dimension only applies during the initial measurement of the torsion rod [109]. This dimension will not apply after the torsion rod [109] is preloaded during the slat adjustment.

(a) Make sure that three (CRES material, 0.063 in. (1.60 mm) nominal thickness) washers are installed in the detent roller/track/arm/sensor target joint (one washer under the bolt head and two washers installed on both sides of the auxiliary arm) per the applicable Illustrated Part Catalog.

NOTE: If the washers are thinner than 0.063 in. (1.60 mm), the lateral location of the roller bearing will be changed and it will no longer align with the centerline of the detent arm.

NOTE: The thinner washers will not support the torque preload and operating load imposed on the joint. As the thinner washers deform, the fastener torque preload is lost, and the joint may move under normal operating loads, inducing additional misalignment of the bearing. This joint holds the slat sensor target, so a loosened bolt will permit the sensor target to move. Target movement could lead to sensor indication problems, and the loose target could physically contact the sensor as the slat moves and cause additional damage.

(b) Adjust all preload on the detent arm to 0 lb (0 kg).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Turn the detent arm preload adjustment bolt [73] clockwise to increase preload or counterclockwise to reduce preload (View D-D, Figure 503).

2) Adjust the preload on all the detent arms [78] to 0 lb (0 kg).

SUBTASK 27-81-00-860-046

(8) Make sure that the bolts [102] on the skin tab [92] are loose on the slat auxiliary arms (View F, Figure 503).

NOTE: This is to prevent damage to the fixed leading edge when the slat is retracted during the adjustment.

H. Leading Edge Slats Adjustment

NOTE: The following operations may require slat position change to complete the adjustment requirements and may result in dimensional changes when moving the slats.

SUBTASK 27-81-00-200-005

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(1) Keep the housing (can) assemblies of the slat main tracks clean and free of all unwanted objects (FOD) at all times.

SUBTASK 27-81-00-820-006

(2) Do the initial adjustment of the leading edge slat in the (intermediate) extend position:

NOTE: If you do a minimum slat adjustment, initial adjustment of the slat in the (intermediate) extend position is not necessary.

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(a) Extend the leading edge slat to the (intermediate) extend (1-unit detent) position with hydraulic power, do this task: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

(b) Align the noses of the slats to get a mismatch of 0.000 in. (0.00 mm) to 0.060 in. (1.52 mm) between the adjacent slats.

1) Dimension may apply at any one point within the 1.0000 in. (25.40 mm) band width (Figure 505).

NOTE: This dimension is normal to the skin surface where the measurement is taken. Vertical mismatch is permissible.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Adjust the forward support of the auxiliary track [72] (View A-A, Figure 503).

1) Make sure that two BACW10P390TF, PTFE washers are installed in the clevis/auxiliary track/detent arm joint, if you disconnected it. Use the applicable Illustrated Part Catalog for the required washers at this location.

NOTE: If the washers are damaged or missing, stabilization of the detent arm is reduced and it is possible for the detent arm to be deflected laterally during slat extension or retraction and the possibility of misalignment between the detent arm and the detent roller increases.

NOTE: If the washers are damaged or missing, it may be possible for the roller to come out of the detent arm track, thus affecting the operation of the detent system. Also extreme misalignment of the slat roller attachment could move the slat down sensor target, causing fault indications or physical damage to the sensor itself.

2) Remove the nut [74] and washer [75] from the clevis [76].

3) Lift the auxiliary track [72] with the clevis [76] through the auxiliary track support.

4) Add or remove the shims [77] until the gap between the slat and fixed leading edge is 0.002 +0.006 / -0.000 in. (0.05 +0.15 / -0.00 mm).

a) Measure the clearance at the tightest point, within 2.00 in. (50.8 mm) on either side of the each auxiliary track centerline.

b) Measure the clearance to a depth of 0.40 in. (10.16 mm) to 0.60 in. (15.24 mm).

5) Move the slat, if required, to remove shims [77].

6) Make sure that the total shim thickness is 0.030 in. (0.76 mm) to 0.270 in. (6.86 mm).

7) Re-align the noses of the slats to get a mismatch of 0.000 in. (0.00 mm) to 0.060 in. (1.52 mm) between the adjacent slats, if/as required.

8) Put the clevis [76] back in its positions on the auxiliary track support.

9) Install the washer [75] and nut [74] on the clevis [76].

(d) Adjust the cam plate [83].

NOTE: The cam plates are located on the forward end of the detent arm and are used to align and hold the slats in the extend position.

1) Loosen the two nuts [84] that attach the cam plate [83] to the detent arm [78].

a) Adjust the cam plates to the dimension (Views B-B and C-C, Figure 503).

<1> If the cam plate serrations do not mate with corresponding serrations on the detent arm when located per the required dimension then move the cam plate aft into the next available serration.

2) Move the cam plate [83] forward or aft, as required, until you get these conditions:

a) Engage the serrations in the required position and tighten the nuts [84] to a setpoint of 85 in-lb (9.6 N·m) (preferred method) or bolts [103] to a setpoint of 100 in-lb (11.3 N·m) (optional method).

NOTE: The recommended method is to tighten the nuts.

NOTE: The optional method is to tighten the bolts.

b) The detent roller touch the root of each detent arm [78].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

c) Make sure that the clearance between the detent roller and aft surface of the cam plate is 0.000 in. (0.00 mm) to 0.030 in. (0.76 mm).

3) Cycle the slats and make sure that the 0.002 +0.006 / -0.000 in. (0.05 +0.15 / -0.00 mm) clearance is kept.

4) Adjust if/as required the alignment of the slat noses and detent arm cam plates.

(e) Move the slat from the extend position until the detent roller is completely clear of the detent arm [78] and cam plate [83].

(f) On slats 1, 4, 5 and 8, adjust the detent arm preload to 80 ±5 lbf (355.9 ±22.3 N), measured with a spring scale, STD-755, at the throat of the cam plate [83], and 0.100 +0.060 / -0.040 in. (2.54 +1.52 / -1.02 mm) dimension at the lower portion of the detent arm [78].

NOTE: The detent arm preload adjustment bolt [73] is located next to the auxiliary tracks at the far end of the torsion rod [109] and is used to change the preload tension of the torsion rod [109] and detent arm [78]. Adjust the preload by rotating the detent arm preload adjustment bolt [73] clockwise for increased preload and counterclockwise for reduced preload.

1) If it is necessary, remove the nut at the lower auxiliary track attach bolt to see this clearance.

(g) On slats 2, 3, 6 and 7, adjust the detent arm preload to 50 ±5 lbf (222.4 ±22.3 N), measured with a spring scale, STD-755, at the throat of the cam plate [83], and 0.100 +0.060 / -0.040 in. (2.54 +1.52 / -1.02 mm) dimension at the lower portion of the detent arm [78].

(h) Make sure that there is 0.010 in. (0.2540 mm) minimum clearance between the torsion rod [109] and shoulder bolt [104], if not, do the steps that follow (View D-D, Figure 503):

NOTE: The shoulder bolt [104] is installed through both of the flanges of the auxiliary track support clevis.

NOTE: The clearance measurement is taken where the torsion rod [109] exits the shoulder bolt [104] on the detent preload side of the mechanism.

1) Remove the preload from the detent arm [78].

2) Adjust the detent arm preload adjustment bolt [73] with the steps that follow:

a) Re-align the torsion rod [109] by backing off the nut [108] and adjusting the shoulder bolt [105] up or down in the slotted hole in the torsion rod support bracket assembly.

b) Tighten the nut [108] to 450 in-lb (51 N·m) - 600 in-lb (68 N·m).

3) Adjust the detent arm [78] preload.

a) Adjust the preload by rotating the detent arm preload adjustment bolt [73] clockwise for increased preload and counterclockwise for reduced preload.

b) After final adjustment fasten the detent arm preload adjustment bolt [73] to its lower trunnion with safety wire (single wire method permissible).

4) Make sure that it is a correct clearance between the torsion rod [109] and shoulder bolt [104].

SUBTASK 27-81-00-820-007

(3) Do the initial adjustment of the leading edge slat in the retract position:

NOTE: If a minimum slat adjustment is done, initial adjustment of the slat in the retract position is not necessary.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

(b) Position the ends of the slats using the end stop pad adjustments to get a 0.000 in. (0.00 mm) to 0.050 in. (1.27 mm) fair between all adjacent slat ends; between the outboard end of slats 1 and 8 and on the adjacent fixed leading edge; and between the inboard end of slat 4 and 5 and adjacent fixed leading edge.

NOTE: The end stops are located near both ends of each slat and can be used to adjust the trailing edge clearance near the slat center, clearance and misfair of the flex skin to the lower fixed leading edge panels, and misfair at the slat ends. Each stop location has a horizontal and vertical pad. To adjust each stop pad, add or subtract in any combination of 0.010 in. (0.25 mm), 0.020 in. (0.51 mm), 0.040 in. (1.02 mm) and 0.063 in. (1.60 mm) thick solid shims. The total permitted shim thickness is 0.000 in. (0.00 mm) to 0.128 in. (3.25 mm) and must be such that the slat flex skin keeps solid contact with the fixed leading edge.

(c) Make sure that the slat upstops touch the horizontal and vertical stop pads.

NOTE: The upstop pads are located 5.3 in. (135 mm) on either side of each actuator and can be used to adjust the trailing edge clearance near the slat center, clearance and misfair of the flex skin to the lower fixed leading edge panels, and misfair at the slat ends. Each stop location has a horizontal and vertical pad.

(d) If the slat upstops do not touch the horizontal and vertical stop pads, adjust the stop pad:

NOTE: Use these stops to adjust the slat nose to match the adjacent slats.

1) Remove the retainers [85], nuts [86], and bolts [89].
2) Add or remove shims [87] as it is necessary until the slat fairs with the adjacent slat.

NOTE: Add or remove only a minimum amount of shim necessary for the slat upstop to touch the stop pad. To adjust each stop pad, add or subtract in any combination of 0.010 in. (0.25 mm), 0.020 in. (0.51 mm), 0.040 in. (1.02 mm) and 0.063 in. (1.60 mm) thick solid shims. The total permitted shim thickness is 0.000 in. (0.00 mm) to 0.128 in. (3.25 mm) and must be such that the slat flex skin keeps solid contact with the fixed leading edge.

3) Install the bolts [89], nuts [86], and retainers [85].

(e) Adjust the aft support of the auxiliary track [72] (Views C-C and D-D, Figure 503):

1) Loosen the nut [90] on the locking bolt [91] at the upper aft auxiliary track.
2) Loosen the jamnut [82].
3) Loosen the nut [80] on the locking bolt [79].
4) Turn the adjustment nut [81] until the clearance between the slat and fixed leading edge is 0.002 +0.006 / -0.000 in. (0.05 +0.15 / -0.00 mm) (View D, Figure 503).

SIA 012, 013

NOTE: For a half-slat span, a clearance of 0.002 +0.019 / -0.000 in. (0.051 +0.483 / -0.000 mm) is permitted between the slat 4 and the fixed leading edge.

NOTE: For a one-slat span, a clearance of 0.002 +0.012 / -0.000 in. (0.051 +0.305 / -0.000 mm) is permitted between the slat 4 and the fixed leading edge.

SIA ALL

a) Measure the clearance at the tightest point, within 2.00 in. (50.8 mm) on either side of the each auxiliary track centerline.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

b) Measure the clearance to a depth of 0.40 in. (10.2 mm) to 0.60 in. (15.2 mm).

5) Temporarily tighten the locking bolt [79].

6) Temporarily tighten the jamnut [82].

7) Temporarily tighten the locking bolt [91] at the upper aft auxiliary track .

(f) Measure and calculate the weighted average misfair.

1) Measure the misfair at six locations for each specified gap (Figure 504, Table 502):

NOTE: There will be a total of 30 locations on each wing that you will need to measure.

a) The gap between all adjacent slat ends.

b) The clearance between the outboard end of slats 1 and 8 and adjacent fixed leading edge.

c) The clearance between the inboard end of slats 4 and 5 and adjacent fixed leading edge.

Point	Location	Value
F36	Inbd slat 3/6	
F41	Inbd slat 4/5	
F42	Inbd slat 4/5	
F43	Inbd slat 4/5	
F44	Inbd slat 4/5	
F45	Inbd slat 4/5	
F46	Inbd slat 4/5	

2) Multiply all negative fair measurements by -0.5.

3) Add all the misfair values (positive and negative misfairs).

4) Divide the total misfair value by 6.

5) Make sure that the result is 0.000 in. (0.00 mm) to 0.050 in. (1.27 mm).

(g) Make sure that the slat endstops touch the horizontal and vertical stop pads.

(h) If the slat endstops do not touch the horizontal and vertical stop pads, adjust the stop pad:

1) Remove the retainers [85], nuts [86], and bolts [89].

2) Add or remove shims [87] as it is necessary until the slat fairs with the adjacent slat.

a) Add or remove only a minimum amount of shim necessary for the slat upstop to touch the stop pad.

NOTE: Add or remove only a minimum amount of shim necessary for the slat upstop to touch the stop pad. To adjust each stop pad, add or subtract in any combination of 0.010 in. (0.25 mm), 0.020 in. (0.51 mm), 0.040 in. (1.02 mm) and 0.063 in. (1.60 mm) thick solid shims. The total permitted shim thickness is 0.000 in. (0.00 mm) to 0.128 in. (3.25 mm) and must be such that the slat flex skin keeps solid contact with the fixed leading edge.

3) Apply Cor-Ban 27L Compound, G50237, or corrosion inhibiting material, G50136, to the bolts [89].

4) Install the bolts [89], nuts [86], and retainers [85].

a) Tighten the bolts [89] to 16 in-lb (1.8 N·m) - 20 in-lb (2.3 N·m).

SUBTASK 27-81-00-820-008

(4) Do the final adjustment of the leading edge slat in the (intermediate) extend position:

WARNING

MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(a) To extend the leading edge slat to the (intermediate) extend (1-unit detent) position, do this task: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

(b) Align the noses of the slats to get a mismatch of 0.000 in. (0.00 mm) to 0.060 in. (1.52 mm) between the adjacent slats.

1) Dimension may apply at any one point within the 1.0000 in. (25.40 mm) band width (Figure 505).

NOTE: This dimension is normal to the skin surface where the measurement is taken. Vertical mismatch is permissible.

(c) Make sure that the detent roller touch the root of each detent arm.

(d) Make sure that the clearance between the detent roller and aft surface of the cam plate is 0.000 in. (0.00 mm) to 0.030 in. (0.76 mm).

(e) If the detent roller does not touch the root of the detent arm and the gap between the detent roller and cam plate [83] is out of tolerance, adjust the cam plate [83]:

1) Loosen the two nuts [84] that attach the cam plate [83] to the detent arm [78].

2) Move the cam plate [83] forward or aft as it is necessary.

3) Temporarily tighten the two nuts [84].

(f) Make sure that the clearance between the slat and fixed leading edge is 0.002 +0.006 / -0.000 in. (0.05 +0.15 / -0.00 mm) (View D, Figure 503).

1) Measure the clearance at the tightest point, within 2.00 in. (50.8 mm) on either side of each auxiliary track centerline.

2) Measure the clearance to a depth of 0.40 in. (10.2 mm) to 0.60 in. (15.2 mm).

(g) If the clearance between the slat and fixed leading edge is not 0.002 +0.006 / -0.000 in. (0.05 +0.15 / -0.00 mm), adjust the forward support of the auxiliary track:

1) Remove the nut [74] and washer [75] from the clevis [76].

2) Lift the auxiliary track [72] with the clevis [76] through the auxiliary track support.

3) Add or remove the shims [77] to a total thickness of 0.030 in. (0.76 mm) to 0.270 in. (6.86 mm).

4) Put the clevis [76] back in its position on the auxiliary track support.

5) Install the washer [75] and nut [74] on the clevis [76].

(h) Remove the preload shim assembly, which is part of the kit, SPL-1739, at the forward supports for the auxiliary tracks:

1) Remove the nut [74] and washer [75] from the clevis [76].

2) Lift the auxiliary track [72] with the clevis [76] through the auxiliary track support.

3) Remove the preload shim assembly.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

4) Put the clevis [76] back in its position on the auxiliary track support.

5) Install the washer [75] and nut [74] on the clevis [76].

(i) Make sure that the minimum clearance at these locations is 0.20 in. (5.1 mm):

1) The clearance between all adjacent slat ends.

2) The clearance between the outboard end of slats 1 and 8 and adjacent fixed leading edge.

3) The clearance between the inboard end of slats 4 and 5 and adjacent fixed leading edge.

(j) Extend the slat until the detent roller is completely clear of the detent arm [78] and cam plate [83].

(k) On slats 1, 4, 5 and 8, make sure that the detent arm preload is 80 ±5 lbf (355.9 ±22.3 N), measured with a spring scale, STD-755, at the throat of the cam plate [83], and 0.100 +0.060 / -0.040 in. (2.54 +1.52 / -1.02 mm) dimension at the lower portion of the detent arm [78].

(l) On slats 2, 3, 6 and 7, make sure that the detent arm preload is 50 ±5 lbf (222.4 ±22.3 N), measured with a spring scale, STD-755, at the throat of the cam plate [83], and 0.100 +0.060 / -0.040 in. (2.54 +1.52 / -1.02 mm) dimension at the lower portion of the detent arm [78].

1) If it is necessary, turn the detent arm preload adjustment bolt [73] clockwise to increase the preload or counterclockwise to reduce the preload.

2) Install MS20995C32 lockwire, G01048, on the detent arm preload adjustment bolt [73].

(m) Make sure that the gap at the lower portion of the detent arm slot is 0.100 +0.060 / -0.040 in. (2.54 +1.52 / -1.02 mm).

SUBTASK 27-81-00-820-009

(5) Do the final adjustment of the leading edge slat in the retract position:

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(a) Do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

(b) Make sure that the slat upstops touch the horizontal and vertical stop pads.

(c) If the slat upstops do not touch the horizontal and vertical stop pads, adjust the stop pad:

1) Remove the retainers [85], nuts [86], and bolts [89].

2) Add or remove shims [87] as it is necessary until the slat fairs with the adjacent slat.

NOTE: Add or remove only a minimum amount of shim necessary for the slat upstop to touch the stop pad. To adjust each stop pad, add or subtract in any combination of 0.010 in. (0.25 mm), 0.020 in. (0.51 mm), 0.040 in. (1.02 mm) and 0.063 in. (1.60 mm) thick solid shims. The total permitted shim thickness is 0.000 in. (0.00 mm) to 0.128 in. (3.25 mm) and must be such that the slat flex skin keeps solid contact with the fixed leading edge.

3) Install the bolts [89], nuts [86], and retainers [85].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Make sure that the clearance between the slat and fixed leading edge is 0.002 +0.006 / -0.000 in. (0.05 +0.15 / -0.00 mm) (View D, Figure 503).

SIA 012, 013

NOTE: For a half-slat span, a clearance of 0.002 +0.019 / -0.000 in. (0.051 +0.483 / -0.000 mm) is permitted between the slat 4 and the fixed leading edge.

NOTE: For a one-slat span, a clearance of 0.002 +0.012 / -0.000 in. (0.051 +0.305 / -0.000 mm) is permitted between the slat 4 and the fixed leading edge.

SIA ALL

1) Measure the clearance at the tightest point, within 2.00 in. (50.8 mm) on either side of each auxiliary track centerline.
2) Measure the clearance to a depth of 0.40 in. (10.2 mm) to 0.60 in. (15.2 mm).

(e) If the clearance between the slat and fixed leading edge is not in tolerance, adjust the aft support of the auxiliary track:

1) Loosen the nut [90] on the locking bolt [91] at the upper aft auxiliary track.
2) Loosen the jamnut [82].
3) Loosen the nut [80] on the locking bolt [79].
4) Turn the adjustment nut [81] until the clearance between the slat and fixed leading edge is 0.002 +0.006 / -0.000 in. (0.05 +0.15 / -0.00 mm) (View D, Figure 503).

SIA 012, 013

NOTE: For a half-slat span, a clearance of 0.002 +0.019 / -0.000 in. (0.051 +0.483 / -0.000 mm) is permitted between the slat 4 and the fixed leading edge.

NOTE: For a one-slat span, a clearance of 0.002 +0.012 / -0.000 in. (0.051 +0.305 / -0.000 mm) is permitted between the slat 4 and the fixed leading edge.

SIA ALL

5) Temporarily tighten the nut [80] on the locking bolt [79].
6) Temporarily tighten the jamnut [82].

(f) Reduce the dimension A by 0.021 ±0.003 in. (0.53 ±0.08 mm) to preload the slat trailing edge:

1) Loosen the jamnut [82].
2) Loosen the nut [80] to loosen the locking bolt [79].
3) Turn the adjustment nut [81] 180 ±30 degrees clockwise, viewed from below.

(g) Temporarily tighten the locking bolt [79].

(h) Temporarily tighten the jamnut [82].

(i) Make sure that the weighted average misfair is 0.000 in. (0.00 mm) to 0.050 in. (1.27 mm).

(j) Make sure that the slat endstops touch the horizontal and vertical stop pads.

(k) If the slat endstops do not touch the horizontal and vertical stop pads, adjust the stop pad:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Remove the retainers [85], nuts [86], and bolts [89].
2) Add or remove shims [87] as it is necessary until the slat fairs with the adjacent slat.

NOTE: Add or remove only a minimum amount of shim necessary for the slat upstop to touch the stop pad. To adjust each stop pad, add or subtract in any combination of 0.010 in. (0.25 mm), 0.020 in. (0.51 mm), 0.040 in. (1.02 mm) and 0.063 in. (1.60 mm) thick solid shims. The total permitted shim thickness is 0.000 in. (0.00 mm) to 0.128 in. (3.25 mm) and must be such that the slat flex skin keeps solid contact with the fixed leading edge.

3) Apply Cor-Ban 27L Compound, G50237, or corrosion inhibiting material, G50136, to the bolts [89].
4) Install the bolts [89], nuts [86], and retainers [85].
   a) Tighten the bolts [89] to 16 in-lb (1.8 N·m) - 20 in-lb (2.3 N·m).

(l) Measure and write down the misfairs at six locations for each of these gaps (Figure 504, Table 502):
1) The clearance between all adjacent slat ends
2) The clearance between the outboard end of slats 1 and 8 and adjacent fixed leading edge
3) The clearance between the inboard end of slats 4 and 5 and adjacent fixed leading edge.

(m) Measure the slat end clearance at three locations for each slat (Figure 504, Table 503).

Table 503/27-81-00-993-804

Point	Location	Value
G1	Outbd slat 1/8	
G2	Outbd slat 1/8	
G3	Outbd slat 1/8	
G11	Inbd slat 1/8	
G12	Inbd slat 1/8	
G13	Inbd slat 1/8	
G21	Inbd slat 2/7	
G22	Inbd slat 2/7	
G23	Inbd slat 2/7	
G31	Inbd slat 3/6	
G32	Inbd slat 3/6	
G33	Inbd slat 3/6	
G41	Inbd slat 4/5	
G42	Inbd slat 4/5	
G43	Inbd slat 4/5	

1) Make sure that the clearance between all adjacent slat ends is 0.260 +0.150 / -0.060 in. (6.60 +3.81 / -1.53 mm).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure that the clearance between the slat ends and the adjacent fixed leading edge is 0.250 +0.150 / -0.060 in. (6.35 +3.81 / -1.52 mm).

SUBTASK 27-81-00-860-047

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(6) To extend the leading edge slats to the full extend (30-unit detent) position, do this task: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

SUBTASK 27-81-00-220-006

(7) Make sure that the minimum clearance at these locations is 0.20 in. (5.1 mm):

(a) The clearance between all adjacent slat ends.

(b) The clearance between the outboard end of slats 1 and 8 and adjacent fixed leading edge.

(c) The clearance between the inboard end of slats 4 and 5 and adjacent fixed leading edge.

SUBTASK 27-81-00-860-048

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(8) To extend the leading edge slats to the (intermediate) extend (1-unit detent) position, do this task: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

SUBTASK 27-81-00-820-010

(9) Make sure that the detent roller touch the root of each detent arm.

NOTE: It is possible to manually apply load to the slats to help the slats meet the requirement.

SUBTASK 27-81-00-820-011

(10) Align the noses of the slats to get a mismatch of 0.000 in. (0.00 mm) to 0.060 in. (1.52 mm) between the adjacent slats.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Dimension may apply at any one point within the 1.0000 in. (25.40 mm) band width (Figure 505).

NOTE: This dimension is normal to the skin surface where the measurement is taken. Vertical mismatch is permissible.

(b) Measure the clearance between the detent roller and aft surface of the cam plate.

(c) Make sure that the sum of all of the clearances is 0.000 in. (0.00 mm) to 0.060 in. (1.52 mm).

SUBTASK 27-81-00-420-004

(11) Tighten the nut [80] on the locking bolt [79] for the auxiliary track aft support to 65 in-lb (7.3 N·m) - 100 in-lb (11.3 N·m).

SUBTASK 27-81-00-420-005

(12) Tighten the jamnut [82] on the auxiliary track aft support.

(a) Finger tight until the jamnut [82] touches the support shaft and tighten an additional quarter turn.

1) As an option, it is possible to tighten the jamnut [82] to a setpoint of 65 in-lb (7.3 N·m).

NOTE: There is no lockwire required on the jamnut [82].

SUBTASK 27-81-00-420-006

(13) Tighten the nut [90] on the locking bolt [91] at the upper aft auxiliary track to 130 in-lb (14.7 N·m) - 200 in-lb (22.6 N·m).

SUBTASK 27-81-00-420-007

(14) Tighten the nut [74] on the auxiliary track forward support to a setpoint of 530 in-lb (59.9 N·m).

SUBTASK 27-81-00-420-008

(15) Tighten the nuts [84] on the cam plate to a setpoint of 85 in-lb (9.6 N·m) (preferred method) or the bolts [103] to a setpoint of 100 in-lb (11.3 N·m) (optional method).

NOTE: The recommended method is to tighten the nuts.

NOTE: The optional method is to tighten the bolts.

SUBTASK 27-81-00-420-009

(16) Install MS20995C32 lockwire, G01048, between the holes in the shims [77] of the auxiliary track forward support.

SUBTASK 27-81-00-420-010

(17) Install MS20995C32 lockwire, G01048, on the detent arm preload adjustment bolt [73].

SUBTASK 27-81-00-220-007

(18) Make sure that the clearances between the slat proximity sensors and slat auxiliary track targets are correct and adjust any out of adjustment clearance if necessary (LEADING EDGE FLAP AND SLAT PROXIMITY SENSOR - REMOVAL/INSTALLATION, PAGEBLOCK 27-88-11/401).

SUBTASK 27-81-00-200-006

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(19) Keep the housing (can) assemblies of the slat main tracks clean and free of all unwanted objects (FOD) at all times.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-860-049

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) Do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

SUBTASK 27-81-00-410-002

(2) Install the applicable access panels (TASK 57-41-02-400-801):

NOTE: At the main track locations, the clearance between the access panel and flex tab must be 0.100 +0.080 / -0.040 in. (2.54 +2.03 / -1.02 mm).

(a) For the left wing, install these access panels:

Number	Name/Location
521CB	Lower Leading Edge Access Panel - Slat Station 50
521DB	Lower Leading Edge Access Panel - Slat Station 70
521EB	Lower Leading Edge Access Panel - Slat Station 91
521FB	Lower Leading Edge Access Panel - Slat Station 107
521JB	Lower Leading Edge Access Panel - Slat Station 161
521KB	Lower Leading Edge Access Panel - Slat Station 179
521LB	Lower Leading Edge Access Panel - Slat Station 208
521MB	Lower Leading Edge Access Panel - Slat Station 226
521QB	Lower Leading Edge Access Panel - Slat Station 280
521RB	Lower Leading Edge Access Panel - Slat Station 298
521SB	Lower Leading Edge Access Panel - Slat Station 328
521TB	Lower Leading Edge Access Panel - Slat Station 347
521WB	Lower Leading Edge Access Panel - Slat Station 406
521XB	Lower Leading Edge Access Panel - Slat Station 425
521YB	Lower Leading Edge Access Panel - Slat Station 470
521ZB	Lower Leading Edge Access Panel - Slat Station 479

(b) For the right wing, install these access panels:

Number	Name/Location
621CB	Lower Leading Edge Access Panel - Slat Station 50
621DB	Lower Leading Edge Access Panel - Slat Station 70
621EB	Lower Leading Edge Access Panel - Slat Station 91
621FB	Lower Leading Edge Access Panel - Slat Station 107
621JB	Lower Leading Edge Access Panel - Slat Station 161
621KB	Lower Leading Edge Access Panel - Slat Station 179
621LB	Lower Leading Edge Access Panel - Slat Station 208
621QB	Lower Leading Edge Access Panel - Slat Station 280
621RB	Lower Leading Edge Access Panel - Slat Station 298
621SB	Lower Leading Edge Access Panel - Slat Station 328
621TB	Lower Leading Edge Access Panel - Slat Station 347
621VB	Lower Leading Edge Access Panel - Slat Station 385
621WB	Lower Leading Edge Access Panel - Slat Station 406
621XB	Lower Leading Edge Access Panel - Slat Station 425
621YB	Lower Leading Edge Access Panel - Slat Station 470

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-00-820-012

(3) Adjust the auxiliary arm skin tabs [92] at the auxiliary track locations:

(a) Adjust the skin tab [92] to get the correct gap to the flex skin and access panels [93]:

1) Loosen the nuts [95] on the bolts [102].

2) Adjust the position of the skin tab [92] to get a gap of 0.100 in. (2.54 mm) between the skin tab [92] and flex skin.

3) Adjust the position of the skin tab [92] to get a gap of 0.100 +0.080 / -0.040 in. (2.54 +2.03 / -1.02 mm) between the skin tab [92] and access panels [93].

4) Tighten the nuts [95].

(b) Adjust the position of the skin tab [92] on the skin tab support [96] and skin tab support [97] to get the correct misfair:

1) Loosen the nuts [101] on the bolts [98].

2) Adjust the position of the skin tab [92] until these misfairs are between the slat and skin tab [92]:

a) -0.010 ±0.020 in. (-0.25 ±0.51 mm) for a minimum of 75 percent of the slat span.

b) -0.010 ±0.040 in. (-0.25 ±1.02 mm) for a maximum of 25 percent of the slat span.

3) Tighten the nuts [101].

SUBTASK 27-81-00-220-008

(4) With the slats completely adjusted (rigged), do the step that follow:

(a) Apply hand load to the end of each slat assembly (as necessary) to make sure that preload exists.

(b) If no preload exists, do these steps:

1) Make sure that the possible under-travel dimension of the slat actuator does not exceed 0.020 in. (0.51 mm) maximum between the attach point at the rod end of the slat actuator and clevis bores of the slat attach fittings.

NOTE: The under-travel dimension of the slat actuator indicates that there is no preload of the slat actuator in relationship to the slat actuator attach fitting.

a) If the dimension is greater than 0.020 in. (0.51 mm), make sure that the part numbers of the main track assemblies are correct.

NOTE: When the slat main tracks are incorrectly installed visual cues (excessive mismatches, misalignment, skew, etc.) will sometimes indicate a problem in advance depending on which slat is affected.

SUBTASK 27-81-00-710-005

(5) Do this task: Leading Edge Flap and Slat Operational Test in Primary Mode, TASK 27-81-00-700-801.

END OF TASK

TASK 27-81-00-700-801

5. Leading Edge Flap and Slat Operational Test in Primary Mode

(Figure 506, Figure 507)

A. General

(1) The leading edge slat sequence for the 737-8 and 737-9 are the same. The leading edge slats move to the extend position for flap lever positions 1-unit detent through 25-unit detent. The leading edge slats move to the full extend position at the 30-unit detent flap lever position.

D. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

E. Prepare for the Test

SUBTASK 27-81-00-860-051

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) To pressurize hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-81-00-860-052

(2) If the flap control lever is not in the UP position, do these steps:

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(a) Move the flap control lever to the UP position.

(b) Let the leading edge flaps and slats and the trailing edge flaps move to the retract position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-00-010-003

(3) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

F. Leading Edge Flap and Slat Operational Test in Primary Mode

SUBTASK 27-81-00-740-001

(1) Do this task: FSEU Display and Existing Faults Test, TASK 27-51-00-740-801.

SUBTASK 27-81-00-730-001

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Do a test of the leading edge flap and slat operational test in primary mode:

(a) Use the FSEU front panel to do a check of the position of the leading edge flaps and slats (Figure 506):

1) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?.

2) Push the down arrow until OTHER FUNCTNS? shows on the display.

3) Push the YES button to select OTHER FUNCTNS? on the FSEU.

4) Push the down arrow until I/O MONITOR? shows on the display.

5) Push the YES button to select I/O MONITOR? from the menu.

6) Push the YES button to select PROX SENSORS? from the I/O MONITOR? menu.

(b) Push the down arrow to step through the proximity sensor states at the leading edge flaps and slats UP position.

(c) Make sure these displays and the proximity sensor states show on the FSEU (FSEU DISPLAY AND PROXIMITY SENSOR STATE - LE FLAPS AND SLATS RETRACTED (FLAP UP)/Table 504):

Table 504/27-81-00-993-805 FSEU DISPLAY AND PROXIMITY SENSOR STATE - LE FLAPS AND SLATS RETRACTED (FLAP UP)

(d) Move the flap control lever to the 1-unit detent position.

(e) Make sure that the leading edge flaps 1 to 4 move to the extend position.

(f) Make sure that the leading edge slats 1 to 8 move to the extend position.

(g) When the leading edge flaps and slats start to move to the commanded 1-unit detent position, look for these conditions(Figure 507):

1) Make sure the amber LE FLAPS TRANSIT light on the engine indication display of the captain's inboard DU on panel P1, comes on.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Make sure these lights come on in the leading edge flap/slat position annunciator, P5-12, on the aft overhead panel.
   a) Make sure the annunciator LE DEVICES FLAPS 1 through 4, amber TRANSIT lights, comes on.
   b) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, comes on.

(h) When the leading edge flaps and slats stop at the commanded 1-unit detent position, look for these conditions:
   1) Make sure the amber LE FLAPS TRANSIT light, on the captain's inboard DU engine indication display, goes off.
   2) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, comes on.
   3) Make sure the annunciator LE DEVICES FLAPS 1 through 4, amber TRANSIT lights, go off.
   4) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, go off.
   5) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, come on.
   6) Make sure the annunciator LE DEVICES SLATS 1 through 8, green EXT lights, come on.
   7) Make sure that the leading edge flaps 1 through 4 are at the extend position.
   8) Make sure that the leading edge slats 1 through 8 are at the extend position.

(i) Push the down arrow on the FSEU to step through the proximity sensor states.
   1) Make sure these displays and the proximity sensor states show on the FSEU (FSEU DISPLAY AND PROXIMITY SENSOR STATE - LE FLAPS AND SLATS EXTEND (1-UNIT DETENT)/Table 505):

Table 505/27-81-00-993-806 FSEU DISPLAY AND PROXIMITY SENSOR STATE - LE FLAPS AND SLATS EXTEND (1-UNIT DETENT)

(j) Move the flap control lever to the 30-unit detent position.

1) Make sure that the leading edge flaps 1 to 4 remain at the extend position.

2) Make sure that the leading edge slats 1 to 8 move to the full extend position.

(k) Do these checks while the leading edge slats move to the commanded 30-unit detent position (Figure 507):

1) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, goes off.

2) Make sure the amber LE FLAPS TRANSIT light, on the captain's inboard DU engine indication display, comes on.

3) Make sure the annunciator LE DEVICES SLATS 1 through 8, green EXT lights, go off.

4) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, come on.

(l) Do these checks when the leading edge slats stop at the commanded 30-unit detent position:

1) Make sure the amber LE FLAPS TRANSIT light, on the captain's inboard DU engine indication display, goes off.

2) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, comes on.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, are on.

4) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, go off.

5) Make sure the annunciator LE DEVICES SLATS 1 through 8, green FULL EXT lights, come on.

(m) Push the down arrow on the FSEU to step through the proximity sensor states.

1) Make sure these displays and the proximity sensor states show on the FSEU (FSEU DISPLAY AND PROXIMITY SENSOR STATE - LE FLAPS AND SLATS FULL EXTEND (30-UNIT DETENT)/Table 506):

Table 506/27-81-00-993-807 FSEU DISPLAY AND PROXIMITY SENSOR STATE - LE FLAPS AND SLATS FULL EXTEND (30-UNIT DETENT)

(n) Push the ON/OFF button on the front panel of the FSEU to turn the display off.

NOTE: The FSEU will turn itself off after 75 seconds.

SUBTASK 27-81-00-860-053

(3) Move the flap control lever to the UP position.

(a) Make sure that the leading edge flaps 1 to 4 retract to the up position.

(b) Make sure that the leading edge slats 1 to 8 retract to the up position.

(c) Look for these conditions as the leading edge flaps and slats move to the retract position.

1) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, goes off.

2) Make sure the amber LE FLAPS TRANSIT light on the engine indication display of the captain's inboard DU on panel P1, comes on.

3) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, goes off.

4) Make sure the annunciator LE DEVICES SLATS 1 through 8, green EXT lights, goes off.

5) Make sure the annunciator LE DEVICES FLAPS 1 through 4, amber TRANSIT lights, come on.

6) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, come on.

(d) Look for these conditions when the leading edge flaps and slats stop at the retract position:

1) Make sure the annunciator LE DEVICES FLAPS 1 through 4, amber TRANSIT lights, goes off.

2) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, goes off.

3) Make sure that all annunciator lights are off.

4) Make sure the amber LE FLAPS TRANSIT light on the engine indication display of the captain's inboard DU on panel P1, goes off.

G. Put the Airplane Back to Its Usual Condition

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Test

SUBTASK 27-81-00-860-056

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) To pressurize hydraulic system B, do this task: Hydraulic System A or B Pressurization with an Engine-Driven Pump (EDP), TASK 29-11-00-860-804 or Hydraulic System A or B Pressurization with a Portable Hydraulic Cart, TASK 29-11-00-860-802.

