777-200/300 FAULT ISOLATION MANUAL

ASSUMED CONDITIONS AT START OF TASK

- External electrical power is ON
- Hydraulic power and pneumatic power are OFF
- Engines are shut down
- No equipment in the system is deactivated

INITIAL EVALUATION PARAGRAPH

- The Initial Evaluation paragraph at the start of the task helps you determine whether you can detect the fault right now.
- If you cannot detect the fault right now, then the task cannot isolate the fault and the Initial Evaluation paragraph will say that there was an intermittent fault.
- If you have an intermittent fault, you must use your judgement (and follow your airline's policy) to decide which components to replace. Then monitor the airplane to see if the fault happens again on subsequent flights.

FAULT ISOLATION STEPS

- The FIM task steps are presented in a specified order. "The If... then" statements will guide you along a logical path. But if you do not plan to follow the FIM task exactly, make sure that you read it before you start to isolate the fault. Some FIM procedures start with important steps that have an effect on the other steps in the procedure.
- When you are at the endpoint of the path, the step says "You corrected the fault." Complete the step and exit the procedure.
- The Recommended Maintenance Action that shows on the MAT for the maintenance message gives a list of possible causes in order by probability of failure. In the FIM procedure, the possible causes can be in a different order from the MAT.

WIRING CHECKS

When a step says "Do a wiring check", do these three types of electrical checks for the specified contacts (pins):

- continuity from contact to contact
- shorts between the contacts
- shorts from each contact to ground

777-200/300 FAULT ISOLATION MANUAL

801. ACE-L1 Flaps Retracted Discrete Disagree (FSEU-1) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13032.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
- (a) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the discrete wiring:
- (a) Open these circuit breakers and install safety tags on the left power supply assembly (PSA-L), M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2
K	5	C27607	SLATS PRI DR CTRL 2
K	8	C27630	SLATS ELEC CTRL RLY PWR
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

777-200/300 FAULT ISOLATION MANUAL

(Continued)

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1
G	12	C27606	SLATS PRI DR CTRL 1

- (c) Remove the left-1 actuator control electronics (ACE-L1), M27121, from the E1-5 shelf.
- (d) Remove the flap/slat electronics unit 1 (FSEU 1), M27001, from the E1-6 shelf.
- (e) Do a wiring check between these pins of connector DM27121AB for the ACE-L1 and connector DM27001AA for FSEU 1 (WDM 27-02-61):

DM27121AB	DM27001AA
pin G5	pin G6

- (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the FSEU 1, M27001.
 - 3) Re-install the ACE-L1, M27121.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- 6) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - c) If the maintenance message shows on the ground test display, then continue.
- (g) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the FSEU 1, M27001. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

802. ACE-L1 Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15009.

B. Initial Evaluation

- (1) Close this circuit breaker on the left Power Supply Assembly (PSA-L), M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR

- (2) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.

EFFECTIVITY

D633W103-ARO

Page 203
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (3) If the MAT shows ACTIVE for the maintenance message on the ground test display, then do the Fault Isolation Procedure below.
- (4) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitor.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the left power supply assembly (PSA-L), M24101.

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-L	PFC BAT INTLK

- (b) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
P	26	C24673	L PSA TRU PWR

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	4	C24675	L PSA BAT PWR

- (c) Remove the left-1 actuator control electronics (ACE-L1), M27121, from the E1-5 shelf. To remove it, do this task: (Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801).
 - (d) Remove the PSA-L, M24101, from the E1-6 shelf. To remove it, do this task: (Power Supply Assembly Removal, AMM TASK 24-35-01-000-801).
 - (e) Do a wiring check between these pins of connector DM27121AB for the ACE-L1 and connector DM24101AD at the PSA-L (WDM 27-02-31):

DM27121AB	DM24101AD
pin A1	pin 5

- (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the PSA-L, M24101. To install it, do this task: (Power Supply Assembly Installation, AMM TASK 24-35-01-400-801).
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: (Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803).

- Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitor.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

803. PFC-L Lane 1 Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15000.

B. Initial Evaluation

- (1) Close this circuit breaker on the left Power Supply Assembly (PSA-L), M24101:
- (a) D2, PFC LANE 1
- (2) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (3) If the MAT shows ACTIVE for the maintenance message on the ground test display, then do the Fault Isolation Procedure below.
- (4) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
- (a) 27-Primary Flight Controls, System Test, Primary Flight Computer (L) Lane Reset.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
- (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the left power supply assembly (PSA-L), M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-L	PFC LANE 1
D	4	CBD4-L	PFC LANE 2
D	6	CBD6-L	PFC LANE 3
D	8	CBD8-L	PFC BAT INTLK

- (b) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
P	26	C24673	L PSA TRU PWR

Standby Power Management Panel, P310

805. ACE-L1 No Output On Flt Ctrl 629 Bus-L - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-13046, 27-18814.

B. Initial Evaluation

- (1) Do this ground test on the MAT:
- 27-Primary Flight Controls, System Test, Transmitter Reset.
 - If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27121. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
- 27-Primary Flight Controls, System Test, Transmitter Reset.
 - If the maintenance message does not show on the MAT, then you corrected the fault.
 - If the maintenance message shows on the MAT, then continue.
- (3) Replace the ARINC 629 coupler, B27111, in the P112 panel. These are the tasks:

END OF TASK

806. PFC Configuration Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14024.

B. Fault Isolation Procedure

- (1) Do a check of the system configuration for this system on the MAT:

- (a) 27-Primary Flight Controls.

NOTE: This maintenance message can occur if the software configuration for all three PFCs are not the same. Ignore this maintenance message if you are in the process of the software installation. If you install a software that is different than the one installed in the other PFCs, do not confirm the software configuration until you install all the PFCs with the same software.

- (b) Find these items on the display and make sure that the software and hardware part numbers are correct:

- 1) Left Primary Flight Computer
 - 2) Center Primary Flight Computer
 - 3) Right Primary Flight Computer

- (c) If a software part number is incorrect, then install software in the applicable primary flight computer (PFC). To install it, do this task: (Primary Flight Computer Software Installation, AMM TASK 27-02-01-400-803).

NOTE: Before you install the software in one PFC, you must remove electrical power to all three PFCs by opening all three PFC circuit breakers on the Power Supply Assemblies (PSA) then closing the circuit breaker for the single PFC that you will load the software.

- (d) If a hardware part number is incorrect, then replace the applicable PFC. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

- (e) If you do not find a problem with the system configuration, then continue.

- (2) Do this check of the program pin wiring for the, PFC-L:

- 4) If the MAT shows NOT ACTIVE FOR the maintenance message (or if the message does not show), you corrected the fault.

———— **END OF TASK** ————

807. ACE-L1 Inoperative - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13008.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) Do this ground test on the MAT:
- (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - (b) If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the left-1 actuator control electronics (ACE-L1), M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 3) If the maintenance message shows on the MAT, then continue.
- (2) Do this check for 28 VDC at the ACE-L1:
- (a) Remove the ACE-L1, M27121, from the E1-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Remove the DO-NOT-CLOSE tag and close this circuit breaker on the left power supply assembly (PSA-L), M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR

- (c) Do a check for 28 VDC from pin A1 to pin A2 of connector DM27121AB (for the ACE-L1) at the E1-5 shelf (WDM 27-02-31).
- (d) If there is not 28 VDC at pin A1 of connector DM27121AB, then do these steps:
 - 1) Remove the PSA-L, M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27121AB (for the ACE-L1) and connector DM24101AD (for the PSA-L) (WDM 27-02-31):

DM27121AB	DM24101AD
pin A1	pin 5

EFFECTIVITY
ARO ALL

27-02 TASKS 806-807

777-200/300 FAULT ISOLATION MANUAL

- 3) Do a continuity check between pin A2 of connector DM27121AB (for the ACE-L1) and structure ground (WDM 27-02-31):
 - 4) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - d) Do this ground test on the MAT:
 - e) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - f) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 5) If you do not find a problem with the wiring, then continue.
 - 6) Install a new PSA-L, M24101, at E1-6 shelf. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
 - 7) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - b) If the maintenance message does not show on the MAT, then you corrected the fault.
- (e) If there is 28 VDC at pin A1 of connector DM27121AB, then continue.
- (3) Do this check of the wiring:
- (a) Make sure the program pins of connector DM27121AB (for the ACE-L1) agree with the wiring diagram (WDM 27-02-36).
 - (b) If program pins do not agree with the wiring diagram, then do these steps:
 - 1) Change the wiring to agree with the wiring diagram.
 - 2) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 3) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - b) If the maintenance message does not show on the MAT, then you corrected the fault.

- 27-13001
- 27-13002
- 27-13003.

(a) If all the messages given in the list above are displayed, then do these steps:

- 1) Do this ground test on the MAT: 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics (L1) Replacement.
 - a) If maintenance message 27-13000 does not reset, replace the left 1 actuator control electronics (ACE-L1), M27121.
- 2) Do this ground test on the MAT: 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics (L2) Replacement.
 - a) If maintenance message 27-13001 does not reset, replace the left 2 actuator control electronics (ACE-L2), M27122.
- 3) Do this ground test on the MAT: 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics (C) Replacement.
 - a) If maintenance message 27-13002 does not reset, replace the center actuator control electronics (ACE-C), M27321.
- 4) Do this ground test on the MAT: 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics (R) Replacement.
 - a) If maintenance message 27-13003 does not reset, replace the right actuator control electronics (ACE-R), M27221.

(b) If all the messages given in the list above are not displayed, then do the fault isolation steps below.

C. Fault Isolation Procedure

- (1) Exchange the ACE-C, M27321 with ACE-L1, M27121. Do this task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Exchange the center power supply assembly (PSA-C), M24301 and the right PSA-R, M24201. Do these tasks:
 - To remove the center PSA-C and the right PSA-R: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - To install the center PSA-C into the right PSA-R position and install the right PSA-R into the center position: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- (3) Dispatch the airplane and track for any of the following faults happen:
 - (a) If the fault moves to the ACE-L1 position, do these tasks to replace the center ACE-C:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (b) If the fault moves to the PSA-R position, do these tasks to replace the PSA-C:
 - Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
 - (c) If the fault stays in the ACE-C position, do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Actuator Confidence.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

- (a) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the ACE-R. Do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (b) Do this task: Actuator Control Electronics (ACE) Monitor Test, AMM TASK 27-02-02-400-801
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

810. Selected Ground Test Failed Because of Operator Response - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-16000, 27-16002.

B. This task is for maintenance message: 27-16002.

C. Initial Evaluation

NOTE: This message can only occur when you do a ground test on the MAT. It occurred because of a selection you made on the MAT during the ground test. Usually this message occurs because you chose to exit the test before it finished. In some cases the message occurs because you did not perform the required action or a condition exists that prevents the results of your action.

D. Fault Isolation Procedure

NOTE: Usually no repairs are necessary for this maintenance message. This maintenance message erases automatically when you exit the ground test. If you want to make sure there are no problems, you can do the ground test again, but make sure you complete all of the steps of the ground test. If the test still does not pass, check for other maintenance messages related to the test you performed. Other related tests may have to be done to isolate the problem.

————— END OF TASK —————

811. Selected Ground Test Does Not Have Sufficient Resources - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16003.

B. Initial Evaluation

NOTE: This maintenance message occurs when you do a test on the MAT and there are not a sufficient number of primary flight computers (PFC) for the test to operate correctly. A different number of PFCs is necessary for different tests on the MAT.

27-02 TASK 811

D633W103-ARO

Page 222
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (2) Find the maintenance messages related to the PFCs.
- (3) Go to the 27 MAINT MSG INDEX in the FIM and find the maintenance messages.
- (4) Go to the task in the FIM and do the steps in the task.

NOTE: You may not need to correct all of the problems with the PFCs to make the test on the MAT operate correctly. First, correct the problems that are related to the center PFC and NOT related to "lane" failures. If the test continues to give this maintenance message, then correct the problems with the PFC lanes.

————— **END OF TASK** —————

812. **Primary Flight Computer (Left) Lane 1 Problems - Fault Isolation**

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURRED BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLERS EVEN AFTER THE PFC HAS BEEN REPLACED.

NOTE: Avoid swapping PFCs if any of them contains a lane fault. The state machine inside the PFC that keeps track of lane faults can get confused and generate more lane faults or get into an unrecoverable state.

NOTE: If an intermittent lane fault continues to occur, the PFC will allow the lane fault to be cleared up to 10 times before it becomes permanently latched. This allows the operator 10 attempts to narrow down the cause of the lane fault. Once a lane fault is permanently latched, the PFC must be removed and sent to a repair shop to have the fault cleared. The following procedure is written to help the operator narrow down the cause of the lane fault and avoid getting to the point where the fault is permanently latched.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14000.

B. Description

- (1) The Left Primary Flight Computer (PFC-L) Lane 1 has an internal or interface fault.

C. Possible Causes

- (1) Primary Flight Computer (Left), M27106
- (2) Flight Controls ARINC 629 (L) Coupler in P112 (PFC-L), B27011
- (3) Flight Controls ARINC 629 (R) Coupler in P212 (PFC-L), B27012
- (4) Flight Controls ARINC 629 (C) Coupler in P312 (PFC-L), B27013
- (5) Wiring

777-200/300 FAULT ISOLATION MANUAL

E. Initial Evaluation

- (1) If the Maintenance Access Terminal (MAT) shows ACTIVE or LATCHED for the maintenance message, then do this Ground Test on the MAT: Primary Flight Computer (L) Lane Reset, AMM TASK 27-02-01-740-801

NOTE: If the PFC Lane Reset was not successful, do the lane reset a second time.

- (a) If the second PFC Lane Reset was successful, swap the Left Primary Flight Computer (PFC-L), M27106 with the Right Primary Flight Computer (PFC-R), M27206. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- 1) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.
 - a) If the maintenance message “27-14012 Primary Flight Computer (Right) lane 1 has an internal or interface fault” now shows, replace the Primary Flight Computer that was originally installed in the PFC-L, M27106 position (now in the PFC-R position). These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
 - b) If the maintenance message “27-14000 Primary Flight Computer (Left) lane 1 has an internal or interface fault” still shows, do the Fault Isolation Procedure below.
- (b) If the second PFC Lane Reset was not successful, the fault is latched and cannot be cleared on the airplane, replace the Left Primary Flight Computer (PFC-L), M27106. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

F. Fault Isolation Procedure

- (1) Swap the ARINC Couplers that follow (WDM 27-02-41, WDM 27-02-43 and WDM 27-02-45):
 - Coupler B27011 (L FC BUS T/R) PFC-L LANE 1 with
 - Coupler B27073 (C FC BUS T/R) PFC-C LANE 1
 - Coupler B27012 (R FC BUS RCV) PFC-L LANE 1 with
 - Coupler B27082 (R FC BUS RCV) PFC-C LANE 2
 - Coupler B27013 (C FC BUS RCV) PFC-L LANE 1 with
 - Coupler B27091 (L FC BUS RCV) PFC-C LANE 3
 - (2) These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801
- NOTE:** Swapping couplers can induce lane faults in the PFCs which would also need to be cleared by running the associated Primary Flight Computer (L, R, or C) Lane Reset Tests, AMM TASK 27-02-01-740-801.
- (a) Do the Repair Confirmation at the end of this task.
 - (3) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.

EFFECTIVITY
ARO ALL

27-02 TASK 812

D633W103-ARO

Page 224
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) If the problem follows the coupler as shown in the table below, replace the applicable coupler. These are the tasks:

- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
- ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

DB Coupler - Original Position	DB Coupler - Swapped Position	Original Maintenance Message	New Maintenance Message after swap	Replace Defective Coupler (Currently in Swapped Position)
P112 (PFC-L), B27011	P312 (PFC-C), B27073	27-14000	27-14006	P312 (PFC-C), B27073
P212 (PFC-L), B27012	P212 (PFC-C), B27082	27-14000	27-14007	P212 (PFC-C), B27082
P312 (PFC-L), B27013	P112 (PFC-C), B27091	27-14000	27-14008	P112 (PFC-C), B27091

- (b) If the maintenance message "27-14000 Primary Flight Computer (Left) lane 1 has an internal or interface fault" still shows in the PFC-L position, then continue.

- (4) Do these PFC-L to the 629 Coupler wire checks:

NOTE: Since it is not possible to determine which Stub Cable has the problem, it is recommended to examine ALL THREE Stub Cable Assemblies at the same time.

- (a) Open these circuit breakers on the PSA-L, M24101:

Power Supply Assembly Left, M24101

Row	Col	Number	Name

- (e) Examine the shelf connector pins for damage, fit and security.
- (f) Examine the coupler connector pins for damage, fit and security.
- (g) Do continuity checks and pin to shield insulation checks.
- (h) If you find a problem with the wiring, disconnect the stub cable at the shelf station and repeat the wiring check for each section to the stub cables to isolate which stub cable section is defective.
- (i) Repair or replace the defective stub cable(s) as necessary (SWPM 20-11-11).
- (j) Re-connect the coupler connectors DB27011, DB27012 and DB27013 to the 629 Couplers B27011, B27012 and B27013.
- (k) Install the couplers that you removed above. This is the task: ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.
- (l) Re-install the PFC-L, M27106. This is the task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
- (m) Close these circuit breakers on the PSA-L, M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-L	PFC LANE 1
D	4	CBD4-L	PFC LANE 2
D	6	CBD6-L	PFC LANE 3
D	8	CBD8-L	PFC BAT INTLK

- (n) Do the Repair Confirmation that follows.

G. Repair Confirmation

- (1) Do this Ground Test on the MAT: Primary Flight Computer (L) Lane Reset, AMM TASK 27-02-01-740-801
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

Page 226
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— **END OF TASK** —————

813. Primary Flight Computer (Left) is Inoperative - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14018.

B. Initial Evaluation

- (1) Open all of these circuit breakers. After they are all open, then close them.

NOTE: This message can be caused when the PFCs get power as the engines are started.
Cycling these circuit breakers will correct this problem.

- (a) On the left power supply assembly (PSA-L), in the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-L	PFC LANE 1
D	4	CBD4-L	PFC LANE 2
D	6	CBD6-L	PFC LANE 3
D	8	CBD8-L	PFC BAT INTLK

- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.

- (3) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:

- (a) 27-Primary Flight Controls, System Test, Transmitter Reset.

NOTE: After 4.0 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display on the MAT.

- (b) Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
- (c) Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
- (d) If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
- (e) If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the left primary flight computer (PFC-L), M27106. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
-

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
- 2) Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
- 3) Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.

777-200/300 FAULT ISOLATION MANUAL

- 4) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 5) If the maintenance message shows on the MAT, then continue.
- (2) Do this check of the power and ground wiring for the, PFC-L:
- (a) Open these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-L	PFC LANE 1
D	4	CBD4-L	PFC LANE 2
D	6	CBD6-L	PFC LANE 3
D	8	CBD8-L	PFC BAT INTLK

- (b) Remove the, PFC-L, M27106. To remove it, do this task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
- (c) Close these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-L	PFC LANE 1
D	4	CBD4-L	PFC LANE 2
D	6	CBD6-L	PFC LANE 3

- (d) Do a check for 28 VDC between these pins of connector DM27106AB, the connector for the, PFC-L (WDM 27-02-31).
 - 1) Pin B2 (+) and pin E2 (-)
 - 2) Pin B5 (+) and pin E5 (-)
 - 3) Pin B8 (+) and pin E8 (-).
- (e) If there is not 28 VDC between the specified pins of connector DM27106AB, then do these steps:
 - 1) Replace the PSA-L, M24101. These are the tasks:
 - Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
 - 2) Do a check for 28 VDC between these sets of pins again.
 - a) Pin B2 (+) and pin E2 (-)
 - b) Pin B5 (+) and pin E5 (-)
 - c) Pin B8 (+) and pin E8 (-).
 - 3) If there is not 28 VDC between these sets of pins, then do this step:
 - a) Repair the wiring between these pins of connector DM27106AB, the connector for the, PFC-L and connector DM24101AD, the connector for the PSA-L (WDM 27-02-31).

- 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - b) Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
 - c) Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
 - d) If the maintenance message does not show on the MAT, then you corrected the fault.
- (d) If you do not find a problem with the wiring, then continue.
- (4) Re-install the, PFC-L, M27106. To install it, do this task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
- (5) Replace the ARINC 629 coupler, DB27011, in the P112 panel.
NOTE: This coupler connects lane 1 of the, PFC-L to the Flt Ctrl 629 Bus-L.
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
 - 3) Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
 - 4) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 5) If the maintenance message shows on the MAT, then continue.
- (6) Replace the ARINC 629 coupler, DB27021, in the P112 panel. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801
NOTE: This coupler connects lane 2 of the, PFC-L to the Flt Ctrl 629 Bus-L.
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Transmitter Reset.

777-200/300 FAULT ISOLATION MANUAL

- 2) Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
 - 3) Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
 - 4) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 5) If the maintenance message shows on the MAT, then continue.
- (7) Replace the ARINC 629 coupler, DB27031, in the P112 panel. These are the tasks:
- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This coupler connects lane 3 of the, PFC-L to the Flt Ctrl 629 Bus-L.

- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
 - 3) Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
 - 4) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 5) If the maintenance message shows on the MAT, then continue.
- (8) Do this check of the wiring from the, PFC-L to the 629 couplers:
- (a) Open these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-L	PFC LANE 1
D	4	CBD4-L	PFC LANE 2
D	6	CBD6-L	PFC LANE 3
D	8	CBD8-L	PFC BAT INTLK

- (b) Remove the, PFC-L, M27106. To remove it, do this task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
- (c) Disconnect connector DB27011 from the 629 coupler, B27011.
- (d) Disconnect connector DB27021 from the 629 coupler, B27021.
- (e) Disconnect connector DB27031 from the 629 coupler, B27031.
- (f) Do a wiring check between these pins of connector DM27106AB for the, PFC-L and connectors DB27011, DB27021, and DB27031 for the 629 couplers (WDM 27-02-41):

777-200/300 FAULT ISOLATION MANUAL

- (b) Replace the L WING switch, S4, on the flight control hydraulic valve power panel, M27035 (WDM 27-02-51).
- (c) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	22	C27618	L FC SOV WG

- (d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (e) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - 1) 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence
 - 2) 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence
 - 3) 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 4) If the maintenance message does not show on the ground test displays, you corrected the fault.
 - 5) If the maintenance message shows on one of the ground test displays, then continue.
- (2) Do this check of the wiring:
 - (a) Disconnect connector DM27035A from the flight control hydraulic valve power panel, M27035.
 - (b) Disconnect connector DV27100 from the left wing hydraulic shutoff valves, V27100.
 - (c) Do a wiring check between these pins of connector DM27035A at the overhead panel, P61, and connector DV27100 at the left wing hydraulic shutoff valve, V27100 (WDM 27-02-51):

DM27035A	DV27100
pin 4	pin 2
pin 12	pin 3

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27035A.
 - 3) Re-connect connector DV27100.
 - 4) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - 5) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - a) 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence
 - b) 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence
 - c) 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - d) If the maintenance message does not show on the ground test displays, you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (f) Re-connect connector DM27035A.

27-02 TASK 815

D633W103-ARO

Page 236
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (3) Replace the left wing hydraulic shutoff valve, V27100. These are the tasks:
- Hydraulic Shutoff Valve Removal, AMM TASK 27-02-32-000-801
 - Hydraulic Shutoff Valve Installation, AMM TASK 27-02-32-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
- 1) 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence
 - 2) 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence
 - 3) 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
- (c) If the maintenance message does not show on the ground test displays, you corrected the fault.

————— END OF TASK —————

816. Tail Flight Control Shutoff Valve in Left Hydraulic System Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17022.

B. Initial Evaluation

- (1) Set the L TAIL switch, S1, on the flight control hydraulic valve power panel, M27035, to the NORM position.

NOTE: This fault can occur when the L TAIL switch is in the SHUTOFF position.

- (a) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
- 1) 27-Primary Flight Controls, System Test, Stabilizer System
 - 2) 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence
 - 3) 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence
 - 4) 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 5) If the maintenance message shows on one of the ground test displays, then do the Fault Isolation Procedure below.
 - 6) If the maintenance message does not show on the ground test displays, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do these steps to replace the L TAIL switch:
- (a) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	20	C27621	L FC SOV TAIL

- (b) Replace the L TAIL switch, S1 on the flight control hydraulic valve power panel, M27035 (WDM 27-02-51).

- (c) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	20	C27621	L FC SOV TAIL

- (d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (e) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
- 1) 27-Primary Flight Controls, System Test, Stabilizer System
 - 2) 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence
 - 3) 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence
 - 4) 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 5) If the maintenance message does not shows on the ground test displays, you corrected the fault.
 - 6) If the maintenance message shows on one of the ground test display, then continue.
- (2) Do this check of the wiring:
- (a) Disconnect connector DM27035A from the flight control hydraulic valve power panel, M27035.
- (b) Disconnect connector DV27101 from the left tail hydraulic shutoff valves, V27101.
- (c) Do a wiring check between these pins of connector DM27035A at the overhead panel, P61, and connector DV27101 at the left tail hydraulic shutoff valve, V27101 (WDM 27-02-51):

DM27035A	DV27101
pin 15	pin 2
pin 16	pin 3

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27035A.
 - 3) Re-connect connector DV27101.
 - 4) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - 5) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - a) 27-Primary Flight Controls, System Test, Stabilizer System
 - b) 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence
 - c) 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence
 - d) 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 6) If the maintenance message does not shows on the ground test displays, you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (f) Re-connect connector DM27035A.

Page 238
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (3) Replace the left tail hydraulic shutoff valve, V27101. These are the tasks:
 - Hydraulic Shutoff Valve Removal, AMM TASK 27-02-32-000-801
 - Hydraulic Shutoff Valve Installation, AMM TASK 27-02-32-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - 1) 27-Primary Flight Controls, System Test, Stabilizer System
 - 2) 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence
 - 3) 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence
 - 4) 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 5) If the maintenance message does not shows on the ground test displays, you corrected the fault.

————— END OF TASK —————

817. Multiple Transducers (Group B Fault L1) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13016.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
 - (a) Monitor the following indications on the flight controls maintenance pages 1 and 2 (on the MFD) (SSM 27-02-15):

Indication	Page
CAPT RUDDER PEDAL POSITION 1	FLIGHT CONTROL PG 1/3
MID RUDDER POSITION	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: : For example, if the value shown for MID RUDDER POSITION is "00X", record "MID RUDDER POSITION". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Pedal Position
 - (b) 27-Primary Flight Controls, System Test, Rudder Position.
 - (c) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

Page 239
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the left 1 actuator control electronics (ACE-L1).
- (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
- (c) Remove the ACE-C and the ACE-L1. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-L1 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:

- 1) 27-Primary Flight Controls, System Test, Pedal Position
- 2) 27-Primary Flight Controls, System Test, Rudder Position.

- (f) If maintenance message 27-13016 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:

- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 3) Remove the ACE tagged SUSPECT from the airplane.
- 4) Install a new ACE in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 5) Do the Repair Confirmation procedure at the end of this task.

- (g) If maintenance message 27-13016 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.

- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

- (i) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- (j) Remove the tag from the ACE-C.

- (2) Do this check for a short to ground of the excitation circuit for the L1 pedal position and mid rudder position transducers:

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

27-02 TASK 817

D633W103-ARO

Page 240
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) Do a check for an electrical short to structure ground from the following pins of connectors DM27121AA and DM27121AC (for the ACE-L1) at the E1-5 shelf (WDM 27-21-12).

DM27121AA	DM27121AC
pin B5	pin K3
pin C5	pin K4

- (b) If you find an electrical short at the above pins, then do these steps:

- 1) Disconnect the appropriate connector from the table below:

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27121AA		
B5 or C5	DM27137	PED POSN XDCR -L1, M27137
DM27121AC		
K3 or K4	DM27008A	RUDDER PCU-MID, M27008

- 2) Do a check for an electrical short to structure ground from connector DM27121AA and DM27121AC again (WDM 27-21-12).
- 3) If you continue to find an electrical short at connector DM27121AA or DM27121AC, then do these steps:
- a) Repair the wiring between these pins of connector DM27121AA or DM27121AC (for the ACE-L1) and the connector that was previously disconnected above (WDM 27-21-12).

DM27121AA	DM27137
pin C5	pin 8
pin B5	pin 9

DM27121AC	DM27008A
pin K3	pin 12
pin K4	pin 13

- b) Re-connect the connector that was previously disconnected above.
- c) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- NOTE: Make sure you do the ACE Installation Test.
- <1> Remove the tag from the ACE-L1.
- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not continue to find the electrical short at pin B5 or C5 of connector DM27121AA or at pin K3 or K4 of connector DM27121AC, then do these steps:
- a) Replace the equipment from the table below:

EFFECTIVITY
ARO ALL

27-02 TASK 817

D633W103-ARO

Page 241
Sep 05/2016

777-200/300
FAULT ISOLATION MANUAL

If the electrical short was found at pin:	Replace this equipment:	Using these tasks:
DM27121AA		
B5 or C5	PED POSN XDCR-L1, M27137	Rudder Pedal Position Transducers Removal, AMM TASK 27-21-04-000-801 Rudder Pedal Position Transducer Installation, AMM TASK 27-21-04-400-801
DM27121AC		
K3 or K4	RUDDER PCU-MID, M27008	Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801 Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801

- b) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L1.

- c) Do the Repair Confirmation procedure at the end of this task.

- (c) If you do not find an electrical short at connector DM27121AA or DM27121AC, then continue.

- (3) Do this check for a short between the wires of the excitation circuit for the pedal position and mid rudder position transducers:

- (a) Measure the resistance between the following pins of connector DM27121AA and DM27121AC (for the ACE-L1) (WDM 27-21-12).

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

DM27121AA	DM27121AC
pin B5 and pin C5	pin K3 and pin K4

- (b) If the resistance between any of the above pins of connector DM27121AA or DM27121AC is less than 10 ohms, then do these steps:

- 1) Disconnect the appropriate connector from the table below.

If the low resistance was found at pins:	Disconnect this connector:	To this equipment:
DM27121AA		
B5 or C5	DM27137	PED POSN XDCR -L1, M27137
DM27121AC		
K3 or K4	DM27008A	RUDDER PCU-MID, M27008

- 2) Do a check for continuity between the pins that previously showed low resistance on connector DM27121AA or DM27121AC (WDM 27-21-12).
- 3) If you still find continuity between the pins that previously showed low resistance on connector DM27121AA or DM27121AC, then do these steps:

Page 242
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- a) Repair the wiring between these pins of connector DM27121AA or DM27121AC (for the ACE-L1) and the connector that was previously disconnected above WDM 27-21-12).

DM27121AA	DM27137
pin C5	pin 8
pin B5	pin 9

DM27121AC	DM27008A
pin K3	pin 12
pin K4	pin 13

- b) Re-connect the connector that was previously disconnected above.
- c) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test

<1> Remove the tag from the ACE-L1.

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not still find continuity between the pins that was previously showed low resistance on connector DM27121AA or DM27121AC, then do these steps:

- a) Replace the equipment from the table below:

If the low resistance was found at pin:	Replace this equipment:	Using these tasks:
DM27121AA		
B5 or C5	PED POSN XDCR-L1, M27137	Rudder Pedal Position Transducers Removal, AMM TASK 27-21-04-000-801 Rudder Pedal Position Transducer Installation, AMM TASK 27-21-04-400-801
DM27121AC		
K3 or K4	RUDDER PCU-MID, M27008	Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801 Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801

- b) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L1.

- c) Do the Repair Confirmation procedure at the end of this task.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring. (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

27-02 TASK 817

D633W103-ARO

Page 243
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for the applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Pedal Position
 - (b) 27-Primary Flight Controls, System Test, Rudder Position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

818. Multiple Transducers (Group C Fault L1) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13020.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
 - (a) Monitor the following indications on the flight controls maintenance pages 1 and 2 (on the MFD) (SSM 27-02-15):

Indication	Page
CAPT WHEEL POSITION 1	FLIGHT CONTROL PG 1/3
LEFT OUTBD FLAPERON POSITION	FLIGHT CONTROL PG 2/3
LEFT STABILIZER POSITION	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for CAPT WHEEL POSITION 1 is "00X", record "CAP WHEEL POSITION 1". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Stabilizer System
 - (b) 27-Primary Flight Controls, System Test, Wheel Position
 - (c) 27-Primary Flight Controls, System Test, Left Flaperon Position.
 - (d) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
 - (e) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.

EFFECTIVITY
ARO ALL

27-02 TASKS 817-818

D633W103-ARO

Page 244
May 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the left 1 actuator control electronics (ACE-L1).
- (b) Put a tag that reads "OK" on the right actuator control electronics (ACE-R).
- (c) Remove the ACE-R and the ACE-L1. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged SUSPECT in the ACE-R rack location, and install the ACE tagged OK in the ACE-L1 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:

- 1) 27-Primary Flight Controls, System Test, Stabilizer System
- 2) 27-Primary Flight Controls, System Test, Wheel Position
- 3) 27-Primary Flight Controls, System Test, Left Flaperon Position.

- (f) If maintenance message 27-13020 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:

- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

- 2) Install the ACE tagged OK in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 3) Remove the ACE tagged SUSPECT from the airplane.

- 4) Install a new ACE in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- (g) If maintenance message 27-13020 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.

- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

- (i) Install the ACE tagged OK in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- (j) Remove the tag from the ACE-R.

777-200/300
FAULT ISOLATION MANUAL

- (2) Do this check of the excitation circuit for the left stabilizer position module, L1 wheel position transducer, and left outboard flaperon PCU command transducers:

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

- (a) Do a check for an electrical short to structure ground from the following pins of connectors DM27121AC and DM27121AA (for the ACE-L1) (WDM 27-41-12)(WDM 27-11-13)(WDM 27-11-15).

DM27121AC	DM27121AA
pin D1	pin K4
pin E1	pin K3
pin B2	
pin B1	

- (b) If you find an electrical short at the above pins, then do these steps:

- 1) Disconnect the appropriate connector from the table below:

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27121AC		
D1 or E1	DM27131	WHEEL POSITION XDCR-L1, M27131
B2 or B1	DM27015	STAB POSN MDL-L, M27015
DM27121AA		
K3 or K4	DM27109	FLAPERON PCU-LOB, M27109

- 2) Do a check for an electrical short to structure ground from connector DM27121AC and DM27121AA again (WDM 27-11-15).
- 3) If you continue to find an electrical short at connector DM27121AC or DM27121AA, then do these steps:
 - a) Repair the wiring between these pins of connector DM27121AC or DM27121AA (for the ACE-L1) and the connector that was previously disconnected above (WDM 27-41-12)(WDM 27-11-15)(WDM 27-11-13).

DM27121AC DM27015

pin B1 pin 3
pin B2 pin 2

DM27121AC DM27131

pin E1 pin 8
pin D1 pin 9

DM27121AA DM27109

pin K3 pin 12
pin K4 pin 13

- b) Re-connect connector that was previously disconnected above.

27-02 TASK 818

D633W103-ARO

Page 246
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- c) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L1.

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not continue to find the electrical short at pin B1, B2, D1 or E1 of connector DM27121AC or K3 or K4 of connector DM27121AA, then do these steps:
- a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Using these tasks:
DM27121AC		
B2 or B1	STAB POSN MDL-L, M27015	Stabilizer Position Module Removal, AMM TASK 27-48-01-000-801 Stabilizer Position Module Installation, AMM Task 27-48-00-400-801
D1 or E1	WHEEL POSN XDCR-L1, M27131	Wheel Position Transducer Removal, AMM TASK 27-11-02-000-801 Wheel Position Transducer Installation, AMM TASK 27-11-02-400-801
DM27121AA		
K3 or K4	Left Outboard Flaperon PCU Transducer, M27109	Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801 Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801

- b) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L1.

- c) Do the Repair Confirmation procedure at the end of this task.
- (c) If you do not find an electrical short at connector DM27121AC or DM27121AA, then continue.
- (3) Do this check for a short between the wires of the excitation circuit for the stabilizer position module, L1 wheel position, and left outboard flaperon PCU transducers:
- (a) Measure the resistance between the following pins of connector DM27121AC and DM27121AA (for the ACE-L1) (WDM 27-41-12)(WDM 27-11-13)(WDM 27-11-15).

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

DM27121AC	DM27121AA
pin D1 and pin E1	pin K3 and pin K4

FAULT ISOLATION MANUAL

- (b) If the resistance between any of the above pins of connector DM27121AC or DM27121AA is less than 10 ohms, then do these steps:

- 1) Disconnect the appropriate connector from the table below:

If the low resistance was found at pins:	Disconnect this connector:	To this equipment:
DM27121AC		
D1 or E1	DM27131	WHEEL POSITION XDCR-L1, M27131
B2 or B1	DM27015	STAB POSN MDL-L, M27015
DM27121AA		
K3 or K4	DM27109	FLAPERON PCU-LOB, M27109

- 2) Do a check for continuity between pins that previously showed low resistance on connector DM27121AC or DM27121AA (WDM 27-41-12)(WDM 27-11-15)(WDM 27-11-13).
- 3) If you find continuity between pins that previously showed low resistance on connector DM27121AC or DM27121AA, then do these steps:
- a) Repair the wiring between these pins of connector DM27121AC or DM27121AA (for the ACE-L1) and the connector that was previously disconnected above.

DM27121AC	DM27015
pin B1	pin 3
pin B2	pin 2

DM27121AC	DM27131
pin E1	pin 8
pin D1	pin 9

DM27121AA	DM27109
pin K3	pin 12
pin K4	pin 13

- b) Re-connect the connector that was previously disconnected above.
- c) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test

<1> Remove the tag from the ACE-L1.

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not still find continuity between the pins that was previously showed low resistance on connector DM27121AC or DM27121AA, then do these steps:
- a) Replace the equipment from the table below:

D633W103-ARO

Page 248
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

If the low resistance was found at pin:	Replace this equipment:	Using these tasks:
DM27121AC		
B2 or B1	STAB POSN MDL-L, M27015	Stabilizer Position Module Removal, AMM TASK 27-48-01-000-801 Stabilizer Position Module Installation, AMM Task 27-48-00-400-801
D1 or E1	WHEEL POSN XDCR-L1, M27131	Wheel Position Transducer Removal, AMM TASK 27-11-02-000-801 Wheel Position Transducer Installation, AMM TASK 27-11-02-400-801
DM27121AA		
K3 or K4	FLAPERON PCU-LOB, M27109	Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801 Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801

- b) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L1.

- c) Do the Repair Confirmation procedure at the end of this task.

- (4) Do this task for obvious electrical faults in the applicable PCU wiring. (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for the applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Stabilizer System
 - (b) 27-Primary Flight Controls, System Test, Wheel Position
 - (c) 27-Primary Flight Controls, System Test, Left Flaperon Position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

Page 249
May 05/2017

777-200/300 FAULT ISOLATION MANUAL

819. Multiple Transducers (Group D Fault L2) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13025.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
- (a) Monitor the following indications on the flight controls maintenance pages 1 and 2 (on the MFD) (SSM 27-02-15):

Indication	Page
F/O WHEEL POSITION 1	FLIGHT CONTROL PG 1/3
CAPT WHEEL FORCE	FLIGHT CONTROL PG 1/3
LEFT ELEVATOR FEEL ACTUATOR POSITION	FLIGHT CONTROL PG 1/3
LEFT OUTBOARD AILERON POSITION	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for F/O WHEEL POSITION 1 is "00X", record "F/O WHEEL POSITION 1". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Left Aileron Position
- (b) 27-Primary Flight Controls, System Test, Elevator Feel System
- (c) 27-Primary Flight Controls, System Test, Wheel Force Transducer
- (d) 27-Primary Flight Controls, System Test, Wheel Position.
- (e) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
- (f) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
- 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
- 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the left 2 actuator control electronics (ACE-L2).
- (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).

27-02 TASK 819

D633W103-ARO

Page 250
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (c) Remove the ACE-C and the ACE-L2. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-L2 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:

- 1) 27-Primary Flight Controls, System Test, Left Aileron Position
- 2) 27-Primary Flight Controls, System Test, Elevator Feel System
- 3) 27-Primary Flight Controls, System Test, Wheel Force Transducer
- 4) 27-Primary Flight Controls, System Test, Wheel Position.

- (f) If maintenance message 27-13025 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:

- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

- 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 3) Remove the ACE tagged SUSPECT from the airplane.

- 4) Install a new ACE in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 5) Do the Repair Confirmation procedure at the end of this task.

- (g) If maintenance message 27-13025 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.

- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

- (i) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- (j) Remove the tag from the ACE-C.

- (2) Do this check of the excitation circuit for the left elevator feel actuator, right 1 wheel position transducer, wheel force transducer, and left outboard aileron PCU transducer:

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

- (a) Do a check for an electrical short to structure ground from the following pins of connectors DM27122AA and DM27122AC at the E1-1 shelf (WDM 27-31-15)(WDM 27-11-11).

DM27122AC	DM27122AA

- c) Install the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L2.

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you still do not find an electrical short at pin D4, E4, E14 or E15 of connector DM27122AA or at pin A10, A11, G14 or H14 or connector DM27122AC, then do these steps:
- a) Check the remaining pins of connector DM27122AA and connector DM27122AC for an electrical short to structure ground.
- b) If you find an electrical short at one of these pins, repair the related wiring.
- c) Do the Repair Confirmation procedure at the end of this task.
- 5) If you do not find an electrical short at connector DM27122AA or connector DM27122AC, then do these steps:
- a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Using these tasks:
DM27122AC		
G14 or H14	WHEEL POSN XDCR-R1, M27231	Wheel Position Transducers Removal, AMM TASK 27-11-02-000-801 Wheel Position Transducers Installation, AMM TASK 27-11-02-400-801
A11 or A10	WHEEL FORCE XDCR ASSY-1, M27129	Wheel Force Transducer - Removal, AMM TASK 27-11-08-000-801 Wheel Force Transducer - Installation, AMM TASK 27-11-08-400-801
DM27122AA		
E15 or E14	AILERON PCU-LOB, M27107	Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801 Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
E4 or D4	ELEV FEEL ACTR-L, M27020	Elevator Feel Actuators Removal, AMM TASK 27-31-07-000-801 Elevator Feel Actuators - Installation, AMM TASK 27-31-07-400-801

- b) Install the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- c) Do the Repair Confirmation procedure at the end of this task.
- (c) If you do not find an electrical short at connector DM27122AA or DM27122AC, then continue.

27-02 TASK 819

D633W103-ARO

Page 253
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (3) Do this check for a short between the wires of the excitation circuit for the left elevator feel actuator:

- (a) Measure the resistance between the following pins of connector DM27122AA and DM27122AC at the E1-1 shelf (WDM 27-31-15)(WDM 27-11-11).

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

DM27122AC	DM27122AA
pin G14 and pin H14	pin E15 and pin E14
pin A11 and pin A10	pin E4 and pin D4

- (b) If the resistance between any of the above pins of connector DM27122AA or DM27122AC is less than 10 ohms, then do these steps:

- 1) Disconnect the appropriate connector from the table below:

If the low resistance was found at pin:	Disconnect this connector	To this equipment:
DM27122AC		
G14 or H14	DM27231	WHEEL POSN XDCR-R1, M27231
A11 or A10	DM27129A	WHEEL FORCE XDCR ASSY-1, M27129
DM27122AA		
E15 or E14	DM27107A	AILERON PCU-LOB, M27107
E4 or D4	DM27020	ELEV FEEL ACTR-L, M27020

- 2) Do a check for continuity between the pins that previously showed low resistance on connector DM27122AA or DM27122AC at the E1-1 shelf (WDM 27-31-15)(WDM 27-11-11).
- 3) If you still find continuity between the pins that previously showed low resistance on connector DM27122AA or DM27122AC, then do these steps:
- a) Repair the wiring between these pins of connector DM27122AA or DM27122AC at the E1-1 shelf and the connector that was previously disconnected above (WDM 27-31-15)(WDM 27-11-11):

DM27122AA	DM27020
pin D4	pin 6
pin E4	pin 4

DM27122AA	DM27107A
pin E15	pin 13
pin E14	pin 12

DM27122AC	DM27231
pin G14	pin 9
pin H14	pin 8

777-200/300 FAULT ISOLATION MANUAL

<1> Remove the tag from the ACE-L2.

c) Do the Repair Confirmation procedure at the end of this task.

- (4) Do this task for obvious electrical faults in the applicable PCU wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, do this task to check for the applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Left Aileron Position
- (b) 27-Primary Flight Controls, System Test, Elevator Feel System
- (c) 27-Primary Flight Controls, System Test, Wheel Force Transducer
- (d) 27-Primary Flight Controls, System Test, Wheel Position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

820. Multiple Transducers (Group E Fault L2) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13029.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
- (a) Monitor the following indications on the flight controls maintenance pages 1 and 2 (on the MFD) (SSM 27-02-15):

Indication	Page
SPDBRK HANDLE POSITION 2	FLIGHT CONTROL PG 1/3
SPOILER POSITION 4	FLIGHT CONTROL PG 2/3
SPOILER POSITION 5	FLIGHT CONTROL PG 2/3
SPOILER POSITION 10	FLIGHT CONTROL PG 2/3
SPOILER POSITION 11	FLIGHT CONTROL PG 2/3

EFFECTIVITY

27-02 TASKS 819-820

D633W103-ARO

Page 256
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for SPOILER POSITION 4 is "0.00X", record "SPOILER POSITION 4". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Speedbrake System
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) 27-Primary Flight Controls, System Test, Spoiler 4, 11 System
 - (c) 27-Primary Flight Controls, System Test, Spoiler 5, 10 System.
 - (d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (e) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
 - (f) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):
- NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.
- (a) Put a tag that reads "SUSPECT" on the left 2 actuator control electronics (ACE-L2).
 - (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
 - (c) Remove the ACE-C and the ACE-L2. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-L2 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.
- (e) Do these ground tests on the MAT:
- 1) 27-Primary Flight Controls, System Test, Speedbrake System
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) 27-Primary Flight Controls, System Test, Spoiler 4, 11 System
 - 3) 27-Primary Flight Controls, System Test, Spoiler 5, 10 System.

- 4) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (f) If maintenance message 27-13029 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do the Repair Confirmation procedure at the end of this task.
- (g) If maintenance message 27-13029 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (i) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-C.
- (2) Do this check of the excitation circuit for the speedbrake lever and spoiler PCU position transducers:
NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.
 - (a) Do a check for an electrical short to structure ground from the following pins D4, E4, A8, A7, K6 or K5 of connector DM27122AC (for the ACE-L2) (WDM 27-61-13).
 - (b) Do a check for an electrical short to structure ground from the following pins K6 , K5, A8 or A7 of connector DM27122AA (for the ACE-L2) WDM 27-61-13(
 - (c) If you find an electrical short at any of the above pins, then do these steps:
 - 1) Disconnect the appropriate connector from the table below:

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27122AC		
D4 or E4	DM27029B	Speed Brake Lever Transducer, M27029
A8 or A7	DM27220	SPLR PCU (10), M27220

27-02 TASK 820

D633W103-ARO

Page 262
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (4) Do this task for obvious electrical faults in the applicable PCU wiring. Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no fault is found with the PCU wiring, then do this task to check for the applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Speedbrake System
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) 27-Primary Flight Controls, System Test, Spoiler 4, 11 System
 - (c) 27-Primary Flight Controls, System Test, Spoiler 5, 10 System.
 - (d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

821. Multiple Transducers Have Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13012.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
 - (a) Monitor the following indications on the flight control maintenance pages 1 and 2 (on the MFD)(SSM 27-02-15)

Indication	Page
CAPT COLUMN POSITION 1	FLIGHT CONTROL PG 1/3
CAPT COLUMN FORCE 1	FLIGHT CONTROL PG 1/3
LEFT OUTBD ELEVATOR POSITION	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means the data is invalid.

NOTE: For example, if the value shown for CAPT COLUMN POSITION 1 is "00X", record "CAPT COLUMN POSITION 1". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.

- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Column Position
 - (b) 27-Primary Flight Controls, System Test, Column Force Transducer
 - (c) 27-Primary Flight Controls, System Test, Left Elevator Position
 - (d) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below
 - (e) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the left 1 actuator control electronics (ACE-L1).
- (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
- (c) Remove the ACE-C and the ACE-L1. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-L1 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Column Position
 - 2) 27-Primary Flight Controls, System Test, Column Force Transducer
 - 3) 27-Primary Flight Controls, System Test, Left Elevator Position.
- (f) If maintenance message 27-13012 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 3) Remove the ACE tagged SUSPECT from the airplane.
- 4) Install a new ACE in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

27-02 TASK 821

D633W103-ARO

Page 266
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (3) Do this check for a short between the wires of the excitation circuit for the left column force, left 1 column position, and left outboard elevator PCU transducers:

- (a) Measure the resistance between the following pins of connector DM27121AA and DM27121AC (for the ACE-L1) (WDM 27-31-11).

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

At connector:	Between the pins:
DM27121AA	J13 and J14
	A10 and A11
DM27121AC	E14 and E15

- (b) If the resistance between any of the above pins of connector DM27121AA or DM27121AC is less than 10 ohms, then do these steps:

- 1) Disconnect the appropriate connector from the table below:

If the low resistance was found at pins:	Disconnect this connector:	To this equipment:
DM27121AA		
J13 and J14	DM27139A	COL FORCE XDCR ASSY-L1, M27139
A10 and A11	DM27134	COL POSN XDCR-L1, M27134
DM27121AC		
E14 and E15	DM27111A	Elevator PCU - LOB, M27111

- 2) Do a check for continuity between the pins that previously showed low resistance on connector DM27121AA or DM27121AC (WDM 27-31-11).
- 3) If you still find continuity between the pins that previously showed low resistance on connector DM27121AA or DM27121AC (for the ACE-L2), then do these steps:
- a) Repair the wiring between these pins of connector DM27121AA or DM27121AC (for the ACE-L1) and connector that previously disconnected above (WDM 27-31-11).

DM27121AA	DM27134
pin A11	pin 9
pin A10	pin 8

DM27121AA	DM27139A
pin J14	pin 9
pin J13	pin 8

DM27121AC	DM27111A
pin E15	pin 13
pin E14	pin 12

- b) Re-connect the connector that was previously disconnected above.

777-200/300 FAULT ISOLATION MANUAL

- c) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L1.

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not still find continuity between the pins that previously showed low resistance on connector DM27121AA or DM27121AC, then do these steps:
- a) Replace the appropriate equipment from the table below:

If the low resistance was found at pins:	Replace this equipment:	Do these tasks:
DM27121AA		
J13 or J14	COL FORCE XDCR ASSY-L1, M27139	Column Force Transducer Removal, AMM TASK 27-31-08-000-801 Column Force Transducer Installation, AMM TASK 27-31-08-400-801
A10 or A11	L1 COL POSN XDCR-L1, M27134	Column Position Transducer Removal, AMM TASK 27-31-04-000-801 Column Position Transducer Installation, AMM TASK 27-31-04-400-801
E14 or E15	ELEVATOR PCU-LOB, M27111	Elevator Power Control Units (PCU) Removal - AMM TASK 27-31-09-000-801 Elevator Power Control Units (PCU) Installation - AMM TASK 27-31-09-400-801

- b) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L1.

- c) Do the Repair Confirmation procedure at the end of this task.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, do this task for the applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:

- (a) 27-Primary Flight Controls, System Test, Column Position
 - (b) 27-Primary Flight Controls, System Test, Column Force Transducer
 - (c) 27-Primary Flight Controls, System Test, Left Elevator Position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

— END OF TASK —

822. Multiple Transducers (Group A Fault L2) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13013.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
- (a) Monitor the following indications on the flight control maintenance pages 1 and 2 (on the MFD) (SSM 27-02-15):

Indication	Page
F/O COLUMN FORCE 1	FLIGHT CONTROL PG 1/3
RIGHT OUTBOARD ELEVATOR PCU ACTUATOR POSITION	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for F/O WHEEL POSITION 1 is "00X", record "F/O WHEEL POSITION 1". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Column Force Transducer
 - (b) 27-Primary Flight Controls, System Test, Right Elevator Position.
 - (c) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the left 2 actuator control electronics (ACE-L2).
- (b) Put a tag that reads "OK" on the right actuator control electronics (ACE-R).
- (c) Remove the ACE-R and the ACE-L2. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged SUSPECT in the ACE-R rack location, and install the ACE tagged OK in the ACE-L2 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Column Force Transducer
 - 2) 27-Primary Flight Controls, System Test, Right Elevator Position.
- (f) If maintenance message 27-13013 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do the Repair Confirmation procedure at the end of this task.
- (g) If maintenance message 27-13013 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (i) Install the ACE tagged OK in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-R.

- (2) Do this check of the excitation circuit for the right 1 column force, and the right outboard elevator PCU position transducers:

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

- (a) Do a check for an electrical short to structure ground from the following pins of connector DM27122AA and DM27122AC (for the ACE-L2)(WDM 27-31-13).

DM27122AA	DM27122AC

(b) If you find an electrical short at the above pins, then do these steps:

1) Disconnect the appropriate connector from the table below:

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27122AA		
J13 or J14	DM27239A	COL FORCE XDCR ASSY-R1, M27239
DM27122AC		
E14 or E15	DM27211A	Elevator PCU-ROB, M27211

- 2) Do a check for an electrical short to structure ground from connector DM27122AA and DM27122AC again (WDM 27-31-13).
- 3) If you continue to find an electrical short at connector DM27122AA or DM27122AC, then do these steps:
- a) Repair the wiring between these pins of connector DM27122AA or DM27122AC (for the ACE-L2) and the connector that was previously disconnected above (WDM 27-31-13):

DM27122AA	DM27239A
pin J13	pin 8
pin J14	pin 9

DM27122AC	DM27211A
pin E14	pin 12
pin E15	pin 13

- b) Re-connect the connector that was previously disconnected above.
- c) Install the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- NOTE: Make sure you do the ACE Installation Test.
- <1> Remove the tag from the ACE-L2.
- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not continue to find an electrical short at pin J13 or J14 of connector DM27122AA or at pin E14 or E15 of connector DM27122AC, then do these steps:

a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Do these tasks:
DM27122AA		
J13 or J14	COL FORCE XDCR ASSY-R1, M27239	Column Force Transducer Removal, AMM Task 27-31-08-000-801 Column Force Transducer Installation, AMM Task 27-31-08-400-801

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the center actuator control electronics (ACE-C).
- (b) Put a tag that reads "OK" on the left 1 actuator control electronics (ACE-L1).
- (c) Remove the ACE-C and the ACE-L1. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged SUSPECT in the ACE-L1 rack location, and install the ACE tagged OK in the ACE-C rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:

- 1) 27-Primary Flight Controls, System Test, Column Position
- 2) 27-Primary Flight Controls, System Test, Column Force Transducer
- 3) 27-Primary Flight Controls, System Test, Left Elevator Position.

- (f) If maintenance message 27-13014 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:

- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- 2) Install the ACE tagged OK in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 3) Remove the ACE tagged SUSPECT from the airplane.
- 4) Install a new ACE in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 5) Do the Repair Confirmation procedure at the end of this task.

- (g) If maintenance message 27-13014 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with step (h) below.

- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

- (i) Install the ACE tagged OK in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- (j) Remove the tag from the ACE-L1.

777-200/300 FAULT ISOLATION MANUAL

- 4) If you do not continue to find the electrical short at pin A10, A11, J13 or J14 of connector DM27321AA or at pin J13 or J14 of connector DM27321AA and DM27321AC, then do these steps:

- a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Do these tasks:
DM27321AA		
J13 or J14	L2 COL FORCE XDCR, M27139	Column Force Transducer Removal, AMM TASK 27-31-08-000-801 Column Force Transducer Installation, AMM TASK 27-31-08-400-801
A10 or A11	L2 COL POSN XDCR, M27135	Column Position Transducer Removal, AMM TASK 27-31-04-000-801 Column Position Transducer Installation, AMM TASK 27-31-04-400-801
DM27321AC		
E14 or E15	ELEVATOR PCU -LIB, M27112	Elevator Power Control Units (PCU) Removal - AMM TASK 27-31-09-000-801 Elevator Power Control Units (PCU) Installation - AMM TASK 27-31-09-400-801

- b) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-C.

- c) Do the Repair Confirmation procedure at the end of this task.

- (c) If you do not find an electrical short at connector DM27321AA or DM27321AC, then continue.

- (3) Do this check for a short between the wires of the excitation circuit for the left column force, left column position, and left inboard elevator PCU transducers:

- (a) Measure the resistance between the following pins of connector DM27321AA and DM27321AC (for the ACE-C) (WDM 27-31-12).

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

At connector:	Between the pins:
DM27321AA	J13 and J14
	A10 and A11
DM27321AC	E14 and E15

- (b) If the resistance between any of the above pins of connector DM27321AA or DM27321AC is less than 10 ohms, then do these steps:

- 1) Disconnect the appropriate connector from the table below:

EFFECTIVITY
ARO ALL

27-02 TASK 823

D633W103-ARO

Page 277
Sep 05/2016

777-200/300
FAULT ISOLATION MANUAL

If the low resistance was found at pins:	Disconnect this connector:	To this equipment:
DM27321AA		
J13 or J14	DM27139B	COL FORCE XDCR ASSY-L2, M27139
A10 or A11	DM27135	COL POSN XDCR-L2, M27135
DM273211AC		
E14 or E15	DM27112A	ELEV PCU-LIB, M27112

- 2) Do a check for continuity between the pins that previously showed low resistance on connector DM27321AA or DM27321AC (WDM 27-31-12).
- 3) If you find continuity between the pins of connector DM27321AA or DM27321AC (for the ACE-C), then do these steps:
 - a) Repair the wiring between these pins of connector DM27321AA or DM27321AC (for the ACE-C) and connector that previously disconnected above (WDM 27-31-12).

DM27321AA	DM27139B
pin J13	pin 8
pin J14	pin 9

DM27321AA	DM27135
pin A10	pin 8
pin A11	pin 9

DM27321AC	DM27112A
pin E14	pin 12
pin E15	pin 13

- b) Re-connect te connector that was previously disconnected above.
 - c) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from ACE-C

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not still find continuity between the pins that previously showed low resistance on connector DM27321AA or DM27321AC, then do these steps:
 - a) Replace the appropriate equipment from the table below:

If the low resistance was found at pins:	Replace this equipment:	Do these tasks:
DM27121AA

777-200/300 FAULT ISOLATION MANUAL

(Continued)

If the low resistance was found at pins:	Replace this equipment:	Do these tasks:
J13 or J14	COL FORCE XDCR ASSY-L2, M27139	Column Force Transducer Removal, AMM TASK 27-31-08-000-801 Column Force Transducer Installation, AMM TASK 27-31-08-400-801
A10 or A11	COL POSN XDCR -L2, M27135	Column Position Transducer Removal, AMM TASK 27-31-04-000-801 Column Position Transducer Installation, AMM TASK 27-31-04-400-801
E14 or E15	ELEVATOR PCU-LIB, M27112	Elevator Power Control Units (PCU) Removal - AMM TASK 27-31-09-000-801 Elevator Power Control Units (PCU) Installation - AMM TASK 27-31-09-400-801

- b) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-C.

- c) Do the Repair Confirmation procedure at the end of this task.

- (4) Do this task for obvious electrical faults in the applicable PCU wiring.:Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found, then do this task for applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Column Position
- (b) 27-Primary Flight Controls, System Test, Column Force Transducer
- (c) 27-Primary Flight Controls, System Test, Left Elevator Position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

824. Multiple Transducers (Group A Fault R) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13015.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
- (a) Monitor the following indications on the flight control maintenance pages 1 or 2 (on the MFD)(SSM 27-02-15)

Indication	Page
F/O COLUMN POSITION 3	FLIGHT CONTROL PG 1/3
F/O COLUMN FORCE 2	FLIGHT CONTROL PG 1/3
RIGHT INBD ELEVATOR PCU ACTUATOR POSITION	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means the data is invalid.

NOTE: For example, if the value shown for F/O COLUMN POSITION 3 is "00X", record "F/O COLUMN POSITION 3". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Column Position
- (b) 27-Primary Flight Controls, System Test, Column Force Transducer
- (c) 27-Primary Flight Controls, System Test, Right Elevator Position.
- (d) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
- (e) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
- 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
- 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the right actuator control electronics (ACE-R).
- (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
- (c) Remove the ACE-C and the ACE-R. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

EFFECTIVITY

27-02 TASK 824

D633W103-ARO

Page 280
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-R rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:

- 1) 27-Primary Flight Controls, System Test, Column Position
- 2) 27-Primary Flight Controls, System Test, Column Force Transducer
- 3) 27-Primary Flight Controls, System Test, Right Elevator Position.

- (f) If maintenance message 27-13015 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:

- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

- 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 3) Remove the ACE tagged SUSPECT from the airplane.

- 4) Install a new ACE in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 5) Do the Repair Confirmation procedure at the end of this task.

- (g) If maintenance message 27-13015 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.

- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

- (i) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- (j) Remove the tag from the ACE-C.

- (2) Do this check of the excitation circuit for the right 2 column force, right 3 column position, and right inboard elevator PCU position transducers:

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

- (a) Do a check for an electrical short to structure ground for the following pins of connector DM27221AA and DM27221AC (for the ACE-R) at the E5-2 shelf (WDM 27-31-14).

DM27221AA	DM27221AC
pin A11	pin E15
pin A10	pin E14
pin J14	
pin J13	

- (b) If you find an electrical short at any of the above pins, then do these steps:

Page 281
Sep 05/2016

**777-200/300
FAULT ISOLATION MANUAL**

- 1) Disconnect the appropriate connector from the table below.

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27221AA		
J13 or J14	DM27239B	COL FORCE XDCR-R2, M27239
A10 or A11	DM27236	COL POSN XDCR-R3, M27236
DM27221AC		
E14 or E15	DM27212A	ELEV PCU-RIB, M27212

- 2) Do a check for an electrical short to structure ground from connectors DM27221AA and DM27221AC again (WDM 27-31-14).
- 3) If you continue to find an electrical short at connector DM27221AA or DM27221AC, then do these steps:
- a) Repair the wiring between these pins of connector DM27221AA or DM27221AC (for the ACE-R) and connector that was previously disconnected above(WDM 27-31-14).

DM27221AA	DM27239B
pin J13	pin 8
pin J14	pin 9

DM27221AA	DM27236
pin A10	pin 8
pin A11	pin 9

DM27221AC	DM27212A
pin E14	pin 12
pin E15	pin 13

- b) Re-connect connector that was previously disconnected above.
- c) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not continue to find the electrical short at pin E14 or E15 of connector DM27221AC or at pin A10, A11, J13 or J14 of connector DM27221AA, then do these steps:
- a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Do these tasks:

Indication	Page
F/O PEDAL POSITION 2	FLIGHT CONTROL PG 1/3
F/O COLUMN POSITION 1	FLIGHT CONTROL PG 1/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means the data is invalid.

NOTE: For example, if the value shown for F/O COLUMN POSITION 1 is "00X", record "F/O COLUMN POSITION 1". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- 27-Primary Flight Controls, System Test, Pedal Position
 - 27-Primary Flight Controls, System Test, Column Position.
 - If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
 - If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
 - Monitor the airplane to see if the fault occurs on the subsequent flights.
 - If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- Put a tag that reads "SUSPECT" on the left 2 actuator control electronics (ACE-L2).
- Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
- Remove the ACE-C and the ACE-L2. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-L2 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:
- 27-Primary Flight Controls, System Test, Pedal Position.
 - 27-Primary Flight Controls, System Test, Column Position
- (f) If maintenance message 27-13017 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:

Page 286
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- 3) Remove the ACE tagged SUSPECT from the airplane.
- 4) Install a new ACE in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (g) Do the Repair Confirmation procedure at the end of this task.
- (h) If maintenance message 27-13017 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
- (i) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (j) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (k) Remove the tag from the ACE-C.
- (2) Do this check of the excitation circuits for the right 2 pedal position, and right 1 column position transducers:
NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.
- (a) Do a check for an electrical short to structure ground from pins C5, B5, J8 or K8 of connector DM27122AA (for the ACE-L2) at the E1-1 shelf (WDM 27-21-12)(WDM 27-31-13).
- (b) If you find an electrical short at any of the above pins, then do these steps:
 - 1) Disconnect the appropriate connector from the table below:

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27122AA		
C5 or B5	DM27238	PED POSN XDCR-R2, M27238
J8 or K8	DM27234	COL POSN XDCR-R1, M27234

- 2) Do a check for an electrical short to structure ground from connector DM27122AA again (WDM 27-21-12)(WDM 27-31-13).
- 3) If you continue to find an electrical short at connector DM27122AA, then do these steps:
 - a) Repair the wiring between these pins of connector DM27122AA (for the ACE-L2) at the E1-1 shelf and the connector that was previously disconnected above (WDM 27-21-12)(WDM 27-31-13):

pin B5	pin 9

DM27122AA	DM27234
pin J8	pin 9
pin K8	pin 8

- b) Re-connect the connector that was previously disconnected above.
- c) Install the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L2.

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not continue to find an electrical short at pin C5 or B5 of connector DM27122AA or at pin J8 or K8 of connector DM27122AC, then do these steps:
- a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Do these tasks:
DM27122AA		
C5 or B5	PEDAL POSITION XDCR-R2, M27238	Rudder Pedal Position Transducers Removal, AMM TASK 27-21-04-000-801 Rudder Pedal Position Transducers Installation, AMM TASK 27-21-04-400-801
J8 or K8	COL POSN XDCR-R1, M27234	Column Position Transducer Removal, AMM TASK 27-31-04-000-801 Column Position Transducer Installation, AMM TASK 27-31-04-400-801

- b) Install the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L2.

- c) Do the Repair Confirmation procedure at the end of this task.
- (c) If you do not find an electrical short at connector DM27122AA, then continue.
- (3) Do this check for a short between the wires of the excitation circuit for the right 2 pedal position and right 1 column position transducers:
- (a) Measure the resistance between the following pins of connector DM27122AA at the E1-1 shelf (WDM 27-21-12)(WDM 27-31-13).

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

Page 288
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

At connector:	Between the pins:
DM27122AA	C5 and B5
	J8 and K8

- (b) If the resistance between any of the above pins of connector DM27122AA is less than 10 ohms, then do these steps:

- 1) Disconnect the appropriate connector from the table below:

If the low resistance was found at pins:	Disconnect this connector:	To this equipment:
DM27122AA		
C5 and B5	DM27238	PED POSN XDCR-R2, M27238
J8 and K8	DM27234	COL POSN XDCR-R1, M27234

- 2) Do a check for continuity between the pins that previously showed low resistance on connector DM27122AA at the E1-1 shelf (WDM 27-21-12)(WDM 27-31-13).
- 3) If you still find continuity between the pins that previously showed low resistance on connector DM27122AA, then do these steps:
- a) Repair the wiring between these pins of connector DM27122AA at the E1-1 shelf and the connector that was previously disconnected above (WDM 27-21-12)(WDM 27-31-13):

DM27122AA	DM27238
pin C5	pin 8
pin B5	pin 9

DM27122AA	DM27234
pin J8	pin 9
pin K8	pin 8

- b) Re-connect the connector that was previously disconnected above.
- c) Install the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- NOTE:** Make sure you do the ACE Installation Test.
- <1> Remove the tag from the ACE-L2.
- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not still find continuity between the pins that previously showed low resistance on connector DM27122AA, then do these steps:
- a) Replace the appropriate equipment from the table below:

If the low resistance was found at pins:	Replace this equipment:	Do these tasks:

If the low resistance was found at pins:	Replace this equipment:	Do these tasks:
C5 or B5	PED POSN XDCR-R2, M27238	Rudder Pedal Position Transducers Removal, AMM TASK 27-21-04-000-801 Rudder Pedal Position Transducers Installation, AMM TASK 27-21-04-400-801
J8 or K8	COL POSN XDCR-R1, M27234	Column Position Transducer Removal, AMM TASK 27-31-04-000-801 Column Position Transducer Installation, AMM TASK 27-31-04-400-801

- b) Install the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L2.

- c) Do the Repair Confirmation procedure at the end of this task.

- (4) Do this task for obvious electrical faults in the applicable PCU wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
(b) If no faults are found with the PCU wiring, then do this task for applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802
(c) If a fault is found, repair or replace the applicable wiring.
(d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
(a) 27-Primary Flight Controls, System Test, Pedal Position
(b) 27-Primary Flight Controls, System Test, Column Position.
(2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

826. Multiple Transducers (Group B Fault C) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13018.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
(a) Monitor the following indications on the flight control maintenance pages 1 and 2 (on the MFD)(SSM 27-02-15)

EFFECTIVITY

Page 290
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

Indication	Page
CAPT PEDAL POSITION 2	FLIGHT CONTROL PG 1/3
F/O COLUMN POSITION 2	FLIGHT CONTROL PG 1/3
UPPER RUDDER PCU	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means the data is invalid.

NOTE: For example, if the value shown for F/O COLUMN POSITION 2 is "00X", record "F/O COLUMN POSITION 2". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- 27-Primary Flight Controls, System Test, Pedal Position
 - 27-Primary Flight Controls, System Test, Column Position
 - 27-Primary Flight Controls, System Test, Rudder Position.
 - If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
 - If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
 - Monitor the airplane to see if the fault occurs on the subsequent flights.
 - If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- Put a tag that reads "SUSPECT" on the center actuator control electronics (ACE-C).
- Put a tag that reads "OK" on the right actuator control electronics (ACE-R).
- Remove the ACE-C and the ACE-R. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- Install the ACE tagged SUSPECT in the ACE-R rack location, and install the ACE tagged OK in the ACE-C rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:
- 27-Primary Flight Controls, System Test, Pedal Position
 - 27-Primary Flight Controls, System Test, Column Position
 - 27-Primary Flight Controls, System Test, Rudder Position.

777-200/300 FAULT ISOLATION MANUAL

- (f) If maintenance message 27-13018 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do the Repair Confirmation procedure at the end of this task.
- (g) If maintenance message 27-13018 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (i) Install the ACE tagged OK in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-R.
- (2) Do this check of the excitation circuits for the left 2 pedal position, right 2 column position and upper rudder PCU position transducers:
- NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.
- (a) Do a check for an electrical short to structure ground from the following pins of connectors DM27321AA and DM27321AC (for the ACE-C) at the E2-5 shelf (WDM 27-21-11)(WDM 27-31-12).

DM27321AA	DM27321AC
pin B5	pin K3
pin C5	pin K4
pin J8	
pin K8	

- (b) If you find an electrical short at any of the above pins, then do these steps:

- 1) Disconnect the appropriate from the table below:

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27321AA		
C5 or B5	DM27138	LPED POSN XDCR-L2, M27138
K8 or J8	DM27235	COL POSN XDCR-R2, M27235

777-200/300 FAULT ISOLATION MANUAL

- (f) If maintenance message 27-13019 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do the Repair Confirmation procedure at the end of this task.
- (g) If maintenance message 27-13019 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (i) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-C.
- (2) Do this check of the excitation circuits for the lower rudder PCU position, right 1 pedal position and left 3 column position transducers:
- NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.
- (a) Do a check for an electrical short to structure ground from the following pins of connectors DM27221AA and DM27221AC (for the ACE-R) at the E5-2 shelf (WDM 27-21-13)WDM 27-31-14.

DM27221AA	DM27221AC
pin B5	pin K3
pin C5	pin K4
pin J8	
pin K8	

- (b) If you find an electrical short at any of the above pins, then do these steps:
- 1) Disconnect the appropriate connector from the table below:

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27221AA		
C5 or B5	DM27237	PED POSN XDCC - R1, M27237
K8 or J8	DM27136	COL POSN XDCC-L3, M27136
DM27221AC

(Continued)

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
K3 or K4	DM27009A	RUDDER PCU-LWR, M27009

- 2) Do a check for an electrical short to structure ground from connector DM27221AA and DM27221AC again (WDM 27-21-13)(WDM 27-31-14).
- 3) If you continue to find an electrical short at connector DM27221AA or DM27221AC, then do these steps:
 - a) Repair the wiring between these pins of connector DM27221AA or DM27221AC (for the ACE-R) and the connector that was previously disconnected above (WDM 27-21-13)(WDM 27-31-14).

DM27221AA	DM27237
pin C5	pin 8
pin B5	pin 9

DM27221AA	DM27136
pin K8	pin 8
pin J8	pin 9

DM27221AC	DM27009A
pin K3	pin 12
pin K4	pin 13

- b) Re-connect the connector that was previously disconnected above.
 - c) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
NOTE: Make sure you do the ACE Installation Test.
<1> Remove the tag from the ACE-R.
 - d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not continue to find the electrical short at pin C5, B5, K8 or J8 of connector DM27221AA or at pin K3 or K4 of connector DM27221AC, then do these steps:
 - a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Do these tasks:
DM27221AA		
B5 or C5	PED POSN XDCR-R1, M27237	Rudder Pedal Position Transducers Removal, AMM TASK 27-21-04-000-801 Rudder Pedal Position Transducer Installation, AMM TASK 27-21-04-400-801

777-200/300 FAULT ISOLATION MANUAL

(Continued)

If the electrical short was found at pin:	Replace this equipment:	Do these tasks:
J8 or K8	COL POSN XDCR-L3, M27136	Column Position Transducers Removal, AMM TASK 27-31-04-000-801 Column Position Transducers Installation, AMM TASK 27-31-04-400-801
DM27221AC		
K3 or K4	RUDDER PCU-LWR, M27009	Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801 Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801

- b) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task:

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- c) Do the Repair Confirmation procedure at the end of this task.

- (c) If you do not find an electrical short at connector DM27221AA or DM27221AC, then continue.

- (3) Do this check for a short between the wires of the excitation circuit for the right 1 pedal position, left 3 column position and the rudder PCU position transducers:

- (a) Measure the resistance between the following pins of connector DM27221AA and DM27221AC (for the ACE-R) at the E5-2 shelf (WDM 27-21-13)(WDM 27-31-14).

At connector:	Between the pins:
DM27221AA	C5 and B5
	K8 and J8
DM27122AA	K3 and K4

- (b) If the resistance between any of the above pins of connector DM27221AA or DM27221AC is less than 10 ohms, then do these steps:

- 1) Disconnect the appropriate connector from the table below.

If the low resistance was found at pins:	Disconnect this connector:	To this equipment:
DM27221AA		
C5 and B5	DM27029B	PEDAL POSN XDCR -R1, M27237
K8 and J8	DM27009	COLUMN POSN XDCR-L3, M27136
DM27221AC		
K3 and K4	DM27119	RUDDER PCU-LWR, m27009

- 2) Do a check for continuity between the pins that previously showed low resistance on connector DM27221AA or DM27221AC (for the ACE-R)(WDM 27-21-13)WDM 27-31-14.

Page 298.3
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- b) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- c) Do the Repair Confirmation procedure at the end of this task.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring. Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found, do this task to check for applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Pedal Position
 - (b) 27-Primary Flight Controls, System Test, Column Position
 - (c) 27-Primary Flight Controls, System Test, Rudder Position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

828. Multiple Transducers (Group C Fault L2) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13021.

B. Description

- (1) Multiple Transducers, that share the same Excitation Power Source have feedback problems.
- (2) This is most likely due to a single failure.

C. Possible Causes

- (1) Actuator Control Electronics (ACE) - L2, M27122
- (2) Flaperon PCU - RIB, M27210
- (3) FDR Wheel Force Transducer, M27014
- (4) Excitation Wiring
- (5) Power Control Unit

D. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
 - (a) On the Multi-Function Display (MFD), monitor the following indication on the FLIGHT CONTROLS Maintenance Page 2 (SSM 27-02-15):

EFFECTIVITY
ARO ALL

FAULT ISOLATION MANUAL**

Indication	Page
RIGHT INBD FLAPERON POSITION	FLIGHT CONTROL PG 2/3

- 1) If an "X" shows after the Transducer value, the data is invalid.

NOTE: For example, if the value shown for RIGHT INBD FLAPERON POSITION is "00X", record "RIGHT INBD FLAPERON POSITION". This information can be useful during further troubleshooting.

- (b) Also, monitor this indication on the FLIGHT CONTROLS Maintenance Page 1 (SSM 27-02-15):

Indication	Page
FDR CAPT WHEEL FORCE	FLIGHT CONTROL PG 1/3

- 1) If an "X" shows after the Transducer value, the data is invalid.

NOTE: For example, if the value shown for FDR CAPT WHEEL FORCE is "00X", record "FDR CAPT WHEEL FORCE". This information can be useful during further troubleshooting.

- (2) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - (a) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the Ground Test Display, then there was an intermittent problem.
 - 1) Monitor the airplane to see if the problem occurs on the subsequent flights.
 - 2) If the problem occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803.

E. Fault Isolation Procedure

- (1) Do this exchange check of the ACEs:

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the problem, then apply Hydraulic Power to all 3 Hydraulic Systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the Left 2 ACE (ACE-L2).
- (b) Put a tag that reads "OK" on the Center ACE (ACE-C).
- (c) Remove the ACE-C and the ACE-L2. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged "SUSPECT" in the ACE-C Rack location, and install the ACE tagged "OK" in the ACE-L2 Rack location. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - 1) If maintenance message 27-13021 does not show on the Ground Test Display (after the last test), the ACE tagged "SUSPECT" is defective. Do these steps:

Page 298.5
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- a) Remove the ACE tagged "SUSPECT" and the ACE tagged "OK". This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - b) Install the ACE tagged "OK" in the ACE-C Rack location. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure that you do the ACE Installation Test.
 - c) Remove the ACE tagged "SUSPECT" from the airplane.
 - d) Install a new ACE in the ACE-L2 Rack location. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure that you do the ACE Installation Test.
 - e) Do the Repair Confirmation at the end of this task.
- 2) If maintenance message 27-13021 still shows on the Ground Test Display, the ACE tagged SUSPECT is serviceable. Do these steps:
- a) Remove the ACE tagged "SUSPECT" and the ACE tagged "OK". This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - b) Install the ACE tagged "OK" in the ACE-C Rack location. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure that you do the ACE Installation Test.
 - c) Remove the tag from the ACE-C.
- (2) Do this check of the Excitation Circuit for the RIB Flaperon PCU Transducer, M27210 (WDM 27-11-18):
- (a) Do a check for an electrical short to structure ground from pin K3 or K4 of connector DM27122AA (for the ACE-L2) at the E1-1.
 - 1) If you find an electrical short at pin K3 or K4, then do these steps:
 - a) Disconnect the connector DM27210 from the RIB Flaperon PCU Transducer.
 - b) Do a check for an electrical short to structure ground from pin K3 or K4 of connector DM27122AA again.
 - <1> If you still have an electrical short at connector DM27122AA, then examine and repair the wiring between the pins indicated below:

DM27122AA	DM27110
pin K3	pin 12
pin K4	pin 13
 - <a> Re-connect connector DM27210.
 - Install the ACE tagged "SUSPECT" in the ACE-L2 Rack location. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
NOTE: Make sure that you do the ACE Installation Test
 - <c> Remove the tag from the ACE-L2.
 - <d> Do the Repair Confirmation at the end of this task.
 - <2> If you do not have an electrical short at connector DM27122AA anymore, then replace the RIB Flaperon PCU Transducer, M27210. These are the tasks:

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

<c> Do the Repair Confirmation at the end of this task.

- 2) If you do not find an electrical short at connector DM27122AC, then continue.
- (4) Do a Resistance check as follows to identify a possible short between the wires of the Excitation Circuit for the RIB Flaperon PCU Transducer, M27210 (WDM 27-11-18):

DM27122AA	DM27122AA	Correct Resistance
pin K3	pin K4	> 10 Ω

- (a) If the Resistance between pins K3 and K4 of connector DM27122AA is < 10 Ω , do these steps:
- 1) Disconnect connector DM27210 from the RIB Flaperon PCU.
 - 2) Do a continuity check between pins K3 and K4 of connector DM27122AA, that previously showed Low Resistance.
 - a) If you still find continuity, examine and repair the wiring between the indicated pins below:

DM27122AA	DM27210
pin K3	pin 12
pin K4	pin 13

<1> Re-connect connector DM27210.

<2> Install the ACE tagged SUSPECT in the ACE-L2 Rack location. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure that you do the ACE Installation Test.

<3> Remove the tag from the ACE-L2.

<4> Do the Repair Confirmation at the end of this task.

- b) If you do not find continuity, then replace the RIB Flaperon PCU Transducer, M27210. These are the tasks:

- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
- Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801

<1> Install the ACE tagged "SUSPECT" in the ACE-L2 Rack location. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure that you do the ACE Installation Test

<2> Remove the tag from the ACE-L2.

<3> Do the Repair Confirmation at the end of this task.

- (b) If the Resistance between pins K3 and K4 of connector DM27122AA is > 10 Ω , continue.

- (5) Do a Resistance check as follows to identify a possible short between the wires of the FDR Wheel Force, M27014 Excitation Circuit (WDM 27-11-20):

DM27122AC	DM27122AC	Correct Resistance
pin B1	pin B2	> 10 Ω

- (a) If the Resistance between pins B1 and B2 of connector DM27122AC is < 10 Ω , do these steps:

Page 298.8
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 1) Disconnect the FDR Wheel Force connector from DM27000.
- 2) Do a continuity check between pins B1 and B2 of connector DM27122AC, that previously showed Low Resistance.
 - a) If you still find continuity, examine and repair the wiring between the indicated pins below:

DM27122AC	DM27000
pin B1	pin 2
pin B2	pin 1

<1> Re-connect connector DM27000.

<2> Install the ACE tagged "SUSPECT" in the ACE-L2 Rack location. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure that you do the ACE Installation Test.

<3> Remove the tag from the ACE-L2.

<4> Do the Repair Confirmation at the end of this task.

- b) If you do not find continuity, then replace the Wheel Force Transducer, M27014. These are the tasks:

- Wheel Force Transducer - Removal, AMM TASK 27-11-08-000-801
- Wheel Force Transducer - Installation, AMM TASK 27-11-08-400-801

<1> Install the ACE tagged "SUSPECT" in the ACE-L2 Rack location. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure that you do the ACE Installation Test.

<2> Remove the tag from the ACE-L2.

<3> Do the Repair Confirmation at the end of this task.

- (b) If the Resistance between pins B1 and B2 of connector DM27122AC is $> 10 \Omega$, continue.

- (6) Do this task for obvious electrical faults in the applicable PCU Wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

- (a) If you find a problem, replace the applicable PCU.

- (b) If you find no problems, do this task to examine the applicable PCU Airplane Wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.

- 1) If you find a problem, repair or replace the applicable wiring.
- 2) Do the Repair Confirmation at the end of this task.

F. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - (a) If the maintenance message does not show on the Ground Test Display, then you corrected the problem.

————— END OF TASK —————

829. Multiple Transducers (Group C Fault C) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13022.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
- (a) Monitor the following indications on the flight controls maintenance pages 1 and 2 (on the MFD) (SSM 27-02-15):

Indication	Page
F/O WHEEL POSITION 2	FLIGHT CONTROL PG 1/3
CENTER STABILIZER POSITION	FLIGHT CONTROL PG 2/3
R OUTBD FLAPERON POSITION	FLIGHT CONTROL PG 2/3

- 1) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for F/O WHEEL POSITION 2 is "00X", record "F/O WHEEL POSITION 2". This information may be useful during further troubleshooting

- 2) Do the Fault Isolation Procedure below.

- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Stabilizer System
- (b) 27-Primary Flight Controls, System Test, Wheel Position
- (c) 27-Primary Flight Controls, System Test, Right Flaperon Position.
- (d) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
- (e) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
- 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
- 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the center actuator control electronics (ACE-C).
- (b) Put a tag that reads "OK" on the left 1 actuator control electronics (ACE-L1).

777-200/300 FAULT ISOLATION MANUAL

- (c) Remove the ACE-C and the ACE-L1. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged SUSPECT in the ACE-L1 rack location, and install the ACE tagged OK in the ACE-C rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Stabilizer System
 - 2) 27-Primary Flight Controls, System Test, Wheel Position
 - 3) 27-Primary Flight Controls, System Test, Right Flaperon Position.
- (f) If maintenance message 27-13022 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do the Repair Confirmation procedure at the end of this task.
- (g) If maintenance message 27-13022 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (i) Install the ACE tagged OK in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-L1.

- (2) Do this check of the excitation circuit for the center stabilizer position, R2 wheel position, and right outboard flaperon PCU transducers:

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

- (a) Do a check for an electrical short to structure ground from the the following pins of connectors DM27321AC and DM27321AA (for the ACE-C) at the E2-5 shelf (WDM 27-41-11)(WDM 27-11-12)(WDM 27-11-17).

777-200/300 FAULT ISOLATION MANUAL

a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Using these tasks:
DM27321AC		
B1 or B2	STAB POSN MDL-C, M27030	Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801 Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801
E1 or D1	WHEEL POSN XDCR-R2, M27232	Wheel Force Transducer Removal, AMM TASK 27-11-08-00-801 Wheel Force Transducer Installation, AMM TASK 27-11-08-400-801
DM27321AA		
K3 or K4	FLAPERON PCU-ROB, M27209	Flaperon PCU - Removal, AMM TASK 27-11-12-000-801 Flaperon PCU - Installation, AMM TASK 27-11-12-400-801

b) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-C.

c) Do the Repair Confirmation procedure at the end of this task.

(c) If you do not find an electrical short at connector DM27321AC or DM27321AA, then continue.

(3) Do this check for a short between the wires of the excitation circuit for the center stabilizer position module, R2 wheel position and right outboard flaperon PCU transducers:

(a) Measure the resistance between the following pins of connector DM27321AC and DM27321AA (for the ACE-C) at the E2-5 shelf (WDM 27-41-11)(WDM 27-11-12)(WDM 27-11-17).

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

DM27321AC	DM27321AA
pin D1 and pin E1	pin K4 and pin K3
pin B2 and pin B1	

(b) If the resistance between any of the above pins of connector DM27321AC or DM27321AA is less than 10 ohms, then do these steps:

1) Disconnect the appropriate connector from the table below:

If the low resistance was found at pins:	Disconnect this connector:	To this equipment:
DM27321AC		
B1 or B2	DM27030	STAB POSN MDL-C, M27030
E1 or D1	DM27232	WHEEL POSN XDCR-R2, M27232

- a) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803 Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-C.

- b) Do the Repair Confirmation procedure at the end of this task.

- (4) Do this task obvious electrical faults in the applicable PCU wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found, do this task to check for applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Stabilizer Position
 - (b) 27-Primary Flight Controls, System Test, Wheel Position
 - (c) 27-Primary Flight Controls, System Test, Right Flaperon Position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

830. Multiple Transducers (Group C Fault R) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13023.

EFFECTIVITY
ARO ALL

27-02 TASKS 829-830

D633W103-ARO

Page 298.15
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
 - (a) Monitor the following indications on the flight controls maintenance pages 1 and 2 (on the MFD) (SSM 27-02-15):

Indication	Page
RIGHT STABILIZER POSITION	FLIGHT CONTROL PG 2/3
CAPT WHEEL POSITION 3	FLIGHT CONTROL PG 1/3
LEFT INBD FLAPPERON POSITION	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for CAPT WHEEL POSITION 3 is "00X", record "CAPT WHEEL POSITION 3". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Stabilizer System
 - (b) 27-Primary Flight Controls, System Test, Wheel Position
 - (c) 27-Primary Flight Controls, System Test, Left Flaperon Position.
 - (d) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
 - (e) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the right actuator control electronics (ACE-R).
 - (b) Put a tag that reads "OK" on the left 1 actuator control electronics (ACE-L1).
 - (c) Remove the ACE-R and the ACE-L1. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (d) Install the ACE tagged suspect in the ACE-L1 rack location, and install the ACE tagged OK in the ACE-R rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:
- 1) 27-Primary Flight Controls, System Test, Stabilizer System
 - 2) 27-Primary Flight Controls, System Test, Wheel Position
 - 3) 27-Primary Flight Controls, System Test, Left Flaperon Position.
- (f) If maintenance message 27-13023 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do the Repair Confirmation procedure at the end of this task.
- (g) If maintenance message 27-13023 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (i) Install the ACE tagged OK in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-L1.
- (2) Do this check of the excitation circuits for the right stabilizer position module, L3 wheel position, and left inboard flaperon position transducers:
NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.
- (a) Do a check for an electrical short to structure ground from the following pins of connector DM27221AC and DM27221AA (for the ACE-R) at the E5-2 shelf (WDM 27-11-14), (WDM 27-11-16), (WDM 27-41-13).

If the low resistance was found at pins:	Disconnect this connector:	To this equipment:
DM27221AA		
K4 or K3	DM27110	FLAPERON PCU -LIB, M27110

- 2) Do a check for continuity between the pins of connector DM27221AC or DM27221AA at the E5-2 shelf (WDM 27-11-16), (WDM 27-11-14), (WDM 27-41-13).
- 3) If you still find continuity between the pins that previously showed low resistance on connector DM27221AC and DM27221AA, then do these steps:
 - a) Repair the wiring between these pins of connector DM27221AC or DM27221AA (for the ACE-R) at the E5-2 shelf and the connector that was previously disconnected above (WDM 27-11-14), (WDM 27-11-16), (WDM 27-41-13).

DM27221AC	DM27031
pin B1	pin 3
pin B2	pin 2

DM27221AC	DM27133
pin E1	pin 8
pin D1	pin 9

DM27221AA	DM27110
pin K3	pin 12
pin K4	pin 13

- b) Re-connect the connector that was previously disconnected above.
 - c) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not still find continuity between the pins that previously showed low resistance on B1 and B2 on connector DM27221AC or DM27221AA, then do these steps:
 - a) Replace the equipment from the table below:

If the low resistance was found at pins:	Replace this equipment:	Do these tasks:
DM27122AC		
B1 or B2	STAB POSN MDL - R, M27031	Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801 Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801

Page 298.20
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

(Continued)

If the low resistance was found at pins:	Replace this equipment:	Do these tasks:
D1 or E1	WHEEL POSN XDCR - L3, M27133	Wheel Force Transducer Removal, AMM TASK 27-11-08-000-801 Wheel Force Transducer Installation, AMM TASK 27-11-08-400-801
DM27122AA		
K3 or K4	Flaperon PCU - LOB, M27110	Flaperon PCU - Removal, AMM TASK 27-11-12-000-801 Flaperon PCU - Installation, AMM TASK 27-11-12-400-801

- b) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- c) Do the Repair Confirmation procedure at the end of this task.