E. Leading Edge Flap and Slat Timing Test in Primary Mode

SUBTASK 27-81-00-720-001

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) Do a timing test of the leading edge flap and slat control system in primary mode:

NOTE: Measure the time intervals between the time the surfaces start to move to the time the surfaces stop moving.

(a) If the flap control lever is not in the UP position, do these steps:

1) Move the flap control lever to the UP position.

2) Let the leading edge flaps and slats and the trailing edge flaps move to the retract position.

(b) Move the flap control lever to the 25-unit detent position. Do one of the following steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Using hydraulic system A or B pressurization with a portable hydraulic cart:
   a) Make sure the leading edge flaps extend fully in 5.5 to 7.5 seconds.
   b) Make sure the leading edge slats move to the extend position in 7.5 to 9.5 seconds.
2) Using hydraulic system A or B pressurization with an Engine-Driven Pump (EDP):
   a) Make sure the leading edge flaps extend fully in 7.0 to 9.0 seconds.
   b) Make sure the leading edge slats move to the extend position in 9.0 to 11.0 seconds.

(c) Move the flap control lever to the 30-unit detent. Do one of the following steps:
1) Using hydraulic system A or B pressurization with a portable hydraulic cart:
   a) Make sure the leading edge slats move to the full extend position in 2.0 to 3.5 seconds.
2) Using hydraulic system A or B pressurization with an Engine-Driven Pump (EDP):
   a) Make sure the leading edge slats move to the full extend position in 3.5 to 5.5 seconds.

(d) Make sure the LE indication flaps EXTEND and slats FULL EXTEND lights on the aft overhead panel are on (Figure 507).

(e) Move the flap control lever to the 1-unit detent position. Do one of the following steps:
1) Using hydraulic system A or B pressurization with a portable hydraulic cart:
   a) Make sure the leading edge slats move to the extend position in 3.5 to 5.5 seconds.
2) Using hydraulic system A or B pressurization with an Engine-Driven Pump (EDP):
   a) Make sure the leading edge slats move to the extend position in 4.5 to 6.5 seconds.
3) Let the trailing edge flaps move to the correct position.

(f) Move the flap control lever to the UP detent position. Do one of the following steps:
1) Using hydraulic system A or B pressurization with a portable hydraulic cart:
   a) Make sure the leading edge flaps move to the retract position in 7.0 to 9.0 seconds.
   b) Make sure the leading edge slats move to the retract position in 6.5 to 8.5 seconds.
2) Using hydraulic system A or B pressurization with an Engine-Driven Pump (EDP):
   a) Make sure the leading edge flaps move to the retract position in 8.0 to 10.0 seconds.
   b) Make sure the leading edge slats move to the retract position in 7.0 to 9.0 seconds.

(g) Make sure the LE indication flaps and slats TRANSIT, EXTEND and FULL EXTEND lights on the aft overhead panel are off.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-860-057

(1) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-81-00-710-801

7. Leading Edge Flap and Slat System Standby Actuation Operational Test

(Figure 507, Figure 508)

NOTE: This procedure is a scheduled maintenance task.

A. General

(1) The alternate control system uses electrical power to power the standby hydraulic system which moves the leading edge slats and flaps.

B. References

Reference	Title
27-81-00-860-804	Leading Edge Flaps and Slats Retraction (P/B 201)

29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

C. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Operational Test

SUBTASK 27-81-00-860-059

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) If the leading edge flaps and slats are not in the retract position, do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

E. Leading Edge Standby System Operational Test

SUBTASK 27-81-00-860-060

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(1) Move the ALTERNATE FLAPS ARM switch on the P5 panel to the ARM position (Figure 508).

NOTE: The standby hydraulic pump motor will operate when the ALTERNATE FLAPS ARM switch is in the ARM position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-00-860-061

WARNING

MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(2) Move the flap control lever to the 30-unit position.

NOTE: This will decrease the load on the flap electric motor. The leading edge and trailing edge surfaces will not move when you move the flap control lever.

SUBTASK 27-81-00-710-002

(3) Move the ALTERNATE FLAPS control switch to the DOWN position to extend the leading edge flaps and slats to the full extend position.

NOTE: It is not necessary to extend the trailing edge flaps beyond the 30-unit position.

(a) When the flaps and slats start to extend, make sure all the LE indication flaps and slats TRANSIT lights, on the aft overhead panel, P5, come on (Figure 507).

(b) Do these checks of the aft overhead lights when the leading edge flaps and slats are in the full extend position:

1) Make sure all the TRANSIT lights go off.

2) Make sure the flaps EXT lights come on.

3) Make sure the slats FULL EXT lights come on.

SUBTASK 27-81-00-860-062

(4) Move the ALTERNATE FLAPS control switch to the OFF position.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-860-063

WARNING

MAKE SURE THE POSITION OF THE FLAPS AGREES WITH THE POSITION OF THE FLAP CONTROL LEVER. WHEN YOU SUPPLY HYDRAULIC POWER, THE FLAPS AND SLATS WILL MOVE AUTOMATICALLY TO THE POSITION OF THE FLAP CONTROL LEVER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Make sure the flap control lever is in the same position as the trailing edge flaps and leading edge flaps and slats.

SUBTASK 27-81-00-860-064

(2) Move the ALTERNATE FLAPS ARM switch to the OFF position to disarm the alternate control system.

SUBTASK 27-81-00-860-065

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-00-860-066

(4) Move the flap control lever to the UP position to retract the leading edge flaps and slats and the trailing edge flaps.

NOTE: The leading edge flaps and slats will not retract with alternate control.

SUBTASK 27-81-00-860-067

(5) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

TASK 27-81-00-700-803

8. Leading Edge Flap and Slat Timing Test in the Standby Mode

(Figure 508)

212	Flight Compartment - Right

C. Prepare for the Test

SUBTASK 27-81-00-860-069

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) If the leading edge flaps and slats are not in the retract position, do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

D. Leading Edge Flap and Slat Timing in the Standby Mode

SUBTASK 27-81-00-710-003

(1) Do the leading edge flap and slat timing test in the standby mode:

NOTE: The leading edge flaps and slats do not retract in the standby mode.

(a) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the ARM position (Figure 508).

(b) Move the ALTERNATE FLAPS control switch to the DOWN position for 5 seconds, then release.

(c) When the flaps and slats start to extend, make sure all the LE indication flaps and slats TRANSIT lights, on the aft overhead panel, P5, come on.

(d) Make sure that the leading edge flaps extend in 29 to 37 seconds.

(e) Make sure that the leading edge slats extend in 43 to 55 seconds.

(f) Do these checks of the lights on the Aft Overhead Panel, P5-12, when the leading edge flaps and slats are in the full extended position(Figure 507);

1) Make sure that all the TRANSIT lights go off.

2) Make sure that the flaps EXT lights come on.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Make sure that the slats FULL EXT lights come on.

(g) Put the ALTERNATE FLAPS arm switch, on the overhead panel, P5, in the OFF position (Figure 508).

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-860-070

(1) Do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

——— END OF TASK ———

212	Flight Compartment - Right

C. Access Panels

Number	Name/Location
117A	Electronic Equipment Access Door

D. Prepare for the Test

SUBTASK 27-81-00-010-004

(1) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-81-00-860-072

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) To pressurize the hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

E. Leading Edge Cruise Depressurization Test

SUBTASK 27-81-00-860-073

WARNING

MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) Move the flap control lever to the 5-unit position to extend the leading edge flaps and slats and the trailing edge flaps.

SUBTASK 27-81-00-740-002

(2) Do this test of the leading edge cruise depressurization valve:

(a) Make sure that the FLT CONTROL and ALTERNATE FLAPS switches on the P5 Fwd Overhead panel are in the OFF position.

(b) Move the ALTERNATE FLAPS ARM switch on the P5-3 panel to the ARM position.

(c) Move flap control lever to the UP position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

(e) Use the FSEU to operate the leading edge cruise depressurization valve:

1) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?.

2) Push the NO button until OTHER FUNCTNS? shows on the display.

3) Push the YES button to select OTHER FUNCTNS? on the FSEU.

4) Push the YES button to select SET OUTPUTS? from the OTHER FUNCTNS? menu.

5) Push the YES button to select LE DEPR VALVE? from the menu.

6) Push the YES button to select SET ON? on the display.

7) Press YES switch on the FSEU.

(f) Make sure the leading edge flaps and slats do not move.

(g) Wait until the FSEU display shows LE DEPR VALVE?.

NOTE: This will take approximately 75 seconds from pressing YES button to SET ON?.

(h) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

(i) Push the YES button on the FSEU to display SET ON?.

1) Make sure the trailing edge flaps remain stationary.

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(j) Push the YES button to select SET ON? on the display.

(k) Make sure the leading edge slats retract and that the trailing edge flaps stay extended.

NOTE: The LE FLAPS TRANSIT lights will stay on.

(l) Wait until the FSEU display shows LE DEPR VALVE? and the leading edge surfaces extend to the extend position.

NOTE: This will take approximately 75 seconds.

(m) Move the flap control lever to the 1-unit position.

NOTE: The flap position indicator stays at the 5-unit position when the flaps and slats move to the 1-unit position.

(n) Push the YES button on the FSEU to display SET ON?.

(o) Push the YES button to select SET ON? on the display.

(p) Make sure the flaps and slats don't move.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(q) Move the ALTERNATE FLAPS ARM switch to the OFF position.

NOTE: The leading edge and trailing edge flaps will move to the 1-unit position.

F. Put the Airplane Back to Its Usual Condition.

SUBTASK 27-81-00-860-074

(1) Push the ON/OFF button on the front panel of the FSEU to turn the display off.

SUBTASK 27-81-00-860-075

(2) Move the flap control lever to the UP position to retract the flaps and slats.

SUBTASK 27-81-00-410-004

(3) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-81-00-860-076

(4) To remove pressure from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

TASK 27-81-00-700-804

10. Leading Edge Uncommanded Motion Protection Test

NOTE: This procedure is a scheduled maintenance task.

117A	Electronic Equipment Access Door

D. Prepare for the Test

SUBTASK 27-81-00-010-005

(1) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-00-860-078

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

E. Leading Edge Uncommanded Motion Protection Test

SUBTASK 27-81-00-860-079

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) Move the flap control lever to the UP position.

SUBTASK 27-81-00-720-002

(2) Do this test of the leading edge UCM shutoff valve:

(a) Make sure that the flap control lever is in the UP detent position.

(b) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

(c) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?.

(d) Push the down arrow until OTHER FUNCTNS? shows on the display.

(e) When OTHER FUNCTNS? shows, press YES.

(f) When SET OUTPUTS? shows, press YES.

(g) When LE DEPR VALVE? shows, press NO.

(h) When LE UCM SHUTOFF? shows, press YES.

(i) When SET ON? shows, press YES and move the flap control lever to the 1-unit detent position within 10 seconds.

NOTE: If you do not move the lever within 10 seconds, the test will not work.

(j) Make sure that the leading edge flaps and slats extend before the TE flap indicator needles are inside the 1-unit detent indicator (View A, Figure 507).

(k) Make sure that the leading edge indication flaps EXTEND light on the aft overhead panel is on (View B, Figure 507).

NOTE: The Amber LE FLAPS TRANSIT indication stays ON and then turns OFF when the Green LE FLAPS EXT indication shows.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(l) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

(m) Wait until the FSEU display shows LE UCM SHUTOFF?.

NOTE: This will take approximately 75 seconds.

(n) Push the YES button on the FSEU to display SET ON?.

(o) When SET ON? shows, press YES and move the flap control lever to the UP detent position within 10 seconds.

NOTE: If you do not move the lever within 10 seconds, the test will not work.

(p) Make sure that the leading edge indication flaps and slats EXTEND lights on the aft overhead panel are on (View B, Figure 507).

(q) Make sure that the leading edge flaps and slats move to the UP position.

NOTE: This will take approximately 75 seconds from pressing YES button to SET ON?.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-860-080

(1) Push the ON/OFF button on the front panel of the FSEU to turn the display off.

SUBTASK 27-81-00-860-081

(2) Move the flap control lever to the UP position to retract the flaps and slats.

SUBTASK 27-81-00-410-005

(3) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-81-00-860-082

(4) To remove pressure from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

TASK 27-81-00-710-802

11. Standby Hydraulic System Leading Edge Uncommanded Motion Test

(Figure 508)

NOTE: This procedure is a scheduled maintenance task.

SUBTASK 27-81-00-010-011

(2) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-81-00-860-102

WARNING WHEN YOU OPEN THE P91 AND P92 PANELS, MAKE SURE THAT THE OUTER DOOR STAYS AS OPEN AS POSSIBLE. IF THE OUTER DOOR TURNS IN, THE ATTACHED DOOR COMPONENTS COULD TOUCH THE INNER DOOR COMPONENTS. THIS CAN CAUSE AN ARC CONDITION WHEN YOU SUPPLY POWER. IF YOU DO NOT OBEY, DAMAGE TO EQUIPMENT AND INJURY TO PERSONNEL CAN OCCUR.

WARNING MAKE SURE THAT YOU DO NOT TOUCH THE CONDUCTORS IN THE P91 AND P92 PANELS. BE CAREFUL WHEN YOU GET ACCESS TO THE CIRCUIT BREAKERS ON THE INNER SIDE OF THE P91 AND P92 PANELS (ROW F). IF IT IS POSSIBLE, REMOVE AIRPLANE ELECTRICAL POWER FIRST. THE P91 AND P92 PANELS HAVE HIGH VOLTAGES AND CURRENTS. ELECTRICAL VOLTAGE AND CURRENT CAN KILL YOU OR CAUSE INJURIES.

(3) Make sure that this circuit breaker is closed:

Power Distribution Panel Number 2, P92

Row	Col	Number	Name
F	2	C01449	STANDBY HYDRAULIC PUMP

SUBTASK 27-81-00-410-009

(4) Close this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-81-00-860-085

(5) Make sure that the leading edge flaps and slats, and trailing edge flaps are in the retracted position:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Supply system B hydraulic power, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(b) Move the flap control lever to the UP position to move the leading edge flaps and slats, and trailing edge flaps to the retracted position.

(c) Remove system B hydraulic power, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

E. Standby Hydraulic System Leading Edge Uncommanded Motion Test

SUBTASK 27-81-00-720-003

(1) Pressurize the standby hydraulic system:

(a) Set the ALTERNATE FLAPS, on the P5 forward overhead panel, to the ARM position.

NOTE: This will start the standby hydraulic pump.

(b) Make sure that the STANDBY HYD LOW PRESSURE light, on the P5 panel, comes on and quickly goes out.

NOTE: This makes sure that the standby system is pressurized.

SUBTASK 27-81-00-210-004

(2) Observe the leading edges on both the left and right wings:

(a) Make sure that the leading edges do not move when you pressurize the standby hydraulic system.

NOTE: The leading edge flaps can slowly extend because of gravity.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-860-086

(1) Move the ALTERNATE FLAPS ARM switch on the forward overhead panel to the OFF position.

NOTE: This will turn off the standby hydraulic system.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE FLAP AND SLAT CONTROL SYSTEM - INSPECTION/CHECK

1. General

A. This procedure has these tasks:

(1) Inspection of the Wing Leading Edge Flap and Slat Actuators and Leading Edge Flap and Slat Actuation Mechanism.

(2) Internal Hydraulic Leakage Check of the Wing Leading Edge Flap and Slat System.

TASK 27-81-00-210-801

TASK 27-81-00-790-801

3. Leading Edge Flap and Slat System Internal Hydraulic Leakage Check

A. General

(1) This procedure does an internal hydraulic leakage check for the leading edge flap and slat valves. The purpose of this leakage test is to identify the total leakage value at the retracted and full extended position.

(2) You must measure the amount of leakage of hydraulic fluid during different conditions of operation to measure the fluid flow rate. It will be necessary to disconnect the return hydraulic lines.

(3) Hydraulic pressure that pushes the hydraulic fluid to blow past the internal O-ring seals in the valves and actuators is internal hydraulic leakage. This is an indication of an internal seal problem. Large internal leakage can cause slow actuation times.

(4) Normal system operation uses the hydraulic system B to move the leading edge (LE) flaps and slats.

(5) Hydraulic pressure goes through the LE cruise depressurization valve to the LE flap and slat control valve. The LE flap and slat control valve sends extend pressure to the LE flap and slat actuators. This causes the LE flaps and slats to move to the extend position. The hydraulic fluid goes through hydraulic fuses in the lines.

(6) The leading edge flap and slat system connects to the hydraulic system return at these three locations: the leading edge standby line, the return line on the LE flap and slat control valve, and the return line for the autoslat module and LE UCM shutoff valve.

Zone	Area
132	Center Section Wing Box, Body Station 540.00 to Body Station 663.75 - Right
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right
192	Lower Wing-To-Body Fairing - Under Wing Box
211	Flight Compartment - Left
212	Flight Compartment - Right

E. Access Panels

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

F. Prepare for the Internal Leakage Check

SUBTASK 27-81-00-860-087

(1) Supply electrical power (TASK 24-22-00-860-801).

SUBTASK 27-81-00-010-008

(2) To get access to the autoslat control valve, do this step:

(a) Remove this access panel:

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

G. Retracted LE Flap and Slat System Internal Hydraulic Leakage Check

SUBTASK 27-81-00-860-088

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power (TASK 29-11-00-860-801).

SUBTASK 27-81-00-860-089

(2) Pressurize the system B hydraulic reservoir (TASK 29-09-00-860-801).

SUBTASK 27-81-00-860-090

(3) Make sure the flap control lever is at the FLAP UP position to do the leakage check at the retracted position.

SUBTASK 27-81-00-860-091

(4) Remove the pressure from the system B reservoir (TASK 29-09-00-860-802).

NOTE: It is necessary to remove the pressure from the reservoir. When you disconnect a hydraulic line below the level of the reservoir, all the hydraulic fluid will flow and drain out of the reservoir if pressure is applied.

SUBTASK 27-81-00-860-092

(5) Remove the system B hydraulic power (TASK 29-11-00-860-805).

SUBTASK 27-81-00-790-001

(6) Do a check of the LE flap and slat control valve for hydraulic fluid leakage:

(a) Put a graduated container, STD-6338, under the LE flap and slat control valve.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Disconnect the return line from the LE flap and slat control valve (TASK 27-81-81-000-801).

NOTE: Only do the applicable steps in the task.

(c) Install a cap/plug, STD-14686, on the hydraulic line that goes to the hydraulic reservoir.

(d) Supply system B hydraulic power (TASK 29-11-00-860-801).

(e) Pressurize the system B hydraulic reservoir (TASK 29-09-00-860-801).

(f) Measure and make a record of the leakage rate of the hydraulic fluid from the LE flap and slat control valve.

(g) Remove the pressure from the system B reservoir (TASK 29-09-00-860-802).

(h) Remove the system B hydraulic power (TASK 29-11-00-860-805).

(i) Remove the cap/plug, STD-14686, from the hydraulic line.

(j) Reconnect the return line to the LE flap and slat control valve (TASK 27-81-81-400-801).

NOTE: Only do the applicable steps in the task.

SUBTASK 27-81-00-790-002

(7) Do a check of the LE standby shutoff valve for hydraulic fluid leakage:

(a) Put a graduated container, STD-6338, under the leading edge standby shutoff valve.

(b) Disconnect the return line from the leading edge standby shutoff valve (TASK 27-81-91-000-801).

NOTE: Only do the applicable steps in the task.

(c) Install a cap/plug, STD-14686, on the hydraulic line that goes to the hydraulic reservoir.

(d) Supply system B hydraulic power (TASK 29-11-00-860-801).

(e) Pressurize the system B hydraulic reservoir (TASK 29-09-00-860-801).

(f) Measure and make a record of the leakage rate of the hydraulic fluid from the leading edge standby shutoff valve.

(g) Remove the pressure from the system B reservoir (TASK 29-09-00-860-802).

(h) Remove the system B hydraulic power (TASK 29-11-00-860-805).

(i) Remove the cap/plug, STD-14686, from the hydraulic line.

(j) Re-connect the return line to the leading edge standby shutoff valve (TASK 27-81-91-400-801).

NOTE: Only do the applicable steps in the task.

SUBTASK 27-81-00-790-003

(8) Do a check of the LE uncommanded movement (UCM) shutoff valve and the autoslat valve for hydraulic fluid leakage:

(a) Put a graduated container, STD-6338, under the tee for the return line on the LE UCM shutoff valve and the autoslat valve.

(b) Disconnect the return line from the tee (TASK 27-81-52-000-801).

NOTE: Only do the applicable steps in the task.

(c) Install a cap/plug, STD-14686, on the hydraulic line that goes to the hydraulic reservoir.

(d) Supply system B hydraulic power (TASK 29-11-00-860-801).

(e) Pressurize the system B hydraulic reservoir (TASK 29-09-00-860-801).

(f) Measure and make a record of the leakage rate of the hydraulic fluid from the tee.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(g) Remove the pressure from the system B reservoir (TASK 29-09-00-860-802).

(h) Remove the system B hydraulic power (TASK 29-11-00-860-805).

(i) Remove the cap/plug, STD-14686, from the hydraulic line.

(j) Re-connect the return line to the tee (TASK 27-81-52-400-801).

NOTE: Only do the applicable steps in the task.

SUBTASK 27-81-00-790-004

(9) Calculate the internal hydraulic leakage for the retracted leading edge flap and slats:

(a) Add the three leakage rates together to find the total leakage rate with the leading edge flaps and slats in the retracted position.

(b) If the total leakage rate is more than 0.1 gal (0.4 l) per minute, then there is excessive leakage in the leading edge system.

NOTE: The hydraulic fuse will set when the leakage rate is more than 0.6 gal (2.3 l) per minute. When the leakage rate is between 0.1 gal (0.4 l) per minute and 0.6 gal (2.3 l) per minute, the fuse could set.

(c) If the total leakage rate is 0.1 gal (0.4 l) per minute or less, then continue to find the total leakage rate for the leading edge flaps and slats in the full extended position.

NOTE: A hydraulic fuse that sets at a leakage rate less than 0.1 gal (0.4 l) per minute should be replaced.

H. Extended LE Flap and Slat System Internal Hydraulic Leakage Check

SUBTASK 27-81-00-860-093

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power (TASK 29-11-00-860-801).

SUBTASK 27-81-00-860-094

(2) Pressurize the system B hydraulic reservoir (TASK 29-09-00-860-801).

SUBTASK 27-81-00-860-095

(3) Extend the leading edge flaps and slats (TASK 27-81-00-860-801).

(a) Move the flap control lever to the 1-unit position to move the leading edge flaps to the full extend position and leading edge slats to the extend position.

SUBTASK 27-81-00-790-005

(4) Do these procedures to make a record of the leakage rate with the leading edge flaps at the full extend position and leading edge slats at the extend position.

(a) Do a check of the LE flap and slat control valve for hydraulic fluid leakage.

(b) Do a check of the LE standby shutoff valve for hydraulic fluid leakage.

(c) Do a check of the LE uncommanded movement (UCM) shutoff valve and the autoslat valve for hydraulic fluid leakage.

SUBTASK 27-81-00-860-096

(5) Extend the leading edge flaps and slats (TASK 27-81-00-860-801).

(a) Move the flap control lever to the 30-unit position to move the leading edge flaps and leading edge slats to the full extend position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-00-790-006

(6) Do these steps to make a record of the leakage rate with the leading edge flaps and leading edge slats at the full extend position.

(a) Do a check of the LE flap and slat control valve for hydraulic fluid leakage.

(b) Do a check of the LE standby shutoff valve for hydraulic fluid leakage.

(c) Do a check of the LE uncommanded movement (UCM) shutoff valve and the autoslat valve for hydraulic fluid leakage.

SUBTASK 27-81-00-860-097

(7) Remove the pressure from the system B reservoir (TASK 29-09-00-860-802).

SUBTASK 27-81-00-860-098

(8) Remove the system B hydraulic power (TASK 29-11-00-860-805).

SUBTASK 27-81-00-790-007

(9) Calculate the Internal Hydraulic Leakage for the Full Extended Leading Edge Flap and Slats.

(a) Add the three leakage rates together to find the total leakage rate with the leading edge in the full extended position.

(b) If the total leakage rate is more than 0.1 gal (0.4 l) per minute, then there is excessive leakage in the leading edge system.

NOTE: The hydraulic fuse will set when the leakage rate is more than 0.6 gal (2.3 l) per minute. When the leakage rate is between 0.1 gal (0.4 l) per minute and 0.6 gal (2.3 l) per minute, the fuse could set.

SUBTASK 27-81-00-790-008

(10) If the total leakage rate is 0.1 gal (0.4 l) per minute or less, then there can be a problem with the hydraulic fuses.

NOTE: A hydraulic fuse that sets at a leakage rate less than 0.1 gal (0.4 l) per minute should be replaced.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-00-610-001

(1) If it is necessary to service the hydraulic reservoir, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-81-00-710-004

(2) Do an operational test of the LE flaps and slats (TASK 27-81-00-700-801).

SUBTASK 27-81-00-790-009

(3) Make sure there are no hydraulic fluid leaks at the LE flap and slat control valve, LE standby shutoff valve, LE Uncommanded Movement (UCM) shutoff valve and autoslat control valve.

SUBTASK 27-81-00-410-006

(4) Install this access panel:

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

SUBTASK 27-81-00-860-099

(5) Remove the hydraulic power (TASK 29-11-00-860-805).

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE FLAPS - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the leading edge flaps.

(2) An installation of the leading edge flaps.

B. This procedure applies to the inboard and outboard leading edge flaps.

TASK 27-81-11-000-801

2. Leading Edge Flap Removal

(Figure 401)

A. References

Reference	Title

29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1734	Lockout Set - Leading Edge Slats and Krueger Flaps Actuators Part #: C27051-29 Supplier: 81205

C. Location Zones

Zone	Area
512	Left Wing - Krueger Flap No. 2
513	Left Wing - Krueger Flap No. 1
612	Right Wing - Krueger Flap No. 3
613	Right Wing - Krueger Flap No. 4

D. Prepare for the Removal

SUBTASK 27-81-11-860-001

WARNING KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Pressurize hydraulic system B (TASK 29-11-00-860-801).

SUBTASK 27-81-11-860-002

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLAPS AND SLATS. THE FLAPS AND SLATS CAN ACCIDENTALLY MOVE AND CAUSE INJURIES TO PERSONNEL OR DAMAGE TO EQUIPMENT.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

CAUTION

DO NOT EXTEND THE LEADING EDGE FLAPS AND SLATS UNTIL YOU CLOSE THE THRUST REVERSER, AND FAN DUCT COWL. THE LEADING EDGE FLAPS AND SLATS WILL HIT THE THRUST REVERSER, OR FAN DUCT COWL IF THEY ARE OPEN. IF THEY HIT, DAMAGE TO EQUIPMENT WILL OCCUR.

(2) Move the flap control lever to the 1-unit detent to extend the leading edge flaps.

SUBTASK 27-81-11-860-003

(3) Remove power from hydraulic system B (TASK 29-11-00-860-805).

SUBTASK 27-81-11-480-001

WARNING

INSTALL THE LOCK ON LEADING EDGE FLAP ACTUATOR CAREFULLY TO PREVENT THE ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS. THE LEADING EDGE FLAPS CAN MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(4) Install the lockout set, SPL-1734, on the actuator of the adjacent leading edge flap (TASK 27-81-00-480-801).

E. Leading Edge Flap Removal

SUBTASK 27-81-11-020-001

(1) Disconnect the flap actuator [4] from the leading edge flap [2] or leading edge flap [1]:

(a) Remove the pin [6], nut [7], washer [8], washer [5], bushing [11], washer [10], and bolt [9] to disconnect the flap actuator [4] from the outboard leading edge flap [1].

(b) Remove the pin [15], nut [16], washer [17], washer [18], bushing [12], washer [13], and bolt [14] to disconnect the flap actuator [4] from the inboard leading edge flap [2].

SUBTASK 27-81-11-020-002

(2) Do these steps to remove the outboard leading edge flap [1] from the fixed leading edge:

(a) Disconnect the outboard bullnose linkage [53] from the fixed leading edge flap.

1) Remove the pin [55], nut [54], washer [56], anti-rotation washers [41], bushing [44], washer [43], and bolt [42].

(b) Remove the nut [32], washers [31], and bolt [30] to disconnect the bonding jumper [29] from the fixed leading edge.

(c) Disconnect hinges 1 through 4 on the leading edge flap [1] from the fixed leading edge.

1) At hinges 1 and 4, remove the pins [21], nuts [22], washers [20], bushings [19], washers [24], and bolts [23].

2) At hinges 2 and 3, remove the pins [34], nuts [33], washers [25], bushings [26], washers [28], and bolts [27].

(d) Remove the leading edge flap [1] from the wing.

SUBTASK 27-81-11-020-003

(3) Do these steps to remove the inboard leading edge flap [2] from the fixed leading edge:

(a) Disconnect the mid and inboard bullnose linkages [53] from the fixed leading edge flap.

1) Remove the pin [55], nut [54], washer [56], anti-rotation washers [41], bushing [44], washer [43], and bolt [42].

(b) Remove the nut [32], washers [31], and bolt [30] to disconnect the bonding jumper [29] from the leading edge flap [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Disconnect hinges 5 through 8 on the leading edge flap [2] from the fixed leading edge flap.

1) At hinge 5, remove the pin [21], nut [22], washer [20], bushing [19], washer [24], and bolt [23].

2) At hinges 6 and 7, remove the pins [34], nuts [33], washers [25], bushings [26], washers [28], and bolts [27].

3) At hinge 8, remove the pin [40], nut [39], washer [35], bushing [38], washer [36], and bolt [37].

(d) Remove the leading edge flap [2] from the wing.

F. Leading Edge Flap Installation

SUBTASK 27-81-11-220-001

(1) If you install used bearings, bushings, and bolts, do this task: Leading Edge Flap Inspection, TASK 27-81-11-200-801.

SUBTASK 27-81-11-420-001

(2) If you removed the outboard leading edge flap [1], connect the outboard leading edge flap [1] to the fixed leading edge:

(a) Connect hinges 1 through 4 on the leading edge flap [1] to the fixed leading edge.

1) Apply grease, D00633, on the mating surfaces of the bolts [23] and bolts [27].

2) At hinges 1 and 4, install the bolts [23], washer [24], bushings [19], washers [20], and nuts [22].

a) Install the bolts [23] with the head outboard.

3) Tighten the nuts [22] to 60 in-lb (6.8 N·m) - 95 in-lb (10.7 N·m).

4) Install the new pins [21].

5) At hinges 2 and 3, install the bolts [27], washers [28], bushings [26], washers [25], and nuts [33].

a) At hinge 2, install the bolt [27] with the head inboard.

b) At hinge 3, install the bolt [27] with the head outboard.

6) Tighten the nuts [33] to 290 in-lb (32.8 N·m) - 510 in-lb (57.6 N·m).

7) Install the new pins [34].

(b) Connect the bonding jumper [29] to the fixed leading edge.

1) Install the bolt [30], washers [31], and nut [32] to attach the bonding jumper [29].

2) Tighten the nut [32] to 28 in-lb (3 N·m) - 35 in-lb (4 N·m).

3) Measure the electrical bonding resistance between the bonding jumper [29] and the fixed leading edge.

a) Use an intrinsically safe approved bonding meter, COM-1550.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

b) Make sure that the resistance is less than 0.001 ohms.

4) Do these steps to make a fay seal (SWPM 20-20-00):

a) Clean the area before you apply the sealant (TASK 51-22-00-160-801).

b) Apply sealant, A00767, or sealant, A50231, around the bolt [30], washers [31], nut [32] and end of the bonding jumper [29].

(c) Connect the outboard bullnose linkage [53] to the fixed leading edge.

1) Install the bolt [42], washer [43], bushing [44], anti-rotation washers [41], washer [56], and nut [54].

a) Install the bolt [42] with the head inboard.

2) Tighten the nut [54] to 30 in-lb (3.4 N·m) - 50 in-lb (5.6 N·m).

3) Install the new pin [55].

SUBTASK 27-81-11-420-002

(3) If you removed the inboard leading edge flap [2], connect the inboard leading edge flap [2] to the fixed leading edge:

(a) Connect hinges 5 through 8 on the leading edge flap [2] to the fixed leading edge.

1) Apply grease, D00633, on the mating surfaces of the bolts [23] and bolts [27].

2) At hinge 5, install the bolt [23], washer [24], bushing [19], washer [20], and nut [22].

a) Install the bolt [23] with the head outboard.

b) Tighten the nut [22] to 60 in-lb (6.8 N·m) - 95 in-lb (10.7 N·m).

c) Install the new pin [21].

3) At hinges 6 and 7, install the bolts [27], washers [28], bushings [26], washers [25], and nuts [33].

a) At hinge 6, install the bolt [27] with the head inboard.

b) At hinge 7, install the bolt [27] with the head outboard.

c) Tighten the nuts [33] to 290 in-lb (32.8 N·m) - 510 in-lb (57.6 N·m).

d) Install the new pins [34].

4) At hinge 8, install the bolt [37], washer [36], bushing [38], washer [35], and nut [39].

a) Install the bolt [37] with the head inboard.

b) Tighten the nut [39] to 60 in-lb (6.8 N·m) - 95 in-lb (10.7 N·m).

c) Install the new pin [40].

(b) Connect the bonding jumper [29] to the fixed leading edge.

1) Install the bolt [30], washers [31], and nut [32] to attach the bonding jumper [29].

2) Tighten the nut [32] to 28 in-lb (3 N·m) - 35 in-lb (4 N·m).

3) Measure the electrical bonding resistance between the bonding jumper [29] and the fixed leading edge.

a) Use an intrinsically safe approved bonding meter, COM-1550.

b) Make sure that the resistance is less than 0.001 ohms.

4) Do these steps to make a fay seal (SWPM 20-20-00):

a) Clean the area before you apply the sealant (TASK 51-22-00-160-801).

b) Apply sealant, A00767, or sealant, A50231, around the bolt [30], washers [31], nut [32] and end of the bonding jumper [29]

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Connect the mid and inboard bullnose linkages [53] to the fixed leading edge.

1) Install the bolt [42], washer [43], bushing [44], anti-rotation washers [41], washer [56], and nut [54].

a) Install the bolt [42] with the heads outboard.

2) Tighten the nut [54] to 30 in-lb (3.4 N·m) - 50 in-lb (5.6 N·m).

3) Install the new pin [55].

SUBTASK 27-81-11-210-001

(4) Do a check of the clearances between the leading edge flap [1] or leading edge flap [2] and the fixed leading edge:

(a) Extend the flap actuator [4] until you can temporarily install the bolt [14] in the rod end [3].

(b) Fully extend the flap actuator [4].

1) Make sure that the flap bullnose can move freely.

(c) Adjust the flap rod [57] until the flap bullnose touches the leading edge flap [1] or leading edge flap [2].

(d) Remove the bolt [14] from the rod end [3].

(e) Retract the flap actuator [4].

(f) Do this check while you retract the leading edge flap [2] or leading edge flap [1] by hand:

1) Make sure that there is sufficient clearance between the leading edge flap [2] or leading edge flap [1] and the fixed leading edge.

SUBTASK 27-81-11-420-003

(5) Connect the flap actuator [4] to the leading edge flap [1] or leading edge flap [2].

(a) Apply grease, D00633, on the mating surfaces of the bolt [14] or bolt [9].

(b) For the outboard leading edge flap [1], install the bolt [9], washer [10], bushing [11], washer [5], washer [8], and nut [7].

NOTE: You can bond the washer [5] to the leading edge flap [1] with sealant, A00247, for easier installation.

(c) For the inboard leading edge flap [2], install the bolt [14], washer [13], bushing [12], washer [18], washer [17], and nut [16].

NOTE: You can bond the washer [18] to the leading edge flap [2] with sealant, A00247, for easier installation.

(d) Tighten the nut [7] or nut [16] to 660 in-lb (74.6 N·m) - 980 in-lb (110.7 N·m).

(e) Install the new pin [6] or new pin [15].

SUBTASK 27-81-11-860-004

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Pressurize hydraulic system B (TASK 29-11-00-860-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-11-860-005

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLAPS AND SLATS. THE FLAPS AND SLATS CAN ACCIDENTALLY MOVE AND CAUSE INJURIES TO PERSONNEL OR DAMAGE TO EQUIPMENT.

(7) Move the flap control lever to the UP detent to retract the leading edge flaps.

SUBTASK 27-81-11-220-002

(8) Measure the full extend angle of the leading edge flap [1] or leading edge flap [2].

(a) Attach a protractor, COM-1691, to the inboard edge of the outboard leading edge flap [1] or the outboard edge of the inboard leading edge flap [2].

(b) Set the protractor, COM-1691, to zero with the leading edge flaps retracted.

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLAPS AND SLATS. THE FLAPS AND SLATS CAN ACCIDENTALLY MOVE AND CAUSE INJURIES TO PERSONNEL OR DAMAGE TO EQUIPMENT.

(c) Move the flap control lever to the 1-unit detent to extend the leading edge flaps.

(d) Make sure that the full extend angle of the leading edge flap [1] or leading edge flap [2] is 98 ±0.5 degrees.

1) If the extend angle is out of tolerance, adjust the length of the flap actuator [4].

a) Loosen the jamnut [45] on the rod end [3].

b) Turn the rod end [3] until you get the correct full extend angle.

NOTE: The limit for maximum adjustment is two full turns.

c) Tighten the jamnut [45] to 550 in-lb (62.1 N·m) - 650 in-lb (73.4 N·m).

d) Install MS20995NC32 lockwire, G01912, on the jamnut [45].

(e) Remove the protractor, COM-1691.

SUBTASK 27-81-11-220-003

(9) Make sure that the mismatch between the inboard leading edge flap [2] and the outboard leading edge flap [1] is 0.000 ±0.040 in. (0.0 ±1.0 mm).