- (4) Do this task for obvious electrical faults in the applicable PCU wiring. (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, do this task to check for the applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Stabilizer System
- (b) 27-Primary Flight Controls, System Test, Wheel Position
- (c) 27-Primary Flight Controls, System Test, Left Flaperon Position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

831. Multiple Transducers (Group D Fault L1) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13024.

EFFECTIVITY
ARO ALL

27-02 TASKS 830-831

D633W103-ARO

Page 298.21
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
 - (a) Monitor the following indications on the flight controls maintenance pages 2 and 3(on the MFD) (SSM 27-02-15):

Indication	Page
RIGHT OUTBD AILERON POSITION	FLIGHT CONTROL PG 2/3
RUD TRI M DIRECTION L1	FLIGHT CONTROL PG 3/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for RIGHT OUTBD AILERON POSITION is "00X", record "RIGHT OUTBD AILERON POSITION". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Right Aileron Position
 - (b) 27-Primary Flight Controls, System Test, Rudder Trim System.
 - (c) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

 - (a) Put a tag that reads "SUSPECT" on the left 1 actuator control electronics (ACE-L1).
 - (b) Put a tag that reads "OK" on the right actuator control electronics (ACE-R).
 - (c) Remove the ACE-R and the ACE-L1. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (d) Install the ACE tagged SUSPECT in the ACE-R rack location, and install the ACE tagged OK in the ACE-L1 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.
- (e) Do these ground tests on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Right Aileron Position

- 2) 27-Primary Flight Controls, System Test, Rudder Trim System.
- (f) If maintenance message 27-13024 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do the Repair Confirmation procedure at the end of this task.
- (g) If maintenance message 27-13024 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (i) Install the ACE tagged OK in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-R.
- (2) Do this check of the excitation circuit for the FDR PED FORCE XDCR-L:
NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.
 - (a) Do a check for an electrical short to structure ground from the following pin A10 or A11 of connector DM27121AC (for the ACE-L1) at the E1-5 shelf (WDM 27-21-18).
 - (b) If you find an electrical short at pin A10 or A11 of connector DM27121AC, then do these steps:
 - 1) Disconnect connector DM27001 from the FDR PED FORCE XDCR-L (M27010).
 - 2) Do a check for an electrical short to structure ground from pin A10 or A11 of connector DM27121AC again (WDM 27-21-18).
 - 3) If you continue to find an electrical short at pin A10 or A11 of connector DM27121AC, then do these steps:
 - a) Repair the wiring between these pins of connector DM27121AC (for the ACE-L1) and connector DM27001 (for the FDR PED FORCE XDCR-L) (WDM 27-21-18).

DM27121AC

pin A10		pin 2
pin A11		pin 1

DM27001

- b) Re-connect connector DM27001, to the FDR PED FORCE XDCR-L (M27010).

27-02 TASK 831

D633W103-ARO

Page 298.23
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- c) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L1

- d) Do the Repair Confirmation procedure at the end of this task.

- 4) If you do not continue to find the electrical short at pin A10 or A11 of connector DM27121AC, then do these steps:

- a) Replace the FDR PED FORCE XDCL-L, M27010. These are the tasks:

- Rudder Pedal Flight Data Recorder (FDR) Force Transducer Removal, AMM TASK 27-21-04-000-802
- Rudder Pedal Flight Data Recorder (FDR) Force Transducer Installation, AMM TASK 27-21-04-400-802

- b) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L1

- c) Do the Repair Confirmation procedure at the end of this task.

- (c) If you do not find an electrical short at pin A10 or A11 of connector DM27121AC, then continue.

- (3) Do this check for a short between the wires of the excitation circuit for the FDR PED FORCE XDCL-L:

- (a) Measure the resistance between pin A10 and pin A11 of connector DM27121AC (for the ACE-L1) at the E1-5 shelf (WDM 27-21-18).

- (b) If the resistance between pin A10 and pin A11 of connector DM27121AC is less than 10 ohms, then do these steps:

- 1) Disconnect connector DM27001 from the FDR PED FORCE XDCL-L (M27010).

- 2) Do a check for continuity between pin A10 and pin A11 of connector DM27121AC (WDM 27-21-18).

- 3) If you still find continuity between pin A10 and A11 of connector DM27121AC, then do these steps:

- a) Repair the wiring between these pins of connector DM27121AC (For the ACE-L1) and connector DM27001 (for the FDR PED FORCE XDCL-L) (WDM 27-21-18).

DM27121AC

pin A10 pin 2
pin A11 pin 1

DM27001

- b) Re-connect connector DM27001 to the FDR PED FORCE XDCL-L (M27010).

- c) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

- <1> Remove the tag from the ACE-L1
- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not find continuity between pin A10 and A11 of connector DM27121AC, then do these steps:
- a) Replace the FDR PED FORCE XDCR-L, M27010. These are the tasks:
- Rudder Pedal Flight Data Recorder (FDR) Force Transducer Removal, AMM TASK 27-21-04-000-802
 - Rudder Pedal Flight Data Recorder (FDR) Force Transducer Installation, AMM TASK 27-21-04-400-802
- b) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- NOTE:** Make sure you do the ACE Installation Test.
- <1> Remove the tag from the ACE-L1
- c) Do the Repair Confirmation procedure at the end of this task.
- (4) Do this check of the excitation circuit for the right outboard aileron PCU and rudder trim actuator:
- NOTE:** Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.
- (a) Do a check for an electrical short to structure ground from the following pins of connector DM27121AA (for the ACE-L1) at the E1-5 shelf (WDM 27-21-15)(WDM 27-11-13).

DM27121AA
pin E15
pin E14
pin D4
pin E4

- (b) If you find an electrical short at the above pins, then do these steps:

- 1) Disconnect the appropriate connector from the table below.

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27121AA		
E15 or E14	DM27207A	AILERON PCU-LOB, M27207
D4 or E4	DM27126B	RUD TRIM ACTR, M27126

- 2) Do a check for an electrical short to structure ground from connector DM27121AA again (WDM 27-21-15)(WDM 27-11-13).
- 3) If you continue to find an electrical short at connector DM27121AA, then do these steps:
- a) Repair the wiring between these pins of connector DM27121AA (for the ACE-L1) and connector that was previously disconnected above (WDM 27-21-15)WDM 27-11-13.

Indication	Page
LEFT INBOARD AILERON POSITION	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for LEFT INBOARD AILERON POSITION is "00X", record "LEFT INBOARD AILERON POSITION". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Left Aileron Position
 - (b) 27-Primary Flight Controls, System Test, Elevator Feel System
 - (c) 27-Primary Flight Controls, System Test, Wheel Force Transducer
 - (d) 27-Primary Flight Controls, System Test, Wheel Position.
 - (e) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
 - (f) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):
- NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.
- (a) Put a tag that reads "SUSPECT" on the center actuator control electronics (ACE-C).
 - (b) Put a tag that reads "OK" on the left 2 actuator control electronics (ACE-L2).
 - (c) Remove the ACE-C and the ACE-L2. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (d) Install the ACE tagged SUSPECT in the ACE-L2 rack location, and install the ACE tagged OK in the ACE-C rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.
- (e) Do these ground tests on the MAT:
- 1) 27-Primary Flight Controls, System Test, Left Aileron Position
 - 2) 27-Primary Flight Controls, System Test, Elevator Feel System
 - 3) 27-Primary Flight Controls, System Test, Wheel Force Transducer

- 4) 27-Primary Flight Controls, System Test, Wheel Position.
- (f) If maintenance message 27-13026 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do the Repair Confirmation procedure at the end of this task.
- (g) If maintenance message 27-13026 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (i) Install the ACE tagged OK in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-L2.
- (2) Do this check of the excitation circuit for the right elevator feel actuator, left 2 wheel position, wheel force transducer and left inboard aileron PCU transducers:
NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.
- (a) Do a check for an electrical short to structure ground from the following pins of connector DM27321AA and DM27321AC at the E2-5 shelf (WDM 27-31-15)(WDM 27-11-12).

DM27321AC	DM27321AA
pin G14	pin E15
pin H14	pin E14
pin A11	pin E4
pin A10	pin D4

- (b) If you find an electrical short at the above pins, then do these steps:
 - 1) Disconnect the appropriate connector from the table below:

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27321AC		
G14 or H14	DM27132	WHEEL POSN XDCR-L2, M27132
A11 or A10	DM27129B	WHEEL FORCE XDCR ASSY-2, M27129

EFFECTIVITY

(Continued)

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27321AA		
E15 or E14	DM27108A	AILERON PCU-LIB, M27108
E4 or D4	DM27021	ELEV FEEL ACTR-R, M27021

- 2) Do a check for an electrical short to structure ground from connector DM27321AA and DM27321AC again (WDM 27-31-15)(WDM 27-11-12).
- 3) If you continue to find an electrical short at connector DM27321AA or DM27321AC, then do these steps:

- a) Repair the wiring between these pins of connector DM27321AA or DM27321AC at the E2-5 shelf and the connector that was previously disconnected above (WDM 27-31-15)(WDM 27-11-12):

DM27321AC	DM27132
pin G14	pin 9
pin H14	pin 8

DM27321AC	DM27129B
pin A10	pin 8
pin A11	pin 9

DM27321AA	DM27021
pin D4	pin 6
pin E4	pin 4

DM27321AA	DM27108A
pin E14	pin 12
pin E15	pin 13

- b) Re-connect the connector that was previously disconnected above.
- c) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-C

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not continue to find electrical short at pin G14, H14, A11 or A10 of connector DM27321AC or at pin E15, E14, D4 or E4 of connector DM27321AA, then do these steps:

- a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Using these tasks:
DM27321AC

If the electrical short was found at pin:	Replace this equipment:	Using these tasks:
G14 or H14	WHEEL POSN XDCR-L2, M27132	Wheel Position Transducer - Removal, AMM TASK 27-11-02-000-801 Wheel Position Transducer - Installation, AMM TASK 27-11-02-400-801
A11 or A10	WHEEL FORCE XDCR ASSY-2, M27129	Wheel Force Transducer - Removal, AMM TASK 27-11-08-000-801 Wheel Force Transducer - Installation, AMM TASK 27-11-08-400-801
DM27321AA		
E15 or E14	AILERON PCU-LIB, M27108	Aileron Power Control Unit (PCU) - Removal, AMM TASK 27-11-11-000-801 Aileron Power Control Unit (PCU) - Installation, AMM TASK 27-11-11-400-801
E4 or D4	ELEV FEEL ACTR-R, M27021	Elevator Feel Actuators - Removal, AMM TASK 27-31-07-000-801 Elevator Feel Actuators - Installation, AMM TASK 27-31-07-400-801

- b) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-C

- c) Do the Repair Confirmation procedure at the end of this task.

- (c) If you do not find an electrical short at connector DM27321AA or Dm27321AC, then continue.

- (3) Do this check for a short between the wires of the excitation circuit for the left 2 wheel position transducer, wheel force transducer, left inboard aileron PCU transducer, and right elevator feel actuator:

- (a) Measure the resistance between the following pins of connector DM27321AC and DM27321AA at the E2-5 shelf (WDM 27-11-12)(WDM 27-31-15).

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

DM27321AC	DM27321AA
pin G14 and pin H14	pin A11 and pi A10
pin E15 and pin E14	pin E4 and pin D4

- (b) If the resistance between any of the above pins of connector DM27321AC or DM27321AA is less than 10 ohms, then do these steps:

- 1) Disconnect the appropriate connector from the table below:

EFFECTIVITY
ARO ALL

27-02 TASK 832

D633W103-ARO

Page 298.32
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

If the low resistance was found at pins:	Disconnect this connector:	To this equipment:
DM27321AC		
G14 or H14	DM27132	WHEEL POSN XDCR-L2, M27132
A11 or A10	DM27129B	WHEEL FORCE XDCR ASSY-2, M27129
DM27321AA		
E15 or E14	DM27108A	AILERON PCU-LIB, M27108
E4 or D4	DM27021	ELEV FEEL ACTR-R, M27021

- 2) Do a check for continuity between the pins that previously showed low resistance on connector DM27321AC or DM27321AA at the E2-5 shelf (WDM 27-11-12)(WDM 27-31-15).
- 3) If you still find continuity between the pins that was previously showed low resistance on connector DM27321AC or DM27321AA, then do these steps:
 - a) Repair the wiring between these pins of connector DM27321AC or DM27321AA at the E2-5 shelf and the connector that was previously disconnected above (WDM 27-11-12)(WDM 27-31-15):

DM27321AC	DM27132
pin G14	pin 9
pin H14	pin 8

DM27321AC	DM27129B
pin A10	pin 8
pin A11	pin 9

DM27321AA	DM27108A
pin E15	pin 13
pin E14	pin 12

DM27321AA	DM27021
pin D4	pin 6
pin E4	pin 4

- b) Re-connect the connector that was previously disconnected above.
 - c) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
<1> Remove the tag from the ACE-C
 - d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not still find continuity between the pins that was previously showed low resistance on connector DM27321AC or DM27321AA, then do these steps:
 - a) Replace the equipment from the table below:

FAULT ISOLATION MANUAL**

If the low resistance was found at pins:	Replace this equipment:	Using these tasks:
DM27321AC		
G14 or H14	WHEEL POSN XDCR-L2, M27132	Wheel Position Transducer - Removal, AMM TASK 27-11-02-000-801 Wheel Position Transducer - Installation, AMM TASK 27-11-02-400-801
A11 or A10	WHEEL FORCE XDCR ASSY-2, M27129	Wheel Force Transducer - Removal, AMM TASK 27-11-08-000-801 Wheel Force Transducer - Installation, AMM TASK 27-11-08-400-801
DM27321AA		
E15 or E14	AILERON PCU-LIB, M27108	Aileron Power Control Unit (PCU) - Removal, AMM TASK 27-11-11-000-801 Aileron Power Control Unit (PCU) - Installation, AMM TASK 27-11-11-400-801
E4 or D4	ELEV FEEL ACTR-R, M27021	Elevator Feel Actuators - Removal, AMM TASK 27-31-07-000-801 Elevator Feel Actuators - Installation, AMM TASK 27-31-07-400-801

- b) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-C.

- c) Do the Repair Confirmation procedure at the end of this task.

- (4) Do a wiring check for obvious electrical faults in the applicable PCU wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
(b) If no faults are found with PCU wiring, do this task to check for the applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
(c) If a fault is found, repair or replace the applicable wiring.
(d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Left Aileron Position
(b) 27-Primary Flight Controls, System Test, Elevator Feel System
(c) 27-Primary Flight Controls, System Test, Wheel Force Transducer
(d) 27-Primary Flight Controls, System Test, Wheel Position.

27-02 TASK 832

D633W103-ARO

Page 298.34
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

833. Multiple Transducers (Group D Fault R) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13027.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps.
- (a) Monitor the following indications on the flight controls maintenance pages 1, 2 and 3(on the MFD) (SSM 27-02-15):

Indication	Page
F/O WHEEL POSITION 3	FLIGHT CONTROL PG 1/3
RUD TRIM POSITION 2	FLIGHT CONTROL PG 1/3
RIGHT INBOARD AILERON POSITION	FLIGHT CONTROL PG 2/3
RUD TRIM ARMED R	FLIGHT CONTROL PG 3/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for LEFT INBOARD AILERON POSITION is "00X", record "LEFT INBOARD AILERON POSITION". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Right Aileron Position
- (b) 27-Primary Flight Controls, System Test, Wheel Position
- (c) 27-Primary Flight Controls, System Test, Rudder Trim System.
- (d) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
- (e) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
- 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
- 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):
- NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.
- (a) Put a tag that reads "SUSPECT" on the right actuator control electronics (ACE-R).

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (b) Put a tag that reads "OK" on the left 2 actuator control electronics (ACE-L2).
- (c) Remove the ACE-R and the ACE-L2. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged SUSPECT in the ACE-L2 rack location, and install the ACE tagged OK in the ACE-R rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Right Aileron Position
 - 2) 27-Primary Flight Controls, System Test, Wheel Position
 - 3) 27-Primary Flight Controls, System Test, Rudder Trim System.
 - (f) If maintenance message 27-13027 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

 - 5) Do the Repair Confirmation procedure at the end of this task.
 - (g) If maintenance message 27-13027 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.
 - (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (i) Install the ACE tagged OK in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-R.

- (2) Do this check of the excitation circuit for the FDR PED FORCE XDCR-R:

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

- (a) Do a check for an electrical short to structure ground from pin A10 or A11 of connector DM27221AC (for the ACE-R) (WDM 27-21-18).
- (b) If you find an electrical short at pin A10 or A11 of connector DM27221AC, then do these steps:
 - 1) Disconnect connector DM27002 from the FDR PED FORCE XDCR-R (M27011).
 - 2) Do a check for an electrical short to structure ground from pin A10 or A11 of connector DM27221AC again (WDM 27-21-18).

- 3) If you continue to find an electrical short at pin A10 or A11 of connector DM27221AC, then do these steps:
- a) Repair the wiring between these pins of connector DM27221AC (For the ACE-R) and connector DM27002 (for the FDR PED FORCE XDCR-R) (WDM 27-21-18).

DM27221AC	DM27002
pin A10	pin 2
pin A11	pin 1

- b) Re-connect connector DM27002, to the FDR PED FORCE XDCR-R (M27011).
- c) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not continue to find the electrical short at pin A10 or A11 of connector DM27221AC, then do these steps:
- a) Replace the FDR PED FORCE XDCR-R, M27011. These are the tasks:
- Rudder Pedal Flight Data Recorder (FDR) Force Transducer Removal, AMM TASK 27-21-04-000-802
 - Rudder Pedal Flight Data Recorder (FDR) Force Transducer Installation, AMM TASK 27-21-04-400-802
- b) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- c) Do the Repair Confirmation procedure at the end of this task.

- (c) If you do not find an electrical short at pin A10 or A11 of connector DM27221AC, then continue.

- (3) Do this check of the excitation circuit for the right 3 wheel position, right inboard aileron PCU, rudder trim actuator, and rudder trim position transducers:

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

- (a) Do a check for an electrical short to structure ground from pins of connector DM27221AC and DM27221AA (for the ACE-R) at the E5-2 shelf (WDM 27-11-14)(WDM 27-21-15)(WDM 27-21-18).

DM27221AA	DM27043
pin E4	pin 8
pin D4	pin 9

- b) Re-connect the connector that was previously disconnected above.
 - c) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not still find continuity between the pins that was previously showed low resistance on connector DM27221AC or DM27221AA, then do these steps:
 - a) Replace the equipment from the table below:

If the low resistance was found at pins:	Replace this equipment:	Using these tasks:
DM27221AC

777-200/300 FAULT ISOLATION MANUAL

(Continued)

If the low resistance was found at pins:	Replace this equipment:	Using these tasks:
G14 or H14	WHEEL POSN XDCR-R3, M27233	Wheel Force Transducer - Removal, AMM TASK 27-11-02-000-801 Wheel Force Transducer - Installation, AMM TASK 27-1-02-400-801
DM27221AA		
E15 or E14	AILERON PCU-RIB, M27208	Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801 Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
D4 or E4	RUDDER TRIM POSN XDCR-2, M27043	Rudder Trim Position Transducer - Removal, AMM TASK 27-21-03-000-801 Rudder Trim Position Transducer - Installation, AMM TASK 27-21-03-400-801

- b) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- c) Do the Repair Confirmation procedure at the end of this task.

- (5) Do this task for obvious electrical faults in the applicable PCU wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with PCU wiring, do this task to check for the applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Right Aileron Position
- (b) 27-Primary Flight Controls, System Test, Wheel Position
- (c) 27-Primary Flight Controls, System Test, Rudder Trim System.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

834. Multiple Transducers (Group E Fault L1) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13028.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
- (a) Monitor the following indications on the flight controls maintenance pages 2 and 3(on the MFD) (SSM 27-02-15):

Indication	Page
SPEEDBRAKE HANDLE POSITION 1	FLIGHT CONTROL PG 1/3
SPOILER POSITION 2	FLIGHT CONTROL PG 2/3
SPOILER POSITION 13	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for SPOILER POSITION 2 is "00X", record "SPOILER POSITION 2". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Speedbrake System
- 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- (b) 27-Primary Flight Controls, System Test, Spoiler 2, 13 System.
- 1) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (c) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
- (d) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
- 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
- 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):
- NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.
- (a) Put a tag that reads "SUSPECT" on the left 1 actuator control electronics (ACE-L1).
- (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
- (c) Remove the ACE-C and the ACE-L1. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

EFFECTIVITY
ARO ALL

27-02 TASK 834

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-L1 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do these ground tests on the MAT:

- 1) 27-Primary Flight Controls, System Test, Speedbrake System
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- 2) 27-Primary Flight Controls, System Test, Spoiler 2, 13 System.
- 3) Push the speedbrake lever forward to make sure that it is in the DOWN position.

- (f) If maintenance message 27-13028 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is not faulty. Do these steps:

- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

- 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 3) Remove the ACE tagged SUSPECT from the airplane.

- 4) Install a new ACE in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 5) Do the Repair Confirmation procedure at the end of this task.

- (g) If maintenance message 27-13028 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.

- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

- (i) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- (j) Remove the tag from the ACE-C.

- (2) Do this check of the excitation circuit for the FDR COL FORCE XDCR-L:

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

- (a) Do a check for an electrical short to structure ground from pins of connector DM27121AA and DM27121AC (for the ACE-L1) at the E1-5 shelf (WDM 27-31-17).

DM27121AA	DM27121AC
pin K6	pin K6
pin K5	pin K5

- (b) If you find an electrical short at the above pins, then do these steps:

- 1) Disconnect the appropriate connector from the table below:

EFFECTIVITY

**777-200/300
FAULT ISOLATION MANUAL**

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27121AC		
K6 or K5	DM27009	FDR COL FORCE XDCR-R, M27013
DM27121AA		
K6 or K5	DM27008	FDR COL FORCE XDCR-L, M27012

- 2) Do a check for an electrical short to structure ground from connector DM27121AA and DM27121AC again (WDM 27-31-17).
- 3) If you continue to find an electrical short at connector DM27121AA or DM27121AC, then do these steps:

- a) Repair the wiring between these pins of connector DM27121AA or DM27121AC (for the ACE-L1) and the connector that was previously disconnected above (WDM 27-31-17).

DM27121AA	DM27008
pin K5	pin 8
pin K6	pin 9

DM27121AC	DM27009
pin K6	pin 9
pin K5	pin 8

- b) Re-connect the connector that was previously disconnected above.
- c) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-L1

- d) Do the Repair Confirmation procedure at the end of this task.
- 4) If you do not continue to find the electrical short at pin K5 or K6 of connector DM27121AA or pin K6 or K5 of connector DM27121AC, then do these steps:
- a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Using these tasks:
DM27121AA		
K6 or K5	FDR COL FORCE XDCR-L, M27012	Column Force Transducer- Removal, AMM TASK 27-31-08-000-801 Column Force Transducer-Installation, AMM TASK 27-31-08-400-801

777-200/300 FAULT ISOLATION MANUAL

- 2) Do a check for an electrical short to structure ground from pin A8 or A7 of connector DM27121AC again (WDM 27-61-11).
- 3) If you continue to find an electrical short at pin A8 or A7 of connector DM27121AC, then do these steps:
 - a) Repair the wiring between these pins of connector DM27121AC (For the ACE-number 2) and connector DM27117 (for the number 2 spoiler PCU) (WDM 27-61-11).

DM27121AC	DM27117
pin A8	pin 8
pin A7	pin 7

- b) Re-connect connector DM27117, to the number 2 spoiler PCU (M27117).
 - c) Do the Repair Confirmation procedure at the end of this task.
 - 4) If you do not continue to find the electrical short at pin A8 or A7 of connector DM27121AC, then do these steps:
 - a) Replace the number 2 spoiler PCU, M27117. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - b) Do the Repair Confirmation procedure at the end of this task.
 - (c) If you do not find an electrical short at pin A8 or A7 of connector DM27121AC, then continue.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Speedbrake System
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) 27-Primary Flight Controls, System Test, Spoiler 2, 13 System.
 - (c) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

835. Multiple Transducers (Group E Fault C) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13030.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
 - (a) Monitor the following indications on the flight controls maintenance pages 1 and 2 (on the MFD) (SSM 27-02-15):

EFFECTIVITY
ARO ALL

27-02 TASKS 834-835

777-200/300 FAULT ISOLATION MANUAL

Indication	Page
SPEEDBRAKE HANDLE POSITION 3	FLIGHT CONTROL PG 1/3
SPOILER POSITION 1	FLIGHT CONTROL PG 2/3
SPOILER POSITION 7	FLIGHT CONTROL PG 2/3
SPOILER POSITION 8	FLIGHT CONTROL PG 2/3
SPOILER POSITION 14	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for SPOILER POSITION 1 is "00X", record "SPOILER POSITION 1". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Speedbrake System
- 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- (b) 27-Primary Flight Controls, System Test, Spoiler 1, 7, 8, 14 System.
- (c) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (d) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
- (e) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
- 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the center actuator control electronics (ACE-C).
- (b) Put a tag that reads "OK" on the left 2 actuator control electronics (ACE-L2).
- (c) Remove the ACE-C and the ACE-L2. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged SUSPECT in the ACE-L2 rack location, and install the ACE tagged OK in the ACE-C rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

Page 298.52
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (e) Do these ground tests on the MAT:
- 1) 27-Primary Flight Controls, System Test, Speedbrake System
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) 27-Primary Flight Controls, System Test, Spoiler 1, 7, 8, 14 System.
 - 3) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (f) If maintenance message 27-13030 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do the Repair Confirmation procedure at the end of this task.
- (g) If maintenance message 27-13030 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (i) Install the ACE tagged OK in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-L2.
- (2) Do this check of the excitation circuits for the speedbrake lever transducer and spoiler PCU position transducers:
- NOTE:** Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.
- (a) Do a check for an electrical short to structure ground from the following pins of connectors DM27321AC and DM27321AA (for the ACE-C) at the E2-5 shelf (WDM 27-61-15).

DM27321AC	DM27321AA
pin D4	pin K6
pin E4	pin K5
pin K6	pin A8
pin K5	pin A7
pin A8	
pin A7

**777-200/300
FAULT ISOLATION MANUAL**

(b) If the resistance between the above pins is not 25-200 ohms, then do these steps:

1) Disconnect the appropriate connector from the table below:

If the electrical short was found at pin:	Disconnect this connector:	To this equipment:
DM27321AC		
D4 or E4	DM27029C	Speed Brake Lever Transducer, M27029
K6 or K5	DM27215	SPLR PCU (8), M27215
A8 or A7	DM27216	SPLR PCU (14), M27216
DM27321AA		
K6 or K5	DM27115	SPLR PCU (7), M27115
A8 or A7	DM27116	SPLR PCU (1), M27116

- 2) Do a check between for an electrical short to structure ground of connector DM27321AC and DM27321AA again.
- 3) If you continue to find an electrical short at connector DM27321AA or DM27321AC, then do these steps:
- a) Repair the wiring between these pins of connector DM27321AA or DM27321AC (for the ACE-C) and the connector that was previously disconnected above (WDM 27-61-15).

DM27321AC	DM27029C
pin D4	pin 9
pin E4	pin 8

DM27321AC	DM27215
pin K6	pin 8
pin K5	pin 7

DM27321AC	DM27216
pin A8	pin 8
pin A7	pin 7

DM27321AA	DM27115
pin K6	pin 8
pin K5	pin 7

DM27321AA	DM27116
pin A8	pin 8
pin A7	pin 7

b) Re-connect the connector that was previously disconnected above.

777-200/300 FAULT ISOLATION MANUAL

- c) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-C.

- d) Do the Repair Confirmation procedure at the end of this task.

- 4) If you do not continue to find the the electrical short at pin D4, E4, K6, K5, A8, or A7 of connector DM27321AC or pin K6, K5, A8, or A7 of connector DM27321AA, then do these steps:

- a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Using these tasks:
DM27321AC		
D4 or E4	Speed Brake Lever Transducer, M27029	Speed Brake Lever Transducer Removal, AMM TASK 27-61-02-000-801 Speed Brake Lever Transducer Installation, AMM TASK 27-61-02-400-801
K6 or K5	SPLR PCU (8), M27215	Inboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-07-000-801 Inboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-07-400-801
A8 or A7	SPLR PCU (14), M27216	Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801 Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
DM27321AA		
K6 or K5	SPLR PCU (7), M27115	Inboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-07-000-801 Inboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-07-400-801
A8 or A7	SPLR PCU (1), M27116	Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801 Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801

- b) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-C.

- c) Do the Repair Confirmation procedure at the end of this task.

777-200/300
FAULT ISOLATION MANUAL

- (c) If the resistance between the above pins of connector DM27321AC or DM27321AA is 25-200 ohms, then continue.
- (3) Do this check for a short between the wires of the excitation circuit for the speedbrake lever and spoiler PCU position transducers::
- (a) Measure the resistance between the following pins of connector DM27321AA and DM27321AC (for the ACE-C) at the E2-5 shelf (WDM 27-61-15)

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

DM27321AC	DM27321AA
pin D4 and pin E4	pin K6 and pin K5
pin K6 and pin K5	pin A8 and pin A7
pin A8 and pin A7	

- (b) If the resistance between any of the above pins of connector DM27321AC or DM27321AA is not 25-200 ohms, then do these steps:

1) Disconnect the appropriate connector from the table below.

If the low voltage was found at pins:	Disconnect this connector:	To this equipment:
DM27321AC		
D4 or E4	DM27029C	Speed Brake Lever Transducer, M27029
K6 or K5	DM27215	SPLR PCU (8), M27215
A8 or A7	DM27216	SPLR PCU (14), M27216
DM27321AA		
K6 or K5	DM27115	SPLR PCU (7), M27115
A8 or A7	DM27116	SPLR PCU (1), M27116

- (c) Do a check between these pins that previously showed low resistance on connector DM27321AA or DM27321AC at the E2-5 shelf (WDM 27-61-15):
- (d) If you still find continuity between the pins that previously showed low resistance on connector DM27321AA or DM27321AC, then do these steps:
- (e) Repair the wiring between these pins of connector DM27321AA or DM27321AC and the connector that was previously disconnected above (WDM 27-61-15).

DM27321AC	DM27029C

Page 298.57
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

(Continued)

If the low voltage was found at pins:	Replace this equipment:	Using these tasks:
A8 or A7	SPLR PCU (1), M27116	Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801 Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801

- (b) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

- 1) Remove the tag from the ACE-R.
- (c) Do the Repair Confirmation procedure at the end of this task.
- (5) Do a wiring check for obvious electrical faults in the applicable PCU wiring. Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, do this task to check for the applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Speedbrake System
- 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- (b) 27-Primary Flight Controls, System Test, Spoiler 1, 7, 8, 14 System.
- (c) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

836. Multiple Transducers (Group E Fault R) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13031.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps.
- (a) Monitor the following indications on the flight controls maintenance pages 1 and 2 (on the MFD) (SSM 27-02-15):

EFFECTIVITY

Indication	Page
SPEEDBRAKE HANDLE POSITION 4	FLIGHT CONTROL PG 1/3
SPOILER POSITION 3	FLIGHT CONTROL PG 2/3
SPOILER POSITION 6	FLIGHT CONTROL PG 2/3
SPOILER POSITION 9	FLIGHT CONTROL PG 2/3
SPOILER POSITION 12	FLIGHT CONTROL PG 2/3

- (b) For the above indications, note the appropriate transducer name for any indications that show an "X" after the transducer value. If an "X" shows after the transducer value, it means that the data is invalid.

NOTE: For example, if the value shown for SPOILER POSITION 3 is "00X", record "SPOILER POSITION 3". This information may be useful during further troubleshooting.

- (c) Do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT:
- (a) 27-Primary Flight Controls, System Test, Speedbrake System
- 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- (b) 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
- (c) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (d) If the maintenance message shows on the ground test display (after the last test), then do the Fault Isolation Procedure below.
- (e) If the maintenance message does not show on the ground test display (after the last test), then there was an intermittent fault.
- 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you correct the fault, then apply hydraulic power to all 3 hydraulic systems (AMM TASK 29-11-00-860-801). This will erase the messages.

- (a) Put a tag that reads "SUSPECT" on the right actuator control electronics (ACE-R).
- (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
- (c) Remove the ACE-C and the ACE-R. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-R rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

D633W103-ARO

Page 298.59
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (e) Do these ground tests on the MAT:
- 1) 27-Primary Flight Controls, System Test, Speedbrake System
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - 3) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (f) If maintenance message 27-13031 does not show on the ground test display (after the last test), the ACE tagged SUSPECT is faulty. Do these steps:
- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do the Repair Confirmation procedure at the end of this task.
- (g) If maintenance message 27-13031 still shows on the ground test display, the ACE tagged SUSPECT is not faulty. Continue with (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (i) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
NOTE: Make sure you do the ACE Installation Test.
- (j) Remove the tag from the ACE-C.
- (2) Do this check of the excitation circuits for the speedbrake lever and spoiler PCU position transducers:
- NOTE:** Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.
- (a) Do a check for an electrical short to structure ground from the following pins of connectors DM27221AA and DM27221AC (for the ACE-R) at the E5-2 shelf (WDM 27-61-17).

DM27221AC	DM27221AA

D633W103-ARO

Page 298.61
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- c) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- d) Do the Repair Confirmation procedure at the end of this task.

- 4) If you do not continue to find the electrical short at pin A7, A8, K5, or K6 of connector DM27221AA or pin A7, A8, D4, E4, K5, or K6 of connector DM27221AC, then do these steps:

- a) Replace the equipment from the table below:

If the electrical short was found at pin:	Replace this equipment:	Using these tasks:
DM27221AC		
D4 or E4	Speed Brake Lever Transducer, M27029	Speed Brake Lever Transducer Removal, AMM TASK 27-61-02-000-801 Speed Brake Lever Transducer Installation, AMM TASK 27-61-02-400-801
K6 or D5	SPLR PCU (9), M27214	Inboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-07-000-801 Inboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-07-400-801
A8 or A7	SPLR PCU (12), M27218	Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801 Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
DM27221AA		
K6 or K5	SPLR PCU (6), M27114	Inboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-07-000-801 Inboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-07-400-801
A8 or A7	SPLR PCU (3), M27118	Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801 Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801

- b) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: Make sure you do the ACE Installation Test.

<1> Remove the tag from the ACE-R.

- c) Do the Repair Confirmation procedure at the end of this task.

- (c) If the resistance between the above pins of connector DM27221AC or DM27221AA is 25-200 ohms, then continue.

- (3) Do this check for a short between the wires of the excitation circuit for the speedbrake lever and spoiler PCU transducers:

D633W103-ARO

Page 298.62
Sep 05/2016

777-200/300
FAULT ISOLATION MANUAL

- (a) Measure the resistance between the following pins of connector DM27221AC and DM27221AA (for the ACE-R) at the E5-2 shelf (WDM 27-61-17).

NOTE: Any transducers recorded as reporting invalid data in the Initial Evaluation should be checked first.

DM27221AC	DM27221AA
pin D4 and pin E4	pin K6 and pin K5
pin K6 and pin K5	pin A8 and pin A7
pin A8 and pin A7	

- (b) If the resistance between any of the above pins of connector DM27221AC or DM27221AA is not 25-200 ohms, then do these steps:

- 1) Disconnect the appropriate connector from the table below.

If the low resistance was found at pins:	Disconnect this connector:	To this equipment:
DM27221AC		
D4 or E4	DM27029D	Speed Brake Lever Transducer, M27029
K6 or K5	DM27114	SPLR PCU (6), M27114
A8 or A7	DM27118	SPLR PCU (3), M27118
DM27221AA		
K6 or K5	DM27214	SPLR PCU (9), M27214
A8 or A7	DM27218	SPLR PCU (12), M27218

- 2) Do a check for continuity between the pins that previously showed low resistance on connector DM27221AC or DM27221AA at the E5-2 shelf (WDM 27-61-17):
- 3) If you still find continuity between the pins that previously showed low resistance on connector DM27221AA or DM27221AC, then do these steps:
- a) Repair the wiring between these pins of connector DM27221AA or DM27221AC (for the ACE-R) and the connector that was previously disconnected above (WDM 27-61-17).

DM27221AC	DM27029D
pin D4	pin 9
pin E4	pin 8

DM27221AC	DM27114

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

<1> Remove the tag from the ACE-R.

c) Do the Repair Confirmation procedure at the end of this task.

- (4) Do this task for obvious electrical faults in the applicable PCU wiring. Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, do this task to check for the applicable PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Do these ground tests on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Speedbrake System
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - (c) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

837. ACE-L2 Flaps Retracted Discrete Disagree (FSEU-1) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13033.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the discrete wiring:

- 6) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - c) If the maintenance message shows on the ground test display, then continue.
- (g) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the FSEU 1, M27001. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

840. ACE-L1 Flaps Retracted Discrete Disagree (FSEU-2) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13036.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.

- (3) Replace the ACE-C recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
- 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - If the maintenance message shows on the ground test display, then continue.
- (4) Replace the FSEU 2, M27002. These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (a) Do this ground test on the MAT:
- 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

843. ACE-R Flaps Retracted Discrete Disagree (FSEU-2) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13039.

EFFECTIVITY
ARO ALL

27-02 TASKS 842-843

D633W103-ARO

Page 298.81
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the discrete wiring:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2
K	5	C27607	SLATS PRI DR CTRL 2
K	8	C27630	SLATS ELEC CTRL RLY PWR
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	11	C27604	FLAPS PRI DR CTRL 1
G	12	C27606	SLATS PRI DR CTRL 1

- (c) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf.
 - (d) Remove the flap/slat electronics unit 2 (FSEU 2), M27002, from the E4-1 shelf.

EFFECTIVITY

Page 298.82
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (e) Do a wiring check between these pins of connector DM27221AB for the ACE-R and connector DM27002AA for FSEU 2 (WDM 27-02-61):

DM27221AB	DM27002AA
pin E6	pin F7

- (f) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install the FSEU 2, M27002.
 - 3) Re-install the ACE-R, M27221.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2
K	5	C27607	SLATS PRI DR CTRL 2
K	8	C27630	SLATS ELEC CTRL RLY PWR
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	11	C27604	FLAPS PRI DR CTRL 1
G	12	C27606	SLATS PRI DR CTRL 1

- 5) Remove the DO-NOT-CLOSE tags and close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 6) Do this ground test on the MAT:
- a) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.

- c) If the maintenance message shows on the ground test display, then continue.
- (g) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the FSEU 2, M27002. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

844. Flaps Retracted Discrete Signals from FSEU 1 and FSEU 2 Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13040.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:

NOTE: During this test the MAT will ask you to select CONTINUE TEST or CONFIGURE.
Select the CONTINUE TEST alternative.

- (a) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit Interface to ACE.
 - (b) During this test the MAT will ask you to select CONTINUE TEST or CONFIGURE. Select CONFIGURE and then CONTINUE (not CONTINUE TEST).

END OF TASK

845. PFC Disconnect Switch Problems (ACE-L1) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13041.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, PFC Disconnect Switch.
 - (b) If the maintenance message shows on the ground test display, then continue.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
- (2) Set the Primary Flight Controls (PFC) DISC switch to the NORM position.
- (3) Do this task to show the flight control system synoptic page 3 of 3, Showing a System Synoptic Page, AMM TASK 31-61-00-800-816.
 - (a) Compare the values on page 3 of 3 of the Flight Control synoptic page with the values in the table below:

ACE ANALOG DISCRETE	L1	L2	C	R
PFC DISCONNECT SWITCH	AUTO	AUTO	AUTO	AUTO

- (b) If the value of the ACE-L1 signal does not match the expected value, do the Fault Isolation Procedure below. Otherwise, continue.
- (4) Set the Primary Flight Controls (PFC) DISC switch to the DISC position.
 - (a) Compare the values on page 3 of 3 of the Flight Control synoptic page with the values in the table below:

ACE ANALOG DISCRETE	L1	L2	C	R
PFC DISCONNECT SWITCH	DISC	DISC	DISC	DISC

- (b) If the value of the ACE-L1 signal does not match the expected value, set the primary flight controls (PFC) DISC switch to the NORM position and do the Fault Isolation Procedure below. Otherwise, continue.
- (5) Set the Primary Flight Controls (PFC) DISC switch to the NORM position.
 - (a) Compare the values on page 3 of 3 of the Flight Control synoptic page with the values in the table below:

- (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
- (2) Set the Primary Flight Controls (PFC) DISC switch to the NORM position.
- (3) Do this task to show the flight control system synoptic page 3 of 3, Showing a System Synoptic Page, AMM TASK 31-61-00-800-816.
 - (a) Compare the values on page 3 of 3 of the Flight Control synoptic page with the values in the table below:

ACE ANALOG DISCRETE	L1	L2	C	R
PFC DISCONNECT SWITCH	AUTO	AUTO	AUTO	AUTO

- (b) If the value of the ACE-L2 signal does not match the expected value, do the Fault Isolation Procedure below. Otherwise, continue.
- (4) Set the Primary Flight Controls (PFC) DISC switch to the DISC position.
 - (a) Compare the values on page 3 of 3 of the Flight Control synoptic page with the values in the table below:

ACE ANALOG DISCRETE	L1	L2	C	R
PFC DISCONNECT SWITCH	DISC	DISC	DISC	DISC

- (b) If the value of the ACE-L2 signal does not match the expected value, set the primary flight controls (PFC) DISC switch to the NORM position and do the Fault Isolation Procedure below. Otherwise, continue.
- (5) Set the Primary Flight Controls (PFC) DISC switch to the NORM position.
 - (a) Compare the values on page 3 of 3 of the Flight Control synoptic page with the values in the table below:

ACE ANALOG DISCRETE	L1	L2	C	R
PFC DISCONNECT SWITCH	AUTO	AUTO	AUTO	AUTO

- (b) If the value of the ACE-L2 signal does not match the expected value, do the Fault Isolation Procedure below. Otherwise, continue.
 - NOTE:** Do not do the following test unless you have sufficient time for troubleshooting. If the ACE monitor test fails, a FLIGHT CONTROL SYS EICAS status message will show. You must clear this message in order to dispatch the aircraft.
- (6) Do this task: Actuator Control Electronics (ACE) Monitor Test, AMM TASK 27-02-02-400-801.
 - (a) If the maintenance message shows on the ground test display, do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

D633W103-ARO

Page 298.92
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

(1) Do this check of the switch wiring:

(a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

(b) Remove the left-2 actuator control electronics (ACE-L2), M27122, from the E1-1 shelf.

(c) Disconnect connector DM27042B from the ADIRU/PFC DISC/TAC panel, M27042 (P5 overhead panel).

(d) Do a wiring check between these pins of connector DM27122AB for the ACE-L2 and connector DM27042B at the ADIRU/PFC DISC/TAC panel (WDM 27-02-49):

<u>DM27122AB</u>	<u>DM27042B</u>
pin F2	pin 11
pin G1	pin 10
pin G2	pin 12

(e) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-connect connector DM27042B to the ADIRU/PFC DISC/TAC panel.
- 3) Re-install the ACE-L2, M27122.
- 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

5) Do this ground test on the MAT:

- a) 27-Primary Flight Controls, System Test, PFC Disconnect Switch.
- b) If the maintenance message does not show on the ground test display, you corrected the fault.
- c) If the maintenance message shows on the ground test display, then continue.

FAULT ISOLATION MANUAL

- (3) If the MAT shows ACTIVE for the maintenance message on the ground test display, then do the Fault Isolation Procedure below.
- (4) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitor.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Open the P110 left power management panel.
 - (b) Do a check for 28V DC from the circuit breaker C27608 to structure ground.
 - (c) If there is not 28V DC at the circuit breaker C27608, then do these steps:
 - 1) Replace this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	28	C27608	ACE-L2 PWR

- 2) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitor.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (d) If there is 28V DC at the circuit breaker C27608, then continue.
- (2) Do this check of the wiring:
 - (a) Disconnect connector D11013P from the P110 left power management panel.
 - (b) Remove the left 2 actuator control electronics (ACE-L2), M27122, from the E1-1 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (c) Do a wiring check between these pins of connector DM27122AB at the E1-1 and connector D11013P at the P110 panel (WDM 27-02-32):

DM27122AB	D11013P
pin A1	pin 5

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 3) Re-connect connector D11013P.
 - 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitor.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

851. **ACE-C Circuit Breaker Open - Fault Isolation**

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15012.

B. Initial Evaluation

- (1) Close this circuit breaker on the right Power Supply Assembly (PSA-R), M24201:
 - (a) A1, ACE PWR
- (2) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (3) If the MAT shows ACTIVE for the maintenance message on the ground test display, then do the Fault Isolation Procedure below.
- (4) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitor.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the right power supply assembly (PSA-R), M24201.

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-R	PFC BAT INTLK

- (b) Remove the PSA-R, M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
- (c) Remove the right actuator control electronics (ACE-R), M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Do a wiring check between these pins of connector DM27221AB for the E5-2 shelf and connector DM24201AD at the E5-1 shelf (WDM 27-02-34):

DM27221AB	DM24201AD
pin A1	pin 5

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 3) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.

 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the PSA-C, M24301. These are the tasks:
 - Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) Close this circuit breaker on the right Power Supply Assembly (PSA-R), M24201:
 - (a) D2, PFC LANE 1
- (2) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (3) If the MAT shows ACTIVE for the maintenance message on the ground test display, then do the Fault Isolation Procedure below.
- (4) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Primary Flight Computer (R) Lane Reset.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Remove the PSA-R, M24301, from the E5-1 shelf. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (b) Remove the right primary flight computer (PFC-R), M27206. To remove it, do this task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
 - (c) Do a wiring check between these pins of connector DM27206AB at the E16-1 shelf and connector DM24201AD at the E5-1 shelf (WDM 27-02-34):

DM27206AB

DM24201AD

pin B2 pin 3

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the PFC-R, M27206. To install it, do this task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
 - 3) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 4) Remove the DO-NOT-CLOSE tags and close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-R	PFC LANE 1
D	4	CBD4-R	PFC LANE 2
D	6	CBD6-R	PFC LANE 3
D	8	CBD8-R	PFC BAT INTLK

- 5) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Primary Flight Computer (R) Lane Reset.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.

EFFECTIVITY

777-200/300 FAULT ISOLATION MANUAL

862. ACE-L2 No Output On Flt Ctrl 629 Bus-L - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-13047, 27-18815.

B. Initial Evaluation

- (1) Do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - (b) If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 3) If the maintenance message shows on the MAT, then continue.
 - (3) Replace the ARINC 629 coupler, B27121, in the P112 panel. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801
- NOTE: This coupler connects the ACE-L2 to the Flt Ctrl 629 Bus-L.
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 3) If the maintenance message shows on the MAT, then continue.
 - (4) Do this check of the wiring from the ACE-L2 to the coupler:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

K	28	C27608	ACE-L2 PWR

- (b) Remove the ACE-L2, M27122.
- (c) Disconnect connector DB27121 from the coupler, B27121.
- (d) Do a wiring check between these pins of connector DM27122AD at the E1-1 shelf and connector DB27121 at the P112 panel (WDM 27-02-42):

<u>DM27122AD</u>	<u>DB27121</u>
pin 5T	pin 5
pin 5TR	pin 4
pin 2T	pin 2
pin 2TR	pin 1

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Replace the ARINC 629 wiring (SWPM 20-11-11).
 - 2) Re-connect connector DB27121.
 - 3) Re-install the ACE-L2, M27122.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) Do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
NOTE: After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display on the MAT.
 - (b) If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 3) If the maintenance message shows on the MAT, then continue.
- (3) Replace the ARINC 629 coupler, B27143, in the P312 panel. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This coupler connects the ACE-C to the Flt Ctrl 629 Bus-C.
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 3) If the maintenance message shows on the MAT, then continue.
- (4) Do this check of the wiring from the ACE-C to the coupler:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the center power supply assembly (PSA-C), M24301.

Power Supply Assembly Center, M24301

- 27-Primary Flight Control, System Test, Actuator Control Electronics Monitor.
 - If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

868. ACE-L2 No Input On Flt Ctrl 629 Bus-L - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13053.

B. Initial Evaluation

NOTE: This message can occur when one primary flight computer (PFC) is deactivated and the other 2 PFCs operate normally (this is referred to as a 3:3:0 configuration). If the airplane is in the 3:3:0 configuration per the Dispatch Deviation Guide you can ignore this maintenance message.

- (1) Do this ground test on the MAT:
- 27-Primary Flight Control, System Test, Actuator Control Electronics Monitor.
 - If the maintenance message shows on the ground test display, then do the fault isolation procedure below.
 - If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
- 27-Primary Flight Control, System Test, Actuator Control Electronics Monitor.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - If the maintenance message shows on the ground test display, then continue.
- (3) Replace the ARINC 629 coupler, B27121, in the P112 panel. These are the tasks:
- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This coupler connects the ACE-L2 to the Flt Ctrl 629 Bus-L.

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Control, System Test, Actuator Control Electronics Monitor.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (4) Do this check of the wiring from the ACE-L2 to the coupler:
- (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the ACE-L2, M27122.
- (c) Disconnect connector DB27121 from the coupler, B27121.
- (d) Do a wiring check between these pins of connector DM27122AD at the E1-1 shelf and connector DB27121 at the P112 panel (WDM 27-02-42):

DM27122AD	DB27121
pin 5T	pin 5
pin 5TR	pin 4
pin 2T	pin 2
pin 2TR	pin 1

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Replace the ARINC 629 wiring (SWPM 20-11-11).
 - 2) Re-connect connector DB27121.
 - 3) Re-install the ACE-L2, M27122.
 - 4) Remove the safety tags and close these circuit breakers:

 - (a) Do this ground test on the MAT:
 - 1) 27 Primary Flight Control, System Test, Actuator Control Electronics Monitor.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
 - (3) Replace the ARINC 629 coupler, B27142, in the P212 panel. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801
- NOTE:** This coupler connects the ACE-C to the Flt Ctrl 629 Bus-R.
- (a) Do this ground test on the MAT:
 - 1) 27 Primary Flight Control, System Test, Actuator Control Electronics Monitor.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
 - (4) Do this check of the wiring from the ACE-C to the coupler:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the Center power supply assembly (PSA-C), M24301.

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the ACE-C, M27321.
- (c) Disconnect connector DB27142 from the coupler, B27142.
- (d) Do a wiring check between these pins of connector DM27321AD at the E2-5 shelf and connector DB27142 at the P212 panel (WDM 27-02-44):

DM27321AD	DB27142
pin 4T	pin 5
pin 4TR	pin 4
pin 1T	pin 2
pin 1TR	pin 1

A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT:
- a) 27 Primary Flight Control, System Test, Actuator Control Electronics Monitor.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

874. ACE-R No Input On Flt Ctrl 629 Bus-L - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13059.

B. Initial Evaluation

NOTE: This message can occur when one primary flight computer (PFC) is deactivated and the other 2 PFCs operate normally (this is referred to as a 3:3:0 configuration). If the airplane is in the 3:3:0 configuration per the Dispatch Deviation Guide you can ignore this maintenance message.

- (1) Do this ground test on the MAT:
- (a) 27 Primary Flight Control, System Test, Actuator Control Electronics Monitor.
 - (b) If the maintenance message shows on the ground test display, then do the fault isolation procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27221. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:

- 3) Do a continuity check between pin A2 of connector DM27321AB (for the ACE-C) and structure ground (WDM 27-02-33):
- 4) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - d) Do this ground test on the MAT:
 - e) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - f) If the maintenance message does not show on the MAT, then you corrected the fault.
- 5) If you do not find a problem with the wiring, then continue.
- 6) Install a new PSA-C, M24301, at E2-6 shelf. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- 7) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - b) If the maintenance message does not show on the MAT, then you corrected the fault.
- (e) If there is 28 VDC at pin A1 of connector DM27321AB, then continue.
- (4) Do this check of the wiring:
 - (a) Make sure the program pins of connector DM27321AB (for the ACE-C) agree with the wiring diagram (WDM 27-02-36).
 - (b) If program pins do not agree with the wiring diagram, then do these steps:
 - 1) Change the wiring to agree with the wiring diagram.

777-200/300 FAULT ISOLATION MANUAL

- 2) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - b) If the maintenance message does not show on the MAT, then you corrected the fault.

————— END OF TASK —————

879. ACE-R Inoperative - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13011.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) Do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - (b) If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 3) If the maintenance message shows on the MAT, then continue.
- (3) Do this check for 28 VDC at the ACE-R:
 - (a) Remove the ACE-R, M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Remove the DO-NOT-CLOSE tag and close this circuit breaker on the center power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- (c) Do a check for 28 VDC from pin A1 to pin A2 of connector DM27221AB on the ACE-R at the E5-2 shelf (WDM 27-02-34).
- (d) If there is not 28 VDC at pin A1 of connector DM27221AB, then do these steps:
- 1) Remove the PSA-R, M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27221AB (for the ACE-R) and connector DM24201AD (for the PSA-R) (WDM 27-02-34):
- | | |
|------------------|------------------|
| DM27221AB | DM24201AD |
| pin A1 | pin 5 |
- 3) Do a continuity check between pin A2 of connector DM27221AB (for the ACE-R) and structure ground (WDM 27-02-34):
 - 4) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - d) Do this ground test on the MAT:
 - e) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - f) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 5) If you do not find a problem with the wiring, then continue.
 - 6) Install a new PSA-R, M24201, at E2-6 shelf. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
 - 7) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - b) If the maintenance message does not show on the MAT, then you corrected the fault.
- (e) If there is 28 VDC at pin A1 of connector DM27221AB, then continue.
- (4) Do this check of the wiring:
- (a) Make sure the program pins of connector DM27221AB (for the ACE-R) agree with the wiring diagram (WDM 27-02-36).
 - (b) If program pins do not agree with the wiring diagram, then do these steps:
 - 1) Change the wiring to agree with the wiring diagram.
 - 2) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Transmitter Reset.

- b) If the maintenance message does not show on the MAT, then you corrected the fault.

————— END OF TASK —————

880. Actuator Control Electronics (Left 1) Internal Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13000.

B. Initial Evaluation

- (1) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT for these maintenance messages: 27-13000, 27-13001, 27-13002, 27-13003.
- (a) If all the messages given in the list above are displayed, then do these steps:
- 1) Do this ground test on the MAT: 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics (L1) Replacement.
 - a) If maintenance message 27-13000 does not reset, replace the left 1 actuator control electronics (ACE-L1), M27121.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics (L2) Replacement.
 - a) If maintenance message 27-13001 does not reset, replace the left 2 actuator control electronics (ACE-L2), M27122.
 - 3) Do this ground test on the MAT: 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics (C) Replacement.
 - a) If maintenance message 27-13002 does not reset, replace the center actuator control electronics (ACE-C), M27321.
 - 4) Do this ground test on the MAT: 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics (R) Replacement.
 - a) If maintenance message 27-13003 does not reset, replace the right actuator control electronics (ACE-R), M27221.
- (b) If all the messages given in the list above are not displayed, then do the fault isolation steps below.
- (2) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT for one or more of these maintenance messages: 27-13041, 27-13042, 27-13043, 27-13044.
- (a) If you find one or more of the maintenance messages given in the list above, then do these steps:
- 1) Find the message in the FIM Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - 3) Do this ground test on the MAT: 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics (L1) Replacement.
 - 4) If the maintenance message does not show on the ground test display, you corrected the fault.
- (b) If you do not find one of the maintenance messages given in the list above, then continue.
- (3) Find the maintenance message on the MAT. Select MAINTENANCE MESSAGE DATA.
- (4) If one or more EICAS messages show as a "Correlated Flight Deck Effect", then do the Fault Isolation Procedure below.

EFFECTIVITY
ARO ALL

777-200/300 FAULT ISOLATION MANUAL

- (5) If no EICAS messages show as a "Correlated Flight Deck Effect", then do these steps:
 - (a) Operate the rudder trim in the NOSE L direction for a minimum of 5 seconds.
 - (b) Operate the rudder trim in the NOSE R direction for a minimum of 5 seconds.
 - (c) If the maintenance message shows ACTIVE or LATCHED, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message shows NOT ACTIVE (or if the message does not show), then no repair is necessary.

C. Fault Isolation Procedure

- (1) Exchange the ACE-L1, M27121 with ACE-C, M27321. Do this task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Exchange the left power supply assembly (PSA-L), M24101 and the right PSA-R, M24201. Do these tasks:
 - To remove the left PSA-L and the right PSA-R: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - To install the left PSA-L into the right PSA-R position and install the right PSA-R into the left position: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- (3) Dispatch the airplane and track for any of the following faults happen:
 - (a) If the fault moves to the center Actuator Control Electronics (ACE-C) position, do these tasks to replace the left ACE-L1:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (b) If the fault moves to the PSA-R position, do these tasks to replace the PSA-L:
 - Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
 - (c) If the fault stays in the ACE-L1 position, do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Actuator Confidence.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message still shows on the ground test display, then continue.
- (4) Remove the ACE-L1, M27121, from the E1-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
- (5) Do the wiring check from the ACE-L1 shelf back connector for the continuity between pin-to-pin shorts, pin to shield shorts (WDM 27-02-31):

	ACE - Connector J1A		DM27121AA
AILERON BYP L	pin A13	AIL PCU BYP RTN	pin A13
AILERON BLK L	pin A15	AIL PCU BLK RTN	pin A15

882. Actuator Control Electronics (Left 1) Monitor Confidence Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13004.

B. Fault Isolation Procedure

- (1) Exchange the ACE that failed for M27121 with ACE that passed. These are the tasks:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 2) If the maintenance message does not show on the ground test display, swap the ACEs back to their original positions and rerun the test to ensure the fault is no longer present.
 - 3) If the maintenance message still shows on the ground test display and the failure has followed the original suspect ACE to the new location, reject the failed ACE.
 - 4) If the maintenance message still shows on the ground test display and the failure has remained in the original location, swap the ACEs back to their original positions and continue troubleshooting.
 - a) Do this ground test on the MAT:
 - b) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - c) If the maintenance message does not show on the ground test display, you corrected the fault.

27-02 TASK 882

D633W103-ARO

Page 298.162
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

Table I - How to Read ACE Monitor Test Results Using Maintenance Access Terminal (MAT) Input Monitoring

From the ON BOARD MAINTENANCE Menu:

- (1) Select OTHER FUNCTIONS from the CMCS main menu.
- (2) Select the INPUT MONITORING function.
- (3) Select ARINC 629 FULL WORDSTRING from the input monitoring main menu.
- (4) Select CONTINUE.
- (5) Put the cursor in a direct entry field.
- (6) Use the keyboard to type the following signal specification into the direct entry field.

NOTE: It is not necessary to type initial zeros.

Enter: [A]/629/[B]/504/[C]/[D]

Where: [A] = AIMS Cabinet, Use L or R (Use opposite of active CMC) *Note 1 [B] = FC BUS

Use FC L for ACE L1 or L2 failures (L PFC data)

Use FC C for ACE C failures (C PFC data)

Use FC R for ACE R failures (R PFC data)

[C] = CID (try each CID in turn until updated data is seen)

Use 0, 3, 6 for ACE L1 or L2 failures (L PFC data)

Use 1, 4, 7 for ACE C failures (C PFC data)

Use 2, 5, 8 for ACE R failures (R PFC data)

[D] = Use 9-9 for ACE L1 failures (L1 ACE NVM WORD)

Use 11-11 for ACE L2 failures (L2 ACE NVM WORD)

Use 13-13 for ACE C failures (C ACE NVM WORD)

Use 15-15 for ACE R failures (R ACE NVM WORD) Example: L/629/FC R/504/2/15-15 to read ACE R AMT failure results, via L AIMS, and trying the first applicable CID.

- (7) Select either IOM.

(8) Select RUN. Verify that "SAMPLING" is displayed confirming that updated data is being displayed. If not, go back and try the next applicable CID in entry field [C]. Only one of the three applicable CIDs will give updated data.

(9) When fresh data is being displayed, record or print. 0000 (Hex) is expected if AMT passes. Anything other than 0000 (Hex) represents a fault code and should be recorded for shop use or reporting to Boeing. Relevant bits for AMT are as follows: 14 = Bus Selection Test, 13 = CRC/Data Validation Test, 12 = Non-629 Monitors Test, B11= Power Supply/SOV Test.

* NOTE 1: Go to ONBOARD MAINTENANCE, select OTHER FUNCTIONS. Go to CMC switch control, make either Left or Right CMC the active one and use the other to begin the input monitoring word string – i.e.: Left CMC is active [A] = R.

- m) If the AMT passes, you corrected the fault.
- n) If the AMT fails, perform additional troubleshooting actions refer to table II - AMT ACE Interfaces and Applicable Ground Tests.

Table II - AMT ACE Interfaces and Applicable Ground Tests

883. Actuator Control Electronics (Left 2) Monitor Confidence Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13005.

B. Fault Isolation Procedure

- (1) Exchange the ACE that failed for M27122 with ACE that passed. These are the tasks:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 2) If the maintenance message does not show on the ground test display, swap the ACEs back to their original positions and rerun the test to ensure the fault is no longer present.

777-200/300 FAULT ISOLATION MANUAL

Table I - How to Read ACE Monitor Test Results Using Maintenance Access Terminal (MAT) Input Monitoring

From the ON BOARD MAINTENANCE Menu:

- (1) Select OTHER FUNCTIONS from the CMCS main menu.
- (2) Select the INPUT MONITORING function.
- (3) Select ARINC 629 FULL WORDSTRING from the input monitoring main menu.
- (4) Select CONTINUE.
- (5) Put the cursor in a direct entry field.
- (6) Use the keyboard to type the following signal specification into the direct entry field.

NOTE: It is not necessary to type initial zeros.

Enter: [A]/629/[B]/504/[C]/[D]

Where: [A] = AIMS Cabinet, Use L or R (Use opposite of active CMC) *Note 1 [B] = FC BUS

Use FC L for ACE L1 or L2 failures (L PFC data)

Use FC C for ACE C failures (C PFC data)

Use FC R for ACE R failures (R PFC data)

[C] = CID (try each CID in turn until updated data is seen)

Use 0, 3, 6 for ACE L1 or L2 failures (L PFC data)

Use 1, 4, 7 for ACE C failures (C PFC data)

Use 2, 5, 8 for ACE R failures (R PFC data)

[D] = Use 9-9 for ACE L1 failures (L1 ACE NVM WORD)

Use 11-11 for ACE L2 failures (L2 ACE NVM WORD)

Use 13-13 for ACE C failures (C ACE NVM WORD)

Use 15-15 for ACE R failures (R ACE NVM WORD) Example: L/629/FC R/504/2/15-15 to read ACE R AMT failure results, via L AIMS, and trying the first applicable CID.

- (7) Select either IOM.

(8) Select RUN. Verify that "SAMPLING" is displayed confirming that updated data is being displayed. If not, go back and try the next applicable CID in entry field [C]. Only one of the three applicable CIDs will give updated data.

(9) When fresh data is being displayed, record or print. 0000 (Hex) is expected if AMT passes. Anything other than 0000 (Hex) represents a fault code and should be recorded for shop use or reporting to Boeing. Relevant bits for AMT are as follows: B14 = Bus Selection Test, B13 = CRC/Data Validation Test, B12 = Non-629 Monitors Test, B11 = Power Supply/SOV Test.

* NOTE 1: Go to ONBOARD MAINTENANCE, select OTHER FUNCTIONS. Go to CMC switch control, make either Left or Right CMC the active one and use the other to begin the input monitoring word string – i.e.: Left CMC is active [A] = R.

(9) When fresh data is being displayed, record or print. 0000 (Hex) is expected if AMT passes. Anything other than 0000 (Hex) represents a fault code and should be recorded for shop use or reporting to Boeing. Relevant bits for AMT are as follows: 14 = Bus Selection Test, 13 = CRC/Data Validation Test, 12 = Non-629 Monitors Test, B11= Power Supply/SOV Test.

* NOTE 1: Go to ONBOARD MAINTENANCE, select OTHER FUNCTIONS. Go to CMC switch control, make either Left or Right CMC the active one and use the other to begin the input monitoring word string – i.e.: Left CMC is active [A] = R.

- m) If the AMT passes, you corrected the fault.
- n) If the AMT fails, perform additional troubleshooting actions refer to table II - AMT ACE Interfaces and Applicable Ground Tests.

Table II - AMT ACE Interfaces and Applicable Ground Tests

1. ACE that is failing AMT				2. AMT subtest that is failing				3. Possible interfaces or components that could be causing AMT failure	4. Applicable Ch 27 Primary Flight Controls System Ground Test(s) or other action

885. Actuator Control Electronics (Right) Monitor Confidence Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13007.

B. Fault Isolation Procedure

- (1) Exchange the ACE that failed for M27221 with ACE that passed. These are the tasks:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 2) If the maintenance message does not show on the ground test display, swap the ACEs back to their original positions and rerun the test to ensure the fault is no longer present.

777-200/300 FAULT ISOLATION MANUAL

Table I - How to Read ACE Monitor Test Results Using Maintenance Access Terminal (MAT) Input Monitoring

From the ON BOARD MAINTENANCE Menu: (1) Select OTHER FUNCTIONS from the CMCS main menu. (2) Select the INPUT MONITORING function. (3) Select ARINC 629 FULL WORDSTRING from the input monitoring main menu. (4) Select CONTINUE. (5) Put the cursor in a direct entry field. (6) Use the keyboard to type the following signal specification into the direct entry field. NOTE: It is not necessary to type initial zeros. Enter: [A]/629/[B]/504/[C]/[D] Where: [A] = AIMS Cabinet, Use L or R (Use opposite of active CMC) *Note 1 [B] = FC BUS Use FC L for ACE L1 or L2 failures (L PFC data) Use FC C for ACE C failures (C PFC data) Use FC R for ACE R failures (R PFC data) [C] = CID (try each CID in turn until updated data is seen) Use 0, 3, 6 for ACE L1 or L2 failures (L PFC data) Use 1, 4, 7 for ACE C failures (C PFC data) Use 2, 5, 8 for ACE R failures (R PFC data) [D] = Use 9-9 for ACE L1 failures (L1 ACE NVM WORD) Use 11-11 for ACE L2 failures (L2 ACE NVM WORD) Use 13-13 for ACE C failures (C ACE NVM WORD) Use 15-15 for ACE R failures (R ACE NVM WORD) Example: L/629/FC R/504/2/15-15 to read ACE R AMT failure results, via L AIMS, and trying the first applicable CID. (7) Select either IOM. (8) Select RUN. Verify that "SAMPLING" is displayed confirming that updated data is being displayed. If not, go back and try the next applicable CID in entry field [C]. Only one of the three applicable CIDs will give updated data. (9) When fresh data is being displayed, record or print. 0000 (Hex) is expected if AMT passes. Anything other than 0000 (Hex) represents a fault code and should be recorded for shop use or reporting to Boeing. Relevant bits for AMT are as follows: 14 = Bus Selection Test, 13 = CRC/Data Validation Test, 12 = Non-629 Monitors Test, B11= Power Supply/SOV Test. * NOTE 1: Go to ONBOARD MAINTENANCE, select OTHER FUNCTIONS. Go to CMC switch control, make either Left or Right CMC the active one and use the other to begin the input monitoring word string – i.e.: Left CMC is active [A] = R.

Page 298.193
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

886. Primary Flight Computer (Left) Lane 2 Problems - Fault Isolation

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLERS EVEN AFTER THE PFC HAS BEEN REPLACED.

NOTE: Avoid swapping PFCs if any of them contains a lane fault. The state machine inside the PFC that keeps track of lane faults can get confused and generate more lane faults or get into an unrecoverable state.

NOTE: If an intermittent lane fault continues to occur, the PFC will allow the lane fault to be cleared up to 10 times before it becomes permanently latched. This allows the operator 10 attempts to narrow down the cause of the lane fault. Once a lane fault is permanently latched, the PFC must be removed and sent to a repair shop to have the fault cleared. The following procedure is written to help the operator narrow down the cause of the lane fault and avoid getting to the point where the fault is permanently latched.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14001.

B. Description

- (1) The Left Primary Flight Computer (PFC-L) Lane 2 has an internal or interface fault.

C. Possible Causes

- (1) Primary Flight Computer (Left), M27106
- (2) Flight Controls ARINC 629 (L) Coupler in P112 (PFC-L), B27021
- (3) Flight Controls ARINC 629 (R) Coupler in P212 (PFC-L), B27022
- (4) Flight Controls ARINC 629 (C) Coupler in P312 (PFC-L), B27023
- (5) Wiring

D. Related Data

- (1) WDM 27-02-41
- (2) WDM 27-02-43
- (3) WDM 27-02-45
- (4) SWPM 20-11-11

E. Initial Evaluation

- (1) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do this Ground Test on the MAT: Primary Flight Computer (L) Lane Reset, AMM TASK 27-02-01-740-801

NOTE: If the PFC Lane Reset was not successful, do the lane reset a second time.

- (a) If the second PFC Lane Reset was successful, swap the Left Primary Flight Computer (PFC-L), M27106 with the Right Primary Flight Computer (PFC-R), M27206. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

- 1) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.

EFFECTIVITY

D633W103-ARO

Page 298.194
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- a) If the maintenance message "27-14013 Primary Flight Computer (Right) lane 2 has an internal or interface fault" now shows, replace the Primary Flight Computer that was originally installed in the PFC-L, M27106 position (now in the PFC-R position). These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
 - b) If the maintenance message "27-14001 Primary Flight Computer (Left) lane 2 has an internal or interface fault" still shows, do the Fault Isolation Procedure below.
- (b) If the second PFC Lane Reset was not successful, the fault is latched and cannot be cleared on the airplane, replace the Left Primary Flight Computer (PFC-L), M27106. These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

F. Fault Isolation Procedure

- (1) Swap the ARINC Couplers that follow (WDM 27-02-41, WDM 27-02-43 and WDM 27-02-45):
 - Coupler B27021 (L FC BUS T/R) PFC-L LANE 2 with
 - Coupler B27073 (C FC BUS T/R) PFC-C LANE 1
 - Coupler B27022 (R FC BUS RCV) PFC-L LANE 2 with
 - Coupler B27082 (R FC BUS RCV) PFC-C LANE 2
 - Coupler B27023 (C FC BUS RCV) PFC-L LANE 2 with
 - Coupler B27091 (L FC BUS RCV) PFC-C LANE 3
- (2) These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: Swapping couplers can induce lane faults in the PFCs which would also need to be cleared by running the associated Primary Flight Computer (L, R, or C) Lane Reset Tests, AMM TASK 27-02-01-740-801.

- (a) Do the Repair Confirmation at the end of this task.
- (3) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.
 - (a) If the problem follows the coupler as shown in the table below, replace the applicable coupler. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

DB Coupler - Original Position	DB Coupler - Swapped Position	Original Maintenance Message	New Maintenance Message after swap	Replace Defective Coupler (Currently in Swapped Position)

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

(Continued)

DB Coupler - Original Position	DB Coupler - Swapped Position	Original Maintenance Message	New Maintenance Message after swap	Replace Defective Coupler (Currently in Swapped Position)
P312 (PFC-L), B27023	P112 (PFC-C), B27091	27-14001	27-14008	P112 (PFC-C), B27091

- (b) If the maintenance message “27-14001 Primary Flight Computer (Left) lane 2 has an internal or interface fault” still shows in the PFC-L position, then continue.

- (4) Do these PFC-L to the 629 Coupler wire checks:

NOTE: Since it is not possible to determine which Stub Cable has the problem, it is recommended to examine ALL THREE Stub Cable Assemblies at the same time.

- (a) Open these circuit breakers on the PSA-L, M24101:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
D	2	CBD2-L	PFC LANE 1
D	4	CBD4-L	PFC LANE 2
D	6	CBD6-L	PFC LANE 3
D	8	CBD8-L	PFC BAT INTLK

- (b) Remove the PFC-L, M27106. This is the task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
- (c) Disconnect connectors DB27021, DB27022 and DB27023 from these ARINC 629 Couplers:
- 1) B27021 Coupler in the P112 Panel (WDM 27-02-41)
 - 2) B27022 Coupler in the P212 Panel (WDM 27-02-43)
 - 3) B27023 Coupler in the P312 Panel (WDM 27-02-45)
- (d) Do a wiring check between these pins of connector DM27106AA OR DM27106AC at the PFC-L and the 629 Coupler connectors indicated in the tables that follow:

PFC-L	B27021
DM27106AA	COUPLER
	DB27021
pin 9T	pin 5
pin 9TR	pin 4
pin 10T	pin 2
pin 10TR	pin 1

PFC-L	B27022
DM27106AC	COUPLER
	DB27022
pin 9T	pin 5
pin 9TR	pin 4
pin 6T	pin 2
pin 6TR	pin 1

DM27106AA	COUPLER
	DB27023
pin 2T	pin 5
pin 2TR	pin 4
pin 1T	pin 2
pin 1TR	pin 1

- (e) Examine the shelf connector pins for damage, fit and security.
- (f) Examine the coupler connector pins for damage, fit and security.
- (g) Do continuity checks and pin to shield insulation checks.
- (h) If you find a problem with the wiring, disconnect the stub cable at the shelf station and repeat the wiring check for each section to the stub cables to isolate which stub cable section is defective.
- (i) Repair or replace the defective stub cable(s) as necessary (SWPM 20-11-11).
- (j) Re-connect the coupler connectors DB27021, DB27022 and DB27023 to the 629 Couplers B27021, B27022 and B27023.
- (k) Install the couplers that you removed above. This is the task: ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.
- (l) Re-install the PFC-L, M27106. This is the task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
- (m) Close these circuit breakers on the PSA-L, M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-L	PFC LANE 1
D	4	CBD4-L	PFC LANE 2
D	6	CBD6-L	PFC LANE 3
D	8	CBD8-L	PFC BAT INTLK

- (n) Do the Repair Confirmation that follows.

G. Repair Confirmation

- (1) Do this Ground Test on the MAT: Primary Flight Computer (L) Lane Reset, AMM TASK 27-02-01-740-801
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.
 - (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

Page 298.197
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

887. Primary Flight Computer (Left) Lane 3 Problems - Fault Isolation

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE, AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLERS EVEN AFTER THE PFC HAS BEEN REPLACED.

NOTE: Avoid swapping PFCs if any of them contains a lane fault. The state machine inside the PFC that keeps track of lane faults can get confused and generate more lane faults or get into an unrecoverable state.

NOTE: If an intermittent lane fault continues to occur, the PFC will allow the lane fault to be cleared up to 10 times before it becomes permanently latched. This allows the operator 10 attempts to narrow down the cause of the lane fault. Once a lane fault is permanently latched, the PFC must be removed and sent to a repair shop to have the fault cleared. The following procedure is written to help the operator narrow down the cause of the lane fault and avoid getting to the point where the fault is permanently latched.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14002.

B. Description

- (1) The Left Primary Flight Computer (PFC-L) Lane 3 has an internal or interface fault.

C. Possible Causes

- (1) Primary Flight Computer (Left), M27106
- (2) Flight Controls ARINC 629 (L) Coupler in P112 (PFC-L), B27031
- (3) Flight Controls ARINC 629 (R) Coupler in P212 (PFC-L), B27032
- (4) Flight Controls ARINC 629 (C) Coupler in P312 (PFC-L), B27033
- (5) Wiring

D. Related Data

- (1) WDM 27-02-41
- (2) WDM 27-02-43
- (3) WDM 27-02-45
- (4) SWPM 20-11-11

E. Initial Evaluation

- (1) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do this Ground Test on the MAT: Primary Flight Computer (L) Lane Reset, AMM TASK 27-02-01-740-801

NOTE: If the PFC Lane Reset was not successful, do the lane reset a second time.

- (a) If the second PFC Lane Reset was successful, swap the Left Primary Flight Computer (PFC-L), M272106 with the Right Primary Flight Computer (PFC-R), M27206. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

- 1) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.

EFFECTIVITY
ARO ALL

D633W103-ARO

Page 298.198
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- a) If the maintenance message "27-14014 Primary Flight Computer (Right) lane 3 has an internal or interface fault" now shows, replace the Primary Flight Computer that was originally installed in the PFC-L, M27106 position (now in the PFC-R position). These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
 - b) If the maintenance message "27-14002 Primary Flight Computer (Left) lane 3 has an internal or interface fault" still shows, do the Fault Isolation Procedure below.
- (b) If the second PFC Lane Reset was not successful, the fault is latched and cannot be cleared on the airplane, replace the Left Primary Flight Computer (PFC-L), M27106. These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

F. Fault Isolation Procedure

- (1) Swap the ARINC Couplers that follow (WDM 27-02-41, WDM 27-02-43 and WDM 27-02-45):
 - Coupler B27031 (L FC BUS T/R) PFC-L LANE 3 with
 - Coupler B27073 (C FC BUS T/R) PFC-C LANE 1
 - Coupler B27032 (R FC BUS RCV) PFC-L LANE 3 with
 - Coupler B27082 (R FC BUS RCV) PFC-C LANE 2
 - Coupler B27033 (C FC BUS RCV) PFC-L LANE 3 with
 - Coupler B27091 (L FC BUS RCV) PFC-C LANE 3
- (2) These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: Swapping couplers can induce lane faults in the PFCs which would also need to be cleared by running the associated Primary Flight Computer (L, R, or C) Lane Reset Tests, AMM TASK 27-02-01-740-801.

- (a) Do the Repair Confirmation at the end of this task.
- (3) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.
 - (a) If the problem follows the coupler as shown in the table below, replace the applicable coupler. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) After 1.5 minutes, look at the message on the MAT:
 - (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this check of the discrete wiring:
 - (a) For the IOM(M008) and IOM(M009) modules in the left AIMS cabinet, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (b) Open these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU

889. Wing Flight Control Shutoff Valve in Center Hydraulic System Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17020.

B. Initial Evaluation

- (1) Set the C WING switch, S5, on the flight control hydraulic valve power panel, M27035, to the NORM position.

NOTE: This fault can occur when the C WING switch is in the SHUTOFF position.

- (a) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - 1) 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence
 - 2) 27-Primary Flight Controls, System Test, Center Aileron Actuator Confidence
 - 3) 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - 4) If the maintenance message shows on one of the ground test displays, then do the Fault Isolation Procedure below.
 - 5) If the maintenance message does not show on the ground test displays, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do these steps to replace the C WING switch:
 - (a) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	21	C27619	C FC SOV WG

- (b) Replace the C WING switch, S5, on the flight control hydraulic valve power panel, M27035 (WDM 27-02-55).
- (c) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	21	C27619	C FC SOV WG

- (d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (e) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - 1) 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence

 - 3) 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - 4) If the maintenance message does not show on the ground test displays, you corrected the fault.
 - 5) If the maintenance message shows on one of the ground test displays, then continue.
- (2) Do this check of the wiring:
- (a) Disconnect connector DM27035A from the flight control hydraulic valve power panel, M27035.
 - (b) Disconnect connector DV27099 from the center wing hydraulic shutoff valves, V27099.
 - (c) Disconnect connector D11035P from the P110 left power management panel.
 - (d) Do a wiring check between these pins of connector DM27035A at the overhead panel, P61, and connector DV27099 at the center wing hydraulic shutoff valve, V27099 (WDM 27-02-55):

DM27035A	DV27099
pin 9	pin 3
 - (e) Do a wiring check between these pins of connector DM27035A at the overhead panel, P61, and connector D11035P at the P110 panel (WDM 27-02-55):

DM27035A	D11035P
pin 8	pin 14
 - (f) Do a wiring check between these pins of connector D11035P at the P110 panel and connector DV27099 at the center wing hydraulic shutoff valve, V27099 (WDM 27-02-55):

D11035P	DV27099
pin 13	pin 2
 - (g) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27035A.
 - 3) Re-connect connector DV27099.
 - 4) Re-connect connector D11035P.
 - 5) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - 6) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - a) 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence
 - b) 27-Primary Flight Controls, System Test, Center Aileron Actuator Confidence
 - c) 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - 7) If the maintenance message does not show on the ground test displays, you corrected the fault.
 - (h) If you do not find a problem with the wiring, then continue.
 - (i) Re-connect connector DM27035A.

Page 298.205
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (j) Re-connect connector DV27099.
- (3) Replace the air/ground relay, K32120 on the P110 left power management panel.
 - (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - (b) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - 1) 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence
 - 2) 27-Primary Flight Controls, System Test, Center Aileron Actuator Confidence
 - 3) 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - 4) If the maintenance message does not show on the ground test displays, you corrected the fault.
 - 5) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the center wing hydraulic shutoff valve, V27099. These are the tasks:
 - Hydraulic Shutoff Valve Removal, AMM TASK 27-02-32-000-801
 - Hydraulic Shutoff Valve Installation, AMM TASK 27-02-32-400-801
 - (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - (b) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - 1) 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence
 - 2) 27-Primary Flight Controls, System Test, Center Aileron Actuator Confidence
 - 3) 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - 4) If the maintenance message does not show on the ground test displays, you corrected the fault.

————— END OF TASK —————

890. Wing Flight Control Shutoff Valve in Right Hydraulic System Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17021.

B. Initial Evaluation

- (1) Set the R WING switch, S6, on the flight control hydraulic valve power panel, M27035, to the NORM position.

NOTE: This fault can occur when the R WING switch is in the SHUTOFF position.

 - (a) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - 1) 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence
 - 2) 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - 3) If the maintenance message shows on one of the ground test displays, then do the Fault Isolation Procedure below.
 - 4) If the maintenance message does not show on the ground test displays, then there was an intermittent fault.

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

(1) Do these steps to replace the R WING switch:

(a) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	6	C27620	R FC SOV WG

(b) Replace the R WING switch, S6, on the flight control hydraulic valve power panel, M27035 (WDM 27-02-53).

(c) Remove the safety tag and close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	6	C27620	R FC SOV WG

(d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.

(e) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:

- 1) 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence
- 2) 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
- 3) If the maintenance message does not show on the ground test displays, you corrected the fault.
- 4) If the maintenance message shows on one of the ground test displays, then continue.

(2) Do this check of the wiring:

(a) Disconnect connector DM27035B from the flight control hydraulic valve power panel, M27035.

(b) Disconnect connector DV27098 from the right wing hydraulic shutoff valves, V27098.

(c) Do a wiring check between these pins of connector DM27035B at the overhead panel, P61, and connector DV27098 at the right wing hydraulic shutoff valve, V27098 (WDM 27-02-53):

DM27035B	DV27098
pin 33	pin 3
pin 54	pin 2

(d) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-connect connector DM27035B.
- 3) Re-connect connector DV27098.
- 4) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- 5) If the MAT shows LATCHED for the maintenance message, then do these ground tests on the MAT one at a time and look for the maintenance message:
 - a) 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence

 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

————— END OF TASK —————

894. Flap or Slat Position Signals From FSEU 1 and FSEU 2 Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-18510, 27-18550, 27-18560.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit to PFC Interface.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the flap/slat Electronics Unit (FSEU) 1, M27001.
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (2) Replace the FSEU 2, M27002.
 - (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the #1 IOM (M009) in the left AIMS cabinet. These are the tasks:
- Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the #2 IOM (M008) in the left AIMS cabinet. These are the tasks:
- Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the #2 IOM (M008) in the right AIMS cabinet. These are the tasks:
- Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the #3 IOM (M004) in the right AIMS cabinet. These are the tasks:
- Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Flap/Slat Electronics Unit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Speedbrake System.
NOTE: The RESET LATCH may display on the MAT during the System Test if there is an existing fault. Select RESET LATCH to reset the fault and continue the test.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the discrete wiring for the left aircraft information management system (AIMS-L), M31101:
 - (a) Remove the #1 IOM(M009) from the left AIMS cabinet at E3-1 shelf. To remove it, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (b) Remove the #2 IOM(M008) from the left AIMS cabinet at E3-1 shelf. To remove it, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (c) Do a wiring check between these contacts of terminal block TB3002 (on the left integration panel, P105) and the connector for the IOM module (at the left AIMS cabinet) (WDM 31-41-19):

TB3002	J410-A
term QA17	pin E7

- (d) Do a wiring check between these contacts of terminal block TB3002 (on the left integration panel, P105) and the connector for the IOM module (at the left AIMS cabinet) (WDM 31-41-19):

TB3002	J420-A
term QA17	pin E7

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the #1 IOM(M009) in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 3) Re-install the #2 IOM(M008) in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Speedbrake System.
<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.

896. Air/Ground Signal from Left WOW Card and Right WOW Card Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-18910.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:

NOTE: This ground test unlatches the fault, but does not do a test of the system. This test will show FAILED, ignore the failure.

- (a) 27-Primary Flight Controls, System Test, Air/Ground System to PFC Interface.

NOTE: After 2.0 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display on the MAT.

- (b) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the left weight-on-wheels (WOW) card, A16, in the left system cardfile (LSCF), P85. These are the tasks:

- Weight-on-Wheels (WOW) Card Removal, AMM TASK 32-09-02-000-801
- Weight-on-Wheels (WOW) Card Installation, AMM TASK 32-09-02-400-801

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Air/Ground System to PFC Interface.

NOTE: After 2.0 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display on the MAT.

- (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (c) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (2) Replace the right WOW card, A16, in the right system cardfile (RSCF), P84. These are the tasks:
 - Weight-on-Wheels (WOW) Card Removal, AMM TASK 32-09-02-000-801
 - Weight-on-Wheels (WOW) Card Installation, AMM TASK 32-09-02-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Air/Ground System to PFC Interface.

NOTE: After 2.0 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display on the MAT.
 - 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
 - 3) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (3) Replace the left WOW load sensor - left system, M32101. These are the tasks:

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19470.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.

NOTE: The RESET LATCH may display on the MAT during the System Test if there is an existing fault. Select RESET LATCH to reset the fault and continue the test.

- (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.

777-200/300 FAULT ISOLATION MANUAL

- (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) To verify that the cause of the fault is not latent, do this task: Test of the Truck Tilt Sensor, AMM TASK 32-61-03-700-801. Disregard any MAT instructions to cycle the landing gear.

C. Fault Isolation Procedure

- (1) Do this check of the discrete wiring for the left aircraft information management system (AIMS-L), M31101:
 - (a) Remove the #3 IOM(M004) from the left AIMS cabinet at E3-1 shelf. To remove it, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (b) Remove the #4 IOM(M003) from the left AIMS cabinet at E3-1 shelf. To remove it, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (c) Do a wiring check between these contacts of terminal block TB4001 (on the right integration panel, P205) and the connector for the IOM module (at the left AIMS cabinet) (WDM 31-41-19):

TB4001	J240-A
term QB31	pin D6

- (d) Do a wiring check between these contacts of terminal block TB4001 (on the right integration panel, P205) and the connector for the IOM module (at the left AIMS cabinet) (WDM 31-41-19):

TB4001	J250-A
term QB31	pin D6

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the #3 IOM(M004) in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 3) Re-install the #4 IOM(M003) in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Speedbrake System.
 - <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (g) Re-install the #3 IOM(M004) in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.

- (h) Re-install the #4 IOM(M003) in the left AIMS cabinet. To install it, do this task:
Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
- (2) Do this check of the discrete wiring for the AIMS-R, M31201:
 - (a) Remove the #3 IOM(M004) from the right AIMS cabinet at E2-1 shelf. To remove it, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (b) Remove the #4 IOM(M003) from the right AIMS cabinet at E2-1 shelf. To remove it, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (c) Do a wiring check between these contacts of terminal block TB4001 (on the right integration panel, P205) and the connector for the IOM module (at the left AIMS cabinet) (WDM 31-41-19):

TB4001	J240-A
term QB31	pin D6

- (d) Do a wiring check between these contacts of terminal block TB4001 (on the right integration panel, P205) and the connector for the IOM module (at the left AIMS cabinet) (WDM 31-41-19):

TB4001	J250-A
term QB31	pin D6

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the #3 IOM(M004) in the right AIMS cabinet. To install it, do this task:
Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 3) Re-install the #4 IOM(M003) in the right AIMS cabinet. To install it, do this task:
Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Speedbrake System.
 - <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (g) Install a new #3 IOM(M004) in the right AIMS cabinet. To install it, do this task:
Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 1) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Speedbrake System.
 - <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) If the maintenance message does not show on the ground test display, then you corrected the fault.

- d) If the maintenance message shows on the ground test display, then continue.
- (h) Install a new #4 IOM(M003) in the right AIMS cabinet. To install it, do this task:
Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 1) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Speedbrake System.
<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - d) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the #3 IOM(M004) in the left AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the #4 IOM(M003) in the left AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

898. Gear Tilt Pressure Left Signal Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-18830.

B. Description

This maintenance message will occur if the flight crew did an alternate extension of the landing gear when there was center hydraulic pressure.

The Gear Tilt Pressure AUTO SPEEDBRAKE message might be caused by an internal hydraulic leak within the hydraulic circuit downstream of the tilt fuse.

EFFECTIVITY
ARO ALL

27-02 TASKS 897-898

D633W103-ARO

Page 298.227
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

In most cases, these messages were also cleared by resetting the fuse. In this situation, the internal leakage problem can be intermittent and requires no further action.

C. Initial Evaluation

NOTE: By resetting the hydraulic fuse, it may clear the maintenance message and no further action is required.

- (1) Do these steps to reset the hydraulic fuse:
 - (a) Depressurize the hydraulic system below 5 psig (34 kPa) (Main Hydraulic System and the Reservoir Depressurization, AMM TASK 29-11-00-860-807).
 - (b) Wait one minute for the hydraulic fuse to reset.
 - 1) If the maintenance message does not show on the ground test display, then there was an intermittent fault and requires no further action.
 - 2) If the maintenance message shows on the ground test display, then continue.

NOTE: If maintenance messages 27-18830 and 27-19510 show, and there was an alternate extension of the landing gear, then only do the ground test below. This will erase the maintenance messages. No repair is necessary.