SUBTASK 27-81-11-860-006

(10) Apply preload at the flap bullnose to the leading edge flap [1] or leading edge flap [2].

(a) Make sure the flap bullnose touches the leading edge flap [1] or leading edge flap [2].

NOTE: To apply the correct preload, the flap bullnose must first touch the leading edge flap [1] or leading edge flap [2].

1) If the flap bullnose does not touch the leading edge flap [1] or leading edge flap [2], adjust the flap rod [57].

(b) Adjust the flap rod [57] an additional 1/2 turn to apply the correct preload at the flap bullnose to the leading edge flap [1] or leading edge flap [2].

(c) Install MS20995NC32 lockwire, G01912, on the flap rod [57].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-11-860-007

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLAPS AND SLATS. THE FLAPS AND SLATS CAN ACCIDENTALLY MOVE AND CAUSE INJURIES TO PERSONNEL OR DAMAGE TO EQUIPMENT.

(11) Move the flap control lever to the UP detent to retract the leading edge flaps.

SUBTASK 27-81-11-220-004

(12) Do a check of the gap at the edge of the leading edge flap [1] or leading edge flap [2].

(a) Do a check of the gap at location 1-4, 6-10, and 13-18 (Figure 402).

1) If all the measurements taken at locations 1-4, 6-10, 13-18 are less than 0.240 in. (6.1 mm), then the gap is satisfactory.

2) If one or more of the gap measurements exceeds 0.240 in. (6.1 mm), convert each of the measurements into a Net Effect Value (NEV) (Figure 402).

3) Add the NEV measurements together and divide by the total number of measurements.

NOTE: This gives the total NEV.

NOTE: For 85% of the Krueger flap trailing edge length, the gap cannot exceed ±0.300 in. (7.620 mm). For the remaining 15% of the Krueger flap trailing edge interface, the fair cannot exceed ±0.450 in. (11.430 mm).

4) Make sure that the calculated total NEV is less than 1.0 (the Net Effect Limit (NEL) for this measurement).

SUBTASK 27-81-11-220-005

(13) Do a check of the mismatch at the forward edge of the leading edge flap [1] and the leading edge flap [2] (Figure 401).

(a) Do a check of the mismatch at the forward edge of the leading edge flap [1] and leading edge flap [2] at locations 1-4 and 6-10 (Figure 402).

1) If all the measurements taken at locations 1-4 and 6-10 are within the range 0.000 +0.062 / -0.071 in. (0.00 +1.57 / -1.80 mm), the misfair at the forward edge of the Krueger flap is acceptable as is without any additional adjustments.

NOTE: See Figure 402 for definition of negative and positive misfair measurements.

2) If one or more of the misfair measurements is outside the range 0.000 +0.062 / -0.071 in. (0.00 +1.57 / -1.80 mm), convert each of the measurements into a NEV (Figure 402).

3) Add the NEV measurements together and divide by the total number of measurements.

NOTE: This gives the total NEV.

NOTE: For 75% of the Krueger flap leading edge length, the fair cannot exceed ±0.100 in. (2.540 mm). For the remaining 25% of the Krueger flap leading edge interface, the fair cannot exceed ±0.130 in. (3.302 mm).

4) Make sure that the calculated total NEV is less than 1.0 (the NEL for this measurement).

5) If it is necessary, adjust the mismatch dimension.

a) Loosen the jamnut [45] on the rod end [3].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

b) Turn the rod end [3] to adjust the length of the flap actuator [4] until you get the correct mismatch.

NOTE: The limit for maximum adjustment is two full turns.

c) Tighten the jamnut [45] to 550 in-lb (62.1 N·m) - 650 in-lb (73.4 N·m).

d) Install MS20995NC32 lockwire, G01912, on the jamnut [45].

SUBTASK 27-81-11-220-006

(14) Do a check of the mismatch at the aft edge of the leading edge flap [1] and leading edge flap [2] (Figure 401).

(a) Do a check of the mismatch at the aft edge of the leading edge flap [1] and leading edge flap [2] at locations 13-18 (Figure 402).

1) If all the measurements taken at locations 13-18 are within the range 0.000 +0.040 / -0.072 in. (0.00 +1.02 / -1.83 mm), the misfair at the aft edge of the Krueger flap is acceptable as is without any additional adjustments.

NOTE: See Figure 402 for definition of negative and positive misfair measurements.

2) If one or more of the misfair measurements is outside the range 0.000 +0.040 / -0.072 in. (0.00 +1.02 / -1.83 mm), convert each of the measurements into a NEV (Figure 402).

3) Add the NEV measurements together and divide by the total number of measurements.

NOTE: This gives the total NEV.

NOTE: For 70% of the Krueger flap trailing edge length, the fair cannot exceed ±0.080 in. (2.032 mm). For the remaining 30% of the Krueger flap trailing edge interface, the fair cannot exceed ±0.100 in. (2.540 mm).

4) Make sure that the calculated total NEV is less than 1.0 (the NEL for this measurement).

5) If the mismatch dimension is out of tolerance for the outboard leading edge flap [1], do these steps:

a) Remove the nut [7], washer [8], washer [5], bushing [11], washer [10], and bolt [9] to disconnect the flap actuator [4] from the leading edge flap [1].

b) Loosen the jamnut [45] on the rod end [3].

c) Turn the rod end [3] to adjust the length of the flap actuator [4] until you get the specified mismatch dimension.

NOTE: The limit for maximum adjustment is two full turns. The full extend angle of the leading edge flap [1] must still be 98 ±0.5 degrees while you make this adjustment.

d) Tighten the jamnut [45] to 550 in-lb (62.1 N·m) - 650 in-lb (73.4 N·m).

e) Install the MS20995NC32 lockwire, G01912, on the jamnut [45].

f) Connect the flap actuator [4] to the leading edge flap [1] with bolt [9], washer [10], bushing [11], washer [5], washer [8], and nut [7].

6) If the mismatch dimension is out of tolerance for the inboard leading edge flap [2], do these steps:

a) Remove the nut [16], washer [17], washer [18], bushing [12], washer [13], and bolt [14] to disconnect the flap actuator [4] from the leading edge flap [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

b) Loosen the jamnut [45] on the rod end [3].

c) Turn the rod end [3] to adjust the length of the flap actuator [4] until you get the specified mismatch dimension.

NOTE: The limit for maximum adjustment is two full turns. The full extend angle of the leading edge flap [2] must still be 98 ±0.5 degrees while you make this adjustment.

d) Tighten the jamnut [45] to 550 in-lb (62.1 N·m) - 650 in-lb (73.4 N·m).

e) Install the MS20995NC32 lockwire, G01912, on the jamnut [45].

f) Connect the flap actuator [4] to the leading edge flap [2] with bolt [14], washer [13], bushing [12], washer [18], washer [17], and nut [16].

SUBTASK 27-81-11-420-004

(15) Tighten the nut [7] or nut [16] to 660 in-lb (74.6 N·m) - 980 in-lb (110.7 N·m).

SUBTASK 27-81-11-420-005

(16) Install the new pin [6] or new pin [15].

SUBTASK 27-81-11-860-008

(17) Move the flap control lever to the 1-unit detent position to extend the leading edge flaps.

G. Leading Edge Flap Installation Test

SUBTASK 27-81-11-080-001

WARNING REMOVE THE LOCK FROM LEADING EDGE FLAP ACTUATOR CAREFULLY TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS. THE LEADING EDGE FLAPS CAN MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(1) Remove the lockout set, SPL-1734, from the actuator of the leading edge flap (TASK 27-81-00-080-801).

SUBTASK 27-81-11-860-009

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLAPS AND SLATS. THE FLAPS AND SLATS CAN ACCIDENTALLY MOVE AND CAUSE INJURIES TO PERSONNEL OR DAMAGE TO EQUIPMENT.

(2) Move the flap control lever to the FLAP UP detent to retract the leading edge flaps.

SUBTASK 27-81-11-860-010

(3) Do a check of the flap panel clearances.

(a) For all but the aft 5 in. (127 mm) of the flap, make sure the gap between the inboard leading edge flap [2] and the outboard leading edge flap [1] is 0.060 in. (1.52 mm) - 0.150 in. (3.81 mm).

(b) For the aft 5 in. (127 mm) of the flap, make sure the gap between the inboard leading edge flap [2] and the outboard leading edge flap [1] is 0.060 in. (1.52 mm) - 0.250 in. (6.35 mm).

SUBTASK 27-81-11-210-002

(4) If the flap panel clearances are out of tolerance, do a check of the wing and flap panel for damage or warping.

NOTE: This check is to make sure that the flap and the wing align correctly. There is no adjustment that you can do.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-11-860-011

(1) Remove power from hydraulic system B (TASK 29-11-00-860-805).

LEADING EDGE FLAP - INSPECTION/CHECK

1. General

A. This procedure contains the task to do an inspection of the leading edge flap.

TASK 27-81-11-200-801

2. Leading Edge Flap Inspection

(Figure 601, Table 601)

A. General

(1) This task gives wear limits and repair data for the leading edge flap inspection.

B. References

Reference	Title
27-81-11-000-801	Leading Edge Flap Removal (P/B 401)
27-81-11-400-801	Leading Edge Flap Installation (P/B 401)

C. Tools/Equipment

513	Left Wing - Krueger Flap No. 1
612	Right Wing - Krueger Flap No. 3
613	Right Wing - Krueger Flap No. 4

E. Procedure

SUBTASK 27-81-11-020-004

(1) Do this task: Leading Edge Flap Removal, TASK 27-81-11-000-801.

SUBTASK 27-81-11-020-005

(2) Use these tools to do a check for wear on the parts of the leading edge flap:

(a) micrometer (0-1 inch, readable to 1/1000 inch), STD-1096

(b) vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

SUBTASK 27-81-11-020-006

(3) Examine the parts of the leading edge flap for worn areas:

NOTE: The Nomex cloth common to the leading edge (krueger) flap seals can be frayed provided there is no damage to the silicon rubber portion of the seal. If the silicon rubber portion is damaged then the seal should be repaired or replaced. Contact Boeing for repair instructions for the seal.

(a) Remove the parts you want to do a check.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096 or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions you measured with the permitted wear dimensions in Table 601.

(d) If the parts are out of tolerance, replace or repair the parts.

LEADING EDGE SLAT - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Leading Edge Slat Removal

(2) Leading Edge Slat Installation

(3) Leading Edge Slat Main Track Removal

(4) Leading Edge Slat Main Track Installation.

B. There are four slats on each wing. This procedure is applicable for the leading edge slats 1 thru 8.

C. You can do this procedure with the airplane on jacks or off jacks, but the wing should not be supported outboard of the engines.

TASK 27-81-21-000-801

2. Leading Edge Slat Removal

(Figure 401, Figure 402)

621ZB	Lower Leading Edge Access Panel - Slat Station 479

SUBTASK 27-81-21-860-001

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(2) Supply hydraulic power to system B (TASK 29-11-00-860-801).

SUBTASK 27-81-21-860-002

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(3) Move the flap control lever to the 30-unit detent to extend the leading edge slats to the full extended position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-21-480-001

WARNING INSTALL THE LOCK ON LEADING EDGE FLAP ACTUATOR CAREFULLY TO PREVENT THE ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS. THE LEADING EDGE FLAPS CAN MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

(4) Install the lockout set, SPL-1734, on the actuators of the adjacent leading edge slats (TASK 27-81-00-480-801).

SUBTASK 27-81-21-860-003

(5) Move the flap control lever to the 1-unit detent to retract the leading edge slat.

NOTE: If the slat is in the full extend position, the slat actuators will be preloaded against the leading edge slat. When you put the flap control lever to the 1-unit detent it removes the preload, which makes it easier removal of the slat actuator.

SUBTASK 27-81-21-860-004

(6) Remove power from hydraulic system B (TASK 29-11-00-860-805).

SUBTASK 27-81-21-200-001

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(7) Keep clean and free of all Foreign Object Damage (FOD), the housing (can) assemblies of the slat main tracks, at all time.

F. Leading Edge Slat Removal

SUBTASK 27-81-21-020-001

(1) Disconnect the slat actuator [9] from the leading edge slat [17] (Figure 401).

(a) Remove the bolt retainer [18] from the leading edge slat [17].

1) Remove the bolts [15] and washers [16] that attach the bolt retainer [18] to the leading edge slat [17].

2) Remove the bolt retainer [18] from the leading edge slat [17].

WARNING MAKE SURE YOU HOLD THE LEADING EDGE SLAT IN ITS POSITION. THE LEADING EDGE SLAT CAN FALL TO THE FULL EXTEND POSITION. THIS CAN CAUSE INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(b) Hold the leading edge slat [17] while you remove the nut [12], washer [11], bushing [10], washer [19], and bolt [20].

SUBTASK 27-81-21-980-001

(2) Carefully let the leading edge slat [17] move down to the full extend position.

SUBTASK 27-81-21-860-005

(3) Use hydraulic power to retract the slat actuator [9] (TASK 27-81-00-860-804).

NOTE: The slat actuator can hang from the upper fitting.

SUBTASK 27-81-21-040-001

(4) Do this task: Leading Edge Flaps and Slats - Deactivation, TASK 27-81-00-040-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-21-480-002

(5) If you use the sling, SPL-2041, to help with the removal of the leading edge slat [17], do these steps to install the sling, SPL-2041, on the leading edge slat [17] (Figure 402):

(a) Remove the stowage A/P fastener (shown in the placard of the sling tool box) from the holes of the slat structure that you will use to install the screws [64] and screws [67] of the sling, SPL-2041, kit.

(b) Attach the wedges [69] on the trailing edge of the leading edge slat [17] where they will line up with the main tracks [21].

(c) Attach the strap assembly [61] to the bottom of the leading edge slat [17] with screws [64], washers [65] and nuts [66].

(d) Attach the end fittings [63] to the leading edge slat [17] with screws [67] and washers [68].

(e) Attach the strap assembly [61] to the end fittings [63], wedges [69] and spreader bar [62].

SUBTASK 27-81-21-480-003

(6) Connect the overhead hoist to the sling, SPL-2041.

SUBTASK 27-81-21-020-002

(7) Remove the leading edge slat [17] (Figure 401).

(a) Disconnect the auxiliary arms [28] from the auxiliary tracks [29].

1) Remove the pins [40], nuts [41], washers [42], targets [43], spacers [48], detent arm roller bearings [45], washers [47], and bolts [46].

2) Move the auxiliary arms [28] away from the auxiliary tracks [29].

NOTE: The auxiliary arms will remain attached to the leading edge slat structure.

3) Remove the auxiliary arm roller bearings [44] from the auxiliary tracks [29].

4) Disconnect the leading edge slat [17] from the main tracks [21].

NOTE: The main track will remain attached to the fixed leading edge structure.

a) Remove the bolt retainer [70] (attached to the leading edge slat [17] structure) by removing two adjustable bolts [76] and two washers [77] at each of the main track [21] attach locations.

b) Remove the nut [75], washer [74], plain bushing [73], washer [72] from the bolt [71] at each of the main track attach locations.

(b) Remove the main tracks [21] from the fixed leading edge structure, as necessary.

1) Manually move the main track [21] until the downstops [22] on the main tracks [21] align with the access holes in the track ribs.

2) Remove the cotter pins [53], nuts [52], washers [51], stop fittings [49], and bolts [50].

SUBTASK 27-81-21-020-003

(8) If you remove slats No. 2, 3, 4, 5, 6 or 7, disconnect the thermal anti-icing duct from the leading edge slat [17] (TASK 30-11-31-000-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-21-200-002

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(9) Keep clean and free of all FOD, the housing (can) assemblies of the slat main tracks, at all time.

END OF TASK

G. Leading Edge Slat Installation

SUBTASK 27-81-21-200-003

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(1) Keep clean and free of all unwanted objects (FOD), the housing (can) assemblies of the slat main tracks, at all time.

SUBTASK 27-81-21-860-006

(2) Prepare the auxiliary tracks [29] and the detent arm [35] for the installation:

NOTE: If you will install the same slat that you removed, it is recommended that you do these steps, but is not necessary.

(a) Adjust the aft support for the auxiliary tracks [29] (View C-C, Figure 401).

1) Loosen nut [24] on the bolt [23] at the upper aft auxiliary track.

2) Loosen the jamnut [39].

3) Loosen the nut [37] to loosen the locking bolt [36].

4) Turn the adjusting nut [38] of the auxiliary track aft support to get the necessary trailing edge clearance until the dimension A is as specified in Table 401.

a) Optional. In order to adjust the auxiliary track aft support to the dimensions given in the table below, adjust the auxiliary track [29] up until the slot in the aft upper corner of the track touches the bolt [23] at the upper aft auxiliary track.

Table 401/27-81-21-993-802

Location	Dimension A	Dimension B (reference)
Slat 1 and 8 (Outbd)	0.830 in. (21.08 mm)	2.38 in. (60.5 mm)
Slat 1 and 8 (Inbd)	0.950 in. (24.13 mm)	2.50 in. (63.5 mm)
Slat 2 and 7 (Outbd)	0.950 in. (24.13 mm)	2.50 in. (63.5 mm)

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Table 401/27-81-21-993-802 (Continued)

Location	Dimension A	Dimension B (reference)
Slat 2 and 7 (Inbd)	1.450 in. (36.83 mm)	3.00 in. (76.2 mm)
Slat 3 and 6 (Outbd)	1.450 in. (36.83 mm)	3.00 in. (76.2 mm)
Slat 3 and 6 (Inbd)	1.450 in. (36.83 mm)	3.00 in. (76.2 mm)
Slat 4 and 5 (Outbd)	1.500 in. (38.10 mm)	3.05 in. (77.5 mm)
Slat 4 and 5 (Inbd)	2.100 in. (53.34 mm)	3.65 in. (92.7 mm)

5) Temporarily tighten the nut [37] on the locking bolt [36].

NOTE: You will apply final torque on the locking bolt during the completion of the slat adjustment (TASK 27-81-00-820-803).

6) Finger tighten the jamnut [39] until in contact with the adjusting nut [38] of the aft support.

7) Tighten the jamnut [39] an additional quarter turn.

8) Temporarily tighten the nut [24] on the bolt [23] at the upper aft auxiliary track.

NOTE: You will apply final torque on the nut during the completion of the slat adjustment (TASK 27-81-00-820-803).

There is no lockwire required on the jamnut.

(b) Adjust the preload on the detent arm [35] to zero:

NOTE: It is recommended that you do these steps, but it is not necessary.

1) Turn the preload adjustment bolt [30] in the clockwise direction to increase preload or in the counterclockwise direction to reduce preload.

2) Adjust the preload on all the detent arm [35] to zero pound.

SUBTASK 27-81-21-480-004

(3) If you disconnected the clevis [33]/auxiliary track [29]/detent arm [35] then install the preload shim assembly, which is part of the kit, SPL-1739, at the forward supports for the auxiliary tracks [29] (View B-B, Figure 401):

NOTE: This step is necessary to make sure that the leading edge slat is not preloaded against the fixed leading edge.

(a) Loosen the nut [31] on the clevis [33].

(b) Lift the auxiliary track [29] with the clevis [33] through the auxiliary track support.

(c) Install the preload shim assembly, which is part of the kit, SPL-1739, with the shims [34] on the clevis [33].

(d) Put the clevis [33] back in its position on the auxiliary track support.

(e) Tighten the nut [31] on the clevis [33].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Make sure that two polytetrafluoroethylene (PTFE) washers are installed in the clevis/auxiliary track/ detent arm joint, if they were disconnected.

NOTE: If the washers are damaged or missing, stabilization of the detent arm is reduced and it is possible for the detent arm to be deflected laterally during slat extension or retraction and the possibility of misalignment between the detent arm and the detent roller increases.

NOTE: If the washers are damaged or missing, it may be possible for the roller to come out of the detent arm track, thus affecting the operation of the detent system. Also extreme misalignment of the slat roller attachment could move the slat down sensor target, causing fault indications or physical damage to the sensor itself.

SUBTASK 27-81-21-020-004

(4) If you removed slats No. 2, 3, 4, 5, 6 or 7, connect the thermal anti-icing duct to the leading edge slat [17] (TASK 30-11-31-400-801).

SUBTASK 27-81-21-420-001

CAUTION

MAKE SURE THAT THE LOWER SURFACE OF THE SLAT TRAILING EDGE AND THE UPPER SKIN PANELS OF THE FIXED LEADING EDGE ARE SMOOTH BEFORE YOU INSTALL THE LEADING EDGE SLATS. MAKE SURE THAT THE SURFACE AND PANELS ARE ALSO CLEAN AND FREE OF CONTAMINATIONS, NICKS, OR BURRS. DAMAGE TO EQUIPMENT CAN OCCUR IF THE SURFACE AND PANELS ARE NOT SMOOTH AND THERE ARE CONTAMINATIONS.

(5) Install the leading edge slat [17] with the steps that follow:

WARNING

DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(a) Keep clean and free of all unwanted objects (FOD), the housing (can) assemblies of the slat main tracks, at all time.

(b) If you removed them, install the main tracks [21] on the fixed leading edge structure (View A-A, Figure 401):

1) Make sure that the clearance between the side guides and stops is 0.2200 in. (5.59 mm) - 0.2500 in. (6.35 mm).

a) If the clearance is not within the specified limit, adjust the shims [80], as necessary (View A1-A1, Figure 401).

<1> Remove and discard the lockwire from the bolts [78].

<2> Remove the bolts [78], washers [79], and stops [81] as necessary to adjust the shims [80].

<3> Apply primer, C00259, to all areas of the holes where the bolts [78] will be installed.

<4> Apply compound, C00528, to all areas of the holes where the bolts [78] will be installed.

<5> Install the stops [81], washers [79], and bolts [78].

<6> Install MS20995NC32 lockwire, G01912, on the bolts [78] (TASK 20-10-44-400-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

2) Apply a layer of grease, D00633, to the vertical web surfaces of the main tracks [21] that contact the side guides.

NOTE: It is not necessary to grease the rolling surface, only the side guide contact surface.

3) Install the stop fittings [49] to the main tracks [21]:

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

CAUTION INSTALL THE WASHERS CORRECTLY. IF YOU DO NOT, THE MAIN TRACK/STRUCTURE JOINT CAN BECOME LOOSE AND THE DOWNSTOP ASSEMBLY CAN FALL. THIS CAN CAUSE DAMAGE TO THE SLAT TRACK HOUSING.

a) Get access to the stop fittings [49] through the access holes in the track ribs.

b) Do a check on the fit of the down stop assembly bolt in the hole in the slat main track.

<1> If the bolt will not enter the hole in the main track [21] using hand pressure (because the hole diameter is less than the bolt's shank diameter) , then do the steps that follow:

<a> Ream the hole up to a maximum of 0.4375 in. (11.1125 mm). If necessary, remove the slat.

<b> Clean the area as necessary.

<c> Apply Cor-Ban 27L Compound, G50237, corrosion inhibiting material to the reamed hole.

<2> If the bolt has side-to-side play in the hole, then do the steps that follow:

<a> Measure the hole and if the hole diameter is 0.4421 in. (11.2293 mm) - 0.5005 in. (12.7127 mm), then install a bushing.

<b> If the hole diameter is greater than 0.5005 in. (12.7127 mm), then replace the slat main track [21].

c) Coat the shank of the bolt [50] and the face of the first stop fitting [49] with Cor-Ban 27L Compound, G50237, and all the surface of the hole in the main track [21].

d) Install one washer [51] under the bolt head and the first stop fitting [49] on the bolt [50].

NOTE: If it is necessary, an additional washer is permitted under the bolt head.

e) Install the bolt [50] attached to the washer [51] and the first stop fitting [49] to the main track [21].

NOTE: The down stop assembly can be installed with the bolt head on either the inboard side or the outboard side of the slat main track.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

f) Install the second stop fitting [49], one washer [51], and the nut [52] on the shank of the bolt [50] that you have it installed on the main track [21].

NOTE: No grip length increase is permitted on the bolt.

<1> Tighten the nut [52] (recommended) or the bolt [50] (optional) to 180 in-lb (20 N·m) - 200 in-lb (23 N·m).

NOTE: The recommended method is to tighten the nuts.

The optional method is to tighten the bolts.

g) Install the new cotter pin [53].

<1> Wrap the cotter pin [53] around the shank of the bolt [50].

h) Make sure by the visual inspection that the bolts [50], washers [51], stop fittings [49], nuts [52], and cotter pins [53] are all installed correctly.

i) Make sure that the slat main track housing (can) is free of unwanted material.

(c) Lift the leading edge slat [17] into its position.

NOTE: On slats No. 2, 3, 4, 5, 6 or 7, engage the thermal anti-ice duct with the leading edge slat.

(d) Attach the main tracks [21] to the leading edge slat [17] at each of the main track [21] locations with the steps that follow (View D-D, Figure 401):

1) Apply grease, D00633, to the shank and threads before the installation of the bolts [71].

2) Install the plain bushing [73] in the main track [21].

3) Install the bolt [71], washer [72], washer [74], and the nut [75].

NOTE: The slats 1 and 8 are attached with 0.500 in. (12.700 mm) nominal diameter bolts. The slats 2 through 7 are attached with 0.625 in. (15.875 mm) nominal diameter bolts.

a) Tighten the nut [75] to 388 in-lb (43.8 N·m) - 412 in-lb (46.5 N·m) for slats 1 and 8.

b) Tighten the nut [75] to 795 in-lb (89.8 N·m) - 845 in-lb (95.5 N·m) for slats 2 through 7.

4) Install the bolt retainer [70] with two adjustable bolts [76] and two washers [77] on the leading edge slat [17] structure.

a) Make sure that there is a permitted clearance dimension between the bolt retainer [70] and the head of the bolt [71].

b) If it is necessary, adjust the clearance by loosening the two adjustable bolts [76], moving the bolt retainer [70] along the slotted holes and tightening the two adjustable bolts [76].

(e) Attach the auxiliary arms [28] to the auxiliary tracks [29] (View G, Figure 401):

1) Apply a layer of grease, D00633, to the auxiliary tracks [29] and the side guards on the auxiliary arms [28].

2) Lift the leading edge slat [17] partially for better access to the roller attachment location.

3) Install the auxiliary arm roller bearings [44] to the auxiliary tracks [29].

4) Install the bolts [46], washers [47], detent arm roller bearings [45], spacers [48], washers [42], targets [43], and nuts [41].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Make sure that three washers (CRES material, 0.063 in. (1.60 mm) nominal thickness) are installed in the detent roller/track/arm/sensor target joint (one washer [47] under the bolt head and two washers [42] installed on both sides of the auxiliary arm).

NOTE: If the washers are thinner than 0.063 in. (1.6 mm), the lateral location of the roller bearing will be changed and it will no longer align with the centerline of the detent arm.

NOTE: The thinner washers will not support the torque preload and operating load imposed on the joint. As the thinner washers deform, the fastener torque preload is lost, and the joint may move under normal operating loads, inducing additional misalignment of the bearing. This joint holds the slat sensor target, so a loosened bolt will permit the sensor target to move. Target movement could lead to sensor indication problems, and the loose target could physically contact the sensor as the slat moves and cause additional damage.

b) Make sure that the flat edges of the target detail aligns with the corresponding face on the auxiliary arm, otherwise the target detail can be damaged during the movement of the slat.

NOTE: The target are “U” shaped and are oriented as such with the base facing down.

c) Add the washer [42] under the nut [41] if and as it is necessary to align the cotter pin hole in the bolt [46] with the slot in the nut [41].

d) Make sure that the BACB30LT6DK35 bolt [46] head clears the fixed LE structure (auxiliary ribs) on slats 1 and 8.

<1> If clearance is limited, make sure that the auxiliary track support is fully adjusted up.

5) Tighten the nuts [41] (recommended) to 95 in-lb (10.7 N·m) - 160 in-lb (18.1 N·m), or the bolts [46] (optional) to 144 in-lb (16.3 N·m) - 176 in-lb (19.9 N·m).

NOTE: The recommended method is to tighten the nuts.

The optional method is to tighten the bolts.

NOTE: It is recommended to orient the bolt for better access to the hole for the pin.

6) Install the pins [40].

(f) Manually extend and retract the leading edge slat [17] to make sure that it moves freely on the tracks.

(g) Make sure that the main tracks [21] move parallel with each other and non-binding between main tracks [21] and side guides.

1) Make sure that the BACB30LT6DK35 bolt head clears the fixed LE structure (auxiliary ribs) on slats 1and 8.

a) If clearance is limited, make sure that the auxiliary track aft support is fully adjusted up.

SUBTASK 27-81-21-440-001

(6) Do this task: Leading Edge Flaps and Slats - Activation, TASK 27-81-00-440-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-21-860-007

(7) Use hydraulic power to retract the slat actuator [9] to the 1-unit position (TASK 27-81-00-860-804).

NOTE: This will permit you to install the bolt.

SUBTASK 27-81-21-710-001

(8) Manually retract the leading edge slat.

SUBTASK 27-81-21-420-002

(9) Connect the slat actuator [9] to the leading edge slat [17] (View B, Figure 401):

(a) Move the leading edge slat [17] until it aligns with the slat actuator [9].

(b) Install the bushing [10], bolt [20], washer [19], washer [11], and nut [12] to attach the slat actuator [9] to the leading edge slat [17].

1) Make sure that the head of the bolt is on the outboard side of the slat actuator.

2) Tighten the nut [12] (recommended) to 660 in-lb (74.6 N·m) - 980 in-lb (110.7 N·m) or the bolt [20] (optional) to 882 in-lb (99.7 N·m) - 1078 in-lb (121.8 N·m).

NOTE: The recommended method is to tighten the nuts.

The optional method is to tighten the bolts.

(c) Install the bolt retainer [18]:

1) Apply compound, C00528, to the shank and threads of the bolts [15].

2) Install the bolts [15] and washers [16] to attach the bolt retainer [18].

SUBTASK 27-81-21-080-001

(10) If you installed the sling, SPL-2041, remove the sling, SPL-2041, from the leading edge slat [17] (Figure 402):

(a) Hold and remove the spreader bar [62] from the overhead hoist.

(b) Remove the strap assembly [61] from end fittings [63] and the wedges [69].

(c) Remove the screws [67] and washers [68] to remove the end fittings [63].

(d) Remove the nuts [66], washers [65], and screws [64] to remove the strap assembly [61] from bottom of the leading edge slat [17].

(e) Remove the wedges [69] from the leading edge slat [17].

(f) Install the stowage A/P fastener (shown in the placard of the tool box) in the holes of the slat structure that you use to install the screws [64] and screws [67] of the sling, SPL-2041, kit.

SUBTASK 27-81-21-211-001

(11) Visually check all leading edge slat bull-noses to make sure that they align within 0 in. (0 mm) - 0.060 in. (1.52 mm) when in the extended intermediate position (View K, Figure 401).

(a) If they do not, make sure that all main tracks [21] are correctly installed.

NOTE: The part number of the main track is located on the forward lower non-wear surface.

SUBTASK 27-81-21-820-001

(12) Do this task: Leading Edge Slats Adjustment, TASK 27-81-00-820-803.

SUBTASK 27-81-21-211-002

(13) With the slats correctly adjusted (rigged), do the steps that follow:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) If necessary, apply a hand load to the end of each slat assembly to make sure that preload exists.

(b) If no preload exists, do as the steps that follow:

1) Make sure that the possible under-travel dimension of the slat actuator [9] is 0.0200 in. (0.5080 mm) or less between the attach point at the rod end of the slat actuator and the clevis bores of the slat attach fittings.

NOTE: The under-travel dimension of the slat actuator shows that there is no preload of the slat actuator in relationship to the slat actuator attach fitting.

a) If the dimension is more than 0.0200 in. (0.5080 mm), make sure that the part numbers of the main track assemblies are correct.

NOTE: When the slat main tracks are incorrectly installed visual cues (excessive mismatches, misalignment, skew, etc.) will sometimes show a problem in advance depending on which slat is affected.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-21-080-002

WARNING CAREFULLY REMOVE THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY IF YOU DO NOT REMOVE THE LOCKS CORRECTLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Remove the lockout set, SPL-1734, from the actuators of the adjacent leading edge slats (TASK 27-81-00-480-801).

SUBTASK 27-81-21-200-004

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(2) Keep clean and free of all unwanted objects (FOD), the housing (can) assemblies of the slat main tracks, at all time.

SUBTASK 27-81-21-940-001

(3) Install these access panels on the lower surface of the fixed leading edge (TASK 57-41-02-400-801):

(a) For the left wing, close these access panels:

Number	Name/Location
521AAB	Lower Leading Edge Access Panel - Slat Station 497
521BB	Engine Fuel Valve Shutoff Access Panel - Slat Station 27
521CB	Lower Leading Edge Access Panel - Slat Station 50

E. Leading Edge Slat Main Track Removal

SUBTASK 27-81-21-860-010

(1) Extend the slats to the full extend position (TASK 27-81-00-860-801).

SUBTASK 27-81-21-040-003

(2) Do this task: Leading Edge Flaps and Slats - Deactivation, TASK 27-81-00-040-801.

SUBTASK 27-81-21-010-004

(3) Remove the applicable access panels (TASK 57-41-02-000-801):

(a) Open these access panels:

Number	Name/Location
521AAB	Lower Leading Edge Access Panel - Slat Station 497
521BB	Engine Fuel Valve Shutoff Access Panel - Slat Station 27
521CB	Lower Leading Edge Access Panel - Slat Station 50
521FB	Lower Leading Edge Access Panel - Slat Station 107
521GB	Lower Leading Edge Access Panel - Slat Station 125
521HB	Lower Leading Edge Access Panel - Slat Station 144

621ZB	Lower Leading Edge Access Panel - Slat Station 479

SUBTASK 27-81-21-020-009

(4) Disconnect the leading edge slat [17] from the main tracks [21].

(a) Remove the bolt retainer [70] attached to the structure of the leading edge slat [17].

1) Remove two adjustable bolts [76] and two washers [77] at each of the main track [21] attach location.

(b) Remove the nut [75], washer [74], bolt [71], washer [72], and plain bushing [73] at each of the main track [21] attach location.

SUBTASK 27-81-21-020-010

(5) Remove the cotter pin [53], nut [52], washer [51], stop fittings [49], and bolt [50] from the aft end of the main track [21].

SUBTASK 27-81-21-020-011

(6) Remove the main track [21] from the housing assembly.

(a) Carefully lift the slat manually to give clearance to remove the main track.

NOTE: The bolt [20] can be removed to give additional clearance for the main track removal.

(b) Remove the main track [21].

NOTE: The weight of the slat on the auxiliary tracks can cause an inadvertent movement in the assembly. This can cause the slat to be out of rig.

——— END OF TASK ———

TASK 27-81-21-400-802

5. Leading Edge Slat Main Track Installation

(Figure 401)

A. General

(1) This procedure contains steps to install one main track.

(2) You can remove only one main track per slat at a time.

F. Leading Edge Slat Main Track Installation

SUBTASK 27-81-21-160-001

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(1) Make sure that the housing assemblies and parts of the slat main tracks are clean and free of unwanted materials.

SUBTASK 27-81-21-210-001

(2) Do a check on the fit of the bolt [50] in the aft hole in the main track [21].

(a) If the bolt will not enter the hole in the main track [21] using hand pressure, then do the steps that follow:

1) Ream the hole up to a maximum of 0.4375 in. (11.1125 mm).

2) Clean the area as necessary.

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

3) Apply Cor-Ban 27L Compound, G50237 (preferred) or corrosion inhibiting material, G50136 (alternate) to the reamed hole.

(b) If the bolt has side-to-side play in the hole, then do the steps that follow:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Measure the hole and if the hole diameter is 0.4421 in. (11.2293 mm) to 0.5005 in. (12.7127 mm), then install a bushing.

2) If the hole diameter is greater than 0.5005 in. (12.7127 mm), then replace the slat main track.

SUBTASK 27-81-21-420-003

(3) Install the new main track [21] in the housing assembly.

(a) Carefully lift the slat manually to give clearance to install the main track.

(b) Install the main track in the housing assembly.

(c) Make sure that the clearance between the side guides and stops is 0.220 in. (5.588 mm) to 0.250 in. (6.350 mm) (Figure 401), View A-A.

1) If the clearance is not within the specified limit, adjust the shims, as necessary.

(d) Apply a layer of grease, D00633 to the vertical web surfaces of the main track [21] that contact the side guides.

NOTE: It is not required to grease the rolling surface, only the side guide contact surface.

(e) Lower the slat to align the main track [21] and the leading edge slat [17].

SUBTASK 27-81-21-420-004

(4) Install the stop fittings [49] to the main track [21]:

(a) Get access to the aft hole of the main track [21] through the access holes in the track ribs.

(b) Coat the shank of the bolt [50], the face of the first stop fitting [49], and all the surface of the hole in the main track [21] with Cor-Ban 27L Compound, G50237 (preferred) or corrosion inhibiting material, G50136 (alternate).

CAUTION

INSTALL THE WASHERS CORRECTLY. IF YOU DO NOT, THE MAIN TRACK/STRUCTURE JOINT CAN BECOME LOOSE AND THE DOWNSTOP ASSEMBLY CAN FALL. THIS CAN CAUSE DAMAGE TO THE SLAT TRACK HOUSING.

(c) Install one washer [51] under the bolt head and the first stop fitting [49] on the bolt [50].

NOTE: An additional washer is permitted under the bolt head, if required.

(d) Install the bolt [50] attached to the washer [51] and the first stop fitting [49] to the main track [21].

NOTE: The down stop assembly can be installed with the bolt head on either the inboard side or the outboard side of the slat main track.

(e) Install the second stop fitting [49], one washer [51] and the nut [52] on the shank of the bolt [50] that is installed on the main track [21].

NOTE: No grip length increase is permitted on the bolt [50].

(f) Tighten the nut [52] (preferred) or the bolt head to the torque range of 180 in-lb (20 N·m) to 200 in-lb (23 N·m).

NOTE: The recommended method is to tighten the nuts.

The optional method is to tighten the bolts.

(g) Install the new cotter pin [53].