If these messages show repeatedly and the messages are erased by resetting the MLG truck positioner actuator tilt fuse each time, the fault could be due to internal hydraulic leakage.

- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows LATCHED for the maintenance message, then do these steps:
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Control, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 4) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - 5) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 6) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

D. Fault Isolation Procedure

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED IN ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed in all the landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

D633W103-ARO

Page 298.228
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

OBEY THE INSTALLATION PROCEDURE FOR THE LANDING GEAR DOOR SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) If the door safety pins are not installed, do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the left hydraulic truck tilt pressure transducer, M29111. These are the tasks:
 - Main Landing Gear Truck Tilt Pressure Transducer - Removal, AMM TASK 32-32-22-000-801
 - Main Landing Gear Truck Tilt Pressure Transducer - Installation, AMM TASK 32-32-22-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Control, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 4) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 5) If the maintenance message shows on the ground test display, then continue.
 - 6) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (4) Do a check of the left truck tilt pressure:
 - (a) Make sure the control lever for the landing gear is in the DN position.
 - (b) Do this task: Supply Electrical Power, AMM TASK 24-22-00-860-805.
 - (c) Show the LANDING GEAR ACTN/INDN maintenance page on the right inboard display unit (AMM TASK 31-61-00-800-804).

NOTE: Use one of the control display units (CDUs) in the flight compartment to show the LANDING GEAR ACTN/INDN maintenance page.
 - (d) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (e) If the left TRUCK TILT indication on the LANDING GEAR ACTN/INDN maintenance page is not between 2750 and 3050 psig, then examine these components for external and internal hydraulic fluid leaks:

NOTE: You can possibly find internal leaks by examining the component for a warm temperature or by listening for the sound of leaking hydraulic fluid. A stethoscope with a probe attachment can help you hear the sound of internal leaks.

 - 1) Examine the hydraulic tubes or hoses for leaks.
 - 2) If there is a leak, do the steps that follow:
 - a) Repair the hydraulic tubes or hoses.
 - b) Do this ground test on the MAT:
 - c) 27-Primary Flight Control, System Test, Speedbrake System.

- <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
 - f) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- 3) If there is no leak, then continue.
- 4) Examine left truck positioner actuator hydraulic fuses for leaks.
- NOTE: Listen for fluid bypassing and touch to see if warm.
- 5) If there is a leak, do the steps that follow:
- a) Replace the applicable truck positioner actuator hydraulic fuse. These are the tasks:
 - Main Landing Gear Hydraulic Fuses Removal, AMM TASK 32-32-19-020-801
 - Main Landing Gear Hydraulic Fuses Installation, AMM TASK 32-32-19-420-801
 - b) Do this ground test on the MAT:
 - c) 27-Primary Flight Control, System Test, Speedbrake System.

<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - e) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
 - g) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- 6) If there is no leak, then continue.
- 7) For airplanes with horizontal side brace downlock actuators and springs, examine the left side brace downlock actuator trunion mount swivel for leaks.
- NOTE: Listen for fluid bypassing and touch to see if warm.
- 8) If there is a leak, do the steps that follow:
- a) Replace the left side brace downlock actuator trunion mount swivel. These are the tasks:
 - Main Landing Gear Side Brace Downlock Actuator Trunion Mount Swivel Removal, AMM TASK 32-32-04-020-807-002
 - Main Landing Gear Side Brace Downlock Actuator Trunion Mount Swivel Installation, AMM TASK 32-32-04-420-807-002
 - b) Do this ground test on the MAT:

 - b) Do this ground test on the MAT:
 - c) 27-Primary Flight Control, System Test, Speedbrake System.
 - <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - e) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
 - g) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - h) If the maintenance message shows on the ground test display, then continue.
- 23) Do the steps that follow for the left drag brace downlock actuator:
- a) Replace the left drag brace downlock actuator. These are the tasks:
 - Main Landing Gear Drag Brace Downlock Actuator Removal, AMM TASK 32-32-05-020-804-002
 - Main Landing Gear Drag Brace Downlock Actuator Installation, AMM TASK 32-32-05-420-804-002
 - b) Do this ground test on the MAT:
 - c) 27-Primary Flight Control, System Test, Speedbrake System.
 - <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - e) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.

Page 298.234
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- g) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- h) If the maintenance message shows on the ground test display, then continue.
- (f) If the left TRUCK TILT indication on the LANDING GEAR ACTN/INDN maintenance page is between 2750 and 3050 or if it does not show, then continue.
- (5) Replace the left hydraulic interface module (HYDIM) card in the left system card file, P85. These are the tasks:
 - Hydraulic Interface Module (HYDIM) Cards Removal, AMM TASK 29-11-50-000-801
 - Hydraulic Interface Module (HYDIM) Cards Installation, AMM TASK 29-11-50-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Control, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 4) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 5) If the maintenance message shows on the ground test display, then continue.
 - 6) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (6) Do this check of the wiring:
 - (a) Remove the HYDIM-L card from the P85 card file. To remove it, do this task: Hydraulic Interface Module (HYDIM) Cards Removal, AMM TASK 29-11-50-000-801.
 - (b) Disconnect connector DM29111 from the left hydraulic truck tilt pressure transducer, M29111.
 - (c) Do a wiring check between these contacts of connector DM29111 (for the transducer) and connector XA17 for the HYDIM-L (at the P85 card file) (SSM 29-11-12), (WDM 29-11-12):

DM29111	XA17
pin 2	pin 73
pin 3	pin 71

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the HYDIM-L. To install it, do this task: Hydraulic Interface Module (HYDIM) Cards Installation, AMM TASK 29-11-50-400-801.
 - 3) Re-connect connector DM29111 to the transducer, M29111.
 - 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Control, System Test, Speedbrake System.
 - <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.

- b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- c) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- d) If the maintenance message does not show on the ground test display, then you corrected the fault.
- e) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

E. Put the Airplane Back to Its Usual Condition

OBEY THE REMOVAL PROCEDURE FOR THE LANDING GEAR DOOR SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (1) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

————— END OF TASK —————

899. Altitude Signal from RA (Left) Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19010.

B. Initial Evaluation

- (1) If the AUTO SPEEDBRAKE EICAS message appears after cycling the LEFT RADIO ALT, C34431, RIGHT RADIO ALT, C4432, and CENTER RADIO ALT, C4433 Circuit Breakers, then cycle the hydraulic power off and back on again. Do these tasks to cycle the hydraulic power:
 - Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808
 - Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Speedbrake System.
NOTE: The RESET LATCH may display on the MAT during the System Test if there is an existing fault. Select RESET LATCH to reset the fault and continue the test.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the Extended Maintenance, Existing Faults display on the MAT.
 - (a) If a maintenance message related to the left radio altimeter (RA) transceiver, then do these steps:
 - 1) Find the message in the applicable FIM Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - 3) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Speedbrake System.
<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) If maintenance message 27-19010 does not show on the ground test display, you corrected the fault.
 - d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - e) If maintenance message 27-19010 shows on the ground test display, then continue.
 - (b) If a maintenance message related to left RA transceiver does not show in Existing Faults, then continue.
- (2) Replace the left radio altimeter (RA) transceiver, M34112. These are the tasks:
 - Radio Altimeter Transceiver Removal, AMM TASK 34-33-01-000-801
 - Radio Altimeter Transceiver Installation, AMM TASK 34-33-01-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the #3 IOM (M004) in the left AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.

- (4) Replace the #4 IOM (M003) in the left AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the #3 IOM (M004) in the right AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the #4 IOM (M003) in the right AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.

- (a) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the center radio altimeter (RA) transceiver, M34312. These are the tasks:
 - Radio Altimeter Transceiver Removal, AMM TASK 34-33-01-000-801
 - Radio Altimeter Transceiver Installation, AMM TASK 34-33-01-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (2) Do this check of the test inhibit command wiring from the left AIMS cabinet:
 - (a) Remove the IOM(M003) from the left AIMS cabinet. To remove it, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (b) Remove the IOM(M004) from the left AIMS cabinet. To remove it, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (c) Remove the center RA transceiver, M34312. To remove it, do this task: Radio Altimeter Transceiver Removal, AMM TASK 34-33-01-000-801.
 - (d) Do a check of the wiring between these pins of connector DM34312AB at the E5-3 shelf and connector P3-B at the left AIMS cabinet (WDM 34-33-31) (WDM 31-41-93):

DM34312AB	J240-B
pin K6	pin C5
 - (e) Do a check of the wiring between these pins of connector DM34312AB at the E5-3 shelf and connector P4-B at the left AIMS cabinet (WDM 34-33-31) (WDM 31-41-93):

DM34312AB	J250-B
pin K6	pin C5
 - (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the IOM(M003) in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 3) Re-install the IOM(M004) in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 4) Re-install the center RA transceiver, M34312. To install it, do this task: Radio Altimeter Transceiver Installation, AMM TASK 34-33-01-400-801.
 - 5) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.

- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the #4 IOM (M003) in the left AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the #3 IOM (M004) in the right AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (7) Replace the #4 IOM (M003) in the right AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

901. PFC (Left) To Flight Controls 629 Bus Communication Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-18811.

EFFECTIVITY
ARO ALL

27-02 TASKS 900-901

D633W103-ARO

Page 298.241
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

NOTE: This maintenance message can be reported by a Power Supply Assembly (PSA), Autopilot Flight Director Computer (AFDC), Air Data Inertial Reference Unit (ADIRU), Air Data Module (ADM), Secondary Attitude Air Data Reference Unit (SAARU), or Airplane Information Management System (AIMS). If one of these LRUs has invalid or intermittent communication with the Primary Flight Computer (PFC), the PFC's can invalidate the wordstrings to that LRU. These maintenance messages can sometimes be caused by power interrupts at engine start or ground maintenance actions. If the fault does not clear by running the PFC Transmitter Reset ground test in the Initial Evaluation, troubleshoot the maintenance messages associated with the reporting system before replacing the PFC in the fault Isolation Procedure.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - (b) If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the left PFC, M27106. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.

————— **END OF TASK** —————

902. Warning Electronic System (Left Channel 1) Signals Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-19150, 27-19160, 27-19190.

B. Initial Evaluation

NOTE: An FSEU (flap/slat electronic unit) fault can cause these Warning Electronic System maintenance messages.

- (1) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT for one or more of these maintenance messages:
 - 27-13032
 - 27-13033
 - 27-13034
 - 27-13035
 - 27-13036

- (1) Replace the left warning electronic unit (WEU), M31107. These are the tasks:
 - Warning Electronic Unit Removal, AMM TASK 31-51-01-000-801
 - Warning Electronic Unit Installation, AMM TASK 31-51-01-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (2) Replace the flap/slat electronics unit (FSEU) 1, M27001. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the left primary flight computer (PFC-L), M27106. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the #1 IOM (M009) in the left AIMS. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the air data inertial reference unit (ADIRU), M34001. These are the tasks:
 - Air Data Inertial Reference Unit - Removal, AMM TASK 34-21-01-000-801
 - Air Data Inertial Reference Unit - Installation, AMM TASK 34-21-01-400-801
 - (a) Do this ground test on the MAT:

777-200/300 FAULT ISOLATION MANUAL

- 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
- 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

903. Warning Electronic System (Left) Signals Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19230.

B. Initial Evaluation

NOTE: An FSEU (flap/slat electronic unit) fault can cause these Warning Electronic System maintenance messages.

- (1) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT for one or more of these maintenance messages: 27-13032, 27-13033, 27-13034, 27-13035, 27-13036, 27-13037, 27-13038, 27-13039, 27-13040, 27-18510, 27-18550, 27-18560.
 - (a) If you find one or more of the maintenance messages given in the list above, then do these steps:
 - 1) Find the message in the FIM Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - 3) Open and then close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	13	C31652	WEU R1
M	14	C31654	WEU R2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
C	8	C31653	WEU L1
C	9	C31655	WEU L2

- 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - (b) If you do not find one of the maintenance messages given in the list above, then continue.
- (2) Open all of these circuit breakers. After they are all open, then close them:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	13	C31652	WEU R1
M	14	C31654	WEU R2

(Continued)

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
C	9	C31655	WEU L2

- (3) Do this ground test on the MAT:
- (a) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the left warning electronic unit (WEU), M31107. These are the tasks:
- Warning Electronic Unit Removal, AMM TASK 31-51-01-000-801
 - Warning Electronic Unit Installation, AMM TASK 31-51-01-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (2) Replace the flap/slat electronics unit (FSEU) 1, M27001. These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the left primary flight computer (PFC-L), M27106. These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the PFC-C, M27306. These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the #1 IOM (M009) in the left AIMS. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the #2 IOM (M008) in the left AIMS. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (7) Replace the secondary attitude air data reference unit (SAARU), M34002. These are the tasks:
 - Secondary Attitude Air Data Reference Unit Removal, AMM TASK 34-21-02-000-801
 - Secondary Attitude Air Data Reference Unit Installation, AMM TASK 34-21-02-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the air data inertial reference unit (ADIRU), M34001. These are the tasks:
 - Air Data Inertial Reference Unit - Removal, AMM TASK 34-21-01-000-801
 - Air Data Inertial Reference Unit - Installation, AMM TASK 34-21-01-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

Page 298.247
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

904. Gear Tilt Pressure Right Signal Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19510.

B. Description

This maintenance message will occur if the flight crew did an alternate extension of the landing gear when there was center hydraulic pressure.

The Gear Tilt Pressure AUTO SPEEDBRAKE message might be caused by an internal hydraulic leak within the hydraulic circuit downstream of the tilt fuse.

In most cases, these messages were also cleared by resetting the fuse. In this situation, the internal leakage problem can be intermittent and requires no further action.

C. Initial Evaluation

NOTE: By resetting the hydraulic fuse, it may clear the maintenance message and no further action is required.

- (1) Do these steps to reset the hydraulic fuse:
 - (a) Depressurize the hydraulic system below 5 psig (34 kPa) (Main Hydraulic System and the Reservoir Depressurization, AMM TASK 29-11-00-860-807).
 - (b) Wait one minute for the hydraulic fuse to reset.
 - 1) If the maintenance message does not show on the ground test display, then there was an intermittent fault and requires no further action.
 - 2) If the maintenance message shows on the ground test display, then continue.

NOTE: If maintenance messages 27-18830 and 27-19510 show, and there was an alternate extension of the landing gear, then only do the ground test below. This will erase the maintenance messages. No repair is necessary.

If these messages show repeatedly and the messages are erased by resetting the MLG truck positioner actuator tilt fuse each time, the fault could be due to internal hydraulic leakage.

- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows LATCHED for the maintenance message, then do these steps:
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Control, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 4) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - 5) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 6) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

D. Fault Isolation Procedure

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED IN ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed in all the landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE LANDING GEAR DOOR SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) If the door safety pins are not installed, do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the right hydraulic truck tilt pressure transducer, M29211. These are the tasks:
 - Main Landing Gear Truck Tilt Pressure Transducer - Removal, AMM TASK 32-32-22-000-801
 - Main Landing Gear Truck Tilt Pressure Transducer - Installation, AMM TASK 32-32-22-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Control, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 4) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 5) If the maintenance message shows on the ground test display, then continue.
 - 6) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (4) Do a check of the right truck tilt pressure:
 - (a) Make sure the control lever for the landing gear is in the DN position.
 - (b) Do this task: Supply Electrical Power, AMM TASK 24-22-00-860-805.
 - (c) Show the LANDING GEAR ACTN/INDN maintenance page on the right inboard display unit (AMM TASK 31-61-00-800-804).

NOTE: Use one of the control display units (CDUs) in the flight compartment to show the LANDING GEAR ACTN/INDN maintenance page.
 - (d) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

777-200/300 FAULT ISOLATION MANUAL

- (e) If the right TRUCK TILT indication on the LANDING GEAR ACTN/INDN maintenance page is not between 2750 and 3050 psig, then examine these components for external and internal hydraulic fluid leaks:

NOTE: You can possibly find internal leaks by examining the component for a warm temperature or by listening for the sound of leaking hydraulic fluid. A stethoscope with a probe attachment can help you hear the sound of internal leaks.

- 1) Examine the hydraulic tubes or hoses for leaks.
- 2) If there is a leak, do the steps that follow.
 - a) Repair the hydraulic tubes or hoses for leaks.
 - b) Do this ground test on the MAT:
 - c) 27-Primary Flight Control, System Test, Speedbrake System.
<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
 - f) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- 3) If there is no leak, then continue.
- 4) Examine right truck positioner actuator hydraulic fuses for leaks.

NOTE: Listen for fluid bypassing and touch to see if warm.

- 5) If there is a leak, do the steps that follow.
 - a) Replace the applicable truck positioner actuator hydraulic fuse. These are the tasks:
 - Main Landing Gear Hydraulic Fuses Removal, AMM TASK 32-32-19-020-801
 - Main Landing Gear Hydraulic Fuses Installation, AMM TASK 32-32-19-420-801
 - b) Do this ground test on the MAT:
 - c) 27-Primary Flight Control, System Test, Speedbrake System.
<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - e) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
 - g) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- 6) If there is no leak, then continue.

- 7) For airplanes with horizontal side brace downlock actuators and springs, examine the right side brace downlock actuator trunion mount swivel for leaks.

NOTE: Listen for fluid bypassing and touch to see if warm.

- 8) If there is a leak, do the steps that follow:
- Replace the right side brace downlock actuator trunion mount swivel. These are the tasks:
 - Main Landing Gear Side Brace Downlock Actuator Trunion Mount Swivel Removal, AMM TASK 32-32-04-020-807-002
 - Main Landing Gear Side Brace Downlock Actuator Trunion Mount Swivel Installation, AMM TASK 32-32-04-420-807-002
 - Do this ground test on the MAT:
 - 27-Primary Flight Control, System Test, Speedbrake System.

<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- 9) If there is no leak, then continue.
- 10) Examine right side brace downlock actuator for leaks.
- NOTE: Listen for fluid bypassing and touch to see if warm.
- 11) If there is a leak, do the steps that follow.
- Replace the right side brace downlock actuator. These are the tasks:
 - Main Landing Gear Side Brace Downlock Actuator Removal, AMM TASK 32-32-04-020-804-002
 - Main Landing Gear Side Brace Downlock Actuator Installation, AMM TASK 32-32-04-420-804-002
 - Do this ground test on the MAT:
 - 27-Primary Flight Control, System Test, Speedbrake System.

<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - If the maintenance message does not show on the ground test display, you corrected the fault.

 - Main Landing Gear Drag Brace Downlock Actuator Trunnion Mount Swivel Installation, AMM TASK 32-32-05-420-805-002
 - Do this ground test on the MAT:
 - 27-Primary Flight Control, System Test, Speedbrake System.
<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - If the maintenance message shows on the ground test display, then continue.
- 22) Do the steps that follow for the right side brace downlock actuator:
- Replace the right side brace downlock actuator. These are the tasks:
 - Main Landing Gear Side Brace Downlock Actuator Removal, AMM TASK 32-32-04-020-804-002
 - Main Landing Gear Side Brace Downlock Actuator Installation, AMM TASK 32-32-04-420-804-002
 - Do this ground test on the MAT:
 - 27-Primary Flight Control, System Test, Speedbrake System.
<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - If the maintenance message shows on the ground test display, then continue.
- 23) Do the steps that follow for the right drag brace downlock actuator:
- Replace the right drag brace downlock actuator: These are the tasks:

- Main Landing Gear Drag Brace Downlock Actuator Removal, AMM TASK 32-32-05-020-804-002
 - Main Landing Gear Drag Brace Downlock Actuator Installation, AMM TASK 32-32-05-420-804-002
- b) Do this ground test on the MAT:
 - c) 27-Primary Flight Control, System Test, Speedbrake System.
 - <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - e) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
 - g) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - h) If the maintenance message shows on the ground test display, then continue.
- (f) If the right TRUCK TILT indication on the LANDING GEAR ACTN/INDN maintenance page is between 2750 and 3050 or if it does not show, then continue.
- (5) Replace the right hydraulic interface module (HYDIM) card in the right system card file, P84. These are the tasks:
 - Hydraulic Interface Module (HYDIM) Cards Removal, AMM TASK 29-11-50-000-801
 - Hydraulic Interface Module (HYDIM) Cards Installation, AMM TASK 29-11-50-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Control, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
 - (d) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (6) Do this check of the wiring:
 - (a) Remove the HYDIM-R card from the P84 card file. To remove it, do this task: Hydraulic Interface Module (HYDIM) Cards Removal, AMM TASK 29-11-50-000-801.
 - (b) Disconnect connector DM29211 from the right hydraulic truck tilt pressure transducer, M29211.
 - (c) Do a wiring check between these contacts of connector DM29211 (for the transducer) and the connector XA17 for the HYDIM-R (at the P84 card file) (SSM 29-11-22), (WDM 29-11-22):

DM29211	XA17
pin 2	pin 73
pin 3	pin 71

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install the HYDIM-R. To install it, do this task: Hydraulic Interface Module (HYDIM) Cards Installation, AMM TASK 29-11-50-400-801.
 - 3) Re-connect connector DM29211 to the transducer, M29211.
 - 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Control, System Test, Speedbrake System.
 <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - d) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - e) Remove center hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

E. Put the Airplane Back to Its Usual Condition

OBEY THE REMOVAL PROCEDURE FOR THE LANDING GEAR DOOR SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (1) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

————— END OF TASK —————

905. Primary Flight Computer (Left, Center, or Right) has an Internal Fault - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14030.

B. Initial Evaluation

NOTE: This maintenance message probably occurred because the PFCs were exchanged (swapped) when one of the PFCs had an internal fault. The PFCs cannot find which PFC has the problem.

- (1) Replace all three PFCs, M27106, M27206, M27306. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

- (a) Do this ground test on the MAT:

NOTE: This ground test unlatches the fault, but does not do a test of the system. This test will show FAILED the first time you do it.

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer Reset.

- (b) Do this ground test on the MAT a second time:

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer Reset.
- 2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

906. Primary Flight Computer (Left) has an Internal Fault - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14031.

B. Fault Isolation Procedure

NOTE: Do not exchange the PFCs (change the location of the PFCs) to try to correct this fault. It will cause a new maintenance message.

- (1) Replace the left primary flight computer (PFC-L), M27106. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

- (a) Do this ground test on the MAT:

NOTE: This ground test unlatches the fault, but does not do a test of the system. This test will show FAILED the first time you do it.

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer Reset.

- (b) Do this ground test on the MAT a second time:

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer Reset.
- 2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

907. Primary Flight Computer (Center) has an Internal Fault - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14032.

B. Fault Isolation Procedure

NOTE: Do not exchange the PFCs (change the location of the PFCs) to try to correct this fault. It will cause a new maintenance message.

- (1) Replace the center primary flight computer (PFC-C), M27306. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

- (a) Do this ground test on the MAT:

NOTE: This ground test unlatches the fault, but does not do a test of the system. This test will show FAILED the first time you do it.

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer Reset.

————— END OF TASK —————

909. ACE-L1 Direct Mode Signals on ARINC 629-R Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17003.

B. Initial Evaluation

- (1) Set the primary flight controls (PFC) DISC switch to the NORM position and wait 1.5 minutes.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows NOT ACTIVE for the maintenance message, then set the PFC DISC switch to the DISC position and wait 1.5 minutes.
 - (a) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:

 - (a) Set the PFC DISC switch to the NORM position and wait 1.5 minutes.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message, then set the PFC DISC switch to the DISC position and wait 1.5 minutes.
 - 1) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.

————— END OF TASK —————

911. ACE-L2 Direct Mode Signals on ARINC 629-R Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17005.

B. Initial Evaluation

- (1) Set the primary flight controls (PFC) DISC switch to the NORM position and wait 1.5 minutes.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows NOT ACTIVE for the maintenance message, then set the PFC DISC switch to the DISC position and wait 1.5 minutes.
 - (a) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.

- (b) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Set the PFC DISC switch to the NORM position and wait 1.5 minutes.
- (b) If the MAT shows NOT ACTIVE for the maintenance message, then set the PFC DISC switch to the DISC position and wait 1.5 minutes.
 - 1) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - 2) If the MAT shows ACTIVE for the maintenance message, then continue.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this check of the discrete wiring:
 - (a) Remove the IOM(M008) and IOM(M009) modules in the right AIMS cabinet. To remove them, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (b) Open these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R

777-200/300 FAULT ISOLATION MANUAL

- (4) Install a new IOM(M003) module in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - (a) Re-install the IOM(M004) module in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - (b) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (c) Close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (d) Set the PFC DISC switch to the NORM position and wait 1.5 minutes.
- (e) If the MAT shows NOT ACTIVE for the maintenance message, then set the PFC DISC switch to the DISC position and wait 1.5 minutes.
 - 1) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - 2) If the MAT shows ACTIVE for the maintenance message, then continue.
- (f) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Replace the IOM(M004) module in the left AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Set the PFC DISC switch to the NORM position and wait 1.5 minutes.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message, then set the PFC DISC switch to the DISC position and wait 1.5 minutes.
 - 1) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.

————— END OF TASK —————

915. ACE-R Direct Mode Signals on ARINC 629-R Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17009.

B. Initial Evaluation

- (1) Set the primary flight controls (PFC) DISC switch to the NORM position and wait 1.5 minutes.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows NOT ACTIVE for the maintenance message, then set the PFC DISC switch to the DISC position and wait 1.5 minutes.

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Set the PFC DISC switch to the NORM position and wait 1.5 minutes.
- (b) If the MAT shows NOT ACTIVE for the maintenance message, then set the PFC DISC switch to the DISC position and wait 1.5 minutes.
 - 1) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - 2) If the MAT shows ACTIVE for the maintenance message, then continue.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this check of the discrete wiring:
 - (a) Remove the IOM(M003) and IOM(M004) modules in the right AIMS cabinet. To remove them, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (b) Open these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (c) Remove the ACE-R, M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Do a wiring check between these contacts of connector DM27221AB (for ACE-R) and the connectors for the two IOM modules (at the AIMS cabinet) (WDM 27-02-49) (SSM 31-41-08):

DM27221AB	J240-A	J250-A
pin J1	pin D9	pin D9
pin K1	GROUND	GROUND

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.

- 2) If the MAT shows ACTIVE for the maintenance message, then continue.
- (f) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Replace the IOM(M004) module in the right AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Set the PFC DISC switch to the NORM position and wait 1.5 minutes.
- (b) If the MAT shows NOT ACTIVE for the maintenance message, then set the PFC DISC switch to the DISC position and wait 1.5 minutes.
- 1) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.

END OF TASK

916. Primary Flight Computers are in Test Mode - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17900.

B. Fault Isolation Procedure

- (1) Look at the MAT, and the maintenance device, SPL-5704, to see if TEST CONDITION: OPERATING shows. For instructions on how to use the MAT, do this task: How to Use the Central Maintenance Computing System, AMM TASK 45-10-00-740-808
- (2) If the MAT (or maintenance device, SPL-5704) shows TEST CONDITION: OPERATING, then do one of these two steps:
 - (a) Wait until the MAT completes the test.
NOTE: Some tests require you to do things to the airplane before the MAT can complete the test. These tests will give you instructions that will show on the MAT.
 - (b) Select STOP TEST on the MAT.
- (3) If the MAT (or maintenance device, SPL-5704) does not show TEST CONDITION: OPERATING, then do these steps:
 - (a) Open these circuit breakers on the PSA-L, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-L	PFC LANE 1
D	4	CBD4-L	PFC LANE 2
D	6	CBD6-L	PFC LANE 3
D	8	CBD8-L	PFC BAT INTLK

- (b) Open these circuit breakers on the PSA-C, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-C	PFC LANE 1
D	4	CBD4-C	PFC LANE 2

- (c) Open these circuit breakers on the PSA-R, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
D	2	CBD2-R	PFC LANE 1
D	4	CBD4-R	PFC LANE 2
D	6	CBD6-R	PFC LANE 3
D	8	CBD8-R	PFC BAT INTLK

- (d) Close these circuit breakers:

- 1) On the PSA-R, on the E5-1 shelf:

NOTE: We recommend that you close the three PFC, LANE circuit breakers at the same time.

- a) D2, LANE 1
- b) D4, LANE 2
- c) D6, LANE 3
- d) D8, BAT INTLK

- 2) On the PSA-C, on the E2-6 shelf:

NOTE: We recommend that you close the three PFC LANE circuit breakers at the same time.

- a) D2, LANE 1
- b) D4, LANE 2
- c) D6, LANE 3
- d) D8, BAT INTLK

- 3) On the PSA-L, on the E1-6 shelf:

NOTE: We recommend that you close the three PFC, LANE circuit breakers at the same time.

- a) D2, LANE 1
- b) D4, LANE 2
- c) D6, LANE 3
- d) D8, BAT INTLK

————— **END OF TASK** —————

917. Radio Altitude Transceiver (Left) Test Inhibit Signals Command Problems - Fault Isolation

A. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Replace the left radio altimeter (RA) transceiver, M34112. These are the tasks:
 - Radio Altimeter Transceiver Removal, AMM TASK 34-33-01-000-801
 - Radio Altimeter Transceiver Installation, AMM TASK 34-33-01-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (2) Do this check of the test inhibit command wiring from the left AIMS cabinet:
 - (a) Remove the IOM(M003) from the left AIMS cabinet. To remove it, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (b) Remove the IOM(M004) from the left AIMS cabinet. To remove it, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (c) Remove the left RA transceiver, M34112. To remove it, do this task: Radio Altimeter Transceiver Removal, AMM TASK 34-33-01-000-801.
 - (d) Do a check of the wiring between these pins of connector DM34112AB at the E5-4 shelf and connector P3-B at the left AIMS cabinet (WDM 34-33-11) (WDM 31-41-93):

DM34112AB	J240-B
pin K6	pin C5
 - (e) Do a check of the wiring between these pins of connector DM34112AB at the E5-4 shelf and connector P4-B at the left AIMS cabinet (WDM 34-33-11) (WDM 31-41-93):

DM34112AB	J250-B
pin K6	pin C5
 - (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the IOM(M003) in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 3) Re-install the IOM(M004) in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 4) Re-install the left RA transceiver, M34112. To install it, do this task: Radio Altimeter Transceiver Installation, AMM TASK 34-33-01-400-801.
 - 5) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (g) If you do not find a problem with the wiring, then continue.
 - (h) Re-install the IOM(M003) in the left AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.

 - (c) Do a check of the wiring between these pins of connector DM34212AB at the E5-2 shelf and connector P3-B at the right AIMS cabinet (WDM 34-33-21) (WDM 31-41-97):

DM34212AB	J240-B
pin K6	pin C5
 - (d) Do a check of the wiring between these pins of connector DM34212AB at the E5-2 shelf and connector P4-B at the right AIMS cabinet (WDM 34-33-21) (WDM 31-41-97):

DM34212AB	J250-B
pin K6	pin C5
 - (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the IOM(M003) in the right AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 3) Re-install the IOM(M004) in the right AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 4) Re-install the right RA transceiver, M34212. To install it, do this task: Radio Altimeter Transceiver Installation, AMM TASK 34-33-01-400-801.
 - 5) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (f) If you do not find a problem with the wiring, then continue.
 - (g) Re-install the IOM(M003) in the right AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - (h) Re-install the IOM(M004) in the right AIMS cabinet. To install it, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
- (4) Replace the #3 IOM (M004) in the left AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- 3) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the #4 IOM (M003) in the left AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the #3 IOM (M004) in the right AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (7) Replace the #4 IOM (M003) in the right AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Radio Altimeter Test Inhibit to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

919. PFC (Center) To Flight Controls 629 Bus Communication Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-18822.

B. Initial Evaluation

NOTE: This maintenance message can be reported by a PSA, AFDC, ADIRU, ADM, SAARU, or AIMS. If one of these LRUs has invalid or intermittent communication with the PFC's, the PFC's can invalidate the wordstrings to that LRU. These maintenance messages can sometimes be caused by power interrupts at engine start or ground maintenance actions. If the fault does not clear by running the PFC Transmitter Reset ground test in the Initial Evaluation, troubleshoot the maintenance messages associated with the reporting system before replacing the PFC in the fault Isolation Procedure.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.

EFFECTIVITY
ARO ALL

- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - (b) If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the center PFC, M27306. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.

————— END OF TASK —————

920. PFC (Right) To Flight Controls 629 Bus Communication Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-18833.

B. Initial Evaluation

NOTE: This maintenance message can be reported by a PSA, AFDC, ADIRU, ADM, SAARU, or AIMS. If one of these LRUs has invalid or intermittent communication with the PFC's, the PFC's can invalidate the wordstrings to that LRU. These maintenance messages can sometimes be caused by power interrupts at engine start or ground maintenance actions. If the fault does not clear by running the PFC Transmitter Reset ground test in the Initial Evaluation, troubleshoot the maintenance messages associated with the reporting system before replacing the PFC in the fault Isolation Procedure.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - (b) If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the right PFC, M27206. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

777-200/300 FAULT ISOLATION MANUAL

- 27-18560

(a) If you find one or more of the maintenance messages given in the list above, then do these steps:

- 1) Find the message in the FIM Maintenance Message Index.
- 2) Do the specified fault isolation task.
- 3) Open and then close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	13	C31652	WEU R1
M	14	C31654	WEU R2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
C	8	C31653	WEU L1
C	9	C31655	WEU L2

4) Do this ground test on the MAT:

- a) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.

(b) If you do not find one of the maintenance messages given in the list above, then continue.

(2) Open all of these circuit breakers. After they are all open, then close them:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	13	C31652	WEU R1
M	14	C31654	WEU R2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
C	8	C31653	WEU L1
C	9	C31655	WEU L2

(3) Do this ground test on the MAT:

- a) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
- b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

(1) Replace the right warning electronic unit (WEU), M31207. These are the tasks:

- Warning Electronic Unit Removal, AMM TASK 31-51-01-000-801
- Warning Electronic Unit Installation, AMM TASK 31-51-01-400-801

(a) Do this ground test on the MAT:

777-200/300 FAULT ISOLATION MANUAL

- 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (2) Replace the flap/slat electronics unit (FSEU) 2, M27002. These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the right primary flight computer (PFC-R), M27206. These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the PFC-C, M27306. These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the #2 IOM (M008) in the right AIMS. These are the tasks:
- Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the #3 IOM(M004) in the right AIMS. These are the tasks:

- Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
- Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (7) Replace the Secondary Attitude Air Data Reference Unit (SAARU), M34002. These are the tasks:
 - Secondary Attitude Air Data Reference Unit Removal, AMM TASK 34-21-02-000-801
 - Secondary Attitude Air Data Reference Unit Installation, AMM TASK 34-21-02-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the air data inertial reference unit (ADIRU), M34001. These are the tasks:
 - Air Data Inertial Reference Unit - Removal, AMM TASK 34-21-01-000-801
 - Air Data Inertial Reference Unit - Installation, AMM TASK 34-21-01-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Warning Electronic System to PFC Interface.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

925. PFC-C Lane 1 Transmit Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14009.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

- (1) Replace the center primary flight computer (PFC-C), M27306. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
- 2) If the maintenance message does not show on the ground test display, you corrected the fault.
- 3) If the maintenance message shows on the ground test display, then continue.

- (2) Replace the ARINC 629 coupler, B27073, in the P312 panel. These are the tasks:

- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
- ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This coupler connects the PFC-C to the FLT CTRL 629 BUS-C.

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
- 2) If the maintenance message does not show on the ground test display, you corrected the fault.
- 3) If the maintenance message shows on the ground test display, then continue.

- (3) Do this check of the wiring from the PFC-C to the coupler:

- (a) Open these circuit breakers on the center power supply assembly (PSA-C), M24301, and install DO-NOT-CLOSE tags:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-C	PFC LANE 1
D	4	CBD4-C	PFC LANE 2
D	6	CBD6-C	PFC LANE 3
D	8	CBD8-C	PFC BAT INTLK

- (b) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- (c) Remove the PFC-C, M27306, from the E2-6 shelf. To remove it, do this task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
- (d) Disconnect connector DB27073 from the ARINC 629 coupler, B27073.
- (e) Do a wiring check between these pins of connector DM27306AA for the PFC-C and connector DB27073 at the ARINC 629 coupler, B27073 (WDM 27-02-45):

EFFECTIVITY

777-200/300 FAULT ISOLATION MANUAL

- (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the right primary flight computer (PFC-R), M27206. These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (R) Lane Reset.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (2) Replace the ARINC 629 coupler, B27052, in the P212 panel. These are the tasks:
- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This coupler connects the PFC-R to the FLT CTRL 629 BUS-R.

- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (R) Lane Reset.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the wiring from the PFC-R to the coupler:
- (a) Open these circuit breakers on the right power supply assembly (PSA-R), M24201, and install DO-NOT-CLOSE tags:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-R	PFC LANE 1
D	4	CBD4-R	PFC LANE 2
D	6	CBD6-R	PFC LANE 3
D	8	CBD8-R	PFC BAT INTLK

- (b) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
P	3	C24672	R PSA TRU PWR

- (c) Remove the PFC-R, M27206, from the E16-1 shelf. To remove it, do this task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
- (d) Disconnect connector DB27052 from the ARINC 629 coupler, B27052.
- (e) Do a wiring check between these pins of connector DM27206AA for the PFC-R and connector DB27052 at the ARINC 629 coupler, B27052 (WDM 27-02-43):

 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

935. **Primary Flight Computer (Center) Lane 1 Problems - Fault Isolation**

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLERS EVEN AFTER THE PFC HAS BEEN REPLACED.

NOTE: Avoid swapping PFCs if any of them contains a lane fault. The state machine inside the PFC that keeps track of lane faults can get confused and generate more lane faults or get into an unrecoverable state.

NOTE: If an intermittent lane fault continues to occur, the PFC will allow the lane fault to be cleared up to 10 times before it becomes permanently latched. This allows the operator 10 attempts to narrow down the cause of the lane fault. Once a lane fault is permanently latched, the PFC must be removed and sent to a repair shop to have the fault cleared. The following procedure is written to help the operator narrow down the cause of the lane fault and avoid getting to the point where the fault is permanently latched.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14006.

B. Description

- (1) The Center Primary Flight Computer (PFC-C) Lane 1 has an internal or interface fault.

C. Possible Causes

- (1) Primary Flight Computer (Centert), M27306
- (2) Flight Controls ARINC 629 (L) Coupler in P112 (PFC-C), B27071
- (3) Flight Controls ARINC 629 (R) Coupler in P212 (PFC-C), B27072
- (4) Flight Controls ARINC 629 (C) Coupler in P312 (PFC-C), B27073
- (5) Wiring

D. Related Data

- (a) If the second PFC Lane Reset was successful, swap the Center Primary Flight Computer (PFC-C), M27306 with the Left Primary Flight Computer (PFC-L), M27106. These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- 1) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.
- a) If the maintenance message “27-14000 Primary Flight Computer (Left) lane 1 has an internal or interface fault” now shows, replace the Primary Flight Computer that was originally installed in the PFC-C, M27306 position (now in the PFC-L position). These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- b) If the maintenance message “27-14006 Primary Flight Computer (Center) lane 1 has an internal or interface fault” still shows, do the Fault Isolation Procedure below.
- (b) If the second PFC Lane Reset was not successful, the fault is latched and cannot be cleared on the airplane, replace the Center Primary Flight Computer (PFC-C), M27306. These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

F. Fault Isolation Procedure

- (1) Swap the ARINC Couplers that follow (WDM 27-02-41, WDM 27-02-43 and WDM 27-02-45):
- Coupler B27071 (L FC BUS RCV) PFC-C LANE 1 with
 - Coupler B27041 (L FC BUS RCV) PFC-R LANE 1
 - Coupler B27072 (R FC BUS RCV) PFC-C LANE 1 with
 - Coupler B27053 (C FC BUS RCV) PFC-R LANE 2
 - Coupler B27073 (C FC BUS T/R) PFC-C LANE 1 with
 - Coupler B27062 (R FC BUS T/R) PFC-R LANE 3
- (2) These are the tasks:
- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801
- NOTE:** Swapping couplers can induce lane faults in the PFCs which would also need to be cleared by running the associated Primary Flight Computer (L, R, or C) Lane Reset Tests, AMM TASK 27-02-01-740-801.
- (a) Do the Repair Confirmation at the end of this task.
- (3) Monitor the airplane during subsequent flight(s) to see if the maintenance message shows again.
- (a) If the problem follows the coupler as shown in the table below, replace the applicable coupler. These are the tasks:
- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— **END OF TASK** —————

936. **Primary Flight Computer (Center) Lane 2 Problems - Fault Isolation**

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLERS EVEN AFTER THE PFC HAS BEEN REPLACED.

NOTE: Avoid swapping PFCs if any of them contains a lane fault. The state machine inside the PFC that keeps track of lane faults can get confused and generate more lane faults or get into an unrecoverable state.

NOTE: If an intermittent lane fault continues to occur, the PFC will allow the lane fault to be cleared up to 10 times before it becomes permanently latched. This allows the operator 10 attempts to narrow down the cause of the lane fault. Once a lane fault is permanently latched, the PFC must be removed and sent to a repair shop to have the fault cleared. The following procedure is written to help the operator narrow down the cause of the lane fault and avoid getting to the point where the fault is permanently latched.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14007.

B. Description

- (1) The Center Primary Flight Computer (PFC-C) Lane 2 has an internal or interface fault.

C. Possible Causes

- (1) Primary Flight Computer (Center), M27306
- (2) Flight Controls ARINC 629 (L) Coupler in P112 (PFC-C), B27081
- (3) Flight Controls ARINC 629 (R) Coupler in P212 (PFC-C), B27082
- (4) Flight Controls ARINC 629 (C) Coupler in P312 (PFC-C), B27083
- (5) Wiring

D. Related Data

- (1) WDM 27-02-41
- (2) WDM 27-02-43
- (3) WDM 27-02-45
- (4) SWPM 20-11-11

E. Initial Evaluation

- (1) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do this Ground Test on the MAT: Primary Flight Computer (C) Lane Reset, AMM TASK 27-02-01-740-801

NOTE: If the PFC Lane Reset was not successful, do the lane reset a second time.

- (a) If the second PFC Lane Reset was successful, swap the Center Primary Flight Computer (PFC-C), M27306 with the Left Primary Flight Computer (PFC-L), M27106. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801

777-200/300 FAULT ISOLATION MANUAL

- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- 1) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.
 - a) If the maintenance message “27-14001 Primary Flight Computer (Left) lane 2 has an internal or interface fault” now shows, replace the Primary Flight Computer that was originally installed in the PFC-C, M27306 position (now in the PFC-L position). These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
 - b) If the maintenance message “27-14007 Primary Flight Computer (Center) lane 2 has an internal or interface fault” still shows, do the Fault Isolation Procedure below.
- (b) If the second PFC Lane Reset was not successful, the fault is latched and cannot be cleared on the airplane, replace the Center Primary Flight Computer (PFC-C), M27306. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

F. Fault Isolation Procedure

- (1) Swap the ARINC Couplers that follow (WDM 27-02-41, WDM 27-02-43 and WDM 27-02-45):
 - Coupler B27081 (L FC BUS RCV) PFC-C LANE 2 with
 - Coupler B27041 (L FC BUS RCV) PFC-R LANE 1
 - Coupler B27082 (R FC BUS RCV) PFC-C LANE 2 with
 - Coupler B27053 (C FC BUS RCV) PFC-R LANE 2
 - Coupler B27083 (C FC BUS T/R) PFC-C LANE 2 with
 - Coupler B27062 (R FC BUS T/R) PFC-R LANE 3
- (2) These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: Swapping couplers can induce lane faults in the PFCs which would also need to be cleared by running the associated Primary Flight Computer (L, R, or C) Lane Reset Tests, AMM TASK 27-02-01-740-801.

 - (a) Do the Repair Confirmation at the end of this task.
- (3) Monitor the airplane during subsequent flight(s) to see if the maintenance message shows again.
 - (a) If the problem follows the coupler as shown in the table below, replace the applicable coupler. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

- (b) If the maintenance message “27-14007 Primary Flight Computer (center) lane 2 has an internal or interface fault” still shows in the PFC-C position, then continue.
- (4) Do these PFC-C to the 629 Coupler wire checks:

NOTE: Since it is not possible to determine which Stub Cable has the problem, it is recommended to examine ALL THREE Stub Cable Assemblies at the same time.

- (a) Open these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
D	2	CBD2-C	PFC LANE 1
D	4	CBD4-C	PFC LANE 2
D	6	CBD6-C	PFC LANE 3
D	8	CBD8-C	PFC BAT INTLK

- (b) Remove the PFC-C, M27306. This is the task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
- (c) Disconnect connectors DB27081, DB27082 and DB27083 from these ARINC 629 Couplers:
- 1) B27081 Coupler in the P112 Panel (WDM 27-02-41)
 - 2) B27082 Coupler in the P212 Panel (WDM 27-02-43)
 - 3) B27083 Coupler in the P312 Panel (WDM 27-02-45)
- (d) Do a wiring check between these pins of connector DM27306AA or DM27306AC at the PFC-C and the 629 Coupler connectors indicated in the tables that follow:

PFC-C	B27081
DM27306AC	COUPLER
	DB27081
pin 9T	pin 5
pin 9TR	pin 4
pin 6T	pin 2
pin 6TR	pin 1

	DB27083
pin 9T	pin 5
pin 9TR	pin 4
pin 10T	pin 2
pin 10TR	pin 1

- (e) Examine the shelf connector pins for damage, fit and security.
- (f) Examine the coupler connector pins for damage, fit and security.
- (g) Do continuity checks and pin to shield insulation checks.
- (h) If you find a problem with the wiring, disconnect the stub cable at the shelf station and repeat the wiring check for each section to the stub cables to isolate which stub cable section is defective.
- (i) Repair or replace the defective stub cable(s) as necessary (SWPM 20-11-11).
- (j) Re-connect the coupler connectors DB27081, DB27082 and DB27083 to the 629 Couplers B27081, B27082 and B27083.
- (k) Install the couplers that you removed above. This is the task: ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.
- (l) Re-install the PFC-L, M27306. This is the task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
- (m) Close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-C	PFC LANE 1
D	4	CBD4-C	PFC LANE 2
D	6	CBD6-C	PFC LANE 3
D	8	CBD8-C	PFC BAT INTLK

- (n) Do the Repair Confirmation that follows.

G. Repair Confirmation

- (1) Do this Ground Test on the MAT: Primary Flight Computer (C) Lane Reset, AMM TASK 27-02-01-740-801
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

D633W103-ARO

Page 298.316
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— **END OF TASK** —————

937. **Primary Flight Computer (Center) Lane 3 Problems - Fault Isolation**

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLERS EVEN AFTER THE PFC HAS BEEN REPLACED.

NOTE: Avoid swapping PFCs if any of them contains a lane fault. The state machine inside the PFC that keeps track of lane faults can get confused and generate more lane faults or get into an unrecoverable state.

NOTE: If an intermittent lane fault continues to occur, the PFC will allow the lane fault to be cleared up to 10 times before it becomes permanently latched. This allows the operator 10 attempts to narrow down the cause of the lane fault. Once a lane fault is permanently latched, the PFC must be removed and sent to a repair shop to have the fault cleared. The following procedure is written to help the operator narrow down the cause of the lane fault and avoid getting to the point where the fault is permanently latched.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14008.

B. Description

- (1) The Center Primary Flight Computer (PFC-C) Lane 3 has an internal or interface fault.

C. Possible Causes

- (1) Primary Flight Computer (Cight), M27306
- (2) Flight Controls ARINC 629 (L) Coupler in P112 (PFC-C), B27091
- (3) Flight Controls ARINC 629 (R) Coupler in P212 (PFC-C), B27092
- (4) Flight Controls ARINC 629 (C) Coupler in P312 (PFC-C), B27093
- (5) Wiring

D. Related Data

- (1) WDM 27-02-41
- (2) WDM 27-02-43
- (3) WDM 27-02-45
- (4) SWPM 20-11-11

E. Initial Evaluation

- (1) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do this Ground Test on the MAT: Primary Flight Computer (C) Lane Reset, AMM TASK 27-02-01-740-801

NOTE: If the PFC Lane Reset was not successful, do the lane reset a second time.

- (a) If the second PFC Lane Reset was successful, swap the Centert Primary Flight Computer (PFC-C), M27306 with the Left Primary Flight Computer (PFC-L), M27106. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801

- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- 1) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.
 - a) If the maintenance message “27-14002 Primary Flight Computer (Left) lane 3 has an internal or interface fault” now shows, replace the Primary Flight Computer that was originally installed in the PFC-C, M27306 position (now in the PFC-L position). These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
 - b) If the maintenance message “27-14008 Primary Flight Computer (Center) lane 3 has an internal or interface fault” still shows, do the Fault Isolation Procedure below.
- (b) If the second PFC Lane Reset was not successful, the fault is latched and cannot be cleared on the airplane, replace the Center Primary Flight Computer (PFC-C), M27306. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

F. Fault Isolation Procedure

- (1) Swap the ARINC Couplers that follow (WDM 27-02-41, WDM 27-02-43 and WDM 27-02-45):
 - Coupler B27091 (L FC BUS RCV) PFC-C LANE 3 with
 - Coupler B27041 (L FC BUS RCV) PFC-R LANE 1
 - Coupler B27092 (R FC BUS RCV) PFC-C LANE 3 with
 - Coupler B27053 (C FC BUS RCV) PFC-R LANE 2
 - Coupler B27093 (C FC BUS T/R) PFC-C LANE 3 with
 - Coupler B27062 (R FC BUS T/R) PFC-R LANE 3
- (2) These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: Swapping couplers can induce lane faults in the PFCs which would also need to be cleared by running the associated Primary Flight Computer (L, R, or C) Lane Reset Tests, AMM TASK 27-02-01-740-801.

 - (a) Do the Repair Confirmation at the end of this task.
- (3) Monitor the airplane during subsequent flight(s) to see if the maintenance message shows again.
 - (a) If the problem follows the coupler as shown in the table below, replace the applicable coupler. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— **END OF TASK** —————

938. **Primary Flight Computer (Right) Lane 1 Problems - Fault Isolation**

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLERS EVEN AFTER THE PFC HAS BEEN REPLACED.

NOTE: Avoid swapping PFCs if any of them contains a lane fault. The state machine inside the PFC that keeps track of lane faults can get confused and generate more lane faults or get into an unrecoverable state.

NOTE: If an intermittent lane fault continues to occur, the PFC will allow the lane fault to be cleared up to 10 times before it becomes permanently latched. This allows the operator 10 attempts to narrow down the cause of the lane fault. Once a lane fault is permanently latched, the PFC must be removed and sent to a repair shop to have the fault cleared. The following procedure is written to help the operator narrow down the cause of the lane fault and avoid getting to the point where the fault is permanently latched.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14012.

B. Description

- (1) The Right Primary Flight Computer (PFC-R) Lane 3 has an internal or interface fault.

C. Possible Causes

- (1) Primary Flight Computer (Right), M27206
- (2) Flight Controls ARINC 629 (L) Coupler in P112 (PFC-R), B27041
- (3) Flight Controls ARINC 629 (R) Coupler in P212 (PFC-R), B27042
- (4) Flight Controls ARINC 629 (C) Coupler in P312 (PFC-R), B27043
- (5) Wiring

P112 (PFC-R), B27041	P112 (PFC-C), B27071	27-14012	27-14006	P112 (PFC-C), B27071
P212 (PFC-R), B27042	P312 (PFC-C), B27083	27-14012	27-14007	P312 (PFC-C), B27083
P312 (PFC-R), B27043	P212 (PFC-C), B27092	27-14012	27-14008	P212 (PFC-C), B27092

- (b) If the maintenance message “27-14012 Primary Flight Computer (right) lane 1 has an internal or interface fault” still shows in the PFC-R position, then continue.
- (4) Do these PFC-R to the 629 Coupler wire checks:
- NOTE: Since it is not possible to determine which Stub Cable has the problem, it is recommended to examine ALL THREE Stub Cable Assemblies at the same time.
- (a) Open these circuit breakers on the PSA-R, M24201:
- Power Supply Assembly Right, M24201**
- | Row | Col | Number | Name |
|-----|-----|--------|---------------|
| D | 2 | CBD2-R | PFC LANE 1 |
| D | 4 | CBD4-R | PFC LANE 2 |
| D | 6 | CBD6-R | PFC LANE 3 |
| D | 8 | CBD8-R | PFC BAT INTLK |
- (b) Remove the PFC-R, M27206. This is the task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
- (c) Disconnect connectors DB27041, DB27042 and DB27043 from these ARINC 629 Couplers:
- 1) B27041 Coupler in the P112 Panel (WDM 27-02-41)
 - 2) B27042 Coupler in the P212 Panel (WDM 27-02-43)
 - 3) B27043 Coupler in the P312 Panel (WDM 27-02-45)
- (d) Do a wiring check between these pins of connector DM27206AA OR DM27206AC at the PFC-R and the 629 Coupler connectors indicated in the tables that follow:

PFC-R	B27041
DM27206AC	COUPLER
	DB27041
pin 5T	pin 5
pin 5TR	pin 4
pin 7T	pin 2
pin 7TR	pin 1

EFFECTIVITY

DM27206AC	COUPLER
	DB27063
pin 1T	pin 5
pin 1TR	pin 4
pin 3T	pin 2
pin 3TR	pin 1

- (e) Examine the shelf connector pins for damage, fit and security.
- (f) Examine the coupler connector pins for damage, fit and security.
- (g) Do continuity checks and pin to shield insulation checks.
- (h) If you find a problem with the wiring, disconnect the stub cable at the shelf station and repeat the wiring check for each section to the stub cables to isolate which stub cable section is defective.
- (i) Repair or replace the defective stub cable(s) as necessary (SWPM 20-11-11).
- (j) Re-connect the coupler connectors DB27041, DB27042 and DB27043 to the 629 Couplers B27041, B27042 and B27043.
- (k) Install the couplers that you removed above. This is the task: ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.
- (l) Re-install the PFC-R, M27206. This is the task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
- (m) Close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-R	PFC LANE 1
D	4	CBD4-R	PFC LANE 2
D	6	CBD6-R	PFC LANE 3
D	8	CBD8-R	PFC BAT INTLK

- (n) Do the Repair Confirmation that follows.

G. Repair Confirmation

- (1) Do this Ground Test on the MAT: Primary Flight Computer (R) Lane Reset, AMM TASK 27-02-01-740-801
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

D633W103-ARO

Page 298.324
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— **END OF TASK** —————

939. **Primary Flight Computer (Right) Lane 2 Problems - Fault Isolation**

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLERS EVEN AFTER THE PFC HAS BEEN REPLACED

NOTE: Avoid swapping PFCs if any of them contains a lane fault. The state machine inside the PFC that keeps track of lane faults can get confused and generate more lane faults or get into an unrecoverable state.

NOTE: If an intermittent lane fault continues to occur, the PFC will allow the lane fault to be cleared up to 10 times before it becomes permanently latched. This allows the operator 10 attempts to narrow down the cause of the lane fault. Once a lane fault is permanently latched, the PFC must be removed and sent to a repair shop to have the fault cleared. The following procedure is written to help the operator narrow down the cause of the lane fault and avoid getting to the point where the fault is permanently latched.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14013.

B. Description

- (1) The Right Primary Flight Computer (PFC-R) Lane 2 has an internal or interface fault.

C. Possible Causes

- (1) Primary Flight Computer (Right), M27206
- (2) Flight Controls ARINC 629 (L) Coupler in P112 (PFC-R), B27051
- (3) Flight Controls ARINC 629 (R) Coupler in P212 (PFC-R), B27052
- (4) Flight Controls ARINC 629 (C) Coupler in P312 (PFC-R), B27053
- (5) Wiring

D. Related Data

- (1) WDM 27-02-41
- (2) WDM 27-02-43
- (3) WDM 27-02-45
- (4) SWPM 20-11-11

E. Initial Evaluation

- (1) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do this Ground Test on the MAT: Primary Flight Computer (R) Lane Reset, AMM TASK 27-02-01-740-801

NOTE: If the PFC Lane Reset was not successful, do the lane reset a second time.

- (a) If the second PFC Lane Reset was successful, swap the Right Primary Flight Computer (PFC-R), M27206 with the Left Primary Flight Computer (PFC-L), M27106. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801

EFFECTIVITY

777-200/300 FAULT ISOLATION MANUAL

- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- 1) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.
 - a) If the maintenance message “27-14001 Primary Flight Computer (Left) lane 2 has an internal or interface fault” now shows, replace the Primary Flight Computer that was originally installed in the PFC-R, M27206 position (now in the PFC-L position). These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
 - b) If the maintenance message “27-14013 Primary Flight Computer (Right) lane 2 has an internal or interface fault” still shows, do the Fault Isolation Procedure below.
- (b) If the second PFC Lane Reset was not successful, the fault is latched and cannot be cleared on the airplane, replace the Right Primary Flight Computer (PFC-R), M27206. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

F. Fault Isolation Procedure

- (1) Swap the ARINC Couplers that follow (WDM 27-02-41, WDM 27-02-43 and WDM 27-02-45):
 - Coupler B27051 (L FC BUS RCV) PFC-R LANE 2 with
 - Coupler B27071 (L FC BUS RCV) PFC-C LANE 1
 - Coupler B27052 (R FC BUS T/R) PFC-R LANE 2 with
 - Coupler B27083 (C FC BUS T/R) PFC-C LANE 2
 - Coupler B27053 (C FC BUS RCV) PFC-R LANE 2 with
 - Coupler B27092 (R FC BUS RCV) PFC-C LANE 3
- (2) These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: Swapping couplers can induce lane faults in the PFCs which would also need to be cleared by running the associated Primary Flight Computer (L, R, or C) Lane Reset Tests, AMM TASK 27-02-01-740-801

 - (a) Do the Repair Confirmation at the end of this task.
- (3) Monitor the airplane during the subsequent flight(s) to see if the maintenance message shows again.
 - (a) If the problem follows the coupler as shown in the table below, replace the applicable coupler. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— **END OF TASK** —————

940. **Primary Flight Computer (Right) Lane 3 Problems - Fault Isolation**

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURRED BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLERS EVEN AFTER THE PFC HAS BEEN REPLACED.

NOTE: Avoid swapping PFCs if any of them contains a lane fault. The state machine inside the PFC that keeps track of lane faults can get confused and generate more lane faults or get into an unrecoverable state.

NOTE: If an intermittent lane fault continues to occur, the PFC will allow the lane fault to be cleared up to 10 times before it becomes permanently latched. This allows the operator 10 attempts to narrow down the cause of the lane fault. Once a lane fault is permanently latched, the PFC must be removed and sent to a repair shop to have the fault cleared. The following procedure is written to help the operator narrow down the cause of the lane fault and avoid getting to the point where the fault is permanently latched.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14014.

B. Description

- (1) The Right Primary Flight Computer (PFC-R) Lane 3 has an internal or interface fault.

C. Possible Causes

- (1) Primary Flight Computer (Right), M27206
- (2) Flight Controls ARINC 629 (L) Coupler in P112 (PFC-R), B27061
- (3) Flight Controls ARINC 629 (R) Coupler in P212 (PFC-R), B27062
- (4) Flight Controls ARINC 629 (C) Coupler in P312 (PFC-R), B27063
- (5) Wiring

D. Related Data

- (n) Do the Repair Confirmation that follows.

G. Repair Confirmation

- (1) Do this Ground Test on the MAT: Primary Flight Computer (R) Lane Reset, AMM TASK 27-02-01-740-801
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

941. Primary Flight Computer (Center) is Inoperative - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14019.

B. Initial Evaluation

NOTE: This message can be caused when the PFCs get power as the engines are started. Cycling these circuit breakers will correct this problem.

- (1) Open all of these circuit breakers. After they are all open, then close them:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-C	PFC LANE 1
D	4	CBD4-C	PFC LANE 2
D	6	CBD6-C	PFC LANE 3
D	8	CBD8-C	PFC BAT INTLK

- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
- 27-Primary Flight Controls, System Test, Transmitter Reset.
 - Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
 - Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
 - If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the center primary flight computer (PFC-C), M27306. These are the tasks:
- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (a) Do this ground test on the MAT:
- 27-Primary Flight Controls, System Test, Transmitter Reset.
 - Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
 - Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
 - If the maintenance message does not show on the MAT, then you corrected the fault.
 - If the maintenance message shows on the MAT, then continue.
- (2) Do this check of the power and ground wiring for the PFC-C:

- 4) Do this ground test on the MAT:

- 27-Primary Flight Controls, System Test, Transmitter Reset.
- Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
- Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
- If the maintenance message does not show on the MAT, then you corrected the fault.

(d) If you do not find a problem with the wiring, then continue.

- (4) Re-install the PFC-C, M27306. To install it, do this task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.

- (5) Replace the ARINC 629 coupler, DB27073, in the P312 panel. These are the tasks:

- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
- ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This coupler connects lane 1 of the PFC-C to the Flt Ctrl 629 Bus-C.

- (a) Do this ground test on the MAT:

- 27-Primary Flight Controls, System Test, Transmitter Reset.
- Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
- If the maintenance message does not show on the MAT, then you corrected the fault.
- If the maintenance message shows on the MAT, then continue.

- (6) Replace the ARINC 629 coupler, DB27083, in the P312 panel. These are the tasks:

- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
- ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This coupler connects lane 2 of the PFC-C to the Flt Ctrl 629 Bus-C.

- (a) Do this ground test on the MAT:

- 27-Primary Flight Controls, System Test, Transmitter Reset.
- Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
- Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
- If the maintenance message does not show on the MAT, then you corrected the fault.
- If the maintenance message shows on the MAT, then continue.

- (7) Replace the ARINC 629 coupler, DB27093, in the P312 panel. These are the tasks:

- (c) Disconnect connector DB27042 from the 629 coupler, B27042.
- (d) Disconnect connector DB27052 from the 629 coupler, B27052.
- (e) Disconnect connector DB27062 from the 629 coupler, B27062.
- (f) Do a wiring check between these pins of connector DM27206AB for the PFC-R and connectors DB27042, DB27052, and DB27062 for the 629 couplers (WDM 27-02-45):

DM27206AA	DB27042
pin 3T	pin 5
pin 3TR	pin 4
pin 6T	pin 2
pin 6TR	pin 1

DM27206AA	DB27052
pin 9T	pin 5
pin 9TR	pin 4
pin 10T	pin 2
pin 10TR	pin 1

DM27206AA	DB27062
pin 8T	pin 5
pin 8TR	pin 4
pin 7T	pin 2
pin 7TR	pin 1

- (g) If you find a problem with the wiring, then do these steps:
 - 1) Replace the ARINC 629 wiring (SWPM 20-11-11).
 - 2) Re-install the PFC-R, M27206. To install it, do this task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
 - 3) Re-connect connector DB27042, DB27052, and DB27062 to their 629 couplers.
 - 4) Close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	CBD2-R	PFC LANE 1
D	4	CBD4-R	PFC LANE 2
D	6	CBD6-R	PFC LANE 3
D	8	CBD8-R	PFC BAT INTLK

- 5) Do this ground test on the MAT:

- a) 27-Primary Flight Controls, System Test, Transmitter Reset.
- b) Set the PRIMARY FLIGHT COMPUTER DISC switch, on the overhead panel, to the DISC position.
- c) Set the PRIMARY FLIGHT COMPUTER DISC switch back to the AUTO position.
- d) If the maintenance message does not show on the MAT, then you corrected the fault.

————— END OF TASK —————

943. Primary Flight Computer (Left) Signals Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14025.

B. Fault Isolation Procedure

- (1) Replace the left primary flight computer (PFC-L), M27106. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

944. Primary Flight Computer (Center) Signals Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14026.

B. Fault Isolation Procedure

- (1) Replace the center primary flight computer (PFC-C), M27306. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

945. Primary Flight Computer (Right) Signals Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14027.

B. Fault Isolation Procedure

- (1) Replace the right flight computer (PFC-R), M27206. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 2) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

946. Flight Controls Power (Left) Problems - Fault Isolation

NOTE: This message is set and latched if PFC R and C are not receiving ARINC 629 data from ACE-L1, PSA-L, and PFC-L. The PFC must receive data from all of these LRUs for the fault to clear.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15100.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:

NOTE: Make sure that the ACE-L1, PSA-L, and PFC-L are powered.

- (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the left power supply assembly (PSA-L), M24101. These are the tasks:
 - Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- (a) Do this ground test on the MAT:
- (b) 27-Primary Flight Controls, System Test, Transmitter Reset.
- (c) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

947. Flight Controls Power (Center) Problems - Fault Isolation

NOTE: This message is set and latched if PFC L and R are not receiving ARINC 629 data from ACE-C, PSA-C, PFC-C, and SAARU. The PFC must receive data from all of these LRUs for the fault to clear.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15101.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:

NOTE: Make sure that the ACE-C, PSA-C, PFC-C, and SAARU are powered.

- (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the center power supply assembly (PSA-C), M24301. These are the tasks:

- Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
- Power Supply Assembly Installation, AMM TASK 24-35-01-400-801

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
- 2) If the maintenance message does not show on the ground test display, you corrected the fault.
- 3) If the maintenance message shows on the ground test display, then continue.

- (2) Do this task: Flight Controls 629 Bus-C is Failed - Fault Isolation, 23-91 TASK 802.

NOTE: Look for maintenance message 27-15101 instead of 23-81002 when you do the Fault Isolation Procedure for maintenance message 23-81002.

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
- 2) If the maintenance message does not show on the ground test display, you corrected the fault.
- 3) If the maintenance message shows on the ground test display, then continue.

————— **END OF TASK** —————

948. Flight Controls Power (Right) Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15102.

B. Fault Isolation Procedure

- (1) Replace the right power supply assembly (PSA-R), M24201. These are the tasks:

- Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
- Power Supply Assembly Installation, AMM TASK 24-35-01-400-801

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
- 2) If the maintenance message does not show on the ground test display, you corrected the fault.
- 3) If the maintenance message shows on the display, go to the next step.

- (2) Check the FBW voltage on the Electrical Maintenance Page.
 - (a) If the FBW voltage is blank, check for ground and power at the PSA-R rack.
 - 1) If you find any problem, do the steps as necessary to fix the problem.
 - 2) If you do not find any problem and there are no other flight control related status messages, replace the ARINC 629 coupler M24201.

— END OF TASK —

949. Actuator Control Electronics (Left-1) Internal Fault - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16041.

B. Initial Evaluation

NOTE: This fault can only occur during a ground test on the MAT. Make a note of which ground test you did when this message occurred.

C. Fault Isolation Procedure

- (1) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT.
 - (a) If maintenance message 27-13041 shows (in the 27 Primary Flight Controls section) on the MAT, then do the Fault Isolation Procedure for maintenance message 27-13041.
 - 1) Do the applicable ground test, on the MAT, again.

NOTE: The applicable ground test is the one that you made the note of in the Initial Evaluation above.
 - 2) If maintenance message 27-16041 does not show on the ground test display, then you corrected the fault.
 - (b) If maintenance message 27-13041 does not show (in the 27 Primary Flight Controls section) on the MAT, then continue
- (2) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do the applicable ground test again.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

— END OF TASK —

950. Actuator Control Electronics (Left-2) Internal Fault - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16042.

- (f) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Replace the IOM(M009) module in the left AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) After 1.5 minutes, look at the message on the MAT:
- (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.

————— END OF TASK —————

955. ACE-L2, ACE PWR SUPP VALID 2 Circuit Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17013.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) After 1.5 minutes, look at the message on the MAT:
- (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this check of the discrete wiring:
 - (a) For the IOM(M008) and IOM(M009) modules in the right AIMS cabinet, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (b) Open these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (d) After 1.5 minutes, look at the message on the MAT:
- (e) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (f) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Replace the IOM(M004) module in the left AIMS cabinet. These are the tasks:
 - Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) After 1.5 minutes, look at the message on the MAT:
- (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.

————— END OF TASK —————

959. ACE-R, ACE PWR SUPP VALID 2 Circuit Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17017.

EFFECTIVITY
ARO ALL

27-02 TASKS 958-959

D633W103-ARO

Page 298.362
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) After 1.5 minutes, look at the message on the MAT:
 - (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this check of the discrete wiring:
 - (a) For the IOM(M003) and IOM(M004) modules in the right AIMS cabinet, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
 - (b) Open these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-2 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (c) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Do a wiring check between these contacts of connector DM27221AB (for ACE-R) and the connectors for the two IOM modules (at the AIMS cabinet) (WDM 27-02-50) (SSM 31-41-08):

DM27221AB	J240-A	J250-A
pin J2	pin D13	pin D13
pin K1	GROUND	GROUND

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.

EFFECTIVITY

960. Autopilot Flight Director Computer Command Signals Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19730.

B. Initial Evaluation

- (1) Do these steps to test the autopilot:
 - (a) Do this task: Air Data Inertial Reference Unit - Alignment, AMM TASK 34-21-00-820-801.
NOTE: The ADIRU must be aligned for the autopilot to operate.
 - (b) Set the two flight director (F/D) switches on the mode control panel to the OFF position.
 - (c) Push one of the autopilot engage (A/P) switches to engage the autopilot.
 - (d) Push the SEL switch.
 - (e) Turn the heading selector knob one or more full turns in the clockwise and the counterclockwise directions.
NOTE: The heading selector knob is the knob that is immediately outside the SEL switch.
 - (f) Turn the vertical speed (V/S) wheel one or more full turns in the UP and the DOWN directions.
 - (g) Look for these messages on the EICAS display:
 - 1) NO LAND 3 (ADVISORY)
 - 2) NO AUTOLAND (ADVISORY)
 - 3) A/P DISC (WARNING)
 - (h) If one or more of these messages shows on the EICAS display, then do the Fault Isolation Procedure below.
 - (i) If none of these messages show on the EICAS display, then there was an intermittent fault.
- (2) Do these steps to test the autopilot flight director computer (AFDC):
 - (a) Do this task: Autopilot Flight Director Computers - System Test, AMM TASK 22-11-00-730-802.
 - (b) If the AFDC system test fail, then do the Fault Isolation Procedure below.
 - (c) If the AFDC system test pass, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: You must do the Initial Evaluation procedure above before you do this Fault Isolation Procedure.

- (1) For each EICAS message that you found above, do this task: How to Find a Maintenance Message Correlated to an Existing (Active or Latched) Flight Deck Effect, AMM TASK 45-10-00-740-801
 - (a) For each maintenance message other than maintenance message 27-19730, do these steps:

777-200/300 FAULT ISOLATION MANUAL

- 1) Find the maintenance message in the Maintenance Message Index.
- 2) Do the procedure listed in the Maintenance Message Index.
- (b) If maintenance message 27-19730 is the only maintenance message that shows (or if you have corrected all the other maintenance messages), then continue.
- (c) If NO LAND 3 is the only message on the EICAS display, then do the LRU test of the Autopilot Flight Director Computer (AFDC):
 - 1) Make these selections on the MAT:
 - a) ONBOARD MAINTENANCE
 - b) LINE MAINTENANCE
 - c) GROUND TESTS
 - d) 22 Autopilot Flight Director System
 - e) LRU REPLACEMENT TEST
 - f) Autopilot Flight Director Computer (left, center, right)
 - g) CONTINUE
 - 2) Do the instructions that show on the MAT and make these selections:
 - a) CONTINUE
 - b) START TEST
 - 3) When the test is completed, if PASSED shows adjacent to TEST CONDITION on the MAT, then you corrected the fault.
 - 4) If FAILED shows, then continue.
- (2) Replace the left autopilot flight director computer, M22101. These are the tasks:
 - Autopilot Flight Director Computer Removal, AMM TASK 22-11-01-000-801
 - Autopilot Flight Director Computer Installation, AMM TASK 22-11-01-400-801
- (a) Do these steps to test the autopilot:
 - 1) Push one of the autopilot engage (A/P) switches to engage the autopilot.
 - 2) Push the SEL switch.
 - 3) Turn the heading selector knob one or more full turns in the clockwise and the counterclockwise directions.
 - 4) Turn the vertical speed (V/S) wheel one or more full turns in the UP and the DOWN directions.
 - 5) Look for these messages on the EICAS display:
 - a) NO LAND 3 (ADVISORY)
 - b) NO AUTOLAND (ADVISORY)
 - c) A/P DISC (WARNING)
 - 6) If none of these messages show on the EICAS display, then you corrected the fault.
 - 7) If one or more of these messages shows on the EICAS display, then continue.
- (3) For the EICAS messages that you found above, do this task: How to Find a Maintenance Message Correlated to an Existing (Active or Latched) Flight Deck Effect, AMM TASK 45-10-00-740-801

B. Initial Evaluation

NOTE: This maintenance message only occurs when you do one of the Actuator Control Electronics Replacement tests on the MAT. Make a note of which Actuator Control Electronics Replacement test (L1, L2, C, or R) you did. Do the Fault Isolation Procedure for the equivalent ACE.

C. Fault Isolation Procedure

- (1) Remove the applicable ACE (L1=M27121, L2=M27122, C=M27321, R=M27221). To install it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (a) Look for bent or pushed-back pins in the electrical connector for the ACE.
 - (b) If you find a bent or pushed-back pin, then do these steps:
 - 1) Repair all the pins that have a problem.
 - 2) Re-install the ACE. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 3) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics.
 - 4) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If you do not find a bent or pushed-back pin, then continue.
- (2) Install a new ACE (L1=M27121, L2=M27122, C=M27321, R=M27221). To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then do these steps:
 - 1) Look for the other maintenance messages that show on the ground test display.
 - 2) Find each message in the Maintenance Message Index.
 - 3) Do the specified fault isolation task.
 - 4) After you have corrected the maintenance messages other than 27-16001, do this ground test on the MAT:
 - a) 27-Primary Flight Controls, LRU Replacement Test, Actuator Control Electronics.
 - 5) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

B. Fault Isolation Procedure

- (1) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.

NOTE: These steps do a check to make sure the indicator light has power and is not burned out.

- (a) If only the one VALVE CLOSED light does not come on, then do these steps:
- 1) Release the IND LTS switch.
 - 2) Replace the VALVE CLOSED light (WDM 27-02-51). To replace it, do this task: Integral Panel Light - Annunciator Replacement, AMM TASK 33-13-00-960-803.
 - 3) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
 - 4) If the VALVE CLOSED light does not come on, then do these steps:
 - a) Repair the wiring between pin 1 of connector DL4 (of M27035) and pin 20 of connector DM27035B (WDM 27-02-51).
 - b) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
- (b) If none of the six VALVE CLOSED lights come on, then do these steps:
- 1) Release the IND LTS switch.
 - 2) Repair the wiring between pin 1 of connector DL4 (of M27035) and pin 18 of connector DP29C at the P29 panel (WDM 27-02-51) (WDM 33-16-13) (WDM 33-16-15) (WDM 33-16-16).
 - 3) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.
 - 4) If the VALVE CLOSED lights comes on, then you corrected the fault. Release the IND LTS switch.
- (c) If a minimum of one but less than six VALVE CLOSED lights come on, then do these steps:
- 1) Release the IND LTS switch.
 - 2) Replace the flight control hydraulic power panel, M27035 (WDM 27-02-51)
 - 3) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.
 - 4) If the VALVE CLOSED lights comes on, then you corrected the fault. Release the IND LTS switch.
- (d) If the VALVE CLOSED lights comes on, then release the IND LTS switch, and continue.
- (2) Open the flight control hydraulic power panel, M27035, for access to the back of the switch.
- NOTE:** These steps do a check to make sure power gets to the switch.
- (a) Do a check for 28 VDC from terminal 2 (+) of switch S4 (of M27035) to structure ground (WDM 27-02-51).
- (b) If there is not 28 VDC at terminal 2 of switch S4, then do these steps:
- 1) Do a check of the following (WDM 27-02-51):
Check for 28 VDC from terminal 2 (+) of this circuit breaker to structure ground:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

D633W103-ARO

Page 298.372
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- a) Replace the circuit breaker.
 - b) Close the flight control hydraulic power panel, M27035.
 - c) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
- 3) If there is 28 VDC at terminal 2 of circuit breaker C27618, then do these steps:
- a) Repair the wiring between terminal 2 of circuit breaker C27618 and terminal 2 of switch S4 (of M27035).
 - b) Close the flight control hydraulic power panel, M27035.
 - c) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
- (c) If there is 28 VDC at terminal 2 of switch S4, then continue.
- (3) Do a check for 28 VDC from terminal 1 (+) of switch S4 (of M27035) to structure ground (WDM 27-02-51).

NOTE: Make sure the switch is in the SHUTOFF position.

- (a) If there is not 28 VDC at terminal 1 of switch S4, then do these steps:

- 1) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	22	C27618	L FC SOV WG

- 2) Replace the switch, S4 of M27035 (WDM 27-02-51).
- 3) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	22	C27618	L FC SOV WG

- 4) Close the flight control hydraulic power panel, M27035.
- 5) Set the FLT CONTROL HYD VALVE POWER switch to the SHUTOFF position.
- a) If the VALVE CLOSED light comes on, then you corrected the fault.
- (b) If there is 28 VDC at terminal 1 of switch S4, then continue.
- (4) Replace the wing shutoff valve for the left hydraulic system, V27100. These are the tasks:
- Hydraulic Shutoff Valve Removal, AMM TASK 27-02-32-000-801
 - Hydraulic Shutoff Valve Installation, AMM TASK 27-02-32-400-801
- (a) Set the FLT CONTROL HYD VALVE POWER switch to the SHUTOFF position.
- 1) Make sure the VALVE CLOSED light comes on.
- (b) Set the FLT CONTROL HYD VALVE POWER switch to the NORM position.
- 1) Make sure the VALVE CLOSED light goes off.
- (c) If the valve closed light operates correctly, then you corrected the fault. Do this step to put the airplane back to its usual condition:
- 1) Close the flight control hydraulic power panel, M27035.
- (d) If the valve closed light does not operate correctly, then continue.
- (5) Set the L FLT CONTROL HYD VALVE POWER switch for the WING to the SHUTOFF position.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Look at the wing shutoff valve for the left hydraulic system, V27100, to see the position of its lever.
- (b) If the lever on the valve is in the shutoff (closed) position, then do these steps:
 - 1) Repair the wiring between the connector at the VALVE CLOSED light (DL1 of M27035), the connector at the valve (DV27100), and structure ground (WDM 27-02-51).

DV27100	DL1
pin 10	pin 2

DV27100	Ground
pin 9	GD78-DC

- 2) Close the flight control hydraulic power panel, M27035.
 - 3) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
- (c) If the lever on the valve is in the open position, then do these steps:
 - 1) Repair the wiring between the switch (S4 of M27035), the connector at the valve (DV27100), and structure ground (WDM 27-02-51).

DV27100	S4
pin 2	term 1

DV27100	Ground
pin 1	GD78-DC

- 2) Close the flight control hydraulic power panel, M27035.
- 3) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.

————— **END OF TASK** —————

967. Flight Control Hydraulic (R system) Shutoff Valve (Wing) Problems - Fault Isolation

A. Initial Evaluation

- (1) Set the R FLT CONTROL HYD VALVE POWER switch for the WING to the SHUTOFF position.
 - (a) If the VALVE CLOSED light, below the switch, does not come on, then do the Fault Isolation Procedure below.

NOTE: If the valve was deactivated to fly the airplane (per the DDG), then you must remove the lockwire from the valve before you do this fault isolation procedure. To remove the lockwire from the valve, (AMM TASK 27-00-00-440-801).
 - (b) If the VALVE CLOSED light comes on, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.

NOTE: These steps do a check to make sure the indicator light has power and is not burned out.

 - (a) If only the one VALVE CLOSED light does not come on, then do these steps:

- 1) Release the IND LTS switch.
 - 2) Replace the VALVE CLOSED light (WDM 27-02-53). To replace it, do this task: Integral Panel Light - Annunciator Replacement, AMM TASK 33-13-00-960-803.
 - 3) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
 - 4) If the VALVE CLOSED light does not come on, then do these steps:
 - a) Repair the wiring between pin 1 of connector DL6 (of M27035) and pin 20 of connector DM27035B (WDM 27-02-53).
 - b) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
- (b) If none of the six VALVE CLOSED lights come on, then do these steps:
- 1) Release the IND LTS switch.
 - 2) Repair the wiring between pin 1 of connector DL6 (of M27035) and pin 18 of connector DP29C at the P29 panel (WDM 27-02-53) (WDM 33-16-13) (WDM 33-16-15) (WDM 33-16-16).
 - 3) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.
 - 4) If the VALVE CLOSED lights comes on, then you corrected the fault. Release the IND LTS switch.
- (c) If a minimum of one but less than six VALVE CLOSED lights come on, then do these steps:
- 1) Release the IND LTS switch.
 - 2) Replace the flight control hydraulic power panel, M27035 (WDM 27-02-53)
 - 3) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.
 - 4) If the VALVE CLOSED lights comes on, then you corrected the fault. Release the IND LTS switch.
- (d) If the VALVE CLOSED lights comes on, then release the IND LTS switch, and continue.
- (2) Open the flight control hydraulic power panel, M27035, for access to the back of the switch.
- NOTE:** These steps do a check to make sure power gets to the switch.
- (a) Do a check for 28 VDC from terminal 2 (+) of switch S6 (of M27035) to structure ground (WDM 27-02-53).
- (b) If there is not 28 VDC at terminal 2 of switch S6, then do these steps:
- 1) Do the following (WDM 27-02-53):
Check for 28 VDC from terminal 2 (+) of this circuit breaker to structure ground:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	6	C27620	R FC SOV WG

- 2) If there is not 28 VDC at terminal 2 of circuit breaker C27620, then do these steps:
 - a) Replace the circuit breaker.
 - b) Close the flight control hydraulic power panel, M27035.
 - c) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
- 3) If there is 28 VDC at terminal 2 of circuit breaker C27620, then do these steps:

970. Flight Control Hydraulic (C system) Shutoff Valve (Tail) Problems - Fault Isolation

A. Initial Evaluation

- (1) Set the C FLT CONTROL HYD VALVE POWER switch for the TAIL to the SHUTOFF position.
 - (a) If the VALVE CLOSED light, below the switch, does not come on, then do the Fault Isolation Procedure below.

NOTE: If the valve was deactivated to fly the airplane (per the DDG), then you must remove the lockwire from the valve before you do this fault isolation procedure. To remove the lockwire from the valve, (AMM TASK 27-00-00-440-801).

NOTE: The two shutoff valves for the center hydraulic system are operated through air/ground relays. These valves will not close if the airplane is in the air.
 - (b) If the VALVE CLOSED light comes on, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.

NOTE: These steps do a check to make sure the indicator light has power and is not burned out.

 - (a) If only the one VALVE CLOSED light does not come on, then do these steps:
 - 1) Release the IND LTS switch.
 - 2) Replace the VALVE CLOSED light (WDM 27-02-55). To replace it, do this task: Integral Panel Light - Annunciator Replacement, AMM TASK 33-13-00-960-803.
 - 3) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
 - 4) If the VALVE CLOSED light does not come on, then do these steps:
 - a) Repair the wiring between pin 1 of connector DL2 (of M27035) and pin 20 of connector DM27035B (WDM 27-02-55).
 - b) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.

FAULT ISOLATION MANUAL**

- (b) If none of the six VALVE CLOSED lights come on, then do these steps:
- 1) Release the IND LTS switch.
 - 2) Repair the wiring between pin 1 of connector DL2 (of M27035) and pin 18 of connector DP29C at the P29 panel (WDM 27-02-55) (WDM 33-16-13) (WDM 33-16-15) (WDM 33-16-16).
 - 3) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.
 - 4) If the VALVE CLOSED lights comes on, then you corrected the fault. Release the IND LTS switch.
- (c) If a minimum of one but less than six VALVE CLOSED lights come on, then do these steps:
- 1) Release the IND LTS switch.
 - 2) Replace the flight control hydraulic power panel, M27035 (WDM 27-02-55)
 - 3) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.
 - 4) If the VALVE CLOSED lights comes on, then you corrected the fault. Release the IND LTS switch.
- (d) If all of the VALVE CLOSED lights come on, then release the IND LTS switch, and continue.
- (2) Do these steps to find if power gets to the valve:
- (a) Disconnect connector DV27103 from the tail shutoff valve, V27103.
- NOTE: The shutoff valves for the center hydraulic system are on the aft bulkhead of the left wheel well. The tail shutoff valve is above the wing shutoff valve.
- (b) Do a check for 28 VDC from pin 2 (+) of connector DV27103 to structure ground.
- (c) If there is 28 VDC at pin 2 of DV27103, then do these steps:
- 1) Replace the tail shutoff valve for the center hydraulic system, V27103. These are the tasks:
 - Hydraulic Shutoff Valve Removal, AMM TASK 27-02-32-000-801
 - Hydraulic Shutoff Valve Installation, AMM TASK 27-02-32-400-801
 - 2) Set the FLT CONTROL HYD VALVE POWER switch to the SHUTOFF position.
 - a) Make sure the VALVE CLOSED light comes on.
 - 3) Set the FLT CONTROL HYD VALVE POWER switch to the NORM position.
 - a) Make sure the VALVE CLOSED light goes off.
 - 4) If the valve closed light operates correctly, then you corrected the fault.
 - 5) If the valve closed light does not operate correctly, then continue.
 - 6) Repair the wiring between the connector at the VALVE CLOSED light (DL2 of M27035), the connector at the valve (DV27103), and structure ground (WDM 27-02-55).

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (d) If there is not 28 VDC at pin 2 of DV27103, then continue.
- (3) Do these steps to find if power gets to the switch:
- Open the flight control hydraulic power panel, M27035, for access to the back of the switch.
 - Do a check for 28 VDC from terminal 2 (+) of switch S2 (of M27035) to structure ground (WDM 27-02-55).
 - If there is not 28 VDC at terminal 2 of switch S2, then do these steps:
 - Do the following (WDM 27-02-55):
Check for 28 VDC from terminal 2 (+) of this circuit breaker to structure ground:
Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	19	C27622	C FC SOV TAIL
 - If there is not 28 VDC at terminal 2 of circuit breaker C27622, then do these steps:
 - Replace the circuit breaker.
 - Close the flight control hydraulic power panel, M27035.
 - If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
 - If there is 28 VDC at terminal 2 of circuit breaker C27622, then do these steps:
 - Repair the wiring between terminal 2 of circuit breaker C27622 and terminal 2 of switch S2 (of M27035).
 - Close the flight control hydraulic power panel, M27035.
 - If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
 - If there is 28 VDC at terminal 2 of switch S2, then continue.
- (4) Do a check for 28 VDC from terminal 1 (+) of switch S2 (of M27035) to structure ground (WDM 27-02-55).

NOTE: Make sure the switch is in the SHUTOFF position.

- (a) If there is not 28 VDC at terminal 1 of switch S2, then do these steps:
- Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

972. Flight Control Maintenance Page Problems - Fault Isolation

A. Initial Evaluation

- (1) If "PFC MODE NORMAL" shows on the Flight Controls maintenance page (page 1) when the PRIMARY FLIGHT COMPUTERS disconnect switch is in the DISC position, then do these steps:
 - (a) Look at the synoptic page for the primary flight controls. To show this page, do this task: Showing a System Synoptic Page, AMM TASK 31-61-00-800-816.
 - (b) If the synoptic page shows "DIRECT" for the "FLT CTRL MODE", then the indication on the maintenance page is incorrect. There is nothing for you to repair.
- (2) If an "X" shows adjacent to the "RUD TRIM" "POSITION 2" indication on the Flight Controls maintenance page (page 1), ignore the "X". This is nuisance fault. If the transducer has a problem, then a maintenance message will occur.

————— END OF TASK —————

973. Flight Control Hydraulic (C system) Shutoff Valve (Wing) Problems - Fault Isolation

A. Initial Evaluation

- (1) Set the C FLT CONTROL HYD VALVE POWER switch for the WING to the SHUTOFF position.
 - (a) If the VALVE CLOSED light, below the switch, does not come on, then do the Fault Isolation Procedure below.

NOTE: If the valve was deactivated to fly the airplane (per the DDG), then you must remove the lockwire from the valve before you do this fault isolation procedure. To remove the lockwire from the valve, (AMM TASK 27-00-00-440-801).

NOTE: The two shutoff valves for the center hydraulic system are operated through air/ground relays. These valves will not close if the airplane is in the air.
 - (b) If the VALVE CLOSED light comes on, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.

NOTE: These steps do a check to make sure the indicator light has power and is not burned out.

 - (a) If only the one VALVE CLOSED light does not come on, then do these steps:
 - 1) Release the IND LTS switch.
 - 2) Replace the VALVE CLOSED light (WDM 27-02-55). To replace it, do this task: Integral Panel Light - Annunciator Replacement, AMM TASK 33-13-00-960-803.
 - 3) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
 - 4) If the VALVE CLOSED light does not come on, then do these steps:
 - a) Repair the wiring between pin 1 of connector DL5 (of M27035) and pin 20 of connector DM27035B (WDM 27-02-55).
 - b) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
 - (b) If none of the six VALVE CLOSED lights come on, then do these steps:
 - 1) Release the IND LTS switch.

- 2) Repair the wiring between pin 1 of connector DL5 (of M27035) and pin 18 of connector DP29C at the P29 panel (WDM 27-02-55) (WDM 33-16-13) (WDM 33-16-15) (WDM 33-16-16).
 - 3) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.
 - 4) If the VALVE CLOSED lights comes on, then you corrected the fault. Release the IND LTS switch.
- (c) If a minimum of one but less than six VALVE CLOSED lights come on, then do these steps:
- 1) Release the IND LTS switch.
 - 2) Replace the flight control hydraulic power panel, M27035 (WDM 27-02-55)
 - 3) On the overhead panel, P5, set and hold the IND LTS switch in the TEST position.
 - 4) If the VALVE CLOSED lights comes on, then you corrected the fault. Release the IND LTS switch.
- (d) If all of the VALVE CLOSED lights come on, then release the IND LTS switch, and continue.
- (2) Do these steps to find if power gets to the valve:
- (a) Disconnect connector DV27099 from the wing shutoff valve, V27099.
- NOTE:** The shutoff valves for the center hydraulic system are on the aft bulkhead of the left wheel well. The tail shutoff valve is above the wing shutoff valve.
- (b) Do a check for 28 VDC from pin 2 (+) of connector DV27099 to structure ground.
- (c) If there is 28 VDC at pin 2 of DV27099, then do these steps:
- 1) Replace the wing shutoff valve for the center hydraulic system, V27099. These are the tasks:
 - Hydraulic Shutoff Valve Removal, AMM TASK 27-02-32-000-801
 - Hydraulic Shutoff Valve Installation, AMM TASK 27-02-32-400-801
 - 2) Set the FLT CONTROL HYD VALVE POWER switch to the SHUTOFF position.
 - a) Make sure the VALVE CLOSED light comes on.
 - 3) Set the FLT CONTROL HYD VALVE POWER switch to the NORM position.
 - a) Make sure the VALVE CLOSED light goes off.
 - 4) If the valve closed light operates correctly, then you corrected the fault.
 - 5) If the valve closed light does not operate correctly, then continue.
 - 6) Repair the wiring between the connector at the VALVE CLOSED light (DL5 of M27035), the connector at the valve (DV27099), and structure ground (WDM 27-02-55).