1) Wrap the cotter pin [53] around the shank of the bolt [50].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(h) Make sure by the visual inspection that the bolt [50], washers [51], stop fittings [49], nut [52] and cotter pin [53] are all installed correctly.

(i) Make sure that the slat main track housing (can) is free of unwanted material.

SUBTASK 27-81-21-420-005

(5) Attach the main track [21] to the leading edge slat [17] with the steps that follow:

(a) Apply Mobilgrease 33, D50306 or AeroShell Grease 33, D50180 to the shank and threads of the bolt [71] and outer diameter of plain bushing [73].

(b) Install the plain bushing [73] in the main track [21].

(c) Install the bolt [71], washer [72], washer [74], and the nut [75].

NOTE: The slats 1 and 8 are attached with 0.500 in. (12.700 mm) nominal diameter bolts. The slats 2 through 7 are attached with 0.625 in. (15.875 mm) nominal diameter bolts.

1) Tighten the nut [75] to 388 in-lb (43.8 N·m) - 412 in-lb (46.5 N·m) for slats 1 and 8.

2) Tighten the nut [75] to 795 in-lb (89.8 N·m) - 845 in-lb (95.5 N·m) for slats 2 through 7.

(d) Install the bolt retainer [70] with two bolts [76] and two washers [77] on the leading edge slat [17] structure.

1) Make sure that there is a permitted clearance dimension between the bolt retainer [70] and the head of the bolt [71], per View H, flagnote 1 (Figure 401).

2) If necessary, adjust the clearance by loosening the two bolts [76], moving the bolt retainer [70] along the slotted holes and tightening the two bolts [76].

SUBTASK 27-81-21-420-006

(6) If removed, install the bolt [20] to connect the slat actuator [9] to the leading edge slat [17].

(a) Install the bushing [10], bolt [20], washer [19], washer [11] and nut [12] to attach the slat actuator [9] to the leading edge slat [17].

NOTE: Make sure the head of the bolt [20] is on the outboard side of the slat actuator [9].

(b) Tighten the nut [12] to 660 in-lb (74.6 N·m) to 980 in-lb (110.7 N·m) or the bolt [20] to 882 in-lb (99.7 N·m) to 1078 in-lb (121.8 N·m).

NOTE: The recommended method is to tighten the nuts.

The optional method is to tighten the bolts.

(c) Install the bolt retainer [18]:

1) Apply compound, C00528 to the shank and threads of the bolts [15].

2) Install the bolts [15] and washers [16] to attach the bolt retainer [18].

SUBTASK 27-81-21-210-002

(7) Visually check that all leading edge slat [17] bull-noses align within 0.00 in. (0.00 mm)-0.06 in. (1.52 mm) when in the extended intermediate position.

(a) If not, make sure that all main tracks [21] are correctly installed.

NOTE: The part number of the main track [21] is located on the forward lower non-wear surface.

(b) If necessary, adjust the slat (TASK 27-81-00-820-803).

SUBTASK 27-81-21-210-003

(8) With the slats extended, do these steps:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Apply hand load to the end of the slat assembly to make sure that preload exists

(b) If no preload exists, do as follow:

1) Make sure that the possible under-travel dimension of the slat actuator does not exceed 0.02 in. (0.508 mm) maximum between the attach point at the rod end of the slat actuator and the clevis bores of the slat attach fittings.

NOTE: The under-travel dimension of the slat actuator indicates that there is no preload of the slat actuator in relationship to the slat actuator attach fitting.

a) If the dimension is greater than 0.02 in. (0.508 mm), make sure that the part numbers of the main track assemblies are correct.

NOTE: When the slat main tracks are incorrectly installed visual cues (excessive mismatches, misalignment, skew, etc.) will sometimes indicate a problem in advance depending on which slat is affected.

(c) If necessary, adjust the slat (TASK 27-81-00-820-803).

SUBTASK 27-81-21-440-002

(9) Do this task: Leading Edge Flaps and Slats - Activation, TASK 27-81-00-440-801.

SUBTASK 27-81-21-710-002

(10) Do this task: Leading Edge Flap and Slat System Operation With Primary Control, TASK 27-81-00-860-801.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-21-410-002

(1) Install the applicable access panels (TASK 57-41-02-400-801):

(a) Close these access panels:

Number	Name/Location
521AAB	Lower Leading Edge Access Panel - Slat Station 497
521BB	Engine Fuel Valve Shutoff Access Panel - Slat Station 27
521CB	Lower Leading Edge Access Panel - Slat Station 50
521FB	Lower Leading Edge Access Panel - Slat Station 107
521GB	Lower Leading Edge Access Panel - Slat Station 125
521HB	Lower Leading Edge Access Panel - Slat Station 144
521JB	Lower Leading Edge Access Panel - Slat Station 161
521MB	Lower Leading Edge Access Panel - Slat Station 226
521NB	Lower Leading Edge Access Panel - Slat Station 244
521PB	Lower Leading Edge Access Panel - Slat Station 261

LEADING EDGE FLAP ACTUATOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the leading edge flap actuator.

(2) An installation of the leading flap actuator.

B. The leading edge flap actuator is referred to as the actuator in this procedure.

TASK 27-81-31-000-801

2. Leading Edge Flap Actuator Removal

(Figure 401)

A. References

Reference	Title

D. Prepare for the Removal

SUBTASK 27-81-31-040-001

WARNING DO THE DEACTIVATION PROCEDURE TO PREVENT THE OPERATION OF THE THRUST REVERSER. THE ACCIDENTAL OPERATION OF THE THRUST REVERSER CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the thrust reversers are activated, then deactivate them. Do this task: Thrust Reverser Deactivation For Ground Maintenance, TASK 78-31-00-040-801-G00.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-31-860-010

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Make sure that the inboard fan duct cowl and the inboard and outboard thrust reversers are closed in the stowed position or are removed.

SUBTASK 27-81-31-860-011

CAUTION

MAKE SURE THAT THE TRAILING EDGE FLAPS ARE FULLY RETRACTED. IF THEY ARE NOT FULLY RETRACTED, THE ACTUATOR WILL EXTEND. THE ACTUATOR CAN CAUSE DAMAGE TO THE WING RIB.

(3) If the trailing edge flaps are not fully retracted, then retract them. Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

SUBTASK 27-81-31-860-002

(4) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	15	C01081	HYDRAULIC SYSTEM PTU VALVE CONT 1
A	16	C01085	HYDRAULIC SYSTEM PTU VALVE CONT 2

SUBTASK 27-81-31-860-012

WARNING

MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Pressurize the hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-81-31-860-003

WARNING

MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Move the flap control lever to the 1-unit position to extend the leading edge flaps.

SUBTASK 27-81-31-860-013

(7) Remove power from the hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-31-480-001

WARNING MAKE SURE TO INSTALL THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS AND SLATS. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(8) Install the lockout set, SPL-1734, on the actuator for the adjacent leading edge flap. Do this task: Leading Edge Flap and Slat Locks Installation, TASK 27-81-00-480-801.

E. Leading Edge Flap Actuator Removal

SUBTASK 27-81-31-020-001

(1) Disconnect the leading edge flap actuator from the leading edge flap. Do the steps for the applicable actuator:

(a) If you are removing the outboard leading edge flap actuator, then do these steps (View E, Figure 401):

1) Remove the cotter pin [19].

a) Discard the cotter pin [19].

2) Remove the nut [24] and the washer [23].

3) Remove the bolt [18], the washer [20], and the bushing [21].

4) Remove the actuator [11] and the washer [22] from the leading edge flap [1].

(b) If you are removing the inboard leading edge flap actuator, then do these steps (View F, Figure 401):

1) Remove the cotter pin [26].

a) Discard the cotter pin [26].

2) Remove the nut [30] and the washer [29].

3) Remove the bolt [25], the washer [27], and the bushing [28].

4) Remove the actuator [12] and the washer [22] from the leading edge flap [2].

SUBTASK 27-81-31-860-014

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) Pressurize the hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-81-31-860-004

(3) Move the flap control lever to the UP position to retract the actuator [11] or the actuator [12].

SUBTASK 27-81-31-860-005

(4) Remove power from the hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-31-020-002

(5) Remove the leading edge flap actuator from the airplane. Do these steps (Views B, C, and D, Figure 401):

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Disconnect the three hydraulic lines from the hydraulic fittings. Do these steps:

1) Attach identification tags or labels to the hydraulic lines and to their related hydraulic fittings for correct connections during the installation procedure.

2) Remove the four screws [6], the four nuts [7], and two clamps [5] that attach the hydraulic line [4] to the bracket [8].

3) Disconnect the hydraulic line [4], the hydraulic line [9], and the hydraulic line [10] from the three hydraulic fittings [3].

4) Install plugs in the open ends of the hydraulic lines.

5) Install caps in the three hydraulic fittings [3].

(b) Remove the nut [17] and the washer [16].

(c) Remove the bolt [13], the washer [14], and the bushing [15].

(d) Remove the actuator [11] or the actuator [12] from the structure.

1) Remove the hydraulic line [4], the hydraulic line [9], and the hydraulic line [10] with the actuator [11] or the actuator [12].

SUBTASK 27-81-31-020-003

(6) If you will install a new leading edge flap actuator, then remove the hydraulic lines from the old actuator. Do these steps for the applicable actuator:

(a) Attach identification tags or labels to the hydraulic lines and to their related hydraulic ports for correct connections during the installation procedure.

(b) Remove the hydraulic line [4], the hydraulic line [9], and the hydraulic line [10] from the actuator [11] or the actuator [12].

(c) Install plugs in the open ends of the hydraulic lines.

(d) Install caps in the hydraulic ports that are on the actuator [11] or the actuator [12].

F. Prepare for the Installation

SUBTASK 27-81-31-040-002

WARNING DO THE DEACTIVATION PROCEDURE TO PREVENT THE OPERATION OF THE THRUST REVERSER. THE ACCIDENTAL OPERATION OF THE THRUST REVERSER CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the thrust reversers are activated, then deactivate them. Do this task: Thrust Reverser Deactivation For Ground Maintenance, TASK 78-31-00-040-801-G00.

SUBTASK 27-81-31-860-015

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Make sure that the inboard fan duct cowl and the inboard and outboard thrust reversers are closed in the stowed position or are removed.

SUBTASK 27-81-31-860-016

CAUTION MAKE SURE THAT THE TRAILING EDGE FLAPS ARE FULLY RETRACTED. IF THEY ARE NOT FULLY RETRACTED, THE ACTUATOR WILL EXTEND. THE ACTUATOR CAN CAUSE DAMAGE TO THE WING RIB.

(3) If the trailing edge flaps are not fully retracted, then retract them. Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

G. Leading Edge Flap Actuator Installation

SUBTASK 27-81-31-820-002

(1) Make sure that the rod end of the leading edge flap actuator that you will install is the same length as the rod end of the actuator that you removed.

(a) If the lengths are not the same, then adjust the rod end length of the actuator that you will install. Do these steps:

1) Remove the lockwire from the nut [31].

a) Discard the lockwire.

2) Loosen the nut [31].

3) Adjust the rod end of the actuator [11] or the actuator [12] to the correct length.

4) Tighten the nut [31] from 550 in-lb (62 N·m) to 650 in-lb (73 N·m).

5) Safety the nut [31] with a new MS20995NC32 lockwire, G50347. Do this task: Lockwire, Cotter Pins, and Lockrings - Installation, TASK 20-10-44-400-801.

SUBTASK 27-81-31-420-001

(2) If the hydraulic lines are not installed on the leading edge flap actuator, then connect the hydraulic lines to the actuator. Do these steps:

(a) Remove the caps from the hydraulic ports that are on the actuator [11] or the actuator [12].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove the plugs from the end of each hydraulic line that will attach to the actuator [11] or the actuator [12].

(c) Connect the hydraulic line [4], the hydraulic line [9], and the hydraulic line [10] to the hydraulic ports that are on the actuator [11] or the actuator [12].

(d) Tighten the B-nuts that are on the hydraulic lines to 140 ±7 in-lb (16 ±1 N·m).

(e) Safety each B-nut with a new MS20995NC32 lockwire, G50347. Do this task: Lockwire, Cotter Pins, and Lockrings - Installation, TASK 20-10-44-400-801.

(f) Remove the identification tags or labels from the hydraulic lines and from their related hydraulic ports that are on the actuator.

SUBTASK 27-81-31-420-005

(3) Install the leading edge flap actuator. Do these steps (Views B, C, and D, Figure 401):

(a) Put the actuator [11] or the actuator [12] in its position on the fitting that is on the structure.

(b) If you are installing a leading edge flap actuator in the left wing, then do this step:

1) Install the bushing [15], the washer [14], and the bolt [13] on the outboard side of the structure fitting.

(c) If you are installing a leading edge flap actuator in the right wing, then do these steps:

1) Install the bushing [15] on the inboard side of the structure fitting.

2) Install the washer [14] and the bolt [13] on the inboard side or the outboard side of the structure fitting.

NOTE: The washer [14] must be installed next to the head of the bolt [13].

(d) Install the washer [16] and the nut [17].

1) Tighten the nut [17] from 660 in-lb (75 N·m) to 980 in-lb (111 N·m).

SUBTASK 27-81-31-420-006

(4) Connect the hydraulic lines to the hydraulic fittings. Do these steps (Views B and C, Figure 401):

(a) Remove the plugs from the hydraulic lines.

(b) Remove the caps from the three hydraulic fittings [3].

(c) Connect the hydraulic line [4], the hydraulic line [9], and the hydraulic line [10] to the three hydraulic fittings [3].

(d) Tighten the B-nuts that are on the hydraulic lines to 140 ±7 in-lb (16 ±1 N·m).

(e) Safety each B-nut with a new MS20995NC32 lockwire, G50347. Do this task: Lockwire, Cotter Pins, and Lockrings - Installation, TASK 20-10-44-400-801.

(f) Remove the identification tags or labels from the hydraulic lines and from their related hydraulic fittings.

SUBTASK 27-81-31-420-007

(5) Attach the hydraulic line [4] to the bracket [8]. Do these steps:

(a) Put the hydraulic line [4] in its position on the bracket [8].

(b) Put the two clamps [5] in their positions on the hydraulic line [4] and the bracket [8].

(c) Install the four screws [6] and the four nuts [7].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-31-860-006

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Pressurize the hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-81-31-860-007

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(7) Move the flap control lever to the 1-unit position to extend the actuator [11] or the actuator [12].

SUBTASK 27-81-31-860-008

(8) Remove power from the hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-31-420-008

(9) Connect the leading edge flap actuator to the leading edge flap. Do the steps for the applicable actuator:

(a) If you are installing the outboard leading edge flap actuator, then do these steps (View E, Figure 401):

1) Apply the grease, D00633, on the mating surfaces of the bolt [18].
2) Put the actuator [11] and the washer [22] in their positions on the fitting of the leading edge flap [1].
a) You can bond the washer [22] to the leading edge flap [1] with the sealant, A00247, for easier installation.
3) Install the bushing [21], the washer [20], and the bolt [18].
4) Install the washer [23] and the nut [24].
a) Tighten the nut [24] from 660 in-lb (75 N·m) to 980 in-lb (111 N·m).
<1> Align a slot that is on the nut [24] with the cotter pin hole that is in the bolt [18].
5) Install a new cotter pin [19] in the bolt [18] hole.

(b) If you are installing the inboard leading edge flap actuator, then do these steps (View F, Figure 401):

1) Apply the grease, D00633, on the mating surfaces of the bolt [25].
2) Put the actuator [12] and the washer [22] in their positions on the fitting of the leading edge flap [2].
a) You can bond the washer [22] to the leading edge flap [2] with the sealant, A00247, for easier installation.
3) Install the bushing [28], the washer [27], and the bolt [25].
4) Install the washer [29] and the nut [30].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

a) Tighten the nut [30] from 660 in-lb (75 N·m) to 980 in-lb (111 N·m).

<1> Align a slot that is on the nut [30] with the cotter pin hole that is in the bolt [25].

5) Install a new cotter pin [26] in the bolt [25] hole.

SUBTASK 27-81-31-080-001

WARNING CAREFULLY REMOVE THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY IF YOU DO NOT REMOVE THE LOCKS CORRECTLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(10) Carefully remove each lockout set, SPL-1734, that is installed. Do this task: Leading Edge Flap and Slat Locks Removal, TASK 27-81-00-080-801.

SUBTASK 27-81-31-790-001

(11) Do a check for hydraulic leaks. Do these steps:

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize the hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION CAREFULLY MONITOR THE FLAP-NOSE CLEARANCE AND THE ACTUATOR CLEARANCES DURING THE FLAP EXTENSION AND RETRACTION. IF THERE IS NOT SUFFICIENT CLEARANCE, YOU CAN CAUSE DAMAGE TO THE STRUCTURE.

(b) Operate the leading edge flaps for a minimum of two cycles to bleed air from the system.

1) Leave the flaps in the extended position.

(c) Make sure that there are no hydraulic leaks from the actuator [11] or the actuator [12].

(d) Make sure that there are no hydraulic leaks from the hydraulic lines.

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(e) Move the flap control lever to the UP position to retract the leading edge flaps.

(f) Remove power from the hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-31-720-001

(12) Do this task: Leading Edge Flap and Slat Timing Test in Primary Mode, TASK 27-81-00-700-802.

SUBTASK 27-81-31-710-002

(13) Do this task: Leading Edge Flap and Slat System Standby Actuation Operational Test, TASK 27-81-00-710-801.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-31-860-009

(1) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	15	C01081	HYDRAULIC SYSTEM PTU VALVE CONT 1
A	16	C01085	HYDRAULIC SYSTEM PTU VALVE CONT 2

SUBTASK 27-81-31-440-001

(2) Activate the thrust reversers. Do this task: Thrust Reverser Activation After Ground Maintenance, TASK 78-31-00-440-801-G00.

——— END OF TASK ———

LEADING EDGE FLAP ACTUATOR - INSPECTION/CHECK

1. General

A. This procedure contains the task to do a check of the leading edge flap actuator.

TASK 27-81-31-200-801

2. Leading Edge Flap Actuator Inspection

(Figure 601)

A. General

(1) This task gives the wear limits and the repair data for the leading edge flap actuator inspection.

E. Procedure

SUBTASK 27-81-31-020-004

(1) Do this task: Leading Edge Flap Actuator Removal, TASK 27-81-31-000-801.

SUBTASK 27-81-31-220-002

(2) Examine the parts of the leading edge flap actuator for worn areas:

(a) Remove the parts that you want to do a check.

(b) Measure the parts with a micrometer (0-1 inch, readable to 1/1000 inch), STD-1096, or a vernier caliper (0 - 6 inch, readable to 1/1000 inch), STD-1097.

(c) Compare the dimensions that you measured with the permitted wear dimensions that are shown in Table 601.

(d) If the parts are out of tolerance, replace or repair the parts if it is necessary.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE SLAT ACTUATOR - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the actuator of the leading edge slat.

(2) An installation of the actuator of the leading edge slat.

TASK 27-81-41-000-801

2. Leading Edge Slat Actuator Removal

(Figure 401)

E. Prepare for the Removal

SUBTASK 27-81-41-040-001

WARNING DO THE DEACTIVATION PROCEDURE TO PREVENT THE OPERATION OF THE THRUST REVERSER. THE ACCIDENTAL OPERATION OF THE THRUST REVERSER CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the thrust reversers are activated, then deactivate them. Do this task: Thrust Reverser Deactivation For Ground Maintenance, TASK 78-31-00-040-801-G00.

SUBTASK 27-81-41-860-013

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Make sure that the inboard fan duct cowl and the inboard and outboard thrust reversers are closed in the stowed position or are removed.

SUBTASK 27-81-41-860-014

CAUTION MAKE SURE THAT THE TRAILING EDGE FLAPS ARE FULLY RETRACTED. IF THEY ARE NOT FULLY RETRACTED, THE ACTUATOR WILL EXTEND. THE ACTUATOR CAN CAUSE DAMAGE TO THE WING RIB.

(3) If the trailing edge flaps are not fully retracted, then retract them. Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-41-860-001

(4) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	15	C01081	HYDRAULIC SYSTEM PTU VALVE CONT 1
A	16	C01085	HYDRAULIC SYSTEM PTU VALVE CONT 2

SUBTASK 27-81-41-860-002

WARNING

MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(5) Pressurize the hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-81-41-860-003

WARNING

MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(6) Move the flap control lever to the 30-unit position to move the leading edge slats to the full extend position.

SUBTASK 27-81-41-040-004

(7) Remove power from the hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-41-480-001

WARNING

MAKE SURE TO INSTALL THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS AND SLATS. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(8) Install the lockout set, SPL-1734, on the leading edge slat actuators that you will not remove. Do this task: Leading Edge Flap and Slat Locks Installation, TASK 27-81-00-480-801.

SUBTASK 27-81-41-860-018

WARNING

MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(9) Pressurize the hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-41-860-004

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(10) Move the flap control lever to the 1-unit position to retract the applicable leading edge slats to the intermediate position.

NOTE: A slat actuator is preloaded against a fully extended slat. You will remove a slat actuator when it is not preloaded.

SUBTASK 27-81-41-040-002

(11) Remove power from the hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-41-010-002

(12) Open the applicable access panels that are adjacent to the actuator (TASK 57-41-02-000-801).

(a) For the left wing, open these access panels:

Number	Name/Location
521DB	Lower Leading Edge Access Panel - Slat Station 70
521EB	Lower Leading Edge Access Panel - Slat Station 91
521KB	Lower Leading Edge Access Panel - Slat Station 179
521LB	Lower Leading Edge Access Panel - Slat Station 208
521RB	Lower Leading Edge Access Panel - Slat Station 298
521SB	Lower Leading Edge Access Panel - Slat Station 328
521XB	Lower Leading Edge Access Panel - Slat Station 425
521YB	Lower Leading Edge Access Panel - Slat Station 470

(b) For the right wing, open these access panels:

Number	Name/Location
621DB	Lower Leading Edge Access Panel - Slat Station 70
621EB	Lower Leading Edge Access Panel - Slat Station 91
621JB	Lower Leading Edge Access Panel - Slat Station 161
621KB	Lower Leading Edge Access Panel - Slat Station 179
621QB	Lower Leading Edge Access Panel - Slat Station 280
621RB	Lower Leading Edge Access Panel - Slat Station 298
621WB	Lower Leading Edge Access Panel - Slat Station 406
621XB	Lower Leading Edge Access Panel - Slat Station 425

SUBTASK 27-81-41-200-001

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(13) Keep the housing (can) assemblies of the slat main tracks clean and free of unwanted objects (FOD) at all times.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Leading Edge Slat Actuator Removal

SUBTASK 27-81-41-020-001

(1) Remove the slat actuator door [3] from the slat actuator [2]. Do these steps (Views B and D, Figure 401):

(a) Do this step for slat 1 or slat 8:

1) Remove the two bolts [14], the two washers [15], the two washers [16], and the two nuts [17] that attach the slat actuator door [3] to the slat actuator [2].

(b) Do this step for slat 2, 3, 4, 5, 6, or 7:

1) Remove the two bolts [14], the two washers [15], the two washers [16], and the two nuts [17] that attach the slat actuator door [3] and the clamp [52] to the slat actuator [2].

(c) Remove the two bolts [4], the four washers [5], and the two nuts [6] that attach the slat actuator door [3] and the bracket [32] to the slat actuator [2].

(d) Remove the slat actuator door [3].

(e) Install the two bolts [4], the four washers [5], and two nuts [6] to temporarily attach the bracket [32] to the slat actuator [2].

SUBTASK 27-81-41-020-002

(2) Remove the two dropout links [7]. Do these steps (View B, Figure 401):

(a) Remove the four cotter pins [13].

1) Discard the four cotter pins [13].

(b) Remove the four nuts [12] and the four washers [11].

(c) Remove the four bolts [8], the four washers [9], and the four bushings [10].

(d) Remove the two dropout links [7].

SUBTASK 27-81-41-020-003

(3) Disconnect the slat actuator [2] from the leading edge slat [1]. Do these steps (View C, Figure 401):

(a) Remove the bolt retainer [23] from the leading edge slat [1]. Do these steps:

1) Remove the two bolts [21] and the two washers [22].

2) Remove the bolt retainer [23] from the leading edge slat [1].

WARNING MAKE SURE YOU HOLD THE LEADING EDGE SLAT IN ITS POSITION. THE LEADING EDGE SLAT CAN FALL TO THE FULL EXTEND POSITION. THIS CAN CAUSE INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(b) Remove the slat actuator [2] from the leading edge slat [1]. Hold the leading edge slat [1] while you do these steps:

1) Remove the nut [19] and the washer [20].

2) Remove the bolt [25], the washer [24], and the bushing [18].

3) Carefully let the leading edge slat [1] move down to the 30 (full extend) position while you hold the slat actuator [2].

SUBTASK 27-81-41-980-002

(4) Let the slat actuator [2] hang from the support fitting [46].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-41-020-004

(5) Remove the slat actuator [2]. Do these steps (View D, Figure 401):

(a) Attach identification tags or labels to the hydraulic lines and to their related ports that are on the swivels [31] for correct connections during the installation procedure.

(b) Do this step for slat 1 or slat 8:

1) Disconnect the hydraulic line [29], the hydraulic line [30], the hydraulic line [40], and the hydraulic line [41] from the four swivels [31].

NOTE: The hydraulic lines, the bracket [32], and the clamps are removed from the airplane with the slat actuator [2].

(c) Do this step for slat 2, 3, 4, 5, 6, or 7:

1) Disconnect the hydraulic line [53], the hydraulic line [54], the hydraulic line [40], and the hydraulic line [41] from the four swivels [31].

NOTE: The hydraulic lines, the bracket [32], and the clamps are removed from the airplane with the slat actuator [2].

(d) Install caps on the hydraulic ports that are on the four swivels [31].

(e) Install plugs in the open ends of the hydraulic lines.

(f) Remove the nut [47] and the washer [48] from the bolt [44].

1) Discard the nut [47].

(g) Hold the slat actuator [2] while you remove the bolt [44], the washer [45], and the bushing [43].

(h) Remove the slat actuator [2] from the airplane.

SUBTASK 27-81-41-020-005

(6) If it is necessary, remove the hydraulic lines and the bracket [32] from the slat actuator [2]. Do these steps:

(a) Attach identification tags or labels to the hydraulic lines and to their related ports that are on the slat actuator [2] for correct connections during the installation procedure.

(b) Do this step for slat 1 or slat 8:

1) Disconnect the hydraulic line [29], the hydraulic line [30], the hydraulic line [40], and the hydraulic line [41] from the slat actuator [2].

(c) Do this step for slat 2, 3, 4, 5, 6, or 7:

1) Disconnect the hydraulic line [53], the hydraulic line [54], the hydraulic line [40], and the hydraulic line [41] from the slat actuator [2].

(d) Install caps on the hydraulic ports that are on the slat actuator [2].

(e) Install plugs in the open ends of the hydraulic lines.

(f) Remove the nut [28], the bolt [27], and the two clamps [26] from the hydraulic lines.

(g) Do this step for slat 2, 3, 4, 5, 6, or 7:

1) Remove the clamp [52] from the hydraulic line.

(h) Remove the eight nuts [39], the eight washers [38], the eight bolts [37], and the four clamps [36] that attach the hydraulic lines to the bracket [32].

(i) Remove the two nuts [6], the four washers [5], and the two bolts [4] that attach the bracket [32] to the slat actuator [2].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-41-200-002

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(7) Keep the housing (can) assemblies of the slat main tracks clean and free of unwanted objects (FOD) at all times.

END OF TASK

G. Prepare for the Installation

SUBTASK 27-81-41-040-003

WARNING DO THE DEACTIVATION PROCEDURE TO PREVENT THE OPERATION OF THE THRUST REVERSER. THE ACCIDENTAL OPERATION OF THE THRUST REVERSER CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the thrust reversers are activated, then deactivate them. Do this task: Thrust Reverser Deactivation For Ground Maintenance, TASK 78-31-00-040-801-G00.

SUBTASK 27-81-41-860-015

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Make sure that the inboard fan duct cowl and the inboard and outboard thrust reversers are closed in the stowed position or are removed.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-41-860-016

CAUTION MAKE SURE THAT THE TRAILING EDGE FLAPS ARE FULLY RETRACTED. IF THEY ARE NOT FULLY RETRACTED, THE ACTUATOR WILL EXTEND. THE ACTUATOR CAN CAUSE DAMAGE TO THE WING RIB.

(3) If the trailing edge flaps are not fully retracted, then retract them. Do this task: Retract the Trailing Edge Flaps, TASK 27-51-00-860-804.

H. Leading Edge Slat Actuator Installation

SUBTASK 27-81-41-200-003

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(1) Keep the housing (can) assemblies of the slat main tracks clean and free of unwanted objects (FOD) at all times.

SUBTASK 27-81-41-980-004

(2) Extend the slat actuator [2] that you will install to the same length as the removed slat actuator [2].

NOTE: This step will help to put the actuator in the correct position.

SUBTASK 27-81-41-420-001

(3) If the hydraulic lines and the bracket [32] are not installed on the slat actuator [2], then install them. Do these steps (View D, Figure 401):

(a) Install the bracket [32] on the slat actuator [2]. Do these steps:

1) Put the bracket [32] in its position on the slat actuator [2].
2) Install the two bolts [4], the four washers [5], and the two nuts [6].

(b) Attach the hydraulic lines to the bracket [32]. Do these steps:

1) Put the hydraulic lines in their positions on the bracket [32].
2) Put the four clamps [36] in their positions on the hydraulic lines.
3) Install the eight bolts [37], the eight washers [38], and the eight nuts [39].

(c) Remove the plug from the end of each hydraulic line that will attach to the slat actuator [2].

(d) Remove the caps from the hydraulic ports that are on the slat actuator [2].

(e) Do these steps for slat 1 or slat 8:

1) Connect the hydraulic line [29], the hydraulic line [30], the hydraulic line [40], and the hydraulic line [41] to the hydraulic ports that are on the slat actuator [2].
2) Tighten the B-nuts that are on the hydraulic lines to 140 ±7 in-lb (16 ±1 N·m).
3) Put the two clamps [26] on the hydraulic line [29] and the hydraulic line [30].
4) Install the bolt [27] and the nut [28].

(f) Do these steps for slat 2, 3, 4, 5, 6, or 7:

1) Connect the hydraulic line [53], the hydraulic line [54], the hydraulic line [40], and the hydraulic line [41] to the hydraulic ports that are on the slat actuator [2].
2) Tighten the B-nuts that are on the hydraulic lines to 140 ±7 in-lb (16 ±1 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

3) Put the two clamps [26] on the hydraulic line [53] and the hydraulic line [54].

4) Install the bolt [27] and the nut [28].

5) Put the clamp [52] on the hydraulic line [53].

(g) Remove the identification tags or labels from the hydraulic lines and from their related hydraulic ports that are on the slat actuator [2].

SUBTASK 27-81-41-980-003

(4) Make sure that the leading edge slat [1] is in the 30-unit (full extend) position.

SUBTASK 27-81-41-420-002

(5) Connect the aft end of the slat actuator [2] to the support fitting [46]. Do these steps (View D, Figure 401):

(a) If the washer [42] is not bonded to the support fitting [46], then do these steps:

1) Make sure that the mating surface of the support fitting [46] is clean.

2) Make sure that the mating surface of the washer [42] is clean.

3) Apply the sealant, A00247, to the mating surface of the washer [42] and to the mating surface of the support fitting [46].

4) Put the washer [42] in its position on the support fitting [46].

(b) Connect the slat actuator [2] to the support fitting [46]. Do these steps:

1) Put the slat actuator [2] in its position on the support fitting [46].

2) Install the bushing [43], the washer [45], and the bolt [44].

a) Make sure that the bushing [43] and the head of the bolt [44] are on the outboard side of the slat actuator [2].

3) Install the washer [48] and the new nut [47].

a) Tighten the nut [47] from 660 in-lb (75 N·m) to 980 in-lb (111 N·m).

<1> Optional method: Tighten the bolt head from 882 in-lb (100 N·m) to 1078 in-lb (122 N·m).

SUBTASK 27-81-41-420-007

(6) If the installation of a repaired/new swivel [31] is necessary, then do these steps for each applicable swivel [31] (View D, Figure 401):

CAUTION

MAKE SURE THAT YOU POSITION THE SWIVEL CORRECTLY TO THE STRUCTURE. MAKE SURE THAT THE MOVEMENT SIDE IS CONNECTED TO THE HYDRAULIC TUBES THAT MOVE WITH THE ACTUATOR. AN INCORRECT REVERSE INSTALLATION OF THE SWIVEL CAN CAUSE TUBE FRACTURE AND HYDRAULIC SYSTEM FLUID LOSS. THIS CAN CAUSE DAMAGE.

(a) Install the repaired/new swivel [31] on the rib swivel bracket. Do these steps:

1) Put the swivel [31] in its position on the rib swivel bracket.

2) Loosely install the two washers [34] and the two bolts [33].

- Do not fully tighten the two bolts [33] at this time.
- If you fully tighten the two bolts [33] at this time, then you can cause damage to the hydraulic lines.
- You must loosely install the two bolts [33] to let the swivel [31] align correctly during the movement of the slats.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

- You will tighten the two bolts [33] with the slats in the fully retracted position at the end of this slat actuator installation task.

SUBTASK 27-81-41-420-008

CAUTION

MAKE SURE THAT YOU SAFELY CONNECT THE HYDRAULIC LINES TO THE CORRECT PORTS AND FITTINGS. IF YOU CONNECT THE HYDRAULIC LINES TO THE INCORRECT PORTS AND FITTINGS, DAMAGE CAN OCCUR. IF YOU DO NOT CONNECT ALL OF THE HYDRAULIC LINES, THEN DAMAGE TO THE ACTUATOR CAN OCCUR.

(7) Connect the hydraulic lines to the swivels [31]. Do these steps:

(a) Remove the caps from the four swivels [31].

(b) Remove the plugs from the hydraulic lines.

(c) Do these steps for slat 1 or slat 8:

1) Connect the hydraulic line [29], the hydraulic line [30], the hydraulic line [40], and the hydraulic line [41] to their related hydraulic ports that are on the four swivels [31].

2) Tighten the B-nuts that are on the hydraulic lines to 140 ±7 in-lb (16 ±1 N·m).

(d) Do these steps for slat 2, 3, 4, 5, 6, or 7:

1) Connect the hydraulic line [53], the hydraulic line [54], the hydraulic line [40], and the hydraulic line [41] to their related hydraulic ports that are on the four swivels [31].

2) Tighten the B-nuts that are on the hydraulic lines to 140 ±7 in-lb (16 ±1 N·m).

(e) Remove the identification tags or labels from the hydraulic lines and from their related hydraulic ports that are on the four swivels [31].

SUBTASK 27-81-41-860-006

(8) Use hydraulic power to extend the slat actuator [2] to the full extend position. Do these steps:

WARNING

MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize the hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

WARNING

MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(b) Move the flap control lever to the 30-unit position to extend the slat actuator [2] to the full extend position.

(c) Remove power from the hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-41-820-001

(9) Make sure that the leading edge slat [1] is in the correct position. Do these steps (Figure 402):

NOTE: The slat actuator [2] must be extended farther than the leading edge slat [1]. This permits the slat actuator [2] to be preloaded against the leading edge slat [1] when it is fully extended (View A-A, Figure 402).

(a) Put the actuator end fitting [72] in its position on the slat fitting [71].

(b) Make sure that the mismatch between the actuator end fitting [72] and the slat fitting [71] is from 0.0050 in. (0.1270 mm) to 0.1000 in. (2.5400 mm).

SUBTASK 27-81-41-860-007

(10) Use hydraulic power to retract the slat actuator [2] to the 1-unit (intermediate) position. Do these steps:

NOTE: This will let you install the bolt [25].

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize the hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(b) Move the flap control lever to the 1-unit position to retract the slat actuator [2] to the extend (intermediate) position.

(c) Remove power from the hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-41-420-003

(11) Connect the slat actuator [2] to the leading edge slat [1]. Do these steps (View C, Figure 401):

WARNING MAKE SURE YOU HOLD THE LEADING EDGE SLAT IN ITS POSITION. THE LEADING EDGE SLAT CAN FALL TO THE FULL EXTEND POSITION. THIS CAN CAUSE INJURY TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(a) Move the leading edge slat [1] until it aligns with the slat actuator [2].

1) Hold the leading edge slat [1] while you install the fasteners.

(b) Install the bushing [18], the washer [24], and the bolt [25].

1) Make sure that the head of the bolt [25] is on the outboard side of the slat actuator [2].

(c) Install the washer [20] and the nut [19].

1) Tighten the nut [19] from 660 in-lb (75 N·m) to 980 in-lb (111 N·m).

a) Optional method: Tighten the bolt head from 882 in-lb (100 N·m) to 1078 in-lb (122 N·m).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(d) Install the bolt retainer [23]. Do these steps:

1) Put the bolt retainer [23] in its position.

2) Apply the compound, C00528, to the shank and threads of the two bolts [21].

3) Install the two bolts [21] and two washers [22].

(e) At the slat actuator [2] rod end, bend the lockwire tail ends parallel to the actuator rod.

1) Make sure that the lockwire tail ends do not touch the leading edge panel assembly.

NOTE: If the lockwire tail ends touch the leading edge assembly, it can cause chafing and damage to the leading edge panel.

SUBTASK 27-81-41-420-004

(12) Install the two dropout links [7]. Do these steps (View B, Figure 401):

(a) Put the two dropout links [7] in their positions.

(b) Install the four bushings [10], the four washers [9], and the four bolts [8].

(c) Install the four washers [11] and the four nuts [12].

(d) Do these steps for each nut [12] and its related bolt [8]:

1) Tighten the nut [12] to 50 in-lb (6 N·m).

2) Make sure that you align the nut [12] castellations with the bolt [8] hole.

a) If necessary, continue to tighten the nut [12] until the castellations align with the bolt [8] hole.

<1> Do not tighten the nut [12] more than 80 in-lb (9 N·m).

3) Install a new cotter pin [13] in the bolt [8] hole.

SUBTASK 27-81-41-860-017

(13) Use hydraulic power to extend the leading edge slat [1] to the full extend position. Do these steps:

WARNING

MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize the hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

WARNING

MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(b) Move the flap control lever to the 30-unit position to extend the leading edge slat [1] to the full extend position.

(c) Remove power from the hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-41-420-005

(14) Install the slat actuator door [3] on the slat actuator [2]. Do these steps (Views B and D, Figure 401):

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the two bolts [4], the four washers [5], and the two nuts [6] that attach the bracket [32] to the slat actuator [2].

1) If there are three washers installed on each bolt [4], then discard the thicker aluminum washers.

(b) Put the slat actuator door [3] and the bracket [32] in their positions on the slat actuator [2].

(c) Install the two bolts [4], the four washers [5], and the two nuts [6] that attach the slat actuator door [3] and the bracket [32] to the slat actuator [2].

(d) Do this step for slat 1 or slat 8:

1) Install the two bolts [14], the two washers [15], the two washers [16], and the two nuts [17] that attach the slat actuator door [3] to the slat actuator [2].

(e) Do this step for slat 2, 3, 4, 5, 6, or 7:

1) Install the two bolts [14], the two washers [15], the two washers [16], and the two nuts [17] that attach the slat actuator door [3] and the clamp [52] to the slat actuator [2].

SUBTASK 27-81-41-820-002

(15) Do this task: Leading Edge Slats Adjustment, TASK 27-81-00-820-803.

SUBTASK 27-81-41-080-001

WARNING CAREFULLY REMOVE THE LEADING EDGE FLAP AND SLAT ACTUATORS LOCKOUT SET. THE LEADING EDGE FLAPS AND SLATS CAN MOVE QUICKLY IF YOU DO NOT REMOVE THE LOCKS CORRECTLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(16) Carefully remove each lockout set, SPL-1734, that is installed. Do this task: Leading Edge Flap and Slat Locks Removal, TASK 27-81-00-080-801.

SUBTASK 27-81-41-720-001

(17) Do this task: Leading Edge Flap and Slat Timing Test in Primary Mode, TASK 27-81-00-700-802.

SUBTASK 27-81-41-710-001

(18) Do this task: Leading Edge Flap and Slat System Standby Actuation Operational Test, TASK 27-81-00-710-801.

SUBTASK 27-81-41-790-001

(19) Do a check for hydraulic leaks. Do these steps:

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Pressurize the hydraulic system B. Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(b) Operate the leading edge slats for a minimum of two cycles to bleed air from the system.

1) Leave the slats in the extended position.

(c) Make sure that there are no hydraulic leaks from the slat actuator [2] or the hydraulic lines.

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(d) Move the flap control lever to the UP position to retract the leading edge slats.

(e) Remove power from the hydraulic system B. Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-41-420-006

(20) If you installed one or more repaired/new swivels [31], then do these steps:

(a) Apply the final torque to the bolts [33] that attach each applicable swivel [31] to the rib swivel brackets per the STANDARD TORQUE VALUES - MAINTENANCE PRACTICES, PAGEBLOCK 20-50-11/201 or per BAC5009.

(b) Apply the final torque to all of the B-Nuts and fittings that are on the hydraulic tubes per BAC5001.

1) Do not tighten the B-Nuts that are common to the swivels [31] until all of the hydraulic tube assemblies have been tightened.

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-41-860-008

(1) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	15	C01081	HYDRAULIC SYSTEM PTU VALVE CONT 1
A	16	C01085	HYDRAULIC SYSTEM PTU VALVE CONT 2

SUBTASK 27-81-41-200-005

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(2) Keep the housing (can) assemblies of the slat main tracks clean and free of unwanted objects (FOD) at all times.

SUBTASK 27-81-41-410-003

(3) Close the applicable access panels (TASK 57-41-02-400-801).

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) For the left wing, close these access panels:

Number	Name/Location
521DB	Lower Leading Edge Access Panel - Slat Station 70
521EB	Lower Leading Edge Access Panel - Slat Station 91
521KB	Lower Leading Edge Access Panel - Slat Station 179
521LB	Lower Leading Edge Access Panel - Slat Station 208
521RB	Lower Leading Edge Access Panel - Slat Station 298
521SB	Lower Leading Edge Access Panel - Slat Station 328
521XB	Lower Leading Edge Access Panel - Slat Station 425
521YB	Lower Leading Edge Access Panel - Slat Station 470

(b) For the right wing, close these access panels:

Number	Name/Location
621DB	Lower Leading Edge Access Panel - Slat Station 70
621EB	Lower Leading Edge Access Panel - Slat Station 91
621JB	Lower Leading Edge Access Panel - Slat Station 161
621KB	Lower Leading Edge Access Panel - Slat Station 179
621QB	Lower Leading Edge Access Panel - Slat Station 280
621RB	Lower Leading Edge Access Panel - Slat Station 298
621WB	Lower Leading Edge Access Panel - Slat Station 406
621XB	Lower Leading Edge Access Panel - Slat Station 425

SUBTASK 27-81-41-440-001

(4) Activate the thrust reversers. Do this task: Thrust Reverser Activation After Ground Maintenance, TASK 78-31-00-440-801-G00.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE SLAT ACTUATOR - INSPECTION/CHECK

1. General

A. There is one task in this procedure. The procedure has this task:

(1) A visual check of the leading edge slat actuator lock indicator.

TASK 27-81-41-200-801

2. Leading Edge Slat Actuator Lock Indicator Visual Check

(Figure 601)

D. Prepare for the Visual Check

SUBTASK 27-81-41-860-009

WARNING

MAKE SURE THAT PERSONNEL AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES. MAKE SURE THAT THE INBOARD FAN DUCT COWL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED. THE FLIGHT CONTROL SURFACES CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) To pressurize hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-41-860-010

WARNING MAKE SURE THAT PERSONNEL AND EQUIPMENT STAY AWAY FROM THE LEADING EDGE SLATS, TRAILING EDGE FLAPS, AND DRIVE MECHANISMS. THE FLAPS, SLATS, AND DRIVE MECHANISMS MOVE QUICKLY. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Move the flap control lever to the 30-unit position.

(a) Make sure that the leading edge slats move to the full extend position.

SUBTASK 27-81-41-480-002

(3) Install the lockout set, SPL-1734 on the adjacent leading edge slats. To install it, do this task: Leading Edge Flap and Slat Locks Installation, TASK 27-81-00-480-801.

SUBTASK 27-81-41-200-006

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(4) Keep clean and free of all unwanted objects (FOD), the housing (can) assemblies of the slat main tracks, at all time.

E. Leading Edge Slat Actuator Lock Indicator Visual Check

SUBTASK 27-81-41-010-003

(1) Remove the slat actuator door [8] from the slat actuator [9]:

(a) Remove the bolts [4], washers [5], washers [6] and nuts [7] that attach the slat actuator door [8] to the slat actuator [9].

(b) Remove the bolts [1], washers [2] and nuts [3] that attach the slat actuator door [8] and the bracket to the slat actuator [9].

(c) Remove the slat actuator door [8].

(d) Temporarily install the bolts [1], washers [2] and nuts [3] to attach the bracket to the slat actuator [9].

SUBTASK 27-81-41-280-001

(2) Do a visual check of the leading edge slat actuator lock indicator:

(a) Move the flap control lever to the UP detent position to retract the slats.

(b) Make sure that the lock indicator hole is open.

(c) Put a 0.115-0.125 inch (2.92-3.18 millimeters) diameter steel rod in the lock indicator hole.

(d) Move the flap control lever to the 1-unit detent position.

(e) Make sure that the actuator is not locked and extends to the extend position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(f) Remove the steel rod from the lock indicator hole.

(g) Make sure that the lock indicator hole is not open.

SUBTASK 27-81-41-410-002

(3) Install the slat actuator door [8] on the slat actuator [9].

(a) Remove the bolts [1], washers [2] and nuts [3] that attach the bracket to the slat actuator [9].

1) If there are three washers installed on the bolts [1], discard the thicker aluminum washer.

(b) Put the slat actuator door [8] in its position on the slat actuator [9].

(c) Install the bolts [1], washers [2] and nuts [3] that attach the slat actuator door [8] and the bracket to the slat actuator [9].

(d) Install the bolts [4], washers [5], washers [6] and nuts [7] that attach the slat actuator door [8] to the slat actuator [9].

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-41-080-002

(1) To remove the lockout set, SPL-1734 from the adjacent leading edge slats, do this task: Leading Edge Flap and Slat Locks Removal, TASK 27-81-00-080-801.

SUBTASK 27-81-41-200-007

WARNING DO NOT LET OBJECTS GET IN THE HOUSING ASSEMBLY OF THE SLAT TRACK. THIS WILL HELP PREVENT A PUNCTURE OF THE HOUSING ASSEMBLY THAT COULD CAUSE A FUEL LEAK. THE FUEL LEAK COULD CAUSE A FIRE AND POSSIBLE DEATH OR INJURY TO PERSONNEL.

(2) Keep clean and free of all unwanted objects (FOD), the housing (can) assemblies of the slat main tracks, at all time.

SUBTASK 27-81-41-860-011

(3) Move the flap control lever to the UP detent position to retract the slats.

SUBTASK 27-81-41-860-012

(4) To remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

END OF TASK

LEADING EDGE UNCOMMANDED MOTION (UCM) VALVE AND LEADING EDGE CRUISE DEPRESSURIZATION VALVE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) LE Uncommanded Motion (UCM) or LE Cruise Depressurization Valve Removal

(2) LE Uncommanded Motion (UCM) or LE Cruise Depressurization Valve Installation.

B. There are two valves installed on the airplane. The Leading Edge (LE) cruise depressurization valve and the LE UCM shutoff valve. This procedure is applicable for the two valves.

C. The leading edge flap and slat uncommanded motion (UCM) or cruise depressurization valve is referred as the valve [3] in this procedure.

D. The LE cruise depressurization valve will be operated each flight to depressurize the leading edge extend at cruise. The LE UCM shutoff valve will be operated only when there is uncommanded motion of the leading edge.

TASK 27-81-52-000-801

2. LE Uncommanded Motion (UCM) or LE Cruise Depressurization Valve Removal

(Figure 401)

D. Access Panels

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

E. Prepare for the Removal

SUBTASK 27-81-52-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-52-860-001

(2) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

SUBTASK 27-81-52-860-002

(3) If there is hydraulic power on hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-52-010-001

(4) To gain access to the UCM valve, do this step:

Remove this access panel:

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

F. Leading Edge Flap and Slat Valve Removal

SUBTASK 27-81-52-020-001

(1) Remove the valve [3]:

CAUTION DO NOT LET HYDRAULIC FLUID GET ON EQUIPMENT. IF HYDRAULIC FLUID GETS ON EQUIPMENT, IMMEDIATELY CLEAN IT FROM THE EQUIPMENT. HYDRAULIC FLUID CAN CAUSE DAMAGE TO EQUIPMENT.

(a) Put a 5-gallon (19-liter) fuel resistant container, STD-1054 below the valve [3] to catch hydraulic fluid.

(b) Disconnect the hydraulic line [4], hydraulic line [5], and hydraulic line [6] from the valve [3].

1) Install caps on the hydraulic lines.

2) Install plugs in the hydraulic ports of the valve [3].

(c) Disconnect the electrical connectors from the valve [3].

(d) After you disconnect the electrical connector(s), examine the connector(s) for corrosion (TASK 20-60-07-910-802).

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(e) Remove the bolts [1] and washers [2].

(f) Remove the valve [3].

END OF TASK

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

G. Leading Edge Flap and Slat Valve Installation

SUBTASK 27-81-52-420-001

(1) Install the valve [3]:

(a) Clean the fay surfaces of the aluminum bracket and valve [3] (CLEANING OF FAY SURFACES, SWPM 20-20-00, Paragraph 2)

(b) Put the valve [3] in its position.

(c) Install the bolts [1] and washers [2].

(d) Apply thin layer of sealant, A00247 along the edges of the joint between the mating surfaces (SWPM 20-20-00, Section 14-D).

(e) Connect the hydraulic lines to the valve [3].

1) Remove the caps from the hydraulic lines.

2) Remove the plugs from the hydraulic ports on the valve [3].

3) Connect the hydraulic line [4] and hydraulic line [6] to the valve [3].

4) Tighten the B-nuts on hydraulic line [4] and hydraulic line [6] to 500 ±25 in-lb (56 ±3 N·m).

5) Connect hydraulic line [5] to the valve [3].

6) Tighten the B-nut on hydraulic line [5] to 270 ±14 in-lb (31 ±2 N·m).

(f) If you did not examine the electrical connector(s) at the removal step, do this task: Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802.

(g) Apply the D5026NS or ZC-026 compound, G50171 to the connectors (SWPM 20-60-03).

(h) If you did not examine the electrical connector(s) at the removal step, do this task: Inspection, Cleaning and Sealing of Electrical Connectors, TASK 20-60-07-910-802.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

SUBTASK 27-81-52-860-003

(2) Use an intrinsically safe approved bonding meter, COM-1550 to measure the resistance between the valve [3] and the bracket (SWPM 20-20-00, Section 21-A).

(a) Make sure the maximum resistance between the valve [3] and the bracket is 0.0025 ohms (2.5 milliohms).

SUBTASK 27-81-52-860-004

(3) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

SUBTASK 27-81-52-720-001

(4) If you replace the Leading Edge (LE) cruise depressurization valve, do this task: Leading Edge Cruise Depressurization Test, TASK 27-81-00-730-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-52-720-002

(5) If you replace the LE UCM shutoff valve, do this task: Leading Edge Uncommanded Motion Protection Test, TASK 27-81-00-700-804.

H. Put the plane back to its usual condition.

SUBTASK 27-81-52-940-001

(1) Install this access panel:

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE CRUISE DEPRESSURIZATION VALVE - INSPECTION/CHECK

1. General

A. This task does a check for internal hydraulic leakage in the leading edge cruise depressurization valve.

TASK 27-81-52-790-801

2. Leading Edge Cruise Depressurization Valve Hydraulic Internal Leakage Check

A. General

(1) This procedure does an internal hydraulic leakage check for the leading edge cruise depressurization valves. The purpose of this leakage test is to identify a high leakage valve.

(2) You must measure the amount of leakage of hydraulic fluid during different conditions of operation to measure the fluid flow rate. It will be necessary to disconnect the return hydraulic line.

134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

E. Prepare for the Internal Leakage Check

SUBTASK 27-81-52-860-006

(1) If the trailing edge flaps are not in the retracted position, then do these steps:

(a) Supply system B hydraulic power. To supply hydraulic power, do this task:
Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(b) Move the flap control lever to the FLAP UP position to retract the trailing edge flaps.

(c) Remove system B hydraulic power. To remove hydraulic power, do this task:
Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-52-860-007

(2) Make sure the flap control lever is at the FLAP UP position.

F. Leading Edge Cruise Depressurization Valve Internal Leakage Check

SUBTASK 27-81-52-790-001

(1) Put a measuring container, STD-6505 under the return line on the cruise depressurization valve.

SUBTASK 27-81-52-790-002

(2) Disconnect the return line from the cruise depressurization valve. Do the applicable steps for this task:

LE Uncommanded Motion (UCM) or LE Cruise Depressurization Valve Removal, TASK 27-81-52-000-801

NOTE: The return line is the smaller of two hydraulic lines that go forward from the cruise depressurization valve.

SUBTASK 27-81-52-790-003

(3) Install a cap or plug on the hydraulic line that goes to the hydraulic reservoir.

SUBTASK 27-81-52-860-008

(4) Supply system B hydraulic power. To supply hydraulic power, do this task:

Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-81-52-860-009

(5) Pressurize the system B hydraulic reservoir. To pressurize the reservoir, do this task:

Hydraulic Reservoirs Pressurization, TASK 29-09-00-860-801.

SUBTASK 27-81-52-790-004

(6) Measure the leakage from the cruise depressurization valve with the solenoids not energized:

(a) Measure and record the leakage rate from the return port on the cruise depressurization valve.

NOTE: The leakage rate must not be more than 100 cc/minute.

SUBTASK 27-81-52-860-010

(7) Do this task:Put the Airplane in the Air Mode, TASK 32-09-00-860-801.

NOTE: The solenoids on the cruise depressurization valve will be energized three seconds after the PSEU is in air mode. A small amount of hydraulic fluid can leak while the valve moves.

SUBTASK 27-81-52-790-005

(8) Measure the leakage from the cruise depressurization valve with the solenoids energized:

(a) Measure and record the leakage rate from the return port on the cruise depressurization valve.

NOTE: The leakage rate must not be more than 100 cc/minute.

SUBTASK 27-81-52-860-011

(9) Do this task: Return the Airplane to the Ground Mode, TASK 32-09-00-860-802.

NOTE: The solenoids on the cruise depressurization valve will be de-energized three seconds after the PSEU is in ground mode. A small amount of hydraulic fluid can leak while the valve moves.

SUBTASK 27-81-52-860-012

(10) Remove the pressure from the system B reservoir. To remove the pressure, do this task:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

SUBTASK 27-81-52-860-013

(11) Remove system B hydraulic power. To remove hydraulic power, do this task:

Hydraulic System A or B Power Removal, TASK 29-11-00-860-805

G. Put the Airplane Back to the Usual Condition

SUBTASK 27-81-52-790-006

(1) Remove the cap or plug from the hydraulic line that goes to the hydraulic reservoir.

SUBTASK 27-81-52-790-007

(2) Re-connect the return line to the leading edge cruise depressurization valve. Do the applicable steps from this task:

LE Uncommanded Motion (UCM) or LE Cruise Depressurization Valve Installation, TASK 27-81-52-400-801.

SUBTASK 27-81-52-610-001

(3) If it is necessary for the hydraulic reservoir, do this task:

Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-81-52-720-003

(4) Do this task:

Leading Edge Cruise Depressurization Test, TASK 27-81-00-730-801.

SUBTASK 27-81-52-210-001

(5) Make sure there are no hydraulic fluid leaks at the leading edge cruise depressurization valve.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE FLAP AND SLAT HYDRAULIC FUSE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the hydraulic fuses of the leading edge flap and slat.

(2) An installation of the hydraulic fuses of the leading edge flap and slat.

B. There are two hydraulic fuses (extend and retract) in the system B and one hydraulic fuse in the standby system. The hydraulic fuses are all located in the airplane main landing gear wheel well.

C. This procedure is applicable for all three hydraulic fuses.

TASK 27-81-61-000-801

2. Leading Edge Flap and Slat Hydraulic Fuse Removal (LE System B or Standby System Fuses)

(Figure 401)

NOTE: This procedure is a scheduled maintenance task.

A. References

Reference	Title
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left

C. Leading Edge Flap and Slat Hydraulic Fuse Removal (LE System B or Standby System Fuses)

SUBTASK 27-81-61-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-81-61-860-001

(2) To remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-61-860-006

(3) To remove power from the standby hydraulic system, do this task: Standby Hydraulic System Power Removal, TASK 29-21-00-000-802.

SUBTASK 27-81-61-020-001

(4) Do these steps to remove the two hydraulic fuses [2] in system B:

(a) Loosen nut [1] and nut [3] to disconnect the hydraulic tubes from the hydraulic fuse [2].

(b) Remove the hydraulic fuse [2].

SUBTASK 27-81-61-020-002

(5) Do these steps to remove the fuse assembly [5] in the standby system:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Loosen nut [6] and nut [7] to disconnect the hydraulic tubes from the fuse assembly [5].

(b) Remove the fuse assembly [5] with the flow limiting valve [4].

(c) Remove the fuse assembly [5] from the flow limiting valve [4].

1) Remove and discard the O-ring packing [8] installed between the fuse assembly [5] and the flow limiting valve [4].

D. Test the LE Hydraulic Fuses

SUBTASK 27-81-61-720-001

(1) Do the functional test of the Leading Edge (LE) hydraulic fuses with the suppliers recommended component maintenance test instructions and test equipment.

NOTE: The suppliers instructions give a reverse flow test, internal leakage test, pressure drop test, volumetric capacity test and reset test for the fuses. This is an off-airplane bench test.

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left

D. Leading Edge Flap and Slat Hydraulic Fuse Installation (LE System B or Standby System Fuses)

SUBTASK 27-81-61-420-001

(1) Do these steps to install the two hydraulic fuses [2] in system B:

(a) Hold the hydraulic fuse [2] in its position.

NOTE: The flow direction arrow on the hydraulic fuse [2] must agree with the arrow on the pressure bulkhead.

(b) Tighten the nut [1] and nut [3] to connect the hydraulic tubes to the hydraulic fuse [2].

SUBTASK 27-81-61-420-002

(2) Do these steps to install the fuse assembly [5] in the standby system:

(a) Install the fuse assembly [5] to the flow limiting valve [4].

1) Install a new O-ring packing [8] between the fuse assembly [5] and the flow limiting valve [4].

(b) Hold the fuse assembly [5] and the flow limiting valve [4] in their position.

NOTE: The flow direction arrow on the fuse assembly [5] and the flow limiting valve [4] must agree with the arrow on the pressure bulkhead.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Tighten the nut [6] and nut [7] to connect hydraulic tubes to the fuse assembly [5] and the flow limiting valve [4].

SUBTASK 27-81-61-860-002

(3) To pressurize hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(a) If you replaced the hydraulic fuse [2], you will need to pressurize the hydraulic system B.

SUBTASK 27-81-61-860-007

(4) To pressurize the standby hydraulic system, do this task: Standby Hydraulic System Pressurization, TASK 29-21-00-000-801.

(a) If you replaced the fuse assembly [5], you will need to pressurize the standby hydraulic system.

SUBTASK 27-81-61-210-001

(5) Do a visual check of the hydraulic fuse [2] or fuse assembly [5] for hydraulic leaks.

SUBTASK 27-81-61-710-001

(6) Do the Leading Edge Flap and Slat Timing Test in Primary Mode, TASK 27-81-00-700-802 for the extend or retract fuse (hydraulic system B fuses).

SUBTASK 27-81-61-710-002

(7) Do the Leading Edge Flap and Slat Timing Test in the Standby Mode, TASK 27-81-00-700-803 for the standby fuse.

SUBTASK 27-81-61-860-003

(8) To remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-61-860-008

(9) To remove power from the standby hydraulic system, do this task: Standby Hydraulic System Power Removal, TASK 29-21-00-000-802.

SUBTASK 27-81-61-610-001

(10) If it is necessary to service the hydraulic reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

——— END OF TASK ———

TASK 27-81-61-860-801

4. Flap and Slat Hydraulic Fuses (System B) Reset

Figure 401

B. Tools/Equipment

Reference	Description
STD-1154	Container - 5 Gallon (19 Liter)

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
211	Flight Compartment - Left

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Zone	Area
212	Flight Compartment - Right

D. Procedure

SUBTASK 27-81-61-860-004

(1) Do these steps to reset the hydraulic fuses [2] for system B:

(a) Make sure that the flap control lever is in the UP position.

(b) Make sure that there is no power on hydraulic system B. If it is necessary to remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

(c) Between the retract or extend hydraulic fuse [2] and the check valve upstream, loosen the nut [1] sufficiently to bleed off the hydraulic fluid into a 5 gallon (19 liter) container, STD-1154.

NOTE: The pressure difference across the hydraulic fuse [2] must be less than 5 psi (34.5 kPa) for a minimum of 5 seconds to put the hydraulic fuse [2] back to the open position.

(d) Tighten the nut [1] after you put the hydraulic fuse [2] back to the open position.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(e) To pressurize the hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(f) Do a check of the hydraulic fuse [2] for hydraulic leaks.

(g) To remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

END OF TASK

TASK 27-81-61-860-802

5. Flap and Slat Hydraulic Fuse (Standby System) Reset

A. References

Reference	Title
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Procedure

SUBTASK 27-81-61-860-005

(1) Do these steps to reset the hydraulic fuse for the standby system:

(a) Make sure that the flap control lever is in the UP position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Remove power from hydraulic system B. To remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE FLAP FLOW LIMITING VALVE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Leading Edge Flap Flow Limiting Valve Removal

(2) Leading Edge Flap Flow Limiting Valve Installation.

B. The Leading Edge Flap Flow Limiting Valve is referred to as the flow limiting valve in these procedures.

TASK 27-81-71-000-801

2. Leading Edge Flap Flow Limiting Valve Removal

(Figure 401)

A. References

Reference	Title
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left

C. Prepare for the Removal

SUBTASK 27-81-71-480-001

WARNING MAKE SURE THAT YOU INSTALL THE DOWNLOCK PINS ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gear, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-81-71-860-001

(2) Do this task to remove power from hydraulic system B: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

D. Leading Edge Flap Flow Limiting Valve Removal

SUBTASK 27-81-71-020-001

(1) Do these steps to remove the flow limiting valve [1]:

(a) Loosen nut [3] and nut [4] to disconnect the hydraulic tubes from the flow limiting valve [1] and the hydraulic fuse [2].

(b) Remove the flow limiting valve [1] from the hydraulic fuse [2].

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

29-11-00-860-801	Hydraulic System A or B Pressurization (P/B 201)
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

B. Expendables/Parts

AMM Item	Description	AIPC Reference	AIPC Effectivity
1	Flow limiting valve	27-81-71-01-015	SIA 001-015
		27-81-71-01-065	SIA 016-999

C. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left

D. Leading Edge Flap Flow Limiting Valve Installation

SUBTASK 27-81-71-420-001

(1) Do these steps to install the flow limiting valve [1]:

(a) Connect the flow limiting valve [1] to the hydraulic fuse [2].

(b) Hold the flow limiting valve [1] and hydraulic fuse [2] in their position.

1) Make sure that the flow direction arrow on the flow limiting valve [1] and hydraulic fuse [2] agree with the arrow on the pressure bulkhead.

(c) Connect the hydraulic tubes to the flow limiting valve [1] and hydraulic fuse [2].

(d) Tighten nut [3] and nut [4].

SUBTASK 27-81-71-610-001

(2) If it is necessary to service the hydraulic reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-81-71-710-001

(3) Do these steps to test the flap flow limiting valve [1]:

(a) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

(b) Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(c) If it is necessary, move the flap control lever to the FLAP UP detent position to retract the leading edge flaps and slats.

WARNING MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE TRAILING EDGE FLAPS. THE FLAPS WILL MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

CAUTION

MAKE SURE THAT YOU CLOSE OR REMOVE THE INBOARD FAN COWL AND THRUST REVERSERS BEFORE YOU RETRACT THE LEADING EDGE FLAPS. THE CLEARANCE IS NOT SUFFICIENT FOR THE FLAPS TO RETRACT WITH THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(d) Put the alternate flap arm switch in the ARM position.

(e) Put the alternate flap control switch in the DOWN position.

1) Make sure that the leading edge flaps and slats fully extend.

(f) Put the alternate flap control switch in the OFF position.

(g) Put the alternate flap arm switch in the OFF position.

1) Make sure that the leading edge flaps and slats fully retract.

(h) Examine the hydraulic fittings of the flow limiting valve [1] for leakage.

E. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-71-860-002

(1) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
D	13	C00841	FLIGHT CONTROL ALTN T.E. FLAP DRIVE

SUBTASK 27-81-71-860-003

(2) Do this task to remove pressure from hydraulic system B: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-71-610-002

(3) If it is necessary to service the hydraulic reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE FLAP AND SLAT CONTROL VALVE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) A removal of the leading edge flap and slat control valve.

(2) An installation of the leading edge flap and slat control valve.

B. The leading edge flap and slat control valve is attached to the flap control unit forward of the trailing edge flap control valve.

C. The leading edge flap and slat control valve is referred to as the "control valve" in this procedure.

TASK 27-81-81-000-801

2. Leading Edge Flap and Slat Control Valve Removal

(Figure 401)

A. References

Reference	Title

32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1585	Kit - Rigging Pin Part #: F70207-151 Supplier: 81205
SPL-12421	Rig Pin, F70207-116 (included in F70207 Kit) Part #: F70207-151 Supplier: 81205
STD-1154	Container - 5 Gallon (19 Liter)

C. Location Zones

Zone	Area
134	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Right

D. Prepare for the Removal

SUBTASK 27-81-81-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-81-81-860-001

(2) If the leading edge flaps and slats are not in the retracted position, do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-81-860-002

(3) To remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

E. Leading Edge Flap and Slat Control Valve Removal

SUBTASK 27-81-81-020-001

(1) Remove the lower pan [8] from the flap control unit [6].

(a) Remove the screw [7] that attaches the lower pan [8] to the flap control unit [6].

(b) Remove the lower pan [8] from the flap control unit [6].

SUBTASK 27-81-81-480-002

(2) Install the rig pin [16] through the cam follower arm [15] and trailing edge flap control valve cam [14].

(a) Use rig pin, F70207-116, SPL-12421, from the rigging pin kit, SPL-1585.

SUBTASK 27-81-81-020-002

(3) Remove the leading edge flap and slat control valve assembly [1].

CAUTION

DO NOT LET HYDRAULIC FLUID GET ON EQUIPMENT. IF HYDRAULIC FLUID GETS ON EQUIPMENT, IMMEDIATELY CLEAN IT FROM THE EQUIPMENT. HYDRAULIC FLUID CAN CAUSE DAMAGE TO EQUIPMENT.

(a) Put a 5 gallon (19 liter) container, STD-1154, below the leading edge flap and slat control valve assembly [1] to catch hydraulic fluid.

(b) Disconnect the hydraulic lines [3] and hydraulic line [18] from the leading edge flap and slat control valve assembly [1].

1) Install caps on the hydraulic lines [3] and hydraulic line [18].

2) Install plugs in the hydraulic ports of the leading edge flap and slat control valve assembly [1].

(c) Remove the nut [13], washer [12], and bolt [11] that attach the leading edge flap and slat control valve assembly [1] to the leading edge cam link [17].

(d) Remove the lockwire or safety cable from the bolts [9].

(e) Remove the bolts [9] and washers [10] that attach the leading edge flap and slat control valve assembly [1] to the flap control unit [6].

(f) Carefully remove the leading edge flap and slat control valve assembly [1] from the flap control unit [6].

E. Leading Edge Flap and Slat Control Valve Installation

SUBTASK 27-81-81-420-001

(1) If they are not installed, install the packings [4], reducers [2], and reducer [5] in the ports of the leading edge flap and slat control valve assembly [1].

(a) Apply hydraulic fluid, D00153, or MCS 352B fluid, D00054, to the new packings [4].

(b) Put the packings [4], reducers [2], and reducer [5] in their location on the leading edge flap and slat control valve assembly [1].

SUBTASK 27-81-81-420-002

(2) Install the leading edge flap and slat control valve assembly [1] in the flap control unit [6].

(a) Carefully put the leading edge flap and slat control valve assembly [1] on the flap control unit [6].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the bolts [9].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Install the bolts [9] and washers [10] to attach the leading edge flap and slat control valve assembly [1] to the flap control unit [6].

(d) Install lockwire or safety cable on the bolts [9].

(e) Connect the leading edge flap and slat control valve assembly [1] to the leading edge cam link [17] with the bolt [11], washer [12], and nut [13].

(f) Connect the hydraulic lines [3] and hydraulic line [18] to the leading edge flap and slat control valve assembly [1].

1) Remove the caps from the hydraulic lines [3] and hydraulic line [18].

2) Remove the plugs from the hydraulic ports on the leading edge flap and slat control valve assembly [1].

3) Connect the hydraulic lines [3] to the leading edge flap and slat control valve assembly [1].

a) Tighten the B-nuts on hydraulic lines [3] to 500 ±25 in-lb (56 ±3 N·m).

b) Tighten the B-nut on hydraulic line [18] to 280 ±14 in-lb (32 ±2 N·m).

SUBTASK 27-81-81-080-001

(3) Remove the rig pin [16] from the flap control unit [6].

SUBTASK 27-81-81-860-003

WARNING

MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Use the primary system to extend and retract the flaps and slats.

(a) To extend and retract the flaps and slats, do this task: Leading Edge Flap and Slat System Operation With Primary Control, TASK 27-81-00-860-801.

SUBTASK 27-81-81-210-001

(5) Examine the hydraulic lines at the control valve for leakage.

SUBTASK 27-81-81-820-001

(6) Do this task: Leading Edge Flap and Slat Control Valve Adjustment, TASK 27-81-81-820-801.

SUBTASK 27-81-81-420-003

(7) Install the lower pan [8] on the flap control unit [6].

(a) Put the lower pan [8] in its location on the flap control unit [6].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the screws [7].

(c) Install the screws [7] to attach the lower pan [8] to the flap control unit [6].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-81-610-001

(1) If it is necessary to fill the hydraulic reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE FLAP AND SLAT CONTROL VALVE - ADJUSTMENT/TEST

1. General

A. This procedure has a task to adjust the leading edge flap and slat control valve.

TASK 27-81-81-820-801

2. Leading Edge Flap and Slat Control Valve Adjustment

(Figure 501)

A. References

Reference	Title
27-81-00-700-802	Leading Edge Flap and Slat Timing Test in Primary Mode (P/B 501)

32-00-01-480-801	Landing Gear Downlock Pins Installation (P/B 201)

B. Tools/Equipment

NOTE: When more than one tool part number is listed under the same "Reference" number, the tools shown are alternates to each other within the same airplane series. Tool part numbers that are replaced or non-procurable are preceded by "Opt:", which stands for Optional.

Reference	Description
SPL-1585	Kit - Rigging Pin Part #: F70207-151 Supplier: 81205
SPL-12421	Rig Pin, F70207-116 (included in F70207 Kit) Part #: F70207-151 Supplier: 81205

C. Consumable Materials

Reference	Description	Specification
G01048	Lockwire - MS20995C32, Corrosion Resistant Steel - 0.032 Inch (0.8128 mm) Diameter	NASM20995
G50237	Compound - Corrosion Inhibiting, Non-drying - Cor-Ban 27L	BMS3-38

D. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
211	Flight Compartment - Left
212	Flight Compartment - Right

E. Prepare for the Adjustment

SUBTASK 27-81-81-480-003

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-81-860-004

(2) If the leading edge flaps and slats are not in the retract position, do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

SUBTASK 27-81-81-010-001

(3) Remove the lower pan [3] from the flap control unit [1].

(a) Remove the screws [4] that attach the lower pan [3] to the flap control unit [1].

(b) Remove the lower pan [3].

SUBTASK 27-81-81-420-004

(4) Install the rig pin [7] through the cam follower arm [6] and the valve cam [5].

(a) Use rig pin, F70207-116, SPL-12421, from the rigging pin kit, SPL-1585.

F. Leading Edge Flap and Slat Control Valve Adjustment

SUBTASK 27-81-81-820-002

(1) Do the adjustment of the leading edge flap and slat control valve [2].

(a) Remove the MS20995C32 lockwire, G01048.

(b) Loosen the jam nut [14].

(c) Remove the nut [10], washer [9], washer [15], and bolt [8].

1) If there is no enough clearance to remove the bolt [8], remove the bolt [16], washer [17], washer [18], and nut [19].

(d) Turn the rod end [13] in 180 degree increments until you can get the valve slide [11] and the index surface [12] to align.

(e) Install the bolt [8] or bolt [16].

(f) Make sure that the valve slide [11] aligns with the index surface [12].

(g) If you installed the bolt [8], install the washer [9], washer [15], and nut [10].

(h) If you installed the bolt [16], install the washer [17], washer [18], and new nut [19].

1) Make sure that the bolt [16] is installed in proper direction.

(i) Make sure that the dimension from the center of the rod end [13] to the jam nut [14] is not more than 1 in. (25.4 mm).

(j) Tighten the jam nut [14] to 55 in-lb (6 N·m).

(k) Install the MS20995C32 lockwire, G01048, with the double twist method.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-81-020-003

(1) Remove the rig pin [7] from the cam follower arm [6] and the valve cam [5].

SUBTASK 27-81-81-410-001

(2) Install the lower pan [3] on the flap control unit [1].

(a) Put the lower pan [3] in its location on the flap control unit [1].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(b) Apply Cor-Ban 27L Compound, G50237, to the shank and threads of the screws [4].

(c) Install the screws [4] that attach the lower pan [3] to the flap control unit [1].

SUBTASK 27-81-81-720-001

(3) Do this task: Leading Edge Flap and Slat Timing Test in Primary Mode, TASK 27-81-00-700-802.

LEADING EDGE STANDBY SHUTOFF VALVE - MAINTENANCE PRACTICES

1. General

A. This procedure has these tasks:

(1) Leading edge standby shutoff valve removal

(2) Leading edge standby shutoff valve installation

(3) Standby shutoff valve motor removal

(4) Standby shutoff valve motor installation

(5) Leading edge standby shutoff valve test.

B. The leading edge standby shutoff valve is referred to as the "valve", and the standby shutoff valve motor is referred to as the "valve motor" in this procedure.

C. You can replace the valve motor with the valve installed in the standby flight controls hydraulic module.

TASK 27-81-91-000-801

2. Leading Edge Standby Shutoff Valve Removal

(Figure 201)

A. General

(1) This task gives the steps to remove the leading edge standby shutoff valve [13] assembly from the hydraulic module housing [10].

NOTE: You can remove the leading edge standby shutoff valve with the leading edge standby shutoff valve motor installed with it.

B. References

D. Location Zones

Zone	Area
133	Main Landing Gear Wheel Well, Body Station 663.75 to Body Station 727.00 - Left
211	Flight Compartment - Left
212	Flight Compartment - Right

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Prepare for the Removal

SUBTASK 27-81-91-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-81-91-860-001

(2) Make sure that there is no power on hydraulic system B. To remove it, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-91-860-002

(3) Do this task: Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

SUBTASK 27-81-91-860-003

(4) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

F. Leading Edge Standby Shutoff Valve Removal

SUBTASK 27-81-91-020-001

(1) Remove the leading edge standby shutoff valve [13].

(a) Disconnect the electrical connector [1] from the leading edge standby shutoff valve motor [2].