DV27099	DL5
pin 10	pin 2

DV27099	Ground
pin 9	GD45090-DC

- (l) If the VALVE CLOSED light comes on (when the switch is in the SHUTOFF position), then you corrected the fault.
- 1) Do these steps to put the airplane back to its usual condition:
 - a) Do this task: Air Mode Simulation - Restoration, AMM TASK 32-09-00-440-801.
 - b) Close the flight control hydraulic power panel, M27035.
 - 2) To put the airplane back to its usual condition, do this task: Air Mode Simulation - Restoration, AMM TASK 32-09-00-440-801.

— END OF TASK —

974. PFCs Have No Input On Flight Controls ARINC 629 Bus (left) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19101.

B. Initial Evaluation

NOTE: All of the PFCs listen to all three of the flight control ARINC 629 buses. To get this maintenance message, all of the PFCs must agree that there is no data on the bus. Thus, replacing a PFC will not correct this problem.

- (1) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for a maintenance message (ATA system 23) related to a bus failure for the left flight controls bus.
 - (a) If you find a maintenance message for a bus failure, then do these steps:
 - 1) Find the maintenance message in the FIM Maintenance Message Index.
 - 2) Do the specified task.
 - (b) If you do not find a maintenance message for the flight controls bus, then continue.
- (2) Do this ground test on the MAT to clear the maintenance message:
 - (a) 27-Primary Flight Controls, System Test, Transmitter Reset Test.

— END OF TASK —

975. PFCs Have No Input From Left AIMS On Flight Controls ARINC 629 Bus (left) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19104.

B. Initial Evaluation

NOTE: All of the PFCs listen to all three of the flight control ARINC 629 buses. To get this maintenance message, all of the PFCs must agree that there is no data from the left AIMS. Thus, replacing a PFC will not correct this problem.

 - b) If the maintenance message does not show on the MAT, then you corrected the fault.

————— END OF TASK —————

983. PFCs Have No Input On Flight Controls ARINC 629 Bus (right) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19301.

B. Initial Evaluation

NOTE: All of the PFCs listen to all three of the flight control ARINC 629 buses. To get this maintenance message, all of the PFCs must agree that there is no data on the bus. Thus, replacing a PFC will not correct this problem.

- (1) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for a maintenance message (ATA system 23) related to a bus failure for the right flight controls bus.
 - (a) If you find a maintenance message for a bus failure, then do these steps:
 - 1) Find the maintenance message in the FIM Maintenance Message Index.
 - 2) Do the specified task.
 - (b) If you do not find a maintenance message for the flight controls bus, then continue.
- (2) Do this ground test on the MAT to clear the maintenance message:
 - (a) 27-Primary Flight Controls, System Test, Transmitter Reset Test.

————— END OF TASK —————

984. PFCs Have No Input From Right AIMS On Flight Controls ARINC 629 Bus (right) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19307.

B. Initial Evaluation

NOTE: All of the PFCs listen to all three of the flight control ARINC 629 buses. To get this maintenance message, all of the PFCs must agree that there is no data from the right AIMS. Thus, replacing a PFC will not correct this problem.

- (1) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for a maintenance message (ATA system 31) related to right AIMS problems.
 - (a) If you find a maintenance message for an AIMS problem, then do these steps:
 - 1) Find the maintenance message in the FIM Maintenance Message Index.
 - 2) Do the specified task.
 - (b) If you do not find a maintenance message for an AIMS problem, then continue.
- (2) Do this ground test on the MAT to clear the maintenance message:
 - (a) 27-Primary Flight Controls, System Test, Transmitter Reset Test.

————— END OF TASK —————

985. PFCs Have No Input From The ADIRU On Flight Controls ARINC 629 Bus (right) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19310.

B. Fault Isolation Procedure

NOTE: All of the PFCs listen to all three of the flight control ARINC 629 buses. To get this maintenance message, all of the PFCs must agree that there is no data from the ADIRU on the right bus. Thus, replacing a PFC will not correct this problem.

- (1) Replace the air data inertial reference unit, M34001. These are the tasks:
 - Air Data Inertial Reference Unit - Removal, AMM TASK 34-21-01-000-801
 - Air Data Inertial Reference Unit - Installation, AMM TASK 34-21-01-400-801
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.

————— END OF TASK —————

986. PFCs Have No Input From The Right AFDC On Flight Controls ARINC 629 Bus (right) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19322.

B. Initial Evaluation

- (1) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - (b) If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: All of the PFCs listen to all three of the flight control ARINC 629 buses. To get this maintenance message, all of the PFCs must agree that there is no data from the right AFDC. Thus, replacing a PFC will not correct this problem.

- (1) Replace ARINC current-mode coupler B22202, in the P212 panel. These are the tasks:

- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
- ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This coupler connects the right AFDC to the Flight Controls 629 Bus-R.

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
- 2) If the maintenance message does not show on the MAT, then you corrected the fault.
- 3) If the maintenance message shows on the MAT, then continue.

- (2) Replace the right autopilot flight director computer (AFDC-R), M22201. These are the tasks:

- Autopilot Flight Director Computer Removal, AMM TASK 22-11-01-000-801
- Autopilot Flight Director Computer Installation, AMM TASK 22-11-01-400-801

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
- 2) If the maintenance message does not show on the MAT, then you corrected the fault.
- 3) If the maintenance message shows on the MAT, then continue.

- (3) Do these steps to correct the wiring problem between the coupler and the AFDC-R.

- (a) Remove the AFDC-R, M22201, do this task: Autopilot Flight Director Computer Removal, AMM TASK 22-11-01-000-801.
- (b) Disconnect connector DB22202 from the current-mode coupler B22202.
- (c) Do a wiring check between these contacts of connector DM22201AB (for the AFDC) and connector DB22202 (for the coupler) (WDM 22-11-18):

DM22201AB	DB22202
pin 6T	pin 2
pin 6TR	pin 1
pin 3T	pin 5
pin 3TR	pin 4

- (d) If you find a problem with the wiring, then do these steps:

- 1) Repair the ARINC 629 wiring (SWPM 20-11-11).
- 2) Re-install the AFDC-R, M22201, do this task: Autopilot Flight Director Computer Installation, AMM TASK 22-11-01-400-801.
- 3) Re-connect connector DB22202 to the current-mode coupler B22202.
- 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Transmitter Reset.

————— END OF TASK —————

987. PFCs Have No Input From The Right PSA On Flight Controls ARINC 629 Bus (right) - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19334.

B. Initial Evaluation

- (1) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
- (a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - (b) If the maintenance message shows on the MAT, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the MAT, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: All of the PFCs listen to all three of the flight control ARINC 629 buses. To get this maintenance message, all of the PFCs must agree that there is no data from the right PSA. Thus, replacing a PFC will not correct this problem.

- (1) Replace ARINC current-mode coupler B24201, in the P212 panel. These are the tasks:

- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
- ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This coupler connects the right PSA to the Flight Controls 629 Bus-R.

- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 3) If the maintenance message shows on the MAT, then continue.
- (2) Replace the right power supply assembly (PSA-R), M24201. These are the tasks:
- Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - 2) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 3) If the maintenance message shows on the MAT, then continue.
- (3) Do these steps to correct the wiring problem between the coupler and the PSA-R.
- (a) Remove the PSA-R, M24201, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (b) Disconnect connector DB24201 from the current-mode coupler B24201.

- (c) Do a wiring check between these contacts of connector DM24201AA (for the PSA) and connector DB24201 (for the coupler) (WDM 24-35-21):

DM24201AA	DB24201
pin 4T	pin 2
pin 4TR	pin 1
pin 1T	pin 5
pin 1TR	pin 4

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the ARINC 629 wiring (SWPM 20-11-11).
 - 2) Re-install the PSA-R, M24201, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 3) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Transmitter Reset.
 - b) If the maintenance message does not show on the MAT, then you corrected the fault.

————— END OF TASK —————

988. Primary Flight Computers Self Test Failed - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14034.

B. Initial Evaluation

NOTE: This maintenance message can only occur if you run the Primary Flight Computer Self Test on the MAT.

- (1) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for maintenance messages (ATA system 27) related to the primary flight computers (PFC).
- (a) For each PFC maintenance message you find, do these steps:
- 1) Find the maintenance message in the FIM Maintenance Message Index.
 - 2) Do the specified task.

————— END OF TASK —————

989. EICAS Messages During Primary Flight Computer Self Test

A. Initial Evaluation

- (1) These EICAS messages show while the PFC self test is in operation:

NOTE: The NO AUTOLAND message shows continuously during the test. The other three messages will show intermittently during the test. The test is two minutes long.

- (a) NO AUTOLAND (ADVISORY)
 - (b) FLIGHT CONTROLS (CAUTION)
 - (c) PRI FLIGHT COMPUTERS (CAUTION)
 - (d) FLIGHT CONTROL SYS (STATUS)
- (2) The PFC self test operates automatically when you remove hydraulic power or when you supply electrical power.
- (3) Look at the LINE MAINTENANCE, EXISTING FLIGHT DECK EFFECT display on the MAT.

- (a) If the MAT shows a correlated maintenance message for one of the EICAS messages in the list above, then do these steps:
 - 1) Find the maintenance message in the FIM Maintenance Message Index.
 - 2) Do the specified task.
- (b) If the MAT does not show a correlated maintenance message for one of the EICAS messages in the list above, then no maintenance is necessary.

————— **END OF TASK** —————

990. EICAS Message FLIGHT CONTROL SYS (with no Correlated Maintenance Messages) - Fault Isolation

A. Description

- (1) The "FLIGHT CONTROL SYS" EICAS Status Message can show with no correlated maintenance messages when one or more of these conditions occur:
 - (a) Low Hydraulic Pressure in flight
 - (b) Low Hydraulic Pressure during taxi
 - (c) A stuck Hydraulic Pressure Transducer that:
 - 1) indicates a pressure greater than 1000 psi or
 - 2) its indicated output lags the actual pressure (an undetected pressure transducer fault).
 - (d) A PCU that performs poorly at low Hydraulic Pressures.

NOTE: It is only necessary to erase the EICAS message.
- (2) This EICAS message also shows while the PFC Self Test is in operation.
 - (a) The message will show intermittently during the test.
 - (b) The test starts automatically and is two minutes long.

B. Initial Evaluation

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (1) With Hydraulic Pressure removed, access the Hydraulic Maintenance Page and do a check for any of the 11 Hydraulic Pressure Transducers that indicate above 1000 psi.
 - (a) If a transducer indicates more than 1000 psi, replace it.
- (2) Pressurize and remove Hydraulic Pressure on one Hydraulic System at a time.

NOTE: To set the "FLIGHT CONTROL SYS" EICAS Status Message for this condition, the PFCs must think that all 3 Hydraulic Systems are pressurized. The message is set because one of the ACE's detects a surface actuation fault due to Low Hydraulic Pressure while one of the related Pressure Transducers is stuck above 1000 psi. However, to reset it, only the system with the fault needs to be pressurized.

NOTE: It is important to pressurize only one Hydraulic System at a time to help identify in which Hydraulic System the fault occurred, in case it occurs again.

 - (a) Do this task to pressurize the Hydraulic System: Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.

EFFECTIVITY
ARO ALL

D633W103-ARO

Page 298.409
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (b) Do this task to remove Hydraulic Power: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (c) Make sure power is removed from the Left, Center, and Right Hydraulic Systems and the EICAS message shows.
 - (d) Pressurize the Left Hydraulic System: Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.
 - 1) If the EICAS Message goes away, make a record that pressurizing the Left Hydraulic System erased the message.
 - 2) Remove Hydraulic Power from the Left Hydraulic System: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (e) Pressurize the Center Hydraulic System: Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.
 - 1) If the EICAS Message goes away, make a record that pressurizing the Center Hydraulic System erased the message.
 - 2) Remove Hydraulic Power from the Center Hydraulic System: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (f) Pressurize the Right Hydraulic System.
 - 1) If the EICAS Message goes away, make a record that pressurizing the Right Hydraulic System erased the message.
 - 2) Remove Hydraulic Power from the Right Hydraulic System: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (g) If the EICAS Message does not show, no more action is required because there is no active EICAS message. The fault may reset on a subsequent flight.
 - (h) If a Hydraulic System Pressure Transducer is suspected to be at fault, do the Fault Isolation Procedure below to identify the defective Pressure Transducer.
- (3) Examine the Captain and F/O Control Position values on the EICAS MAINTENANCE page for differences greater than 2.0 between like transducers when the controls are at neutral.
- (a) If any sensors show a difference greater than 0.02, perform the rigging procedure associated with the transducers.
- (4) On the MAT do the Primary Flight Control System Ground Tests that follow (How to Do a Ground Test, AMM TASK 45-10-00-740-819):
- (a) Column Position
 - (b) Left Elevator Actuator Confidence
 - (c) Pedal Position
 - (d) Right Elevator Actuator Confidence
 - (e) Stabilizer System
 - (f) Wheel Position.
- (5) If the Left Hydraulic System erased the EICAS message, then do - The Left Hydraulic System Erased the EICAS Message below (SUBTASK 27-02-00-810-278).
- (6) If the Right Hydraulic System erased the EICAS message, then do - The Left Hydraulic System Erased the EICAS Message below (SUBTASK 27-02-00-810-279).
- (7) If the Center Hydraulic System erased the EICAS message, then do - The Left Hydraulic System Erased the EICAS Message below (SUBTASK 27-02-00-810-280).

C. Fault Isolation Procedure - The Left Hydraulic System Erased the EICAS Message

- (1) Pressurize the Center and Right Hydraulic Systems. Do this task: Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.
- (2) Use the Left ACMP to pressurize the Left Hydraulic System. This is the task: Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.
- (3) Make sure that the EICAS Message does not show.
- (4) Display the Hydraulic Maintenance Page.
- (5) Monitor the Hydraulic Maintenance Page, and remove Hydraulic Power from the Left Hydraulic System. This is the task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (6) Monitor the Left Hydraulic SYSTEM PRESS and DEMAND PUMP PRESS as the pressure bleeds OFF.
 - (a) If the EICAS Message shows, the problem is with the transducer that was the slowest bleeding off pressure or was stuck at greater than 1000 psi (either briefly or longer). Replace the defective Left Hydraulic System Pressure Transducer, M29101 or Left ACMP Pressure Transducer, M29109. These are the tasks:
 - 1) Left Hydraulic System Pressure Transducer, M29101:
 - Hydraulic System Pressure Transducer Removal, AMM TASK 29-31-01-000-801
 - Hydraulic System Pressure Transducer Installation, AMM TASK 29-31-01-400-801
 - 2) Left ACMP Pressure Transducer, M29109:
 - Left and Right System Alternating Current Motor Pump (ACMP) Pressure Transducer Removal, AMM TASK 29-31-02-000-801
 - Left and Right System Alternating Current Motor Pump (ACMP) Pressure Transducer Installation, AMM TASK 29-31-02-400-801.
 - (b) If the EICAS message does not show, replace the Left EDP Pressure Transducer, M29108. These are the tasks:
 - Engine-Driven Pump (EDP) Pressure and Case Drain Filter Module and Components Removal, AMM TASK 29-11-42-000-801
 - Engine-Driven Pump (EDP) Pressure and Case Drain Filter Module and Components Installation, AMM TASK 29-11-42-400-801
- (7) Do the Repair Confirmation at the end of this task.

D. Fault Isolation Procedure - The Right Hydraulic System Erased the EICAS Message

- (1) Pressurize the Center and Left Hydraulic Systems. Do this task: Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.
- (2) Use the Left ACMP to pressurize the Right Hydraulic System. This is the task: Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.
- (3) Make sure that the EICAS Message does not show.
- (4) Display the Hydraulic Maintenance Page.
- (5) Monitor the Hydraulic Maintenance Page, and remove Hydraulic Power from the Right Hydraulic System. This is the task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (6) Monitor the Right Hydraulic SYSTEM PRESS and DEMAND PUMP PRESS as the pressure bleeds OFF.

- (a) If the EICAS Message shows, the problem is with the transducer that was the slowest bleeding off pressure or was stuck at greater than 1000 psi (either briefly or longer). Replace the defective Right Hydraulic System Pressure Transducer or Right ACMP Pressure Transducer. These are the tasks:
 - 1) Right Hydraulic System Pressure Transducer:
 - Hydraulic System Pressure Transducer Removal, AMM TASK 29-31-01-000-801
 - Hydraulic System Pressure Transducer Installation, AMM TASK 29-31-01-400-801
 - 2) Right ACMP Pressure Transducer:
 - Left and Right System Alternating Current Motor Pump (ACMP) Pressure Transducer Removal, AMM TASK 29-31-02-000-801
 - Left and Right System Alternating Current Motor Pump (ACMP) Pressure Transducer Installation, AMM TASK 29-31-02-400-801.
 - (b) If the EICAS message does not show, replace the Right EDP Pressure Transducer, M29108. These are the tasks:
 - Engine-Driven Pump (EDP) Pressure and Case Drain Filter Module and Components Removal, AMM TASK 29-11-42-000-801
 - Engine-Driven Pump (EDP) Pressure and Case Drain Filter Module and Components Installation, AMM TASK 29-11-42-400-801
- (7) Do the Repair Confirmation at the end of this task.

E. Fault Isolation Procedure - The Center Hydraulic System Erased the EICAS Message

- (1) Pressurize the Left and Right Hydraulic Systems. Do this task: Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.
- (2) Use the ACMP C1 to pressurize the Center Hydraulic System. This is the task: Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.
- (3) Make sure that the EICAS Message does not show.
- (4) Display the Hydraulic Maintenance Page.
- (5) Monitor the Hydraulic Maintenance Page, and remove Hydraulic Power from the Center Hydraulic System. This is the task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (6) Monitor the Center 1 Hydraulic SYSTEM PRESS and DEMAND PUMP PRESS as the pressure bleeds OFF.
 - (a) If the EICAS Message shows, the problem is with the transducer that was the slowest bleeding off pressure or was stuck at greater than 1000 psi (either briefly or longer). Replace the defective Center Hydraulic System Pressure Transducer, M29301 or Center 1 ACMP Pressure Transducer, M29312. These are the tasks:
 - 1) Center Hydraulic System Pressure Transducer, M29301:
 - Hydraulic System Pressure Transducer Removal, AMM TASK 29-31-01-000-801
 - Hydraulic System Pressure Transducer Installation, AMM TASK 29-31-01-400-801
 - 2) Center 1 ACMP Pressure Transducer, M29312:
 - Left and Right System Alternating Current Motor Pump (ACMP) Pressure Transducer Removal, AMM TASK 29-31-02-000-801

- (2) Operate the affected Hydraulic System with lower Hydraulic Pressure until a fault is set (Flight Controls DC Power - Operational Test, AMM TASK 24-35-00-700-801).
 - (a) Pressurize the two Hydraulic Systems that are not affected. Do this task: Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.
 - (b) Pressurize the affected Hydraulic System to 3000 psi with a Variable Output Pressure Source: Do this task: Main Hydraulic System Pressurization with a Portable Hydraulic Cart, AMM TASK 29-11-00-860-802.
 - (c) Use the Flight Deck Displays to set and monitor the Hydraulic Pressure supplied by the Ground Cart.
 - (d) Make sure that the "FLIGHT CONTROL SYS" EICAS Status Message does not show.
 - (e) On the MAT, monitor the EXISTING FAULTS.
 - 1) Do not actuate any hydraulically-powered components during this check (e.g., flaps, brakes, stabilizer trim, flaperons, etc.).
 - (f) Reduce the pressure of the Hydraulic Cart approximately 200 psi every 30 seconds until the "FLIGHT CONTROL SYS" EICAS Status Message shows.
 - 1) When the Status message shows, stop reducing the Hydraulic Cart Pressure.
 - (g) If the message does not show after reaching 1200 psi, slowly lower the pressure to 1100 psi and hold it there for at least 30 seconds.
 - (h) If the "FLIGHT CONTROL SYS" Status Message shows, refer to 27-FAULT CODE INDEX to find the applicable FIM Tasks for the correlated maintenance messages that show.
 - 1) Do the Repair Confirmation at the end of this task.
 - (i) If the "FLIGHT CONTROL SYS" Status Message does not show, the cause for the "FLIGHT CONTROL SYS" EICAS STATUS Message without associated Maintenance Messages, cannot be determined at this time.

G. Fault Isolation Procedure (Defective FCDC Battery)

- (1) Do this task to make sure that the FCDC Battery is not defective: Flight Controls DC Power - Operational Test, AMM TASK 24-35-00-700-801.
- (2) If the "FLIGHT CONTROL SYS" EICAS Status Message continues to show, do these steps to reset the "FLIGHT CONTROL SYS" EICAS Status Message:
 - (a) Remove power from the PFC.
 - (b) Cycle the Lane 1/2/3 circuit breakers on the Power Supply Assembly (PSA) Front Panel.
 - 1) If the EICAS Message still shows, replace the FCDC Battery. These are the tasks:
 - FCDC Batteries Removal, AMM TASK 24-35-02-000-801
 - FCDC Batteries Installation, AMM TASK 24-35-02-400-801
 - (c) If necessary, repeat the steps to reset the "FLIGHT CONTROL SYS" EICAS Status Message.

H. Fault Isolation Procedure (No defects identified)

- (1) Do this task to Supply Electrical Power, AMM TASK 24-22-00-860-805.
- (2) Do this task to supply Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Do this task to Showing a System Synoptic Page, AMM TASK 31-61-00-800-816.

D633W103-ARO

Page 298.414
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Compare the values on page 2 of 3 on the ATA 27 Synoptic page with values in table below:

Flight Control Surfaces	Position Ranges with Hydraulics Pressurized - No Control or Trim Inputs
SPOILER (1,2,3,5,10,11,12,13 and 14)	POSITION = -2.90 to -3.30
SPOILER (4 and 11)	POSITION = -2.85 to -3.35
SPOILER (6,7,8 and 9)	POSITION = -2.20 to -2.60
FLAPERON	POSITION = +3.82 to +4.08 PCU FORCE = -500 to +500
AILERON	POSITION = -0.07 TO -0.12
RUDDER	POSITION = +0.21 TO +0.32 DELTA PRESS = -400 TO +400
ELEVATOR	POSITION = -0.05 TO +0.05 DELTA PRESS = -400 TO +400

- (b) If a value on one of the control surfaces does not fall into the specified range then that the flight control component is at fault.
- 1) Do this task for the flight control that is out of range: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
- (4) Do this task to depressurize hydraulics: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

- (a) Compare the values on page 2 of 3 on the ATA 27 Synoptic page with the values in table below:

Flight Control Surfaces	Position Ranges with Hydraulics Depressurized
SPOILER (1,2,3,5,10,11,12,13 and 14)	POSITION = -2.90 to -3.30
SPOILER (4 and 11)	POSITION = -2.85 to -3.35
SPOILER (6,7,8 and 9)	POSITION = -2.20 to -2.60
FLAPERON	POSITION (LEFT) signals agree within 1.00 degrees POSITION (RIGHT) signals agree within 1.00 degrees PCU FORCE = -200 to +200
AILERON	POSITION (LEFT) signals agree within 0.20 degrees POSITION (RIGHT) signals agree within 0.20 degrees
RUDDER	POSITION signals agree within 0.40 degrees DELTA PRESS = -200 TO +200
ELEVATOR	POSITION (LEFT) signals agree within 0.40 degrees POSITION (RIGHT) signals agree within 0.40 degrees DELTA PRESS = -200 TO +200

- (b) If a value on one of the flight control surfaces does not fall into the specified range then flight control component is at fault.
- 1) Do this task for the flight control that is out of range: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

777-200/300 FAULT ISOLATION MANUAL

- I
- (5) Do this task to Remove Electrical Power, AMM TASK 24-22-00-860-806
 - (6) Swap the PSA - L, M24101 with PSA - C. Do the following tasks:
NOTE: Make note to the original location of all components that are swapped.
Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - (7) Do this task to Supply Electrical Power, AMM TASK 24-22-00-860-805
 - (8) Do a check to see if the FLIGHT CONTROL SYS status message is still present. If present, do a check of the MAT to see if a maintenance message is now showing active. If a maintenance message is present, do the trouble shooting per the applicable FIM task. If no maintenance message is active then continue.
 - (9) Do this task to Remove Electrical Power, AMM TASK 24-22-00-860-806
 - (10) Swap the PSA - C, M24301 with PSA - R, M24201. Do the following tasks:
NOTE: Make note to the original location of all components that are swapped.
Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - (11) Do this task to Supply Electrical Power, AMM TASK 24-22-00-860-805
 - (12) Do a check to see if the FLIGHT CONTROL SYS status message is still present. If present, do a check of the MAT to see if a maintenance message is now showing active. If a maintenance message is present, do the trouble shooting per the applicable FIM task. If no maintenance message is active then continue with FIM task. If no maintenance message is present then the fault has been reset.
 - (13) Do this task to Remove Electrical Power, AMM TASK 24-22-00-860-806
 - (14) Swap the ACE - L1, M27121 with the ACE - C, M27321. Do the following tasks:
 - (a) Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (15) Do this task to Supply Electrical Power, AMM TASK 24-22-00-860-805
 - (16) Do a check to see if the FLIGHT CONTROL SYS status message is still present. If present, do a check of the MAT to see if a maintenance message is now showing active. If a maintenance message is present, do the trouble shooting per the applicable FIM task. If no maintenance message is active then continue with FIM task. If no maintenance message is present then the fault has been reset.
 - (17) Do this task to Remove Electrical Power, AMM TASK 24-22-00-860-806
 - (18) Swap the ACE - L2, M27122 with the ACE - R, M27221. Do the following tasks:
 - (a) Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (19) Do this task to Supply Electrical Power, AMM TASK 24-22-00-860-805
 - (20) Do a check to see if the FLIGHT CONTROL SYS status message is still present. If present, do a check of the MAT to see if a maintenance message is now showing active. If a maintenance message is present, do the trouble shooting per the applicable FIM task. If no maintenance message is active then continue with FIM task. If no maintenance message is present then the fault has been reset.
 - (21) Do this task to Remove Electrical Power, AMM TASK 24-22-00-860-806

777-200/300 FAULT ISOLATION MANUAL

- (22) Swap the Primary Flight Computer (PFC) - L, M27106 with Primary Flight Computer (PFC) - C, 27306. Do the following tasks:
 - (a) Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - (b) Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (23) Do this task to Supply Electrical Power, AMM TASK 24-22-00-860-805
- (24) Do a check to see if the FLIGHT CONTROL SYS status message is still present. If present, do a check of the MAT to see if a maintenance message is now showing active. If a maintenance message is present, do the trouble shooting per the applicable FIM task. If no maintenance message is active then continue with FIM task. If no maintenance message is present then the fault has been reset.
- (25) Do this task to Remove Electrical Power, AMM TASK 24-22-00-860-806
- (26) Swap the Primary Flight Computer (PFC) - R, M27206 with Primary Flight Computer (PFC) - L, 27106. Do the following tasks:
 - (a) Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - (b) Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- (27) Do this task to Supply Electrical Power, AMM TASK 24-22-00-860-805
- (28) Do a check to see if the FLIGHT CONTROL SYS status message is still present. If present, do a check of the MAT to see if a maintenance message is now showing active. If a maintenance message is present, do the trouble shooting per the applicable FIM task. If no maintenance message is active then continue with FIM task. If no maintenance message is present then the fault has been reset.
- (29) With no fault found and no active messages present, do the following tasks for all circuits for each flight control actuator.
 - (a) Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801
 - (b) Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802

I. Repair Confirmation

- (1) Do this Ground Test on the MAT: Primary Flight Computer (PFC) Reset Test, AMM TASK 27-02-01-400-801.
 - (a) If the EICAS message does not show, you corrected the fault.
 - (b) If the EICAS message still shows, then continue the Fault Isolation Procedure at the applicable subsequent step.

————— END OF TASK —————

991. EICAS Message SPOILER (with No Correlated Maintenance Messages) - Fault Isolation

A. Initial Evaluation

NOTE: This EICAS message can show with no correlated maintenance message when these 3 conditions occur together: 1) engines are in operation; 2) hydraulic power is off (or hydraulic pressure is low); and 3) you move the speedbrake lever or the control wheel. It is only necessary to erase the message.

- (1) Do these 5 ground tests on the MAT (this will erase the EICAS message):
 - (a) 27 Primary Flight Control System, System Test, Spoiler 1, 7, 8, 14 System
 - (b) 27 Primary Flight Control System, System Test, Spoiler 2, 13 System

992. PFC-C (lane 1) ARINC Fault on Flt Ctrl 629 Bus-C - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14044.

B. Initial Evaluation

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLERS EVEN AFTER THE PFC HAS BEEN REPLACED.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
 - (b) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the ARINC 629 coupler, B27073, in the P312 panel. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This is one of the couplers that connect the PFC-C to the Flt Ctrl 629 Bus-C.

- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
 - 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - 3) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
 - (2) Replace the center primary flight computer (PFC-C), M27306. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802
- NOTE: Do the ground test below before you do the ground tests in the Installation Test of AMM 27-02-01. However, do the software configuration check in the Installation Test of AMM 27-02-01 before you do any of the ground tests.
- (a) Do this ground test on the MAT:

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLER EVEN AFTER THE PFC HAS BEEN REPLACED.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
 - (b) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the ARINC 629 coupler, B27083, in the P312 panel. These are the tasks:
 - ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
 - ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This is one of the couplers that connect the PFC-C to the Flt Ctrl 629 Bus-C.

- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
 - 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - 3) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (2) Replace the center primary flight computer (PFC-C), M27306. These are the tasks:
 - Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
 - Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

NOTE: Do the ground test below before you do the ground tests in the Installation Test of AMM 27-02-01. However, do the software configuration check in the Installation Test of AMM 27-02-01 before you do any of the ground tests.
- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
 - 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - 3) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (3) Do this wiring check of the wiring between the PFC and the ARINC 629 coupler:
 - (a) Remove the PFC-C, M27306. To remove it, do this task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.

27-02 TASK 995

D633W103-ARO

Page 298.423
Sep 05/2017

**777-200/300
FAULT ISOLATION MANUAL**

- (b) Disconnect connector DB27083 from the ARINC 629 coupler B27083.
- (c) Do a wiring check between these contacts of connector DM27306AA (for PFC-C) and the connector DB27083 at the coupler (WDM 27-02-45):

DM27306AA	DB27083
pin 10T	pin 2
pin 10TR	pin 1
pin 9T	pin 5
pin 9TR	pin 4

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DB27083 to the ARINC 629 coupler B27083.
 - 3) Re-install the center primary flight computer (PFC-C), M27306. To install it, do this task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
 - 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
 - b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

END OF TASK

996. PFC-C (lane 2) ARINC Fault on Flt Ctrl 629 Bus-L - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14048.

B. Initial Evaluation

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLER EVEN AFTER THE PFC HAS BEEN REPLACED.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Primary Flight Computer (C) Lane Reset.
 - (b) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then there was an intermittent fault.

- (1) This task is for maintenance message: 27-14053.

B. Initial Evaluation

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLER EVEN AFTER THE PFC HAS BEEN REPLACED.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Primary Flight Computer (L) Lane Reset.
 - (b) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the ARINC 629 coupler, B27013, in the P312 panel. These are the tasks:

- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
- ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This is one of the couplers that connect the, PFC-L to the Flt Ctrl 629 Bus-C.

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (L) Lane Reset.
- 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- 3) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.

- (2) Replace the left primary flight computer (PFC-L), M27106. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

NOTE: Do the ground test below before you do the ground tests in the Installation Test of AMM 27-02-01. However, do the software configuration check in the Installation Test of AMM 27-02-01 before you do any of the ground tests.

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (L) Lane Reset.
- 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- 3) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.

- (3) Do this wiring check of the wiring between the PFC and the ARINC 629 coupler:

- (a) Remove the, PFC-L, M27106. To remove it, do this task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
- (b) Disconnect connector DB27013 from the ARINC 629 coupler B27013.
- (c) Do a wiring check between these contacts of connector DM27106AC (for, PFC-L) and the connector DB27013 at the coupler (WDM 27-02-45):

DM27106AC	DB27013
pin 7T	pin 2
pin 7TR	pin 1
pin 5T	pin 5
pin 5TR	pin 4

- (d) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-connect connector DB27013 to the ARINC 629 coupler B27013.
- 3) Re-install the left primary flight computer (PFC-L), M27106. To install it, do this task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
- 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Primary Flight Computer (L) Lane Reset.

- b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

————— END OF TASK —————

A07. PFC-L (lane 3) ARINC Fault on Flt Ctrl 629 Bus-C - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14059.

B. Initial Evaluation

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLER EVEN AFTER THE PFC HAS BEEN REPLACED.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
- (a) 27-Primary Flight Controls, System Test, Primary Flight Computer (L) Lane Reset.
- (b) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the ARINC 629 coupler, B27033, in the P312 panel.

These are the tasks:

ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801,

ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.

NOTE: This is one of the couplers that connect the, PFC-L to the Flt Ctrl 629 Bus-C.

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (L) Lane Reset.
- 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- 3) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.

- (2) Replace the left primary flight computer (PFC-L), M27106.

These are the tasks:

Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801,

Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.

NOTE: Do the ground test below before you do the ground tests in the Installation Test of AMM 27-02-01. However, do the software configuration check in the Installation Test of AMM 27-02-01 before you do any of the ground tests.

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT:
 - 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (L) Lane Reset.
 - 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - 3) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (3) Do this wiring check of the wiring between the PFC and the ARINC 629 coupler:
 - (a) Remove the, PFC-L, M27106. To remove it, do this task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
 - (b) Disconnect connector DB27033 from the ARINC 629 coupler B27033.
 - (c) Do a wiring check between these contacts of connector DM27106AC (for, PFC-L) and the connector DB27033 at the coupler (WDM 27-02-45):

DM27106AC	DB27033
pin 4T	pin 2
pin 4TR	pin 1
pin 2T	pin 5
pin 2TR	pin 4

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DB27033 to the ARINC 629 coupler B27033.
 - 3) Re-install the left primary flight computer (PFC-L), M27106. To install it, do this task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
 - 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Primary Flight Computer (L) Lane Reset.
 - b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

 - a) 27-Primary Flight Controls, System Test, Primary Flight Computer (R) Lane Reset.
 - b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

————— **END OF TASK** —————

A13. PFC-R (lane 2) ARINC Fault on Flt Ctrl 629 Bus-C - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-14065.

B. Initial Evaluation

NOTE: IT IS POSSIBLE THAT AN INTERMITTENT FAULT WITH THE ARINC 629 COUPLERS OR STUB CABLES CAN CAUSE THIS MAINTENANCE MESSAGE TO LATCH. IF THIS FAULT OCCURS BEFORE AND THE PFC IS ALREADY REPLACED, IT IS POSSIBLE THAT THIS FAULT IS WITH AN ARINC 629 COUPLER OR STUB CABLE AND NOT WITH THE PFC ITSELF. IF THIS IS THE CASE, THEN CONTINUE ON WITH THE FAULT ISOLATION PROCEDURE AND REPLACE THE ARINC 629 COUPLER EVEN AFTER THE PFC HAS BEEN REPLACED.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Primary Flight Computer (R) Lane Reset.

- (b) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the ARINC 629 coupler, B27053, in the P312 panel. These are the tasks:

- ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801
- ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801

NOTE: This is one of the couplers that connect the PFC-R to the Flt Ctrl 629 Bus-C.

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (R) Lane Reset.
- 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- 3) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.

- (2) Replace the right primary flight computer (PFC-R), M27206. These are the tasks:

- Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801
- Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802

NOTE: Do the ground test below before you do the ground tests in the Installation Test of AMM 27-02-01. However, do the software configuration check in the Installation Test of AMM 27-02-01 before you do any of the ground tests.

- (a) Do this ground test on the MAT:

- 1) 27-Primary Flight Controls, System Test, Primary Flight Computer (R) Lane Reset.
- 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- 3) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.

- (3) Do this wiring check of the wiring between the PFC and the ARINC 629 coupler:

- (a) Remove the PFC-R, M27206. To remove it, do this task: Primary Flight Computer (PFC) Removal, AMM TASK 27-02-01-000-801.
- (b) Disconnect connector DB27053 from the ARINC 629 coupler B27053.
- (c) Do a wiring check between these contacts of connector DM27206AC (for PFC-R) and the connector DB27053 at the coupler (WDM 27-02-45):

DM27206AC	DB27053
pin 6T	pin 2
pin 6TR	pin 1
pin 9T	pin 5
pin 9TR	pin 4

- (d) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-connect connector DB27053 to the ARINC 629 coupler B27053.

- 3) Re-install the right primary flight computer (PFC-R), M27206. To install it, do this task: Primary Flight Computer (PFC) Installation, AMM TASK 27-02-01-400-802.
- 4) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Primary Flight Computer (R) Lane Reset.
 - b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

————— END OF TASK —————

A19. Altitude Signal from RA (Center) Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-19550.

B. Initial Evaluation

- (1) If the AUTO SPEEDBRAKE EICAS message appears after cycling the LEFT RADIO ALT, C34431, RIGHT RADIO ALT, C4432, and CENTER RADIO ALT, C4433 Circuit Breakers, then cycle the hydraulic power off and back on again. Do these tasks to cycle the hydraulic power:
 - Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808
 - Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Speedbrake System.
NOTE: The RESET LATCH may display on the MAT during the System Test if there is an existing fault. Select RESET LATCH to reset the fault and continue the test.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the Extended Maintenance, Existing Faults display on the MAT.
 - (a) If a maintenance message related to the center radio altimeter (RA) transceiver, then do these steps:
 - 1) Find the message in the applicable FIM Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - 3) Do this ground test on the MAT:
 - a) 27-Primary Flight Controls, System Test, Speedbrake System.
<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.

- b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) If maintenance message 27-19550 does not show on the ground test display, you corrected the fault.
 - d) If maintenance message 27-19550 shows on the ground test display, then continue.
- (b) If a maintenance message related to center RA transceiver does not show in Existing Faults, then continue.
- (2) Replace the center radio altimeter (RA) transceiver, M34312. These are the tasks:
- Radio Altimeter Transceiver Removal, AMM TASK 34-33-01-000-801
 - Radio Altimeter Transceiver Installation, AMM TASK 34-33-01-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the #3 IOM (M004) in the left AIMS cabinet. These are the tasks:
- Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the #4 IOM (M003) in the left AIMS cabinet. These are the tasks:
- Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801
 - Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801
- (a) Do this ground test on the MAT:
- 1) 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the #3 IOM (M004) in the right AIMS cabinet. These are the tasks:

- On the MFD "31 MAINTENANCE TASK" maintenance page.

- (1) If you need to do the ground test, do this task: Actuator Control Electronics (ACE) Monitor Test, AMM TASK 27-02-02-400-801.

END OF TASK

A22. Actuator Control Electronics (Left 1) Configuration Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13066.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT:
 - (a) 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the configuration pins for the left-1 actuator control electronics (ACE-L1) (WDM 27-02-36):
 - (a) Open these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the left 1 actuator control electronics (ACE-L1), M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Do a check to make sure that pins D6 and C6 of connector DM27121AB are connected.
 - 1) If pins D6 and C6 of connector DM27121AB are not connected, then do these steps:
 - a) Repair the wiring.

- b) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - c) Do the Repair Confirmation procedure at the end of this task.
 - 2) If pins D6 and C6 of connector DM27121AB are connected, then continue.
- (d) Do a check to make sure that pins D8 and C8 of connector DM27121AB are connected.
 - 1) If pins D8 and C8 of connector DM27121AB are not connected, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - c) Do the Repair Confirmation procedure at the end of this task.
 - 2) If pins D8 and C8 of connector DM27121AB are connected, then continue.
- (e) Do a check to make sure that these pins of connector DM27121AB are not connected to ground:
 - 1) List of Ungrounded Configuration Pins:
 - a) Pin D5
 - b) Pin C5
 - c) Pin D7
 - d) Pin C7
 - e) Pin D9
 - f) Pin C9
 - g) Pin D10
 - h) Pin C10
 - 2) If any of the pins in the list above are connected to ground, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - c) Do the Repair Confirmation procedure at the end of this task.
 - 3) If any of the pins in the list above are not connected to ground, then continue.
- (2) Install a new ACE-L1. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Do the Repair Confirmation procedure at the end of this task.

D. Repair Confirmation

- (1) Close these circuit breakers on the PSA-L, M24101:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU

- (b) Remove the center actuator control electronics (ACE-C), M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Do a check to make sure that pins D6 and C6 of connector DM27321AB are connected.
 - 1) If pins D6 and C6 of connector DM27321AB are not connected, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - c) Do the Repair Confirmation procedure at the end of this task.
 - 2) If pins D6 and C6 of connector DM27321AB are connected, then continue.
- (d) Do a check to make sure that pins D8 and C8 of connector DM27321AB are connected.
 - 1) If pins D8 and C8 of connector DM27321AB are not connected, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - c) Do the Repair Confirmation procedure at the end of this task.
 - 2) If pins D8 and C8 of connector DM27321AB are connected, then continue.
- (e) Do a check to make sure that these pins of connector DM27321AB are not connected to ground:
 - 1) List of Ungrounded Configuration Pins:
 - a) Pin D5
 - b) Pin C5
 - c) Pin D7
 - d) Pin C7
 - e) Pin D9
 - f) Pin C9
 - g) Pin D10
 - h) Pin C10.
 - 2) If any of the pins in the list above are connected to ground, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the ACE-C that you removed, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (b) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

A26. EICAS Status Message PFCS INTERFACE with No Correlated Maintenance Message - Fault Isolation

A. Initial Evaluation

- (1) Look at the Extended Maintenance, Present Leg Faults display on the MAT for one or more of these maintenance messages:
- 24-50201
 - 24-50202
 - 24-50203
 - 24-50211
 - 24-50212
 - 24-50213
 - 24-50221
 - 24-50222,
 - 24-50223.
- (a) If you find one of the specified messages on the MAT, then do this step:
- 1) Find the message in the FIM Maintenance Message Index and do the specified task.
- (b) If you do not find any of the specified messages on the MAT, then there was an intermittent fault.

————— END OF TASK —————

A27. Swapping the Actuator Control Electronics (ACEs)

A. Description

This task provides operators with a general procedures for determining whether the ACE is at fault before removal.

B. Fault Isolation Procedure

- (1) When troubleshooting ACE actuator/transducer maintenance messages, swap the ACEs in accordance with the attached Table I before performing the FIM step to replace the ACE.
- (a) To remove each ACE, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (b) To install each ACE, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: The Aileron, Elevator, and Rudder actuators and Stabilizer Trim Control Modules have primary and secondary ACEs. When troubleshooting these ACE/Actuator faults, first swap the primary ACE, and run the applicable System Test (Table II). If the fault remains with the same ACE/Actuator, then return the ACEs to their original positions, then swap the secondary ACE.

*[1] When the System Test is rerun, the ACEs being swapped out will not be retested in its new location. If the fault is not set when the system test is rerun, then it should confirm that the fault is with the ACE that was swapped out.

- (2) After swapping the ACEs, perform the corresponding System Test(s) in the attached Table II as indicated in Table I. If the fault moves with the ACE, then the moved ACE is at fault and should be replaced. If the fault remains in the original position, then the actuator/transducer or wiring is at fault. Due to the time required to replace the actuator/transducer, the wiring should be checked the same time with the actuator/transducer replacement.

A28. Selected Ground Test Failed Because of A Hydraulic Configuration Violation

A. This task is for maintenance message: 27-16000.

B. Initial Evaluation

NOTE: This message can only occur when you do the actuator control electronics (ACE) monitor ground test on the MAT. It occurred because one or more hydraulic system pressure signals was greater than 1000 psi during the test or one or more of hydraulic system pressure signals became invalid during the test.