(b) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(c) If there was corrosion, refer to SWPM 20-60-03, Paragraph 2 to correct the problem.

(d) Remove the lockwire that attaches to the screws [5].

(e) Remove the screws [5] and washers [6] that attach the leading edge standby shutoff valve motor [2] to the hydraulic module housing [10].

(f) Put a 5 gallon (19 liter) container, STD-1154, below the leading edge standby shutoff valve [13] to catch hydraulic fluid that drains from the leading edge standby shutoff valve [13].

(g) Carefully lift the leading edge standby shutoff valve [13] straight up to remove it from the standby flight controls hydraulic module housing [10].

(h) Remove the backup rings [12], O-rings [11], backup rings [8], and O-ring [9] from the leading edge standby shutoff valve [13].

1) Discard the O-ring [9] and O-rings [11].

(i) Put a cover on the hydraulic module housing [10] to keep contamination out of the open leading edge standby shutoff valve motor [2] hole.

END OF TASK

212	Flight Compartment - Right

F. Leading Edge Standby Shutoff Valve Installation

SUBTASK 27-81-91-420-001

(1) Install the backup rings [8], O-ring [9], backup rings [12], and O-rings [11] on the leading edge standby shutoff valve [13].

(a) Use new O-ring [9] and O-rings [11].

(b) Apply hydraulic fluid, D00153, or MCS 352B fluid, D00054, to the backup rings [8], O-ring [9], backup rings [12], and O-rings [11].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Use new O-ring [9] and O-rings [11].

SUBTASK 27-81-91-420-002

(2) Install the leading edge standby shutoff valve [13].

(a) Carefully install the leading edge standby shutoff valve [13] in the hydraulic module housing [10].

(b) Install the screws [5] and washers [6] to attach the leading edge standby shutoff valve [13] to the hydraulic module housing [10].

(c) Install the MS20995NC32 lockwire, G01912, on the screws [5] (TASK 20-10-44-400-801).

(d) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

1) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

2) If there was corrosion, refer to SWPM 20-60-03, Paragraph 2 to correct the problem.

(e) Apply the D5026NS or ZC-026 compound, G50171, to the electrical connector [1] (SWPM 20-60-03, Paragraph 2).

(f) Connect the electrical connector [1] to the leading edge standby shutoff valve motor [2].

NOTE: Corrosion inhibiting compound is applied to the exterior of the mated electrical connectors after the operational test is completed.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-91-860-004

(1) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

SUBTASK 27-81-91-610-001

(2) If it is necessary to service the hydraulic reservoirs, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-81-91-720-001

(3) Do this task: Leading Edge Standby Shutoff Valve Test, TASK 27-81-91-720-801.

——— END OF TASK ———

TASK 27-81-91-000-802

4. Standby Shutoff Valve Motor Removal

(Figure 201)

A. General

(1) This task gives the steps to remove the leading edge standby shutoff valve motor [2] from the leading edge standby shutoff valve [13].

B. References

211	Flight Compartment - Left
212	Flight Compartment - Right

D. Prepare for the Removal

SUBTASK 27-81-91-480-002

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on all the landing gears, do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-81-91-860-005

(2) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

E. Standby Shutoff Valve Motor Removal

SUBTASK 27-81-91-020-002

(1) Remove the leading edge standby shutoff valve motor [2].

(a) Disconnect the electrical connector [1] from the leading edge standby shutoff valve motor [2].

(b) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

(c) If there was corrosion, refer to SWPM 20-60-03, Paragraph 2 to correct the problem.

(d) Set the manual override lever [4] on the leading edge standby shutoff valve motor [2] to POSITION 2.

(e) Remove the lockwire that attaches to the screws [14].

(f) Remove the screws [14] that attach the leading edge standby shutoff valve motor [2] to the leading edge standby shutoff valve [13].

(g) Remove the leading edge standby shutoff valve motor [2] from the leading edge standby shutoff valve [13].

(h) If you will not replace the leading edge standby shutoff valve assembly, remove the shutoff valve motor data plate [15] (Figure 201).

1) Keep the shutoff valve motor data plate [15] for the subsequent installation.

NOTE: Data plate is for leading edge standby shutoff valve assembly accountability/traceability and will be installed on new motor.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(i) If you will replace the leading edge standby shutoff valve assembly, make sure that the shutoff valve motor data plate [15] is maintained with the removed leading edge standby shutoff valve assembly.

——— END OF TASK ———

TASK 27-81-91-400-802

5. Standby Shutoff Valve Motor Installation

(Figure 201)

A. General

(1) This task gives the steps to install the leading edge standby shutoff valve motor [2] to the leading edge standby shutoff valve [13].

NOTE: You can install the leading edge standby shutoff valve motor with theleading edge standby shutoff valve installed in the hydraulic module housing.

B. References

F. Standby Shutoff Valve Motor Installation

SUBTASK 27-81-91-420-003

(1) Install the leading edge standby shutoff valve motor [2].

(a) If you did not replace the leading edge standby shutoff valve assembly, install the removed shutoff valve motor data plate [15] (Figure 201).

1) If the leading edge standby shutoff valve assembly has been replaced, install the new shutoff valve motor data plate.

(b) If you replaced the leading edge standby shutoff valve assembly, install the new shutoff valve motor data plate [15].

NOTE: If the shutoff valve motor data plate is maintained with the removed shutoff valve motor you can use it.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Make sure that the manual override lever [4] on the leading edge standby shutoff valve motor [2] is set to POSITION 2.

(d) Set the leading edge standby shutoff valve motor [2] in its position on the leading edge standby shutoff valve [13].

(e) Engage the leading edge standby shutoff valve motor [2] with the valve cam [7].

(f) Install the screws [14] to attach the leading edge standby shutoff valve motor [2].

(g) Tighten the screws [14] to 17 in-lb (1.92 N·m) - 20 in-lb (2.26 N·m).

(h) Install the MS20995NC20 lockwire, G02166, on the screws [14] (TASK 20-10-44-400-801).

(i) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: The inspection of the electrical connector(s) can be done after the removal step or before the installation step of the electrical connector(s). This is an operator option.

1) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

2) If there was corrosion, refer to SWPM 20-60-03, Paragraph 2 to correct the problem.

(j) Apply the D5026NS or ZC-026 compound, G50171, to the electrical connector [1] (SWPM 20-60-03, Paragraph 2).

(k) Connect the electrical connector [1] to the leading edge standby shutoff valve motor [2].

NOTE: Corrosion inhibiting compound is applied to the exterior of the mated electrical connectors after the operational test is completed.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-81-91-860-006

(1) Set the manual override lever [4] on the leading edge standby shutoff valve motor [2] to POSITION 1.

SUBTASK 27-81-91-860-007

(2) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

SUBTASK 27-81-91-720-002

(3) Do this task: Leading Edge Standby Shutoff Valve Test, TASK 27-81-91-720-801.

——— END OF TASK ———

TASK 27-81-91-720-801

6. Leading Edge Standby Shutoff Valve Test

(Figure 202)

212	Flight Compartment - Right

D. Leading Edge Standby Shutoff Valve Motor Test

SUBTASK 27-81-91-710-001

(1) Do the test for the leading edge standby shutoff valve [13].

(a) Make sure that the manual override lever [4] is at position 1.

(b) To pressurize hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(c) Make sure that the flap control lever is in the UP detent.

(d) Set the alternate flaps arm switch, on the P5 flight controls panel, to the ARM position.

1) Make sure that the STANDBY HYD LOW PRESSURE light comes on.

2) Make sure that the standby hydraulic pump starts.

3) Make sure that the STANDBY HYD LOW PRESSURE light is off.

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE SLATS. THE LEADING EDGE SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(e) Set the alternate flaps control switch, on the P5 flight controls panel, to the DOWN position.

1) Make sure that the manual override lever [4] is at position 2.

2) Make sure that the leading edge flaps and slats fully extend.

(f) Set the alternate flaps control switch to the OFF position.

1) Make sure that the leading edge flaps and slats do not move.

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE SLATS. THE LEADING EDGE SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(g) Set the alternate flaps arm switch to the OFF position.

1) Make sure that the manual override lever [4] moves to position 1.

2) Make sure that the leading edge flaps and slats fully retract.

NOTE: The leading edge flaps and slats retract because of the pressurization of hydraulic system B.

SUBTASK 27-81-91-210-001

(2) Make sure that there is no hydraulic fluid leakage from the valve hydraulic fittings.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-81-91-860-010

(3) To remove power from hydraulic system B, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-81-91-212-001

(4) Apply the Ardrox AV25 compound, G50170, to the mated electrical connector assembly completely, until the compound drips from the connector.

(a) Do not remove the excess corrosion inhibiting compound.

END OF TASK

LEADING EDGE AUTOSLAT SYSTEM - ADJUSTMENT/TEST

1. General

A. This procedure has these tasks:

(1) Test of the autoslat system indicator light

(2) Operational test of the leading edge autoslat system.

TASK 27-83-00-720-801

2. Autoslat System Indicator Light - Functional Test

(Figure 501)

A. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

B. Do a test of the autoslat system indicator light

SUBTASK 27-83-00-860-004

(1) Make sure that these circuit breakers are closed:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	5	C01204	SMYD-1 CMPTR DC

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	5	C01206	SMYD-2 CMPTR DC

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

SUBTASK 27-83-00-820-001

(2) Make sure that the AUTOSLAT FAIL light, on the P5-3 overhead panel, is off.

SUBTASK 27-83-00-720-001

(3) Push and release the AUTOSLAT FAIL light switch.

(a) Make sure that the AUTOSLAT FAIL light comes on when you push the light switch then it goes off when you release.

SUBTASK 27-83-00-720-002

(4) Put the LIGHTS switch in the TEST position and make sure that these lights come on (Figure 501):

(a) The MASTER CAUTION lights.

(b) The FLT CONT light.

(c) The AUTOSLAT FAIL light.

SUBTASK 27-83-00-860-005

(5) Put the LIGHTS switch in the BRT position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-83-00-720-003

(6) Push the MASTER CAUTION light switch and make sure that these lights go off:

(a) The MASTER CAUTION lights.

(b) The FLT CONT light.

(c) The AUTOSLAT FAIL light.

SUBTASK 27-83-00-720-004

(7) Push the master caution annunciator panel.

(a) Make sure that the AUTOSLAT FAIL light stays off.

SUBTASK 27-83-00-720-005

(8) Make sure that the autoslat fault display works correctly when autoslat 1 is disabled:

(a) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

(b) Push the master caution annunciator panel and make sure that these lights come on:

1) The MASTER CAUTION lights.

2) The FLT CONT light.

3) The AUTOSLAT FAIL light.

(c) Push the MASTER CAUTION switch light and make sure that these lights go off:

1) The MASTER CAUTION lights.

2) The FLT CONT light.

3) The AUTOSLAT FAIL light.

SUBTASK 27-83-00-720-006

(9) Make sure that the autoslat fault display works correctly when autoslat 1 and 2 are disabled:

(a) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2

(b) Push the master caution annunciator panel and make sure that these lights come on:

1) The MASTER CAUTION lights.

2) The FLT CONT light.

3) The AUTOSLAT FAIL light.

(c) Push the MASTER CAUTION light switch and make sure that these actions occur:

1) The MASTER CAUTION lights go off.

2) The FLT CONT light goes off.

3) The AUTOSLAT FAIL light stays on.

SUBTASK 27-83-00-720-007

(10) Make sure that the autoslat fault display works properly when autoslat 2 is disabled:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

(b) Make sure that the AUTOSLAT FAIL light goes off.

(c) Push the master caution annunciator panel and make sure that these lights come on:

1) The MASTER CAUTION lights.
2) The FLT CONT light.
3) The AUTOSLAT FAIL light.

(d) Push the MASTER CAUTION light switch and make sure that these lights go off:

1) The MASTER CAUTION lights.
2) The FLT CONT light.
3) The AUTOSLAT FAIL light.

SUBTASK 27-83-00-860-006

(11) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2

E. Prepare for the Procedure

NOTE: There is no need to simulate airspeed during this test.

SUBTASK 27-83-00-860-007

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

WARNING OBEY THE PROCEDURE THAT PUTS THE AIRPLANE IN THE AIR MODE. IF YOU DO THE PROCEDURE INCORRECTLY, INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT CAN OCCUR.

(1) For the hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-83-00-010-001

(2) Open this access panel:

Number	Name/Location
117A	Electronic Equipment Access Door

F. Autoslat Operation Test

SUBTASK 27-83-00-860-008

(1) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	4	C01392	STICK SHAKER LEFT

CAPT Electrical System Panel, P18-3

Row	Col	Number	Name
C	3	C01072	HEATERS ALPHA VANE LEFT
D	3	C01071	HEATERS ALPHA VANE RIGHT

F/O Electrical System Panel, P6-1

Row	Col	Number	Name
B	6	C01393	STICK SHAKER RIGHT

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

SUBTASK 27-83-00-840-002

WARNING KEEP PERSONS AND EQUIPMENT AWAY FROM THE LEADING EDGE SLATS WHEN OPERATE THIS TEST. THE LEADING EDGE SLATS WILL MOVE. INJURY TO PERSONNEL OR DAMAGE TO EQUIPMENT CAN OCCUR.

(2) Make sure that there are no personnel or equipment near the leading edge slats.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-83-00-820-002

WARNING MAKE SURE THAT THE HEATER CIRCUIT BREAKERS ABOVE ARE OPEN AND THE AOA SENSOR HEAT IS OFF BEFORE YOU MOVE THE AOA SENSOR. IF THE HEATER CIRCUIT BREAKERS ARE CLOSED, INJURY TO PERSONS CAN OCCUR.

(3) Turn the Left AOA sensor counterclockwise and the right AOA sensor clockwise to 30 degrees (Figure 502).

NOTE: You can use Method 1 or Method 2 to measure the AOA sensor angle.

NOTE: For the duration of this test, airspeed must not be simulated.

(a) Method 1 to measure the AOA sensor angle:

1) Install the angle of attack probe test fixture, SPL-1917, on the AOA sensor.

NOTE: The test fixture allows for accurate measurement of the AOA sensor angle.

(b) Method 2 to measure the AOA sensor angle:

1) Do these steps on each Stall Management Yaw Damper (SMYD) to determine when the AOA sensor angles show 30 degrees airplane nose up:

a) Push the ON/OFF switch on the SMYD.

b) Push the down arrow switch on the SMYD until the display shows GROUND TESTS?.

c) Push the YES switch.

d) Push the down arrow switch on the SMYD until the display shows ANALOG INPUTS?.

e) Push the YES switch.

<1> Make sure the display shows AOA SENSOR.

f) Push the YES switch.

g) The display will show AOA and the angle of the AOA sensor.

SUBTASK 27-83-00-860-009

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(4) Move the flaps to the 1 position.

(a) Make sure that the leading edge slats move to the flaps 1 (mid-extend) position.

SUBTASK 27-83-00-860-010

(5) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-83-00-840-003

WARNING MAKE SURE THAT YOU DO THE STEPS TO PREPARE THE SYSTEMS FOR THE AIR MODE CORRECTLY. IF YOU DO NOT FOLLOW THESE INSTRUCTIONS, INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT CAN OCCUR.

(6) Do this task: Put the Airplane in the Air Mode, TASK 32-09-00-860-801.

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE CLEAR OF THE FLIGHT CONTROLS SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Make sure that the slats move to the full extend position.

(b) Make sure that LE FLAPS EXT displays and LE FLAPS TRANSIT not displays on the Engine Display of the main instrument panel.

SUBTASK 27-83-00-860-011

(7) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE MOVED AWAY FROM THE CONTROL SURFACES BEFORE YOU START MOVEMENT. THIS WILL PREVENT INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Make sure that the slats move to the flaps 1 (mid-extend) position.

SUBTASK 27-83-00-860-012

(8) Remove the safety tag and close this circuit breaker:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2

WARNING MAKE SURE ALL PERSONS AND EQUIPMENT ARE MOVED AWAY FROM THE CONTROL SURFACES BEFORE YOU START MOVEMENT. THIS WILL PREVENT INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(a) Make sure that the slats move to the full extend position.

(b) Make sure that LE FLAPS EXT displays and LE FLAPS TRANSIT not displays on the Engine Display of the main instrument panel.

SUBTASK 27-83-00-860-013

(9) Open this circuit breaker and install safety tag:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AUTOSLAT CONTROL VALVE - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Removal of the autoslat control valve

(2) Installation of the autoslat control valve.

B. There are solenoids installed on the autoslat control valve. It is not necessary to remove the solenoids to remove the control valve.

TASK 27-83-21-000-801

2. Autoslat Control Valve Removal

(Figure 401)

A. References

Reference	Title
29-11-00-860-805	Hydraulic System A or B Power Removal (P/B 201)

SWPM 20-60-03	Special Protection of Electrical Connectors

B. Location Zones

Zone	Area
192	Lower Wing-To-Body Fairing - Under Wing Box

C. Access Panels

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

D. Prepare for the Removal

SUBTASK 27-83-21-480-001

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Make sure that the downlock pins installed on the main and nose landing gear. Do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-83-21-860-001

(2) Do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-83-21-010-001

(3) To gain access to the autoslat control valve,

Remove this access panel:

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Autoslat Control Valve Removal

SUBTASK 27-83-21-860-002

(1) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

SUBTASK 27-83-21-020-001

(2) Disconnect the electrical connector [6] and electrical connector [7] from the autoslat control valve [1].

(a) After you disconnect the electrical connector(s), examine the connector(s) for corrosion.

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-83-21-480-002

(3) Put a bucket or other applicable container to collect hydraulic fluid below the autoslat control valve [1].

SUBTASK 27-83-21-020-002

(4) Disconnect the hydraulic line (C2) [4], hydraulic line [5], hydraulic line (C1) [8], hydraulic line [9], hydraulic line [10], and hydraulic line [11] from the autoslat control valve [1].

SUBTASK 27-83-21-020-003

(5) Remove the bolts [2], washers [3], and the autoslat control valve [1].

SUBTASK 27-83-21-480-003

(6) Install caps on the hydraulic line (C2) [4], hydraulic line [5], hydraulic line (C1) [8], hydraulic line [9], hydraulic line [10], and hydraulic line [11].

SUBTASK 27-83-21-480-004

(7) Install plugs in the hydraulic ports on the autoslat control valve [1].

G. Prepare for the Installation

SUBTASK 27-83-21-480-005

WARNING MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Make sure that the downlock pins installed on the main and nose landing gear. Do this task: Landing Gear Downlock Pins Installation, TASK 32-00-01-480-801.

SUBTASK 27-83-21-860-003

(2) Make sure that there is no hydraulic power. If there is, do this task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

H. Autoslat Control Valve Installation

SUBTASK 27-83-21-420-001

(1) Install the autoslat control valve [1]:

(a) Make sure that the mating surface of the autoslat control valve [1] and the mounting bracket are clean.

(b) Apply sealant, A00247 on the bolts [2] threads.

(c) Put the autoslat control valve [1] in its position on the bracket.

(d) Install the bolts [2] and washers [3] that attach the autoslat control valve [1].

(e) With the intrinsically safe approved bonding meter, COM-1550, make sure that the bonding resistance between the autoslat control valve [1] and the structure is less than 0.0025 ohms.

(f) Remove the caps from the hydraulic line (C2) [4], hydraulic line [5], hydraulic line (C1) [8], and hydraulic line [9].

(g) Remove the plugs from the ports on the autoslat control valve [1].

SUBTASK 27-83-21-420-002

(2) Connect the hydraulic line (C2) [4], hydraulic line (C1) [8], hydraulic line [9], and hydraulic line [10] to the autoslat control valve [1].

(a) Tighten the B-nuts on hydraulic line (C2) [4], hydraulic line (C1) [8], hydraulic line [9], and hydraulic line [10] to 500 ±25 in-lb (56 ±3 N·m).

SUBTASK 27-83-21-420-004

(3) Connect the hydraulic line [5] and hydraulic line [11] to the autoslat control valve [1].

(a) Tighten the B-nuts on hydraulic line [5] and hydraulic line [11] to 170 ±9 in-lb (19 ±1 N·m).

SUBTASK 27-83-21-210-001

(4) If you did not examine the electrical connector(s) at the removal step, do these steps:

NOTE: You can do the inspection of the electrical connector(s) after the removal or before the installation steps of the electrical connector(s). This is an operator option.

(a) Before you connect the electrical connector(s), examine the connector(s) for corrosion.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

WARNING

DO THE STEPS BELOW IF THE AIRPLANE OPERATES AT AIRPORTS WHERE DEICING FLUID THAT CONTAIN POTASSIUM FORMATE IS USED. ALSO DO THE STEPS FOR ALL AIRPLANES THAT YOU FOUND CORROSION IN THE ELECTRICAL CONNECTORS IN THE MAIN WHEEL WELL. THE ELECTRICAL CONNECTOR IS PART OF A SYSTEM THAT IS NECESSARY FOR SAFE FLIGHT.

(b) If there was corrosion, refer to (SWPM 20-60-03) to correct the problem.

SUBTASK 27-83-21-800-001

(5) Apply the D5026NS or ZC-026 compound, G50171 to the connectors (SWPM 20-60-03).

SUBTASK 27-83-21-420-003

(6) Connect the electrical connector [6] and electrical connector [7] to the autoslat control valve [1].

SUBTASK 27-83-21-860-004

(7) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

SUBTASK 27-83-21-610-001

(8) If it is necessary for the hydraulic system, do this task: Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-83-21-740-001

(9) Do this task: Leading Edge Autoslat System - Functional Test, TASK 27-83-00-710-801.

SUBTASK 27-83-21-210-002

(10) Make sure that there are no hydraulic fluid leaks at the autoslat control valve [1].

I. Put the Airplane Back to Its Usual Condition

SUBTASK 27-83-21-940-001

(1) Install this access panel:

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

AUTOSLAT CONTROL VALVE - INSPECTION/CHECK

1. General

A. This task does a check for internal hydraulic leakage in the autoslat valve.

TASK 27-83-21-790-801

2. Autoslat Valve Internal Hydraulic Leakage Check

A. General

(1) This procedure does an internal hydraulic leakage check for the leading edge auto slat valves. The purpose of this leakage test is to identify high leakage valve.

(2) You must measure the amount of leakage of hydraulic fluid during different conditions of operation to measure the fluid flow rate. It will be necessary to disconnect the return hydraulic line.

F. Prepare for the Internal Leakage Check

SUBTASK 27-83-21-860-006

(1) If the trailing edge flaps are not in the retracted position, then do these steps:

(a) Supply system B hydraulic power. To supply hydraulic power, do this task:
Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

(b) Move the flap control lever to the FLAP UP position to retract the trailing edge flaps.

(c) Remove system B hydraulic power. To remove hydraulic power, do this task:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

SUBTASK 27-83-21-860-007

(2) Make sure the flap control lever is at the FLAP UP position.

SUBTASK 27-83-21-860-008

(3) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

SUBTASK 27-83-21-010-002

(4) To gain access to the autoslat control valve,

Remove this access panel:

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

G. Autoslat Valve Internal Leakage Check

SUBTASK 27-83-21-860-009

WARNING

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) Supply system B hydraulic power. To supply hydraulic power, do this task:

Hydraulic Power System - Activation, TASK 29-00-00-800-802

SUBTASK 27-83-21-860-010

(2) Move the flap control lever to the 15-unit detent position to extend the leading and trailing edge flaps and slats.

NOTE: The flap control lever operates the control cable input to the flap control unit. The flap control unit controls the leading edge flap and slat control valve to provide the hydraulic power to the autoslat valve.

SUBTASK 27-83-21-860-011

(3) Remove system B hydraulic power. To remove hydraulic power, do this task:

Hydraulic Power System - Deactivation, TASK 29-00-00-800-801.

SUBTASK 27-83-21-860-012

(4) Remove the pressure from the system B reservoir. To remove the pressure, do this task:

Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

NOTE: It is necessary to remove the pressure from the reservoir. When you disconnect a hydraulic line below the level of the reservoir, all the hydraulic fluid will flow and drain out of the reservoir if pressure is applied.

SUBTASK 27-83-21-790-001

(5) Put a measuring container, STD-6505 under the return line on the autoslat valve.

SUBTASK 27-83-21-020-004

(6) Disconnect the return line from the autoslat valve. Use the applicable steps from this task

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Autoslat Control Valve Removal, TASK 27-83-21-000-801.

NOTE: The return line goes to a tee, with one line to the hydraulic reservoir, and one line to the leading edge UCM valve.

SUBTASK 27-83-21-790-002

(7) Install a cap or plug on the hydraulic line that goes to the tee.

SUBTASK 27-83-21-860-013

(8) Pressurize the system B hydraulic reservoir. To pressurize the reservoir, do this task:

Hydraulic Reservoirs Pressurization, TASK 29-09-00-860-801.

SUBTASK 27-83-21-860-014

(9) Supply system B hydraulic power. To supply hydraulic power, do this task:

Hydraulic Power System - Activation, TASK 29-00-00-800-802.

SUBTASK 27-83-21-790-003

(10) Measure the leakage from the autoslat valve with the solenoids not energized:

(a) Measure and record the leakage rate from the return port on the autoslat valve.

NOTE: The leakage rate must not be more than 40 cc/minute.

SUBTASK 27-83-21-860-015

(11) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
B	14	C01070	FLIGHT CONTROL AUTOSLAT DC 2
C	14	C01068	FLIGHT CONTROL AUTOSLAT DC 1

SUBTASK 27-83-21-860-016

(12) Do this task: Put the Airplane in the Air Mode, TASK 32-09-00-860-801.

SUBTASK 27-83-21-860-017

(13) Move the flap control lever to the 30-unit detent position.

NOTE: A small amount of hydraulic fluid will leak from the autoslat valve when the autoslat valve solenoids are energized. The solenoids will be energized for approximately 1/2 second, when the trailing edge flaps are between the 15 and 25 unit positions.

SUBTASK 27-83-21-790-004

(14) Measure the leakage from the autoslat valve after the solenoids have been cycled:

(a) Measure and record the leakage rate from the return port on the autoslat valve again.

NOTE: The leakage rate must not be more than 40 cc/minute.

SUBTASK 27-83-21-860-018

(15) Move the flap control lever to the UP position to retract the leading and trailing edge flaps and slats.

SUBTASK 27-83-21-860-019

(16) Do this task Return the Airplane to the Ground Mode, TASK 32-09-00-860-802.

SUBTASK 27-83-21-860-020

(17) Remove system B hydraulic power. To remove hydraulic power, do this task:

Hydraulic Power System - Deactivation, TASK 29-00-00-800-801

SUBTASK 27-83-21-860-021

(18) Remove the pressure from the system B reservoir. To remove the pressure, do this task:

ECCN 9E991 BOEING PROPRIETARY - See title page for details

Hydraulic Reservoirs Depressurization, TASK 29-09-00-860-802.

H. Return the Airplane to the Usual Condition

SUBTASK 27-83-21-410-001

(1) Remove the cap or plug from the hydraulic line that goes to the hydraulic reservoir.

SUBTASK 27-83-21-410-002

(2) Re-connect the return line to the autoslat valve. Do the applicable steps from this task:
Autoslat Control Valve Installation, TASK 27-83-21-400-801.

SUBTASK 27-83-21-610-002

(3) If it is necessary for the hydraulic reservoir, do this task:
Hydraulic Reservoir Servicing, TASK 12-12-00-610-801.

SUBTASK 27-83-21-720-001

(4) Do this task:
Leading Edge Autoslat System - Functional Test, TASK 27-83-00-710-801.

SUBTASK 27-83-21-210-003

(5) Make sure there are no hydraulic fluid leaks at the autoslat control valve.

SUBTASK 27-83-21-410-003

(6) Install this access panel:

Number	Name/Location
192BR	ECS Ram Air Inlet Mixing Duct Panel - Forward

——— END OF TASK ———

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE FLAP AND SLAT POSITION INDICATING SYSTEM - ADJUSTMENT/TEST

1. General

A. This procedure contains an operational test of the leading edge flap and slat position indicating system.

TASK 27-88-00-710-801

2. Leading Edge Flap and Slat Position Indicating System - Operational Test

(Figure 501)

A. General

(1) The leading edge flap and slat position indicating system must be correctly adjusted before you do the operational test. The leading edge proximity sensors and targets are used to find the leading edge flap and slat position.

(2) The leading edge slat sequence for the 737-8 and 737-9 are the same. The leading edge slats move to the extend position for flap lever positions 1-unit detent through 25-unit detent. The leading edge slats move to the full extend position at the 30-unit detent flap lever position.

D. Prepare for the Operational Test

SUBTASK 27-88-00-860-008

WARNING KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(1) To pressurize hydraulic system B, do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

E. Leading Edge Flap and Slat Position Indicating System - Operational Test

SUBTASK 27-88-00-710-002

(1) Move the flap control lever to the FLAP UP position.

(a) Make sure each flap and slat is in the retract position and align with the wing structure.

(b) Make sure the amber LE FLAPS TRANSIT light and green LE FLAPS EXT light on the engine indication display of the captains inboard display unit (DU) on panel P1, are off.

(c) Make sure all the position lights on the leading edge flap/slat position annunciator, P5-12, on the aft overhead panel are off.

(d) Set the master dim and test lights switch, on the P1 panel, to the DIM position.

(e) Push the TEST switch below the leading edge flap/slat position annunciator, P5-12, on the aft overhead panel.

(f) Make sure all the annunciator lights are on.

(g) Release the TEST switch.

(h) Make sure all the annunciator lights go off.

SUBTASK 27-88-00-710-003

CAUTION

MAKE SURE THAT THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED AND IN THE STOWED POSITION OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN COWL PANEL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(2) Move the flap control lever to the 1-unit detent position.

(a) When the leading edge flaps and slats start to move to the commanded 1-unit detent position, look for these conditions:

1) Make sure the amber LE FLAPS TRANSIT light on the engine indication display of the captain's inboard DU on panel P1, comes on.

2) Make sure these lights come on in the leading edge flap/slat position annunciator, P5-12, on the aft overhead panel.

a) Make sure the annunciator LE DEVICES FLAPS 1 through 4, amber TRANSIT lights, comes on.

b) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, comes on.

(b) When the leading edge flaps and slats stop at the commanded 1-unit detent position, look for these conditions:

1) Make sure the amber LE FLAPS TRANSIT light, on the captain's inboard DU engine indication display, goes off.

2) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, comes on.

3) Make sure the annunciator LE DEVICES FLAPS 1 through 4, amber TRANSIT lights, go off.

4) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, go off.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

5) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, come on.

6) Make sure the annunciator LE DEVICES SLATS 1 through 8, green EXT lights, come on.

7) Make sure that the leading edge flaps 1 through 4 are at the extend position.

8) Make sure that the leading edge slats 1 through 8 are at the extend position.

SUBTASK 27-88-00-710-004

(3) Move the flap control lever to the 5-unit detent position.

(a) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, are on.

(b) Make sure the annunciator LE DEVICES SLATS 1 through 8, green EXT lights, are on.

(c) Make sure leading edge slats 1 through 8 remain at the extend position.

SUBTASK 27-88-00-710-006

(4) Move the flap control lever to the 30-unit detent position.

(a) Do these checks while the leading edge slats move to the commanded 30-unit detent position:

1) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, goes off.

2) Make sure the amber LE FLAPS TRANSIT light, on the captain's inboard DU engine indication display, comes on.

3) Make sure the annunciator LE DEVICES SLATS 1 through 8, green EXT lights, go off.

4) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, come on.

(b) Do these checks when the leading edge slats stop at the commanded 30-unit detent position:

1) Make sure the amber LE FLAPS TRANSIT light, on the captain's inboard DU engine indication display, goes off.

2) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, comes on.

3) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, are on.

4) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, go off.

5) Make sure the annunciator LE DEVICES SLATS 1 through 8, green FULL EXT lights, come on.

6) Make sure that the leading edge slats 1 through 8 move from the extend position to the full extend position.

SUBTASK 27-88-00-710-007

(5) Move the flap control lever to the 40-unit detent position.

(a) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, remains on.

(b) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, remain on.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Make sure the annunciator LE DEVICES SLATS 1 through 8, green FULL EXT lights, remain on.

(d) Make sure that the leading edge slats 1 through 8 remain at the full extend position.

(e) Make sure that the leading edge flaps 1 through 4 remain at the extend position.

SUBTASK 27-88-00-710-009

(6) Move the flap control lever to the 30-unit detent position.

(a) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display remains on.

(b) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, remain on.

(c) Make sure the annunciator LE DEVICES SLATS 1 through 8, green FULL EXT lights, remain on.

(d) Make sure that the leading edge slats 1 through 8 remains at the full extend position.

(e) Make sure that the leading edge flaps 1 through 4 remains at the extend position.

SUBTASK 27-88-00-710-011

(7) Move the flap control lever to the 25-unit detent position.

(a) Do these checks while the leading edge slats move to the commanded 25-unit detent position:

1) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, goes off.

2) Make sure the amber LE FLAPS TRANSIT light, on the captain's inboard DU engine indication display, comes on.

3) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, remain on.

4) Make sure the annunciator LE DEVICES SLATS 1 through 8, green FULL EXT lights, go off.

5) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, come on.

6) Make sure that the leading edge flaps 1 through 4 remain at the extend position.

7) Make sure that the leading edge slats 1 through 8 move from the full extend position to the extend position.

(b) Do these checks when the leading edge slats stop at the commanded 25-unit detent position:

1) Make sure the amber LE FLAPS TRANSIT light, on the captain's inboard DU engine indication display, goes off.

2) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, comes on.

3) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, remain on.

4) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, go off.

5) Make sure the annunciator LE DEVICES SLATS 1 through 8, green EXT lights, come on.

6) Make sure that the leading edge flaps 1 through 4 remain at the extend position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

7) Make sure that the leading edge slats 1 through 8 are at the extend position.

SUBTASK 27-88-00-710-012

(8) Move the flap control lever to the 1-unit detent position.

(a) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display remains on.

(b) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, remain on.

(c) Make sure the annunciator LE DEVICES SLATS 1 through 8, green EXT lights, remain on.

(d) Make sure that the leading edge flaps 1 through 4 remain at the extend position.

(e) Make sure that the leading edge slats 1 through 8 remain at the extend position.

SUBTASK 27-88-00-710-013

(9) Move the flap control lever to the FLAP UP detent position.

(a) Make sure the leading edge flaps and slats move to the retract position.

1) Make sure the green LE FLAPS EXT light, on the captain's inboard DU engine indication display, goes off.

2) Make sure the amber LE FLAPS TRANSIT light on the engine indication display of the captain's inboard DU on panel P1, comes on.

3) Make sure the annunciator LE DEVICES FLAPS 1 through 4, green EXT lights, goes off.

4) Make sure the annunciator LE DEVICES SLATS 1 through 8, green EXT lights, goes off.

5) Make sure the annunciator LE DEVICES FLAPS 1 through 4, amber TRANSIT lights, come on.

6) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, come on.

(b) Do these checks when the leading edge flaps and slats are at the retract position:

1) Make sure the annunciator LE DEVICES FLAPS 1 through 4, amber TRANSIT lights, goes off.

2) Make sure the annunciator LE DEVICES SLATS 1 through 8, amber TRANSIT lights, goes off.

3) Make sure that all annunciator lights are off.

4) Make sure the amber LE FLAPS TRANSIT light on the engine indication display of the captain's inboard DU on panel P1, goes off.

F. Put the Airplane Back to Its Usual Condition

SUBTASK 27-88-00-860-009

(1) Remove hydraulic power. This is the task: Hydraulic System A or B Power Removal, TASK 29-11-00-860-805.

CAUTION

CAREFULLY INSTALL OR REMOVE THE LEADING EDGE LOCKOUT SET TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS AND SLATS. THE LEADING EDGE FLAPS CAN MOVE QUICKLY. IF YOU DO NOT FOLLOW INSTRUCTIONS, INJURY TO PERSONS AND DAMAGE TO EQUIPMENT CAN OCCUR.

(2) Install the lockout set, SPL-1734, on the actuators of the adjacent leading edge slat, do this task: Leading Edge Flap and Slat Locks Installation, TASK 27-81-00-480-801.

SUBTASK 27-88-11-010-001

(3) Remove the applicable access panels to get access to the slat proximity sensor [26] (TASK 57-41-02-000-801):

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) For the left wing, open these access panels:

Number	Name/Location
521CB	Lower Leading Edge Access Panel - Slat Station 50
521DB	Lower Leading Edge Access Panel - Slat Station 70
521FB	Lower Leading Edge Access Panel - Slat Station 107
521JB	Lower Leading Edge Access Panel - Slat Station 161
521KB	Lower Leading Edge Access Panel - Slat Station 179
521LB	Lower Leading Edge Access Panel - Slat Station 208
521MB	Lower Leading Edge Access Panel - Slat Station 226
521QB	Lower Leading Edge Access Panel - Slat Station 280
521RB	Lower Leading Edge Access Panel - Slat Station 298

F. Leading Edge Slat Proximity Sensor Removal

SUBTASK 27-88-11-020-002

(1) Do these steps to remove the inboard proximity sensor [26] of the slat (with the slats 1 through 8 in the extended position and/or with the slats 1 and 8 in the retracted position) (View B, Figure 401):

(a) Disconnect the wires at the splice.

(b) For the slats 1 and 8 (in the extended position), remove the two screw [29] that attach the proximity sensor [26] to the rib and remove the shim [27], aluminum spacer [28], and washer [30] that is installed under the nuts [31].

(c) For the slats 2, 3, 6 and 7 (in the extended position), remove the two screws [32] that attach the proximity sensor [26] to the rib and remove the shim [27], aluminum spacer [34], and washer [30] that is installed under the nuts [31].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Measure the thickness of the shim [27] and the thickness of the aluminum spacer [34], and keep record of it for easier completion of the sensor-target clearance required during proximity sensor [26] installation task.

(d) For the slats 4 and 5 (in the extended position), remove the two screws [33] that attach the proximity sensor [26] to the rib and remove the shim [27] and washer [30] that is installed under the nuts [31].

1) Measure the thickness of the shim [27] and keep record of it for easier completion of the sensor-target clearance required during the proximity sensor [26] installation task.

(e) For the slats 1 and 8 (in the retracted position), remove the two screws [29] that attach the proximity sensor [26] to the rib, and the aluminum spacer [28]:

1) Remove the bolt [37], shim [27], washer [35], and nut [36] from the aluminum spacer [34], if necessary.

(f) Remove the inboard proximity sensor [26].

SUBTASK 27-88-11-020-004

(2) Do these steps to remove the outboard aluminum spacer [28] or aluminum spacer [34] of the slats 1 through 8 (in the extended or flap lever 5 position) (View C, Figure 401):

(a) Disconnect the wires at the splice.

(b) For the slat 1 through 8 (in the extended or flap lever 5 position) remove the (aluminum pigmented) cap screws [52]], aluminum shim [27], and aluminum spacer [28] or aluminum spacer [34].

NOTE: The P-clamp [51] gets disconnected when the cap screw [52] are removed.

1) Measure the thickness of the aluminum shim [27] and the thickness of the aluminum aluminum spacer [28] or aluminum spacer [34], and keep record of it for easier completion of the sensor-target clearance required during the proximity sensor [26] installation task.

(c) For the slats 1 and 8 (in the retracted position), remove the cap screw [38] and aluminum spacer [28].

(d) Remove the outboard proximity sensor [26].

SUBTASK 27-88-11-020-005

(3) Do these steps to remove the retract proximity sensor [24] (View D and View E, Figure 401):

NOTE: The retract proximity sensors [24] are installed on slats 2, 3, 4, 5, 6 and 7.

(a) Remove the slat actuator door [23] from the slat actuator to get access to the mid retract proximity sensor [24]:

1) Remove the nuts [19], washers [18], and bolts [17].

2) Remove the nuts [22], washers [21], and bolts [20] that attach the slat actuator door [23] and the bracket to the slat actuator.

3) Remove the slat actuator door [23].

4) Temporarily install the bolts [20], washers [21], and nuts [22] to attach the bracket to the slat actuator.

(b) Disconnect the electrical connector from the retract proximity sensor [24].

(c) Remove the fastener [25] to remove the retract proximity sensor [24].

END OF TASK

G. Leading Edge Slat Proximity Sensor Installation

SUBTASK 27-88-11-010-003

(1) Make sure that these circuit breakers are open and have safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2

SUBTASK 27-88-11-420-008

(2) Make sure that the lockout set, SPL-1734, is installed on the actuators of the adjacent leading edge flaps and slats (TASK 27-81-00-480-801).

SUBTASK 27-88-11-420-002

(3) Do these steps to install the inboard proximity sensor [26] of the slat (View B, Figure 401):

WARNING USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a thin coat of Cor-Ban 27L Compound, G50237 (preferred), to the threads of the screws [29] or screw [32] before installation.

1) Use the applicable dry or lube torque value corresponding to the choice of the corrosion inhibitor.

NOTE: Noted series fasteners can be adjusted two additional grip lengths longer or shorter to accommodate the shim variations.

(b) For slat No. 1 or 8 (with the slats in the extended position), install the screws [29], washers [30], shim [27], aluminum spacer [28], and nuts [31] (View B, Figure 401).

1) Use the thickness dimensions of the aluminum shim [27] and aluminum spacer [28] that you recorded during the removal procedure to determine the closest amount of shim [3] you need to install.

a) Use the shim [27], as required, to meet the clearance requirement.

<1> Adjust the sensor to target clearance by adding or removing shim laminations as required.

NOTE: The clearance dimension applies to both the forward and aft targets.

b) Apply coating, C50069, to both sides of aluminum shim [27] (dry before install).

c) Bond the aluminum shim [27] and aluminum spacer [28] to the support bracket as follows:

<1> Lightly sand to remove the gloss from the mating surfaces.

<2> Clean the mating surfaces with alcohol, B00065, or alcohol, B50073.

<3> Wipe clean with a cotton wiper, G00034, wiper, G50262, or equivalent.

<4> Mix adhesive, A00165, fully before you use it.

NOTE: The adhesive must not be used if it is too thick.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

<5> Apply two thin, continuous layers of adhesive, A00165, to each mating surface.

NOTE: The first layer of the adhesive must dry fully before you apply the second layer. The second layer of the adhesive must dry only until it is tacky.

<6> Join the mating surfaces while adhesive, A00165, is tacky.

<7> Apply sufficient pressure to make good contact.

d) Apply adhesive, A01076, for faying surface sealing to the side of the aluminum shim [27] that contacts the proximity sensor [26].

e) Apply adhesive, A01076, to the sensor interface with the aluminum spacer [28] or with the structure, if no aluminum shim [27] is needed.

f) Apply coating, C50069 (dry before install), and Frekote 44-NC non-peelable parting agent, G50335, to the base of the proximity sensor [26].

2) Find the same color wires and make a splice.

3) Attach the wires together to make a bundle.

4) If the wires between the proximity sensor [26] and the last clamp are loosened during adjustment (rigging), do the steps that follow:

a) Remove all slack from slat sensor wires between the proximity sensor [26] and the last clamping location.

b) Redistribute the slack back to main bundle.

<1> Adjust the clamp size to accommodate the sheep shank area.

<2> Stitch-tie to prevent riding condition.

c) Reclamp if necessary.

(c) For slats No. 2, 3, 6 or 7 (with the slats in the extended position), install the screws [32], washers [30], shim [27], aluminum spacer [34], and nuts [31] (View B, Figure 401).

1) Use the thickness dimensions of the aluminum shim [27] and aluminum spacer [34] that you recorded during the removal procedure to determine the closest amount of shim [3] that you need to install.

a) Use shim [27], as required, to meet the clearance requirement.

<1> Adjust the sensor to target clearance by adding or removing shim laminations as required.

NOTE: The clearance dimension applies to both the forward and aft targets.

b) Bond the shim [27] and aluminum spacer [34] to the support bracket as follows:

<1> Lightly sand to remove the gloss from the mating surfaces.

<2> Clean the mating surfaces with alcohol, B00065, or alcohol, B50073.

<3> Wipe clean with a cotton wiper, G00034, wiper, G50262, or equivalent.

<4> Mix the adhesive, A00165, fully before you use it.

NOTE: The adhesive must not be used if it is too thick.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

<5> Apply two thin, continuous layers of the adhesive, A00165, to each mating surface.

NOTE: The first layer of the adhesive must dry fully before you apply the second layer. The second layer of the adhesive must dry only until it is tacky.

<6> Join the mating surfaces while the adhesive, A00165, is tacky.

<7> Apply sufficient pressure to make good contact.

c) Apply adhesive, A01076, for faying surface sealing to the side of the aluminum shim [27] that contacts the proximity sensor [4].

d) Apply adhesive, A01076, to the sensor interface with the aluminum spacer [34] with the structure, if no aluminum shim [27] is needed.

e) Apply coating, C50069 (dry before install), and Frekote 44-NC non-peelable parting agent, G50335, to the base of the proximity sensor [26].

2) Find the same color wires and make a splice.

3) Attach the wires together to make a bundle.

4) If the wires between the proximity sensor [26] and the last clamp are loosened during adjustment (rigging), do the steps that follow:

a) Remove all slack from slat sensor wires between the proximity sensor [26] and the last clamping location.

b) Redistribute the slack back to main bundle.

<1> Adjust the clamp size to accommodate the sheep shank area.

<2> Stitch-tie to prevent riding condition.

c) Re-clamp if necessary.

(d) For slat No. 4 or 5 (with the slats in the extended position), install the screws [33], washers [30], shim [3], and nuts [31] (View B, Figure 401).

1) Use the thickness dimensions of the aluminum shim [27] that you recorded during the removal procedure to determine the closest amount of shim [27] you need to install.

a) Use shim [27], as required, to meet the clearance requirement.

<1> Adjust the sensor to target clearance by adding or removing shim laminations as required.

NOTE: The clearance dimension applies to both the forward and aft targets.

b) Bond the shim [27] to the support bracket as follows:

<1> Lightly sand to remove the gloss from the mating surfaces.

<2> Clean the mating surfaces with alcohol, B00065, or alcohol, B50073.

<3> Wipe clean with a cotton wiper, G00034, wiper, G50262, or equivalent.

<4> Mix the adhesive, A00165, fully before you use it.

NOTE: The adhesive must not be used if it is too thick.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

<5> Apply two thin, continuous layers of the adhesive, A00165, to each mating surface.

NOTE: The first layer of the adhesive must dry fully before you apply the second layer. The second layer of the adhesive must dry only until it is tacky.

<6> Join the mating surfaces while the adhesive, A00165,is tacky.

<7> Apply sufficient pressure to make good contact.

c) Apply adhesive, A01076, for faying surface sealing to the side of the aluminum shim [27] that contacts the proximity sensor [26].

d) Apply adhesive, A01076, to the sensor interface with the structure, if no aluminum shim [27] is needed.

e) Apply coating, C50069 (dry before install), and Frekote 44-NC non-peelable parting agent, G50335, to the base of the proximity sensor [26].

2) Find the same color wires and make a splice.

3) Attach the wires together to make a bundle.

4) If the wires between the proximity sensor [26] and the last clamp are loosened during adjustment (rigging), do the steps that follow:

a) Remove all slack from slat sensor wires between the proximity sensor [26] and the last clamping location.

b) Redistribute the slack back to main bundle.

<1> Adjust the clamp size to accommodate the sheep shank area.

<2> Stitch-tie to prevent riding condition.

c) Re-clamp if necessary.

(e) For the slats 1 and 8 (with the slats in the retracted position), install the screw [29], aluminum spacer [28], bolts [37], washers [35], and nuts [36] if you removed the shim [27] (View B, Figure 401).

1) Use the thickness dimensions of the aluminum shim [27] and aluminum spacer [28] that you recorded during the removal procedure to determine the closest amount of shim [27] you need to install.

a) Use shim [27], as required, to meet the clearance requirement.

<1> Adjust the sensor to target clearance by adding or removing shim laminations as required.

NOTE: The clearance dimension applies to both the forward and aft targets.

b) Bond the shim [27] and aluminum spacer [28] to the support bracket as follows:

<1> Lightly sand to remove the gloss from the mating surfaces.

<2> Clean the mating surfaces with alcohol, B00065, or alcohol, B50073.

<3> Wipe clean with a cotton wiper, G00034, wiper, G50262, or equivalent.

<4> Mix the adhesive, A00165, fully before you use it.

NOTE: The adhesive must not be used if it is too thick.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

<5> Apply two thin, continuous layers of the adhesive, A00165, to each mating surface.

NOTE: The first layer of the adhesive must dry fully before you apply the second layer. The second layer of the adhesive must dry only until it is tacky.

<6> Join the mating surfaces while the adhesive, A00165, is tacky.

<7> Apply sufficient pressure to make good contact.

c) Apply adhesive, A01076, to the sensor interface with the aluminum spacer [28] or with the structure.

d) Apply coating, C50069 (dry before install), and Frekote 44-NC non-peelable parting agent, G50335, to the base of the proximity sensor [26].

2) Find the same color wires and make a splice.

3) Attach the wires together to make a bundle.

4) If the wires between the proximity sensor [26] and the last clamp are loosened during adjustment (rigging), do the steps that follow:

a) Remove all slack from slat sensor wires between the proximity sensor [26] and the last clamping location.

b) Redistribute the slack back to main bundle.

<1> Adjust the clamp size to accommodate the sheep shank area.

<2> Stitch-tie to prevent riding condition.

c) Re-clamp if necessary.

SUBTASK 27-88-11-400-001

(4) Install the outboard proximity sensor [26] of the slat with the slat in the extended or flap lever 5 position.

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a thin layer of Cor-Ban 27L Compound, G50237 on the holes of the proximity sensor [26] and on the threads of the (aluminum pigmented) cap screw [52] before you install them.

1) Use applicable dry or lube torque value corresponding to the choice of the corrosion inhibitor.

(b) Use the thickness dimensions of the shim [27] and aluminum spacer [28] or aluminum spacer [34] that you recorded during the removal procedure to determine the closest amount of shim [27] you need to install.

(c) Install the aluminum shim [27] (as many as necessary to get the permitted clearance) between the proximity sensor [26] and the aluminum spacer [28] or aluminum spacer [34] and fasten them to the outboard sensor bracket [53] with the (aluminum pigmented) cap screw [52].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Adjust the sensor to target clearance by adding or removing shim laminations as required.

NOTE: The clearance dimension applies to both the forward and aft targets.

NOTE: Noted series fasteners can be adjusted two additional grip lengths longer or shorter to accommodate the shim variations.

(d) Apply coating, C50069, to both sides of aluminum shim [27] (dry before install).

(e) Bond the aluminum shim [27] and the aluminum spacer [28] or aluminum spacer [34] to the outboard sensor bracket [53] as follows:

1) Lightly sand to remove the gloss from the mating surfaces.

2) Clean the mating surfaces with alcohol, B00065, or alcohol, B50073.

3) Wipe clean with a cotton wiper, G00034, wiper, G50262, or equivalent.

4) Mix the adhesive, A00165, fully before you use it.

NOTE: The adhesive must not be used if it is too thick.

5) Apply two thin, continuous layers of the adhesive, A00165, to each mating surface.

NOTE: The first layer of the adhesive must dry fully before you apply the second layer. The second layer of the adhesive must dry only until it is tacky.

6) Join the mating surfaces while the adhesive, A00165, is tacky.

7) Apply sufficient pressure to make good contact.

(f) Apply adhesive, A01076, for faying surface sealing to the side of the aluminum shim [27] that contacts the proximity sensor [26].

(g) Apply adhesive, A01076, to the sensor interface with the aluminum spacer [28] or aluminum spacer [34] or with the structure, if no aluminum shim [27] is needed.

(h) Apply coating, C50069(dry before install), and Frekote 44-NC non-peelable parting agent, G50335, to the base of the proximity sensor [4].

(i) Install the P-clamp [51] with the screw to the aluminum spacer [28] or aluminum spacer [34].

(j) Find the same color wires and make a splice.

(k) Attach the wires together to make a bundle.

(l) If the wires between the proximity sensor [26] and the last clamp are loosened during adjustment (rigging), do the steps that follow:

1) Remove all slack from slat sensor wires between the proximity sensor [26] and the last clamping location.

2) Redistribute the slack back to main bundle.

a) Adjust the clamp size to accommodate the sheep shank area.

b) Stitch-tie to prevent riding condition.

3) Reclamp if necessary.

(m) For the slats 1 and 8 (with the slats in the retracted position), install the screw [38], aluminum spacer [28], bolt [37], washer [35], and nut [36] if you removed the shim [27] (View B, Figure 401).

1) Use the thickness dimensions of the aluminum shim [27] and aluminum spacer [28] that you recorded during the removal procedure to determine the closest amount of shim [27] you need to install.

a) Use shim [27], as required, to meet the clearance requirement.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

<1> Adjust the sensor to target clearance by adding or removing shim laminations as required.

NOTE: The clearance dimension applies to both the forward and aft targets.

b) Bond the shim [27] and aluminum spacer [28] to the support bracket as follows:

<1> Lightly sand to remove the gloss from the mating surfaces.

<2> Clean the mating surfaces with alcohol, B00065, or alcohol, B50073.

<3> Wipe clean with a cotton wiper, G00034, wiper, G50262 or equivalent.

<4> Mix the adhesive, A00165, fully before you use it.

NOTE: The adhesive must not be used if it is too thick.

<5> Apply two thin, continuous layers of the adhesive, A00165 to each mating surface.

NOTE: The first layer of the adhesive must dry fully before you apply the second layer. The second layer of the adhesive must dry only until it is tacky.

<6> Join the mating surfaces while the adhesive, A00165, is tacky.

<7> Apply sufficient pressure to make good contact.

c) Apply adhesive, A01076, to the sensor interface with the aluminum spacer [28] or with the structure.

d) Apply coating, C50069 (dry before install), and Frekote 44-NC non-peelable parting agent, G50335, to the base of the proximity sensor [26].

2) Find the same color wires and make a splice.

3) Attach the wires together to make a bundle.

4) If the wires between the and the last clamp are loosened during adjustment (rigging), do the steps that follow:

a) Remove all slack from slat sensor wires between the proximity sensor [26] and the last clamping location.

b) Redistribute the slack back to main bundle.

<1> Adjust the clamp size to accommodate the sheep shank area.

<2> Stitch-tie to prevent riding condition.

c) Re-clamp if necessary.

SUBTASK 27-88-11-420-004

(5) Do these steps to install the retract proximity sensor [24]:

NOTE: It is not necessary to adjust a clearance for the retract proximity sensor [24].

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a thin coat of Cor-Ban 27L Compound, G50237, to the pilot diameter and fay surface of the retract proximity sensor [24].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Install the retract proximity sensor [24] with the fastener [25].

(c) Connect the electrical connector to the retract proximity sensor [24].

(d) Install the slat actuator door [23] to the slat actuator.

1) Remove the nut [22], washer [21], and bolt [20] that attached the bracket to the slat actuator that attach the bracket to the slat actuator.

a) If there are three washers installed on the bolt [20], discard the thicker aluminum washer.

2) Put the slat actuator door [23] in its position on the slat actuator.

3) Install bolt [20],washer [21], and nut [22] that attach the slat actuator door [23] and the bracket to the slat actuator.

4) Install the bolt [17], washer [18], and nut [19] that attach the slat actuator door [23] to the slat actuator.

SUBTASK 27-88-11-220-001

(6) With the leading edge slat in the full extend position, make sure the clearance between the inboard or outboard proximity sensor [26] and the target [54] is 0.115 in. (2.92 mm)– 0.135 in. (3.43 mm).

(a) If the permitted clearance is out of tolerance, adjust the clearance between the proximity sensor [26] and the target [54].

1) Use the required consumable materials that you used during the installation procedure above for the re-installation of the proximity sensor [26], as necessary

2) Remove the (aluminum pigmented) cap screw [52], shim [27], and aluminum spacer [28] or aluminum spacer [34].

3) Add or remove shim [27] as it is necessary to get the correct clearance between the proximity sensor [26] and the target [54].

a) Adjust the sensor to target clearance by adding or removing shim laminations as required.

NOTE: The clearance dimension applies to both the forward and aft targets.

b) Use the thickness dimensions of shim [27] and aluminum spacer [28] or aluminum spacer [34] that you recorded during the removal procedure to determine the closest amount of shim [27] you need to install.

4) Fasten the proximity sensor [26], shim [27] and aluminum spacer [28] or aluminum spacer [34] to the outboard sensor bracket [53] with the (aluminum pigmented) cap screw [52].

a) Use the applicable dry or lube torque value corresponding to the choice of the corrosion inhibitor.

SUBTASK 27-88-11-860-002

WARNING

MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(7) Retract the leading edge slat to the extend (flap lever 1-unit detent) position with primary control. To do this, do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-88-11-220-003

(8) With the slat in the 1-unit detent position, make sure the clearance between the inboard and/or outboard proximity sensor [26] and the target [9] for the inboard sensor or target [54] for the outboard sensor is 0.125 ±0.010 in. (3.175 ±0.254 mm).

(a) If the permitted clearance is out of tolerance, adjust the clearance between the proximity sensor [26] and the target [9] or target [54].

1) Remove the screw [29]

or screw [32] for the inboard sensor, or cap screw [52] for the outboard sensors of the slats, washer [30] and nut [31] on the inboard sensor, shim [27] and aluminum spacer [28] or aluminum spacer [34].

2) Add or remove shim [27] as it is necessary to get the correct clearance between the proximity sensor [26] and the target [9] or target [54].

3) Install the screw [29] or screw [32] for the inboard sensors of the slats or cap screw [52] for the outboard sensors of the slats, washer [30] and nut [31] on the inboard slat, and aluminum spacer [28] or aluminum spacer [34].

(b) Bond the shim [27] and aluminum spacer [28] or aluminum spacer [34] to the bracket with adhesive, A00165.

SUBTASK 27-88-11-410-001

(9) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2

SUBTASK 27-88-11-860-003

WARNING MAKE SURE THAT PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE SLATS. THE LEADING EDGE SLATS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(10) Retract the leading edge slats to the retracted (flap lever UP) position with primary control. To do this, do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

SUBTASK 27-88-11-220-005

(11) On leading edge slat 1 or 8, make sure that the clearance between the (inboard or outboard) proximity sensor [26] and the target [14] is 0.125 ±0.010 in. (3.175 ±0.254 mm).

(a) If the permitted clearance is out of tolerance, adjust the clearance between the proximity sensor [26] and the target [14].

1) Remove the nut [36], washer [35], shim [27], and bolt [37] to remove the target [14].

2) Add or remove shim [27] as it is necessary to get the correct clearance between the proximity sensor [26] and the target [14].

3) Install the bolt [37],target [14], washer [35], and nut [36].

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-88-11-080-003

CAUTION

CAREFULLY INSTALL OR REMOVE THE LEADING EDGE LOCKOUT SET TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS AND SLATS. THE LEADING EDGE FLAPS CAN MOVE QUICKLY. IF YOU DO NOT FOLLOW INSTRUCTIONS, INJURY TO PERSONS AND DAMAGE TO EQUIPMENT CAN OCCUR.

(12) Remove the lockout set, SPL-1734, from the actuators of the leading edge flap and slats. To do this, do this task: Leading Edge Flap and Slat Locks Removal, TASK 27-81-00-080-801.

SUBTASK 27-88-11-710-001

(13) Do this task: Leading Edge Flap and Slat Proximity Sensor Test, TASK 27-88-11-700-801.

H. Put the Airplane Back to Its Usual Condition

SUBTASK 27-88-11-940-001

(1) Install the applicable access panels (TASK 57-41-02-400-801):

(a) For the left wing, close these access panels:

Number	Name/Location
521CB	Lower Leading Edge Access Panel - Slat Station 50
521DB	Lower Leading Edge Access Panel - Slat Station 70
521FB	Lower Leading Edge Access Panel - Slat Station 107
521JB	Lower Leading Edge Access Panel - Slat Station 161
521KB	Lower Leading Edge Access Panel - Slat Station 179
521LB	Lower Leading Edge Access Panel - Slat Station 208
521MB	Lower Leading Edge Access Panel - Slat Station 226
521QB	Lower Leading Edge Access Panel - Slat Station 280
521RB	Lower Leading Edge Access Panel - Slat Station 298
521SB	Lower Leading Edge Access Panel - Slat Station 328
521TB	Lower Leading Edge Access Panel - Slat Station 347
521WB	Lower Leading Edge Access Panel - Slat Station 406
521XB	Lower Leading Edge Access Panel - Slat Station 425
521YB	Lower Leading Edge Access Panel - Slat Station 470
521ZB	Lower Leading Edge Access Panel - Slat Station 479

(b) For the right wing, close these access panels:

Number	Name/Location
621CB	Lower Leading Edge Access Panel - Slat Station 50
621DB	Lower Leading Edge Access Panel - Slat Station 70
621FB	Lower Leading Edge Access Panel - Slat Station 107
621JB	Lower Leading Edge Access Panel - Slat Station 161
621KB	Lower Leading Edge Access Panel - Slat Station 179
621LB	Lower Leading Edge Access Panel - Slat Station 208
621PB	Lower Leading Edge Access Panel - Slat Station 261
621QB	Lower Leading Edge Access Panel - Slat Station 280
621RB	Lower Leading Edge Access Panel - Slat Station 298
621SB	Lower Leading Edge Access Panel - Slat Station 328
621VB	Lower Leading Edge Access Panel - Slat Station 385
621WB	Lower Leading Edge Access Panel - Slat Station 406
621XB	Lower Leading Edge Access Panel - Slat Station 425

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

Number	Name/Location
621YB	Lower Leading Edge Access Panel - Slat Station 470

END OF TASK

TASK 27-88-11-000-802

4. Leading Edge Flap Proximity Sensor Removal

(Figure 402)

D. Prepare for the Removal

SUBTASK 27-88-11-860-004

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT YOU CLOSE OR REMOVE THE INBOARD FAN COWL AND THRUST REVERSERS BEFORE YOU RETRACT THE LEADING EDGE FLAPS. THE CLEARANCE IS NOT SUFFICIENT FOR THE FLAPS TO RETRACT WITH THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(1) To extend the leading edge flaps, do this task: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-88-11-010-004

(2) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2

SUBTASK 27-88-11-480-004

WARNING CAREFULLY REMOVE THE LEADING EDGE FLAP ACTUATOR LOCK TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS. THE LEADING EDGE FLAPS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Install the lockout set, SPL-1734 on the actuator of the adjacent leading edge flap. To do this, do this task: Leading Edge Flap and Slat Locks Installation, TASK 27-81-00-480-801.

E. Leading Edge Flap Proximity Sensor Removal

SUBTASK 27-88-11-020-007

(1) Remove the extend proximity sensor [44A] and/or retract proximity sensor [44B] per Figure 402:

(a) Disconnect the wires at the splice.

(b) To remove the retract proximity sensor [44B], remove the nuts [43], washers [42] (installed under the nut), and the (aluminum pigmented) cap screws [49].

(c) To remove the extend proximity sensor [44A], remove the (aluminum pigmented) cap screws [50] and the shim [46].

1) Measure the thickness of the shim [46] and keep record of it for easier completion of the sensor-target clearance required during the installation task of the extend extend proximity sensor [44A].

(d) Remove the extend proximity sensor [44A] and/or retract proximity sensor [44B].

F. Leading Edge Flap Proximity Sensor Installation

SUBTASK 27-88-11-010-005

(1) Make sure that these circuit breakers are open and have safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2

SUBTASK 27-88-11-800-001

(2) Do these steps to install the flap (titanium) extend proximity sensor [44A] or retract proximity sensor [44B] Figure 402:

NOTE: The titanium sensor installed with applicable hardware and consumable is interchangeable with the stainless steel sensor installed with the applicable hardware and consumable.

WARNING

USE NITRILE GLOVES FOR SKIN PROTECTION WHEN YOU USE COR-BAN 27L, G50237. IF IT GETS ON YOUR SKIN, IMMEDIATELY REMOVE IT WITH WATER. IF THIS MATERIAL GETS IN YOUR EYES, IMMEDIATELY FLUSH YOUR EYES WITH WATER. GET MEDICAL AID. THIS MATERIAL CONTAINS FLAMMABLE AGENTS WHICH CAN CAUSE INJURIES TO PERSONNEL.

(a) Apply a thin coat of Cor-Ban 27L Compound, G50237 on the holes of the titanium extend proximity sensor [44A]or , retract proximity sensor [44B], the threads of the (aluminum pigmented) cap screws [49], and cap screws [50].

(b) Apply coating, C50069 (dry before install) or primer, C00259 to the two sides of the aluminum shim [46].

(c) Apply adhesive, A01076 to the faying surface seal on the side that contacts the titanium extend proximity sensor [44A] or retract proximity sensor [44B].

(d) Apply coating, C50069 (dry before install) or primer, C00259 and Frekote 44-NC non-peelable parting agent, G50335 to the base of the titanium extend proximity sensor [44A] or retract proximity sensor [44B].

(e) Install the retract proximity sensor [44B] with the (aluminum pigmented) cap screws [49], washers [42], and nuts [43].

(f) Install the extend proximity sensor [44A] with the (aluminum pigmented) cap screws [50] and shim [46].

(g) Find the same color wires and make a splice.

(h) Attach the wires together to make a bundle.

SUBTASK 27-88-11-800-002

(3) With the flap in the extend position, make sure the clearance dimension between the extend proximity sensor [44A] and the target [45] is 0.125 ±0.010 in. (3.175 ±0.254 mm).

(a) If the clearance dimension is out of tolerance, adjust the clearance dimension between the extend proximity sensor [44A] and the target [45].

NOTE: The sensor-target clearance of the extend proximity sensor [44A] is adjustable. The sensor-target clearance of the retract proximity sensor [44B] is not adjustable.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

1) Use the necessary materials from the above installation to install the extend proximity sensor [44A] after the adjustment.
2) Remove the (aluminum pigmented) cap screws [50] and shim [46].
3) If necessary, add or remove shims [46] to get the correct clearance dimension between the extend proximity sensor [44A] and the target [45].
   a) Use the thickness dimensions of the shims [46] recorded during the removal procedure to find the necessary quantity of shims [46].
4) Install the (aluminum pigmented) cap screws [50].
   a) Use the applicable dry or lube torque value.

G. Put the Airplane Back to Its Usual Condition

SUBTASK 27-88-11-080-004

WARNING CAREFULLY REMOVE THE LEADING EDGE FLAP ACTUATOR LOCK TO PREVENT ACCIDENTAL OPERATION OF THE LEADING EDGE FLAPS. THE LEADING EDGE FLAPS CAN MOVE QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) Remove the lockout set, SPL-1734 from the actuator of the leading edge flap, (TASK 27-81-00-080-801).

SUBTASK 27-88-11-410-002

(2) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2

SUBTASK 27-88-11-860-005

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Retract the leading edge flap to the UP position with primary control, (TASK 27-81-00-860-804).

SUBTASK 27-88-11-710-002

(4) Do this task: Leading Edge Flap and Slat Proximity Sensor Test, TASK 27-88-11-700-801

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details

LEADING EDGE FLAP AND SLAT PROXIMITY SENSOR - ADJUSTMENT/TEST

1. General

A. This procedure contains the following tasks:

(1) Leading Edge Flap and Slat Proximity Sensor Test

(2) Leading Edge Flap and Slat Proximity Sensor Test Using a LCR Meter

(3) Leading Edge Flap and Slat Proximity Sensor Test Using a Breakout Box and a LCR Meter.

B. These tasks are functional tests of the proximity switch systems sensors.

NOTE: If available, use B737 FSEU Test/Breakout Box MPN 380-026-02 to do the inductance and resistance tests.

C. These tests are intended to determine a proximity sensor(s) health preventing unnecessary replacement of the Flap/Slat Electronics Unit (FSEU).

D. The proximity sensors provide position sensing for the leading edge flaps and slats systems.

E. The proximity sensors remain installed on the airplane during the test.

TASK 27-88-11-700-801

2. Leading Edge Flap and Slat Proximity Sensor Test

(Figure 501)

C. Prepare for the Test

SUBTASK 27-88-11-860-006

(1) Make sure that the flap control lever is in the FLAP UP detent position with the leading edge (LE) flaps and slats in the retract position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(a) If it is necessary, do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

SUBTASK 27-88-11-740-001

(2) Do this task: FSEU Display and Existing Faults Test, TASK 27-51-00-740-801.

SUBTASK 27-88-11-860-008

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

D. Leading Edge Flap and Slat Proximity Sensor Test

SUBTASK 27-88-11-730-001

WARNING

MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION

MAKE SURE THE INBOARD FAN DUCT COWL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS IN THIS TEST. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(1) Do a test of the leading edge flap and slat proximity sensor:

(a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?.

(b) Push the down arrow until OTHER FUNCTNS? shows on the display.

(c) Push the YES button to select OTHER FUNCTNS? on the FSEU.

(d) Push the down arrow until I/O MONITOR? shows on the display.

(e) Push the YES button to select I/O MONITOR? from the menu.

(f) Push the YES button to select PROX SENSORS? from the I/O MONITOR? menu.

(g) Push the down arrow to step through the proximity sensor states at the LE flaps and slats UP position.

(h) Make sure that these displays and the proximity sensor states show on the FSEU (Table 501):

Table 501/27-88-11-993-801

Display	State

(i) Move the flap control lever to the 1-unit detent position.

1) Make sure that these lights come on during the flaps and slats extension and go off after extension:

a) The LE FLAPS TRANSIT light on the P2-2 center instrument panel.

b) All the LE flaps and slats TRANSIT lights on the P5-12 aft overhead panel.

2) Push the down arrow on the FSEU to step through the proximity sensor states.

3) Make sure that these displays and the proximity sensor states show on the FSEU (Table 502):

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-88-11-760-801

3. Leading Edge Flap and Slat Proximity Sensor Test Using a LCR Meter

(Figure 502)

A. General

(1) This test will measure the resistance and inductance of the 3-wire proximity sensor and wire bundle. And compare the values to a known range. This test also examines the target to the sensor condition.

(2) Obey all applicable warnings, cautions, and maintenance practice instructions when necessary to measure the Proximity Sensor in the test.

(3) Use an LCR meter that has a USB port to record the data with a PC automatically. For example 878B or 879B have a USB port. Use the specified instructions included with the LCR meter.

(4) The Sensor Test Gauge Kit (proximity sensor test set, SPL-1690) consists of six go-gauges, sensor de-actuator tool and an instruction booklet. Use the go-gauges in place of a sensor, if you suspect the sensor is faulty. Refer to 27-88 IFIM if necessary.

Number	Name/Location
117A	Electronic Equipment Access Door

F. Prepare for the Test

SUBTASK 27-88-11-860-014

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT YOU CLOSE OR REMOVE THE INBOARD FAN COWL AND THRUST REVERSERS BEFORE YOU RETRACT THE LEADING EDGE FLAPS. THE CLEARANCE IS NOT SUFFICIENT FOR THE FLAPS TO RETRACT WITH THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(1) Make sure that the flaps and slats are in the retracted position.

(a) If the flaps and slats are not retracted, do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-88-11-740-002

(2) Do this task: FSEU Display and Existing Faults Test, TASK 27-51-00-740-801.

SUBTASK 27-88-11-860-041

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-88-11-730-003

WARNING

MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION

MAKE SURE THE INBOARD FAN DUCT COWL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS IN THIS TEST. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(4) Do a test of the leading edge flap and slat proximity sensor:

(a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?.

(b) Push the down arrow until OTHER FUNCTNS? shows on the display.

(c) Push the YES button to select OTHER FUNCTNS? on the FSEU.

(d) Push the down arrow until I/O MONITOR? shows on the display.

(e) Push the YES button to select I/O MONITOR? from the menu.

(f) Push the YES button to select PROX SENSORS? from the I/O MONITOR? menu.

(g) Push the down arrow to step through the proximity sensor states at the LE flaps and slats UP position.

(h) Make sure that these displays and the proximity sensor states show on the FSEU (Table 501).

SUBTASK 27-88-11-860-011

(5) Remove electrical power from the system for the test.

(a) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(Continued)

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-010-006

(6) Open this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-88-11-020-008

(7) Do this task to remove the Flap/Slat Electronics Unit (FSEU): Flap/Slat Electronics Unit Removal, TASK 27-51-01-000-801.

(a) Keep the FSEU for installation.

(b) Install blanking caps on the removed FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-210-001

(8) Examine the ARINC connector pins for damage or corrosion.

(a) Repair as necessary.

G. Measure the Proximity Sensor and Wiring Installation Resistance with the Flaps and Slats in the Retracted Position

SUBTASK 27-88-11-760-001

(1) Refer to the applicable WDM (WDM 27-81-11, WDM 27-81-12, WDM 27-81-21,WDM 27-81-22) for the 3-wire sensor to FSEU ARINC connector pin callout.

SUBTASK 27-88-11-760-048

(2) Connect the LCR meter (Inductance, Capacitance, Resistance), COM-1741 (a digital voltmeter, STD-6481, or digital/analog multimeter, COM-1793, may be used to measure the resistance).

(a) First do the Red to Yellow measurement.

(b) Then the Blue to Yellow measurement.

(c) Alternate connections as needed.

SUBTASK 27-88-11-760-050

(3) Supply power to the LCR meter (Inductance, Capacitance, Resistance), COM-1741.

SUBTASK 27-88-11-760-049

(4) Set the LCR meter (Inductance, Capacitance, Resistance), COM-1741, to measure series resistance (Rs) at 120 Hz.

SUBTASK 27-88-11-700-001

(5) Measure the resistance at the ARINC connector pins on the E1-1 rack for each sensor under test and record in the log sheet (Figure 502).

(a) The “DATA HOLD” button is used to "capture" your current measured result.

(b) To make a new measurement, the, "DATA HOLD" must be released, by pressing the button once, then the new measurement can be made.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Record the resistance of sensors in the appropriate space on log sheet. Values to be recorded in hundredths (two numbers right of the decimal point), for example XX.XX or XXX.XX.

SUBTASK 27-88-11-760-051

(6) Compare the measured resistance value to Table 505.

Table 504/27-88-11-993-810 GO-GAUGES TABLE

BOEING SENSOR PART NUMBER	CRANE SENSOR PART NUMBER	TARGET NEAR INDUCTANCE (WITH GO-GAUGE)	TARGET FAR INDUCTANCE (WITH GO-GAUGE)	COIL RESISTANCE RED-YELLOW (TARGET FAR)	RESISTANCE BLUE-YELLOW (TARGET FAR)
10-61226-29	1-899-29	38.0 mH minimum	36.0-37.5 mH	27.0-39.0 Ω	344.5-351.5 Ω
10-61226-30	1-899-30	38.0 mH minimum	36.0-37.5 mH	27.0-33.0 Ω	344.5-351.5 Ω
10-61226-45	80-207-01	38.0 mH minimum	36.0-37.5 mH	27.0-33.0 Ω	344.5-351.5 Ω
10-61226-47	80-207-02	38.0 mH minimum	36.0-37.5 mH	27.0-33.0 Ω	344.5-351.5 Ω

SUBTASK 27-88-11-760-053

(7) If the measured resistance value is less than 5.00 ohms, this indicates a short circuit condition.

(a) If there is a short circuit, inspect the associated wiring and connectors for contamination or damage.

SUBTASK 27-88-11-760-054

(8) If the resistance value as measured between the Red and Yellow leads is greater than 100.00 ohms, this indicates a loose contact or wire damage or a defective sensor.

(a) If there is loose contact or wire damage, inspect the associated wiring and connectors for contamination or damage.

SUBTASK 27-88-11-760-055

(9) If the resistance value as measured between the Blue and Yellow leads is greater than 500.00 ohms, this indicates a loose contact or wire damage or a defective sensor.

(a) If there is loose contact or wire damage, inspect the associated wiring and connectors for contamination or damage.

H. Measure the Inductance at the ARINC Connector Pins on the E1-1 Rack for each Sensor Under Test with the Flaps and Slats in the Retracted Position

SUBTASK 27-88-11-760-002

(1) Refer to the applicable WDM (WDM 27-81-11, WDM 27-81-12, WDM 27-81-21,WDM 27-81-22) for the 3-wire sensor to FSEU ARINC connector pin callout.

SUBTASK 27-88-11-760-052

(2) Connect the LCR meter (Inductance, Capacitance, Resistance), COM-1741, for Red to Blue measurement.

SUBTASK 27-88-11-760-056

(3) Supply power to the LCR meter (Inductance, Capacitance, Resistance), COM-1741.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-88-11-760-057

(4) Set the LCR meter (Inductance, Capacitance, Resistance), COM-1741, to read series inductance (Ls) at 1 kHz.

SUBTASK 27-88-11-760-058

(5) Measure the inductance for the targets with the flaps and slats in the retracted position and record in the log sheet for each sensor (Figure 502).

(a) The “DATA HOLD” button is used to "capture" your current measured result.

(b) To make a new measurement, the, "DATA HOLD" must be released, by pressing the button once, then the new measurement can be made.

(c) Record the inductance of sensors in the appropriate space on log sheet. Values to be recorded in hundredths (two numbers right of the decimal point), for example XX.XX or XXX.XX.

(d) If you suspect a faulty sensor, use the applicable, Sensor Test Gauge Kit – Go-Gauge (proximity sensor test set, SPL-1690) to simulate a configuration change of the sensors current position to a target FAR or a target NEAR position.

(e) Compare the measured inductance values to Table 504 only if using GO-GAUGES.

SUBTASK 27-88-11-760-059

(6) Make sure that the inductance value for the sensor under test is within the range of Table 505.

Table 505/27-88-11-993-811 SENSOR'S NOMINAL VALUES

VALUE	SENSOR CONDITION
Three-wire Sensors	
35 mH	Target FAR
40 mH - 50 mH	Correctly rigged NEAR sensor
Greater than 50 mH	Target may be rigged too near to the sensor
Resistance on aircraft (Red-Yellow resistance plus Blue-Yellow resistance): ≤ 390 Ω	

I. Measure the Inductance at the ARINC Connector Pins on the E1-1 Rack for each Sensor Under Test with the Flaps and Slats in the Extended Position

SUBTASK 27-88-11-410-008

(1) Do this task to install the FSEU: Flap/Slat Electronics Unit Installation, TASK 27-51-01-400-801.

(a) Remove the blanking caps on the FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-860-054

(2) Restore electrical power.

(a) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-88-11-860-055

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT YOU CLOSE OR REMOVE THE INBOARD FAN COWL AND THRUST REVERSERS BEFORE YOU RETRACT THE LEADING EDGE FLAPS. THE CLEARANCE IS NOT SUFFICIENT FOR THE FLAPS TO RETRACT WITH THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(3) Move the flaps and slats to the extended position for the test.

(a) Do this task to extend the leading edge flaps: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

1) Move the flap control lever to detent position 1, 2, 5, 10, 15, and 25.

2) Stop for 2 seconds at each detent position.

SUBTASK 27-88-11-010-010

(4) Do this task to remove the FSEU: Flap/Slat Electronics Unit Removal, TASK 27-51-01-000-801.

(a) Keep the FSEU for installation.

(b) Install blanking caps on the removed FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-860-056

(5) Remove electrical power from the system for the test.

(a) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-760-034

(6) Refer to the applicable WDM (WDM 27-81-11, WDM 27-81-12, WDM 27-81-21,WDM 27-81-22) for the 3-wire sensor to FSEU ARINC connector pin callout.

SUBTASK 27-88-11-760-035

(7) Connect the LCR meter (Inductance, Capacitance, Resistance), COM-1741, for Red to Blue measurement.

SUBTASK 27-88-11-760-036

(8) Supply power to the LCR meter (Inductance, Capacitance, Resistance), COM-1741.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-88-11-760-037

(9) Set the LCR meter (Inductance, Capacitance, Resistance), COM-1741, to read series inductance (Ls) at 1 kHz.

SUBTASK 27-88-11-760-038

(10) Measure the inductance for the targets with the flaps and slats in the extended position and record in the log sheet for each sensor (Figure 502).

(a) The “DATA HOLD” button is used to "capture" your current measured result.

(b) To make a new measurement, the, "DATA HOLD" must be released, by pressing the button once, then the new measurement can be made.

(c) Record the inductance of sensors in the appropriate space on log sheet. Values to be recorded in hundredths (two numbers right of the decimal point), for example XX.XX or XXX.XX.

(d) If you suspect a faulty sensor, use the applicable, Sensor Test Gauge Kit – Go-Gauge (proximity sensor test set, SPL-1690) to simulate a configuration change of the sensors current position to a target FAR or a target NEAR position.

(e) Compare the measured inductance value to the range in Table 504 only if using GO-GAUGES.

SUBTASK 27-88-11-760-039

(11) Make sure that the inductance value for the sensor under test is within the range of Table 505.

J. Measure the Inductance at the ARINC Connector Pins on the E1-1 Rack for each Sensor Under Test with the Flaps and Slats in the Full Extended Position

SUBTASK 27-88-11-410-004

(1) Do this task to install the FSEU: Flap/Slat Electronics Unit Installation, TASK 27-51-01-400-801.

(a) Remove the blanking caps on the FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-860-028

(2) Restore electrical power.

(a) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-860-029

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

CAUTION

MAKE SURE THAT YOU CLOSE OR REMOVE THE INBOARD FAN COWL AND THRUST REVERSERS BEFORE YOU RETRACT THE LEADING EDGE FLAPS. THE CLEARANCE IS NOT SUFFICIENT FOR THE FLAPS TO RETRACT WITH THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(3) Move the flaps and slats to the full extended position for the test.

(a) Do this task to extend the leading edge flaps: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

1) Stop for 2 seconds at each detent position until detent position 30.

SUBTASK 27-88-11-010-008

(4) Do this task to remove the FSEU: Flap/Slat Electronics Unit Removal, TASK 27-51-01-000-801.

(a) Keep the FSEU for installation.

(b) Install blanking caps on the removed FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-860-030

(5) Remove electrical power from the system for the test.

(a) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-760-003

(6) Refer to the applicable WDM (WDM 27-81-11, WDM 27-81-12, WDM 27-81-21,WDM 27-81-22) for the 3-wire sensor to FSEU ARINC connector pin callout.

SUBTASK 27-88-11-760-040

(7) Connect the LCR meter (Inductance, Capacitance, Resistance), COM-1741, for Red to Blue measurement.

SUBTASK 27-88-11-760-041

(8) Supply power to the LCR meter (Inductance, Capacitance, Resistance), COM-1741.

SUBTASK 27-88-11-760-042

(9) Set the LCR meter (Inductance, Capacitance, Resistance), COM-1741, to read series inductance (Ls) at 1 kHz.

SUBTASK 27-88-11-760-043

(10) Measure the inductance for the targets with the flaps and slats in the full extended position and record in the log sheet for each sensor (Figure 502).

(a) The “DATA HOLD” button is used to "capture" your current measured result.

(b) To make a new measurement, the, "DATA HOLD" must be released, by pressing the button once, then the new measurement can be made.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(c) Record the inductance of sensors in the appropriate space on log sheet. Values to be recorded in hundredths (two numbers right of the decimal point), for example XX.XX or XXX.XX.

(d) If you suspect a faulty sensor, use the applicable, Sensor Test Gauge Kit – Go-Gauge (proximity sensor test set, SPL-1690) to simulate a configuration change of the sensors current position to a target FAR or a target NEAR position.

(e) Compare the measured inductance value to the range in Table 504 only if using GO-GAUGES.

SUBTASK 27-88-11-760-044

(11) Make sure that the inductance value for the sensor under test is within the range of Table 505.

K. Put the Airplane Back to Its Usual Condition

SUBTASK 27-88-11-020-009

(1) Remove the blanking caps on the FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-420-006

(2) Do this task to install the FSEU: Flap/Slat Electronics Unit Installation, TASK 27-51-01-400-801.

SUBTASK 27-88-11-860-013

(3) Restore electrical power.

(a) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-730-002

(4) Do this task: Leading Edge Flap and Slat Proximity Sensor Test, TASK 27-88-11-700-801.

SUBTASK 27-88-11-410-010

(5) Close this access door:

Number	Name/Location

ECCN 9E991 BOEING PROPRIETARY - See title page for details

TASK 27-88-11-720-801

4. Leading Edge Flap and Slat Proximity Sensor Test Using a Breakout Box and LCR Meter

(Figure 503, Figure 504)

A. General

CAUTION	THE PROXIMITY SENSOR BREAKOUT BOX IS USED ONLY TO EXAMINE BASIC SENSOR HEALTH AND INSTALLATION. DO NOT USE AS A RIGGING TOOL. RIGGING OF SENSORS AND OTHER MAINTENANCE ACTIONS SHOULD BE DONE ONLY IN ACCORDANCE WITH AIRLINE OPERATING AND MAINTENANCE PROCEDURES, APPROVED MAINTENANCE MANUALS, OR DIRECTIVES OF THE APPROPRIATE CERTIFICATION AGENCY.

(1) The test will measure the inductance and resistance of the 3-wire sensors, sensor wires, and connectors. And compare the values to a known range. This test also examines the target to sensor conditions.

(2) This test uses the Crane Sensor Test System made up of the following parts:

(a) Proximity Sensor Breakout Box (BOB) and a LCR Meter.

(b) Sensors Test Gauge Set.

1) The controls on the face of the proximity sensor BOB are used to select the desired sensor for testing.

a) The proximity sensor BOB does not test two-wire sensors. Two-wire sensors, do not need to be tested.

2) The Sensor Test Gauge Kit (proximity sensor test set, SPL-1690) consists of six go-gauges, sensor de-actuator tool and an instruction booklet. Use the go-gauges in place of a sensor, if you suspect the sensor is faulty. Refer to IFIM 27-88 if necessary.

(3) Obey all applicable warnings, cautions, and maintenance practice instructions when necessary to measure the Proximity Sensor in the test.

(4) Use an LCR meter that has a USB port to record the data with a PC automatically. For example 878B or 879B have a USB port. Use the specified instructions included with the LCR meter. Full instructions are included in the BOB's Sensor Test System.

F. Prepare for the Test

SUBTASK 27-88-11-860-015

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(WARNING PRECEDES)

CAUTION

MAKE SURE THAT YOU CLOSE OR REMOVE THE INBOARD FAN COWL AND THRUST REVERSERS BEFORE YOU RETRACT THE LEADING EDGE FLAPS. THE CLEARANCE IS NOT SUFFICIENT FOR THE FLAPS TO RETRACT WITH THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(1) Make sure that the flaps and slats are in the retracted position.

(a) If the flaps and slats are not retracted, do this task: Leading Edge Flaps and Slats Retraction, TASK 27-81-00-860-804.

SUBTASK 27-88-11-740-003

(2) Do this task: FSEU Display and Existing Faults Test, TASK 27-51-00-740-801.

SUBTASK 27-88-11-860-042

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(3) Do this task: Hydraulic System A or B Pressurization, TASK 29-11-00-860-801.

SUBTASK 27-88-11-730-004

WARNING

MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION

MAKE SURE THE INBOARD FAN DUCT COWL AND THE INBOARD AND OUTBOARD THRUST REVERSERS ARE CLOSED OR REMOVED BEFORE YOU EXTEND THE LEADING EDGE FLAPS AND SLATS IN THIS TEST. THERE IS NOT SUFFICIENT CLEARANCE FOR THE FLAPS AND SLATS TO EXTEND IF THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS ARE IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(4) Do a test of the leading edge flap and slat proximity sensor:

(a) Push the ON/OFF button on the front panel of the FSEU to turn on the display.

NOTE: The display will show EXISTING FAULTS?.

(b) Push the down arrow until OTHER FUNCTNS? shows on the display.

(c) Push the YES button to select OTHER FUNCTNS? on the FSEU.

(d) Push the down arrow until I/O MONITOR? shows on the display.

(e) Push the YES button to select I/O MONITOR? from the menu.

(f) Push the YES button to select PROX SENSORS? from the I/O MONITOR? menu.

(g) Push the down arrow to step through the proximity sensor states at the LE flaps and slats UP position.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(h) Make sure that these displays and the proximity sensor states show on the FSEU (Table 501).

SUBTASK 27-88-11-860-016

(5) Remove electrical power from the system for the test.

(a) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-010-007

(6) Open this access door:

Number	Name/Location
117A	Electronic Equipment Access Door

SUBTASK 27-88-11-020-010

(7) Do this task to remove the FSEU: Flap/Slat Electronics Unit Removal, TASK 27-51-01-000-801.

(a) Keep the FSEU for installation.

(b) Install blanking caps on the removed FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-210-002

(8) Examine the ARINC connector pins for damage or corrosion.

(a) Repair if necessary.

SUBTASK 27-88-11-480-005

(9) Install the proximity sensor breakout box, SPL-14585, in the FSEU location.

(a) Remove the blanking caps from the rear connectors and install the blanking caps on the removed FSEU rear ARINC 629 bus connectors.

NOTE: No calibration or test is necessary for the proximity sensor BOB.

(b) If a fault is suspected in the FSEU, test each pin of the ARINC connector for continuity. and repair as necessary. Set the sensor selector switch to each sensor in its turn. And measure for continuity between the sensor inputs of the ARINC connector and the front panel connectors.

G. Measure the Proximity Sensor and Wiring Installation Resistance with the Flaps and Slats in the Retracted Position

SUBTASK 27-88-11-480-006

(1) Connect the LCR meter (Inductance, Capacitance, Resistance), COM-1741, leads to the RED and YELLOW jacks on the front of the proximity sensor breakout box, SPL-14585.

(a) A digital voltmeter, STD-6481, or digital/analog multimeter, COM-1793, may be used to measure the resistance.

SUBTASK 27-88-11-860-018

(2) Set the LCR meter (Inductance, Capacitance, Resistance), COM-1741, to measure series resistance (Rs) at 120 Hz.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-88-11-860-019

(3) Push the L/C/R button to change to resistance mode.

SUBTASK 27-88-11-860-020

(4) Push and hold the LCR meter (Inductance, Capacitance, Resistance), COM-1741, button for more than one second to change to series mode.

(a) SER is shown in the middle-right side of the LCR meter (Inductance, Capacitance, Resistance), COM-1741, display.

SUBTASK 27-88-11-760-006

(5) Measure the resistance for the targets with the flaps and slats in the retracted position (RED to YELLOW) and record in the log sheet for each sensor (Figure 504).

(a) The “DATA HOLD” button is used to "capture" your current measured result.

(b) To make a new measurement, the, "DATA HOLD" must be released, by pressing the button once, then the new measurement can be made.

(c) Record the resistance of sensors in the appropriate space on log sheet. Values to be recorded in hundredths (two numbers right of the decimal point), for example XX.XX or XXX.XX.

SUBTASK 27-88-11-200-002

(6) Compare the measured resistance values to Table 508.

SUBTASK 27-88-11-860-021

(7) Use the proximity sensor breakout box, SPL-14585, controls to set the next sensor. And again measure the resistance (RED to YELLOW) and record for each of the remaining sensors.

SUBTASK 27-88-11-480-007

(8) Connect the LCR meter (Inductance, Capacitance, Resistance), COM-1741, leads to the BLUE and YELLOW jacks on the front of the proximity sensor breakout box, SPL-14585.

(a) A digital voltmeter, STD-6481, or digital/analog multimeter, COM-1793, may be used to measure the resistance.

SUBTASK 27-88-11-760-007

(9) Measure the resistance for the targets with the flaps and slats in retracted position (BLUE to YELLOW) and record in the log sheet for each sensor (Figure 504).

(a) The “DATA HOLD” button is used to "capture" your current measured result.

(b) To make a new measurement, the, "DATA HOLD" must be released, by pressing the button once, then the new measurement can be made.

(c) Record the resistance of sensors in the appropriate space on log sheet. Values to be recorded in hundredths (two numbers right of the decimal point), for example XX.XX or XXX.XX.

SUBTASK 27-88-11-210-003

(10) Compare the measured resistance values to Table 508.

SUBTASK 27-88-11-860-032

(11) Use the proximity sensor breakout box, SPL-14585, controls to set the next sensor. And again measure the resistance (BLUE to YELLOW) and record for each of the remaining sensors.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

H. Measure the Inductance (RED to BLUE) for each Sensor Under Test with the Flaps and Slats in the Retracted Position

SUBTASK 27-88-11-420-007

(1) Connect the LCR meter (Inductance, Capacitance, Resistance), COM-1741, leads to the RED and BLUE jacks on the front of the proximity sensor breakout box, SPL-14585.

SUBTASK 27-88-11-760-004

(2) Supply power to the LCR meter (Inductance, Capacitance, Resistance), COM-1741.

SUBTASK 27-88-11-720-001

(3) Use Table 506 to set the BOB controls to the appropriate sensor for test.

Table 506/27-88-11-993-806 PROXIMITY SENSOR BREAKOUT BOX (BOB)

SENSOR EQUIP. NO.	PROX SENSOR BOB SETTING	P/N 380-026-02
	SW POSITION	FUNCTION
S1008	1	LE SLAT 8 OUTBD
S994	2	LE SLAT 1 OUTBD

S172	21	LE FLAP 3 RETRACT
S170	22	LE FLAP 2 RETRACT
S173	23	LE FLAP 3 EXTEND
S171	24	LE FLAP 2 EXTEND

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-88-11-860-017

(4) Set the LCR meter (Inductance, Capacitance, Resistance), COM-1741, to read series inductance (Ls) at 1 kHz.

SUBTASK 27-88-11-760-005

(5) Measure the inductance for the targets with the flaps and slats in the retracted position (RED to BLUE) and record in the log sheet for each sensor (Figure 504).

(a) The “DATA HOLD” button is used to "capture" your current measured result.

(b) To make a new measurement, the "DATA HOLD" must be released, by pressing the button once, then the new measurement can be made.

(c) Record the inductance of sensors in the appropriate space on log sheet. Values to be recorded in hundredths (two numbers right of the decimal point), for example XX.XX or XXX.XX.

(d) If you suspect a faulty sensor, use the applicable, Sensor Test Gauge Kit – Go-Gauge (proximity sensor test set, SPL-1690) to simulate a configuration change of the sensors current position to a target FAR or a target NEAR position.

SUBTASK 27-88-11-760-060

(6) Compare the measured inductance values to Table 507 only if you are using the GO-GAUGE.

Table 507/27-88-11-993-809 GO-GAUGES TABLE

BOEING SENSOR PART NUMBER	CRANE SENSOR PART NUMBER	TARGET NEAR INDUCTANCE (GO SIDE) (WITH GO-GAUGE)	TARGET FAR INDUCTANCE (NO GO SIDE) (WITH GO-GAUGE)	COIL RESISTANCE RED-YELLOW (TARGET FAR)	RESISTANCE BLUE-YELLOW (TARGET FAR)
10-61226-29	1-899-29	38.0 mH minimum	36.0-37.5 mH	27.0-39.0 Ω	344.5-351.5 Ω
10-61226-30	1-899-30	38.0 mH minimum	36.0-37.5 mH	27.0-33.0 Ω	344.5-351.5 Ω
10-61226-45	80-207-01	38.0 mH minimum	36.0-37.5 mH	27.0-33.0 Ω	344.5-351.5 Ω
10-61226-47	80-207-02	38.0 mH minimum	36.0-37.5 mH	27.0-33.0 Ω	344.5-351.5 Ω

SUBTASK 27-88-11-200-001

(7) Make sure that the inductance value for the sensor under test is within the range of Table 508.

Table 508/27-88-11-993-807 SENSOR'S NOMINAL VALUES

VALUE	SENSOR CONDITION
Three-wire Sensors	
35 mH*[1]	Target FAR
40 mH - 50 mH	Correctly rigged NEAR sensor
Greater than 50 mH	Target may be rigged too near to the sensor
Resistance on aircraft (Red-Yellow resistance plus Blue-Yellow resistance): ≤ 390 Ω	

*[1] There is no range (tolerance) for Target FAR. The nominal 35 mH value for Target FAR is left without tolerance because many operator’s fleet will behave differently based on a variety of conditions such as flight cycles, operating climate, age, etc.

SUBTASK 27-88-11-860-022

(8) Use the proximity sensor breakout box, SPL-14585, controls to set the next sensor. And again measure the inductance (RED to BLUE) and record for each of the remaining sensors.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

I. Measure the Inductance (RED to BLUE) for each Sensor Under Test with the Flaps and Slats in the Extended Position

SUBTASK 27-88-11-080-010

(1) Disconnect and remove the LCR meter (Inductance, Capacitance, Resistance), COM-1741, from the proximity sensor breakout box, SPL-14585.

SUBTASK 27-88-11-080-011

(2) Remove the proximity sensor breakout box, SPL-14585, from the FSEU location.

SUBTASK 27-88-11-410-009

(3) Do this task to install the Flap/Slat Electronics Unit (FSEU): Flap/Slat Electronics Unit Installation, TASK 27-51-01-400-801.

(a) Remove the blanking caps on the FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-860-057

(4) Restore electrical power.

(a) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES

A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-860-058

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT YOU CLOSE OR REMOVE THE INBOARD FAN COWL AND THRUST REVERSERS BEFORE YOU RETRACT THE LEADING EDGE FLAPS. THE CLEARANCE IS NOT SUFFICIENT FOR THE FLAPS TO RETRACT WITH THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(5) Move the flaps and slats to the extended position for the test.

(a) Do this task to extend the leading edge flaps: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

1) Move the flap control lever to detent position 1, 2, 5, 10, 15, and 25.

2) Stop for 2 seconds at each detent position.

SUBTASK 27-88-11-020-013

(6) Do this task to remove the FSEU: Flap/Slat Electronics Unit Removal, TASK 27-51-01-000-801.

(a) Keep the FSEU for installation.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

(b) Install blanking caps on the removed FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-860-059

(7) Remove electrical power from the system for the test.

(a) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-480-012

(8) Install the proximity sensor breakout box, SPL-14585, in the FSEU location.

SUBTASK 27-88-11-480-013

(9) Connect the LCR meter (Inductance, Capacitance, Resistance), COM-1741, leads to the RED and BLUE jacks on the front of the proximity sensor breakout box, SPL-14585.

SUBTASK 27-88-11-860-060

(10) Supply power to the LCR meter (Inductance, Capacitance, Resistance), COM-1741.

SUBTASK 27-88-11-860-061

(11) Use Table 506 to set the BOB controls to the appropriate sensor for test.

SUBTASK 27-88-11-860-062

(12) Set the LCR meter (Inductance, Capacitance, Resistance), COM-1741, to read series inductance (Ls) at 1 kHz.

SUBTASK 27-88-11-760-045

(13) Measure the inductance for the targets with the flaps and slats in the extended position (RED to BLUE) and record in the log sheet for each of the sensors (Figure 504).

(a) The “DATA HOLD” button is used to "capture" your current measured result.

(b) To make a new measurement, the, "DATA HOLD" must be released, by pressing the button once, then the new measurement can be made.

(c) Record the inductance of sensors in the appropriate space on log sheet. Values to be recorded in hundredths (two numbers right of the decimal point), for example XX.XX or XXX.XX.

(d) If you suspect a faulty sensor, use the applicable, Sensor Test Gauge Kit – Go-Gauge (proximity sensor test set, SPL-1690) to simulate a configuration change of the sensors current position to a target FAR or a target NEAR position.

SUBTASK 27-88-11-760-046

(14) Compare the measured inductance value to the range in Table 508 if using the Go-Gauge.

SUBTASK 27-88-11-860-063

(15) Make sure that the inductance value for the sensor under test is within the range of Table 508.

SUBTASK 27-88-11-860-064

(16) Use the proximity sensor breakout box, SPL-14585, controls to set the next sensor.

(a) Again measure the inductance (RED to BLUE) and record for each of the remaining sensors.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

J. Measure the Inductance (RED to BLUE) for each Sensor Under Test with the Flaps and Slats in the Full Extended Position

SUBTASK 27-88-11-080-005

(1) Disconnect and remove the LCR meter (Inductance, Capacitance, Resistance), COM-1741, from the proximity sensor breakout box, SPL-14585.

SUBTASK 27-88-11-080-006

(2) Remove the proximity sensor breakout box, SPL-14585, from the FSEU location.

SUBTASK 27-88-11-410-005

(3) Do this task to install the FSEU: Flap/Slat Electronics Unit Installation, TASK 27-51-01-400-801.

(a) Remove the blanking caps on the FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-860-033

(4) Restore electrical power.

(a) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-860-034

WARNING MAKE SURE PERSONS AND EQUIPMENT ARE CLEAR OF THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES. THE LEADING EDGE AND TRAILING EDGE CONTROL SURFACES CAN EXTEND AND RETRACT QUICKLY. THIS CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

CAUTION MAKE SURE THAT YOU CLOSE OR REMOVE THE INBOARD FAN COWL AND THRUST REVERSERS BEFORE YOU RETRACT THE LEADING EDGE FLAPS. THE CLEARANCE IS NOT SUFFICIENT FOR THE FLAPS TO RETRACT WITH THE INBOARD FAN DUCT COWL AND THE THRUST REVERSERS IN THE OPEN POSITION. THIS CAN CAUSE DAMAGE TO EQUIPMENT.

(5) Move the flaps and slats to the full extended position for the test.

(a) Do this task to extend the leading edge flaps: Leading Edge Flaps and Slats Extension, TASK 27-81-00-860-803.

1) Stop for 2 seconds at each detent position until detent position 30.

SUBTASK 27-88-11-020-011

(6) Do this task to remove the FSEU: Flap/Slat Electronics Unit Removal, TASK 27-51-01-000-801.

(a) Keep the FSEU for installation.

(b) Install blanking caps on the removed FSEU rear ARINC 629 bus connectors.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

SUBTASK 27-88-11-860-035

(7) Remove electrical power from the system for the test.

(a) Open these circuit breakers and install safety tags:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-480-008

(8) Install the proximity sensor breakout box, SPL-14585, in the FSEU location.

SUBTASK 27-88-11-480-009

(9) Connect the LCR meter (Inductance, Capacitance, Resistance), COM-1741, leads to the RED and BLUE jacks on the front of the proximity sensor breakout box, SPL-14585.

SUBTASK 27-88-11-860-036

(10) Supply power to the LCR meter (Inductance, Capacitance, Resistance), COM-1741.

SUBTASK 27-88-11-860-037

(11) Use Table 506 to set the BOB controls to the appropriate sensor for test.

SUBTASK 27-88-11-860-038

(12) Set the LCR meter (Inductance, Capacitance, Resistance), COM-1741, to read series inductance (Ls) at 1 kHz.

SUBTASK 27-88-11-760-008

(13) Measure the inductance for the targets with the flaps and slats in the full extended position (RED to BLUE) and record in the log sheet for each of the sensors (Figure 504).

(a) The “DATA HOLD” button is used to "capture" your current measured result.

(b) To make a new measurement, the, "DATA HOLD" must be released, by pressing the button once, then the new measurement can be made.

(c) Record the inductance of sensors in the appropriate space on log sheet. Values to be recorded in hundredths (two numbers right of the decimal point), for example XX.XX or XXX.XX.

(d) If you suspect a faulty sensor, use the applicable, Sensor Test Gauge Kit – Go-Gauge (proximity sensor test set, SPL-1690) to simulate a configuration change of the sensors current position to a target FAR or a target NEAR position.

SUBTASK 27-88-11-760-047

(14) Compare the measured inductance value to the range in Table 508 if using the Go-Gauge.

SUBTASK 27-88-11-200-003

(15) Make sure that the inductance value for the sensor under test is within the range of Table 508.

SUBTASK 27-88-11-860-039

(16) Use the proximity sensor breakout box, SPL-14585, controls to set the next sensor.

(a) Again measure the inductance (RED to BLUE) and record for each of the remaining sensors.

ECCN 9E991 BOEING PROPRIETARY - See title page for details

K. Put the Airplane Back to Its Usual Condition

SUBTASK 27-88-11-080-007

(1) Disconnect and remove the LCR meter (Inductance, Capacitance, Resistance), COM-1741, from the proximity sensor breakout box, SPL-14585.

SUBTASK 27-88-11-860-024

(2) Remove the proximity sensor breakout box, SPL-14585, from the FSEU location.

SUBTASK 27-88-11-860-027

(3) Remove the blanking caps on the FSEU rear ARINC 629 bus connectors.

SUBTASK 27-88-11-400-002

(4) Do this task to install the FSEU: Flap/Slat Electronics Unit Installation, TASK 27-51-01-400-801.

SUBTASK 27-88-11-860-026

(5) Restore electrical power.

(a) Remove the safety tags and close these circuit breakers:

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	6	C00566	FLIGHT CONTROL FLAP LOAD RELIEF
A	7	C00210	FLIGHT CONTROL FLAP SHUTOFF VALVES
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2
A	11	C01443	FC TE FLAP POS/SKEW SNSR & IND RIGHT
A	12	C00213	FC TE FLAP POS/SKEW SNSR & IND LEFT

SUBTASK 27-88-11-720-002

(6) Do this task: Leading Edge Flap and Slat Proximity Sensor Test, TASK 27-88-11-700-801.

SUBTASK 27-88-11-410-011

(7) Close this access door:

Number	Name/Location

P5-12 OVERHEAD LEADING EDGE DEVICE ANNUNCIATOR PANEL - REMOVAL/INSTALLATION

1. General

A. This procedure has these tasks:

(1) Removal of the P5-12 Overhead Leading Edge Device Annunciator Panel.

(2) Installation of the P5-12 Overhead Leading Edge Device Annunciator Panel.

TASK 27-88-21-000-801

2. P5-12 Overhead Leading Edge Device Annunciator Panel Removal

(Figure 401)

A. General

(1) This task includes the steps to remove the P5-12 Annunciator Panel.

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. Prepare for the Removal

SUBTASK 27-88-21-860-001

(1) Open these circuit breakers and install safety tags:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	7	C01208	STALL WARN ASYM MODE

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
A	8	C00211	FLIGHT CONTROL FSEU DC 1
A	9	C01468	FLIGHT CONTROL FSEU DC 2

D. P5-12 Annunciator Panel Removal

SUBTASK 27-88-21-020-001

(1) Do these steps to remove the P5-12 annunciator panel [1]:

(a) Release the fasteners [2] on the front of the P5-12 annunciator panel [1].

CAUTION

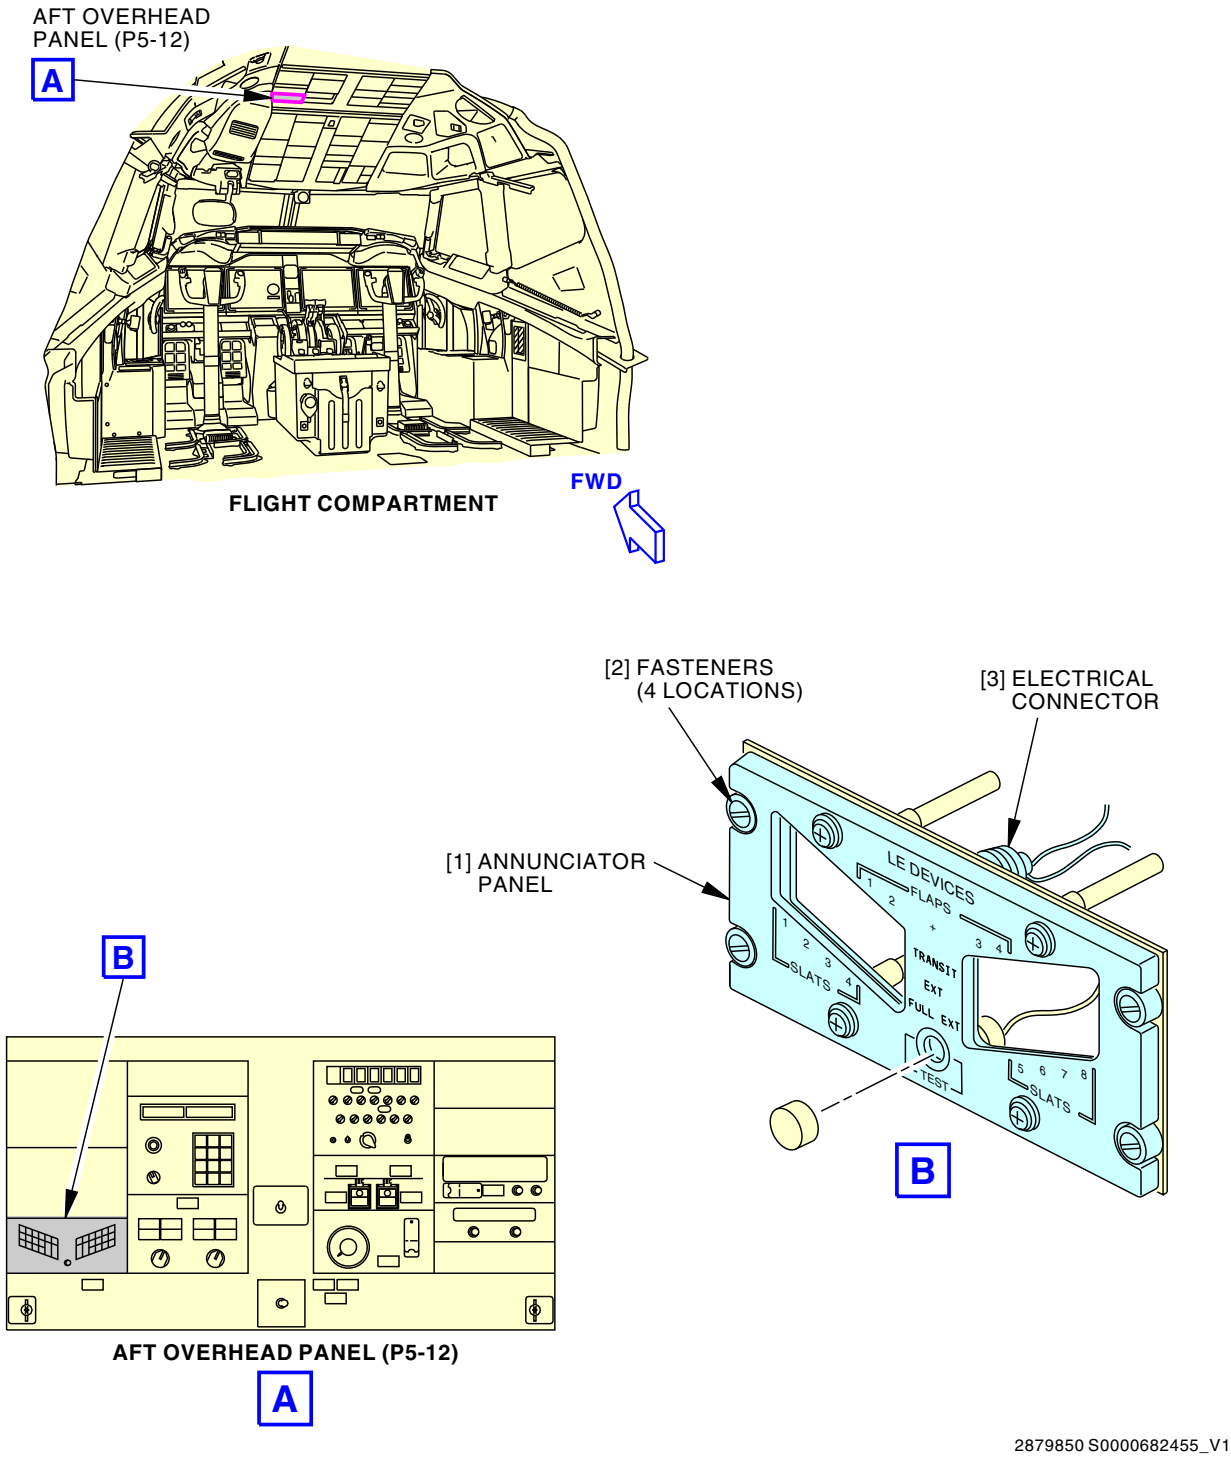
DO NOT APPLY TOO MUCH FORCE. TOO MUCH FORCE WILL CAUSE DAMAGE TO EQUIPMENT.

(b) Carefully lower the P5-12 annunciator panel [1] until you can get to the electrical connector [3].

(c) Disconnect the electrical connector [3] from the rear of the panel.

END OF TASK

ECCN 9E991 BOEING PROPRIETARY - See title page for details



2879850 S0000682455_V1

Leading Edge Device Annunciator Panel Installation

TASK 27-88-21-400-801

3. P5-12 Overhead Leading Edge Device Annunciator Panel Installation

Figure 401

A. General

(1) This task includes the steps to install the P5-12 Annunciator Panel.

B. Location Zones

Zone	Area
211	Flight Compartment - Left
212	Flight Compartment - Right

C. P5-12 Annunciator Panel Installation

SUBTASK 27-88-21-420-001

(1) Do these steps to Install the P5-12 annunciator panel [1]:

(a) Connect the electrical connector [3] to the rear of the P5-12 annunciator panel [1].

CAUTION

DO NOT APPLY TOO MUCH FORCE. TOO MUCH FORCE WILL CAUSE DAMAGE TO EQUIPMENT.

(b) Carefully install the P5-12 annunciator panel [1] into the pilot's P5 Overhead Panel.

(c) Lock the fasteners [2] on the front of the P5-12 annunciator panel [1].

D. P5-12 Annunciator Panel Installation Test

SUBTASK 27-88-21-860-002

(1) Remove the safety tags and close these circuit breakers:

CAPT Electrical System Panel, P18-2

Row	Col	Number	Name
E	7	C01208	STALL WARN ASYM MODE

F/O Electrical System Panel, P6-2

Row	Col	Number	Name