C. Fault Isolation Procedure

NOTE: Usually no repairs are necessary for this maintenance message. This maintenance message erases automatically when you exit the ground test. If you want to make sure there are no problems, you can do the ground test again, but make sure you perform the test correctly.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10200.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the fault isolation procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the command wiring:
 - (a) Open these circuit breakers and install safety tags:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf.
- (c) Disconnect connector DM27108A from the left inboard aileron power control unit (LIB PCU).
- (d) Do a wiring check between these pins of connector DM27321AA for the ACE-C and connector DM27108A at the LIB PCU (WDM 27-11-12):

<u>DM27321AA</u>	<u>DM27108A</u>
pin A14	pin 9
pin B14	pin 8

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27108A to the PCU.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- 4) Remove the safety tags and close these circuit breakers:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
- a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (f) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE for M27108. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- NOTE:** For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the left inboard aileron PCU, M27108. These are the tasks:
- Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801

 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

805. Left Flaperon Surface Actuation Confidence Test Failed - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-10312, 27-10482, 27-10485, 27-10488.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Examine the two flaperon power control units (PCU) for the left flaperon to see if they are mechanically disconnected from the flaperon or the wing.
 - (a) If a flaperon PCUs is disconnected or damaged, then do these steps:
 - 1) Replace the applicable flaperon PCU, M27109 or M27110. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
 - a) Repair or replace all other damaged parts.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
- (2) Replace the left 1 actuator control electronics (ACE-L1), M27121. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

Page 209
May 05/2014

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, continue.
- (3) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, continue.
- (5) Do this test of the outboard PCU for the left flaperon:
 - (a) Set the C and R FLT CONTROL HYD VALVE PWR switches for the WING to the SHUTOFF position.
 - (b) Set the L FLT CONTROL HYD VALVE PWR switch for the WING to the NORM position.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (c) For the left hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (d) Look at page 2 of the flight controls maintenance pages on the MFD. To see this page, do this task: Showing a Maintenance Page, AMM TASK 31-61-00-800-804.
- (e) Monitor the left outboard FLAPERON POSITION indication on the maintenance page. At the same time look at the flaperon to see if it moves.
- (f) Turn and hold one of the control wheels fully clockwise.
 - 1) Look at the left flaperon and make sure it is fully down.

NOTE: You do not need to measure the flaperon movement. It is satisfactory if you can see that it moved down.

- 2) Make sure the FLAPERON POSITION indication shows -5.98 to -6.63.

- 3) Make sure the FLAPERON (left outboard) DELTA PRESS or PCU FORCE indication (whichever shows on the maintenance page) shows +5000 to +8000.

NOTE: This shows that the flaperon PCU is fully extended.

For the flaperon PCUs (unlike the other PCUs), the DELTA PRESS indication shows the force that the PCU causes, not the pressure in the PCU. Thus, the indication can show values that are more than the hydraulic system pressure.

27-11 TASK 805

D633W103-ARO

Page 210
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (g) Turn and hold one of the control wheels fully counterclockwise.
- 1) Look at the left flaperon and make sure it is fully up.
NOTE: You do not need to measure the flaperon movement. It is satisfactory if you can see that it moved up.
 - 2) Make sure the FLAPERON POSITION indication shows +5.98 to +6.63.
 - 3) Make sure the FLAPERON DELTA PRESS or PCU FORCE indication (whichever shows on the maintenance page) shows -2500 to -5000.
- (h) Release the control wheel.
- 1) Make sure the left flaperon is in the neutral position.
NOTE: You do not need to measure the flaperon position. It is satisfactory if you can see that it is approximately level.
- (i) If the flaperon or the indications did not operate correctly (as specified in the steps above), then do these steps:
- 1) Open these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- 2) Remove the ACE-L1, M27121.
- 3) Disconnect connector DM27109 from the left outboard flaperon PCU, M27109.
- 4) Do a wiring check between these pins of connector DM27121AA at the E1-5 shelf and connector DM27109 at the left outboard flaperon PCU, M27109 (WDM 27-11-15):
NOTE: Do a check for a short between the wires.

DM27121AA	DM27109
pin F1	pin 5
pin G1	pin 15
pin K1	pin 19
pin K2	pin 7

- 5) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27109.
 - c) Re-install the ACE-L1, M27121.

EFFECTIVITY

27-11 TASK 805

D633W103-ARO

Page 211
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- d) Close these circuit breakers on the PSA-L, M24101:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
- f) If the maintenance message does not show on the ground test display, you corrected the fault.
- 6) If you no not find a problem with the wiring, then continue.
- 7) Replace the outboard PCU for the left flaperon, M27109. These are the tasks:
- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- 8) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
- 9) If the maintenance message does not show on the ground test display, you corrected the fault.
- (j) If the flaperon and the indications operated correctly, then continue.
- (6) Do this test of the inboard PCU on the left flaperon:
- (a) Set the L and C FLT CONTROL HYD VALVE PWR switches for the WING to the SHUTOFF position.
- (b) Set the R FLT CONTROL HYD VALVE PWR switch for the WING to the NORM position.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (c) For the right hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (d) Look at page 2 of the flight controls maintenance pages on the MFD. To see this page, do this task: Showing a Maintenance Page, AMM TASK 31-61-00-800-804.
- (e) Monitor the left inboard FLAPERON POSITION indication an the maintenance page. At the same time look at the flaperon to see if it moves.
- (f) Turn and hold one of the control wheels fully clockwise.
- 1) Look at the left flaperon and make sure it is fully down.

NOTE: You do not need to measure the flaperon movement. It is satisfactory if you can see that it moved down.

777-200/300 FAULT ISOLATION MANUAL

- 2) Make sure the FLAPERON POSITION indication shows -5.98 to -6.63.
 - 3) Make sure the FLAPERON (left inboard) DELTA PRESS or PCU FORCE indication (whichever shows on the maintenance page) shows +5000 to +8000.
- (g) Turn and hold one of the control wheels fully counterclockwise.
- 1) Look at the left flaperon and make sure it is fully up.
NOTE: You do not need to measure the flaperon movement. It is satisfactory if you can see that it moved up.
 - 2) Make sure the FLAPERON POSITION indication shows +5.98 to +6.63.
 - 3) Make sure the FLAPERON DELTA PRESS or PCU FORCE indication (whichever shows on the maintenance page) shows -2500 to -5000.
- (h) Release the control wheel.
- 1) Make sure the left flaperon is in the neutral position.
NOTE: You do not need to measure the flaperon position. It is satisfactory if you can see that it is approximately level.
- (i) If the flaperon or the indications did not operate correctly (as specified in the steps above), then do these steps:
- 1) Open these circuit breakers on the PSA-R, M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 2) Remove the ACE-R, M27221.
- 3) Disconnect connector DM27110 from the left inboard flaperon PCU, M27110.
- 4) Do a wiring check between these pins of connector DM27221AA at the E5-2 shelf and connector DM27110 at the left inboard flaperon PCU, M27110 (WDM 27-11-16):

NOTE: Do a check for a short between the wires.

DM27221AA	DM27110
pin F1	pin 5
pin G1	pin 15
pin K1	pin 19
pin K2	pin 7

- 5) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27110.
 - c) Re-install the ACE-R, M27221.

27-11 TASK 805

D633W103-ARO

Page 213
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- d) Close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
- f) If the maintenance message does not show on the ground test display, you corrected the fault.
- 6) If you no not find a problem with the wiring, then continue.
- 7) Replace the inboard PCU on the left flaperon, M27110. These are the tasks:
- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- 8) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
- 9) If the maintenance message does not show on the ground test display, you corrected the fault.
- (j) If the flaperon and the indications operated correctly, then continue.
- (7) Replace the outboard PCU on the left flaperon, M27109. These are the tasks:
- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the inboard PCU on the left flaperon, M27110. These are the tasks:
- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

806. Left Inboard Aileron PCU Ram Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11200.

EFFECTIVITY
ARO ALL

27-11 TASKS 805-806

D633W103-ARO

Page 214
May 05/2014

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) ram feedback wiring:
 - (a) Open these circuit breakers and install safety tags:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf.
- (c) Disconnect connector DM27108A from the left inboard (LIB) aileron PCU.
- (d) Do a wiring check between these pins of connector DM27321AA for the ACE-C and connector DM27108A at the LIB PCU (WDM 27-11-12):

DM27321AA	DM27108A
pin E12	pin 19
pin E13	pin 7

- 1) Check for shorts to ground for pins 7 and 19.
 - 2) Check for shorts between pins 7 and 19.
 - 3) Check for shorts between pin 7 and pins 3, 8, 9, 11, 12, 13, 16, 17, and 18.
 - 4) Check for shorts between pin 15 and pins 3, 8, 9, 11, 12, 13, 16, 17, and 18.
- (e) Disconnect connector DM27107B.
 - 1) Check for shorts between pin 7 and DM27107B pins 1 and 2.
 - 2) Check for shorts between pin 19 and DM27107B pins 1 and 2.
 - (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27108A to the PCU.

EFFECTIVITY
ARO ALL

27-11 TASK 806

D633W103-ARO

Page 215
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 3) Re-connect connector DM27211B.
- 4) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 5) Remove the safety tags and close these circuit breakers:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 6) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (g) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the left inboard aileron PCU, M27108. These are the tasks:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf.
- (c) Disconnect connector DM27208A from the right inboard (RIB) aileron PCU.
- (d) Do a wiring check between these pins of connector DM27221AA for the ACE-R and connector DM27208A at the RIB PCU (WDM 27-11-14):

DM27221AA	DM27208A
pin E12	pin 19
pin E13	pin 7

- 1) Check for shorts to ground for pins 7 and 19.
- 2) Check for shorts between pins 7 and 19.
- 3) Check for shorts between pin 7 and pins 3, 8, 9, 11, 12, 13, 16, 17, and 18.
- 4) Check for shorts between pin 15 and pins 3, 8, 9, 11, 12, 13, 16, 17, and 18.
- (e) Disconnect connector DM27207B.
 - 1) Check for shorts between pin 7 and DM27207B pins 1 and 2.
 - 2) Check for shorts between pin 19 and DM27207B pins 1 and 2.
- (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27208A to the PCU.
 - 3) Re-connect connector DM27207B.
 - 4) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 5) Remove the safety tags and close these circuit breakers:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 6) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (g) If you do not find a problem with the wiring, then continue.

- (2) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the right inboard aileron PCU, M27208. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

— END OF TASK —

809. Right Outboard Aileron PCU Ram Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11203.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.

- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) ram feedback wiring:
 - (a) Open these circuit breakers and install safety tags:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left-1 actuator control electronics (ACE-L1), M27121, from the E1-5 shelf.
- (c) Disconnect connector DM27207A from the right outboard (ROB) aileron PCU.
- (d) Do a wiring check between these pins of connector DM27121AA for the ACE-L1 and connector DM27207A at the ROB PCU (WDM 27-11-13):

DM27121AA	DM27207A
pin E12	pin 19
pin E13	pin 7

- 1) Check for shorts to ground for pins 7 and 19.
 - 2) Check for shorts between pins 7 and 19.
 - 3) Check for shorts between pin 7 and pins 3, 8, 9, 11, 12, 13, 16, 17, and 18.
 - 4) Check for shorts between pin 19 and pins 3, 8, 9, 11, 12, 13, 16, 17, and 18.
- (e) Disconnect connector DM27208B.
 - 1) Check for shorts between pin 7 and DM27208B pins 1 and 2.
 - 2) Check for shorts between pin 19 and DM27208B pins 1 and 2.
- (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27207A to the PCU.
 - 3) Re-connect connector DM27208B.
 - 4) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

 - 2) Check for shorts between pin 11 and DM27207B pins 1 and 2.
- (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27208A to the PCU.
 - 3) Re-connect connector DM27207B.
 - 4) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 5) Remove the DO-NOT-CLOSE tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 6) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (g) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

Page 230
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the right inboard aileron PCU, M27208. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

813. Right Outboard Aileron PCU EHV Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11209.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) EHV feedback wiring:
 - (a) Open these circuit breakers and install safety tags:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU

27-11 TASK 816

D633W103-ARO

Page 239
Sep 05/2016

777-200/300
FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

———— **END OF TASK** ————

817. Right Outboard Flaperon PCU Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10303.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the wiring:
 - (a) Open these circuit breakers and install safety tags:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf.
- (c) Disconnect connector DM27209 from the right outboard flaperon power control unit (ROB PCU).
- (d) Do a wiring check between these pins of connector DM27321AA for the ACE-C and connector DM27209 at the ROB PCU (WDM 27-11-17):

DM27321AA	DM27209
pin F3	pin 9
pin G3	pin 8

- (2) If you find a problem with the wiring, then do these steps:

D633W103-ARO

Page 240
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) Repair the wiring.
- (b) Re-connect connector DM27209 to the PCU.
- (c) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (d) Remove the safety tags and close these circuit breakers:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) If you do not find a problem with the wiring, then continue.
 - (a) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
 - (c) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
 - (d) If a fault is found, replace the applicable PCU.
 - (e) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (f) If a fault is found, repair or replace the applicable wiring.
 - (g) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (h) If the maintenance message shows on the ground test display, then continue.

B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf.
- (c) Disconnect connector DM27209 from the right outboard (ROB) flaperon PCU.
- (d) Do a wiring check between these pins of connector DM27321AA for the ACE-C and connector DM27209 at the ROB PCU (WDM 27-11-17):

DM27321AA	DM27209
pin K1	pin 19
pin K2	pin 7

- 1) Check for shorts to ground for pins 7 and 19.
 - 2) Check for shorts between pins 7 and 19.
 - 3) Check for shorts between pin 7 and pins 3, 5, 8, 9, 11, 12, 13, 15, 16, 17 and 18.
 - 4) Check for shorts between pin 19 and pins 3, 5, 8, 9, 11, 12, 13, 15, 16, 17 and 18.
- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27209 to the PCU.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
- a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (f) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE for M27321. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- NOTE:** For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the right outboard flaperon PCU, M27209. These are the tasks:
- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801

————— **END OF TASK** —————

822. Left Inboard Flaperon PCU EHV Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11306.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) EHV feedback wiring:
 - (a) Open these circuit breakers and install safety tags:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf.
- (c) Disconnect connector DM27110 from the left inboard (LIB) flaperon PCU.
- (d) Do a wiring check between these pins of connector DM27221AA for the ACE-R and connector DM27110 at the LIB PCU (WDM 27-11-16):

DM27221AA	DM27110
pin J3	pin 3
pin J4	pin 11

- 1) Check for shorts to ground for pins 3 and 11.
- 2) Check for shorts between pins 3 and 11.

777-200/300 FAULT ISOLATION MANUAL

- 3) Check for shorts between pin 3 and pins 5, 7, 8, 9, 12, 13, 15, 16, 17, 18 and 19.
- 4) Check for shorts between pin 11 and pins 5, 7, 8, 9, 12, 13, 15, 16, 17, 18 and 19.
- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27209 to the PCU.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
 - (f) If you do not find a problem with the wiring, then continue.
 - (2) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
 - (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- NOTE:** For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.

777-200/300 FAULT ISOLATION MANUAL

- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the right outboard flaperon PCU, M27209. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

826. Left Aileron Surface Actuation Problems - Fault Isolation.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10216.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System test, Left Aileron Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (3) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (5) Examine the inboard and outboard PCUs on the left aileron to make sure these parts are not broken or missing:
 - (a) The kick link (1 for each PCU)
NOTE: The kick link is immediately forward of the PCU.
 - (b) The kick link bolts (3 for each PCU)
 - (c) The reaction link (1 for each PCU)
NOTE: The reaction link is the U shaped link that is above the PCU.
 - (d) The reaction link bolt at the aft end of the PCU (1 for each PCU)
 - (e) The bolts for the reaction link end cap (2 for each PCU)
NOTE: The end cap is on the forward right end of the reaction link.
 - (f) The rod end bolt (1 for each PCU)
 - (g) If you find a broken part or if a part is missing, then do these steps:
 - 1) Replace the part. For information about these parts, (AMM TASK 27-11-11-400-801).
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (h) If you do not find a broken part or a part that is missing, then continue.
- (6) Replace the left outboard aileron power control unit (PCU), M27107. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (7) Replace the left inboard aileron PCU, M27108. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

Page 261
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Description

- (1) The Right Aileron Surface Actuator Confidence Test failed.

C. Possible Causes

- (1) Right Outboard Aileron Power Control Unit (PCU), M27207
- (2) Right Inboard Aileron PCU, M27208

D. Initial Evaluation

- (1) If the Maintenance Access Terminal (MAT) shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - (a) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the Ground Test Display, then there was an intermittent problem.

E. Fault Isolation Procedure

- (1) Exchange the Actuator Control Electronics (ACE) for M27121. This is the task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do the Repair Confirmation at the end of this task.
- (3) Exchange the ACE for M27221. This is the task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do the Repair Confirmation at the end of this task.
- (5) Examine the Inboard and Outboard PCUs on the Right Aileron to make sure that these parts are not broken or missing:
 - (a) The kick link (1 for each PCU)
NOTE: The kick link is immediately forward of the PCU.
 - (b) The kick link bolts (3 for each PCU)
 - (c) The reaction link (1 for each PCU)
NOTE: The reaction link is the U shaped link that is above the PCU.
 - (d) The reaction link bolt at the aft end of the PCU (1 for each PCU)
 - (e) The bolts for the reaction link end cap (2 for each PCU)
NOTE: The end cap is on the forward right end of the reaction link.
 - (f) The rod end bolt (1 for each PCU)
 - (g) If you find a broken part or if a part is missing, then do these steps:
 - 1) Replace the part. For information about these parts, refer to Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801.

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 2) Do the Repair Confirmation at the end of this task.
- (h) If you do not find a broken part or a part that is missing, then continue.
- (6) Replace the Right Outboard Aileron PCU, M27207. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
- (a) Do the Repair Confirmation at the end of this task.
- (7) Replace the Right Inboard Aileron PCU, M27208. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
- (a) Do the Repair Confirmation at the end of this task.

F. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.
 - (b) If the maintenance message shows on the Ground Test Display, then continue the Fault Isolation at the subsequent step.

— END OF TASK —

828. Left Outboard Aileron PCU Bypass SOV Command Problems - Fault Isolation.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10209.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Do a check for 28 VDC from terminal QA41 of terminal block TB1101 at the E1-1 shelf to structure ground (WDM 27-11-11).
 - (b) If there is not 28 VDC at terminal QA41 of terminal block TB1101, then do these steps:
 - 1) Repair the wiring.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.

K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the left-2 actuator control electronics (ACE-L2), M27122, from the E1-1 shelf.
- (c) Disconnect connector DM27107A from the left outboard aileron power control unit (LOB PCU).
- (d) Do a wiring check between these pins of connector DM27122AA for the ACE-L2 and connector DM27107A at the LOB PCU (WDM 27-11-11):

DM27122AA	DM27107A
pin A13	pin 17

- (e) Do a wiring check between these pins of terminal block TB1101 and connector DM27107A at the PCU (WDM 27-11-11):

TB1101	DM27107A
term QA41	pin 16

- (f) Do a wiring check between pin A7 of connector DM27122AB and structure ground (WDM 27-11-11).
- (g) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27107A to the PCU.
 - 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R

830. Left Aileron PCU Ram Transducer Signal Disagreement - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11204.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.

NOTE: If the EICAS status message FLIGHT CONTROL SYS clears during the test steps, ignore the message and continue with the task.

- (a) If one or more maintenance messages show on the ground test display, then do these steps:

- 1) Find each message in the Maintenance Message Index.
- 2) Do the specified fault isolation task.

- (b) If no maintenance message shows on the ground test display, then there was an intermittent fault.

- 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
- 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

- (c) If the maintenance message shows on the ground test display, then continue.

- (2) Do a wiring check for obvious electrical faults in the applicable PCU wiring. (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

831. Left Flaperon PCU Ram Transducer Signal Disagreement - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11304.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Position.

NOTE: If the EICAS status message FLIGHT CONTROL SYS clears during the test steps, ignore the message and continue with the task.

- (a) If one or more maintenance messages show on the ground test display, then do these steps:

- 1) Find each message in the Maintenance Message Index.
- 2) Do the specified fault isolation task.

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

832. Left Outboard Aileron PCU Multiple Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11211.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) transducer excitation and ground wiring:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

777-200/300 FAULT ISOLATION MANUAL

- (b) Disconnect connector D11013P from the left power management panel, P110.
- (c) Remove the left-2 actuator control electronics (ACE-L2), M27122, from the E1-1 shelf.
- (d) Disconnect connector DM27107A from the left outboard (LOB) aileron PCU.
- (e) Do a wiring check between these pins of connector DM27122AA for the ACE-L2 and connector DM27107A at the LOB PCU (WDM 27-11-11):

DM27122AA	DM27107A
pin D12	pin 18
pin E14	pin 12
pin E15	pin 13

- 1) Check for shorts to ground for pins 12, 13 and 18.
- 2) Check for shorts between pins 12, 13 and 18.
- 3) Check for shorts between pin 12 and pins 3, 7, 8, 9, 11, 16, 17 and 19.
- 4) Check for shorts between pin 13 and pins 3, 7, 8, 9, 11, 16, 17 and 19.
- 5) Check for shorts between pin 18 and pins 3, 7, 8, 9, 11, 16, 17 and 19.
- (f) Disconnect connector DM27108B.
 - 1) Check for shorts between pin 12 and DM27108B pins 1 and 2.
 - 2) Check for shorts between pin 13 and DM27108B pins 1 and 2
 - 3) Check for shorts between pin 18 and DM27108B pins 1 and 2
- (g) Do a wiring check between these pins of connector DM27122AB for the ACE-L2 and connector D11013P at the left power management panel, P110 (WDM 27-11-11):

DM27122AB	D11013P
pin A7	pin 2

- (h) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27107A to the PCU.
 - 3) Re-connect connector DM27108B.
 - 4) Re-connect connector D11013P to the left power management panel, P110.
 - 5) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 6) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

833. Left Outboard Flaperon PCU Multiple Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11315.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) transducer excitation and ground wiring:
 - (a) Open this circuit breaker on the left power supply assembly (PSA-L) and attach safety tag:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-L	PFC BAT INTLK

- (b) Remove the PSA-L, M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
- (c) Remove the left-1 actuator control electronics (ACE-L1), M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Disconnect connector DM27109 from the left outboard (LOB) flaperon PCU.
- (e) Do a wiring check between these pins of connector DM27121AA for the ACE-L1 and connector DM27109 at the LOB PCU (WDM 27-11-15):

DM27121AA	DM27109
pin J1	pin 18
pin K3	pin 12
pin K4	pin 13

- 1) Check for shorts to ground for pins 12, 13 and 18.
- 2) Check for shorts between pins 12, 13 and 18.
- 3) Check for shorts between pin 12 and pins 3, 5, 7, 8, 9, 11, 15, 16, 17 and 19.

C. Fault Isolation Procedure

- (1) Do this check of the captain's control wheel.
 - (a) Do this task: Control Wheel Force Versus Travel Test, AMM TASK 27-11-00-720-801.
 - (b) If you find a problem, then do these steps:
 - 1) Examine these components, on the captain's side, for damaged parts, loose parts, or for objects that prevent smooth movement. Replace or repair those components that have damage.
 - a) The lateral control mechanism.
 - b) The wheel control cable.
 - c) The wheel control cable pulleys.
 - 2) Adjust the control wheel. To adjust it, do this task: Control Wheel and Cable Adjustment (Rigging), AMM TASK 27-11-00-700-802.
 - 3) Do this ground test on the MAT: 27-Primary Flight Controls, System test, Wheel Position.
 - 4) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If you did not find a problem, then continue.
- (2) Do this check of the first officer's control wheel.
 - (a) Do this task: Control Wheel Force Versus Travel Test, AMM TASK 27-11-00-720-801.
 - (b) If you find a problem, then do these steps:
 - 1) Examine these components, on the first officer's side, for damaged parts, loose parts, or for objects that prevent smooth movement. Replace or repair those components that have damage.
 - a) The lateral control mechanism.
 - b) The wheel control cable.
 - c) The wheel control cable pulleys.
 - 2) Adjust the control wheel. To adjust it, do this task: Control Wheel and Cable Adjustment (Rigging), AMM TASK 27-11-00-700-802.
 - 3) Do this ground test on the MAT: 27-Primary Flight Controls, System test, Wheel Position.
 - 4) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If you did not find a problem, then continue.
- (3) For the captain's Wheel Jam Breakout Mechanism, do this task: Force Limiter Operational Test, AMM TASK 27-11-00-700-807.
 - (a) If you find a problem, then do these steps:
 - 1) Replace the wheel jam breakout mechanism. These are the tasks:
 - Force Limiter Removal, AMM TASK 27-11-07-000-801
 - Force Limiter Installation, AMM TASK 27-11-07-400-801
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System test, Wheel Position.

777-200/300 FAULT ISOLATION MANUAL

- 3) If the maintenance message does not show on the ground test display, you corrected the fault.
- (b) If you did not find a problem, then continue.
- (4) For the First Officer's Wheel Jam Breakout Mechanism, do this task: Force Limiter Operational Test, AMM TASK 27-11-00-700-807.
 - (a) If you find a problem, then do these steps:
 - 1) Replace the Wheel Jam Breakout Mechanism. These are the tasks:
 - Force Limiter Removal, AMM TASK 27-11-07-000-801
 - Force Limiter Installation, AMM TASK 27-11-07-400-801
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System test, Wheel Position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (b) If you did not find a problem, then continue.
- (5) Adjust the control wheel. To adjust it, do this task: Control Wheel and Cable Adjustment (Rigging), AMM TASK 27-11-00-700-802.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System test, Wheel Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

836. Left Outboard Aileron PCU Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15022.

B. Initial Evaluation

- (1) Close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)

- (a) If the circuit breaker opens when you try to close it, then do the Fault Isolation Procedure below.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

777-200/300 FAULT ISOLATION MANUAL

- (2) Replace this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)

- (a) These are the tasks:
- Circuit Breaker - Removal, AMM TASK 24-09-00-000-818-002
 - Circuit Breaker - Installation, AMM TASK 24-09-00-400-814-002
- (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Exchange the ACE for M27107. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (5) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the left outboard aileron PCU, M27107. These are the tasks:
- Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (7) Replace the left inboard aileron PCU, M27108. These are the tasks:
- Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

Page 280
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

837. Left Outboard Flaperon PCU Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15026.

B. Initial Evaluation

- (1) Close this circuit breaker on the left power supply assembly (PSA-L), M24101:
- (a) A5, FLPRN PCU
 - (b) If the circuit breaker opens when you try to close it, then do the Fault Isolation Procedure below.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
- (a) Open this circuit breaker on the left power supply assembly (PSA-L) and attach safety tag:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-L	PFC BAT INTLK

- (b) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
P	26	C24673	L PSA TRU PWR

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	4	C24675	L PSA BAT PWR

- (c) Remove the PSA-L, M24101, from the E1-6 shelf.
- (d) Remove connector DM27109 from the left outboard flaperon power control unit (LOB PCU), M27109.
- (e) Do a wiring check between these pins of connector DM27109 for the LOB PCU and connector DM24101AD at the PSA-L (WDM 27-11-15):

DM27109	DM24101AD
pin 16	pin 22

- (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27109 to the LOB PCU, M27109.
 - 3) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

B. Initial Evaluation

- (1) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Force Transducer.
 - (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.
 - (b) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.

————— END OF TASK —————

839. Left Outboard Aileron PCU Ram Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16034.

B. Initial Evaluation

NOTE: This message can only occur when you do the Left Aileron Position ground test on the MAT. It will occur if the ground test is failed. If the ground test is passed the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) For the left outboard aileron power control unit (PCU), do this task: Aileron Adjustment (Rigging), AMM TASK 27-11-00-820-802.
 - (a) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Left Aileron Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (2) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the feedback wiring:

777-200/300 FAULT ISOLATION MANUAL

841. Wheel Force Transducer (#1) Signal Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16023.

B. Initial Evaluation

NOTE: This message can only occur when you do the Wheel Force Transducer ground test on the MAT. It will occur if the ground test is failed. If the ground test is passed the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) Look at the Flight Controls Maintenance Page 1 on the MFD. To see this page, do this task:
Showing a Maintenance Page, AMM TASK 31-61-00-800-804.
- (2) Do the steps that follow to apply a force to the Captains control wheels and at the same time monitor the values for the WHEEL POSITIONS and the WHEEL FORCES on the Flight Controls Maintenance Page 1.
 - (a) Release the Captains control wheel to the neutral position.
 - 1) Make sure the two WHEEL FORCE indications, on the maintenance page 1, show between -1.00 and 1.00.

NOTE: The two wheel force transducers are contained in a single part. Each will give approximately the same indication as the other.
 - (b) Turn the control wheel fully counterclockwise.
 - 1) Make sure the two WHEEL FORCE indications show between -24.00 and -10.00.
 - (c) Turn the Captains control wheel fully clockwise.
 - 1) Make sure the two WHEEL FORCE indications show between 10.00 and 24.00.
 - (d) Release the Captains control wheels.
- (3) Do the steps that follow to apply a force to the First Officers control wheels and at the same time monitor the values for the WHEEL POSITIONS and the WHEEL FORCES on the Flight Controls Maintenance Page 1.
 - (a) Release the First Officers control wheel to the neutral position.
 - 1) Make sure the two WHEEL FORCE indications, on the maintenance page 1, show between -1.00 and 1.00.

NOTE: The two wheel force transducers are contained in a single part. Each will give approximately the same indication as the other.
 - (b) Turn the First Officers control wheel fully counterclockwise.
 - 1) Make sure the two WHEEL FORCE indications show between -24.00 and -10.00.
 - (c) Turn the First Officers control wheel fully clockwise.
 - 1) Make sure the two WHEEL FORCE indications show between 10.00 and 24.00.
 - (d) Release the First Officers control wheels.
- (4) If you find a problem with indication, then do these steps.
 - (a) Do this task: Control Wheel Force Versus Travel Test, AMM TASK 27-11-00-720-801.
 - (b) If the wheel force transducers do not operate as specified in the task, then do these steps:
 - 1) Replace the wheel force transducer, M27129. These are the tasks:
 - Wheel Position Transducers Removal, AMM TASK 27-11-02-000-801

EFFECTIVITY
ARO ALL

27-11 TASK 841

D633W103-ARO

Page 288
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- Wheel Position Transducers Installation, AMM TASK 27-11-02-400-801
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Control Wheel Force Transducer Test, AMM TASK 27-11-00-710-802.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - c) If the maintenance message shows on the ground test display, then continue.
- (c) If the wheel force transducers operate as specified in the task, then continue.
- (5) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the left-2 actuator control electronics (ACE-L2), M27122, from the E1-1 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27129A from the disconnect panel.
- (d) Do a wiring check between these pins of connector DM27122AC for the ACE-L2 and connector DM27129A (WDM 27-11-11):

DM27122AC	DM27129A
pin C10	pin 5
pin C11	pin 6

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27129 to the disconnect panel.
 - 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

ECCN 9E991 BOEING PROPRIETARY - Copyright © Unpublished Work - See title page for details

Page 290
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

NOTE: This message can only occur when you do the Left Flaperon Alignment ground test on the MAT. It will occur if you select NO when the MAT shows this statement during the test: Select NO if you can not align them. If you select YES this test will pass and the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Alignment.

NOTE: This ground test adjusts (rigs) the flaperon. AMM 27-11-00/501 contains information that will help you do this ground test.

- (a) If you could adjust the flaperon correctly during the ground test, then you corrected the fault.
 - (b) If you could not adjust the flaperon correctly during the ground test, then continue.
- (2) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the left outboard power control unit (LOB PCU), M27109. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

843. Wheel Position Transducer Multiple Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-12006, 27-12013.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the FIM Maintenance Message Index.
 - 2) Do the specified fault isolation task.

Page 291
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (b) If no maintenance message shows on the ground test display, then there was an intermittent fault.

————— END OF TASK —————

844. Left Outboard Aileron PCU Blocking Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10205.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Do a check for 28 VDC from terminal QB53 of terminal block TB2501 at the E2-5 shelf to structure ground (WDM 27-11-12).
 - (b) If there is not 28 VDC at terminal QB53 of terminal block TB2501, then do these steps:
 - 1) Remove the center power supply assembly (PSA-C), M24301. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of terminal block TB2501 at the E2-5 shelf and the connector DM24301AD at the E2-6 shelf (WDM 27-11-12):

TB2501

DM24301AD

term QB53 pin 10

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Confidence.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
- 4) If you do not find a problem with the wiring, then continue.
- 5) Install a new PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Confidence.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.

A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf.
- (c) Disconnect connector DM27107B from the left outboard aileron power control unit (LOB PCU).
- (d) Do a wiring check between these pins of connector DM27321AA for the ACE-C and connector DM27107B at the LOB PCU (WDM 27-11-12):

DM27321AA	DM27107B
pin A15	pin 2

- (e) Do a wiring check between these pins of terminal block TB2501 and connector DM27107B at the PCU (WDM 27-11-12):

TB2501	DM27107B
term QB53	pin 1

- (f) Do a check for continuity between pin A7 of connector DM27321AB and structure ground (WDM 27-11-12).
- (g) If there is no continuity, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27107B to the PCU.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers:

Power Supply Assembly Center, M24301

777-200/300 FAULT ISOLATION MANUAL

845. Left Outboard Flaperon PCU Bypass Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10305.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wiring:
 - (a) Open this circuit breaker on the PSA-L and attach safety tag:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-L	PFC BAT INTLK

- (b) Remove the PSA-L, M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
- (c) Remove the left-1 actuator control electronics (ACE-L1), M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Do a wiring check between these pins of connector DM27121AB for the ACE-L1 and connector DM24101AD at the PSA-L (WDM 27-11-15):

DM27121AB	DM24101AD
pin B6	pin 16

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tag and close this circuit breaker on the PSA-L:

- (d) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - (e) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (f) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the PSA-L, M24101. These are the tasks:
- Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (5) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the left outboard flaperon PCU, M27109. These are the tasks:
- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

846. Left-1 Wheel Position Transducer Problem - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12000.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wheel position transducer excitation and feedback wiring:
 - (a) Open these circuit breakers and install safety tags:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left-1 actuator control electronics (ACE-L1), M27121, from the E1-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27131 (the connector for the left-1 wheel position transducer) from the disconnect panel on the left end of wheel control rods.
- (d) Do a wiring check between these pins of connector DM27121AC at the E1-5 shelf and connector DM27131 at the transducer (WDM 27-11-13):

DM27121AC		DM27131
pin D1		pin 9
pin D3		pin 5
pin E1		pin 8
pin E2		pin 6
pin E3		pin 1

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27131 to the disconnect panel.

777-200/300 FAULT ISOLATION MANUAL

- 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 4) Remove the safety tags and close these circuit breakers:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - 6) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (f) If you do not find a problem with the wiring, then continue.
- (2) Install a new ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Re-connect connector DM27131 to the disconnect panel.
 - (b) Make sure that the safety tags are removed and these circuit breakers are closed on the PSA-L:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the left-1 wheel position transducer, M27131. These are the tasks:
- Wheel Position Transducers Removal, AMM TASK 27-11-02-000-801
 - Wheel Position Transducers Installation, AMM TASK 27-11-02-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.

————— END OF TASK —————

847. Left Flaperon Surface Delta Pressure Signal Difference Out of Range - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10314.

B. Initial Evaluation

- (1) Make sure that the primary flight computer (PFC) is in NORMAL mode.
- (2) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (3) Turn and hold the control wheel fully left.
 - (a) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (4) Turn and hold the control wheel fully right.
 - (a) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display (on the MAT).
- (5) If the MAT shows ACTIVE for the maintenance message during the steps above, then do the Fault Isolation Procedure below.
- (6) If the MAT shows NOT ACTIVE for the maintenance message during all the steps above, then there was an intermittent fault.
 - (a) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Alignment.

NOTE: This ground test adjusts (rigs) the Flaperon. AMM 27-11-00/501 contains information that will help you do this ground test.

- (a) Make sure that the primary flight computer (PFC) is in NORMAL mode.
- (b) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (c) Turn and hold the control wheel fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (d) Turn and hold the control wheel fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (e) If the maintenance message does not show on the MAT, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

850. Right-2 Wheel Position Transducer Signal Disagreement - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12011.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do the control wheel adjustment procedure. To do this check, do this task: Control Wheel and Cable Adjustment (Rigging), AMM TASK 27-11-00-700-802.
- (a) If you find a problem with the adjustment, then do these steps:
- 1) Adjust the transducer. To adjust it, do this task: Wheel Position Transducer (LVDT) Adjustment, AMM TASK 27-11-00-820-801.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (b) If you do not find a problem with the adjustment, then continue.
- (2) Do this check of the wheel position transducer feedback wiring:
- (a) Open these circuit breakers and install safety tags:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27232 from the disconnect panel on the right end of wheel control rods.

EFFECTIVITY
ARO ALL

777-200/300 FAULT ISOLATION MANUAL

- (d) Do a wiring check between these pins of connector DM27321AC for the ACE-C and connector DM27232 (WDM 27-11-12):

DM27321AC	DM27232
pin D3	pin 6
pin E2	pin 5

- (e) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-connect connector DM27232 to the disconnect panel.
- 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 4) Remove the safety tags and close these circuit breakers:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - 6) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 7) If the maintenance message shows on the ground test display, then continue.
- (f) If you do not find a problem with the wiring, then continue.
- (g) Re-connect connector DM27232 to the disconnect panel.
- (3) Install a new ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Make sure that the safety tags are removed and these circuit breakers are closed on the PSA-C:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.

777-200/300 FAULT ISOLATION MANUAL

- (c) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right-2 wheel position transducer, M27232. These are the tasks:
 - Wheel Position Transducers Removal, AMM TASK 27-11-02-000-801
 - Wheel Position Transducers Installation, AMM TASK 27-11-02-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

851. Wheel Force Transducer Assembly #1 Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12500.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Force Transducer.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Force Transducer.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the wheel force transducer, M27129. These are the tasks:
 - Wheel Force Transducer - Removal, AMM TASK 27-11-08-000-801
 - Wheel Force Transducer - Installation, AMM TASK 27-11-08-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Force Transducer.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (4) Repair the excitation and feedback wiring for the force transducer:
 - (a) Repair the wiring between these pins of connector DM27122AC for the ACE-L2 and connector DM27129A for the force transducer (WDM 27-11-11):

DM27122AC	DM27129A
pin A11	pin 9
pin A10	pin 8
pin C10	pin 5
pin B11	pin 1
pin C11	pin 6

- 1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Force Transducer.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

852. Control Wheels Do Not Move Freely/Ratcheting Feeling On The Control Wheel – Fault Isolation

A. Initial Evaluation

- (1) Operate Captain's control wheel several times.
- (2) Operate First Officer's control wheel several times.
 - (a) If the control wheels do not move freely, then do the Fault Isolation Procedure below.
 - (b) If the control wheels move freely, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Do a check of Control Wheel Force and Travel Test. To check it, do this task: Control Wheel Force Versus Travel Test, AMM TASK 27-11-00-720-801.
 - (a) If you find a problem, then do these steps.
 - 1) Examine these components for damaged parts, loose parts, or for objects that prevent smooth movement. Replace or repair those components that have damage.
 - a) The lateral control mechanism.
 - b) The wheel control cables.
 - c) The wheel control cable pulleys.
 - d) The force limiters.
 - e) The spoiler cables.
 - f) The spoiler control mechanism for the mechanical spoilers (#4 & #11).
 - g) The spoiler PCU quadrants.
 - h) The spoiler PCU quadrant pushrods (bearings).
 - i) The mechanical spoilers (#4 & #11) PCUs.
 - 2) Do a check of Control Wheel Adjustment. To adjust it, do this task: Control Wheel and Cable Adjustment (Rigging), AMM TASK 27-11-00-700-802.
 - 3) Do a check of Spoiler Control Cable Adjustment. To adjust it, do this task: Control Cable Adjustment (Rigging) for Spoilers 4 and 11, AMM TASK 27-61-00-820-801.
 - 4) Do a check of the control wheel damper. Do this task: (Control Wheel Damper Test, AMM TASK 27-11-00-700-806).

777-200/300 FAULT ISOLATION MANUAL

- a) If necessary, replace the control wheel damper (AMM TASK 27-11-03-000-801).
- 5) Operate control wheels several times.
- 6) If the control wheels move freely, you corrected the fault.

————— **END OF TASK** —————

853. Aileron Trim Failed To Trim In Left Wing Down Direction - Fault Isolation

A. Initial Evaluation

- (1) Look for the maintenance message AIL TRIM CB OPEN on the MAT.
 - (a) If the message shows on the MAT, then do the corrective action for the message.
 - (b) If the message does not show on the MAT, then continue.
- (2) Move aileron trim switches on aft aisle stand panel, P8, in "LEFT WING DOWN" direction.
 - (a) If the control wheels do not turn clockwise, then do the Fault Isolation Procedure below.
 - (b) If the control wheels turn correctly, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Replace the aileron/rudder trim control panel, M27036, at aft aisle stand, P8. These are the tasks:
 - Rudder and Aileron Trim Module - Removal, AMM TASK 27-21-08-000-801
 - Rudder and Aileron Trim Module - Installation, AMM TASK 27-21-08-400-801
 - (a) Move the aileron trim switches on aft aisle stand panel, P8, in "RIGHT WING DOWN" direction and then "LEFT WING DOWN" direction.
 - (b) If the control wheels turn counterclockwise and then clockwise, you corrected the fault.

————— **END OF TASK** —————

854. Aileron Trim Failed To Trim In Right Wing Down Direction - Fault Isolation

A. Initial Evaluation

- (1) Look for the maintenance message AIL TRIM CB OPEN on the MAT.
 - (a) If the message shows on the MAT, then do the corrective action for the message.
 - (b) If the message does not show on the MAT, then continue.
- (2) Move aileron trim switches on aft aisle stand panel, P8, in "RIGHT WING DOWN" direction.
 - (a) If the control wheels do not turn counterclockwise, then do the Fault Isolation Procedure below.
 - (b) If the control wheels turn correctly, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Replace the aileron/rudder trim control panel, M27036, at aft aisle stand, P8. These are the tasks:
 - Rudder and Aileron Trim Module - Removal, AMM TASK 27-21-08-000-801
 - Rudder and Aileron Trim Module - Installation, AMM TASK 27-21-08-400-801
 - (a) Move the aileron trim switches on aft aisle stand panel, P8, in "RIGHT WING DOWN" direction and then "LEFT WING DOWN" direction.

- (b) If the control wheels turn counterclockwise and then clockwise, you corrected the fault.

— END OF TASK —

855. Aileron Trim Failed To Trim In Either Direction - Fault Isolation

A. Initial Evaluation

- (1) Look for the maintenance message AIL TRIM CB OPEN on the MAT.
 - (a) If the message shows on the MAT, then do the corrective action for the message.
 - (b) If the message does not show on the MAT, then continue.
- (2) Move aileron trim switches on aft aisle stand panel, P8, in "RIGHT WING DOWN" direction and then "LEFT WING DOWN" direction.
 - (a) If the control wheels do not turn counterclockwise and then clockwise, then do the Fault Isolation Procedure below.
 - (b) If the control wheels turn correctly, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Do a check of the linkage between trim actuator and lateral control input shaft.
 - (a) If you find a problem, then do these steps.
 - 1) Replace or repair aileron trim parts as necessary.
 - 2) Move the aileron trim switches on aft aisle stand panel, P8, in "RIGHT WING DOWN" direction and then "LEFT WING DOWN" direction.
 - 3) If the control wheels turn correctly, you corrected the fault.
 - (b) If you do not find a problem, then continue.
- (2) Do this check of voltage at connector DM27127 for aileron trim actuator:
 - (a) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	18	C27625	AIL TRIM ACTR

- (b) Disconnect connector DM27127 from aileron trim actuator.
- (c) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	18	C27625	AIL TRIM ACTR

- (d) Place the aileron trim switches on aft aisle stand panel, P8, to "RIGHT WING DOWN" and hold.
- (e) Do a check of 28 VDC between pin 1 and pin 5 of connector DM27127 (WDM 27-11-19).
- (f) If there is 28 VDC between pin 1 and pin 5 of DM27127, then do these steps:
 - 1) Replace the aileron trim actuator, M27127. These are the tasks:
 - Aileron Trim Actuator - Removal, AMM TASK 27-11-09-000-801
 - Aileron Trim Actuator - Installation, AMM TASK 27-11-09-400-801
 - 2) Move the aileron trim switches on aft aisle stand panel, P8, in "RIGHT WING DOWN" direction and then "LEFT WING DOWN" direction.

777-200/300 FAULT ISOLATION MANUAL

- 3) If the control wheels turn correctly, you corrected the fault.
- (g) If there is not 28 VDC between pin 1 and pin 5 of DM27127, then do these steps:
- 1) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- 2) Disconnect connector DM27036A from aileron/rudder trim control panel, M27036.
- 3) Disconnect connector D11013P from left power management panel, P110.
- 4) Do a wiring check between these pins of connector DM27127 for the aileron trim actuator and connector DM27036A for the aileron/rudder trim control panel, M27036 (WDM 27-11-19):

DM27127	DM27036A
pin 1	pin 10
pin 5	pin 12

- 5) Do a wiring check between these pins of connector D11013P for the P110 and connector DM27036A for the aileron/rudder trim control panel, M27036 (WDM 27-11-19):

D11013P	DM27036A
pin 16	pin 11
pin 18	pin 3

- 6) If you find a problem with the wiring, then do these steps:
- a) Repair the wiring.
- b) Re-connect connector D11013P.
- c) Re-connect connector DM27036A.
- d) Re-connect connector DM27127.
- e) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR
