Page 298.30
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (d) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DK27002 at the P110 power management panel (WDM 27-51-17):

DM27001AA	DK27002
pin D5	pin X2

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Install the flaps bypass/clutch relay, K27002 on the P110 power management panel (WDM 27-51-17).
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

Row	Col	Number	Name
D	2	C27301	FLAPS ELEC MOT PWR

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flap Primary Control Valve Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (8) Install a new flaps bypass/clutch relay, K27002 on the P110 power management panel (WDM 27-51-17).
- (9) Re-install FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (10) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

Row	Col	Number	Name

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message shows on the ground test display, then continue.
- (19) Replace the flap electric motor, B27002.
These are the tasks:
Flap Electric Motor Removal, AMM TASK 27-51-34-000-801,
Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
- (20) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flap Primary Control Valve Test-FSEU 1.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (21) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

————— END OF TASK —————

844. Flaps Shutoff Valve Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25291.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flap Primary Control Valve Test-FSEU 1.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the Shutoff Solenoid on the flap primary control valve, V27004 in the right wheel well.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,

- 1) If the maintenance message does not show on the Ground Test Display, then you corrected the problem.
- (b) If the circuit breakers were closed, or if the maintenance message shows on the Ground Test Display, then continue.
- (3) Do this check to see if the Flap Drive System is locked:
 - (a) Use the Primary System to extend and retract the flaps. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - 1) If the flaps do not operate with the Primary System, then the Flap Drive System is locked. Do Fault Isolation Procedure - Flap Drive System Locked below.
 - 2) If the flaps operate with the Primary System, then the Flap Drive System is not locked. Do Fault Isolation Procedure - Flap Drive System Not Locked below.

G. Fault Isolation Procedure - Flap Drive System Locked

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the Downlock Pins are not installed on the Main and Nose Landing Gear, install them. This is the task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Install the Landing Gear Door Safety Pins. This is the task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) For the Center Hydraulic System, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (4) Disconnect the Torque Tubes inboard of the Flap Position Sensor Gearboxes.

DO NOT TURN THE MANUAL DRIVE WITH MORE THAN 1200 POUND-INCH(113 N-M) TORQUE OR FASTER THAN 400 RPM. YOU CAN CAUSE DAMAGE TO THE POSITION SENSOR GEARBOX AND THE TORQUE TUBES.

DO NOT LET THE BALLSCREW NUTS HIT THE UP STOPS OR DOWN STOPS. YOU CAN CAUSE DAMAGE TO THE SHEAROUT IN THE POSITION SENSOR GEARBOX.

EFFECTIVITY

27-51 TASK 846

D633W103-ARO

Page 298.41
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

(CAUTION PRECEDES)

CAUTION

DO NOT LET THE BALLSCREW ACTUATOR HIT THE MECHANICAL STOPS. DAMAGE TO THE BALLSCREW ACTUATOR AND THE STABILIZER CAN OCCUR.

- (5) Use the Manual Drive on the Flap Position Sensor Gearboxes to extend and retract the flaps on each wing. This is the task: Trailing Edge Flap System Manual Operation, AMM TASK 27-51-00-980-801.
 - (a) If you can extend and retract the flaps on each wing, do these steps:
 - 1) Remove the Flap Electric Motor, B27002. This is the task: Flap Electric Motor Removal, AMM TASK 27-51-34-000-801.
 - 2) Use a T.E. flap torque tube coupling drive adapter, SPL-1704 to turn the Flap PDU in the EXTEND and RETRACT directions.
 - a) If you can turn the PDU, install a new Flap Electric Motor, B27002. This is the task task: Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
<1> Do the Repair Confirmation at the end of this task.
 - b) If you cannot turn the PDU, do this task: Flap Hydraulic Motor Removal, AMM TASK 27-51-33-000-801.
<1> Re-install the Flap Electric Motor. This is the task: Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
 - 3) Use a T.E. flap torque tube coupling drive adapter, SPL-1704 to turn the Flap PDU in the EXTEND and RETRACT directions.
 - a) If you cannot turn the PDU, replace it. These are the tasks:
 - Flap Power Drive Unit (PDU) Removal, AMM TASK 27-51-31-000-801
 - Flap Power Drive Unit (PDU) Installation, AMM TASK 27-51-31-400-801<1> Do the Repair Confirmation at the end of this task.
 - 4) Try to turn the Output Shaft on the Flap Hydraulic Motor.
 - a) If you can turn the Output Shaft on the Flap Hydraulic Motor, replace the Flap Primary Control Valve, V27004. These are the tasks:
 - Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
 - Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801<1> Re-install the Flap Hydraulic Motor. This is the task: Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.
<2> Do the Repair Confirmation at the end of this task.
 - b) If you cannot turn the Output Shaft on the Flap Hydraulic Motor, install a new Flap Hydraulic Motor. This is the task: Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.
<1> Do the Repair Confirmation at the end of this task.
 - (b) If you cannot extend and retract the flaps on one of the wings, open the access panels on the applicable wing to find where the Flap Drive System is locked:

- (c) If the Torque Trip Indicator shows “tripped” for a Transmission, do these steps:

- 1) Disconnect the Torque Tubes from the applicable Transmission and try to turn the Torque Tube Couplings.
- 2) If you cannot turn the Transmission, disconnect the Ballscrew from the Transmission and try to turn the Torque Tube Couplings.
 - a) If you cannot turn an Inboard Flap Inboard Transmission, replace the applicable Inboard Transmission. These are the tasks:
 - Inboard Flap Inboard Transmission Removal, AMM TASK 27-51-15-000-801
 - Inboard Flap Inboard Transmission Installation, AMM TASK 27-51-15-400-801

<1> Do the Repair Confirmation at the end of this task.
 - b) If you cannot turn an Inboard Flap Outboard Transmission, replace the applicable Outboard Transmission. These are the tasks:
 - Inboard Flap Outboard Transmission Removal, AMM TASK 27-51-15-000-802
 - Inboard Flap Outboard Transmission Installation, AMM TASK 27-51-15-400-802

<1> Do the Repair Confirmation at the end of this task.
 - c) If you cannot turn an Outboard Flap Inboard Transmission, replace the applicable Inboard Transmission. These are the tasks:
 - Outboard Flap Inboard Transmission Removal, AMM TASK 27-51-25-000-801
 - Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801

<1> Do the Repair Confirmation at the end of this task.
 - d) If you cannot turn an Outboard Flap Outboard Transmission, replace the applicable Outboard Transmission. These are the tasks:
 - Outboard Flap Outboard Transmission Removal, AMM TASK 27-51-25-000-802
 - Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801

<1> Do the Repair Confirmation at the end of this task.
 - e) If necessary, connect the Ballscrew to the Transmission.

777-200/300 FAULT ISOLATION MANUAL

- f) Connect the Torque Tubes to the applicable Transmission.
 - g) Reset the Torque Trip Indicator on the applicable Transmission.
 - 3) Try to turn the Ballscrew on the applicable Transmission.
 - a) If you cannot turn the Ballscrew for the Inboard Flap Inboard Transmission, replace the applicable Inboard Ballscrew. These are the tasks:
 - Inboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-801
 - Inboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-801

<1> Do the Repair Confirmation at the end of this task.
 - b) If you cannot turn the Ballscrew for the Inboard Flap Outboard Transmission, replace the applicable Outboard Ballscrew. These are the tasks:
 - Inboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-802
 - Inboard Flap Outboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-802

<1> Do the Repair Confirmation at the end of this task.
 - c) If you cannot turn the Ballscrew for the Outboard Flap Inboard Transmission, replace the applicable Inboard Ballscrew. These are the tasks:
 - Outboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-802
 - Outboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-26-400-802.

<1> Do the Repair Confirmation at the end of this task.
 - d) If you cannot turn the Ballscrew for the Outboard Flap Outboard Transmission, replace the applicable Outboard Ballscrew. These are the tasks:
 - Outboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-801
 - Outboard Flap Outboard Ballscrew and Gimbal Installation, AMM TASK 27-51-26-400-801

<1> Do the Repair Confirmation at the end of this task.
 - (d) If none of the Torque Trip Indicators show, or if you did not find a problem with a Transmission or Ballscrew, examine the other Gearboxes for the Flap Drive System on the applicable wing:
 - 1) Disconnect the Torque Tubes from the applicable Gearbox.
 - a) If you cannot manually turn the applicable Gearbox, replace the Gearbox.
 - 2) Connect the Torque Tubes to the applicable Gearbox.
 - 3) Close the access panels on the applicable wing:
 - a) Close these panels on the left wing:
- | <u>Number</u> | <u>Name/Location</u> |
|---------------|----------------------------------|
| 573DR | Flap Support Fairing No. 3 Panel |
| 576CL | Flap Support Fairing No. 2 Panel |

- b) Close these panels on the right wing:

<u>Number</u>	<u>Name/Location</u>
673DL	Flap Support Fairing No. 6 Panel
676CR	Flap Support Fairing No. 7 Panel
677DR	Flap Support Fairing No. 8 Panel

- (e) Connect the Torque Tubes to the Flap Position Sensor Gearboxes.
(f) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.

OBEY THE DOOR ACTIVATION PROCEDURE. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONNEL, AND DAMAGE TO EQUIPMENT.

- (g) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
(h) Do the Repair Confirmation at the end of this task.

H. Fault Isolation Procedure - Flap Drive System Not Locked

- (1) If the Flap Drive System is not locked, use the Alternate System to extend and retract the flaps. This is the task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.

NOTE: This step is done to find if the flaps do not extend, retract or do not operate at all with Electric Power.

- (a) If the flaps do not operate at all with the Alternate System, then replace the Flap Electric Motor, B27002. These are the tasks:
- Flap Electric Motor Removal, AMM TASK 27-51-34-000-801
 - Flap Electric Motor Installation, AMM TASK 27-51-34-400-801
- 1) Do the Repair Confirmation at the end of this task.
- (b) If the flaps do not extend with the Alternate System, then replace the Flaps Extend Relay, K27004 on the P110 Panel (WDM 27-51-17).
- 1) Do the Repair Confirmation at the end of this task.
- (c) If the flaps do not retract with the Alternate System, then replace the Flaps Retract Relay, K27006 on the P110 Panel (WDM 27-51-17).
- 1) Do the Repair Confirmation at the end of this task.
- (2) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

- (3) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel (WDM 27-51-17).
(4) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

- (5) Do a check for 28V DC at pin X1 of the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.

847. Flap Position Sensor Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25321.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a check of the torque tubes between the flap power drive unit (PDU) and the flap position sensor gearboxes in the left and right wheel wells.
 - (a) If the torque tubes are broken or disconnected, connect or replace the torque tubes.

These are the tasks:

Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.

 - 1) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
 - 2) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If you do not find a problem with the torque tubes, then continue.
- (4) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

 - (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Use the alternate system to retract the flaps to the retracted position. To retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- (6) Look at the FLAP POS L1 and FLAP POS R1 indications on the FLAP/SLAT maintenance page on EICAS.
 - (a) Replace the flap position sensor for the flap position indication which is further from 10.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

EFFECTIVITY

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

NOTE: The flap position sensor for FLAP POS L1 is M27101 in the left wheel well. The flap position sensor for FLAP POS R1 is M27102 in the right wheel well.

- (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (7) Replace the other flap position sensor 1L, M27101 or 1R, M27102.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (8) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (9) Remove FSEU 1, M27001 from the E1-6 shelf.
- (10) Do a check of the wiring between FSEU 1 and the flap position sensor 1L, M27101:
 - (a) Disconnect the connector DM27101 from flap position sensor 1L, M27101.
 - (b) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27101 at the flap position sensor 1L, M27101 (WDM 27-58-11):

DM27001AC	DM27101
pin K3	pin 1
pin J3	pin 2
pin G9	pin 3
pin G10	pin 4
pin F9	pin 5
pin F10	pin 6

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27101.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.

FAULT ISOLATION MANUAL

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (14) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

————— END OF TASK —————

848. Flaps Extend Solenoid Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25491.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breaker was closed, continue.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (3) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (5) Disconnect electrical connector DV27004B from the flap primary control valve, V27004 in the right wheel well.
- (6) Do this wiring check of the Primary Extend Solenoid on the flap primary control valve, V27004:
- (a) Do a check of the resistance between pins 9 and 19 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-15):
- (b) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

- 1) Replace the Primary Extend solenoid on the flap primary control valve, V27004.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.

- 2) Do a check of the resistance between pins 9 and 19 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-15).

NOTE: This does a check of the internal wiring on the primary control valve, V27004.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,

Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

- b) If the resistance between the pins is in the limit, then continue.

- 3) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.

- 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.

777-200/300 FAULT ISOLATION MANUAL

- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (c) If you do not find a problem with the wiring, then continue.
- (11) Install a new FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (12) Re-connect connector DV27004B to the flap primary control valve, V27004.
- (13) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	11	C27604	FLAPS PRI DR CTRL 1

- (14) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (15) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

850. Flaps Low Speed Solenoid Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25511.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.

G	11	C27604	FLAPS PRI DR CTRL 1

- (5) Disconnect electrical connector DV27004B from the flap primary control valve, V27004 in the right wheel well.
- (6) Do this wiring check of the Primary Low Speed Solenoid on the flap primary control valve, V27004:
 - (a) Do a check of the resistance between pins 8 and 18 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-15):
 - (b) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - 1) Replace the Primary Low Speed solenoid on the flap primary control valve, V27004.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.
 - 2) Do a check of the resistance between pins 8 and 18 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-15).
NOTE: This does a check of the internal wiring on the primary control valve, V27004.
 - a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.

— END OF TASK —

855. Flaps Skew and Position Sensor Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25581.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only:
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- (a) If the MAT shows PASSED after the ground test, then replace FSEU 1, M27001. These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- 1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the MAT does not show PASSED after the ground test, then continue.
- (2) Look for broken or disconnected torque tubes for the flap drive system:

NOTE: It is likely that there are broken or disconnected torque tubes between the flap position sensor gearboxes and flap supports No. 1 and 8.

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (a) If the downlock pins are not installed on the main and nose landing gear, do this task:
Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (b) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (c) Look at the torque tubes in the main landing gear wheel wells outboard of the position sensor gearboxes to see if they are broken or disconnected.
- (d) Look at the torque tubes between flap support No. 1 and No. 2.

- 1) If the flap is retracted, remove these access panels to get access to the torque tubes

- 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace flap position sensors 1L, M27101 and 1R, M27102. These are the tasks:
 - Flap Position Sensor Removal, AMM TASK 27-58-03-000-801
 - Flap Position Sensor Installation, AMM TASK 27-58-03-400-801
- (a) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

856. FSEU Problem During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25591.

B. Fault Isolation Procedure

- (1) Replace FSEU 1, M27001. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (3) Do this check of the wiring:
 - (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Do a wiring check between these pins at the E1-6 shelf and ground (WDM 27-51-11):
 - 1) Connector DM27001AA, Pin J1
 - 2) Connector DM27001AA, Pin K2.
- (d) If you find a problem with the wiring, then repair the wiring.
- (e) Re-install FSEU 1, M27001.
- (f) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (g) Cycle the ALT ARM switch until FSEU 1 is IN CONTROL.

NOTE: This will cause FSEU 1 to do a self test.

858. Sensor Excitation Voltage Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25611.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1:
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that these circuit breakers are closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	C24420	STBY 28V BUS
A	8	C27513	SNSR EXC 1

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breakers were closed, then continue.
- (2) Do this wiring check between FSEU 1, M27001 and the P310 panel:

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Do a wiring check between these pins on connector D31023P at the P310 standby power management panel and connector DM27001AA at the E1-6 shelf (WDM 27-51-11):

D31023P	DM27001AA
pin 11	pin A1

- (d) Do a wiring check between these pins on connector D31023P at the P310 standby power management panel and connector DM27001AC at the E1-6 shelf (WDM 27-51-11):

D31023P	DM27001AC
pin 11	pin K1

- (e) If there is a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Connect re-install FSEU 1, M27001 on the E1-6 shelf.
 - 3) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 4) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (3) Install a new FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

859. Flap Lever Sensor Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25621.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1:
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Push the ALTN FLAPS ARM switch on the control stand.
NOTE: This is to make sure the flaps do not move during the following steps.
- (2) Move the flap control lever to the 30-unit position.
- (3) Look at the FLAP LEVER indications on the FLAP/SLAT maintenance page on EICAS.
 - (a) If the FLAP LEVER indications are not less than 2.87, then adjust the link between the flap lever position sensor and the flap lever.
 - 1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
 - (b) If the FLAP LEVER indications are less than 2.87, then continue
- (4) Move the flap control lever to the UP position.
- (5) Look at the FLAP LEVER indications on the FLAP/SLAT maintenance page on EICAS.
 - (a) If the FLAP LEVER indications are 9.44 or less, then adjust the link between the flap lever position sensor and the flap lever.
 - 1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
 - (b) If the FLAP LEVER indications are more than 9.44, then continue
- (6) Push the ALTN FLAPS ARM switch on the control stand to disarm the alternate system.
- (7) Replace the Flap Lever Position Sensor, M27037.

These are the tasks:

Flap Lever Position Sensor Removal, AMM TASK 27-51-03-000-801,

Flap Lever Position Sensor Installation, AMM TASK 27-51-03-400-801.

- (a) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

Page 298.84
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 2) If the maintenance message shows on the ground test display, then continue.
- (8) Do this wiring check between FSEU 1, M27001 and the flap lever position sensor, M27037:
- (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Disconnect connectors DM27037A and DM27037B for the flap lever position sensors.
- (c) Remove FSEU 1, M27001 from the E1-6 shelf.
- (d) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DM27037A for the flap lever position sensor, M27037 (WDM 27-51-13):

DM27001AA		DM27037A	
pin A2		pin 1	
pin B2		pin 2	
pin A9		pin 4	
pin B9		pin 5	

- (e) Do a wiring check between these pins on connector DM27001AC at the E1-6 shelf and connector DM27037B for the flap lever position sensor, M27037 (WDM 27-51-13):

DM27001AC		DM27037B	
pin K2		pin 1	
pin J2		pin 2	
pin K9		pin 4	
pin J9		pin 5	

- (f) If there is a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connectors DM27037A and DM27037B for the flap lever position sensors.
 - 3) Connect re-install FSEU 1, M27001 on the E1-6 shelf.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (g) If you do not find a problem with the wiring, then continue.
- (9) Install a new FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

D	3	C27601	FSEU 1

- (11) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

860. Flap Hydraulic Pressure Low Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20360.

B. Fault Isolation Procedure

NOTE: This maintenance message can occur if the flaps are operated when the center hydraulic system pressure is low or off. This can occur when the center hydraulic system is intentionally off. Therefore, it is possible that there are no problems with the airplane.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- NOTE: Use the Air Driven Pumps (ADPs) to supply hydraulic power.
- (2) Do these steps to find hydraulic system problems:
- (a) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS, 29 Hydraulic System page on the MAT.
- (b) If you find maintenance messages for the center hydraulic system, then do these steps:
- 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - 3) After you have corrected the maintenance messages for the hydraulic system, then continue.
- (c) If there are no maintenance messages for the center hydraulic system, then continue.
- (3) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
- NOTE: While the flaps operate, look at the hydraulic synoptic page on the MFD to make sure the hydraulic pressure stays higher than 2500 psi.
- (a) If the flaps operate in the primary mode, and the hydraulic pressure stays above 2500 psi, then you corrected the fault.

FAULT ISOLATION MANUAL

- (b) If the flaps do not operate in the primary mode, then continue.
- (4) Replace FSEU 1, M27001, or FSEU 2, M27002 that reported the fault.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

————— END OF TASK —————

861. FSEU Alternate Armed Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20130.

B. Initial Evaluation

- (1) If the PRESENT LEG FAULTS display on the MAT shows LATCHED for the maintenance message 27-20980 or 27-20130, then do these steps:

- (a) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

- (b) Remove the Slats/Bypass Clutch Relay, K27001 from the P210 panel WDM 27-81-17
- (c) Disconnect the ALTN FLAPS ARM switch, S27052 from the P10 panel WDM 27-81-17
- (d) Do a wiring check between connector DK27001 and connector DS27052 WDM 27-81-17

DS27052	DK27001
pin 2	pin X2

- 1) If you find a problem with the wiring, then repair the wiring.
- a) Reinstall the Slats/Bypass Clutch Relay, K27001 on the P210 panel.
- 2) If you do not find a problem with the wiring, then install a new Slats Bypass/Clutch Relay, K27001 on the P210 panel.
- (e) Connect the electrical connector, DS27052 to the ALTN FLAPS ARM switch, S27052 on the P10 panel.
- (f) Remove the safety tag and close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

- (g) Use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
- 1) If the flaps operate with the alternate system, then you corrected the fault.
- (2) If the PRESENT LEG FAULTS display on the MAT does not show LATCHED for the maintenance message 27-20980 or 27-20130, then continue.
- (3) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.

EFFECTIVITY

Page 298.87
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (4) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the ALTN FLAPS ARM switch, M27052 on the control stand (WDM 27-51-17).
- (a) If the MAT shows NOT ACTIVE for the maintenance message, (or if the message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Find which FSEU does not agree with the ALTN ARM switch position:
- (a) Make sure the ALTN ARM switch is not in the ARMED position.
- (b) Look at the FLAP/SLAT maintenance page on EICAS.
- (c) If the STATUS of FSEU 1 shows ALT ARM, then there is a problem with FSEU 1.
- (d) If the STATUS of FSEU 2 shows ALT ARM, then there is a problem with FSEU 2.
- (3) If there is a problem with FSEU 1, do these steps:
- (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Do a wiring check between these pins on connector DM27001AC at the E1-6 shelf and connector DS27052 at the ALTN FLAPS ARM switch, S27052 in the control stand (WDM 27-51-17):

DM27001AC	DS27052
pin B3	pin 5

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
- 2) Re-install FSEU 1, M27001.
- 3) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (e) If you do not find a problem with the wiring, install a new FSEU 1. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (f) If the MAT shows NOT ACTIVE for the maintenance message, (or if the message does not show), then you corrected the fault.
- (g) If the MAT shows ACTIVE for the maintenance message, then continue.
- (4) If there is a problem with FSEU 2, do these steps:

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Do a wiring check between these pins on connector DM27002AC at the E1-6 shelf and connector DS27052 at the ALTN FLAPS ARM switch, S27052 in the control stand (WDM 27-51-17):

DM27002AC	DS27052
pin B3	pin 8

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (e) If you do not find a problem with the wiring, install a new FSEU 2. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (f) If the MAT shows NOT ACTIVE for the maintenance message, (or if the message does not show), then you corrected the fault.

————— **END OF TASK** —————

862. Flap Primary Circuit Breaker Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20381.

B. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.
NOTE: This step will cause the maintenance message to become INACTIVE. Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.
- (2) Move the flap control lever to a position which does not agree with the position of the flaps.
- (3) Move the flap control lever to agree with the position of the flaps.
- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

866. Center Hydraulic System Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21261.

B. Initial Evaluation

- (1) Look at the MAT Existing Faults display for 29 Hydraulic Systems messages related to the center system reservoir quantity or center system HYDIM cards:
- (a) If you find 29 Hydraulic Systems maintenance messages, then do these steps:
- 1) Do the applicable fault isolation tasks for the maintenance messages.
 - 2) When the hydraulic system messages are corrected, then continue.
- (2) Cycle the ALTN FLAPS ARM switch until FSEU 1 is in control.
- (3) Use the primary system to extend and retract the flaps a small distance. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the HYDRAULICS synoptics page on the EICAS display.
- (a) If the quantity for the center hydraulic system reservoir is low, then fill the reservoir, do this task: Hydraulic Reservoir Filling, AMM TASK 12-12-01-610-802.
- 1) Use the primary system to extend and retract the flaps a small distance. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the quantity for the center hydraulic system reservoir is not low, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Do a wiring check between FSEU 1, M27001 and the Left System Card File (LSCF) P85:
- (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Do a wiring check between these pins of connector DM27001AA on FSEU 1, M27001 and connector DP8513 on the P85 panel (WDM 29-11-37):

777-200/300 FAULT ISOLATION MANUAL

DM27001AA

DP8513

pin J6 pin 18

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 4) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (3) Install a new FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
 - a) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
- NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

———— **END OF TASK** ————

867. Flaps Retracted Discrete Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21271.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 1, M27001.

These are the tasks:

777-200/300 FAULT ISOLATION MANUAL

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.

————— **END OF TASK** —————

868. Flap Secondary Uncommanded Motion Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-21291, 27-21292.

B. Initial Evaluation

- (1) Make sure the ALTN FLAPS control switch is in the OFF position.

WARNING

MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE FLAPS. THE FLAPS CAN MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Push the ALTN FLAPS ARM switch on the control stand to arm the alternate control system.

NOTE: Look for movement of the flaps when you arm the alternate control system. As soon as you see the flaps move, disarm the alternate control system.

- (a) If the flaps move when you arm the alternate control system, then do the Fault Isolation Procedure below.
 - (b) If the flaps do not move when you arm the alternate control system, then there was an intermittent fault.
- (3) Push the ALTN FLAPS ARM switch on the control stand to disarm the alternate control system.

C. Fault Isolation Procedure

- (1) If the flaps moved in the extend direction while the alternate control system was armed, replace the Flaps Extend relay, K27004 on the left power management panel, P110 (WDM 27-51-18).
- (2) If the flaps moved in the retract direction while the alternate control system was armed, replace the Flaps Retract relay, K27006 on the left power management panel, P110 (WDM 27-51-18).
- (3) Do a test of the Flaps Bypass/Clutch Relay, K27002:
 - (a) With the alternate control system disarmed, move the ALTN FLAPS control switch on the control stand to the EXT and the RET positions.
 - (b) If the flaps did not move while the switch is in the EXT or RET positions, then you corrected the fault.
 - (c) If the flaps move while the switch is in the EXT or RET positions, replace the Flaps Bypass/Clutch Relay, K27002 on the left power management panel, P110 (WDM 27-51-17).
- (4) Do a test of the ALTN FLAPS ARM switch, S27052:
 - (a) With the alternate control system disarmed, move the ALTN FLAPS control switch to the EXT and the RET positions.
 - (b) If the flaps move while the switch is in the EXT or RET positions, replace the ALTN FLAPS ARM switch, S27052 on the control stand, P10 (WDM 27-51-17).
- (5) Make sure the ALTN FLAPS control switch is in the OFF position.

————— **END OF TASK** —————

869. FSEU 1 Monitor Channel No Output on Systems 629 Bus-C1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-28851.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Replace the ARINC 629 coupler, B27302, in the P311 panel.

These are the tasks:

ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801,

ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.

NOTE: Coupler B27302 connects the monitor channel for FSEU 1 to the Systems 629 Bus-C1.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this check of the wiring from FSEU 1 to the coupler, B27302:
- (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Disconnect the connector DB27302 from the coupler B27302.
- (d) Do a wiring check between these pins of connector DM27001AD on FSEU 1, M27001 and connector DB27302 at the P311 panel (WDM 27-51-11):

- 5) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

————— **END OF TASK** —————

870. Flaps Uncommanded Motion During Test - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25640.

B. Fault Isolation Procedure

- (1) Look at the MAT Existing Faults display to find the FLAPS PRIMARY UNCOMMANDED MOTION or FLAPS SECONDARY UNCOMMANDED MOTION maintenance message.

NOTE: The maintenance messages numbers are: 27-20431, 27-20432 (Flaps Primary Uncommanded Motion), 27-21291 and 27-21292 (Flaps Secondary Uncommanded Motion)

- (2) Do the fault isolation procedure for the applicable maintenance message.

————— **END OF TASK** —————

871. Alternate Flaps Extend Problems - Fault Isolation

A. Fault Isolation Procedure

NOTE: The flaps will not extend past the 20-unit position with alternate control.

- (1) Use the secondary system to extend the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.
- (2) If the flaps do not extend with the secondary system, then replace the Flaps Extend Relay, K27004 on the P110 panel (WDM 27-51-18).
 - (a) Use the alternate system to extend the flaps. To extend them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - 1) If the flaps extend with the alternate system, then you corrected the fault.

ARO ALL

27-51 TASK 871

777-200/300 FAULT ISOLATION MANUAL

- a) If the flaps extend with the alternate system, then you corrected the fault.
- 10) If you do not find a problem with the wiring, then continue.
- (3) Replace the ALTN FLAPS CONTROL switch, S27053 on the P10 control stand (WDM 27-51-17).
 - (a) Use the alternate system to extend the flaps. To extend them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - 1) If the flaps extend with the alternate system, then you corrected the fault.
 - 2) If the flaps do not extend with the alternate system, then continue.

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (4) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (5) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (6) Replace the flap limit switch, S27004.

These are the tasks:

Flap Limit Switch Removal, AMM TASK 27-51-32-000-801,

Flap Limit Switch Installation, AMM TASK 27-51-32-400-801.

 - (a) Use the alternate system to extend the flaps. To extend them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - 1) If the flaps extend with the alternate system, then you corrected the fault.
 - 2) If the flaps do not extend with the alternate system, then continue.
- (7) Do this check of the wiring between the Alternate Flaps Control Switch, S27053 and the Flaps Limit Switch, S27004:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (b) Disconnect the electrical connector, DS27053 from the Alternate Flap Control switch, S27053 in the control stand.
- (c) Disconnect the electrical connector, DS27004 from the flap limit switch, S27004 in the right wheel well.

EFFECTIVITY

27-51 TASK 871

D633W103-ARO

Page 298.103
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (d) Do a wiring check between these pins of connector DS27053 in the P10 control stand panel and connector DS27004 at the Flap Limit Switch, S27004 (WDM 27-51-17):

DS27053	DS27004
pin G	pin 3

- (e) If you find a problem with the wiring, then repair the wiring.
- (f) Connect the electrical connector, DS27053 to the Alternate Flap Control switch, S27053 in the control stand.
- (g) Connect the electrical connector, DS27004 to the flap limit switch, S27004 in the right wheel well.
- (h) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

Row	Col	Number	Name
D	2	C27301	FLAPS ELEC MOT PWR

- (i) Use the alternate system to extend the flaps. To extend them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- 1) If the flaps extend with the alternate system, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (8) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

————— **END OF TASK** —————

872. Alternate Flap System Problems - Fault Isolation

A. Fault Isolation Procedure

NOTE: The flaps will not extend past the 20-unit position with alternate control.

- (1) Make sure that these circuit breakers are closed:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

Row	Col	Number	Name
D	2	C27301	FLAPS ELEC MOT PWR

- (a) If the circuit breakers were not closed, use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 1) If the flaps operate with the alternate system, then you corrected the fault.
- (b) If the circuit breakers were closed, or if the flaps do not operate with alternate control, then continue.
- (2) Do a check of the ALTN FLAPS ARM switch, S27052:
 - (a) Press the ALTN FLAPS ARM switch on the P10 control stand to arm the alternate control system.
 - (b) Look at the FLAP/SLAT maintenance page on EICAS.
 - (c) If the STATUS for FSEU 1 and FSEU 2 is not ALT ARM, then replace the ALTN FLAPS ARM switch, S27052 (WDM 27-51-17).
 - 1) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - a) If the flaps operate with the alternate system, then you corrected the fault.
 - b) If the flaps do not operate with the alternate system, then continue.
 - (d) If the STATUS for FSEU 1 is not ALT ARM, then do this wiring check between the ALTN FLAPS ARM switch, S27052 and FSEU 1, M27001:
 - 1) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 2) Disconnect electrical connector DS27052 from the ALTN FLAPS ARM switch, S27052 on the control stand.
- 3) Remove the FSEU 1, M27001 from the E1-6 shelf.
- 4) Do a wiring check between these pins of connector DM27001AC on the E1-6 shelf and DS27052 on the control stand (WDM 27-51-17):

DM27001AC	DS27052
pin B3	pin 5

- 5) If you find a problem with the wiring, then repair the wiring.
- 6) Re-connect electrical connector, DS27052 to the ALTN FLAPS ARM switch.
- 7) Re-install FSEU 1, M27001 on the E1-6 shelf.

- 9) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- a) If the flaps operate with the alternate system, then you corrected the fault.
- 10) If you do not find a problem with the wiring, then continue.
- (3) Do this check to see if the flap drive system is locked:
- (a) Use the primary system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
- (b) If the flaps do not operate with the primary system, then the flap drive system is locked.
- (c) If the flaps operate with the primary system, then the flap drive system is not locked.
- (4) If the flap drive system is locked, do these steps:

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (a) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (b) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (c) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (d) Disconnect the torque tubes inboard of the flap position sensor gearboxes.

27-51 TASK 872

D633W103-ARO

Page 298.107
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

DO NOT TURN THE MANUAL DRIVE WITH MORE THAN 1200 POUND-INCHES TORQUE OR FASTER THAN 400 RPM. YOU CAN CAUSE DAMAGE TO THE POSITION SENSOR GEARBOX AND THE TORQUE TUBES.

DO NOT LET THE BALLSCREW NUTS HIT THE UPSTOPS OR DOWNSTOPS. YOU CAN CAUSE DAMAGE TO THE SHEAROUT IN THE POSITION SENSOR GEARBOX.

- (e) Use the manual drive on the flap position sensor gearboxes to extend and retract the flaps on each wing. To manually operate the flaps, do this task: Trailing Edge Flap System Manual Operation, AMM TASK 27-51-00-980-801.
- (f) If you can extend and retract the flaps on each wing, do these steps:
 - 1) Do this task: Flap Electric Motor Removal, AMM TASK 27-51-34-000-801.
 - 2) Use an T.E. flap torque tube coupling drive adapter, SPL-1704 to turn the flap power drive unit (PDU) in the extend and retract directions.
 - 3) If you can turn the PDU, install a new flap electric motor, B27002. To install it, do this task: Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
 - 4) If you cannot turn the PDU, do this task: Flap Hydraulic Motor Removal, AMM TASK 27-51-33-000-801.
 - 5) Use an T.E. flap torque tube coupling drive adapter, SPL-1704 to turn the flap power drive unit (PDU) in the extend and retract directions.
 - 6) If you cannot turn the PDU, replace the flap power drive unit (PDU). These are the tasks:
 - Flap Power Drive Unit (PDU) Removal, AMM TASK 27-51-31-000-801
 - Flap Power Drive Unit (PDU) Installation, AMM TASK 27-51-31-400-801
 - 7) Try to turn the output shaft on the flap hydraulic motor.
 - 8) If you can turn the output shaft on the hydraulic motor, replace the flap primary control valve, V27004. These are the tasks:
 - Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
 - Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801
 - 9) If you cannot turn the output shaft on the flap hydraulic motor, install a new flap hydraulic motor. To install it, do this task: Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.
 - 10) If it is necessary, re-install the flap hydraulic motor. To install it, do this task: Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.
 - 11) If it is necessary, re-install the flap electric motor. To install it, do this task: Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
- (g) If you cannot extend and retract the flaps on one of the wings, find where the flap drive system is locked:
 - 1) Open the access panels on the applicable wing:

- 2) Look at the torque trip indicators on the transmissions on the applicable wing.
- 3) If the torque trip indicator shows tripped for a transmission, do these steps:
- Disconnect the torque tubes from the applicable transmission.
 - Try to turn the torque tube couplings on the applicable transmission.
 - If you cannot turn the transmission, disconnect the ballscrew from the transmission.
 - Try to turn the torque tube couplings on the transmission.
 - If you cannot turn an inboard flap inboard transmission, replace the applicable transmission. These are the tasks:
 - Inboard Flap Inboard Transmission Removal, AMM TASK 27-51-15-000-801
 - Inboard Flap Inboard Transmission Installation, AMM TASK 27-51-15-400-801
 - If you cannot turn an inboard flap outboard transmission, replace the applicable transmission. These are the tasks:
 - Inboard Flap Outboard Transmission Removal, AMM TASK 27-51-15-000-802
 - Inboard Flap Outboard Transmission Installation, AMM TASK 27-51-15-400-802
 - If you cannot turn an outboard flap inboard transmission, replace the applicable transmission. These are the tasks:
 - Outboard Flap Inboard Transmission Removal, AMM TASK 27-51-25-000-801
 - Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801
 - If you cannot turn an outboard flap outboard transmission, replace the applicable transmission. These are the tasks:
 - Outboard Flap Outboard Transmission Removal, AMM TASK 27-51-25-000-802
 - Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801
 - Try to turn the ballscrew on the applicable transmission.
 - If you cannot turn the ballscrew for the inboard flap inboard transmission, replace the applicable ballscrew. These are the tasks:

D633W103-ARO

Page 298.110
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (i) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (j) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
- (k) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- 1) If the flaps operate with the alternate system, then you corrected the fault.
 - 2) If the flaps do not operate with alternate control, then continue.
- (5) If the flap drive system is not locked, use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.
- (6) If the flaps do not operate with the secondary system, then replace the flap electric motor, B27002. These are the tasks:
- Flap Electric Motor Removal, AMM TASK 27-51-34-000-801
 - Flap Electric Motor Installation, AMM TASK 27-51-34-400-801
- (a) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- 1) If the flaps operate with the alternate system, then you corrected the fault.
 - 2) If the flaps do not operate with alternate control, then continue.
- (7) If the flaps do not extend with the secondary system, then replace the Flaps Extend Relay, K27004 on the P110 Panel (WDM 27-51-17).
- (a) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- 1) If the flaps operate with the alternate system, then you corrected the fault.
 - 2) If the flaps do not operate with alternate control, then continue.
- (8) If the flaps do not retract with the secondary system, then replace the Flaps Retract Relay, K27006 on the P110 Panel (WDM 27-51-17).
- (a) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- 1) If the flaps operate with the alternate system, then you corrected the fault.
 - 2) If the flaps do not operate with alternate control, then continue.
- (9) Replace the ALTN FLAPS ARM Switch, S27052 on the P10 control stand (WDM 27-51-17).
- (a) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- 1) If the flaps operate with the alternate system, then you corrected the fault.
 - 2) If the flaps do not operate with alternate control, then continue.

Sep 05/2017

**777-200/300
FAULT ISOLATION MANUAL**

- (10) Replace the ALTN FLAPS CONTROL Switch, S27053 on the P10 control stand (WDM 27-51-17).
- (a) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- 1) If the flaps operate with the alternate system, then you corrected the fault.
- 2) If the flaps do not operate with alternate control, then continue.
- (11) Replace the Flaps Bypass/Clutch Relay, K27002 on the P110 panel (WDM 27-51-17).
- (a) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- 1) If the flaps operate with the alternate system, then you corrected the fault.
- 2) If the flaps do not operate with alternate control, then continue.
- (12) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

- (13) Do this check of the wiring between the Flaps Bypass/Clutch Relay, K27002 and the ALTN FLAPS ARM switch, S27052:
- (a) Disconnect electrical connector DS27052 from the ALTN FLAPS ARM switch, S27052 on the control stand.
- (b) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel (WDM 27-51-17).
- (c) Do a wiring check between these pins of connector DS27052 on the control stand connector DK27002 on the P110 panel (WDM 27-51-17):

DS27052	DK27002
pin 11	pin X2

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
- 2) Re-connect electrical connector, DS27052 to the ALTN FLAPS ARM switch.
- 3) Re-install the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
- 4) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

- 5) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- a) If the flaps operate with the alternate system, then you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (14) Re-install the Flaps Bypass/Clutch Relay, K27002 on the P110 panel (WDM 27-51-17).

Page 298.112
Sep 05/2017

**777-200/300
FAULT ISOLATION MANUAL**

- (15) Open this circuit breaker and install safety tag:

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (16) Do this check of the wiring between the Flaps Extend Relay, K27004 and the ALTN FLAPS CONTROL switch, S27053:

- Remove the Flaps Extend Relay, K27004 from the P110 panel (WDM 27-51-17).
- Disconnect electrical connector DS27053 from the ALTN FLAPS CONTROL switch, S27053.
- Do a wiring check between these pins of connector DS27053 in the control stand and connector DK27004 on the P110 panel (WDM 27-51-17):

DS27053	DK27004
pin G	pin X2

- If you find a problem with the wiring, then do these steps:
 - Repair the wiring.
 - Re-connect connector DS27053.
 - Re-install the Flaps Extend Relay, K27004 on the P110 panel.
 - Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - If the flaps operate with the alternate system, then you corrected the fault.
 - If you do not find a problem with the wiring, then continue.
- (17) Re-install the Flaps Extend Relay, K27004 on the P110 panel (WDM 27-51-17).
- (18) Do this check of the wiring between the Flaps Retract Relay, K27006 and the ALTN FLAPS CONTROL switch, S27053:
- Remove the Flaps Retract Relay, K27006 from the P110 panel (WDM 27-51-17).
 - Do a wiring check between these pins of connector DS27053 in the control stand and connector DK27006 on the P110 panel (WDM 27-51-17):

DS27053	DK27006
pin J	pin X2

- If you find a problem with the wiring, then do these steps:
 - Repair the wiring.

Page 298.113
Sep 05/2017

**777-200/300
FAULT ISOLATION MANUAL**

- 2) Re-connect connector DS27053.
- 3) Re-install the Flaps Retract Relay, K27006 on the P110 panel.
- 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- 5) Use the alternate system to extend or retract the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - a) If the flaps operate with the alternate system, then you corrected the fault.
- (d) If you do not find a problem with the wiring, then continue.
- (19) Do this check of the wiring between the Flaps Retract Relay, K27006 and the flap electric motor, B27002:

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (a) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (b) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (c) Disconnect the electrical connector DB27002 from the flap electric motor, B27002 in the left wheel well.
- (d) Do a wiring check between these pins of connector DB27002 on the flap electric motor and connector DK27006 on the P110 panel (WDM 27-51-18):

DB27002

pin 1
pin 2
pin 3

DK27006

pin A2
pin B2
pin C2

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect electrical connector DB27002 to the flap electric motor.
 - 3) Re-install the Flaps Retract Relay, K27006 on the P110 panel.

- (i) Use the alternate system to retract the flaps. To retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - 1) If the flaps retract with the alternate system, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (8) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

END OF TASK

874. Airplane Type Program Pin Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21301.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check to see if the fault is in FSEU 1:
 - (a) Open these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Exchange FSEU 1, M27001 (E1-6 shelf) with FSEU 2, M27002 (E4-1 shelf).

———— **END OF TASK** ————

875. Trailing Edge Flaps Slow Operation Problems - Fault Isolation

A. Initial Evaluation

- (1) If the trailing edge flaps and leading edge slats are not in the fully retracted position, retract them. To retract the flaps and slats, do this task: Retract the Trailing Edge Flaps, AMM TASK 27-51-00-860-805.
- (2) Record the time necessary to extend the leading edge slats and the trailing edge flaps with the primary system:
 - (a) Use the primary system to extend the flaps and the slats to the fully extended position. To extend them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (b) If the time necessary to fully extend the trailing edge flaps is more than 1 minute and the time necessary to fully extend the leading edge slats is more than 45 seconds, then do the Fault Isolation Procedure below.
 - (c) If the time necessary to fully extend the trailing edge flaps is less than 1 minute and the time necessary to fully extend the leading edge slats is less than 45 seconds, then the system is operating correctly.
 - (d) If the time necessary to fully extend the leading slats is less than 45 seconds and the time necessary to fully extend the trailing edge flaps is more than 1 minute, then do the steps below to check the position of the low speed solenoid on the flap primary control valve.
 - (e) If the time necessary to fully extend the leading slats is more than 45 seconds and the time necessary to fully extend the trailing edge flaps is less than 1 minute, then do the steps in the following task to check the position of the low speed solenoid on the slat primary control valve: Leading Edge Slats Slow Operation Problems - Fault Isolation, 27-81 TASK 851.

EFFECTIVITY
ARO ALL

27-51 TASKS 874-875

D633W103-ARO

Page 298.122
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (f) It is also recommended to do the Flap Primary Control Valve Test, AMM TASK 27-51-05-740-801. If more than one failure is found then fault can possibly be with PCV. If only a single fault then T/S the fault shown on the MAT.

B. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the flap/slat priority valve. These are the tasks:
- Flap/Slat Priority Valve Removal, AMM TASK 27-51-06-000-801
 - Flap/Slat Priority Valve Installation, AMM TASK 27-51-06-400-801
- (a) Use the primary system to extend the flaps. To extend them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
- 1) If the flaps extend in less than one minute, then you corrected the fault.
 - 2) If the flaps do not extend in less than one minute, then continue.
- (4) Do a check of the position of the low speed solenoid on the flap primary control valve:
- (a) Look at the FLAPS MODE indication on the FLAP/SLAT maintenance page on the MFD.
- (b) If the FLAPS MODE is LO SPD, then do this wiring check of the low speed solenoid on the flap primary control valve, V27004 in the right main wheel well:
- 1) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- 2) Disconnect electrical connector DV27004B from the flap primary control valve, V27004 in the right wheel well.
- 3) Do a check of the resistance between pins 8 and 18 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-15):
- 4) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - a) Replace the Low Speed solenoid on the flap primary control valve, V27004. These are the tasks:

EFFECTIVITY
ARO ALL

27-51 TASK 875

D633W103-ARO

Page 298.123
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802
 -
 - Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802
- b) Do a check of the resistance between pins 8 and 18 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-15).
- NOTE: This does a check of the internal wiring on the primary control valve, V27004.
- c) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004. These are the tasks:
- Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
 - Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801
- d) If the resistance is in the limits, then continue.
- 5) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.
- 6) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (c) If the FLAPS MODE is not LO SPD, then continue.
- (5) Do a check of the transmissions to see if a torque trip indicator has tripped:
- (a) Get access to the transmissions to check the torque trip indicators:
- 1) For the left wing, open the following access panels:
- | <u>Number</u> | <u>Name/Location</u> |
|---------------|----------------------------------|
| 573DR | Flap Support Fairing No. 3 Panel |
| 576CL | Flap Support Fairing No. 2 Panel |
| 577DL | Flap Support Fairing No. 1 Panel |
- 2) For the right wing, open the following panels:
- | <u>Number</u> | <u>Name/Location</u> |
|---------------|----------------------------------|
| 673DL | Flap Support Fairing No. 6 Panel |
| 676CR | Flap Support Fairing No. 7 Panel |
| 677DR | Flap Support Fairing No. 8 Panel |
- (b) Look at the torque trip indicators on the transmissions.
- (c) If the torque trip indicator shows tripped for a transmission, then do these steps:
- 1) Disconnect the torque tubes from the applicable transmission.
 - 2) Try to turn the torque tube couplings on the applicable transmission by hand.
 - 3) If you cannot turn the transmission, disconnect the ballscrew from the transmission.

Page 298.124
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 4) Try to turn the torque tube couplings on the transmission.
- 5) If you cannot turn an inboard flap inboard transmission, replace the applicable transmission. These are the tasks:
 - Inboard Flap Inboard Transmission Removal, AMM TASK 27-51-15-000-801
 - Inboard Flap Inboard Transmission Installation, AMM TASK 27-51-15-400-801
- 6) If you cannot turn an inboard flap outboard transmission, replace the applicable transmission. These are the tasks:
 - Inboard Flap Outboard Transmission Removal, AMM TASK 27-51-15-000-802
 - Inboard Flap Outboard Transmission Installation, AMM TASK 27-51-15-400-802
- 7) If you cannot turn an outboard flap inboard transmission, replace the applicable transmission. These are the tasks:
 - Outboard Flap Inboard Transmission Removal, AMM TASK 27-51-25-000-801
 - Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801
- 8) If you cannot turn an outboard flap outboard transmission, replace the applicable transmission. These are the tasks:
 - Outboard Flap Outboard Transmission Removal, AMM TASK 27-51-25-000-802
 - Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801
- 9) Try to turn the ballscrew on the applicable transmission.
- 10) If you cannot turn the ballscrew for the inboard flap inboard transmission, then replace the applicable ballscrew. These are the tasks:
 - Inboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-801
 - Inboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-801
- 11) If you cannot turn the ballscrew for the inboard flap outboard transmission, replace the applicable ballscrew. These are the tasks:
 - Inboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-802
 - Inboard Flap Outboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-802
- 12) If you cannot turn the ballscrew for the outboard flap inboard transmission, replace the applicable ballscrew. These are the tasks:
 - Outboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-802
 - Outboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-26-400-802
- 13) If you cannot turn the ballscrew for the outboard flap outboard transmission, replace the applicable ballscrew. These are the tasks:
 - Outboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-801
 - Outboard Flap Outboard Ballscrew and Gimbal Installation, AMM TASK 27-51-26-400-801
- 14) If it is necessary, connect the ballscrew to the transmission.

D633W103-ARO

Page 298.125
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 15) Connect the torque tubes to the applicable transmission.
- 16) Reset the torque trip indicator on the applicable transmission.
- (d) Use the primary system to extend the flaps. To extend them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - 1) If the flaps extend in less than one minute, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (6) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

————— **END OF TASK** —————

876. Flaps Move to 20 Units With Flap Lever at 15 Units - Fault Isolation

A. Initial Evaluation

- (1) Do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (2) Move the flap control lever to 15 units.
 - (a) If the FLAPS indication on EICAS momentarily shows a value greater than 15 units, then do the Fault Isolation Procedure below.
 - (b) If the FLAPS indication on EICAS does not momentarily show a value greater than 15 units, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Do this task: Flap Primary Control Valve Test, AMM TASK 27-51-05-740-801.
 - (a) If the MAT shows FAILED when the test is completed, then do the FIM task for the maintenance message that shows with the test on the MAT.
 - (b) If the MAT shows PASSED when the test is completed, then continue.
- (2) Replace the low speed solenoid. Do these tasks: Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802 and Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.
 - (a) Move the flap control lever to 15 units.
 - 1) If the FLAPS indication on EICAS does not momentarily show a value greater than 15 units, then you corrected the fault.

801. Flap Primary Low Speed Solenoid Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20372.

B. Description

- (1) Flaps Primary Low Speed Solenoid circuit is open.

C. Possible Causes

- (1) Flaps Primary Low Speed Solenoid, V3
- (2) Flap Primary Control Valve, V27004
- (3) Wiring
- (4) Flap/Slat Electronics Unit (FSEU) 2, M27002

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault.

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

E. Related Data

- (1) WDM 27-51-16
- (2) SSM 27-51-15

F. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 2 is IN CONTROL.

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then there was an intermittent problem.

27-52 TASK 801

D633W103-ARO

Page 201
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

G. Fault Isolation Procedure

NOTE: When you do the AMM Procedure to install a component, it is not necessary to do the test given at the end of the AMM Task. The steps in this FIM Procedure are a sufficient test.

MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

- (1) If the Downlock pins are not installed on the Main and Nose Landing Gear, do this task:
Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

MAKE CERTAIN MAIN LANDING GEAR DOOR SAFETY LOCKS ARE INSTALLED WHEN PERSONS WORK IN WHEELWELL AREAS. DOOR MOVEMENT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
(3) Do a wiring check of the Low Speed Solenoid as follows:
(a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27004B from the Flap Primary Control Valve, V27004 in the Right Wheel Well WDM 27-51-16.
(c) Do a Resistance check between pins 5 and 12 of connector DV27004B on the Flap Primary Control Valve, V27004 in the Right Wheel Well.
(d) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then do these steps:
1) Replace the Low Speed Solenoid on the Flap Primary Control Valve, V27004.
These are the tasks:
• Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802
• Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802
2) Do a Resistance check between pins 5 and 12 of connector DV27004B on the Flap Primary Control Valve, V27004 again (WDM 27-51-16).

NOTE: This does a check of the internal wiring on the Flap Primary Control Valve, V27004.

- a) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then replace the Flap Primary Control Valve, V27004. These are the tasks:
• Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
• Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801

- <1> Do the Repair Confirmation at the end of this task.
- b) If the Resistance is in the specified limits, then continue.
- (e) If the Resistance is in the specified limits, then continue.
- (4) Connect electrical connector DV27004B to the Flap Primary Control Valve, V27004, in the Right Wheel Well.
- (5) Do a check for 28V DC at FSEU 2 as follows:
- (a) Remove FSEU 2, M27002, from the E4-1 Shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (b) Make sure that this circuit breaker is closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

- (c) Do a check for 28V DC between pin F1 (+) on connector DM27002AC and structure ground (WDM 27-51-16).
- 1) If you do not find 28V DC at pin F1 on connector DM27002AC, then do these steps:
- a) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

- b) At the P210 Power Management Panel, disconnect electrical connector D21026P.
- c) In the Right Wheel Well, disconnect electrical connector DV27004B from the Flap Primary Control Valve, V27004.
- d) Do a wiring check from the FSEU-2 connector DM27002AC to the Power Management Panel P210 connector D21026P as follows (WDM 27-51-16):

E4-1 Shelf	R Wheel Well
DM27002AC	DV27004B
pin F1	pin 12

R Wheel Well	P210 Panel
DV27004B	D21026P
pin 5	pin 13

- <1> If you find a problem with the wiring, then do these steps:
- <a> Repair the wiring.
- Re-connect electrical connector DV27004B.
- <c> Re-connect electrical connector D21026P.
- <d> Re-install FSEU 2, M27002. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- <e> Do the Repair Confirmation at the end of this task.
- <2> If you do not find a problem with the wiring, continue.

- 2) If you find 28V DC at pin F1 of connector DM27002AC, continue.
- (d) Replace FSEU 2, M27002. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801

H. Repair Confirmation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 2 is IN CONTROL

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (a) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then you corrected the problem.
 - (b) If the MAT shows LATCHED with the maintenance message, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

802. Flap Primary Circuit Breaker Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20382.

B. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 2 is IN CONTROL.

NOTE: This step will cause the maintenance message to become INACTIVE. Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.
- (2) Move the flap control lever to a position which does not agree with the position of the flaps.
- (3) Move the flap control lever to agree with the position of the flaps.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

G. Fault Isolation Procedure

NOTE: When you do the AMM Procedure to install a component, it is not necessary to do the test given at the end of the AMM Task. The steps in this FIM Procedure are a sufficient test.

MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

- (1) If the Downlock Pins are not installed on the Main and Nose Landing Gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

MAKE CERTAIN MAIN LANDING GEAR DOOR SAFETY LOCKS ARE INSTALLED WHEN PERSONS WORK IN WHEELWELL AREAS. DOOR MOVEMENT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Extend Solenoid as follows (WDM 27-51-16):

EFFECTIVITY
ARO ALL

27-52 TASK 803

D633W103-ARO

Page 206
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27004B from the Flap Primary Control Valve, V27004 in the Right Wheel Well.
- (c) Do a Resistance check between pins 11 and 15 of connector DV27004B on the Flap Primary Control Valve, V27004 in the Right Wheel Well.
- (d) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then do these steps:
- 1) Replace the Extend Solenoid on the Flap Primary Control Valve, V27004. These are the tasks:
 - Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802
 - Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802
 - 2) Do a Resistance check between pins 11 and 15 of connector DV27004B on the Flap Primary Control Valve, V27004 again (WDM 27-51-16).
- NOTE:** This does a check of the internal wiring on the Flap Primary Control Valve, V27004.
- a) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoid), then replace the Flap Primary Control Valve, V27004. These are the tasks:
 - Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
 - Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801<1> Do the Repair Confirmation at the end of this task.
 - b) If the Resistance is in the specified limits, then continue.
- (e) If the Resistance is the specified limits, then continue.

- (4) Connect electrical connector DV27004B to the Flap Primary Control Valve, V27004, in the Right Wheel Well.

- (5) Do a check for 28V DC at FSEU 2 as follows:

- (a) Remove FSEU 2, M27002, from the E4-1 shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (b) Make sure that this circuit breaker is closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

- (c) Do a check for 28V DC between pin G1 (+) on connector DM27002AC and structure ground (WDM 27-51-16).
- 1) If you do not find 28V DC at pin G1 on connector DM27002AC, then do these steps:

27-52 TASK 803

D633W103-ARO

Page 207
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- a) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

- b) At the P210 Power Management Panel, disconnect electrical connector D21026P.
- c) In the Right Wheel Well, disconnect electrical connector DV27004B from the Flap Primary Control Valve, V27004.
- d) Do a wiring check from the FSEU-2 connector DM27002AC to the Power Management Panel P210 connector D21026P as follows (WDM 27-51-16):

E4-1 Shelf	R Wheel Well
DM27002AC	DV27004B
pin G1	pin 11

R Wheel Well	P210 Panel
DV27004B	D21026P
pin 15	pin 13

<1> If you find a problem with the wiring, then do these steps:

- <a> Repair the wiring.
- Re-connect electrical connector DV27004B.
- <c> Re-connect electrical connector D21026P.
- <d> Re-install FSEU 2, M27002. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- <e> Do the Repair Confirmation at the end of this task.

<2> If you do not find a problem with the wiring, continue.

2) If you find 28V DC at pin G1 of connector DM27002AC, continue.

- (d) Replace FSEU 2, M27002. These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801

H. Repair Confirmation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 2 is IN CONTROL

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

————— **END OF TASK** —————

806. Flap Uncommanded Motion Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20432.

B. Initial Evaluation

- (1) Make sure the position of the flap control lever agrees with the position of the flaps.
- (2) Make sure the ALTN FLAPS control switch is in the OFF position.
- (3) Push the ALTN FLAPS ARM switch on the control stand to arm the alternate control system.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (4) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: Use a single AC Motor Pump (ACMP) to supply power to the center system. This will cause the flaps to move more slowly if there is not an intermittent fault. If you use two ACMPs or an Air Driven Pump (ADP) the flaps will move further before the FSEUs stop them.

777-200/300 FAULT ISOLATION MANUAL

MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE FLAPS. THE FLAPS CAN MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (5) Push the ALTN FLAPS ARM switch on the control stand to disarm the alternate control system.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure - Uncommanded Motion below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then continue.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (6) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: Use an Air Driven Pump (ADP) to move the flaps. This will allow the flaps to move at their usual rate.
- (7) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 2 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.
- (8) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure - Stops Out of Detent below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.
- (9) Do this ground test on the MAT for FSEU 2: Flap Primary Control Valve Test, AMM TASK 27-51-05-740-801.

C. Fault Isolation Procedure - Uncommanded Motion

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (2) Replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

EFFECTIVITY

27-52 TASK 806

D633W103-ARO

Page 217
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (4) Use the primary system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (5) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

D. Fault Isolation Procedure - Stops Out of Detent

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Low Speed solenoid on the flap primary control valve, V27004 in the right main wheel well:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

777-200/300 FAULT ISOLATION MANUAL

- (b) Disconnect electrical connector DV27004B from the flap primary control valve, V27004 in the right wheel well.
- (c) Do a check of the resistance between pins 5 and 12 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-16):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - 1) Replace the Low Speed solenoid on the flap primary control valve, V27004.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.
 - 2) Do a check of the resistance between pins 5 and 12 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-16).
NOTE: This does a check of the internal wiring on the primary control valve, V27004.
 - a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.
These are the tasks:
Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.
- (e) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (g) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (h) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (i) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (j) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (4) Do this check of the adjustment of the flap position sensors:
 - (a) Make sure the trailing edge flaps are in the retracted position.
 - (b) Look at the FLAPS POS L1, R1, L2 and R2 indications on the FLAP/SLAT maintenance page on EICAS.
 - (c) If one of the flap position indications is not less than 12.03, then replace the applicable flap position sensor.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

NOTE: The flap position sensor for FLAP POS L1 and L2 are in the left wheel well. The flap position sensor for FLAP POS R1 and R2 are in the right wheel well.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (d) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (e) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (f) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (5) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

————— **END OF TASK** —————

807. Flap Secondary System Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20442.

EFFECTIVITY
ARO ALL

27-52 TASKS 806-807

D633W103-ARO

Page 220
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Make sure that these circuit breakers are closed:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (a) If the circuit breakers were not closed, use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the circuit breakers were closed, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Do this check to see if the flap drive system is locked:
 - (a) Use the primary system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.
 - (b) If the flaps do not operate with the primary system, then use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802
 - (c) If the flaps do not operate with the primary or the alternate system, then the flap drive system is locked.

EFFECTIVITY
ARO ALL

27-52 TASK 807

D633W103-ARO

Page 221
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (d) If the flaps operate with the primary system or the alternate system, then the flap drive system is not locked.
- (3) If the flap drive system is locked, then do these steps:

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (a) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (b) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (c) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (d) Disconnect the torque tubes inboard of the flap position sensor gearboxes.

CAUTION

DO NOT TURN THE MANUAL DRIVE WITH MORE THAN 1200 POUND-INCHES TORQUE OR FASTER THAN 400 RPM. YOU CAN CAUSE DAMAGE TO THE POSITION SENSOR GEARBOX AND THE TORQUE TUBES.

CAUTION

DO NOT LET THE BALLSCREW NUTS HIT THE UPSTOPS OR DOWNSTOPS. YOU CAN CAUSE DAMAGE TO THE SHEAROUT IN THE POSITION SENSOR GEARBOX.

- (e) Use the manual drive on the flap position sensor gearboxes to extend and retract the flaps on each wing. To manually operate the flaps, do this task: Trailing Edge Flap System Manual Operation, AMM TASK 27-51-00-980-801.
- (f) If you can extend and retract the flaps on each wing, do these steps:
- 1) Do this task: Flap Electric Motor Removal, AMM TASK 27-51-34-000-801.
 - 2) Use an T.E. flap torque tube coupling drive adapter, SPL-1704 to turn the flap power drive unit (PDU) in the extend and retract directions.
 - 3) If you can turn the PDU, install a new flap electric motor, B27002. To install it, do this task: Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
 - 4) If you cannot turn the PDU, do this task: Flap Hydraulic Motor Removal, AMM TASK 27-51-33-000-801.
 - 5) Use an T.E. flap torque tube coupling drive adapter, SPL-1704 to turn the flap power drive unit (PDU) in the extend and retract directions.
 - 6) If you cannot turn the PDU, replace the flap power drive unit (PDU).

These are the tasks:

Flap Power Drive Unit (PDU) Removal, AMM TASK 27-51-31-000-801,

EFFECTIVITY
ARO ALL

27-52 TASK 807

D633W103-ARO

Page 222
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

Flap Power Drive Unit (PDU) Installation, AMM TASK 27-51-31-400-801.

- 7) Try to turn the output shaft on the flap hydraulic motor.
- 8) If you can turn the output shaft on the hydraulic motor, replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,

Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

- 9) If you cannot turn the output shaft on the flap hydraulic motor, install a new flap hydraulic motor. To install it, do this task: Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.
 - 10) If it is necessary, re-install the flap hydraulic motor. To install it, do this task: Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.
 - 11) If it is necessary, re-install the flap electric motor. To install it, do this task: Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
- (g) If you cannot extend and retract the flaps on one of the wings, find where the flap drive system is locked:

- 1) Open the access panels on the applicable wing:

- a) If the flap drive system is locked on the left wing, open

<u>Number</u>	<u>Name/Location</u>

573DR	Flap Support Fairing No. 3 Panel
576CL	Flap Support Fairing No. 2 Panel
577DL	Flap Support Fairing No. 1 Panel

- b) If the flap drive system is locked on the right wing, open

<u>Number</u>	<u>Name/Location</u>

673DL	Flap Support Fairing No. 6 Panel
676CR	Flap Support Fairing No. 7 Panel
677DR	Flap Support Fairing No. 8 Panel

- 2) Look at the torque trip indicators on the transmissions on the applicable wing.
- 3) If the torque trip indicator shows tripped for a transmission, do these steps:
 - a) Disconnect the torque tubes from the applicable transmission.
 - b) Try to turn the torque tube couplings on the applicable transmission.
 - c) If you cannot turn the transmission, disconnect the ballscrew from the transmission.
 - d) Try to turn the torque tube couplings on the transmission.
 - e) If you cannot turn an inboard flap inboard transmission, replace the applicable transmission.

These are the tasks:

Inboard Flap Inboard Transmission Removal, AMM TASK 27-51-15-000-801,

Inboard Flap Inboard Transmission Installation, AMM TASK 27-51-15-400-801.

- f) If you cannot turn an inboard flap outboard transmission, replace the applicable transmission.

These are the tasks:

Page 225
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Do a detailed visual inspection of the flap drive mechanism for misaligned, or damaged parts.
- (b) Lubricate the applicable transmission, ballscrew and gimbal:
 - 1) For an inboard flap, inboard transmission, do this task: Inboard Flap Inboard Transmission, Ballscrew and Gimbal Lubrication, AMM TASK 12-21-09-640-802.
 - 2) For an inboard flap, outboard transmission, do this task: Inboard Flap Outboard Transmission, Ballscrew and Gimbal Lubrication, AMM TASK 12-21-09-640-807.
 - 3) For an outboard flap, inboard transmission, do this task: Outboard Flap Inboard Transmission, Ballscrew and Gimbal Lubrication, AMM TASK 12-21-09-640-810.
 - 4) For an outboard flap, outboard transmission, do this task: Outboard Flap Outboard Transmission, Ballscrew and Gimbal Lubrication, AMM TASK 12-21-09-640-804.
- (c) Fill the applicable transmission with oil. To fill a transmission, do this task: Flap PDU and Electric Motor Servicing, AMM TASK 12-13-09-610-801.
- (d) Reset the torque trip indicator on the applicable transmission.
- (e) Use the primary system to retract and extend the flaps. To retract and extend them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.
- (f) Use the secondary system to retract and extend the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.
 - 1) If the flaps operate with the primary and secondary systems, and if the maintenance message does not show on the MAT, then you corrected the fault.
 - 2) If the flaps do not operate, or if the maintenance message shows on the MAT, then continue.
- (6) Use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- (7) If the flaps do not operate with the alternate system, then do a check of the electrical power to the flap electric motor, B27002:

- (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (b) If the downlock pins are not installed on the main and nose landing gear, do this task:
Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (c) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
(d) Disconnect the electrical connector, DB27002 from the flap electric motor, B27002.
(e) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (f) Push the ALT FLAPS ARM switch on the control stand to arm the alternate control system.
(g) Do a check for 28 VDC between pin 6 of connector DB27002 and structure ground (WDM 27-51-17).
(h) Turn the ALT FLAPS control switch to the EXT position.
(i) With the ALT FLAPS control switch in the EXT position do a check for 115 VAC at pins 1, 2 and 3 of connector DB27002 (WDM 27-51-18).
(j) Turn the ALT FLAPS control switch to the RET position.
(k) With the ALT FLAPS control switch in the RET position do a check for 115 VAC at pins 1, 2 and 3 of connector DB27002 (WDM 27-51-18).
(l) If there is 115 VAC at pins 1, 2 and 3 and 28 VDC at pin 6 of connector DB27002, then replace the flap electric motor, B27002.

These are the tasks:

Flap Electric Motor Removal, AMM TASK 27-51-34-000-801,

Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.

- 1) Turn the ALT FLAPS control switch to the OFF position.
- 2) Push the ALT FLAPS ARM switch on the control stand to disarm the alternate control system.
- 3) Connect the electrical connector, DB27002 to the flap electric motor, B27002.

FAULT ISOLATION MANUAL**

- 4) Use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - 5) If the flaps operate with the alternate system, then you corrected the fault.
- (m) If there is not 28 VDC at pin 6 of connector DB27002, then do this wiring check between the flap electric motor, B27002 and the Flaps Bypass/Clutch Relay, K27002 on the P110 panel:
- 1) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel (WDM 27-51-17).
 - 2) Do a wiring check between these pins of connector DB27002 on the flap electric motor, B27002 and connector DK27002 on the P110 panel (WDM 27-51-17):

DB27002	DK27002
pin 6	pin B2

- 3) If you find a problem with the wiring, then repair the wiring.
 - a) Reinstall the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
 - 4) If you do not find a problem with the wiring, then install a new Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
 - 5) Connect the electrical connector, DB27002 to the flap electric motor, B27002.
 - 6) Use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - a) If the flaps operate with the alternate system, then you corrected the fault
- (n) If there is not 115 VAC at pins 1, 2 and 3 then do this wiring check between the flap electric motor, B27002 and the Flaps Retract Relay, K27006 on the P110 panel:
- 1) Remove the Flaps Retract Relay, K27006 from the P110 panel (WDM 27-51-18).
 - 2) Do a wiring check between these pins of connector DB27002 on the flap electric motor, B27002 and connector DK27006 on the P110 panel (WDM 27-51-18):

DB27002	DK27006
pin 1	pin A2
pin 2	pin B2
pin 3	pin C2

- 3) If you find a problem with the wiring, then repair the wiring.
 - a) Reinstall the Flaps Retract Relay, K27006 on the P110 panel.
- 4) If you do not find a problem with the wiring, then do this wiring check between the Flaps Retract Relay, K27006 and the Flaps Extend Relay K27004 on the P110 panel:
 - a) Remove the Flaps Extend Relay, K27004 from the P110 panel (WDM 27-51-18).
 - b) Do a wiring check between these pins of connector DK27004 and connector DK27006 on the P110 panel (WDM 27-51-18):

- (17) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.

————— **END OF TASK** —————

808. Flap Secondary System Auto Test Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20452.

B. Initial Evaluation

- (1) Use the secondary system to extend the flaps to another position. To extend them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Make sure that these circuit breakers are closed:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (a) If the circuit breakers were not closed, use the secondary system to extend the flaps to another position. To extend them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the circuit breakers were closed, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Do a check of the electrical power to the flap electric motor, B27002:

EFFECTIVITY

- 5) If you do not find a problem with the wiring, then install a new Flaps Extend Relay, K27004 and a new Flaps Retract Relay, K27006 on the P110 panel.
- 6) Connect the electrical connector, DB27002 to the flap electric motor, B27002.
- 7) Use the secondary system to extend the flaps to another position. To extend them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (o) Connect the electrical connector, DB27002 to the flap electric motor, B27002.
- (p) Turn the ALT FLAPS control switch to the OFF position.
- (q) Push the ALT FLAPS ARM switch on the control stand to disarm the alternate control system.

Page 236
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (r) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
- (3) Do this check of the wiring between the Flaps Bypass/Clutch Relay, K27002 and FSEU 2, M27002:
- (a) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel (WDM 27-51-17).
- (b) Do a wiring check between these pins of connector DM27002AA on the E4-1 shelf and connector DK27002 on the P110 panel (WDM 27-51-17):

DM27002AA

pin D5

DK27002

pin X2

- (c) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2 on the E4-1 rack.
 - 3) Re-install the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Use the secondary system to extend to another position. To extend them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- a) If the maintenance message does not show on the MAT, then you corrected the fault.
- (d) If you do not find a problem with the wiring, or if the maintenance message shows on the MAT, then continue.
- (e) Re-install the Flaps Bypass/Clutch Relay, K27002 on the P110 panel (WDM 27-51-17).
- (4) Open this circuit breaker and install safety tag:

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (5) Do this check of the wiring between the Flaps Extend Relay, K27004 and FSEU 2, M27002:

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the flap position sensor 2L, M27201 in the left wheel well.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (4) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (5) Remove FSEU 2, M27002 from the E4-1 shelf.
- (6) Do a wiring check between FSEU 2, M27002 and flap position sensor 2L, M27201:
 - (a) Disconnect connector DM27201 from flap position sensor 2L, M27201 in the left main wheel well.
 - (b) Do a wiring check between these pins on connector DM27002AC at the E4-1 shelf and connector DM27201 at the flap position sensor 2L, M27201 in the left wheel well (WDM 27-58-12):

pin F9	pin 5
pin F10	pin 6

- (c) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27201.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) If the MAT does not show ACTIVE for the maintenance message, then you corrected the fault.
- (d) If you do not find a problem with the wiring, or if the MAT shows ACTIVE for the maintenance message, then continue.
- (7) Install a new FSEU 2, M27002. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
 - (a) Re-connect connector DM27201 to flap position sensor 2L, M27201 in the left main wheel well.
 - (b) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the Maintenance Access Terminal (MAT) EXISTING FAULTS DISPLAY shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT EXISTING FAULTS DISPLAY does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 2, M27002. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (2) Do this ground test on the MAT: 27 High Lift System, Line Replaceable Unit (LRU) Replacement Test, FSEU 2.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, and the Engine Indication and Crew Alerting System (EICAS) message FLAP/SLAT CONTROL 2 does not show, then you corrected the fault.
- (3) An intermittent failure of the ALTN FLAPS ARM switch S27052 can also set mm 27-20721. Do a wiring check of the wiring between the ALTN FLAPS ARM switch, S27052 and FSEU 2, M27002.
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Remove the ALTN FLAPS ARM switch, S27052 from the control stand.
- (d) Do a wiring check between these pins on connector DM27002AC at the E4-1 shelf and DS27052 at the ALTN FLAPS ARM switch, S27052 on the control stand (WDM 27-51-17):

DM27002AC	DS27052
pin B3	pin 8

- (e) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002 and ALTN FLAPS ARM switch, S27052.
 - 3) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (f) If you do not find a problem with the wiring, replace the ALTN FLAPS ARM switch, S27052 on the control stand (WDM 27-51-17).

777-200/300 FAULT ISOLATION MANUAL

816. FSEU 2 No Input from FSEU 1 on ARINC 429 Bus - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20922.

B. Initial Evaluation

- (1) If the MAT Existing Faults display shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT Existing Faults display shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: If you use a megohmmeter to do wiring checks on an ARINC 429 bus (or if you need the exact resistance of the bus wiring), first remove all the LRUs that are connected to the bus (use the WDM to tell which LRUs are on the bus). Then re-install the LRUs when you are done.

- (1) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT Existing Faults display shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
- (b) If the MAT Existing Faults display shows ACTIVE for the maintenance message, then continue.

- (2) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT Existing Faults display shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
- (b) If the MAT Existing Faults display shows ACTIVE for the maintenance message, then continue.

- (3) Do this check of the wiring:

- (a) Remove FSEU 1, M27001 from the E1-6 shelf.
- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Do a wiring check between these pins of connector DM27001AA on FSEU 1, M27001 and connector DM27002AC on FSEU 2, M27002 (WDM 27-51-11):

DM27002AC

pin C1
pin C2

DM27001AA

pin F3
pin F5

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001 on the E1-6 shelf.
 - 3) Re-install FSEU 2, M27002 on the E4-1 shelf.

818. Flaps Relay K27002 Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20752.

B. Initial Evaluation

- (1) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the Flaps Bypass/Clutch Relay, K27002 on the P110 panel (WDM 27-51-17).
 - (a) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Do this wiring check:
 - (a) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel.
 - (b) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (c) Do a wiring check between these pins of connector DM27002AA on the E4-1 shelf and connector DK27002 on the P110 panel (WDM 27-51-17):

DM27002AA	DK27002
pin D5	pin X2

- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002 on the E4-1 shelf.
 - 3) Re-install the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
 - 4) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- 3) Use the secondary system to extend the flaps to another position. To extend them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- 4) If the maintenance message does not show on the MAT, then you corrected the fault.

————— **END OF TASK** —————

821. Flaps Secondary Auto Test, Relay K27004 Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20802.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED with the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the circuit breaker was closed, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Replace the Flaps Extend Relay, K27004 on the P110 panel (WDM 27-51-17).
 - (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (3) Do this wiring check:
 - (a) Remove FSEU 2, M27002 from the E4-1 shelf.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a visual check of the torque tubes between the flap power drive unit (PDU) and the flap position sensor gearboxes and the wiring for the flap position sensors in the left and right wheel wells.
 - (a) If you find a problem with the wiring, repair the wiring.
 - (b) If the torque tubes are broken or disconnected, connect or replace the torque tubes.

These are the tasks:

Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.

 - 1) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
 - 2) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

 - a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (c) If you do not find a problem with the torque tubes, then continue.
- (4) Replace the flap position sensor 2L, M27201 in the left wheel well.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,
Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

 - (a) Use the primary system to extend the flaps to the 30-unit position, then retract the flaps to the retracted position. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

 - 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

- (a) Use the primary system to extend the flaps to the 30-unit position, then retract the flaps to the retracted position. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (13) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

————— **END OF TASK** —————

828. Left and Right Flap Position Sensor Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21202.

B. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

777-200/300 FAULT ISOLATION MANUAL

- (2) Use the primary system to extend the flaps to the 30-unit position, then retract the flaps to the retracted position. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a check of the torque tubes between the flap power drive unit (PDU) and the flap position sensor gearboxes in the left and right wheel wells.

- (a) If the torque tubes are broken or disconnected, connect or replace the torque tubes.

These are the tasks:

Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,

Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.

- 1) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
- 2) Use the primary system to extend the flaps to the 30-unit position, then retract the flaps to the retracted position. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If you do not find a problem with the torque tubes, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.

27-52 TASK 828

D633W103-ARO

Page 268
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (4) Make sure the flaps are in the retracted position. To retract them, do this task: Retract the Trailing Edge Flaps, AMM TASK 27-51-00-860-805.
- (5) Make sure the index marks for the rig indicator on the flap position sensor gearbox align.
- (6) Use the FLAP/SLAT maintenance page on EICAS to make sure the four FLAP POS indications are in the limit of 8.50 to 11.00.
- (7) If FLAP POS indications are not in the limit, replace the applicable flap position sensors.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

NOTE: FLAP POS L1 is M27101; FLAP POS R1 is M27102; FLAP POS L2 is M27201; FLAP POS R2 is M27202.

- (a) If the four FLAP POS indications on the FLAP/SLAT maintenance page on EICAS are in the limit of 8.50 to 11.00, do this test:
 - 1) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.
 - 2) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the four FLAP POS indications on the FLAP/SLAT maintenance page on EICAS are not the limit, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (8) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the four FLAP POS indications on the FLAP/SLAT maintenance page on EICAS are in the limit of 8.50 to 11.00, do this test:
 - 1) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.
 - 2) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the four FLAP POS indications on the FLAP/SLAT maintenance page on EICAS are not the limit, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.

D633W103-ARO

Page 269
Sep 05/2017

777-200/300
FAULT ISOLATION MANUAL

- (9) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (10) Remove FSEU 2, M27002 from the E4-1 shelf.
- (11) If FLAP POS L2 is not in the limit, do this check of the wiring between the flap position sensor 2L, M27201 and FSEU 2, M27002:
- (a) Disconnect the connector DM27201 from the flap position sensor 2L, M27201 in the left wheel well.
- (b) Do a wiring check between these pins on connector DM27002AC at the E4-1 shelf and connector DM27201 on flap position sensor 2L, M27201 (WDM 27-58-12):

DM27002AC	DM27201
pin K3	pin 1
pin J3	pin 2
pin G9	pin 3
pin G10	pin 4
pin F9	pin 5
pin F10	pin 6

- (c) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Reconnect connector DM27201 to flap position sensor 2L, M27201 in the left main wheel well.
 - 3) Re-install FSEU 2 on the E4-1 rack.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- a) If the maintenance message does not show on the MAT, then you corrected the fault.
- (d) If you do not find a problem with the wiring, or if the maintenance message shows on the MAT, then continue.
- (e) Reconnect connector DM27201 to flap position sensor 2L, M27201 in the left main wheel well.

777-200/300 FAULT ISOLATION MANUAL

- (12) If FLAP POS R2 is not in the limit, do this check of the wiring between the flap position sensor 2R, M27202 and FSEU 2, M27002:
- (a) Disconnect the connector DM27202 from the flap position sensor 2R, M27202 in the right wheel well.
 - (b) Do a wiring check between these pins on connector DM27002AA at the E4-1 shelf and connector DM27102 on flap position sensor 2R, M27202 (WDM 27-58-12):

DM27002AA	DM27202
pin A3	pin 1
pin B3	pin 2
pin D9	pin 3
pin D10	pin 4
pin E9	pin 5
pin E10	pin 6

- (c) If you find a problem with the wiring, repair the wiring.
- (d) Reconnect connector DM27202 to flap position sensor 2R, M27202 in the right main wheel well.
- (e) Re-install FSEU 2 on the E4-1 rack.
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (g) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (13) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED with the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a check of the torque tubes between the flap power drive unit (PDU) and the flap position sensor gearboxes in the left and right wheel wells.
 - (a) If the torque tubes are broken or disconnected, connect or replace the torque tubes.

These are the tasks:

Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.

 - 1) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
 - 2) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If you do not find a problem with the torque tubes, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
 - (4) Replace the flap position sensor 2R, M27202 in the right wheel well.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,
Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for broken or disconnected torque tubes for the flap drive system:

NOTE: It is likely that there are broken or disconnected torque tubes between the flap position sensor gearboxes and flap supports No. 1 and 8.

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (a) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (b) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (c) Look at the torque tubes in the main landing gear wheel wells outboard of the position sensor gearboxes to see if they are broken or disconnected.
- (d) Look at the indications for the INBD FLAPS and OUTBD FLAPS on the FLAP/SLAT maintenance page on EICAS.
 - 1) Compare the indications for the adjacent flap supports to see if they are different by more than 1 volt.
 - 2) If the indications are different by more than 1 volt, then look at the torque tubes between the applicable flap supports.
- (e) Look at the torque tubes between flap support No. 1 and No. 2.
 - 1) If the flap is retracted, remove these access panels to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
561CB	Midspan Fixed Trailing Edge Panel
561DB	Midspan Fixed Trailing Edge Panel
561EB	Midspan Fixed Trailing Edge Panel

- (f) Look at the torque tubes between flap supports No. 2 and No. 3.
 - 1) If the flap is retracted, remove these access panels to get access to the torque tubes:

Inboard Wing Flap Torque Tube Removal, AMM TASK 27-51-38-000-802,
Inboard Wing Flap Torque Tube Installation, AMM TASK 27-51-38-400-802.

- 3) If it is necessary, replace a torque tube in the wheel well.

These are the tasks:

Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.

- 4) If it is necessary, replace an outboard wing torque tube support.

These are the tasks:

Outboard Wing Torque Tube Support Removal, AMM TASK 27-51-39-000-802,
Outboard Wing Torque Tube Support Installation, AMM TASK 27-51-39-400-802.

- 5) If it is necessary, replace an inboard wing torque tube support.

These are the tasks:

Inboard Wing Torque Tube Support Removal, AMM TASK 27-51-39-000-801,
Inboard Wing Torque Tube Support Installation, AMM TASK 27-51-39-400-801.

- (l) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.

- (m) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.

- (n) Install the applicable access panels:

- 1) Install these access panel between flap supports No. 1 and No. 2:

<u>Number</u>	<u>Name/Location</u>
561CB	Midspan Fixed Trailing Edge Panel
561DB	Midspan Fixed Trailing Edge Panel
561EB	Midspan Fixed Trailing Edge Panel

- 2) Install these access panel between flap supports No. 2 and 3:

<u>Number</u>	<u>Name/Location</u>
552HB	Inboard Fixed Trailing Edge Panel
552JB	Fixed Trailing Edge Panel
552LB	Outboard Fixed Trailing Edge Panel

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (o) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
(p) If you do not see broken or disconnected torque tubes, then continue.
(2) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.

————— **END OF TASK** —————

831. FSEU 2 Control Channel No Input from Monitor Channel on Systems 629 Bus-C1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21232.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
(2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.

- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Replace the ARINC 629 coupler, B27303, in the P311 panel.

These are the tasks:

ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801,

ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.

NOTE: This coupler connects the control channel for FSEU 2 to the Systems 629 Bus C1.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Replace the ARINC 629 coupler, B27304, in the P311 panel.

These are the tasks:

ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801,

ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.

NOTE: This coupler connects the monitor channel for FSEU 2 to the Systems 629 Bus C1.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (4) Do this check of the wiring from FSEU 2 to the coupler, B27303:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Disconnect the connector DB27303 from the coupler B27303.
- (d) Do a wiring check between these pins of connector DM27002AB on FSEU 2, M27002 and connector DB27303 at the P311 panel (WDM 27-51-12):

DM27002AB	DB27303
pin 3TR	pin 1
pin 3T	pin 2
pin 6TR	pin 4
pin 6T	pin 5

- (e) If you find a problem with the wiring, then do these steps:
- 1) Replace the ARINC 629 wiring (SWPM 20-11-11).
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DB27303 to the coupler, B27303.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) Look at the MAT Existing Faults display for 29 Hydraulic Systems messages related to the center system reservoir quantity or center system HYDIM cards:
 - (a) If you find 29 Hydraulic Systems maintenance messages, then do these steps:
 - 1) Do the applicable fault isolation tasks for the maintenance messages.
 - 2) When the hydraulic system messages are corrected, then continue.
- (2) Cycle the ALTN FLAPS ARM switch until FSEU 2 is in control.
- (3) Use the primary system to extend and retract the flaps a small distance. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the HYDRAULICS synoptics page on the EICAS display.
 - (a) If the quantity for the center hydraulic system reservoir is low, then fill the reservoir, do this task: Hydraulic Reservoir Filling, AMM TASK 12-12-01-610-802.
 - 1) Use the primary system to extend and retract the flaps a small distance. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the quantity for the center hydraulic system reservoir is not low, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Do a wiring check between FSEU 2, M27002 and the Left System Card File (LSCF) P85:
 - (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Do a wiring check between these pins of connector DM27002AA on FSEU 2, M27002 and connector DP8507 on the P85 panel (WDM 29-11-37):

DM27002AA	DP8507
pin J6	pin 38

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.

K	4	C27602	FSEU 2

- 5) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (4) Re-connect connector DB27202 to the coupler, B27202.
- (5) Do this check of the wiring from FSEU 2 to the coupler, B27201:
- (a) Disconnect the connector DB27201 from the coupler B27201.
- (b) Do a wiring check between these pins of connector DM27002AB on FSEU 2, M27002 and connector DB27201 at the P211 panel (WDM 27-51-12):

DM27002AB	DB27201
pin 2TR	pin 1
pin 2T	pin 2
pin 5TR	pin 4
pin 5T	pin 5

- (c) If you find a problem with the wiring, then do these steps:
- 1) Replace the ARINC 629 wiring (SWPM 20-11-11).

FAULT ISOLATION MANUAL

- 2) Re-install FSEU 2, M27002.
- 3) Re-connect connector DB27201 to the coupler, B27201.
- 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

END OF TASK

837. FSEU 2 Monitor Channel No Output on Systems 629 Bus-C1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-28852.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Replace the ARINC 629 coupler, B27304, in the P311 panel.

These are the tasks:

ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801,

ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.

NOTE: Coupler B27304 connects the monitor channel for FSEU 2 to the Systems 629 Bus-C1.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this check of the wiring from FSEU 2 to the coupler, B27304:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Disconnect the connector DB27304 from the coupler B27304.
- (d) Do a wiring check between these pins of connector DM27002AD on FSEU 2, M27002 and connector DB27304 at the P311 panel (WDM 27-51-12):

<u>DM27002AD</u>	<u>DB27304</u>
pin 3TR	pin 1
pin 3T	pin 2
pin 6TR	pin 4
pin 6T	pin 5

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Replace the ARINC 629 wiring (SWPM 20-11-11).
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DB27302 to the coupler, B27304.
 - 4) Remove the safety tags and close these circuit breakers:

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

END OF TASK

838. FSEU Synchronization Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25012.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check to see if the fault is in FSEU 2:

- (d) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.

- (e) If the maintenance message does not show on the ground test display, then do these steps:

- 1) Replace FSEU 1 (this is the FSEU initially installed in the position of FSEU 2).

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- 2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
- 3) If the maintenance message 27-25011 does not show on the ground test display, then you corrected the fault.

- (f) If the maintenance message 27-25012 shows on the ground test display, then continue.

- (2) Do this check of the wiring between FSEU 1, M27001 and FSEU 2, M27002:

- (a) Remove FSEU 1, M27001 from the E1-6 shelf.
- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Do a wiring check between these pins of connector DM27002AC on FSEU 2, M27002 and connector DM27001AA on FSEU 1, M27001 (WDM 27-51-11):

- (d) Do a wiring check between these pins of connector DM27002AA on FSEU 2, M27002 and connector DM27001AC on FSEU 1, M27001 (WDM 27-51-12):

DM27002AA	DM27001AC
pin F3	pin C1
pin F5	pin C2

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-install FSEU 2, M27002.
 - 4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (f) If you do not find a problem with the wiring (or if the maintenance message shows), then continue.
- (3) Replace FSEU 2 (this is the FSEU initially installed in the position of FSEU 1).
These are the tasks:
Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - (b) If the maintenance message does not show on the ground test display, then you corrected the fault.

— END OF TASK —

839. Primary Flaps Extend Slow Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25182.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.

NOTE: This fault can occur if there is not sufficient hydraulic power available. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power. The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the flaps.

- (a) If the maintenance message does not show on the ground test display, then do the Fault Isolation Procedure - Intermittent Extend Solenoid Problem below.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Extend Problem below.

C. Fault Isolation Procedure - Intermittent Extend Solenoid Problem

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Primary Extend solenoid on the flap primary control valve, V27004 in the right main wheel well:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27004B from the flap primary control valve, V27004 in the right wheel well.
- (c) Do a check of the resistance between pins 11 and 15 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-16):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

- 1) Replace the Primary Extend solenoid on the flap primary control valve, V27004.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.

- 2) Do a check of the resistance between pins 11 and 15 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-16).

NOTE: This does a check of the internal wiring on the primary control valve, V27004.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,

Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

Page 292
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (e) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (g) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
 - 1) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Extend Problem below.
 - 2) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

D. Fault Isolation Procedure - Slow Extend Problem

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the flaps. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power.
- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (3) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2:

————— END OF TASK —————

841. Primary Flaps Retract Slow Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25202.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.

NOTE: This fault can occur if there is not sufficient hydraulic power available. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power. The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the flaps.

- (a) If the maintenance message does not show on the ground test display, then do the Fault Isolation Procedure - Intermittent Retract Solenoid Problem below.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Retract Problem below.

C. Fault Isolation Procedure - Intermittent Retract Solenoid Problem

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Primary Retract solenoid on the flap primary control valve, V27004 in the right main wheel well:

D633W103-ARO

Page 297
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27004B from the flap primary control valve, V27004 in the right wheel well.
- (c) Do a check of the resistance between pins 4 and 14 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-16):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
- 1) Replace the Primary Retract solenoid on the flap primary control valve, V27004.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.
 - 2) Do a check of the resistance between pins 4 and 14 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-16).
NOTE: This does a check of the internal wiring on the primary control valve, V27004.
 - a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.
These are the tasks:
Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.
- (e) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (g) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
- 1) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Retract Problem below.

EFFECTIVITY

- 2) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

D. Fault Isolation Procedure - Slow Retract Problem

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the flaps. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power.

- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.

C. Fault Isolation Procedure

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the center hydraulic system is not pressurized, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (5) Replace the Primary Extend solenoid on the flap primary control valve, V27004.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.

 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
 - (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (6) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (7) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT does not show PASSED after the ground test, then replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,

Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

- 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (b) If the MAT shows PASSED after the ground test, then continue.
- (8) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (9) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
- (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (4) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
 - (a) If the MAT does not show PASSED after the ground test, then replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

 - 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
 - (b) If the MAT shows PASSED after the ground test, then continue.
- (6) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (7) Do a check of the internal wiring in the primary control valve, V27004 for the Low Speed solenoid:
 - (a) Disconnect electrical connector DV27004B from the flap primary control valve, V27004.
 - (b) Do a check of the resistance between pins 5 and 12 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-16):
 - (c) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - 1) Replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.
 - 2) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.

Page 298.10
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 3) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- 4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.

- a) If the maintenance message does not show on the ground test display, then you corrected the fault.

- (d) If the resistance between the pins is in the limit, or if the maintenance message shows on the ground test display, then continue.

- (8) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (9) Remove FSEU 2, M27002 from the E4-1 shelf.
- (10) Do a wiring check between these pins on connector DM27002AC at the E4-1 shelf and connector DV27004B at the flap primary control valve, V27004 in the right wheel well (WDM 27-51-16):

DM27002AC	DV27004B
pin F1	pin 12

- (a) If you find a problem with the wiring, do these steps:

- 1) Repair the wiring.
- 2) Re-install FSEU 2, M27002.
- 3) Re-connect connector DV27004B.
- 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.

777-200/300
FAULT ISOLATION MANUAL

- (15) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (16) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

END OF TASK

844. Primary Flaps Low Speed Retract Slow Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25242.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the center hydraulic system is not pressurized, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
- NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

EFFECTIVITY

D633W103-ARO

Page 298.13
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (5) Replace the Primary Retract solenoid on the flap primary control valve, V27004.
- These are the tasks:
- Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.
- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
- (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (6) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (7) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
- (a) If the MAT does not show PASSED after the ground test, then replace the flap primary control valve, V27004.
- These are the tasks:
- Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.
- 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- b) If the maintenance message shows on the ground test display, then continue.
- (b) If the MAT shows PASSED after the ground test, then continue.
- (8) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (9) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

C. Fault Isolation Procedure

- (1) Make sure that these circuit breakers are closed:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breakers were closed, continue.
- (2) Use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- (a) If the flaps do not operate in alternate mode, replace the flap electric motor, B27002.
- These are the tasks:
- Flap Electric Motor Removal, AMM TASK 27-51-34-000-801,
Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
- 1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the flaps operate in alternate mode, continue.
- (3) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
- (a) If the maintenance message does not show on the ground test display, replace FSEU 2, M27002.
- These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- 1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, continue.

FAULT ISOLATION MANUAL**

- (d) If you do not find a problem with the wiring, or if the maintenance message shows on the ground test display, then install a new FSEU 2. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (e) Install the flaps bypass/clutch relay, K27002 on the P110 power management panel (WDM 27-51-17).
- (f) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (g) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (h) If the maintenance message shows on the ground test display, then replace the flaps bypass/clutch relay, K27002 on the P110 power management panel (WDM 27-51-17).
 - (i) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (j) If the maintenance message shows on the ground test display, then continue.
- (7) Do this check of the flaps extend relay, K27004:
- (a) Remove the flaps extend relay, K27004 from the P110 power management panel (WDM 27-51-17).
 - (b) Do a wiring check between these pins on connector DM27002AA at the E4-1 shelf and connector DK27004 at the P110 power management panel (WDM 27-51-17):

DM27002AA	DK27004
pin D1	pin X2

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Install the flaps extend relay, K27004 on the P110 power management panel (WDM 27-51-17).

FAULT ISOLATION MANUAL

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

846. Secondary Flaps Retract Slow Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25272.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that these circuit breakers are closed:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, or if the circuit breakers were closed, continue.
- (2) Use the alternate mode to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - (a) If the flaps do not operate in alternate mode, replace the flap electric motor, B27002.

These are the tasks:

Flap Electric Motor Removal, AMM TASK 27-51-34-000-801,

Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.

 - 1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, or if the flaps operate in alternate mode, continue.

— END OF TASK —

847. Flap Control Lever Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25412.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
 - (a) If the MAT does not show PASSED after the ground test, then replace the flap lever position sensor, M27037.

These are the tasks:

Flap Lever Position Sensor Removal, AMM TASK 27-51-03-000-801,
Flap Lever Position Sensor Installation, AMM TASK 27-51-03-400-801.
 - (b) If the MAT shows PASSED after the ground test, then replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

777-200/300 FAULT ISOLATION MANUAL

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flap Primary Control Valve Test-FSEU 2.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breakers were closed, then continue.

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (3) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (4) Do this wiring check of the Bypass solenoid on the flap primary control valve, V27004:
 - (a) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

- (b) Disconnect electrical connector DV27004A from the flap primary control valve, V27004 in the right wheel well.
- (c) Do a check of the resistance between pins 10 and 16 of connector DV27004A on the flap primary control valve, V27004 in the left wheel well (WDM 27-51-17):
- (d) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - 1) Replace the Bypass solenoid on the flap primary control valve, V27004.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.

- 2) Do a check of the resistance between pins 10 and 16 of connector DV27004A on the flap primary control valve, V27004 again (WDM 27-51-17).

NOTE: This does a check of the internal wiring on the primary control valve, V27004.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,

Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

- b) If the resistance between the pins is in the limit, then continue.
- 3) Connect electrical connector DV27004A to the flap primary control valve, V27004 in the right wheel well.
- 4) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flap Primary Control Valve Test-FSEU 2.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flap Primary Control Valve Test-FSEU 1.
 - (a) If the MAT shows PASSED after the ground test, then replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

 - 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flap Primary Control Valve Test-FSEU 2.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the MAT does not show PASSED after the ground test, then continue.
- (6) Do this check of the flaps bypass/clutch relay, K27002:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Remove the flaps bypass/clutch relay, K27002 from the P110 power management panel (WDM 27-51-17).

EFFECTIVITY
ARO ALL

777-200/300 FAULT ISOLATION MANUAL

- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, then continue.
- (18) Replace the flap electric motor, B27002.
- These are the tasks:
- Flap Electric Motor Removal, AMM TASK 27-51-34-000-801,
Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
- (19) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flap Primary Control Valve Test-FSEU 2.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (20) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

849. Flaps Shutoff Valve Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25292.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flap Primary Control Valve Test-FSEU 2.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the Shutoff Solenoid on the flap primary control valve, V27004 in the right wheel well.

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the circuit breakers were closed, or if the maintenance message shows on the ground test display, then continue.
- (2) Do this check to see if the flap drive system is locked:
- (a) Use the primary system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
- (b) If the flaps do not operate with the primary system, then the flap drive system is locked.
- (c) If the flaps operate with the primary system, then the flap drive system is not locked.
- (3) If the flap drive system is locked, do these steps:

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (a) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (b) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (c) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (d) Disconnect the torque tubes inboard of the flap position sensor gearboxes.

DO NOT TURN THE MANUAL DRIVE WITH MORE THAN 1200 POUND-INCHES TORQUE OR FASTER THAN 400 RPM. YOU CAN CAUSE DAMAGE TO THE POSITION SENSOR GEARBOX AND THE TORQUE TUBES.

777-200/300 FAULT ISOLATION MANUAL

(CAUTION PRECEDES)

DO NOT LET THE BALLSCREW NUTS HIT THE UPSTOPS OR DOWNSTOPS. YOU CAN CAUSE DAMAGE TO THE SHEAROUT IN THE POSITION SENSOR GEARBOX.

- (e) Use the manual drive on the flap position sensor gearboxes to extend and retract the flaps on each wing. To manually operate the flaps, do this task: Trailing Edge Flap System Manual Operation, AMM TASK 27-51-00-980-801.
- (f) If you can extend and retract the flaps on each wing, do these steps:
- 1) Do this task: Flap Electric Motor Removal, AMM TASK 27-51-34-000-801.
 - 2) Use an T.E. flap torque tube coupling drive adapter, SPL-1704 to turn the flap power drive unit (PDU) in the extend and retract directions.
 - 3) If you can turn the PDU, install a new flap electric motor, B27002. To install it, do this task: Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
 - 4) If you cannot turn the PDU, do this task: Flap Hydraulic Motor Removal, AMM TASK 27-51-33-000-801.
 - 5) Use an T.E. flap torque tube coupling drive adapter, SPL-1704 to turn the flap power drive unit (PDU) in the extend and retract directions.
 - 6) If you cannot turn the PDU, replace the flap power drive unit (PDU).
These are the tasks:
Flap Power Drive Unit (PDU) Removal, AMM TASK 27-51-31-000-801,
Flap Power Drive Unit (PDU) Installation, AMM TASK 27-51-31-400-801.
 - 7) Try to turn the output shaft on the flap hydraulic motor.
 - 8) If you can turn the output shaft on the hydraulic motor, replace the flap primary control valve, V27004.
These are the tasks:
Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.
 - 9) If you cannot turn the output shaft on the flap hydraulic motor, install a new flap hydraulic motor. To install it, do this task: Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.
 - 10) If it is necessary, re-install the flap hydraulic motor. To install it, do this task: Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.
 - 11) If it is necessary, re-install the flap electric motor. To install it, do this task: Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
- (g) If you cannot extend and retract the flaps on one of the wings, find where the flap drive system is locked:
- 1) Open the access panels on the applicable wing:
 - a) If the flap drive system is locked on the left wing, open

- 2) If the torque trip indicator shows tripped for a transmission, do these steps:

- Disconnect the torque tubes from the applicable transmission.
- Try to turn the torque tube couplings on the applicable transmission.
- If you cannot turn the transmission, disconnect the ballscrew from the transmission.
- Try to turn the torque tube couplings on the transmission.
- If you cannot turn an inboard flap inboard transmission, replace the applicable transmission.

These are the tasks:

Inboard Flap Inboard Transmission Removal, AMM TASK 27-51-15-000-801,
Inboard Flap Inboard Transmission Installation, AMM TASK 27-51-15-400-801.

- If you cannot turn an inboard flap outboard transmission, replace the applicable transmission.

These are the tasks:

Inboard Flap Outboard Transmission Removal, AMM TASK 27-51-15-000-802,
Inboard Flap Outboard Transmission Installation, AMM
TASK 27-51-15-400-802.

- If you cannot turn an outboard flap inboard transmission, replace the applicable transmission.

These are the tasks:

Outboard Flap Inboard Transmission Removal, AMM TASK 27-51-25-000-801,
Outboard Flap Inboard Transmission Installation, AMM
TASK 27-51-25-400-801.

- If you cannot turn an outboard flap outboard transmission, replace the applicable transmission.

These are the tasks:

Outboard Flap Outboard Transmission Removal, AMM
TASK 27-51-25-000-802,

Outboard Flap Inboard Transmission Installation, AMM
TASK 27-51-25-400-801.

- Try to turn the ballscrew on the applicable transmission.
- If you cannot turn the ballscrew for the inboard flap inboard transmission, replace the applicable ballscrew.

These are the tasks:

Inboard Flap Inboard Ballscrew and Gimbal Removal, AMM
TASK 27-51-16-000-801,

Inboard Flap Inboard Ballscrew and Gimbal Installation, AMM
TASK 27-51-16-400-801.

- k) If you cannot turn the ballscrew for the inboard flap outboard transmission, replace the applicable ballscrew.

These are the tasks:

Inboard Flap Outboard Ballscrew and Gimbal Removal, AMM
TASK 27-51-16-000-802,

Inboard Flap Outboard Ballscrew and Gimbal Installation, AMM
TASK 27-51-16-400-802.

- l) If you cannot turn the ballscrew for the outboard flap inboard transmission, replace the applicable ballscrew.

These are the tasks:

Outboard Flap Inboard Ballscrew and Gimbal Removal, AMM
TASK 27-51-26-000-802,

Outboard Flap Inboard Ballscrew and Gimbal Installation, AMM
TASK 27-51-26-400-802.

- m) If you cannot turn the ballscrew for the outboard flap outboard transmission, replace the applicable ballscrew.

These are the tasks:

Outboard Flap Outboard Ballscrew and Gimbal Removal, AMM
TASK 27-51-26-000-801,

Outboard Flap Outboard Ballscrew and Gimbal Installation, AMM
TASK 27-51-26-400-801.

- n) If it is necessary, connect the ballscrew to the transmission.
o) Connect the torque tubes to the applicable transmission.
p) Reset the torque trip indicator on the applicable transmission.
- 3) If none of the torque trip indicators show, or if you did not find a problem with a transmission or ballscrew, examine the other gearboxes for the flap drive system on the applicable wing:
- a) Disconnect the torque tubes from the applicable gearbox.
b) If you cannot manually turn the applicable gearbox, replace the gearbox.
c) Connect the torque tubes to the applicable gearbox.
- 4) Close these access panels on the left wing

- (h) Connect the torque tubes to the flap position sensor gearboxes.
- (i) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (j) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
- (k) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) If the flap drive system is not locked, use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.

NOTE: This step is intended to find if the flaps do not extend, retract or do not operate at all with electric power.

- (5) If the flaps do not operate with the alternate system, then replace the flap electric motor, B27002.

These are the tasks:

Flap Electric Motor Removal, AMM TASK 27-51-34-000-801,

Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.

- (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (6) If the flaps do not extend with the alternate system, then replace the Flaps Extend Relay, K27004 on the P110 Panel (WDM 27-51-17).
 - (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) If the flaps do not retract with the alternate system, then replace the Flaps Retract Relay, K27006 on the P110 Panel (WDM 27-51-17).

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the Flaps Bypass/Clutch Relay, K27002 on the P110 panel (WDM 27-51-17).
 - (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (9) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

 - (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (10) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (11) Remove FSEU 2, M27002 from the E4-1 shelf.
- (12) Do this check of the wiring between the Flaps Bypass/Clutch Relay, K27002 and FSEU 2, M27002:
 - (a) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel (WDM 27-51-17).
 - (b) Do a wiring check between these pins of connector DM27002AA on the E4-1 shelf and connector DK27002 on the P110 panel (WDM 27-51-17):

DM27002AA	DK27002
pin D5	pin X2

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2 on the E4-1 rack.
 - 3) Re-install the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.

- 1) Repair the wiring.
 - 2) Re-install the Flaps Extend Relay, K27004 on the P110 panel.
 - 3) Re-install the Flaps Retract Relay, K27006 on the P110 panel.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

Row	Col	Number	Name
D	2	C27301	FLAPS ELEC MOT PWR

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (24) Re-install the Flaps Extend Relay, K27004 on the P110 panel (WDM 27-51-17).
- (25) Re-install the Flaps Retract Relay, K27006 on the P110 panel (WDM 27-51-17).
- (26) Do this check of the wiring between the Flaps Bypass/Clutch Relay, K27002 and the flap primary control valve, V27004 in the right main wheel well:
 - (a) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel (WDM 27-51-17).
 - (b) Disconnect electrical connector DV27004A from the flap primary control valve, V27004.
 - (c) Do a wiring check between these pins of connector DK27002 on the P110 panel and connector DV27004A on the flap primary control valve (WDM 27-51-17):

DK27002	DV27004A
pin A2	pin 16

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.

EFFECTIVITY

777-200/300 FAULT ISOLATION MANUAL

- 2) Re-install the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
- 3) Re-connect connector DV27004A to the flap primary control valve, V27004.
- 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (27) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

852. Flap Position Sensor Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25322.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a check of the torque tubes between the flap power drive unit (PDU) and the flap position sensor gearboxes in the left and right wheel wells.
 - (a) If the torque tubes are broken or disconnected, connect or replace the torque tubes.

These are the tasks:

Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.

 - 1) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
 - 2) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If you do not find a problem with the torque tubes, then continue.
- (4) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

 - (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.

- (5) Use the alternate system to retract the flaps to the retracted position. To retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- (6) Look at the FLAP POS L2 and FLAP POS R2 indications on the FLAP/SLAT maintenance page on EICAS.
 - (a) Replace the flap position sensor for the flap position indication which is further from 10.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

EFFECTIVITY
ARO ALL

27-52 TASK 852

Page 298.52
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

NOTE: The flap position sensor for FLAP POS L2 is M27201 in the left wheel well. The flap position sensor for FLAP POS R2 is M27202 in the right wheel well.

- (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (7) Replace the other flap position sensor 2L, M27201 or 2R, M27202.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (8) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (9) Remove FSEU 2, M27002 from the E4-1 shelf.
- (10) Do a check of the wiring between FSEU 2 and the flap position sensor 2L, M27201:
 - (a) Disconnect the connector DM27201 from flap position sensor 2L, M27201.
 - (b) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27201 at the flap position sensor 2L, M27201 (WDM 27-58-12):

DM27002AC	DM27201
pin K3	pin 1
pin J3	pin 2
pin G9	pin 3
pin G10	pin 4
pin F9	pin 5
pin F10	pin 6

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27201.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.

G	11	C27604	FLAPS PRI DR CTRL 1

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.

- a) If the maintenance message does not show on the ground test display, then you corrected the fault.

- (c) If there is continuity between the pins, then continue.

- (7) Do this wiring check between the flap primary control valve, V27004 and the P210 panel:

- (a) Do a wiring check between these pins on connector D21026P at the P210 standby power management panel and connector DV27004B at the flap primary control valve, V27004 in the right wheel well (WDM 27-51-16):

D21026P	DV27004B
pin 13	pin 14

- (b) If there is a problem with the wiring, do these steps:

- 1) Repair the wiring.

- 2) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.

- (14) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (15) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

855. Flaps Low Speed Solenoid Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25512.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.

G	11	C27604	FLAPS PRI DR CTRL 1

- (5) Disconnect electrical connector DV27004B from the flap primary control valve, V27004 in the right wheel well.
- (6) Do this wiring check of the Primary Low Speed Solenoid on the flap primary control valve, V27004:
 - (a) Do a check of the resistance between pins 5 and 12 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-16):
 - (b) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - 1) Replace the Primary Low Speed solenoid on the flap primary control valve, V27004.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.
 - 2) Do a check of the resistance between pins 5 and 12 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-16).
NOTE: This does a check of the internal wiring on the primary control valve, V27004.
 - a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.

860. Flaps Skew and Position Sensor Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25582.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only:
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - (a) If the MAT shows PASSED after the ground test, then replace FSEU 2, M27002.
These are the tasks:
Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
 - 1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the MAT does not show PASSED after the ground test, then continue.
- (2) Look for broken or disconnected torque tubes for the flap drive system:

NOTE: It is likely that there are broken or disconnected torque tubes between the flap position sensor gearboxes and flap supports No. 1 and 8.

- 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace flap position sensors 2L, M27201 and 2R, M27202.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

- (a) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

861. FSEU Problem During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25592.

B. Fault Isolation Procedure

- (1) Replace FSEU 2, M27002. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (3) Do this check of the wiring:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Do a wiring check between these pins at the E4-1 shelf and ground (WDM 27-51-12):

DM27002AC	ground
Pin B1	ground

DM27002AA	ground
Pin K2	ground

- (d) If you find a problem with the wiring, then repair the wiring.
- (e) Re-install FSEU 2, M27002.

777-200/300 FAULT ISOLATION MANUAL

- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (g) Cycle the ALT ARM switch until FSEU 2 is IN CONTROL.

NOTE: This will cause FSEU 2 to do a self test.

- (h) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— END OF TASK —————

862. Test ID Problem During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25602.

B. Fault Isolation Procedure

- (1) The requested test function does not exist in the current version of the FSEU. Update the software in FSEU 2, M27002, do this task: Flap/Slat Electronics Unit (FSEU) Software Installation, AMM TASK 27-51-01-400-802.
- (2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

863. Sensor Excitation Voltage Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25612.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2:
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that these circuit breakers are closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
C	3	C24448	R 28V BUS
F	21	C27514	SNSR EXC 2

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2.

864. Flap Lever Sensor Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25622.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2:
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Push the ALTN FLAPS ARM switch on the control stand.
NOTE: This is to make sure the flaps do not move during the following steps.
- (2) Move the flap control lever to the 30-unit position.
- (3) Look at the FLAP LEVER indications on the FLAP/SLAT maintenance page on EICAS.
 - (a) If the FLAP LEVER indications are not less than 2.87, then adjust the link between the flap lever position sensor and the flap lever.
 - 1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
 - (b) If the FLAP LEVER indications are less than 2.87, then continue
- (4) Move the flap control lever to the UP position.
- (5) Look at the FLAP LEVER indications on the FLAP/SLAT maintenance page on EICAS.
 - (a) If the FLAP LEVER indications are not more than 9.44, then adjust the link between the flap lever position sensor and the flap lever.
 - 1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
 - (b) If the FLAP LEVER indications are less than 9.44, then continue
- (6) Push the ALTN FLAPS ARM switch on the control stand to disarm the alternate system.
- (7) Replace the Flap Lever Position Sensor, M27037.

These are the tasks:

Flap Lever Position Sensor Removal, AMM TASK 27-51-03-000-801,

Flap Lever Position Sensor Installation, AMM TASK 27-51-03-400-801.

- (a) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (8) Do this wiring check between FSEU 2, M27002 and the flap lever position sensor, M27037:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Disconnect connectors DM27037C and DM27037D for the flap lever position sensors.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Do a wiring check between these pins on connector DM27002AA at the E4-1 shelf and connector DM27037C for the flap lever position sensor, M27037 (WDM 27-51-13):

DM27002AA	DM27037C
pin A2	pin 1
pin B2	pin 2
pin A9	pin 4
pin B9	pin 5

- (e) Do a wiring check between these pins on connector DM27002AC at the E4-1 shelf and connector DM27037D for the flap lever position sensor, M27037 (WDM 27-51-13):

DM27002AC	DM27037D
pin K2	pin 1
pin J2	pin 2
pin K9	pin 4
pin J9	pin 5

- (f) If there is a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connectors DM27037C and DM27037D for the flap lever position sensors.
 - 3) Connect re-install FSEU 2, M27002 on the E4-1 shelf.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

801. Flap Skew Sensor 1 Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20281.

B. Description

- (1) There is one Skew Sensor installed at Flap Supports 1 and 2.
 - (a) Sensor M27338 is installed at Flap Support No. 1.
 - (b) Sensor M27339 is installed at Flap Support No. 2.

C. Possible Causes

- (1) Flap Skew Sensor L1 A, M27338
- (2) Wiring
- (3) Flap/Slat Electronics Unit (FSEU) 1, M27001

D. Circuit Breakers

- (1) These are the primary circuit breakers related to the fault:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

E. Related Data

- (1) WDM 27-59-11

F. Initial Evaluation

- (1) Use the Primary System to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT Maintenance Page on the EICAS Display to make sure that FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM Switch to put FSEU 1 IN CONTROL.

- (a) If the Maintenance Access Terminal (MAT) shows NOT ACTIVE for the maintenance message (or if the message does not show), then there was an intermittent fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.

G. Fault Isolation Procedure - With Flap Skew Detection Redesign

- (1) Replace the Flap Skew Sensor L1 A, M27338 on Flap Support-1. These are the tasks:
 - Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002
 - Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002
 - (a) Do the Repair Confirmation at the end of this task.
- (2) Do a wiring check between the FSEU 1 and Flap Skew Sensor L1 A, M27338 as follows (WDM 27-59-11):
 - (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1

EFFECTIVITY

(Continued)

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	3	C27601	FSEU 1

- (b) Disconnect the electrical connector, DM27338A from the Flap Skew Sensor L1 A, M27338.
- (c) Remove FSEU 1, M27001 from the E1-6 shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (d) Examine the wiring as follows:

FSEU 1	SKEW SNSR
M27001AC	L1A
	DM27338A
pin J11	pin 5
pin K11	pin 6

- (e) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
 - 3) Re-connect connector DM27338A.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do the Repair Confirmation at the end of this task.
- (f) If you do not find a problem with the wiring, continue.
- (3) Do a wiring check between Flap Skew Sensors L1 A, M27338 and L2 B, M27339 (WDM 27-59-11):
 - (a) Disconnect the electrical connector, DM27339B from the Flap Skew Sensor L2 B, M27339.
 - (b) Examine the wiring as follows :

SKEW SNSR	SKEW SNSR
L1A	L2B
DM27338A	DM27339B
pin 1	pin 2
pin 3	pin 4

- (c) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27338A.
 - 3) Re-connect connector DM27339B.

- 4) Re-install FSEU 1, M27001. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- 5) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 6) Do the Repair Confirmation at the end of this task.
- (d) If you do not find a problem with the wiring, continue.
- (4) Install a new FSEU 1, M27001. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (5) Re-connect the electrical connector, DM27338A on the Flap Skew Sensor L1 A.
- (6) Re-connect the electrical connector, DM27339B on the Flap Skew Sensor L2 B.
- (7) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (8) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Use the Primary System to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT Maintenance Page on the EICAS Display to make sure that FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM Switch to put FSEU 1 IN CONTROL.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the problem.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue the Fault Isolation Procedure at the subsequent step.

————— **END OF TASK** —————

802. Flap Skew Sensor 2 Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20291.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the flap skew sensor L2 A, M27325 on the number 2 flap support mechanism.
These are the tasks:

777-200/300 FAULT ISOLATION MANUAL

Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,
Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Do a wiring check between FSEU 1, M27001 and flap skew sensor L2 A, M27325:
- (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Disconnect the electrical connector, DM27325 from the flap skew sensor L2 A, M27325.
- (c) Remove FSEU 1, M27001 from the E1-6 shelf.
- (d) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27325 at the flap skew sensor L2 A, M27325 (WDM 27-59-11):

DM27001AC	DM27325
pin F11	pin 5
pin G11	pin 6

- (e) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27325.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - (f) If you did not find a problem with the wiring, or if the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Install a new FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (4) Re-connect the electrical connector, DM27325 on the flap skew sensor L2 A.

- (5) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (6) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

— END OF TASK —

803. Flap Skew Sensor 3 Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20301.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the flap skew sensor L3 A, M27327 on the number 3 flap support mechanism.

These are the tasks:

Inboard Flap Outboard Skew Sensor - Removal, AMM TASK 27-59-01-000-808-002,

Inboard Flap Outboard Skew Sensor - Installation, AMM TASK 27-59-01-400-808-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Do a wiring check between FSEU 1, M27001 and flap skew sensor L3 A, M27327:
- (a) Open these circuit breakers and install safety tags:

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the flap skew sensor R8 A, M27322 on the number 8 flap support mechanism.

These are the tasks:

Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,

Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Do a wiring check between FSEU 1, M27001 and flap skew sensor R8 A, M27322:

- (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Disconnect the electrical connector, DM27322 from the flap skew sensor R8 A, M27322.
- (c) Remove FSEU 1, M27001 from the E1-6 shelf.

D633W103-ARO

Page 213
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (d) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27322 at the flap skew sensor R8 A, M27322 (WDM 27-59-13):

DM27001AA	DM27322
pin B11	pin 5
pin A11	pin 6

- (e) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27322.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- (f) If you do not find a problem with the wiring, or if the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do a wiring check between flap skew sensor R7 A, M27324 and flap skew sensor R8 A, M27322:
- (a) Disconnect the electrical connector, DM27324 from the flap skew sensor R7 A, M27324.
- (b) Do a wiring check between these pins of connector DM27324 at the flap skew sensor R7 A, M27324 and connector DM27322 at the flap skew sensor R8 A, M27322 (WDM 27-59-13):

DM27324	DM27322
pin 2	pin 1
pin 4	pin 3

- (c) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27322.
 - 3) Re-connect connector DM27324.
 - 4) Re-install FSEU 1, M27001.

C. Fault Isolation Procedure

- (1) Replace the flap skew sensor R8 A, M27322 on the number 8 flap support mechanism.

These are the tasks:

Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,

Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Replace the flap skew sensor L1 A, M27323 on the number 1 flap support mechanism.

These are the tasks:

Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,

Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (4) Do a wiring check between FSEU 1, M27001 and flap skew sensor R8 A, M27322:
- (a) Disconnect the electrical connector DM27322 from the flap skew sensor R8 A, M27322.
- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27322 at the flap skew sensor R8 A, M27322 (WDM 27-59-13):

DM27001AA	DM27322
pin B11	pin 5
pin A11	pin 6

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
- 2) Re-install FSEU 1, M27001.
- 3) Re-connect connector DM27322.
- (e) If you do not find a problem with the wiring, then continue.
- (5) Do a wiring check between FSEU 1, M27001 and flap skew sensor L1 A, M27323.
- (a) Disconnect electrical connector DM27323 from the flap skew sensor L1 A, M27323.
- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27323 at the flap skew sensor L1 A, M27323 (WDM 27-59-11):

- (8) Install a new FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (9) Re-connect connector DM27322.
- (10) Re-connect connector DM27323.
- (11) Re-connect connector DM27324.
- (12) Re-connect connector DM27325.
- (13) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (14) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

————— **END OF TASK** —————

810. Flap Support No. 1 Skew Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20461.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for a broken or disconnected torque tube between transmission No. 1 and transmission No. 2:

- (a) If the flap is retracted, remove these access panels to get access to the torque tubes

<u>Number</u>	<u>Name/Location</u>
561CB	Midspan Fixed Trailing Edge Panel
561DB	Midspan Fixed Trailing Edge Panel
561EB	Midspan Fixed Trailing Edge Panel

- (b) If you see a broken or disconnected torque tube, do these steps:

- 4) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System
Test-FSEU 1, Test of Flaps Only.
 - a) If the MAT EXISTING FAULTS display does not show LATCHED for the
maintenance message, then you corrected the fault.
 - (c) If you do not see a broken torque tube, then continue.
- (2) For flap support No. 1, do this task: Outboard Flap Support Fairing Removal, AMM
TASK 27-51-28-000-801.
- (3) Visually examine these components and replace those that have damage:
 - (a) Ballscrew and gimbal.
These are the tasks:
Outboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-801,
Outboard Flap Outboard Ballscrew and Gimbal Installation, AMM
TASK 27-51-26-400-801.
 - (b) Transmission and yoke.
These are the tasks:
Outboard Flap Outboard Transmission Removal, AMM TASK 27-51-25-000-802,
Outboard Flap Outboard Transmission Installation, AMM TASK 27-51-25-400-802.
 - (c) Flap support mechanism.
These are the tasks:
Outboard Flap Outboard Support Mechanism Removal, AMM TASK 27-51-22-000-801,
Outboard Flap Outboard Support Mechanism - Installation, AMM
TASK 27-51-22-400-801.
- (4) If you replaced a component above, do this ground test on the MAT: 27 High Lift System,
System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message,
then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- 1) If the flap is retracted, remove these access panels to get access to the torque tubes

<u>Number</u>	<u>Name/Location</u>
661CB	Midspan Fixed Trailing Edge Panel
661DB	Midspan Fixed Trailing Edge Panel
661EB	Midspan Fixed Trailing Edge Panel

- (j) If you see a broken or disconnected torque tube, replace the applicable torque tube, torque tube support or no-back brake:

- 1) These are the tasks:

Outboard Wing Flap Torque Tube Removal, AMM TASK 27-51-38-000-801,
Outboard Wing Flap Torque Tube Installation, AMM TASK 27-51-38-400-801.

- 2) These are the tasks:

Inboard Wing Flap Torque Tube Removal, AMM TASK 27-51-38-000-802,
Inboard Wing Flap Torque Tube Installation, AMM TASK 27-51-38-400-802.

- 3) These are the tasks:

Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.

- 4) These are the tasks:

Outboard Wing Torque Tube Support Removal, AMM TASK 27-51-39-000-802,
Outboard Wing Torque Tube Support Installation, AMM TASK 27-51-39-400-802.

- 5) These are the tasks:

Inboard Wing Torque Tube Support Removal, AMM TASK 27-51-39-000-801,
Inboard Wing Torque Tube Support Installation, AMM TASK 27-51-39-400-801.

- (k) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.

- (l) Install the applicable access panels:

- 1) Install these access panels between flap supports No. 1 and No. 2:

<u>Number</u>	<u>Name/Location</u>
561CB	Midspan Fixed Trailing Edge Panel
561DB	Midspan Fixed Trailing Edge Panel
561EB	Midspan Fixed Trailing Edge Panel

- 2) Install these access panels between flap supports No. 2 and 3:

<u>Number</u>	<u>Name/Location</u>
552HB	Inboard Fixed Trailing Edge Panel
552JB	Fixed Trailing Edge Panel
552LB	Outboard Fixed Trailing Edge Panel
561AB	Midspan Fixed Trailing Edge Panel
561BB	Midspan Fixed Trailing Edge Panel

- 3) Install these access panels between flap supports No. 3 and No. 4:

<u>Number</u>	<u>Name/Location</u>
552AB	Inboard Fixed Trailing Edge Panel

- 6) Install these access panels between flap supports No. 7 and No. 8:

<u>Number</u>	<u>Name/Location</u>
661CB	Midspan Fixed Trailing Edge Panel
661DB	Midspan Fixed Trailing Edge Panel
661EB	Midspan Fixed Trailing Edge Panel

- (m) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.

- 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (n) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

- (o) If you do not see a broken or disconnected torque tube, then continue.

- (2) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (3) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

Page 235
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.

————— END OF TASK —————

817. Flap Skew Sensors 1 and 8 Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25371.

B. Initial Evaluation

- (1) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only:
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the HIGH LIFT Eicas maintenance page to see which flap skew sensor indication does not agree with the other indications:
 - (a) Look at the indications OUTBD FLAP L1 A and R8 A to see which does not agree with L1 B and R8 B.
 - (b) If the indication OUTBD FLAP R8 A does not agree with the other indications, look for problems at flap support No. 8 on the right wing first.
 - (c) If the indication OUTBD FLAP L1 A does not agree with the other indications, look for problems at flap support No. 1 on the left wing first.
- (2) Replace the flap skew sensor R8 A, M27322 on flap support No. 8.
These are the tasks:
Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,
Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.
 - (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the flap skew sensor L1 A, M27323 on flap support No. 1.
These are the tasks:
Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,
Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.
 - (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

- (4) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (5) Do a wiring check between FSEU 1, M27001 and flap skew sensor R8 A, M27322:
- (a) Disconnect the electrical connector DM27322 from the flap skew sensor R8 A, M27322.
 - (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27322 at the flap skew sensor R8 A, M27322 (WDM 27-59-13):

DM27001AA	DM27322
pin B11	pin 5
pin A11	pin 6

- (d) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27322.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (6) Do a wiring check between FSEU 1, M27001 and flap skew sensor L1 A, M27323.
 - (a) Disconnect electrical connector DM27323 from the flap skew sensor L1 A, M27323.
 - (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27323 at the flap skew sensor L1 A, M27323 (WDM 27-59-11):

DM27001AC	DM27323
pin J11	pin 5
pin K11	pin 6

- (d) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27323.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (3) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (4) Do a wiring check between FSEU 1, M27001 and flap skew sensor R7 A, M27324:
- (a) Disconnect the electrical connector DM27324 from the flap skew sensor R7 A, M27324.
 - (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27324 at the flap skew sensor R7 A, M27324 (WDM 27-59-13):

DM27001AA	DM27324
pin E11	pin 5
pin D11	pin 6

- (d) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27324.
 - (e) If you do not find a problem with the wiring, then continue.
- (5) Do a wiring check between FSEU 1, M27001 and flap skew sensor L2 A, M27325.
- (a) Disconnect electrical connector DM27325 from the flap skew sensor L2 A, M27325.
 - (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27325 at the flap skew sensor L2 A, M27325 (WDM 27-59-11):

DM27001AC	DM27325
pin F11	pin 5
pin G11	pin 6

- (d) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27325.
 - (e) If you do not find a problem with the wiring, then continue.
- (6) Do a wiring check between flap skew sensor R7 A, M27324 and flap skew sensor R6 A, M27326:
- (a) Disconnect the electrical connector DM27326 from the flap skew sensor R6 A, M27326.
 - (b) Do a wiring check between these pins of connector DM27326 at the flap skew sensor R6 A, M27326 and connector DM27324 at the flap skew sensor R7 A, M27324 (WDM 27-59-13):

DM27326

pin 2 pin 1
pin 4 pin 3

DM27324

- (c) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27326.
 - 4) Re-connect connector DM27324
- (d) If you do not find a problem with the wiring, then continue.
- (7) Do a wiring check between flap skew sensor L2 A, M27325 and flap skew sensor L3 A, M27327:
- (a) Disconnect the electrical connector DM27327 from the flap skew sensor R3 A, M27327.
- (b) Do a wiring check between these pins of connector DM27327 at the flap skew sensor L3 A, M27327 and connector DM27325 at the flap skew sensor L2 A, M27325 (WDM 27-59-11):

DM27327

pin 2 pin 1
pin 4 pin 3

DM27325

- (c) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27325.
 - 4) Re-connect connector DM27327.
- (d) If you do not find a problem with the wiring, then continue.
- (8) Install a new FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (9) Re-connect connector DM27324.
- (10) Re-connect connector DM27325.
- (11) Re-connect connector DM27326.
- (12) Re-connect connector DM27327.
- (13) Remove the safety tags and close these circuit breakers:

777-200/300
FAULT ISOLATION MANUAL

- (14) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

————— **END OF TASK** —————

819. Flap Skew Sensors 3 and 6 Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20671.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the flap skew sensor R6 A, M27326 on the number 6 flap support mechanism.

These are the tasks:

Inboard Flap Outboard Skew Sensor - Removal, AMM TASK 27-59-01-000-808-002,

Inboard Flap Outboard Skew Sensor - Installation, AMM TASK 27-59-01-400-808-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Replace the flap skew sensor L3 A, M27327 on the number 3 flap support mechanism.
- These are the tasks:
- Inboard Flap Outboard Skew Sensor - Removal, AMM TASK 27-59-01-000-808-002,
- Inboard Flap Outboard Skew Sensor - Installation, AMM TASK 27-59-01-400-808-002.
- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (4) Do a wiring check between FSEU 1, M27001 and flap skew sensor R6 A, M27326:
- (a) Disconnect the electrical connector DM27326 from the flap skew sensor R6 A, M27326.
- (b) Remove FSEU 1, M27001 from the E1-6 shelf.

FAULT ISOLATION MANUAL**

- (c) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27326 at the flap skew sensor R6 A, M27326 (WDM 27-59-13):

DM27001AA	DM27326
pin H11	pin 5
pin G11	pin 6

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27326.
- (e) If you do not find a problem with the wiring, then continue.
- (5) Do a wiring check between FSEU 1, M27001 and flap skew sensor L3 A, M27327.
- (a) Disconnect electrical connector DM27325 from the flap skew sensor L3 A, M27327.
- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27327 at the flap skew sensor L3 A, M27326 (WDM 27-59-11):

DM27001AC	DM27327
pin C11	pin 5
pin D11	pin 6

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27327.
- (e) If you do not find a problem with the wiring, then continue.
- (6) Do a wiring check between flap skew sensor R6 A, M27326 and flap skew sensor R5 A, M27328:
- (a) Disconnect the electrical connector DM27328 from the flap skew sensor R5 A, M27328.
- (b) Do a wiring check between these pins of connector DM27328 at the flap skew sensor R5 A, M27328 and connector DM27326 at the flap skew sensor R6 A, M27326 (WDM 27-59-13):

DM27328	DM27326
pin 2	pin 1
pin 4	pin 3

- (c) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27328.
 - 4) Re-connect connector DM27326
- (d) If you do not find a problem with the wiring, then continue.

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20511.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
- (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) For flap support No. 2, do this task: Outboard Flap Support Fairing Removal, AMM TASK 27-51-28-000-801.
- (2) Visually examine these components on flap support No. 2 and replace those that have damage:
- (a) Ballscrew and gimbal.
These are the tasks:
Outboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-802,
Outboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-26-400-802.
- (b) Transmission and yoke.
These are the tasks:
Outboard Flap Inboard Transmission Removal, AMM TASK 27-51-25-000-801,
Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801.
- (c) Flap support mechanism.
These are the tasks:
Outboard Flap Inboard Support Mechanism Removal, AMM TASK 27-51-22-000-802,
Outboard Flap Inboard Support Mechanism - Installation, AMM TASK 27-51-22-400-802.
- (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
- 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
- (3) Replace the two flap skew sensors M27325 and M27333 at flap support No. 2.
These are the tasks:
Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,
Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

FAULT ISOLATION MANUAL

- (4) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (5) Do this check of the wiring between FSEU 1 and FSEU 2 and the flap skew sensors on the flap support No. 2
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Disconnect the connector DM27325 from the flap skew sensor M27325.
- (e) Disconnect the connector DM27333 from the flap skew sensor M27333.
- (f) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27325 at the flap skew sensor, M27325 (WDM 27-59-11):

DM27001AC	DM27325
pin F11	pin 5
pin G11	pin 6

- (g) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27333 at the flap skew sensor, M27333 (WDM 27-59-12):

DM27002AC	DM27333
pin F11	pin 5
pin G11	pin 6

- (h) If you find a problem with the wiring, repair the wiring.
- (i) Re-install FSEU 1, M27001.
- (j) Re-install FSEU 2, M27002.
- (k) Reconnect connector DM27325.
- (l) Reconnect connector DM27333.

27-59 TASK 822

D633W103-ARO

Page 254
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (m) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (6) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then continue.
- (7) For flap support No. 2, do this task: Outboard Flap Support Fairing Installation, AMM TASK 27-51-28-400-801.
- (8) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (9) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

823. Flap Supports No. 2 and No. 7 Skew Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20521.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.

EFFECTIVITY

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for a broken or disconnected torque tube between transmission No. 2 and transmission No. 3:

- (a) If the flap is retracted, remove these access panels to get access to the torque tubes

<u>Number</u>	<u>Name/Location</u>
552HB	Inboard Fixed Trailing Edge Panel
552JB	Fixed Trailing Edge Panel
552LB	Outboard Fixed Trailing Edge Panel
561AB	Midspan Fixed Trailing Edge Panel
561BB	Midspan Fixed Trailing Edge Panel

- (b) If you see a broken or disconnected torque tube, do these steps:

- 1) Replace the applicable torque tube or torque tube support:

- a) These are the tasks:

- Outboard Wing Flap Torque Tube Removal, AMM TASK 27-51-38-000-801,
 - Outboard Wing Flap Torque Tube Installation, AMM TASK 27-51-38-400-801.

- b) These are the tasks:

- Outboard Wing Torque Tube Support Removal, AMM TASK 27-51-39-000-802,
 - Outboard Wing Torque Tube Support Installation, AMM TASK 27-51-39-400-802.

- 2) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.

- 3) Install these access panels if you removed them,

<u>Number</u>	<u>Name/Location</u>
552HB	Inboard Fixed Trailing Edge Panel
552JB	Fixed Trailing Edge Panel
552LB	Outboard Fixed Trailing Edge Panel
561AB	Midspan Fixed Trailing Edge Panel
561BB	Midspan Fixed Trailing Edge Panel

- 4) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.

- a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.

- (2) Look for a broken or disconnected torque tube between transmission No. 6 and transmission No. 7:

- (a) If the flap is retracted, remove these access panels to get access to the torque tubes

4) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System
Test-FSEU 1, Test of Flaps Only.

a) If the MAT EXISTING FAULTS display does not show LATCHED for the
maintenance message, then you corrected the fault.

(c) If you do not see a broken or disconnected torque tube, then continue.

(3) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

(4) Use the primary system to extend or retract the flaps to another position. To extend or retract
them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM
TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN
CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get
FSEU 1 IN CONTROL.

(a) If the MAT does not show LATCHED for the maintenance message, then you corrected
the fault.

777-200/300 FAULT ISOLATION MANUAL

824. Flap Support No. 3 Skew Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20531.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) For flap support No. 3, do this task: Outboard Flap Support Aft Fairing Removal, AMM TASK 27-51-18-000-802.
- (2) Visually examine these components on flap support No. 3 and replace those that have damage:
 - (a) Ballscrew and gimbal.
These are the tasks:
Inboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-802,
Inboard Flap Outboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-802.
 - (b) Transmission and yoke.
These are the tasks:
Inboard Flap Outboard Transmission Removal, AMM TASK 27-51-15-000-802,
Inboard Flap Outboard Transmission Installation, AMM TASK 27-51-15-400-802.
 - (c) Flap support mechanism.
These are the tasks:
Pivot Link, Fairing Links and Spring Removal, AMM TASK 27-51-14-020-801,
Drive Arm Removal, AMM TASK 27-51-14-020-805.
 - (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
- (3) Replace the two flap skew sensors M27327 and M27335 at flap support No. 3.
These are the tasks:
Inboard Flap Outboard Skew Sensor - Removal, AMM TASK 27-59-01-000-808-002,
Inboard Flap Outboard Skew Sensor - Installation, AMM TASK 27-59-01-400-808-002.
- (4) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Visually examine these components on flap support No. 4 and replace those that have damage:
 - (a) Ballscrew and gimbal.
These are the tasks:
Inboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-801,
Inboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-801.
 - (b) Transmission and yoke.
These are the tasks:
Inboard Flap Inboard Transmission Removal, AMM TASK 27-51-15-000-801,
Inboard Flap Inboard Transmission Installation, AMM TASK 27-51-15-400-801.
 - (c) Flap support mechanism.
These are the tasks:
Bellcrank and Drive Links Removal, AMM TASK 27-51-13-000-801,
Bellcrank and Drive Links Installation, AMM TASK 27-51-13-400-804.
 - (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
- (4) Replace the two flap skew sensors M27329 and M27337 at flap support No. 4.
These are the tasks:
Inboard Flap Inboard Skew Sensor - Removal, AMM TASK 27-59-01-000-809-002,
Inboard Flap Inboard Skew Sensor - Installation, AMM TASK 27-59-01-400-809-002.
- (5) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.

777-200/300
FAULT ISOLATION MANUAL

- (6) Do this check of the wiring between FSEU 1 and FSEU 2 and the flap skew sensors on the flap support No. 4

- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
(c) Remove FSEU 2, M27002 from the E4-1 shelf.
(d) Disconnect the connector DM27329 from the flap skew sensor M27329.
(e) Disconnect the connector DM27335 from the flap skew sensor M27335.
(f) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27329 at the flap skew sensor, M27329 (WDM 27-59-11):

DM27001AC	DM27329
pin A10	pin 5
pin A11	pin 6

- (g) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27337 at the flap skew sensor, M27337 (WDM 27-59-12):

DM27002AC	DM27337
pin A10	pin 5
pin A11	pin 6

- (h) If you find a problem with the wiring, repair the wiring.
(i) Re-install FSEU 1, M27001.
(j) Re-install FSEU 2, M27002.
(k) Reconnect connector DM27329.
(l) Reconnect connector DM27337.
(m) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

FAULT ISOLATION MANUAL

- (7) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then continue.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (8) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

- (9) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (10) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.

END OF TASK

827. Flap Supports No. 4 and No. 5 Skew Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20561.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
- (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Look for a broken or disconnected torque tube in the left wheel well, between transmission No. 4 and the flap power drive unit:
- (a) If you see a broken or disconnected torque tube, do these steps:
- 1) Replace the applicable torque tube.
These are the tasks:
Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.
 - 2) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
 - 3) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If you do not see a broken or disconnected torque tube, then continue.
- (4) Look for a broken or disconnected torque tube in the right wheel well, between transmission No. 5 and the flap power drive unit:
- (a) If you see a broken or disconnected torque tube, do these steps:
- 1) Replace the applicable torque tube.
These are the tasks:
Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.
 - 2) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
 - 3) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If you do not see a broken or disconnected torque tube, then continue.

A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Disconnect the connector DM27324 from the flap skew sensor M27324.
- (e) Disconnect the connector DM27332 from the flap skew sensor M27332.
- (f) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27324 at the flap skew sensor, M27324 (WDM 27-59-13):

DM27001AA	DM27324
pin E11	pin 5
pin D11	pin 6

- (g) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27332 at the flap skew sensor, M27332 (WDM 27-59-14):

DM27002AA	DM27332
pin E11	pin 5
pin D11	pin 6

- (h) If you find a problem with the wiring, repair the wiring.
- (i) Re-install FSEU 1, M27001.
- (j) Re-install FSEU 2, M27002.
- (k) Reconnect connector DM27324.
- (l) Reconnect connector DM27332.
- (m) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

27-59 TASK 830

D633W103-ARO

Page 274
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (8) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

831. Flap Supports No. 7 and No. 8 Skew Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20621.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
- (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for a broken or disconnected torque tube between transmission No. 6 and transmission No. 7:

- (a) If the flap is retracted, remove these access panels to get access to the torque tubes

<u>Number</u>	<u>Name/Location</u>
552HB	Inboard Fixed Trailing Edge Panel
552JB	Fixed Trailing Edge Panel
552LB	Outboard Fixed Trailing Edge Panel
561AB	Midspan Fixed Trailing Edge Panel
561BB	Midspan Fixed Trailing Edge Panel

- (b) If you see a broken or disconnected torque tube, do these steps:
- 1) Replace the applicable torque tube or torque tube support:
- a) These are the tasks:
Outboard Wing Flap Torque Tube Removal, AMM TASK 27-51-38-000-801,
Outboard Wing Flap Torque Tube Installation, AMM TASK 27-51-38-400-801.
- b) These are the tasks:
Outboard Wing Torque Tube Support Removal, AMM TASK 27-51-39-000-802,
Outboard Wing Torque Tube Support Installation, AMM TASK 27-51-39-400-802.
- 2) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.

- (19) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.

————— END OF TASK —————

833. Flap Skew Sensors 2 and 7 Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25381.

B. Initial Evaluation

- (1) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only:
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

- (1) Look at the HIGH LIFT EICAS maintenance page to see which flap skew sensor indication does not agree with the other indications:
 - (a) Look at the indications OUTBD FLAP L2 A and R7 A to see which does not agree with L2 B and R7 B.
 - (b) If the indication OUTBD FLAP R7 A does not agree with the other indications, look for problems at flap support No. 7 on the right wing first.
 - (c) If the indication OUTBD FLAP L2 A does not agree with the other indications, look for problems at flap support No. 2 on the left wing first.
- (2) Replace the flap skew sensor R7 A, M27324 on flap support No. 7.

These are the tasks:

Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,

Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

- (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the flap skew sensor L2 A, M27325 on flap support No. 2.

These are the tasks:

Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,

Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

- (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (5) Do a wiring check between FSEU 1, M27001 and flap skew sensor R7 A, M27324:
 - (a) Disconnect the electrical connector DM27324 from the flap skew sensor R7 A, M27324.
 - (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27324 at the flap skew sensor R7 A, M27324 (WDM 27-59-13):

DM27001AA	DM27324
pin E11	pin 5
pin D11	pin 6

- (d) If you find a problem with the wiring, do these steps:

D633W103-ARO

Page 284
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 1) Repair the wiring.
- 2) Re-install FSEU 1, M27001.
- 3) Re-connect connector DM27324.
- 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (6) Do a wiring check between FSEU 1, M27001 and flap skew sensor L2 A, M27325.
 - (a) Disconnect electrical connector DM27323 from the flap skew sensor L2 A, M27325.
 - (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27325 at the flap skew sensor L2 A, M27325 (WDM 27-59-11):

DM27001AC	DM27325
pin F11	pin 5
pin G11	pin 6

- (d) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27325.
 - 4) Re-connect connector DM27324.
 - 5) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 6) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (7) Do a wiring check between flap skew sensor R7 A, M27324 and flap skew sensor R6 A, M27326:
 - (a) Disconnect the electrical connector DM27326 from the flap skew sensor R6 A, M27326.

— END OF TASK —

834. Flap Skew Sensors 3 and 6 Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25391.

B. Initial Evaluation

- (1) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only:
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the HIGH LIFT Eicas maintenance page to see which flap skew sensor indication does not agree with the other indications:
 - (a) Look at the indications OUTBD FLAP L3 A and R6 A to see which is does not agree with L3 B and R6 B.
 - (b) If the indication OUTBD FLAP R6 A does not agree with the other indications, look for problems at flap support No. 6 on the right wing first.
 - (c) If the indication OUTBD FLAP L3 A does not agree with the other indications, look for problems at flap support No. 3 on the left wing first.
- (2) Replace the flap skew sensor R6 A, M27326 on flap support No. 6.
These are the tasks:
Inboard Flap Outboard Skew Sensor - Removal, AMM TASK 27-59-01-000-808-002,
Inboard Flap Outboard Skew Sensor - Installation, AMM TASK 27-59-01-400-808-002.
 - (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the flap skew sensor L3 A, M27327 on flap support No. 3.

pin 4	pin 3

- (c) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27329.
 - 4) Re-connect connector DM27327.
 - 5) Remove the safety tags and close these circuit breakers:
- Standby Power Management Panel, P310**
- | <u>Row</u> | <u>Col</u> | <u>Number</u> | <u>Name</u> |
|------------|------------|---------------|-------------|
| A | 8 | C27513 | SNSR EXC 1 |
| D | 3 | C27601 | FSEU 1 |
- 6) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (d) If you do not find a problem with the wiring, then continue.
- (11) Install a new FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (12) Re-connect connector DM27327.
- (13) Re-connect connector DM27329.
- (14) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

 - (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (22) For flap supports No. 3 and No. 6, do this task: Outboard Flap Support Aft Fairing Installation, AMM TASK 27-51-18-400-802.

————— **END OF TASK** —————

835. Flap Skew Sensors 4 and 5 Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25401.

B. Initial Evaluation

- (1) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only:
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the HIGH LIFT Eicas maintenance page to see which flap skew sensor indication does not agree with the other indications:
- (a) Look at the indications OUTBD FLAP L4 A and R5 A to see which does not agree with L4 B and R5 B.
 - (b) If the indication OUTBD FLAP R5 A does not agree with the other indications, look for problems at flap support No. 5 on the right wing first.
 - (c) If the indication OUTBD FLAP L4 A does not agree with the other indications, look for problems at flap support No. 4 on the left wing first.
- (2) Replace the flap skew sensor R5 A, M27328 on flap support No. 5.

777-200/300 FAULT ISOLATION MANUAL

These are the tasks:

Inboard Flap Inboard Skew Sensor - Removal, AMM TASK 27-59-01-000-809-002,
Inboard Flap Inboard Skew Sensor - Installation, AMM TASK 27-59-01-400-809-002.

- (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the flap skew sensor L4 A, M27329 on flap support No. 4.

These are the tasks:

Inboard Flap Inboard Skew Sensor - Removal, AMM TASK 27-59-01-000-809-002,
Inboard Flap Inboard Skew Sensor - Installation, AMM TASK 27-59-01-400-809-002.

- (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (5) Do a wiring check between FSEU 1, M27001 and flap skew sensor R5 A, M27328:
 - (a) Disconnect the electrical connector DM27328 from the flap skew sensor R5 A, M27328.
 - (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27328 at the flap skew sensor R5 A, M27328 (WDM 27-58-11) and (WDM 27-59-13):

DM27001AA	DM27328
pin K10	pin 5
pin K11	pin 6
pin A3	pin 1
pin B3	pin 3

- (d) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27328.

— END OF TASK —

836. Flap Skew Sensor 1 Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20282.

B. Description

- (1) There is one Skew Sensor installed at Flap Supports 1 and 2.
 - (a) Sensor M27338 is installed at Flap Support No. 1.
 - (b) Sensor M27339 is installed at Flap Support No. 2.

C. Possible Causes

- (1) Flap Skew Sensor L1 B, M27338
- (2) Wiring
- (3) FSEU 2, M27002

D. Circuit Breakers

- (1) These are the primary circuit breakers related to the fault:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

E. Related Data

- (1) WDM 27-59-12

F. Initial Evaluation

- (1) Use the Primary System to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT Maintenance Page on the EICAS Display to make sure that FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM Switch to put FSEU 2 IN CONTROL.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then there was an intermittent fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.

FAULT ISOLATION MANUAL**

G. Fault Isolation Procedure - With Flap Skew Detection Redesign

- (1) Replace the Flap Skew Sensor L1 B, M27338 on the No. 1 Flap Support Mechanism. These are the tasks:
 - Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002
 - Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002
- (a) Do the Repair Confirmation at the end of this task.
- (2) Do a wiring check between the FSEU 2 and Flap Skew Sensor L1 B, M27338 as follows (WDM 27-59-12):
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Disconnect the electrical connector, DM27338 from the Flap Skew Sensor L1 B, M27338.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (d) Examine the wiring as follows:

FSEU 2	SKEW SNSR
M27002AC	L1B
	DM27338B
pin J11	pin 5
pin K11	pin 6

- (e) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
 - 3) Re-connect connector DM27338B.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Do the Repair Confirmation at the end of this task.
 - (f) If you do not find a problem with the wiring, continue.
- (3) Do a wiring check between Flap Skew Sensors L1B, M27338 and L2A, M27339 (WDM 27-59-12):
 - (a) Disconnect the electrical connector, DM27333 from the Flap Skew Sensor L2 B, M27339.
 - (b) Examine the wiring as follows :

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

6) Do the Repair Confirmation at the end of this task.

(d) If you do not find a problem with the wiring, continue.

- (4) Install a new FSEU 2, M27002. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (5) Re-connect the electrical connector, DM27338B on the Flap Skew Sensor L1 B.
- (6) Re-connect the electrical connector, DM27339A on the Flap Skew Sensor L2 A.
- (7) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

(8) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Use the Primary System to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT Maintenance Page on the EICAS Display to make sure that FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM Switch to put FSEU 2 IN CONTROL.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the problem.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue the Fault Isolation Procedure at the subsequent step.

777-200/300 FAULT ISOLATION MANUAL

837. Flap Skew Sensor 2 Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20292.

B. General

- (1) There is one skew sensor installed at flap supports 2 and 3.
 - (a) Sensor M27339 is installed at flap support No. 2.
 - (b) Sensor M27340 is installed at flap support No. 3.

C. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

D. Fault Isolation Procedure

- (1) Replace the flap skew sensor L2 B, M27333 on the number 2 flap support mechanism.

These are the tasks:

Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,

Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Do a wiring check between FSEU 2, M27002 and flap skew sensor L2 B, M27333:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Disconnect the electrical connector, DM27333 from the flap skew sensor L2 B, M27333.
 - (c) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (d) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27333 at the flap skew sensor L2 B, M27333 (WDM 27-59-12):

DM27002AC	DM27333
pin F11	pin 5
pin G11	pin 6

- (e) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27333.

- 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- (f) If you did not find a problem with the wiring, or if the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do a wiring check between flap skew sensors L3 B, M27335 and L2 B, M27333:
- (a) Disconnect the electrical connector, DM27335 from the flap skew sensor L3 B, M27335.
- (b) Do a wiring check between these pins of connector DM27335 at the flap skew sensor L3 B, M27335 and connector DM27333 at the flap skew sensor L2 B, M27333 (WDM 27-59-12):

DM27335	DM27333
pin 2	pin 1
pin 4	pin 3

- (c) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27333.
 - 3) Re-connect connector DM27335.
 - 4) Re-install FSEU 2, M27002.
 - 5) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2

- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27334 at the flap skew sensor R6 B, M27334 (WDM 27-59-14):

DM27002AA		DM27334	
pin H11		pin 5	
pin G11		pin 6	

- (e) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27334.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - (f) If you do not a problem with the wiring, or if the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do a wiring check between flap skew sensor R5 B, M27336 and flap skew sensor R6 B, M27334:
- (a) Disconnect the electrical connector, DM27336 from the flap skew sensor R5 B, M27336.
 - (b) Do a wiring check between these pins of connector DM27336 at the flap skew sensor R5 B, M27336 and connector DM27334 at the flap skew sensor R6 B, M27334 (WDM 27-59-14):

DM27336		DM27334	
pin 2		pin 1	
pin 4		pin 3	

- (c) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27334.
 - 3) Re-connect connector DM27336.
 - 4) Re-install FSEU 2, M27002.

C. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

D. Fault Isolation Procedure

- (1) Replace the flap skew sensor R7 B, M27332 on the number 7 flap support mechanism.

These are the tasks:

Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,

Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Do a wiring check between FSEU 2, M27002 and flap skew sensor R7 B, M27332:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Disconnect the electrical connector, DM27332 from the flap skew sensor R7 B, M27332.
 - (c) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (d) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27332 at the flap skew sensor R7 B, M27332 (WDM 27-59-14):

<u>DM27002AA</u>	<u>DM27332</u>
pin E11	pin 5
pin D11	pin 6

- (e) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27332.
 - 4) Remove the safety tags and close these circuit breakers:

777-200/300 FAULT ISOLATION MANUAL

Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,
Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (4) Do a wiring check between FSEU 2, M27002 and flap skew sensor R7 B, M27332:
- (a) Disconnect the electrical connector DM27332 from the flap skew sensor R7 B, M27332.
 - (b) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (c) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27332 at the flap skew sensor R7 B, M27332 (WDM 27-59-14):

DM27002AA	DM27332
pin E11	pin 5
pin D11	pin 6

- (d) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27332.
 - (e) If you do not find a problem with the wiring, then continue.
- (5) Do a wiring check between FSEU 2, M27002 and flap skew sensor L2 B, M27333.
- (a) Disconnect electrical connector DM27333 from the flap skew sensor L2 B, M27333.
 - (b) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (c) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27333 at the flap skew sensor L2 B, M27333 (WDM 27-59-12):

DM27002AC	DM27333
pin F11	pin 5
pin G11	pin 6

- (d) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27333.
 - (e) If you do not find a problem with the wiring, then continue.
- (6) Do a wiring check between flap skew sensor R7 B, M27332 and flap skew sensor R6 B, M27334:
- (a) Disconnect the electrical connector DM27334 from the flap skew sensor R6 B, M27334.

**777-200/300
FAULT ISOLATION MANUAL**

- (b) Do a wiring check between these pins of connector DM27334 at the flap skew sensor R6 B, M27334 and connector DM27332 at the flap skew sensor R7 B, M27332 (WDM 27-59-14):

DM27334	DM27332
pin 2	pin 1
pin 4	pin 3

- (c) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27334.
 - 4) Re-connect connector DM27332.
- (d) If you do not find a problem with the wiring, then continue.
- (7) Do a wiring check between flap skew sensor L2 B, M27333 and flap skew sensor L3 B, M27335:
- (a) Disconnect the electrical connector DM27335 from the flap skew sensor R3 B, M27335.
- (b) Do a wiring check between these pins of connector DM27335 at the flap skew sensor L3 B, M27335 and connector DM27333 at the flap skew sensor L2 B, M27333 (WDM 27-59-12):

DM27327	DM27325
pin 2	pin 1
pin 4	pin 3

- (c) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27333.
 - 4) Re-connect connector DM27335.
- (d) If you do not find a problem with the wiring, then continue.
- (8) Install a new FSEU 2, M27002. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (9) Re-connect connector DM27332.
- (10) Re-connect connector DM27333.
- (11) Re-connect connector DM27334.
- (12) Re-connect connector DM27335.
- (13) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

FAULT ISOLATION MANUAL

- (14) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

————— **END OF TASK** —————

846. Flap Skew Sensors 3 and 6 Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20672.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the flap skew sensor R6 B, M27334 on the number 6 flap support mechanism.

These are the tasks:

Inboard Flap Outboard Skew Sensor - Removal, AMM TASK 27-59-01-000-808-002,

Inboard Flap Outboard Skew Sensor - Installation, AMM TASK 27-59-01-400-808-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Replace the flap skew sensor L3 B, M27335 on the number 3 flap support mechanism.
- These are the tasks:
- Inboard Flap Outboard Skew Sensor - Removal, AMM TASK 27-59-01-000-808-002,
- Inboard Flap Outboard Skew Sensor - Installation, AMM TASK 27-59-01-400-808-002.
- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (4) Do a wiring check between FSEU 2, M27002 and flap skew sensor R6 B, M27334:
- (a) Disconnect the electrical connector DM27334 from the flap skew sensor R6 B, M27334.
- (b) Remove FSEU 2, M27002 from the E4-1 shelf.

**777-200/300
FAULT ISOLATION MANUAL**

- (c) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27334 at the flap skew sensor R6 B, M27334 (WDM 27-59-14):

DM27002AA	DM27334
pin H11	pin 5
pin G11	pin 6

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27334.
- (e) If you do not find a problem with the wiring, then continue.
- (5) Do a wiring check between FSEU 2, M27002 and flap skew sensor L3 B, M27335.
- (a) Disconnect electrical connector DM27335 from the flap skew sensor L3 B, M27325.
- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27335 at the flap skew sensor L3 B, M27335 (WDM 27-59-12):

DM27002AC	DM27335
pin C11	pin 5
pin D11	pin 6

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27335.
- (e) If you do not find a problem with the wiring, then continue.
- (6) Do a wiring check between flap skew sensor R6 B, M27334 and flap skew sensor R5 B, M27336:
- (a) Disconnect the electrical connector DM27336 from the flap skew sensor R5 B, M27336.
- (b) Do a wiring check between these pins of connector DM27336 at the flap skew sensor R5 B, M27336 and connector DM27334 at the flap skew sensor R6 B, M27334 (WDM 27-59-14):

DM27336	DM273234
pin 2	pin 1
pin 4	pin 3

- (c) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27336.
 - 4) Re-connect connector DM27334
- (d) If you do not find a problem with the wiring, then continue.

777-200/300 FAULT ISOLATION MANUAL

- (7) Do a wiring check between flap skew sensor L3 B, M27335 and flap skew sensor L4 B, M27337:
- (a) Disconnect the electrical connector DM27337 from the flap skew sensor R4 B, M27337.
 - (b) Do a wiring check between these pins of connector DM27337 at the flap skew sensor L4 B, M27337 and connector DM27335 at the flap skew sensor L3 B, M27335 (WDM 27-59-12):

DM27337	DM27335
pin 2	pin 1
pin 4	pin 3

- (c) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27337.
 - 4) Re-connect connector DM27335.
- (d) If you do not find a problem with the wiring, then continue.
- (8) Install a new FSEU 2, M27002. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (9) Re-connect connector DM27334.
- (10) Re-connect connector DM27335.
- (11) Re-connect connector DM27336.
- (12) Re-connect connector DM27337.
- (13) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (14) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the flap skew sensor R5 B, M27336 on the number 5 flap support mechanism.

These are the tasks:

Inboard Flap Inboard Skew Sensor - Removal, AMM TASK 27-59-01-000-809-002,

Inboard Flap Inboard Skew Sensor - Installation, AMM TASK 27-59-01-400-809-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Replace the flap skew sensor L4 B, M27337 on the number 4 flap support mechanism.

These are the tasks:

Inboard Flap Inboard Skew Sensor - Removal, AMM TASK 27-59-01-000-809-002,

Inboard Flap Inboard Skew Sensor - Installation, AMM TASK 27-59-01-400-809-002.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (a) Disconnect the electrical connector DM27336 from the flap skew sensor R5 B, M27336.
 - (b) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (c) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27336 at the flap skew sensor R5 B, M27336 (WDM 27-58-12) and (WDM 27-59-14):

DM27002AA	DM27336
pin K10	pin 5
pin K11	pin 6
pin A3	pin 1
pin B3	pin 3

- (d) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27336.

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for a broken or disconnected torque tube between transmission No. 1 and transmission No. 2:
 - (a) If the flap is retracted, remove these access panels to get access to the torque tubes

<u>Number</u>	<u>Name/Location</u>
561CB	Midspan Fixed Trailing Edge Panel
561DB	Midspan Fixed Trailing Edge Panel
561EB	Midspan Fixed Trailing Edge Panel
 - (b) If you see a broken or disconnected torque tube, do these steps:
 - 1) Replace the applicable torque tube, torque tube support or no-back brake:
 - a) These are the tasks:
Outboard Wing Flap Torque Tube Removal, AMM TASK 27-51-38-000-801,
Outboard Wing Flap Torque Tube Installation, AMM TASK 27-51-38-400-801.
 - b) These are the tasks:
Outboard Wing Torque Tube Support Removal, AMM TASK 27-51-39-000-802,
Outboard Wing Torque Tube Support Installation, AMM TASK 27-51-39-400-802.
 - 2) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
 - 3) Install these access panels if you removed them,

<u>Number</u>	<u>Name/Location</u>
561CB	Midspan Fixed Trailing Edge Panel
561DB	Midspan Fixed Trailing Edge Panel
561EB	Midspan Fixed Trailing Edge Panel
 - 4) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (c) If you do not see a broken torque tube, then continue.
- (2) For flap support No. 1, do this task: Outboard Flap Support Fairing Removal, AMM TASK 27-51-28-000-801.
- (3) Visually examine these components and replace those that have damage:
 - (a) Ballscrew and gimbal.

777-200/300 FAULT ISOLATION MANUAL

These are the tasks:

Outboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-801,
Outboard Flap Outboard Ballscrew and Gimbal Installation, AMM
TASK 27-51-26-400-801.

- (b) Transmission and yoke.

These are the tasks:

Outboard Flap Outboard Transmission Removal, AMM TASK 27-51-25-000-802,
Outboard Flap Outboard Transmission Installation, AMM TASK 27-51-25-400-802.

- (c) Flap support mechanism.

These are the tasks:

Outboard Flap Outboard Support Mechanism Removal, AMM TASK 27-51-22-000-801,
Outboard Flap Outboard Support Mechanism - Installation, AMM
TASK 27-51-22-400-801.

- (4) If you replaced a component above, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (5) For flap support No. 1, do this task: Outboard Flap Support Fairing Installation, AMM TASK 27-51-28-400-801.
- (6) Replace the FSEU 2, M27002.
- These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (7) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then continue.
- (8) Replace the two flap skew sensors M27323 and M27331 at flap support No. 1.
- These are the tasks:
- Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,
Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.
- (9) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Disconnect the connector DM27323 from the flap skew sensor M27323.
- (e) Disconnect the connector DM27331 from the flap skew sensor M27331.
- (f) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27323 at the flap skew sensor, M27323 (WDM 27-59-11):

DM27001AC	DM27323
pin J11	pin 5
pin K11	pin 6

- (g) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27331 at the flap skew sensor, M27331 (WDM 27-59-12):

DM27002AC	DM27331
pin J11	pin 5
pin K11	pin 6

- (h) If you find a problem with the wiring, repair the wiring.
- (i) Re-install FSEU 1, M27001.
- (j) Re-install FSEU 2, M27002.
- (k) Reconnect connector DM27323.
- (l) Reconnect connector DM27331.
- (m) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

777-200/300 FAULT ISOLATION MANUAL

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (11) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then continue.
- (12) Do this check of the wiring between the flap skew sensors on the flap supports No. 1 and No. 2:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1

- (b) Disconnect the connector DM27323 from the flap skew sensor M27323.
- (c) Disconnect the connector DM27331 from the flap skew sensor M27331.
- (d) Disconnect the connector DM27325 from the flap skew sensor M27325.
- (e) Disconnect the connector DM27333 from the flap skew sensor M27333.
- (f) Do a wiring check between these pins of connector DM27325 at the flap skew sensor, M27325 and connector DM27323 at the flap skew sensor, M27323 (WDM 27-59-11):

DM27325	DM27323
pin 2	pin 1
pin 4	pin 3

- (g) Do a wiring check between these pins of connector DM27333 at the flap skew sensor, M27333 and connector DM27331 at the flap skew sensor, M27331 (WDM 27-59-12):

DM27333	DM27331
pin 2	pin 1
pin 4	pin 3

- (h) If you find a problem with the wiring, repair the wiring.
- (i) Reconnect connector DM27325.
- (j) Reconnect connector DM27333.

- (k) Reconnect connector DM27323.
- (l) Reconnect connector DM27331.
- (m) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1

- (13) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows LATCHED for the maintenance message, then continue.
- (14) Replace the two flap skew sensors M27322 and M27330 at flap support No. 8.
These are the tasks:
Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,
Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.
- (15) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (16) Do this check of the wiring between FSEU 1 and FSEU 2 and the flap skew sensors on the flap support No. 8:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.

————— END OF TASK —————

849. Flap Supports No. 1 and No. 2 Skew Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20472.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for a broken or disconnected torque tube between transmission No. 2 and transmission No. 3:

- (a) If the flap is retracted, remove these access panels to get access to the torque tubes

<u>Number</u>	<u>Name/Location</u>

- (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for a broken or disconnected torque tube in the left wheel well, between transmission No. 4 and the flap power drive unit:

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (a) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (b) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (c) If you see a broken or disconnected torque tube, do these steps:

- 1) Replace the applicable torque tube.

These are the tasks:

Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.

- 2) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
- 3) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (d) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
- (e) If you do not see a broken or disconnected torque tube, then continue.
- (2) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

777-200/300 FAULT ISOLATION MANUAL

- a) These are the tasks:
Outboard Wing Flap Torque Tube Removal, AMM TASK 27-51-38-000-801,
Outboard Wing Flap Torque Tube Installation, AMM TASK 27-51-38-400-801.
- b) These are the tasks:
Outboard Wing Torque Tube Support Removal, AMM TASK 27-51-39-000-802,
Outboard Wing Torque Tube Support Installation, AMM
TASK 27-51-39-400-802.
- 2) Do this task: Trailing Edge Flap Drive System Adjustment, AMM
TASK 27-51-00-820-801.
- 3) Install these access panels if you removed them,

<u>Number</u>	<u>Name/Location</u>
661CB	Midspan Fixed Trailing Edge Panel
661DB	Midspan Fixed Trailing Edge Panel
661EB	Midspan Fixed Trailing Edge Panel
- 4) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System
Test-FSEU 2, Test of Flaps Only.
 - a) If the MAT EXISTING FAULTS display does not show LATCHED for the
maintenance message, then you corrected the fault.
 - (c) If you do not see a broken torque tube, then continue.
- (5) For flap support No. 8, do this task: Outboard Flap Support Fairing Removal, AMM
TASK 27-51-28-000-801.
- (6) Visually examine these components on flap support No. 8 and replace those that have
damage:
 - (a) Ballscrew and gimbal.
These are the tasks:
Outboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-801,
Outboard Flap Outboard Ballscrew and Gimbal Installation, AMM
TASK 27-51-26-400-801.
 - (b) Transmission and yoke.
These are the tasks:
Outboard Flap Outboard Transmission Removal, AMM TASK 27-51-25-000-802,
Outboard Flap Outboard Transmission Installation, AMM TASK 27-51-25-400-802.
 - (c) Flap support mechanism.
These are the tasks:
Outboard Flap Outboard Support Mechanism Removal, AMM TASK 27-51-22-000-801,
Outboard Flap Outboard Support Mechanism - Installation, AMM
TASK 27-51-22-400-801.
 - (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System,
System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the MAT EXISTING FAULTS display does not show LATCHED for the
maintenance message, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- (7) For flap supports No. 1 and No. 8, do this task: Outboard Flap Support Fairing Installation, AMM TASK 27-51-28-400-801.
- (8) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (9) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

853. Flap Support No. 2 Skew Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20512.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) For flap support No. 2, do this task: Outboard Flap Support Fairing Removal, AMM TASK 27-51-28-000-801.
- (2) Visually examine these components on flap support No. 2 and replace those that have damage:
 - (a) Ballscrew and gimbal.

These are the tasks:

Outboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-802,
Outboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-26-400-802.
 - (b) Transmission and yoke.

These are the tasks:

Outboard Flap Inboard Transmission Removal, AMM TASK 27-51-25-000-801,
Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801.
 - (c) Flap support mechanism.

777-200/300 FAULT ISOLATION MANUAL

854. Flap Supports No. 2 and No. 7 Skew Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20522.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for a broken or disconnected torque tube between transmission No. 2 and transmission No. 3:

- (a) If the flap is retracted, remove these access panels to get access to the torque tubes

<u>Number</u>	<u>Name/Location</u>
552HB	Inboard Fixed Trailing Edge Panel
552JB	Fixed Trailing Edge Panel
552LB	Outboard Fixed Trailing Edge Panel

- (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Visually examine these components on flap support No. 4 and replace those that have damage:
- (a) Ballscrew and gimbal.
These are the tasks:
Inboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-801,
Inboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-801.
 - (b) Transmission and yoke.
These are the tasks:
Inboard Flap Inboard Transmission Removal, AMM TASK 27-51-15-000-801,
Inboard Flap Inboard Transmission Installation, AMM TASK 27-51-15-400-801.
 - (c) Flap support mechanism.
These are the tasks:
Bellcrank and Drive Links Removal, AMM TASK 27-51-13-000-801,
Bellcrank and Drive Links Installation, AMM TASK 27-51-13-400-804.
 - (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
- (4) Replace the two flap skew sensors M27329 and M27337 at flap support No. 4.
These are the tasks:
Inboard Flap Inboard Skew Sensor - Removal, AMM TASK 27-59-01-000-809-002,
Inboard Flap Inboard Skew Sensor - Installation, AMM TASK 27-59-01-400-809-002.
- (5) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (6) Do this check of the wiring between FSEU 1 and FSEU 2 and the flap skew sensors on the flap support No. 4
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Disconnect the connector DM27329 from the flap skew sensor M27329.
- (e) Disconnect the connector DM27335 from the flap skew sensor M27335.
- (f) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27329 at the flap skew sensor, M27329 (WDM 27-59-11):

DM27001AC	DM27329
pin A10	pin 5
pin A11	pin 6

- (g) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27337 at the flap skew sensor, M27337 (WDM 27-59-12):

DM27002AC	DM27337
pin A10	pin 5
pin A11	pin 6

- (h) If you find a problem with the wiring, repair the wiring.
- (i) Re-install FSEU 1, M27001.
- (j) Re-install FSEU 2, M27002.
- (k) Reconnect connector DM27329.
- (l) Reconnect connector DM27337.
- (m) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (3) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

861. Flap Support No. 6 Skew Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20592.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

- (1) For flap support No. 6, do this task: Outboard Flap Support Aft Fairing Removal, AMM TASK 27-51-18-000-802.
- (2) Visually examine these components on flap support No. 6 and replace those that have damage:
 - (a) Ballscrew and gimbal.
These are the tasks:
Inboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-802,
Inboard Flap Outboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-802.
 - (b) Transmission and yoke.
These are the tasks:
Inboard Flap Outboard Transmission Removal, AMM TASK 27-51-15-000-802,
Inboard Flap Outboard Transmission Installation, AMM TASK 27-51-15-400-802.
 - (c) Flap support mechanism.
These are the tasks:
Pivot Link, Fairing Links and Spring Removal, AMM TASK 27-51-14-020-801,
Drive Arm Removal, AMM TASK 27-51-14-020-805.
 - (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
- (3) Replace the two flap skew sensors M27326 and M27334 at flap support No. 6.
These are the tasks:
Inboard Flap Outboard Skew Sensor - Removal, AMM TASK 27-59-01-000-808-002,
Inboard Flap Outboard Skew Sensor - Installation, AMM TASK 27-59-01-400-808-002.
- (4) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (5) Do this check of the wiring between FSEU 1 and FSEU 2 and the flap skew sensors on the flap support No. 6:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,
Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

- (9) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Flaps Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (10) Do this check of the wiring between FSEU 1 and FSEU 2 and the flap skew sensors on the flap support No. 8
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Disconnect the connector DM27322 from the flap skew sensor M27322.
- (e) Disconnect the connector DM27330 from the flap skew sensor M27330.
- (f) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27322 at the flap skew sensor, M27322 (WDM 27-59-13):

DM27001AA	DM27322
pin B11	pin 5
pin A11	pin 6

- (g) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27330 at the flap skew sensor, M27330 (WDM 27-59-14):

DM27002AA	DM27330
pin B11	pin 5
pin A11	pin 6

- (h) If you find a problem with the wiring, repair the wiring.
- (i) Re-install FSEU 1, M27001.
- (j) Re-install FSEU 2, M27002.
- (k) Reconnect connector DM27322.
- (l) Reconnect connector DM27330.

FAULT ISOLATION MANUAL**

- (m) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (11) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then continue.
- (12) Do this check of the wiring between the flap skew sensors on the flap supports No. 7 and No. 8:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1

- (b) Disconnect the connector DM27324 from the flap skew sensor M27324.
- (c) Disconnect the connector DM27332 from the flap skew sensor M27332.
- (d) Disconnect the connector DM27322 from the flap skew sensor M27322.
- (e) Disconnect the connector DM27330 from the flap skew sensor M27330.
- (f) Do a wiring check between these pins of connector DM27324 at the flap skew sensor, M27324 and connector DM27322 at the flap skew sensor, M27322 (WDM 27-59-13):

DM27324	DM27322
pin 2	pin 1
pin 4	pin 3

- (g) Do a wiring check between these pins of connector DM27332 at the flap skew sensor, M27332 and connector DM27330 at the flap skew sensor, M27330 (WDM 27-59-14):

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

866. Flap Skew Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20642.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for broken or disconnected torque tubes for the flaps:

NOTE: It is likely there are multiple broken or disconnected torque tubes in the flap drive system.

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (a) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (3) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the HIGH LIFT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the MAT does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

867. Flap Skew Sensors 1 and 8 Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25372.

B. Initial Evaluation

- (1) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only:
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the HIGH LIFT Eicas maintenance page to see which flap skew sensor indication does not agree with the other indications:
 - (a) Look at the indications OUTBD FLAP L1 B and R8 B to see which does not agree with L1 A and R8 A.
 - (b) If the indication OUTBD FLAP R8 B does not agree with the other indications, look for problems at flap support No. 8 on the right wing first.
 - (c) If the indication OUTBD FLAP L1 B does not agree with the other indications, look for problems at flap support No. 1 on the left wing first.
- (2) Replace the flap skew sensor R8 B, M27330 on flap support No. 8.
These are the tasks:
Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,
Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.
 - (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the flap skew sensor L1 B, M27331 on flap support No. 1.
These are the tasks:
Outboard Flap Skew Sensor - Removal, AMM TASK 27-59-01-000-807-002,
Outboard Flap Skew Sensor - Installation, AMM TASK 27-59-01-400-807-002.

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (5) Do a wiring check between FSEU 2, M27002 and flap skew sensor R8 B, M27330:
- (a) Disconnect the electrical connector DM27330 from the flap skew sensor R8 B, M27330.
 - (b) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (c) Do a wiring check between these pins of connector DM27001AA at the E4-1 shelf and connector DM27330 at the flap skew sensor R8 B, M27330 (WDM 27-59-14):

DM27002AA	DM27330
pin B11	pin 5
pin A11	pin 6

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27330.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (6) Do a wiring check between FSEU 2, M27002 and flap skew sensor L1 B, M27331.
- (a) Disconnect electrical connector DM27331 from the flap skew sensor L1 B, M27331.
 - (b) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (c) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27331 at the flap skew sensor L1 B, M27331 (WDM 27-59-12):

DM27002AC	DM27331
pin J11	pin 5
pin K11	pin 6

777-200/300 FAULT ISOLATION MANUAL

- (21) Visually examine these components on flap support No. 8 and replace those that have damage:
- (a) Ballscrew and gimbal.
These are the tasks:
Outboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-801,
Outboard Flap Outboard Ballscrew and Gimbal Installation, AMM
TASK 27-51-26-400-801.
 - (b) Transmission and yoke.
These are the tasks:
Outboard Flap Outboard Transmission Removal, AMM TASK 27-51-25-000-802,
Outboard Flap Outboard Transmission Installation, AMM TASK 27-51-25-400-802.
 - (c) Flap support mechanism.
These are the tasks:
Outboard Flap Outboard Support Mechanism Removal, AMM TASK 27-51-22-000-801,
Outboard Flap Outboard Support Mechanism - Installation, AMM
TASK 27-51-22-400-801.
 - (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System,
System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you
corrected the fault.
- (22) For flap supports No. 1 and No. 8, do this task: Outboard Flap Support Fairing Installation,
AMM TASK 27-51-28-400-801.

————— **END OF TASK** —————

868. Flap Skew Sensors 2 and 7 Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25382.

B. Initial Evaluation

- (1) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU
2, Test of Flaps Only:
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation
Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an
intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the HIGH LIFT Eicas maintenance page to see which flap skew sensor indication does
not agree with the other indications:
- (a) Look at the indications OUTBD FLAP L2 B and R7 B to see which does not agree with L2
A and R7 A.
 - (b) If the indication OUTBD FLAP R7 B does not agree with the other indications, look for
problems at flap support No. 7 on the right wing first.
 - (c) If the indication OUTBD FLAP L2 B does not agree with the other indications, look for
problems at flap support No. 2 on the left wing first.

777-200/300 FAULT ISOLATION MANUAL

- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (c) If you do not see a broken torque tube, then continue.
- (17) For flap support No. 2, do this task: Outboard Flap Support Fairing Removal, AMM TASK 27-51-28-000-801.
- (18) Visually examine these components on flap support No. 2 and replace those that have damage:
- (a) Ballscrew and gimbal.
These are the tasks:
Outboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-802,
Outboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-26-400-802.
- (b) Transmission and yoke.
These are the tasks:
Outboard Flap Inboard Transmission Removal, AMM TASK 27-51-25-000-801,
Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801.
- (c) Flap support mechanism.
These are the tasks:
Outboard Flap Inboard Support Mechanism Removal, AMM TASK 27-51-22-000-802,
Outboard Flap Inboard Support Mechanism - Installation, AMM TASK 27-51-22-400-802.
- (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (e) If you did not replace a component, then continue.
- (19) Look for a broken or disconnected torque tube between transmission No. 6 and transmission No. 7:
- (a) If the flap is retracted, remove these access panels to get access to the torque tubes
- | <u>Number</u> | <u>Name/Location</u> |

777-200/300 FAULT ISOLATION MANUAL

869. Flap Skew Sensors 3 and 6 Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25392.

B. Initial Evaluation

- (1) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only:
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the HIGH LIFT Eicas maintenance page to see which flap skew sensor indication does not agree with the other indications:
 - (a) Look at the indications OUTBD FLAP L3 B and R6 B to see which do not agree with L3 A and R6 A.
 - (b) If the indication OUTBD FLAP R6 B does not agree with the other indications, look for problems at flap support No. 6 on the right wing first.
 - (c) If the indication OUTBD FLAP L3 B does not agree with the other indications, look for problems at flap support No. 3 on the left wing first.
- (2) Replace the flap skew sensor R6 B, M27334 on flap support No. 6.

These are the tasks:

Inboard Flap Outboard Skew Sensor - Removal, AMM TASK 27-59-01-000-808-002,

Inboard Flap Outboard Skew Sensor - Installation, AMM TASK 27-59-01-400-808-002.

- (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the flap skew sensor L3 B, M27335 on flap support No. 3.

These are the tasks:

Inboard Flap Outboard Skew Sensor - Removal, AMM TASK 27-59-01-000-808-002,

Inboard Flap Outboard Skew Sensor - Installation, AMM TASK 27-59-01-400-808-002.

- (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

**777-200/300
FAULT ISOLATION MANUAL**

- (5) Do a wiring check between FSEU 2, M27002 and flap skew sensor R6 B, M27334:
- (a) Disconnect the electrical connector DM27334 from the flap skew sensor R6 B, M27334.
 - (b) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (c) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27334 at the flap skew sensor R6 B, M27334 (WDM 27-59-14):

DM27002AA		DM27334	
pin H11		pin 5	
pin G11		pin 6	

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27334.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

K	4	C27602	FSEU 2

- 5) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (6) Do a wiring check between FSEU 2, M27002 and flap skew sensor L3 B, M27335.
- (a) Disconnect electrical connector DM27335 from the flap skew sensor L3 B, M27335.
 - (b) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (c) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27335 at the flap skew sensor L3 B, M27335 (WDM 27-59-12):

DM27002AC		DM27335	
pin C11		pin 5	
pin D11		pin 6	

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27335.
 - 4) Re-connect connector DM27334.
 - 5) Remove the safety tags and close these circuit breakers:

870. Flap Skew Sensors 4 and 5 Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25402.

B. Initial Evaluation

- (1) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only:
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the HIGH LIFT Eicas maintenance page to see which flap skew sensor indication does not agree with the other indications:
- (a) Look at the indications OUTBD FLAP L4 B and R5 B to see which does not agree with L4 A and R5 A.
- (b) If the indication OUTBD FLAP R5 B does not agree with the other indications, look for problems at flap support No. 5 on the right wing first.
- (c) If the indication OUTBD FLAP L4 B does not agree with the other indications, look for problems at flap support No. 4 on the left wing first.
- (2) Replace the flap skew sensor R5 B, M27336 on flap support No. 5.

These are the tasks:

Inboard Flap Inboard Skew Sensor - Removal, AMM TASK 27-59-01-000-809-002,
Inboard Flap Inboard Skew Sensor - Installation, AMM TASK 27-59-01-400-809-002.

- (a) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- 2) If the maintenance message shows on the ground test display, then continue.

pin K10	pin 5
pin K11	pin 6
pin A3	pin 1
pin B3	pin 3

- (d) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27336.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (6) Do a wiring check between FSEU 2, M27002 and flap skew sensor L4 B, M27337.

D633W103-ARO

Page 298.103
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Disconnect electrical connector DM27337 from the flap skew sensor L4 B, M27337.
- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27337 at the flap skew sensor L4 B, M27337 (WDM 27-58-12) and (WDM 27-59-12):

DM27002AC	DM27337
pin A10	pin 5
pin A11	pin 6
pin K3	pin 1
pin J3	pin 3

- (d) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27337.
 - 4) Re-connect connector DM27336.
 - 5) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (6) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (e) If you do not find a problem with the wiring, then continue.
- (7) Re-connect connector DM27337.
- (8) Re-connect connector DM27336.
- (9) Install a new FSEU 2, M27002. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (10) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (11) Do this ground test of the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, then continue.

Page 298.104
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (12) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (13) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (14) Look for a broken or disconnected torque tube between transmission No. 4 and the flap Power Drive Unit (PDU) in the left wheel well.
- (a) If you see a broken or disconnected torque tube, do these steps:
- 1) Replace the applicable torque tube.
These are the tasks:
Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.
 - 2) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
 - 3) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If you do not see a broken torque tube, then continue.
- (15) Visually examine these components on flap support No. 4 and replace those that have damage:
- (a) Ballscrew and gimbal.
These are the tasks:
Inboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-801,
Inboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-801.
- (b) Transmission and yoke.
These are the tasks:
Inboard Flap Inboard Transmission Removal, AMM TASK 27-51-15-000-801,
Inboard Flap Inboard Transmission Installation, AMM TASK 27-51-15-400-801.
- (c) Flap support mechanism.
These are the tasks:
Bellcrank and Drive Links Removal, AMM TASK 27-51-13-000-801,
Bellcrank and Drive Links Installation, AMM TASK 27-51-13-400-804.
- (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (e) If you did not replace a component, then continue.
- (16) Look for a broken or disconnected torque tube between transmission No. 5 and the flap PDU in the right wheel well.
- (a) If you see a broken or disconnected torque tube, do these steps:
 - 1) Replace the applicable torque tube.
These are the tasks:
Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,
Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.
 - 2) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
 - 3) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If you do not see a broken torque tube, then continue.
- (17) Visually examine these components on flap support No. 5 and replace those that have damage:
- (a) Ballscrew and gimbal.
These are the tasks:
Inboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-801,
Inboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-801.
 - (b) Transmission and yoke.
These are the tasks:
Inboard Flap Inboard Transmission Removal, AMM TASK 27-51-15-000-801,
Inboard Flap Inboard Transmission Installation, AMM TASK 27-51-15-400-801.
 - (c) Flap support mechanism.
These are the tasks:
Bellcrank and Drive Links Removal, AMM TASK 27-51-13-000-801,
Bellcrank and Drive Links Installation, AMM TASK 27-51-13-400-804.
 - (d) If you replaced a component above, do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Flaps Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (e) If you did not replace a component, then continue.

Page 298.107
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

801. Spoiler Power Control Unit (1) Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10500.

B. Description

- (1) The Spoiler Power Control Unit (PCU)-1 does not follow system commands.

C. Possible Causes

- (1) Spoiler PCU-1, M27116
- (2) Spoiler PCU-1 Electro-Hydraulic Servo Valve (EHSV)
- (3) Actuator Control Electronics (ACE) (Center), M27321
- (4) Wiring

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)
D	2	CBD2-C	PFC LANE 1
D	4	CBD4-C	PFC LANE 2
D	6	CBD6-C	PFC LANE 3
D	8	CBD8-C	PFC BAT INTLK

E. Related Data

- (1) WDM 27-11-12
- (2) WDM 27-61-15

F. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then look for active HYDIM communication maintenance messages (29-18891, 29-18892, 29-18893, or 29-18894) and troubleshoot per associated FIM Tasks.

ARO 005-999; ARO 001-004 POST SB 777-27-0111

- (3) If the MAT shows LATCHED for the maintenance message, then do these steps:
 - (a) Check the Main Hydraulic System Pressure.
 - 1) If the pressure is less than 1000 psi, this can be a normal condition caused by the PFC software that continuously monitors the spoiler operation and Hydraulic Pressure information.
 - (b) To determine if it is a nuisance fault, pressurize the applicable Hydraulic System and check if the message clears or changes to an inactive mode.

777-200/300 FAULT ISOLATION MANUAL

ARO 005-999; ARO 001-004 POST SB 777-27-0111 (Continued)

- 1) If the fault shows LATCHED with the Hydraulic System pressurized, then continue.

ARO ALL

- (4) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1,7,8,14 System.
 - (a) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the Ground Test Display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803.

G. Fault Isolation Procedure

- (1) Do this check of the Spoiler PCU-1:
 - (a) Do the Spoiler Operational Test, AMM TASK 27-61-00-700-801 and monitor the Spoiler #1 position during the task.
 - 1) If the Spoiler #1 position readout is not within limits at one or more of the AMM Task steps, or is intermittent, do these tasks to replace the Spoiler PCU-1:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If the Spoiler #1 position readout is within limits at each AMM Task step, then continue.
- (2) Do this check of the Spoiler PCU-1 Electro-Hydraulic Servo Valve (EHSV):
 - (a) Disconnect connector DM27116 from the Spoiler PCU-1.
 - (b) Visually inspect the connector for damaged or contaminated pins.
 - 1) If you find damage, replace the Spoiler PCU-1. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If you find contamination, clean the connector (SWPM 20-60-01), then continue.
 - 3) If you do not find damage or contamination, then continue.

EFFECTIVITY
ARO ALL

27-61 TASK 801

D633W103-ARO

Page 202
May 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (c) Do this task for the Spoiler PCU-1: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

NOTE: For Flight Control PCU Wiring, a short is considered a resistance of 50000 Ohms or less.

NOTE: This task includes the Resistance Check and Low Voltage Insulation Resistance Check.

- 1) If a wiring problem is found in either pin 3 or 10, do this task to remove the EHSV: Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801.
 - a) Inspect the Spoiler PCU-1 EHSV electrical connector for contaminated or damaged pins.
 - <1> If you find damage or contamination, do these steps:
 - <a> Do this task to re-install the removed EHSV:
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
 - Do these tasks to replace the Spoiler PCU-1:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - I. Do the Repair Confirmation at the end of this task.
 - <2> If you find no damage or contamination on the Spoiler PCU-1 EHSV connector, then replace the EHSV. These are the tasks:
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
 - <a> Do this task for the Spoiler PCU-1: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
 - I. If no wiring problems are found, then do the Repair Confirmation at the end of this task.
 - II. If a wiring problem is found, do these tasks to re-install the original EHSV and replace the Spoiler PCU-1:
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - III. Do the Repair Confirmation at the end of this task.

Page 203
May 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 2) If a wiring problem is detected for other pins except 3 and 10, replace the Spoiler PCU-1. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
- 3) If no wiring problems are found, then continue.
- (3) Do this check of the Command Wiring and Feedback Wiring:
 - (a) Remove the Center Actuator Control Electronics (ACE-C), M27321, from the E2-5 shelf. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Do a wiring check between the ACE-C and the Spoiler PCU-1 as follows (WDM 27-61-15):

NOTE: For Flight Control PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

ACE-C		SPOILER PCU-1
DM27321AA		DM27116
pin A9		pin 5
pin C9		pin 1
pin B9		pin 6
pin C7		pin 3
pin C8		pin 10
pin A7		pin 7
pin A8		pin 8

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27116 to the Spoiler PCU-1.
 - 3) Re-install the ACE-C, M27321. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Do the Repair Confirmation at the end of this task.
- (d) If you do not find a problem with the wiring, connect connector DM27116 to the Spoiler PCU-1, then continue.
- (4) Install a new ACE-C, M27321. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1, 7, 8, 14 System.
- (2) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

III. Do the Repair Confirmation at the end of this task.

- 2) If a wiring problem is detected for other pins except 3 and 10, replace the Spoiler PCU-2. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 3) If no wiring problems are found, then continue.
- (3) Do this check of the Command Wiring and Feedback Wiring:
- (a) Remove the ACE-L1, M27121, from the E1-5 shelf. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Do a wiring check between the ACE-L1 and the Spoiler PCU-2 as follows (WDM 27-61-11):

NOTE: For Flight Control PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

ACE-L1	SPOILER PCU-2
DM27121AC	DM27117
pin A9	pin 5
pin C9	pin 1
pin B9	pin 6
pin C7	pin 3
pin C8	pin 10
pin A7	pin 7
pin A8	pin 8

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27117 to the Spoiler PCU-2.
 - 3) Re-install the ACE-L1, M27121. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Do the Repair Confirmation at the end of this task.
 - (d) If you do not find a problem with the wiring, connect connector DM27117 to the Spoiler PCU-2, then continue.
- (4) Install a new ACE-L1, M27121. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 2, 13 System.
- (2) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

- (3) If the MAT shows LATCHED for the maintenance message, then do these steps:
- (a) Check the Main Hydraulic System Pressure.
 - 1) If the pressure is less than 1000 psi, this can be a normal condition caused by the PFC software that continuously monitors the spoiler operation and Hydraulic Pressure information.
 - (b) To determine if it is a nuisance fault, pressurize the applicable Hydraulic System and check if the message clears or changes to an inactive mode.
 - 1) If the fault shows LATCHED with the Hydraulic System pressurized, then continue.

ARO ALL

- (4) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3,6,9,12 System.
- (a) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the Ground Test Display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803.

G. Fault Isolation Procedure

- (1) Do this check of the Spoiler PCU-3:
- (a) Do the Spoiler Operational Test, AMM TASK 27-61-00-700-801 and monitor the Spoiler #3 position during the task.
 - 1) If the Spoiler #3 position readout is not within limits at one or more of the AMM Task steps, or is intermittent, do these tasks to replace the Spoiler PCU-3:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If the Spoiler #3 position readout is within limits at each AMM Task step, then continue.
- (2) Do this check of the Spoiler PCU-3 Electro-Hydraulic Servo Valve (EHSV):
- (a) Disconnect connector DM27118 from the Spoiler PCU-3.
 - (b) Visually inspect the connector for damaged or contaminated pins.
 - 1) If you find damage, replace the Spoiler PCU-3. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If you find contamination, clean the connector (SWPM 20-60-01), then continue.

 - 1) If the fault shows LATCHED with the Hydraulic System pressurized, then continue.

ARO ALL

- (4) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3,6,9,12 System.
- (a) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the Ground Test Display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803.

G. Fault Isolation Procedure

- (1) Do this check of the Spoiler PCU-6:
- (a) Do the Spoiler Operational Test, AMM TASK 27-61-00-700-801 and monitor the Spoiler #6 position during the task.
 - 1) If the Spoiler #6 position readout is not within limits at one or more of the AMM Task steps, or is intermittent, do these tasks to replace the Spoiler PCU-6:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If the Spoiler #6 position readout is within limits at each AMM Task step, then continue.
- (2) Do this check of the Spoiler PCU-6 Electro-Hydraulic Servo Valve (EHSV):
- (a) Disconnect connector DM27114 from the Spoiler PCU-6.
 - (b) Visually inspect the connector for damaged or contaminated pins.
 - 1) If you find damage, replace the Spoiler PCU-6. These are the tasks:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If you find contamination, clean the connector (SWPM 20-60-01), then continue.

- 3) If you do not find damage or contamination, then continue.
- (c) Do this task for the Spoiler PCU-6: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

NOTE: For Flight Control PCU Wiring, a short is considered a resistance of 50000 Ohms or less.

NOTE: This task includes the Resistance Check and Low Voltage Insulation Resistance Check.

- 1) If a wiring problem is found in either pin 3 or 10, do this task to remove the EHSV: Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801.
- a) Inspect the Spoiler PCU-6 EHSV electrical connector for contaminated or damaged pins.
- <1> If you find damage or contamination, do these steps:
- <a> Do this task to re-install the removed EHSV:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
- Do these tasks to replace the Spoiler PCU-6:
- Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
- I. Do the Repair Confirmation at the end of this task.
- <2> If you find no damage or contamination on the Spoiler PCU-6 EHSV connector, then replace the EHSV. These are the tasks:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
- <a> Do this task for the Spoiler PCU-6: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
- I. If no wiring problems are found, then do the Repair Confirmation at the end of this task.
- II. If a wiring problem is found, do these tasks to re-install the original EHSV and replace the Spoiler PCU-6:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801

III. Do the Repair Confirmation at the end of this task.

- 2) If a wiring problem is detected for other pins except 3 and 10, replace the Spoiler PCU-6. These are the tasks:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 3) If no wiring problems are found, then continue.
- (3) Do this check of the Command Wiring and Feedback Wiring:
- (a) Remove the Right Actuator Control Electronics (ACE-R), M27221, from the E5-2 shelf. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Do a wiring check between the ACE-R and the Spoiler PCU-6 as follows (WDM 27-61-17):
- NOTE: For Flight Control PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

ACE-R	SPOILER PCU-6
DM27221AC	DM27114
pin K7	pin 5
pin H7	pin 1
pin J7	pin 6
pin H5	pin 3
pin H6	pin 10
pin K5	pin 7
pin K6	pin 8

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27114 to the Spoiler PCU-6.
 - 3) Re-install the ACE-R, M27221. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Do the Repair Confirmation at the end of this task.
 - (d) If you do not find a problem with the wiring, connect connector DM27114 to the Spoiler PCU-6, then continue.
- (4) Install a new ACE-R, M27221. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3,6,9,12 System.
- (2) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

806. Spoiler Power Control Unit (7) Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10506.

B. Description

- (1) The Spoiler Power Control Unit (PCU)-7 does not follow system commands.

C. Possible Causes

- (1) Spoiler PCU-7, M27115
- (2) Spoiler PCU-7 EHSV
- (3) ACE (Center), M27321
- (4) Wiring

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)
D	2	CBD2-C	PFC LANE 1
D	4	CBD4-C	PFC LANE 2
D	6	CBD6-C	PFC LANE 3
D	8	CBD8-C	PFC BAT INTLK

E. Related Data

- (1) WDM 27-11-12
- (2) WDM 27-61-15

F. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then look for active HYDIM communication maintenance messages (29-18891, 29-18892, 29-18893, or 29-18894) and troubleshoot per associated FIM Tasks.

ARO 005-999; ARO 001-004 POST SB 777-27-0111

- (3) If the MAT shows LATCHED for the maintenance message, then do these steps:
 - (a) Check the Main Hydraulic System Pressure.
 - 1) If the pressure is less than 1000 psi, this can be a normal condition caused by the PFC software that continuously monitors the spoiler operation and Hydraulic Pressure information.
 - (b) To determine if it is a nuisance fault, pressurize the applicable Hydraulic System and check if the message clears or changes to an inactive mode.
 - 1) If the fault shows LATCHED with the Hydraulic System pressurized, then continue.

ARO ALL

- (4) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1,7,8,14 System.
 - (a) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the Ground Test Display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803.

G. Fault Isolation Procedure

- (1) Do this check of the Spoiler PCU-7:
 - (a) Do the Spoiler Operational Test, AMM TASK 27-61-00-700-801 and monitor the Spoiler #7 position during the task.
 - 1) If the Spoiler #7 position readout is not within limits at one or more of the AMM Task steps, or is intermittent, do these tasks to replace the Spoiler PCU-7:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If the Spoiler #7 position readout is within limits at each AMM Task step, then continue.
- (2) Do this check of the Spoiler PCU-7 Electro-Hydraulic Servo Valve (EHSV):
 - (a) Disconnect connector DM27115 from the Spoiler PCU-7.
 - (b) Visually inspect the connector for damaged or contaminated pins.
 - 1) If you find damage, replace the Spoiler PCU-7. These are the tasks:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If you find contamination, clean the connector (SWPM 20-60-01), then continue.

 - (a) Remove the Center Actuator Control Electronics (ACE-C), M27321, from the E2-5 shelf. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Do a wiring check between the ACE-C and the Spoiler PCU-8 as follows (WDM 27-61-15):

NOTE: For Flight Control PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

ACE-C	SPOILER PCU-8
DM27321AC	DM27215
pin K7	pin 5
pin H7	pin 1
pin J7	pin 6
pin H5	pin 3
pin H6	pin 10
pin K5	pin 7
pin K6	pin 8

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27215 to the Spoiler PCU-8.
 - 3) Re-install the ACE-C, M27321. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Do the Repair Confirmation at the end of this task.
- (d) If you do not find a problem with the wiring, connect connector DM27215 to the Spoiler PCU-8, then continue.
- (4) Install a new ACE-C, M27321. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1, 7, 8, 14 System.
- (2) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

808. Spoiler Power Control Unit (9) Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10508.

B. Description

- (1) The Spoiler Power Control Unit (PCU)-9 does not follow system commands.

C. Possible Causes

- (1) Spoiler PCU-9, M27214
- (2) Spoiler PCU-9 EHSV
- (3) ACE (Right), M27221
- (4) Wiring

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)
D	2	CBD2-R	PFC LANE 1
D	4	CBD4-R	PFC LANE 2
D	6	CBD6-R	PFC LANE 3
D	8	CBD8-R	PFC BAT INTLK

E. Related Data

- (1) WDM 27-11-14
- (2) WDM 27-61-17

F. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then look for active HYDIM communication maintenance messages (29-18891, 29-18892, 29-18893, or 29-18894) and troubleshoot per associated FIM Tasks.

777-200/300 FAULT ISOLATION MANUAL

ARO 005-999; ARO 001-004 POST SB 777-27-0111

- (3) If the MAT shows LATCHED for the maintenance message, then do these steps:
- (a) Check the Main Hydraulic System Pressure.
 - 1) If the pressure is less than 1000 psi, this can be a normal condition caused by the PFC software that continuously monitors the spoiler operation and Hydraulic Pressure information.
 - (b) To determine if it is a nuisance fault, pressurize the applicable Hydraulic System and check if the message clears or changes to an inactive mode.
 - 1) If the fault shows LATCHED with the Hydraulic System pressurized, then continue.

ARO ALL

- (4) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3,6,9,12 System.
- (a) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the Ground Test Display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803.

G. Fault Isolation Procedure

- (1) Do this check of the Spoiler PCU-9:
- (a) Do the Spoiler Operational Test, AMM TASK 27-61-00-700-801 and monitor the Spoiler #9 position during the task.
 - 1) If the Spoiler #9 position readout is not within limits at one or more of the AMM Task steps, or is intermittent, do these tasks to replace the Spoiler PCU-9:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If the Spoiler #9 position readout is within limits at each AMM Task step, then continue.
- (2) Do this check of the Spoiler PCU-9 Electro-Hydraulic Servo Valve (EHSV):
- (a) Disconnect connector DM27214 from the Spoiler PCU-9.
 - (b) Visually inspect the connector for damaged or contaminated pins.
 - 1) If you find damage, replace the Spoiler PCU-9. These are the tasks:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If you find contamination, clean the connector (SWPM 20-60-01), then continue.

777-200/300 FAULT ISOLATION MANUAL

- 3) If you do not find damage or contamination, then continue.
- (c) Do this task for the Spoiler PCU-9: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

NOTE: For Flight Control PCU Wiring, a short is considered a resistance of 50000 Ohms or less.

NOTE: This task includes the Resistance Check and Low Voltage Insulation Resistance Check.

- 1) If a wiring problem is found in either pin 3 or 10, do this task to remove the EHSV: Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801.
- a) Inspect the Spoiler PCU-9 EHSV electrical connector for contaminated or damaged pins.
- <1> If you find damage or contamination, do these steps:
- <a> Do this task to re-install the removed EHSV:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
- Do these tasks to replace the Spoiler PCU-9:
- Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
- I. Do the Repair Confirmation at the end of this task.
- <2> If you find no damage or contamination on the Spoiler PCU-9 EHSV connector, then replace the EHSV. These are the tasks:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
- <a> Do this task for the Spoiler PCU-9: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
- I. If no wiring problems are found, then do the Repair Confirmation at the end of this task.
- II. If a wiring problem is found, do these tasks to re-install the original EHSV and replace the Spoiler PCU-9:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801

III. Do the Repair Confirmation at the end of this task.

- 2) If a wiring problem is detected for other pins except 3 and 10, replace the Spoiler PCU-9. These are the tasks:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 3) If no wiring problems are found, then continue.
- (3) Do this check of the Command Wiring and Feedback Wiring:
- (a) Remove the Right Actuator Control Electronics (ACE-R), M27221, from the E5-2 shelf. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Do a wiring check between the ACE-R and the Spoiler PCU-9 as follows (WDM 27-61-17):
- NOTE: For Flight Control PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

ACE-R	SPOILER PCU-9
DM27221AA	DM27214
pin K7	pin 5
pin H7	pin 1
pin J7	pin 6
pin H5	pin 3
pin H6	pin 10
pin K5	pin 7
pin K6	pin 8

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27214 to the Spoiler PCU-9.
 - 3) Re-install the ACE-R, M27221. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Do the Repair Confirmation at the end of this task.
 - (d) If you do not find a problem with the wiring, connect connector DM27214 to the Spoiler PCU-9, then continue.
- (4) Install a new ACE-R, M27221. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3,6,9,12 System.
- (2) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

777-200/300 FAULT ISOLATION MANUAL

- (c) If the maintenance message shows on the Ground Test Display and is correlated to either the FLT CONTROL SYS or SPOILERS EICAS messages, then do the Fault Isolation Procedure below.
- (d) If the maintenance message does not show on the Ground Test Display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

F. Fault Isolation Procedure

- (1) Do this check of the Spoiler PCU-11:
 - (a) Do the Spoiler Operational Test, AMM TASK 27-61-00-700-801 and monitor the Spoiler #11 position during the task.
 - 1) If the Spoiler #11 position readout is not within limits at one or more of the AMM Task steps, or is intermittent, do a visual inspection of the Spoiler #11 PCU wire bundle for contamination, corrosion, and damaged pins.
 - 2) If the airplane is pre SB 777-27-0107, replace the existing spoiler PCU jumper wire bundle (P/N 24654-131) with a new design jumper wire bundle (P/N 24654-210) or jumper wire bundle (P/N 24654-131).
 - 3) If the problem continues, do these tasks to replace the Spoiler PCU-11:
 - Cable-Controlled Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-09-000-801
 - Cable-Controlled Spoiler Power Control Unit - Installation, AMM TASK 27-61-09-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 4) If the Spoiler #11 position readout is within limits at each AMM Task step, then continue.
 - (2) Make sure that the Control Wheels are in the neutral position.
 - (3) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (4) Do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) If both Spoiler 11 and Spoiler 4 are not in the down position, remove the Main Hydraulic System Power (Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808). Do a check for 28V DC at Terminal QB41 of TB1101 (WDM 27-11-18).
 - 1) If you do not find 28V DC, examine and repair the wiring between the Terminal Block and the FLPRN PCU RIB (BYP) SPLRS 4 & 11 Circuit Breaker, C27610 (WDM 27-11-18).
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If you find 28V DC, then do these steps:

27-61 TASK 810

D633W103-ARO

Page 238
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- a) Pressurize the Main Hydraulic System Power. This is the task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- b) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11

- <1> If Spoiler 11 and Spoiler 4 move to the down position, remove the Main Hydraulic System Power (Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808).
- <2> Disconnect connector DM27219 from the Spoiler PCU-11 (WDM 27-61-13).
- <3> Do a check for an electrical short to structure ground from pin 3 of connector DM27219.
- <4> If you find an electrical short at pin 3 of connector DM27219, exchange the ACEs (Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27).

NOTE: When you swap the ACEs, examine the pins on the Line Replaceable Unit (LRU) connectors and the Rack connectors. Make sure that the pins are not damaged, before you install the ACEs back in the Rack.

- <a> If the problem is corrected, replace the suspect ACE-L2. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - I. Do the Repair Confirmation at the end of this task.
- If the problem continues, disconnect electrical connector DM27122AC from the ACE, M27122 and examine the wiring from the ACE-L2 to Spoiler PCU-11 and PCU-4 as follows (WDM 27-61-13):

DM27219	DM27122AC
pin 3	pin H3

DM27119	DM27122AC
pin 3	pin F4

- I. If you find a problem with the wiring, repair it as necessary.
- II. Re-connect connectors DM27119, DM27219 and connector DM27122AC.
- III. Re-install the ACE-L2, M27122. Do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

27-61 TASK 810

D633W103-ARO

Page 239
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

IV. Close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11

V. Do the Repair Confirmation at the end of this task.

(b) If only Spoiler (11) is not in the down position, continue.

(5) Do a check for 28V DC at Spoiler 11 as follows:

(a) Disconnect connector DM27219 from the Spoiler PCU-11 (WDM 27-61-13).

(b) Do a check for 28V DC at pin 10 of connector DM27219.

1) If you find 28V DC, do a continuity check between pins 3 and 10, at the Spoiler PCU body.

a) If you do not find continuity, replace the Spoiler PCU-11 Solenoid Valve. These are the tasks:

- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801

<1> Do the Repair Confirmation at the end of this task.

b) If you find continuity, do this task for obvious electrical faults in the Spoiler PCU-11 wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

NOTE: For Flight Control PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

<1> If you find a fault, replace the Spoiler PCU-11. These are the tasks:

- Cable-Controlled Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-09-000-801
- Cable-Controlled Spoiler Power Control Unit - Installation, AMM TASK 27-61-09-400-801

<2> If you find no faults with the Spoiler PCU-11 wiring, then do a check of the Spoiler PCU-11 Airplane Wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.

<a> If you find a fault, repair or replace the applicable wiring.

 Do the Repair Confirmation at the end of this task.

2) If you do not find 28V DC at the Spoiler PCU-11, examine the wiring between the Spoiler PCU-11 connector DM27219 and ACE-L2 at the E1-1 shelf as follows (WDM 27-61-13):

a) Open these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R

K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- b) Remove the ACE-L2, M27122. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- c) Do a check of the command wiring as follows:

DM27219	DM27122AC
pin 3	pin H3

- d) Do a check of the feedback wiring as follows:

DM27219	DM27122AC
pin 1	pin H7
pin 5	pin K7
pin 6	pin J7
pin 7	pin K5
pin 8	pin K6

- e) If you find a problem with the wiring, then repair it as necessary.
- f) Re-connect connector DM27219 to the Spoiler PCU-11.
- g) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- h) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R

K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- i) Do the Repair Confirmation at the end of this task.
- (6) If the problem continues, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (7) Use the PFCS MAINTENANCE pages to do a check of the Spoiler rigging.
- (a) Turn the captain's Control Wheel clockwise until the value for the CAPT WHEEL POSITION 1 is 1.36 to 1.51 on PFCS MAINTENANCE page 1. Hold the Control Wheel in that position.
- (b) Look at the PFCS MAINTENANCE page 2 and make sure that the value for SPOILER POSITION 11 is 1.39 to 1.79.

EFFECTIVITY

27-61 TASK 810

D633W103-ARO

Page 241
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (c) If the value for SPOILER POSITION 11 is 1.39 to 1.79, do these steps:
- 1) Exchange the ACE for M27122. Do this task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
NOTE: When you swap the ACEs, examine the pins on the LRU connectors and the Rack connectors. Make sure that the pins are not damaged, before you install the ACEs back in the Rack.
 - 2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 3) Do the Repair Confirmation at the end of this task.
- (d) If the value for SPOILER POSITION 11 is not 1.39 to 1.79, then continue.
- (8) Do the Mechanical Spoiler Adjustment and Test (Spoiler Pair 4 and 11), AMM TASK 27-61-00-700-802.
- (a) Adjust, repair or replace defective components as necessary.
 - (b) Do the Repair Confirmation at the end of this task.
- (9) If the problem continues, do a check of the Cable-controlled Spoiler PCU Speedbrake Mode Valve (SMV).
- (a) If the EICAS Messages "SPOILER" (Advisory) and "FLIGHT CONTROL SYS" appear on the EICAS Display, then the PCU is the root cause and the following apply:
 - 1) Cable-controlled Spoiler Panels 4, 11 remain deployed after the Speedbrake Handle is stowed, usually following exposure to a long cold-soak period.
 - 2) Cable-controlled Spoiler Panels exhibiting this condition, operate normally when they warm up, or will return to faired position upon hydraulic shutdown.
 - 3) Cable-controlled Spoiler faults are intermittent and maintenance messages can be cleared.
 - (b) Replace the faulty Spoiler 4, 11 PCU Speedbrake Mode Valve (SMV). These are the tasks:
 - Cable-Controlled Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-09-000-801
 - Cable-Controlled Spoiler Power Control Unit - Installation, AMM TASK 27-61-09-400-801
- (c) Do the Repair Confirmation at the end of this task.

G. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 4, 11 System.
- (2) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.
 - (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

777-200/300 FAULT ISOLATION MANUAL

811. Spoiler Power Control Unit (12) Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10511.

B. Description

- (1) The Spoiler Power Control Unit (PCU)-12 does not follow system commands.

C. Possible Causes

- (1) Spoiler PCU-12, M27218
- (2) Spoiler PCU-12 EHSV
- (3) ACE (Right), M27221
- (4) Wiring

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)
D	2	CBD2-R	PFC LANE 1
D	4	CBD4-R	PFC LANE 2
D	6	CBD6-R	PFC LANE 3
D	8	CBD8-R	PFC BAT INTLK

E. Related Data

- (1) WDM 27-11-14
- (2) WDM 27-61-17

F. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then look for active HYDIM communication maintenance messages (29-18891, 29-18892, 29-18893, or 29-18894) and troubleshoot per associated FIM Tasks.

ARO 005-999; ARO 001-004 POST SB 777-27-0111

- (3) If the MAT shows LATCHED for the maintenance message, then do these steps:
 - (a) Check the Main Hydraulic System Pressure.
 - 1) If the pressure is less than 1000 psi, this can be a normal condition caused by the PFC software that continuously monitors the spoiler operation and Hydraulic Pressure information.
 - (b) To determine if it is a nuisance fault, pressurize the applicable Hydraulic System and check if the message clears or changes to an inactive mode.

777-200/300 FAULT ISOLATION MANUAL

ARO 005-999; ARO 001-004 POST SB 777-27-0111 (Continued)

- 1) If the fault shows LATCHED with the Hydraulic System pressurized, then continue.

ARO ALL

- (4) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3,6,9,12 System.
 - (a) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the Ground Test Display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803.

G. Fault Isolation Procedure

- (1) Do this check of the Spoiler PCU-12:
 - (a) Do the Spoiler Operational Test, AMM TASK 27-61-00-700-801 and monitor the Spoiler #12 position during the task.
 - 1) If the Spoiler #12 position readout is not within limits at one or more of the AMM Task steps, or is intermittent, do these tasks to replace the Spoiler PCU-12:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If the Spoiler #12 position readout is within limits at each AMM Task step, then continue.
- (2) Do this check of the Spoiler PCU-12 Electro-Hydraulic Servo Valve (EHSV):
 - (a) Disconnect connector DM27218 from the Spoiler PCU-12.
 - (b) Visually inspect the connector for damaged or contaminated pins.
 - 1) If you find damage, replace the Spoiler PCU-12. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If you find contamination, clean the connector (SWPM 20-60-01), then continue.
 - 3) If you do not find damage or contamination, then continue.

EFFECTIVITY
ARO ALL

D633W103-ARO

Page 244
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (c) Do this task for the Spoiler PCU-12: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

NOTE: For Flight Control PCU Wiring, a short is considered a resistance of 50000 Ohms or less.

NOTE: This task includes the Resistance Check and Low Voltage Insulation Resistance Check.

- 1) If a wiring problem is found in either pin 3 or 10, do this task to remove the EHSV: Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801.
 - a) Inspect the Spoiler PCU-12 EHSV electrical connector for contaminated or damaged pins.
 - <1> If you find damage or contamination, do these steps:
 - <a> Do this task to re-install the removed EHSV:
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
 - Do these tasks to replace the Spoiler PCU-12:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - I. Do the Repair Confirmation at the end of this task.
 - <2> If you find no damage or contamination on the Spoiler PCU-12 EHSV connector, then replace the EHSV. These are the tasks:
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
 - <a> Do this task for the Spoiler PCU-12: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
 - I. If no wiring problems are found, then do the Repair Confirmation at the end of this task.
 - II. If a wiring problem is found, do these tasks to re-install the original EHSV and replace the Spoiler PCU-12:
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - III. Do the Repair Confirmation at the end of this task.

27-61 TASK 811

D633W103-ARO

Page 245
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 2) If a wiring problem is detected for other pins except 3 and 10, replace the Spoiler PCU-12. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
- 3) If no wiring problems are found, then continue.
- (3) Do this check of the Command Wiring and Feedback Wiring:
 - (a) Remove the Right Actuator Control Electronics (ACE-R), M27221, from the E5-2 shelf. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Do a wiring check between the ACE-R and the Spoiler PCU-12 as follows (WDM 27-61-17):

NOTE: For Flight Control PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

ACE-R	SPOILER
DM27221AA	PCU-12
	DM27118
pin A9	pin 5
pin C9	pin 1
pin B9	pin 6
pin C7	pin 3
pin C8	pin 10
pin A7	pin 7
pin A8	pin 8

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27218 to the Spoiler PCU-12.
 - 3) Re-install the ACE-R, M27221. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Do the Repair Confirmation at the end of this task.
- (d) If you do not find a problem with the wiring, connect connector DM27218 to the Spoiler PCU-12, then continue.
- (4) Install a new ACE-R, M27221. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3,6,9,12 System.
- (2) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

ARO 005-999; ARO 001-004 POST SB 777-27-0111

- (3) If the MAT shows LATCHED for the maintenance message, then do these steps:
 - (a) Check the Main Hydraulic System Pressure.
 - 1) If the pressure is less than 1000 psi, this can be a normal condition caused by the PFC software that continuously monitors the spoiler operation and Hydraulic Pressure information.
 - (b) To determine if it is a nuisance fault, pressurize the applicable Hydraulic System and check if the message clears or changes to an inactive mode.
 - 1) If the fault shows LATCHED with the Hydraulic System pressurized, then continue.

ARO ALL

- (4) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 2, 13 System.
 - (a) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the Ground Test Display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803.

G. Fault Isolation Procedure

- (1) Do this check of the Spoiler PCU-13:
 - (a) Do the Spoiler Operational Test, AMM TASK 27-61-00-700-801 and monitor the Spoiler #13 position during the task.
 - 1) If the Spoiler #13 position readout is not within limits at one or more of the AMM Task steps, or is intermittent, do these tasks to replace the Spoiler PCU-13:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If the Spoiler #13 position readout is within limits at each AMM Task step, then continue.
- (2) Do this check of the Spoiler PCU-13 Electro-Hydraulic Servo Valve (EHSV):
 - (a) Disconnect connector DM27217 from the Spoiler PCU-13.
 - (b) Visually inspect the connector for damaged or contaminated pins.
 - 1) If you find damage, replace the Spoiler PCU-13. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If you find contamination, clean the connector (SWPM 20-60-01), then continue.

Page 248
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 3) If you do not find damage or contamination, then continue.
- (c) Do this task for the Spoiler PCU-13: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
- NOTE: For Flight Control PCU Wiring, a short is considered a resistance of 50000 Ohms or less.
- NOTE: This task includes the Resistance Check and Low Voltage Insulation Resistance Check.
- 1) If a wiring problem is found in either pin 3 or 10, do this task to remove the EHSV: Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801.
- a) Inspect the Spoiler PCU-13 EHSV electrical connector for contaminated or damaged pins.
- <1> If you find damage or contamination, do these steps:
- <a> Do this task to re-install the removed EHSV:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
- Do these tasks to replace the Spoiler PCU-13:
- Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
- I. Do the Repair Confirmation at the end of this task.
- <2> If you find no damage or contamination on the Spoiler PCU-13 EHSV connector, then replace the EHSV. These are the tasks:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
- <a> Do this task for the Spoiler PCU-13: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
- I. If no wiring problems are found, then do the Repair Confirmation at the end of this task.
- II. If a wiring problem is found, do these tasks to re-install the original EHSV and replace the Spoiler PCU-13:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801

III. Do the Repair Confirmation at the end of this task.

- 2) If a wiring problem is detected for other pins except 3 and 10, replace the Spoiler PCU-13. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 3) If no wiring problems are found, then continue.
- (3) Do this check of the Command Wiring and Feedback Wiring:
- (a) Remove the ACE-L1, M27121, from the E1-5 shelf. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Do a wiring check between the ACE-L1 and the Spoiler PCU-13 as follows (WDM 27-61-11):

NOTE: For Flight Control PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

ACE-L1	SPOILER
DM27121AA	PCU-13
	DM27217
pin A9	pin 5
pin C9	pin 1
pin B9	pin 6
pin C7	pin 3
pin C8	pin 10
pin A7	pin 7
pin A8	pin 8

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27217 to the Spoiler PCU-13.
 - 3) Re-install the ACE-L1, M27121. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Do the Repair Confirmation at the end of this task.
 - (d) If you do not find a problem with the wiring, connect connector DM27217 to the Spoiler PCU-13, then continue.
- (4) Install a new ACE-L1, M27121. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Do the Repair Confirmation at the end of this task.
- (5) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 2, 13 System.
- (6) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
- (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

813. Spoiler Power Control Unit (14) Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10513.

B. Description

- (1) The Spoiler Power Control Unit (PCU)-14 does not follow system commands.

C. Possible Causes

- (1) Spoiler PCU-14, M27216
- (2) Spoiler PCU-14 EHSV
- (3) ACE (Center), M27321
- (4) Wiring

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)
D	2	CBD2-C	PFC LANE 1
D	4	CBD4-C	PFC LANE 2
D	6	CBD6-C	PFC LANE 3
D	8	CBD8-C	PFC BAT INTLK

E. Related Data

- (1) WDM 27-11-12
- (2) WDM 27-61-15

F. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then look for active HYDIM communication maintenance messages (29-18891, 29-18892, 29-18893, or 29-18894) and troubleshoot per associated FIM Tasks.

ARO 005-999; ARO 001-004 POST SB 777-27-0111

- (3) If the MAT shows LATCHED for the maintenance message, then do these steps:
- (a) Check the Main Hydraulic System Pressure.
 - 1) If the pressure is less than 1000 psi, this can be a normal condition caused by the PFC software that continuously monitors the spoiler operation and Hydraulic Pressure information.
 - (b) To determine if it is a nuisance fault, pressurize the applicable Hydraulic System and check if the message clears or changes to an inactive mode.
 - 1) If the fault shows LATCHED with the Hydraulic System pressurized, then continue.

ARO ALL

- (4) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1,7,8,14 System.
- (a) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the Ground Test Display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803.

G. Fault Isolation Procedure

- (1) Do this check of the Spoiler PCU-14:
- (a) Do the Spoiler Operational Test, AMM TASK 27-61-00-700-801 and monitor the Spoiler #14 position during the task.
 - 1) If the Spoiler #14 position readout is not within limits at one or more of the AMM Task steps, or is intermittent, do these tasks to replace the Spoiler PCU-14:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If the Spoiler #14 position readout is within limits at each AMM Task step, then continue.
- (2) Do this check of the Spoiler PCU-14 Electro-Hydraulic Servo Valve (EHSV):
- (a) Disconnect connector DM27216 from the Spoiler PCU-14.
 - (b) Visually inspect the connector for damaged or contaminated pins.
 - 1) If you find damage, replace the Spoiler PCU-14. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If you find contamination, clean the connector (SWPM 20-60-01), then continue.

- 3) If you do not find damage or contamination, then continue.
- (c) Do this task for the Spoiler PCU-14: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
- NOTE: For Flight Control PCU Wiring, a short is considered a resistance of 50000 Ohms or less.
- NOTE: This task includes the Resistance Check and Low Voltage Insulation Resistance Check.
- 1) If a wiring problem is found in either pin 3 or 10, do this task to remove the EHSV: Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801.
- a) Inspect the Spoiler PCU-14 EHSV electrical connector for contaminated or damaged pins.
- <1> If you find damage or contamination, do these steps:
- <a> Do this task to re-install the removed EHSV:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
- Do these tasks to replace the Spoiler PCU-14:
- Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
- I. Do the Repair Confirmation at the end of this task.
- <2> If you find no damage or contamination on the Spoiler PCU-14 EHSV connector, then replace the EHSV. These are the tasks:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
- <a> Do this task for the Spoiler PCU-14: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
- I. If no wiring problems are found, then do the Repair Confirmation at the end of this task.
- II. If a wiring problem is found, do these tasks to re-install the original EHSV and replace the Spoiler PCU-14:
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
 - Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801

III. Do the Repair Confirmation at the end of this task.

- 2) If a wiring problem is detected for other pins except 3 and 10, replace the Spoiler PCU-14. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 3) If no wiring problems are found, then continue.
- (3) Do this check of the Command Wiring and Feedback Wiring:
- (a) Remove the Center Actuator Control Electronics (ACE-C), M27321, from the E2-5 shelf. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Do a wiring check between the ACE-C and the Spoiler PCU-14 as follows (WDM 27-61-15):
- NOTE: For Flight Control PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

ACE-C	SPOILER
DM27321AC	PCU-14
	DM27116
pin A9	pin 5
pin C9	pin 1
pin B9	pin 6
pin C7	pin 3
pin C8	pin 10
pin A7	pin 7
pin A8	pin 8

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27216 to the Spoiler PCU-14.
 - 3) Re-install the ACE-C, M27321. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Do the Repair Confirmation at the end of this task.
 - (d) If you do not find a problem with the wiring, connect connector DM27216 to the Spoiler PCU-14, then continue.
- (4) Install a new ACE-C, M27321. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1, 7, 8, 14 System.
- (2) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.

Page 254
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.
- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

814. Spoiler Power Control Unit (1) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11500.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1,7,8,14 System.
 - (a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you corrected the fault, then perform the fault isolation task specified in the Maintenance Message Index.

 - (a) Put a tag that reads "SUSPECT" on the center actuator control electronics (ACE-C).
 - (b) Put a tag that reads "OK" on the right actuator control electronics (ACE-R).
 - (c) Remove the ACE-C and the ACE-R. To remove them, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - (d) Install the ACE tagged SUSPECT in the ACE-R rack location, and install the ACE tagged OK in the ACE-C rack location. To install them, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

 - (e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1, 7, 8 and 14 System.
 - (f) If the maintenance message 27-11500 does not show on the ground test display (after the test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove them, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801

EFFECTIVITY
ARO ALL

D633W103-ARO

Page 255
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

2) Install the ACE tagged OK in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

3) Remove the ACE tagged SUSPECT from the airplane.

4) Install a new ACE in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1, 7, 8 and 14 System.

a) Push the speedbrake lever forward to make sure that it is in the DOWN position.

b) If the maintenance message does not show on the ground test display, you corrected the fault.

(g) If the maintenance message 27-11500 still shows on the ground test display (after the test), the ACE tagged SUSPECT is not faulty. Continue with step (h) below.

(h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove them, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

(i) Install the ACE tagged OK in the ACE-R rack location and the ACE tagged SUSPECT in the ACE-C rack location. To install them, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

(j) Remove the tags from the ACEs.

(2) Do this check of the excitation and feedback wiring:

(a) Open these circuit breakers on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

1) A1, ACE PWR

2) A3, AIL PCU

3) A5, FLPRN PCU

4) A7, ELEV PCU

5) A9, RUD PCU

6) B2, STAB TRIM

7) B6, ELEV FEEL (C)

(b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

(c) Disconnect connector DM27116 from the number 1 spoiler power control unit (PCU).

(d) Visually inspect the DM27116 for any evidence of corrosion (SPWM 20-10-06)

(e) Do a wiring check between these pins of connector DM27321AA (for ACE-C) and connector DM27116 (at the spoiler PCU) (WDM 27-61-15).

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

815. Spoiler Power Control Unit (11) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11510.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 4, 11 System.
 - (a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):
- NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you corrected the fault, then perform the fault isolation task specified in the Maintenance Message Index.
- (a) Put a tag that reads "SUSPECT" on the right actuator control electronics (ACE-L2).
 - (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
 - (c) Remove the ACE-C and the ACE-L2. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-L2 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.
- (e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 4, 11 System.

777-200/300 FAULT ISOLATION MANUAL

- (f) If the maintenance message 27-11510 does not show on the ground test display (after the test), the ACE tagged SUSPECT is fault. Do these steps:
- 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- NOTE: Make sure you do the ACE Installation Test.
- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 4, 11 System.
- a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (g) If the maintenance message 27-11510 still shows on the ground test display (after the test), the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
- (i) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (j) Remove the tag from ACE-C.
- (2) Do this check of the excitation and feedback wiring:
- (a) Open these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R

K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the left 2 actuator control electronics (ACE-L2), M27122, from the E1-1 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27219 from the number 11 spoiler power control unit (PCU).
- (d) Visually inspect the connector for evidence of corrosion (SPWM 20-10-06).
- (e) Do a wiring check between these pins of connector DM27122AC (for ACE-L2) and connector DM27219 (at the spoiler PCU), (WDM 27-61-13).

NOTE: For flight control PCU wiring, a short between contacts is a resistance of 50,000 Ohms or less.

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 4, 11 System.
- 1) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

816. Speedbrake Lever Transducer Assembly, No. 1 Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12300.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the excitation and feedback wiring:
 - (a) Open these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name

- Speedbrake Lever Transducer Removal, AMM TASK 27-61-02-000-801
- Speedbrake Lever Transducer Installation, AMM TASK 27-61-02-400-801

NOTE: All four of the transducers for the speedbrake lever are in the M27029 assembly. It is not possible to adjust the transducers independently. You must adjust or replace all of the transducers at the same time.

- Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
- Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- Push the speedbrake lever forward to make sure that it is in the DOWN position.
- If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

818. Speedbrake Lever Transducer Assembly Multiple Transducer Problems - Fault Isolation

A. Maintenance Messages

- This task is for maintenance message: 27-12308.

B. Initial Evaluation

- Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.

NOTE: This test will find which transducer has the problem. A new maintenance message will then show for that transducer.

- Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- Push the speedbrake lever forward to make sure that it is in the DOWN position.
- If one or more maintenance messages shows on the ground test display, then do these steps:
 - Find each maintenance message in the Maintenance Message Index.
 - Do the specified fault isolation task.
- If no maintenance message shows on the ground test display, then there was an intermittent fault.

————— **END OF TASK** —————

819. Spoiler Power Control Unit (2) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- This task is for maintenance message: 27-11501.

B. Initial Evaluation

- If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 2, 13 System.
 - Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you corrected the fault, then perform the fault isolation task specified in the Maintenance Message Index.

 - (a) Put a tag that reads "SUSPECT" on the left actuator control electronics (ACE-L).
 - (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
 - (c) Remove the ACE-C and the ACE-L. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-L rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

 - (e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 2, 13 System.
 - (f) If the maintenance message 27-11501 does not show on the ground test display (after the test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-L rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

 - 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 2, 13 System.
 - a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (g) If the maintenance message 27-11501 still shows on the ground test display (after the test), the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
 - (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801

Page 268
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 4) Close these circuit breakers on PSA-L, M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 2,13 System.

- Push the speedbrake lever forward to make sure that it is in the DOWN position.
- If the maintenance message does not show on the ground test display, you corrected the fault.

(g) If you do not find a problem with the wiring, then continue.

- (3) Replace the number 2 spoiler PCU, M27117. Do these tasks: Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801 Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801

- (4) Install the ACE tagged SUSPECT in the ACE-L1 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (a) Close these circuit breakers on PSA-L, M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 2,13 System.

- Push the speedbrake lever forward to make sure that it is in the DOWN position.
- If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

Page 269
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you corrected the fault, then perform the fault isolation task specified in the Maintenance Message Index.

 - (a) Put a tag that reads "SUSPECT" on the right actuator control electronics (ACE-R).
 - (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
 - (c) Remove the ACE-C and the ACE-R. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-R rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.
- (e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
- (f) If the maintenance message 27-11502 does not show on the ground test display (after the test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.
- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - a) Push the speedbrake lever forward to make sure that it is in the DOWN position.

27-61 TASK 820

D633W103-ARO

Page 270
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (g) If the maintenance message 27-11502 still shows on the ground test display (after the test), the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
- (i) Install the ACE tagged OK in the ACE-C rack location and install the ACE tagged SUSPECT in the ACE-R rack location. To install them, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (j) Remove the tags from ACEs.
- (2) Do this check of the excitation and feedback wiring:
 - (a) Open these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Disconnect connector DM27118 from the number 3 spoiler power control unit (PCU).
- (c) Visually inspect the connector for evidence of corrosion (SPWM 20-10-06)
- (d) Do a wiring check between these pins of connector DM27221AC (for ACE-R) and connector DM27118 (at the spoiler PCU), (WDM 27-61-17).

NOTE: For flight control PCU wiring, a short between contacts is a resistance of 50,000 Ohms or less.

DM27221AC	DM27118
pin C7	pin 3
pin C8	pin 10
pin A7	pin 7
pin A8	pin 8
pin C9	pin 1
pin A9	pin 5
pin B9	pin 6

- 1) Check each individual pin 1, 3, 5, 6, 7, 8 and 10 for shorts to ground.
- 2) Check for shorts between pins 1, 3, 5, 6, 7, 8 and 10.
- (e) If you find an evidence of corrosion at the DM27118 connector or a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27118 to the number 3 spoiler PCU.

777-200/300 FAULT ISOLATION MANUAL

- (f) If you find evidence of corrosion or a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27120 to the number 5 spoiler PCU.
 - 3) Install the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (g) Close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- 1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 5, 10 System.
- 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.

- (h) If you do not find a problem with the wiring, then continue.

- (3) Replace the number 5 spoiler PCU, M27120. These are the tasks:

- Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
- Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801

- (4) Install the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (a) Close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 5,10 System.

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

- (5) Replace the number 5 spoiler PCU, M27120. These are the tasks:

- Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
- Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801

Page 278
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

823. Spoiler Power Control Unit (6) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11505.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you corrected the fault, then perform the fault isolation task specified in the Maintenance Message Index.

 - (a) Put a tag that reads "SUSPECT" on the left-2 actuator control electronics (ACE-L2).
 - (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
 - (c) Remove the ACE-C and the ACE-R. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-R rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

 - (e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - (f) If the maintenance message 27-11505 does not show on the ground test display (after the test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

Page 279
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (g) If the maintenance message 27-11505 still shows on the ground test display (after the test), the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
 - (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - (i) Install the ACE tagged OK in the ACE-C rack location and the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (j) Remove the tags from the ACEs.
- (2) Do this check of the excitation and feedback wiring:
- (a) Open these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27114 from the number 6 spoiler power control unit (PCU).
- (d) Visually inspect the DM27114 connector for any evidence of corrosion (SPWM 20-10-06).
- (e) Do a wiring check between these pins of connector DM27221AC (for ACE-R) and connector DM27114 (at the spoiler PCU), (WDM 27-61-17).

NOTE: For flight control PCU wiring, a short between contacts is a resistance of 50,000 Ohms or less.

DM27221AC	DM27114
pin H5	pin 3
pin H6	pin 10
pin K5	pin 7
pin K6	pin 8
pin H7	pin 1
pin K7	pin 5
pin J7	pin 6

- 1) Check each individual pin 1, 3, 5, 6, 7, 8 and 10 for shorts to ground.

- 2) Check for shorts between pins 1, 5, 6, 7 and 8.
- (f) If you find evidence of corrosion or a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27114 to the number 6 spoiler PCU.
 - 3) Install the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Close these circuit breakers on PSA-R, M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (g) If you do not find a problem with the wiring, then continue.
- (3) Replace the number 6 spoiler PCU, M27114. These are the tasks:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
- (4) Install the ACE tagged SUSPECT in the CE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Close these circuit breakers on PSA-R, M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR

pin K6	pin 8
pin H7	pin 1
pin K7	pin 5
pin J7	pin 6

- 1) Check each individual pin 1, 3, 5, 6, 7, 8 and 10 for shorts to ground.
- 2) Check for shorts between pins 1, 3, 5, 6, 7, 8 and 10.
- (f) If you find evidence of corrosion or a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27215 to the number 8 spoiler PCU.
 - 3) Install the ACE tagged SUSPECT in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Close these circuit breakers on PSA-C, M24301:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1, 7, 8, 14 System.
 - a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (g) If you do not find a problem with the wiring, then continue.
- (3) Replace the number 8 spoiler PCU, M27115. These are the tasks:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801

A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1, 7, 8, 14 System.
 - 1) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

826. Spoiler Power Control Unit (9) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11508.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - (a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you corrected the fault, then perform the fault isolation task specified in the Maintenance Message Index.

- (a) Put a tag that reads "SUSPECT" on the right actuator control electronics (ACE-R).
- (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).

777-200/300 FAULT ISOLATION MANUAL

- (c) Remove the ACE-C and the ACE-R. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-R rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.
 - (e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - (f) If the maintenance message 27-11508 does not show on the ground test display (after the test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
NOTE: Make sure you do the ACE Installation Test.
 - 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3, 6, 9, 12 System.
 - a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (g) If the maintenance message 27-11508 still shows on the ground test display (after the test), the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
 - (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - (i) Install the ACE tagged OK in the ACE-C rack location and the ACE tagged SUSPECT in the ACE-R rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (j) Remove the tags from the ACEs.
- (2) Do this check of the excitation and feedback wiring:
- (a) Open these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU

C. Fault Isolation Procedure

- (1) Do this exchange check of the actuator control electronics (ACEs):

NOTE: It is possible that other maintenance messages will show when you exchange the ACEs. Ignore the other messages. If they continue to show after you corrected the fault, then perform the fault isolation task specified in the Maintenance Message Index.

- (a) Put a tag that reads "SUSPECT" on the left actuator control electronics (ACE-L2).
- (b) Put a tag that reads "OK" on the center actuator control electronics (ACE-C).
- (c) Remove the ACE-C and the ACE-L2. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
- (d) Install the ACE tagged SUSPECT in the ACE-C rack location, and install the ACE tagged OK in the ACE-L2 rack location. To install each one, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: It is not necessary to do the ACE Installation Test until you install the ACEs later in this task.

- (e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 5, 10 System.
- (f) If the maintenance message 27-11509 does not show on the ground test display (after the test), the ACE tagged SUSPECT is faulty. Do these steps:
 - 1) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - 2) Install the ACE tagged OK in the ACE-C rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 3) Remove the ACE tagged SUSPECT from the airplane.
 - 4) Install a new ACE in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

NOTE: Make sure you do the ACE Installation Test.

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 5, 10 System.
 - a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (g) If the maintenance message 27-11509 still shows on the ground test display (after the test), the ACE tagged SUSPECT is not faulty. Continue with step (h) below.
- (h) Remove the ACE tagged SUSPECT and the ACE tagged OK. To remove each one, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
- (i) Install the ACE tagged OK in the ACE-C rack location and the ACE tagged SUSPECT in the ACE-L2 rack location. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (j) Remove the tags from the ACEs.

- (2) Do this check of the excitation and feedback wiring:

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 4,11 System.
 - 1) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Do this check of the power wiring:

NOTE: This message only occurs if the solenoid operated valve (SOV) on both the 4 and 11 spoiler do not operate. Thus, this procedure only does a check of the wiring that is used by both SOVs.

 - (a) Do a check for 28V DC from TB1101, QB41, to structure ground (WDM 27-11-18).
 - (b) If there is not 28V DC at TB1101, QB41, then do these steps:
 - 1) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11

- 2) Repair the wiring between TB1101, QB41, and the load terminal of circuit breaker C27610 (WDM 27-11-18):

C27610	TB1101
term 2	QB41

- 3) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11

27-61 TASK 828

777-200/300 FAULT ISOLATION MANUAL

- 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 4,11 System.
- 5) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- 6) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

829. Gear Not Tilt Signals from PSEU 1 and PSEU 2 Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-18850.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.

NOTE: The RESET LATCH may display on the MAT during the System Test if there is an existing fault. Select RESET LATCH to reset the fault and continue the test.

- (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) To verify that the cause of the fault is not latent, do this task: Test of the Truck Tilt Sensor, AMM TASK 32-61-03-700-801. Disregard any MAT instructions to cycle the landing gear.

C. Fault Isolation Procedure

- (1) Look at the Extended Maintenance, Existing Faults display on the MAT.
 - (a) If a maintenance messages related to PSEU 1 or PSEU 2 shows in Existing Faults, then do these steps:
 - 1) Find the message in the applicable FIM Maintenance Message Index.
 - 2) Do the specified task for the maintenance message.
 - 3) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 4) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 5) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 6) If the maintenance message (27-18850) does not show on the ground test display, you corrected the fault.
 - 7) If the maintenance message shows on the ground test display, then continue.
 - (b) If a maintenance message related to PSEU 1 or PSEU 2 does not show in Existing Faults, then continue.

777-200/300 FAULT ISOLATION MANUAL

- (2) Replace the circuit card assembly (CCA), Communication, A1, in the proximity sensor electronics unit (PSEU) 1, M32021. These are the tasks:
 - PSEU Circuit Card Removal, AMM TASK 32-08-02-000-801
 - PSEU Circuit Card Installation, AMM TASK 32-08-02-400-801
 -
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the CCA, Communication, A17, in PSEU 2, M32025. These are the tasks:
 - PSEU Circuit Card Removal, AMM TASK 32-08-02-000-801
 - PSEU Circuit Card Installation, AMM TASK 32-08-02-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the CCA, Communication, A2, in PSEU 1, M32021. These are the tasks:
 - PSEU Circuit Card Removal, AMM TASK 32-08-02-000-801
 - PSEU Circuit Card Installation, AMM TASK 32-08-02-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the CCA, Communication, A2, in PSEU 2, M32025. These are the tasks:
 - PSEU Circuit Card Removal, AMM TASK 32-08-02-000-801
 - PSEU Circuit Card Installation, AMM TASK 32-08-02-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.

777-200/300 FAULT ISOLATION MANUAL

- 2) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- 3) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- 4) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

830. Speedbrake Lever Does Not Move Freely - Fault Isolation

A. Initial Evaluation

- (1) Move the speedbrake lever.
 - (a) If the speedbrake lever does not move freely, then do the Fault Isolation Procedure below.
 - (b) If the speedbrake lever moves freely, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Apply a small quantity of grease, D00014 to the detent plate for the speedbrake lever.
 - (a) If the speedbrake lever moves freely, you corrected the fault.
 - (b) If the speedbrake lever does not move freely, then continue.
- (2) Remove the speedbrake lever transducer, M27029. To remove it, do this task: Speedbrake Lever Transducer Removal, AMM TASK 27-61-02-000-801.
 - (a) If the speedbrake lever moves freely, then do these steps:
 - 1) Install a new speedbrake lever transducer, M27029. To install it, do this task: Speedbrake Lever Transducer Installation, AMM TASK 27-61-02-400-801.
 - 2) If the speedbrake lever moves freely, you corrected the fault.
 - (b) If the speedbrake lever does not move freely, then continue.
 - (c) Re-install the speedbrake lever transducer, M27029. To install it, do this task: Speedbrake Lever Transducer Installation, AMM TASK 27-61-02-400-801.
- (3) Disconnect the rod between the speedbrake lever and auto speedbrake clutch.
 - (a) If the speedbrake lever moves freely, then do these steps:
 - 1) Replace the auto speedbrake clutch. These are the tasks:
 - Auto Speedbrake Clutch Removal, AMM TASK 27-62-02-000-802
 - Auto Speedbrake Clutch Installation, AMM TASK 27-62-02-400-802
 - 2) Re-connect the rod between the speedbrake lever and auto speedbrake clutch.
 - 3) If the speedbrake lever moves freely, you corrected the fault.
 - (b) If the speedbrake lever does not move freely, then do these steps:
 - 1) Replace the speedbrake lever. These are the tasks:
 - Speedbrake Lever Removal, AMM TASK 27-61-01-000-801
 - Speedbrake Lever Installation, AMM TASK 27-61-01-400-801
 - 2) Re-connect the rod between the speedbrake lever and auto speedbrake clutch.
 - 3) If the speedbrake lever moves freely, you corrected the fault.

831. Spoiler Panel Floats - Fault Isolation

A. Fault Isolation Procedure

- (1) For the spoiler 4 or 11, adjust the control cable. To adjust it, do this task: Control Cable Adjustment (Rigging) for Spoilers 4 and 11, AMM TASK 27-61-00-820-801.
- (2) Perform a test of the spoiler PCU extend check valve and thermal relief valve by doing the following steps:
 - (a) Extend the trailing edge flaps completely. To extend, do this task: Extend the Trailing Edge Flaps, AMM TASK 27-51-00-860-804.
 - (b) Ensure the manual release cam is in the NORMAL position.
 - (c) Do this task: Main Hydraulic System and the Reservoir Depressurization, AMM TASK 29-11-00-860-807.
 - (d) Apply a moderate force of 25 to 50 lbs (111 to 222 newtons) upward on the center of the spoiler panel.
 - (e) If the spoiler 4 or 11 does not move up (float), you corrected the fault.
 - (f) If the spoiler 4 or 11 floats, then continue.
 - (g) Do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (h) Do this task: Retract the Trailing Edge Flaps, AMM TASK 27-51-00-860-805.
- (3) Replace the spoiler power control unit (PCU):
 - (a) For the inboard spoilers, these are the tasks:
 - Inboard Spoiler Power Control Units (PCUs) - Removal, AMM TASK 27-61-07-000-801
 - Inboard Spoiler Power Control Units (PCU) - Installation, AMM TASK 27-61-07-400-801
 - (b) For the outboard spoilers, These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
- (4) Perform a test of the spoiler PCU extend check valve and thermal relief valve by doing the following steps:
 - (a) Extend the trailing edge flaps completely. To extend, do this task: Extend the Trailing Edge Flaps, AMM TASK 27-51-00-860-804.
 - (b) Ensure the manual release cam is in the NORMAL position.
 - (c) Do this task: Main Hydraulic System and the Reservoir Depressurization, AMM TASK 29-11-00-860-807.
 - (d) Apply a moderate force of 25 to 50 lbs (111 to 222 newtons) upward on the center of the spoiler panel.
 - 1) If the spoiler does not move up (float), you corrected the fault.
 - a) Do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - b) Do this task: Retract the Trailing Edge Flaps, AMM TASK 27-51-00-860-805.
 - 2) If the spoiler floats, then continue with the Fault Isolation Procedure.
- (5) Replace the actuator control electronics (ACE) for the applicable spoiler:
 - (a) For the spoiler 2 or 13, replace the left 1 actuator control electronics, M24121. These are the tasks:

777-200/300 FAULT ISOLATION MANUAL

- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
- Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (b) For the spoiler 4, 5, 10, or 11, replace the left 2 actuator control electronics, M24122. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (c) For the spoiler 1, 7, 8, or 14, replace the center actuator control electronics, M24321. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (d) For the spoiler 3, 6, 9, or 12, replace the right actuator control electronics, M24221. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (e) If the spoiler does not float, you corrected the fault.

————— END OF TASK —————

832. Spoiler Power Control Unit (12) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11511.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3,6,9,12 System.
 - (a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the excitation and feedback wiring:
 - (a) Open these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU

B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27218 from the number 12 spoiler power control unit (PCU).
- (d) Do a wiring check between these pins of connector DM27221AA at the E5-2 shelf and connector DM27218 at the spoiler PCU, M27218 (WDM 27-61-17):

DM27221AA	DM27218
pin A8	pin 8
pin A7	pin 7
pin A9	pin 5
pin C9	pin 1
pin B9	pin 6

- 1) Check for shorts to ground for pins 1, 5, 6, 7 and 8.
 - 2) Check for shorts between pins 1, 5, 6, 7 and 8.
 - 3) Check for shorts between pin 3 and pins 1, 5, 6, 7 and 8.
 - 4) Check for shorts between pin 10 and pins 1, 5, 6, 7 and 8.
- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27218 to the spoiler PCU.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU

Page 298.3
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (f) If you do not find a problem with the wiring, then continue.
- (2) Install a new ACE-R, M27221. To install it, these are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3,6,9,12 System.
- 1) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- NOTE:** For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the number 12 spoiler PCU, M27218. These are the tasks:
- Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 3,6,9,12 System.
- 1) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.

833. Spoiler Power Control Unit (13) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11512.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 2,13 System.
 - (a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (c) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the excitation and feedback wiring:
 - (a) Open these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left 1 actuator control electronics (ACE-L1), M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27217 from the number 13 spoiler power control unit (PCU).
- (d) Do a wiring check between these pins of connector DM27121AA at the E1-5 shelf and connector DM27217 at the spoiler PCU, M27217 (WDM 27-61-11):

DM27121AA	DM27217
pin A8	pin 8
pin A7	pin 7
pin A9	pin 5
pin C9	pin 1

B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27216 from the number 14 spoiler power control unit (PCU).
- (d) Do a wiring check between these pins of connector DM27321AC at the E2-5 shelf and connector DM27216 at the spoiler PCU, M27216 (WDM 27-61-15):

<u>DM27321AC</u>	<u>DM27216</u>
pin A8	pin 8
pin A7	pin 7
pin A9	pin 5
pin C9	pin 1
pin B9	pin 6

- 1) Check for shorts to ground for pins 1, 5, 6, 7 and 8.
 - 2) Check for shorts between pins 1, 5, 6, 7 and 8.
 - 3) Check for shorts between pin 3 and pins 1, 5, 6, 7 and 8.
 - 4) Check for shorts between pin 10 and pins 1, 5, 6, 7 and 8.
- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27216 to the spoiler PCU.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU

777-200/300 FAULT ISOLATION MANUAL

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1,7,8,14 System.
 - a) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (2) Install a new ACE-C, M27321. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Close these circuit breakers on the PSA-C, M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, Spoiler 1,7,8,14 System.
 - 1) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the number 14 spoiler PCU, M27216. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 1,7,8,14 System.

777-200/300 FAULT ISOLATION MANUAL

- 1) MPush the speedbrake lever forward to make sure that it is in the DOWN position.
- 2) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

835. Speedbrake Lever Transducer Assembly, No. 2 Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12301.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the excitation and feedback wiring:
 - (a) Open these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the left 2 actuator control electronics (ACE-L2), M27121, from the E1-1 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27029B (the connector for the speedbrake lever transducer) at disconnect panel AEO160.

NOTE: The disconnect panel is in the area forward of the nose landing gear wheel well.
- (d) Do a wiring check between these pins of connector DM27122AC (for ACE-L2) and connector DM27029B (for the speedbrake lever transducer), (WDM 27-61-13):

- (c) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (e) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (f) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the speedbrake lever transducers, M27029. These are the tasks:
- Speedbrake Lever Transducer Removal, AMM TASK 27-61-02-000-801
 - Speedbrake Lever Transducer Installation, AMM TASK 27-61-02-400-801
- NOTE:** All four of the transducers for the speedbrake lever are in the M27029 assembly. It is not possible to adjust the transducers independently. You must adjust or replace all of the transducers at the same time.
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - (b) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (c) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

839. Speedbrake Lever Transducer Assembly, No. 3 Transducer Position Signal Does Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12306.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the feedback wiring:

Page 298.21
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the feedback wiring:
 - (a) Open these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27029D (the connector for the speedbrake lever transducer) at disconnect panel AEO160.

NOTE: The disconnect panel is in the area forward of the nose landing gear wheel well.
- (d) Do a wiring check between these pins of connector DM27221AC (for ACE-R) and connector DM27029D (for the speedbrake lever transducer) (WDM 27-61-17):

DM27221AC	DM27029D
pin D5	pin 5
pin E5	pin 6

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27029D for the speedbrake lever transducer.
 - 3) Re-install ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

NOTE: All four of the transducers for the speedbrake lever are in the M27029 assembly. It is not possible to adjust the transducers independently. You must adjust or replace all of the transducers at the same time.

- Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
- Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- Push the speedbrake lever forward to make sure that it is in the DOWN position.
- If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

841. Spoiler Power Control Unit (4) Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10503.

B. Description

- (1) The Spoiler Power Control Unit (PCU)-4 does not follow system commands.

C. Possible Causes

- (1) Spoiler PCU-4 Solenoid Valve
- (2) Wiring
- (3) Spoiler PCU-4, M27119
- (4) ACE (Left 2), M27122
- (5) PCU Control Cables out of adjustment

D. Related Data

- (1) WDM 27-11-18
- (2) WDM 27-61-13

E. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then check for active HYDIM communication maintenance messages (29-18891, 29-18892, 29-18893, or 29-18894) and troubleshoot per associated FIM tasks.
- (3) If the MAT shows LATCHED for the maintenance message and the message is not correlated to a FLT CONTROL SYS or SPOILERS Advisory EICAS message, it should be considered a nuisance message and it can be disregarded.
 - (a) To clear the message, do this task: Uncorrelated Cable-Controlled Spoiler PCU Maintenance Message - Fault Isolation, 27-61 TASK 848.
- (4) If the MAT shows LATCHED for the maintenance message and the message is correlated to a FLT CONTROL SYS or SPOILERS Advisory EICAS message, clear any other correlated messages before you do this Fault Isolation Procedure or Spoiler Power Control Unit (4) Command Problems - Fault Isolation, 27-61 TASK 841 for message 27-10503. Then do the Ground Test below.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (5) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 4, 11 System.
 - (a) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (b) If the maintenance message shows on the Ground Test Display and is uncorrelated to either the FLT CONTROL SYS or SPOILERS EICAS messages, then it may be considered a nuisance message and it can be disregarded.
 - 1) To clear the message, do this task: Uncorrelated Cable-Controlled Spoiler PCU Maintenance Message - Fault Isolation, 27-61 TASK 848.
 - (c) If the maintenance message shows on the Ground Test Display and is correlated to either the FLT CONTROL SYS or SPOILERS EICAS messages, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the Ground Test Display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

F. Fault Isolation Procedure

- (1) Do this check of the Spoiler PCU-4:
 - (a) Do the Spoiler Operational Test, AMM TASK 27-61-00-700-801 and monitor the Spoiler #4 position during the task.
 - 1) If the Spoiler #4 position readout is not within limits at one or more of the AMM Task steps, or is intermittent, do a detail visual inspection of the spoiler #4 PCU jumper wire bundle for contamination, corrosion, and damaged pins.
 - 2) If the airplane is pre SB 777-27-0107, replace the existing spoiler PCU jumper wire bundle (P/N 24654-124) with a new design jumper wire bundle (P/N 24654-203) or another jumper wire bundle (P/N 24654-124).
 - 3) If the problem continues, do these tasks to replace the Spoiler PCU-4:
 - Cable-Controlled Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-09-000-801
 - Cable-Controlled Spoiler Power Control Unit - Installation, AMM TASK 27-61-09-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 4) If the Spoiler #4 position readout is within limits at each AMM Task step, then continue.
 - (2) Make sure that the Control Wheels are in the neutral position.
 - (3) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (4) Do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

EFFECTIVITY

27-61 TASK 841

D633W103-ARO

Page 298.25
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) If both Spoiler 11 and Spoiler 4 are not in the down position, remove the Main Hydraulic System Power (Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808). Do a check for 28V DC at Terminal QB41 of TB1101 (WDM 27-11-18).
- 1) If you do not find 28V DC, examine and repair the wiring between the Terminal Block and the FLPRN PCU RIB (BYP) SPLRS 4 & 11 Circuit Breaker, C27610 (WDM 27-11-18).
- a) Do the Repair Confirmation at the end of this task.
- 2) If you find 28V DC, then do these steps:
- a) Pressurize the Main Hydraulic System Power. This is the task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- b) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11

- <1> If Spoiler 11 and Spoiler 4 move to the down position, remove the Main Hydraulic System Power (Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808).
- <2> Disconnect connector DM27119 from the Spoiler PCU-4 (WDM 27-61-13).
- <3> Do a check for an electrical short to structure ground from pin 3 of connector DM27119.
- <4> If you find an electrical short at pin 3 of connector DM27119, exchange the ACEs (Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27).

NOTE: When you swap the ACEs, examine the pins on the LRU connectors and the Rack connectors. Make sure that the pins are not damaged, before you install the ACEs back in the Rack.

- <a> If the problem is corrected, replace the suspect ACE-L2. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- I. Do the Repair Confirmation at the end of this task.
- If the problem continues, disconnect electrical connector DM27122AC from the ACE, M27122 and examine the wiring from the ACE-L2 to Spoiler PCU-11 and PCU-4 as follows (WDM 27-61-13):

DM27219	DM27122AC
pin 3	pin H3

DM27119	DM27122AC
pin 3	pin F4

Page 298.26
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- I. If you find a problem with the wiring, repair it as necessary.
- II. Re-connect connectors DM27119, DM27219 and connector DM27122AC.
- III. Re-install the ACE-L2, M27122. Do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- IV. Close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11

- V. Do the Repair Confirmation at the end of this task.

(b) If only Spoiler (4) is not in the down position, continue.

(5) Do a check for 28V DC at Spoiler 4 as follows:

(a) Disconnect connector DM27119 from the Spoiler PCU-4 (WDM 27-61-13).

(b) Do a check for 28V DC at pin 10 of connector DM27119.

1) If you find 28V DC, do a continuity check between pins 3 and 10, at the Spoiler PCU body.

a) If you do not find continuity, replace the Spoiler PCU-4 Solenoid Valve. These are the tasks:

- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Removal, AMM TASK 27-61-14-000-801
- Spoiler PCU Electro-Hydraulic Servo Valve (EHSV) or Solenoid Valve Installation, AMM TASK 27-61-14-400-801

<1> Do the Repair Confirmation at the end of this task.

b) If you find continuity, do this task for obvious electrical faults in the Spoiler PCU-4 wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

NOTE: For Flight Control PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

<1> If you find a fault, replace the Spoiler PCU-4. These are the tasks:

- Cable-Controlled Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-09-000-801
- Cable-Controlled Spoiler Power Control Unit - Installation, AMM TASK 27-61-09-400-801

<2> If you find no faults with the Spoiler PCU-4 wiring, then do a check of the Spoiler PCU-4 Airplane Wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.

<a> If you find a fault, repair or replace the applicable wiring.

 Do the Repair Confirmation at the end of this task.

K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- b) Remove the ACE-L2, M27122. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- c) Do a check of the command wiring as follows:

DM27119	DM27122AC
pin 3	pin F4

- d) Do a check of the feedback wiring as follows:

DM27119	DM27122AA
pin 1	pin H7
pin 5	pin K7
pin 6	pin J7
pin 7	pin K5
pin 8	pin K6

- e) If you find a problem with the wiring, then repair it as necessary.
- f) Re-connect connector DM27119 to the Spoiler PCU-4.
- g) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- h) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- i) Do the Repair Confirmation at the end of this task.
- (6) If the problem continues, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (7) Use the PFCS MAINTENANCE pages to do a check of the Spoiler rigging.

27-61 TASK 841

D633W103-ARO

Page 298.28
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Turn the captain's control wheel counterclockwise until the value for the CAPT WHEEL POSITION 1 is -1.51 to -1.36 on PFCS maintenance page 1. Hold the Control Wheel in that position.
 - (b) Look at the PFCS MAINTENANCE page 2 and make sure that the value for SPOILER POSITION 11 is 1.39 to 1.79.
 - (c) If the value for SPOILER POSITION 4 is 1.39 to 1.79, do these steps:
 - 1) Exchange the ACE for M27122. Do this task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
NOTE: When you swap the ACEs, examine the pins on the LRU connectors and the Rack connectors. Make sure that the pins are not damaged, before you install the ACEs back in the Rack.
 - 2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 3) Do the Repair Confirmation at the end of this task.
 - (d) If the value for SPOILER POSITION 4 is not 1.39 to 1.79, then continue.
- (8) Do the Mechanical Spoiler Adjustment and Test (Spoiler Pair 4 and 11), AMM TASK 27-61-00-700-802.
- (a) Adjust, repair or replace defective components as necessary.
 - (b) Do the Repair Confirmation at the end of this task.
- (9) If the problem continues, do a check of the Cable-controlled Spoiler PCU Speedbrake Mode Valve (SMV):
- (a) If the EICAS Messages "SPOILER" (Advisory) and "FLIGHT CONTROL SYS" appear on the EICAS Display, then the PCU is the root cause and following apply:
 - 1) Cable-controlled Spoiler Panels 4, 11 remains deployed after the speedbrake handle is stowed, usually following exposure to a long cold-soak period.
 - 2) Cable-controlled Spoiler Panels exhibiting this condition, operate normally when they warm up, or will return to faired position upon hydraulic shutdown.
 - 3) Cable-controlled Spoiler faults are intermittent and maintenance messages can be cleared.
 - (b) Replace the faulty Spoiler 4, 11 PCU Speedbrake Mode Valve (SMV). These are the tasks:
 - Cable-Controlled Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-09-000-801
 - Cable-Controlled Spoiler Power Control Unit - Installation, AMM TASK 27-61-09-400-801.
 - (c) Do the Repair Confirmation at the end of this task.

G. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Spoiler 4, 11 System.
- (2) Push the Speedbrake Lever forward to make sure that it is in the DOWN position.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— **END OF TASK** —————

842. Spoiler Auxiliary Retract Device (Left Wing Door) Signal to ACE-C Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17031.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wiring:
- (a) Open these circuit breakers on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Do a wiring check between these pins of connector DM27321AA at the E2-5 and terminal block TB2501 at E2-5 shelf (WDM 27-61-15):

DM27321AA	TB2501
pin G11	QB03

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 3) Close these circuit breakers on PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU

801. Auto Speedbrake Actuator Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10600.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT to erase the maintenance message: 27-Primary Flight Controls, System Test, Speedbrake System.
 - (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the auto speedbrake actuator, M27019. These are the tasks:
 - Auto Speedbrake Actuator - Removal, AMM TASK 27-62-01-000-801
 - Auto Speedbrake Actuator - Installation, AMM TASK 27-62-01-400-801
 - (a) Do this ground test on the MAT to erase the maintenance message: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (d) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the left 1 actuator control electronics (ACE-L1) recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT to erase the maintenance message: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (d) If the maintenance message shows on the ground test display, then continue.

- (4) Exchange the ACE for M27221. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (5) Replace the right actuator control electronics (ACE-R) recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT to erase the maintenance message: 27-Primary Flight Controls, System Test, Speedbrake System.
- 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (c) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If the maintenance message shows on the ground test display, then continue.
- (6) Do a check of the wiring between the speedbrake actuator (M27019), the two relays (K27009 and K27010) and the PSA-L (M24101) (WDM 27-61-19).

- (a) Open this circuit breaker on the PSA-L, M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	4	CBB4-L	AUTO SPDBRK (L,R)

- (b) Open this circuit breaker on the PSA-R, M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (c) Disconnect connector DM27019 from the auto speedbrake actuator.
- (d) Remove the auto speedbrake relay K27010.
- (e) Do a check of this wiring:

DM27019	DK27010
pin 6	pin A2
pin 8	pin B2

- (f) Remove the auto speedbrake relay K27009.
- (g) Do a check of this wiring:

DK27010	DK27009
pin A3	pin A2
pin B1	pin B2

- (h) Remove the PSA-L, M24101, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
- (i) Do a check of these wirings:

- a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- 6) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- 7) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

802. Auto Speedbrake Relay (Arm) Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10601.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the auto speedbrake arm relay, K27010 (WDM 27-61-19).

NOTE: This relay is on the top of the AEO160 disconnect panel, which is above the forward access door, 112AL.

 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the right actuator control electronics (ACE-R) recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.

777-200/300 FAULT ISOLATION MANUAL

- 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If the maintenance message shows on the ground test display, then continue.
- (4) Do this check of the power wiring:
- (a) Remove the auto speedbrake arm relay, K27010 (WDM 27-61-19).
 - (b) Do a check for 28V DC from pin X1 of connector DK27010 to structure ground.
 - (c) If there is not 28V DC at pin X1 of connector DK27010, then do these steps:
 - 1) Remove the right power supply assembly (PSA-R), M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DK27010 at the auto speedbrake arm relay, K27010, and connector DM24201AD at the E5-1 shelf (WDM 27-61-19):

DK27010	DM24201AD
pin X1	pin 12

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the auto speedbrake arm relay, K27010.
 - c) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - e) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - f) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - g) If the maintenance message does not show on the ground test display, you corrected the fault.
- 4) If you do not find a problem with the wiring, then do these steps:
 - a) Re-install the auto speedbrake arm relay, K27010.
 - b) Install a new PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - d) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - e) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	4	CBB4-L	AUTO SPDBRK (L,R)

- (a) If the circuit breaker opens when you try to close it, then do the Fault Isolation Procedure below.
- (2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the auto speedbrake control relay, K27009 (WDM 27-61-19).

NOTE: This relay is on the top of the AEO160 disconnect panel, which is above the forward access door, 112AL.

- (a) Close these circuit breakers on the left power supply assembly (PSA-L), M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	4	CBB4-L	AUTO SPDBRK (L,R)

- (b) If the circuit breaker opens when you try to close it, then continue.
 - (c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (2) Replace the auto speedbrake arm relay, K27010 (WDM 27-61-19).

NOTE: This relay is adjacent to K27009, on the top of the AEO160 disconnect panel.

- (a) Close these circuit breakers on the left power supply assembly (PSA-L), M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	4	CBB4-L	AUTO SPDBRK (L,R)

- (b) If the circuit breaker opens when you try to close it, then continue.
 - (c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.

Page 211
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- (d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (e) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the left power supply assembly (PSA-L), M24101. These are the tasks:
 - Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- (a) Close these circuit breakers on the left power supply assembly (PSA-L), M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	4	CBB4-L	AUTO SPDBRK (L,R)

- (b) If the circuit breaker opens when you try to close it, then continue.
- (c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- (d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (e) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If the maintenance message shows on the ground test display, then continue.
- (4) Do this check of the power wiring:
 - (a) Remove the auto speedbrake control relay, K27009 (WDM 27-61-19).
 - (b) Remove the PSA-L, M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (c) Do a check for continuity from pin 12 of connector DM24101AD, the connector for the PSA-L, to structure ground (WDM 27-61-19):
 - 1) If there is continuity from pin 12 of DM24101AD to structure ground, then do these steps:
 - a) Repair the wiring between these pins of connector DM24101AD (at the PSA-L, M24101) and connector DK27009 (at the auto speedbrake control relay, K27009) (WDM 27-61-19):

DM24101AD	DK27009
pin 12	pin A3
pin 12	pin B1
pin 12	pin X1

- b) Re-install the auto speedbrake control relay, K27009 (WDM 27-61-19).
- c) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- d) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.

EFFECTIVITY
ARO ALL

27-62 TASK 804

777-200/300 FAULT ISOLATION MANUAL

- <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- e) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
- 2) If there is not continuity from pin 12 of DM24101AD to structure ground, then continue.
- (5) Do this check of the control wiring:
- (a) Remove the auto speedbrake arm relay, K27010 (WDM 27-61-19).
 - (b) Do a check for continuity from these pins of connector DK27009 (the connector for the auto speedbrake control relay) to structure ground (WDM 27-61-19):
 - 1) Pin A2 to structure ground
 - 2) Pin B2 to structure ground
 - 3) If there is continuity from pin A2 or B2 of DK27009 to structure ground, then do these steps:
 - a) Repair the wiring between these pins of connector DK27009 (at the auto speedbrake control relay, K27009) and connector DK27010 (at the auto speedbrake arm relay, K27010) (WDM 27-61-19):
- | DK27009 | DK27010 |
|------------------|----------------|
| pin A2 | pin A3 |
| pin B2 | pin B1 |
- b) Re-install the auto speedbrake control relay, K27009, and the auto speedbrake arm relay, K27010 (WDM 27-61-19).
 - c) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If there is not continuity from pin A2 or B2 of DK27009 to structure ground, then continue.
- (c) Disconnect the connector for the auto speedbrake actuator, DM27019, at the AEO160 disconnect panel.
- NOTE: This disconnect panel is above the forward access door, 112AL.
- (d) Do a check for continuity from these pins of connector DK27010 (the connector for the auto speedbrake arm relay) to structure ground (WDM 27-61-19):
 - 1) Pin A2 to structure ground
 - 2) Pin B2 to structure ground
 - 3) If there is continuity from pin A2 or B2 of DK27010 to structure ground, then do these steps:

777-200/300 FAULT ISOLATION MANUAL

- a) Repair the wiring between these pins of connector DK27010 at the auto speedbrake arm relay, K27010 and connector DM27019 for the auto speedbrake actuator, M27019 (WDM 27-61-19):

DK27010	DK27019
pin A2	pin 6
pin B2	pin 8

- b) Re-connect connector DM27019 for the auto speedbrake actuator.
- c) Re-install the auto speedbrake control relay, K27009, and the auto speedbrake arm relay, K27010 (WDM 27-61-19).
- d) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
- <1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- f) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- g) If the maintenance message does not show on the ground test display, you corrected the fault.
- 4) If there is not continuity from pin A2 or B2 of DK27010 to structure ground, then continue.
- (6) Replace the auto speedbrake actuator, M27019. These are the tasks:
- Auto Speedbrake Actuator - Removal, AMM TASK 27-62-01-000-801
 - Auto Speedbrake Actuator - Installation, AMM TASK 27-62-01-400-801
- (a) Re-install the auto speedbrake control relay, K27009, and the auto speedbrake arm relay, K27010 (WDM 27-61-19).
- 1) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
- 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
- (c) Push the speedbrake lever forward to make sure that it is in the DOWN position.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT to erase the maintenance message: 27-Primary Flight Controls, System Test, Speedbrake System.
 - (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (d) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the auto speedbrake control relay, K27009 (WDM 27-61-19).

NOTE: This relay is on the top of the AEO160 disconnect panel, which is above the forward access door, 112AL.

 - (a) Do this ground test on the MAT to erase the maintenance message: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (d) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the left 1 actuator control electronics (ACE-L1) recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT to erase the maintenance message: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (d) If the maintenance message shows on the ground test display, then continue.
- (4) Do this check of the power wiring:
 - (a) Remove the auto speedbrake control relay, K27009 (WDM 27-61-19).
 - (b) Do a check for 28V DC from pin X1 of connector DK27009 to structure ground.
 - (c) If there is not 28V DC at pin X1 of connector DK27009, then do these steps:

EFFECTIVITY

27-62 TASK 805

D633W103-ARO

Page 215
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 1) Remove the left power supply assembly (PSA-L), M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
- 2) Do a wiring check between these pins of connector DK27009 at the auto speedbrake control relay, K27009, and connector DM24101AD at the E1-5 shelf (WDM 27-61-19):

DK27009	DM24101AD
pin X1	pin 12

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the auto speedbrake control relay, K27009.
 - c) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) Do this ground test on the MAT to erase the maintenance message: 27-Primary Flight Controls, System Test, Speedbrake System.

<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - e) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
- 4) If you do not find a problem with the wiring, then do these steps:
 - a) Re-install the auto speedbrake control relay, K27009.
 - b) Install a new PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT to erase the maintenance message: 27-Primary Flight Controls, System Test, Speedbrake System.

<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - d) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If there is 28V DC at pin X1 of connector DK27009, then continue.
- (5) Do this check of the command wiring:
 - (a) Open these circuit breakers on the PSA-L, M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR

777-200/300 FAULT ISOLATION MANUAL

806. Auto Speedbrake Thrust Reverser Switch Status Does Not Agree with Reverser Status from Electronic Engine Controls - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17001.

B. Initial Evaluation

- (1) Set the EEC MAINT L ENG POWER switch and the EEC MAINT R ENG POWER switch on the overhead maintenance panel, P61, to the TEST position.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (d) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then there was an intermittent fault.
 - 1) Set the EEC MAINT switches back to the NORM position.

C. Fault Isolation Procedure

- (1) Replace the auto speedbrake RTO (rejected takeoff) switch (also called the auto speedbrake armed switch), S27056. To adjust the switch, do this task: Speedbrake Control System - Adjustment, AMM TASK 27-62-00-820-801
 - (a) Make sure the EEC MAINT L ENG POWER switch and the EEC MAINT R ENG POWER switch on the overhead maintenance panel, P61, are set to the TEST position.
 - (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - 2) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - 3) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault. Set the EEC MAINT switches back to the NORM position.
 - 4) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (2) Do this check of the wiring.
 - (a) Do a wiring check between this pin of terminal block TB1009 and structure ground (WDM 27-61-20).

TB1009	Ground
pin PB5	GB1001-DC

- (b) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.

Page 219
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 2) Make sure the EEC MAINT L ENG POWER switch and the EEC MAINT R ENG POWER switch on the overhead maintenance panel, P61, are set to the TEST position.
- 3) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault. Set the EEC MAINT switches back to the NORM position.
- (c) If you do not find a problem with the wiring, then continue:
- (d) Remove the IOM(M003) and IOM(M004) cards from the AIMS-L cabinet, M31101. To remove them, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
- (e) Do a wiring check between these pins of terminal block TB1009 and the connectors for the IOM modules (at the AIMS-L cabinet) (WDM 27-61-20).

TB1009	J240-A
pin PA5	pin C17
pin PA6	pin D1

TB1009	J250-A
pin PA5	pin C17
pin PA6	pin D1

- (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-Install the IOM cards. To install them, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 3) Make sure the EEC MAINT L ENG POWER switch and the EEC MAINT R ENG POWER switch on the overhead maintenance panel, P61, are set to the TEST position.
 - 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault. Set the EEC MAINT switches back to the NORM position.
- (g) If you do not find a problem with the wiring, then continue:

Page 220
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (h) Remove the IOM(M003) and IOM(M004) cards from the AIMS-R cabinet, M31201. To remove them, do this task: Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801.
- (i) Do a wiring check between these pins of terminal block TB1009 and the connectors for the IOM modules (at the AIMS-R cabinet) (WDM 27-61-20).

TB1009	J240-A
pin PA5	pin C17
pin PA6	pin D1

TB1009	J250-A
pin PA5	pin C17
pin PA6	pin D1

- (j) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-Install the IOM cards. To install them, do this task: Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - 3) Make sure the EEC MAINT L ENG POWER switch and the EEC MAINT R ENG POWER switch on the overhead maintenance panel, P61, are set to the TEST position.
 - 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault. Set the EEC MAINT switches back to the NORM position.

————— **END OF TASK** —————

807. EICAS Message SPEEDBRAKE ARMED - Fault Isolation

A. Initial Evaluation

NOTE: This message shows when the speedbrake handle is set to the ARMED position.

- (1) Push the speedbrake lever forward to make sure that it is in the DOWN position.

————— **END OF TASK** —————

808. Speedbrake Lever does Not Follow Command - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16061.

B. Initial Evaluation

NOTE: This maintenance message only occurs when you do the Speedbrake System ground test on the MAT.

Page 221
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

(1) Look at page one of the maintenance pages for flight controls (on the MFD).

- (a) Move the speedbrake lever forward and aft. Look to see if the SPD BRK HANDLE POSITION indications, on the maintenance page, change as you move the lever.

NOTE: The indications should change from approximately -5 to -10 (when the lever is in the DOWN position), to approximately +32 to +38 (when the lever is in the UP position).

- (b) If the position indications do not change when you move the lever, then do these steps:

NOTE: If this happens, then the speedbrake lever is not mechanically connected to the transducers.

- 1) Examine the rod that connects the speedbrake lever to the auto speedbrake clutch. For an illustration of the rod (AMM TASK 27-62-02-400-802).
- 2) If the rod is disconnected or broken, then do these steps:
 - a) Replace or re-connect the rod.
 - b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.

<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - c) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
- 3) If the rod is not disconnected, then continue.
- 4) Replace the speedbrake lever transducers, M27029. These are the tasks:
 - Speedbrake Lever Transducer Removal, AMM TASK 27-61-02-000-801
 - Speedbrake Lever Transducer Installation, AMM TASK 27-61-02-400-801
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.

<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - c) If the maintenance message does not show on the ground test display, you corrected the fault.
 - d) If the maintenance message shows on the ground test display, then continue.
- 5) Replace the auto speedbrake clutch. These are the tasks:
 - Auto Speedbrake Clutch Removal, AMM TASK 27-62-02-000-802
 - Auto Speedbrake Clutch Installation, AMM TASK 27-62-02-400-802
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.

<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.

27-62 TASK 808

D633W103-ARO

Page 222
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the position indications for the speedbrake lever change when you move the lever, then continue.
- (2) Apply a small quantity of grease, D00014 to the detent plate for the speedbrake lever.
NOTE: Too much friction between the speedbrake lever and its detent plate can cause the speedbrake clutch to slip.
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
 - 1) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - (c) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (d) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the auto speedbrake actuator:
 - (a) Do these steps to prepare for the check:
 - 1) Move the FUEL CONTROL switches on the control stand to the CUTOFF position and attach DO-NOT-OPERATE tags.
 - 2) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
P	23	C78605	L ENG T/R CTRL

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
N	12	C78604	R ENG T/R CTRL

- 3) Set the EEC MAINT L ENG POWER switch and the EEC MAINT R ENG POWER switch on the overhead maintenance panel, P61, to the TEST position.
- 4) Move the reverse thrust levers down to the stowed position.
- 5) Move the forward thrust levers aft to the idle position.
- 6) Set the speedbrake lever to the DOWN position.
- (b) Do this check:
 - 1) Move the reverse thrust levers up the deployed position. Listen to hear if the speedbrake actuator (which is in the control stand) operates.
 - a) Make sure the speedbrake lever moves to the UP position.
 - 2) Move the reverse thrust levers down to the stowed position.
 - 3) Move the forward thrust levers fully forward. Listen to hear if the speedbrake actuator operates.
 - a) Make sure the speedbrake lever moves to the DOWN position.
- (c) Do these steps to put the airplane back to its usual condition:
 - 1) Move the forward thrust levers aft to the idle position.

Page 223
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 2) Set the EEC MAINT L ENG POWER switch and the EEC MAINT R ENG POWER switch on the overhead maintenance panel, P61, to the NORM position.
- 3) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
P	23	C78605	L ENG T/R CTRL

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
N	12	C78604	R ENG T/R CTRL

- 4) Remove the DO-NOT-OPERATE tags from the FUEL CONTROL switches on the P10 panel.
- (d) If (in the actuator check above) the speedbrake lever operated as specified, then do these steps:

NOTE: These steps will find if the limit switch in the speedbrake actuator is OK.

- 1) Do the actuator check again (the manual test given above, not the test on the MAT). But, this time, look at page 3 of the maintenance pages for the flight controls (on the MFD).
 - a) Make sure the SPDBRK ACT RETRACTED indication shows NO when the speedbrake actuator moves the lever to the UP position.

NOTE: Only the ACE L1 indication will show these indications. The other three ACEs do not monitor the speedbrake actuator position.
 - b) Make sure the SPDBRK ACT RETRACTED indication shows YES when the speedbrake actuator moves the lever to the DOWN position.
 - c) If the indications do not operate as specified above, then continue.
 - d) Replace the auto speedbrake actuator, M27019. These are the tasks:
 - Auto Speedbrake Actuator - Removal, AMM TASK 27-62-01-000-801
 - Auto Speedbrake Actuator - Installation, AMM TASK 27-62-01-400-801
 - e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.

<1> Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - f) Push the speedbrake lever forward to make sure that it is in the DOWN position.
 - g) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If (in the actuator check above) you do not hear the speedbrake actuator operate and the speedbrake lever does not move, then do these steps:

NOTE: If this happens, then there is a problem with the speedbrake actuator or its wiring (including its relays).

END OF TASK

809. EICAS Message AUTO SPEEDBRAKE (with No Correlated Maintenance Message) - Fault Isolation

A. Description

- (1) AUTO SPEEDBRAKE advisory and status messages occur on the ground with no correlated maintenance messages.

B. Possible Causes

- (1) Uncorrelated AUTO SPEEDBRAKE advisory or status messages can be set if the center hydraulic system pressure drops below 2600 psi for more than 40 seconds.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Speedbrake System.
- (a) Make sure that the left and right hydraulic system pressures show 200 psi (1379 kPa) or less before you do this test.
 - (b) If the AUTO SPEEDBRAKE advisory or status message shows with no correlated maintenance messages, then pressurize the center hydraulic system to greater than 2700 psi.
 - 1) If the AUTO SPEEDBRAKE advisory or status message does not show on the ground test display, then there was an intermittent fault.
 - 2) If the AUTO SPEEDBRAKE advisory or status message shows with correlated maintenance messages, then do the appropriate fault isolation task.

801. Slat Asymmetry Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20941.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED with the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (2) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Replace the two slat position sensors on the left wing, M27103 and M27203.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

- (4) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (5) Replace the two slat position sensors on the right wing, M27104 and M27204.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

Page 202
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (i) Re-install FSEU 1, M27001.
- (j) Re-install FSEU 2, M27002.
- (k) Re-connect connector DS27103.
- (l) Re-connect connector DS27203.
- (m) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (8) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (9) Do a check of the wiring between FSEU 1 and FSEU 2 and the slat position sensors on the right wing:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Page 204
Jan 05/2013

777-200/300 FAULT ISOLATION MANUAL

- 2) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- 3) Use the wrench flats the torque tube outboard of the PDU to turn the slat drive system.
 - 4) If the SLAT POS L 1 and 2 indications on the maintenance page do not change when you turn the drive system, the broken or disconnected torque tube is in the left wing.
 - 5) If the SLAT POS R 1 and 2 indications on the maintenance page do not change when you turn the drive system, the broken or disconnected torque tube is in the right wing.
- (b) If the broken or disconnected torque tube is in the right wing, do these steps until you find the torque tube:
- 1) Look at the torque tubes and gearboxes that go through the fuselage.
 - 2) Disconnect the inboard torque tube from the slat PDU.
 - 3) Use a LE slat drive torque tube coupling adapter, SPL-1694 to manually turn the right wing drive system a maximum of four torque tube turns.
NOTE: This will move the slats approximately 1/2 inch.
 - 4) Look at the slats on the right wing for a pair of slats that do not fair or a slat that is skewed.
NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.
 - 5) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
 - 6) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
 - 7) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
 - 8) Remove these access panels for the offset gearboxes on the lower surface of the right wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
611EB	Inboard Fixed Leading Edge Panel
611LB	Inboard Fixed Leading Edge Panel

- (14) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.
- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

802. Left Wing Slat Asymmetry Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20851.

B. Initial Evaluation

DO NOT DO A TEST OF THE SLAT SYSTEM WITH HYDRAULIC OR ELECTRIC POWER BEFORE YOU DO A CHECK FOR A BREAK IN THE DRIVE SYSTEM. IF YOU OPERATE THE SLATS WITH POWER, YOU CAN CAUSE DAMAGE TO THE SYSTEM.

- (1) Do not try to operate the slats before you do the Fault Isolation Procedure below.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Look for a broken or disconnected torque tube in the left wing:
- (a) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- (b) Use the wrench flats on the torque tube outboard of the PDU to manually turn the slat drive system a maximum of four torque tube turns.

NOTE: This will move the slats approximately 1/2 inch.

- 1) Use the FLAP/SLAT maintenance page to find which direction to move slats.

NOTE: If the SLAT POS L indications are more than the SLAT POS R indications, move the slats in the retract direction. If the SLAT POS L indications are less than the SLAT POS R indications, move the slats in the extend direction.

- (c) Carefully watch the slats on the left wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.

- (d) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.

Inboard Wing Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-801,
Inboard Wing Slat Torque Tube Support Installation, AMM TASK 27-81-39-400-801.
 - (f) If it is necessary, replace a torque tube support on the outboard side of the wing.
These are the tasks:
Outboard Wing Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-802,
Outboard Wing Slat Torque Tube Support Installation, AMM TASK 27-81-39-400-802.
 - (g) If it is necessary, replace a torque tube support in the cargo compartment.
These are the tasks:
Cargo Compartment Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-803,
Cargo Compartment Torque Tube Support Installation, AMM TASK 27-81-39-400-803.

- (3) Install these access panels:

621EB	Outboard Fixed Leading Edge Panel
621GB	Outboard Fixed Leading Edge Panel
621JB	Outboard Fixed Leading Edge Panel
621MB	Outboard Fixed Leading Edge Panel
621PB	Outboard Fixed Leading Edge Panel

- (4) Close this access panel below the PDU:

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- (5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.

- (6) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (7) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.

- (8) Replace the two slat position sensors on the right wing, M27104 and M27204.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

- (9) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

Page 213
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

804. Slat Primary Low Speed Solenoid Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20961.

B. Description

- (1) The Slats Primary Low Speed Solenoid circuit is open.

C. Possible Causes

- (1) Slats Primary Low Speed Solenoid, V3
- (2) Slat Primary Control Valve, V27003
- (3) Wiring
- (4) Flap/Slat Electronics Unit (FSEU) 1, M27001

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault.

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	12	C27606	SLATS PRI DR CTRL 1

E. Related Data

- (1) WDM 27-81-15
- (2) SSM 27-81-15

F. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend or retract the slats to another position. This is the task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then there was an intermittent problem.

27-81 TASK 804

D633W103-ARO

Page 214
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

G. Fault Isolation Procedure

NOTE: When you do the AMM Procedure to install a component, it is not necessary to do the test given at the end of the AMM Task. The steps in this FIM Procedure are a sufficient test.

WARNING

MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

- (1) If the Downlock Pins are not installed on the Main and Nose Landing Gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

MAKE CERTAIN MAIN LANDING GEAR DOOR SAFETY LOCKS ARE INSTALLED WHEN PERSONS WORK IN WHEELWELL AREAS. DOOR MOVEMENT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Low Speed Solenoid as follows (WDM 27-81-15):
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27003B from the Slat Primary Control Valve, V27003 in the Left Wheel Well.
- (c) Do a Resistance check between pins 8 and 18 of connector DV27003B on the Slat Primary Control Valve, V27003 in the Left Wheel Well.
- (d) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the Low Speed Solenoid on the Slat Primary Control Valve, V27003. These are the tasks:
- Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802
 - Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802
- 2) Do a Resistance check between pins 8 and 18 of connector DV27003B on the Slat Primary Control Valve, V27003 again (WDM 27-81-15).

NOTE: This does a check of the internal wiring on the Slat Primary Control Valve, V27003.

EFFECTIVITY
ARO ALL

27-81 TASK 804

D633W103-ARO

Page 215
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- a) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then replace the Slat Primary Control Valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

- Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801
 - Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801
- <1> Do the Repair Confirmation at the end of this task.

- b) If the Resistance is in the specified limits, then continue.

- (e) If the Resistance is in the specified limits, then continue.

- (4) Connect electrical connector DV27003B to the Slat Primary Control Valve, V27003, in the Left Wheel Well.
- (5) Do a check for 28V DC at FSEU 1 as follows:
- (a) Remove FSEU 1, M27001, from the E1-6 shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (b) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (c) Do a check for 28V DC between pin F3 (+) on connector DM27001AC and structure ground (WDM 27-81-15).
- 1) If you do not find 28V DC at pin F3 on connector DM27001AC, then do these steps:
- a) Open this circuit breaker and install safety tag:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- b) At the P310 Power Management Panel, disconnect electrical connector D31036P.
- c) In the Left Wheel Well, disconnect electrical connector DV27003B from the Slat Primary Control Valve, V27003.
- d) Do a wiring check from the FSEU-1 connector DM27001AC to the Power Management Panel P310 connector D31036P as follows (WDM 27-51-15):

E1-6 Shelf	L Wheel Well
DM27001AC	DV27003B
pin F3	pin 8

L Wheel Well	P310 Panel
DV27003B	D31036P
pin 18	pin 14

- <1> If you find a problem with the wiring, then do these steps:

ECCN 9E991 BOEING PROPRIETARY - Copyright © Unpublished Work - See title page for details

Page 216
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- <a> Repair the wiring.
 - Re-connect electrical connector DV27003B.
 - <c> Re-connect electrical connector D31036P.
 - <d> Re-install FSEU 1, M27001. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
 - <e> Do the Repair Confirmation at the end of this task.
- <2> If you do not find a problem with the wiring, continue.
- 2) If you find 28V DC at pin F3 of connector DM27001AC, continue.
- (d) Replace FSEU 1, M27001. These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801

H. Repair Confirmation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 1 is IN CONTROL

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend or retract the slats to another position. This is the task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
- (a) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then you corrected the problem.
- (b) If the MAT shows LATCHED with the maintenance message, then continue the Fault Isolation Procedure at the subsequent step.

————— **END OF TASK** —————

805. Slat Primary System Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-20980, 27-20981, 27-20982.

B. Initial Evaluation

- (1) If the PRESENT LEG FAULTS display on the MAT shows LATCHED for the maintenance message 27-20980 or 27-20130, then do these steps:
- (a) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

FAULT ISOLATION MANUAL

- (b) Remove the Slats/Bypass Clutch Relay, K27001 from the P210 panel. WDM 27-81-17
- (c) Disconnect the ALTN FLAPS ARM switch, S27052 from the P10 panel. WDM 27-81-17
- (d) Do a wiring check between connector DK27001 and connector DS27052. WDM 27-81-17

DS27052	DK27001
pin 2	pin X2

- 1) If you find a problem with the wiring, then repair the wiring.
 - a) Reinstall the Slats/Bypass Clutch Relay, K27001 on the P210 Panel.
- 2) If you do not find a problem with the wiring, then install a new Slats Bypass/Clutch relay, K27001 on the P210 panel.
- (e) Connect the electrical connector, DS27052 to the ALTN FLAPS ARM switch, S27052 on the P10 panel.
- (f) Remove the safety tag and close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

- (g) Use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
 - 1) If the flaps operate with the alternate system, then you corrected the fault.
- (2) If the PRESENT LEG FAULTS display on the MAT does not show LATCHED for the maintenance message 27-20980 or 27-20130 then continue.
- (3) If the PRESENT LEG FAULTS display on the MAT shows LATCHED for the maintenance message 27-21031 or 27-21032, then do these steps:
 - (a) Go to the Maintenance Message Index to find the procedure for the applicable maintenance message 27-21031 or 27-21032.
 - (b) Do the fault isolation procedure for the applicable maintenance message.
- (4) If the PRESENT LEG FAULTS display on the MAT does not show LATCHED for the maintenance message 27-21031 or 27-21032, then continue.
- (5) If the PRESENT LEG FAULTS display on the MAT shows LATCHED for the maintenance message 27-20971 or 27-20972, then do these steps:

NOTE: An open circuit breaker indicates that there can be a shorted primary control valve solenoid.

- (a) Make sure that these circuit breakers are closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (b) Do the Fault Isolation Procedure - Solenoid Check below.

27-81 TASK 805

D633W103-ARO

Page 218
Sep 05/2017

777-200/300
FAULT ISOLATION MANUAL

(6) If the PRESENT LEG FAULTS display on the MAT does not show LATCHED for the maintenance message 27-20971 or 27-20972, then do these steps:

(a) Cycle the ALTN FLAPS ARM switch on the control stand.

NOTE: This will cause the maintenance message to become INACTIVE.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(b) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

(c) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

1) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure - Hydraulics Check below.

2) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure - Solenoid Check

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

(2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.

(3) Do a check of the Primary Extend Solenoid on the slat primary control valve, V27003 in the left wheel well:

(a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

D633W103-ARO

Page 219
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (b) Disconnect electrical connector DV27003B from the slat primary control valve V27003.
- (c) Measure the resistance between these pairs of pins of the connector DV27003B on the slat primary control valve V27003 in the left wheel well (WDM 27-81-15):
- 1) Pins 9 and 19, specified resistance 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids).
NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.
 - 2) Pins 11 and 15, specified resistance 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids).
NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.
- (d) Do a continuity check between pins 9, 11, 15 and 19 of the connector DV27003B on the slat primary control valve V27003 and structure ground.
- (e) If the resistance between the pins is not in the limit, or if there is continuity to ground, then do these steps:
- 1) Replace the Primary Extend solenoid on the slat primary control valve, V27003.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.
 - 2) Do a check of the resistance between the pins 9 and 19, and pins 11 and 15 of connector DV27003B on the slat primary control valve, V27003 again (WDM 27-81-15).
NOTE: This does a check of the internal wiring on the primary control valve, V27003.
 - a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.
NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.
These are the tasks:
Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
- b) If the resistance between the pins is in the limits, then continue.
- 3) Connect electrical connector DV27003B to the slat primary control valve V27003.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

G	12	C27606	SLATS PRI DR CTRL 1

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- 5) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- 6) Use the primary system to extend the slats to another position. To extend them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 7) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- 8) If there is continuity between the pins, or if the MAT shows LATCHED for the maintenance message, then do the Fault Isolation Procedure - Hydraulics Check below.
- (5) Connect electrical connector DV27003B to the slat primary control valve, V27003 in the left wheel well.
- (6) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	12	C27606	SLATS PRI DR CTRL 1

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (7) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

D. Fault Isolation Procedure - Hydraulics Check

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Replace the slat hydraulic motor.
These are the tasks:
Slat Hydraulic Motor Removal, AMM TASK 27-81-33-000-801,
Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
- (2) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows LATCHED with the maintenance message, then continue.
- (3) Replace the slat primary control valve, V27003.
These are the tasks:
Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
- (4) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— END OF TASK —————

806. Slat Primary Extend Solenoid Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20991.

B. Description

- (1) Slats Primary Extend Solenoid circuit is open.

C. Possible Causes

- (1) Slats Primary Extend Solenoid, V2
- (2) Slat Primary Control Valve, V27003
- (3) Wiring
- (4) FSEU 1, M27001

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault.

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	12	C27606	SLATS PRI DR CTRL 1

E. Related Data

- (1) WDM 27-81-15
- (2) SSM 27-81-15

F. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend the slats to another position. This is the task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

- (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then there was an intermittent problem.

G. Fault Isolation Procedure

NOTE: When you do the AMM Procedure to install a component, it is not necessary to do the test given at the end of the AMM Task. The steps in this FIM Procedure are a sufficient test.

WARNING

MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

- (1) If the Downlock Pins are not installed on the Main and Nose Landing Gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

MAKE CERTAIN MAIN LANDING GEAR DOOR SAFETY LOCKS ARE INSTALLED WHEN PERSONS WORK IN WHEELWELL AREAS. DOOR MOVEMENT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Extend Solenoid as follows:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27003B from the Slat Primary Control Valve, V27003 in the Left Wheel Well (WDM 27-81-15).
- (c) Do a Resistance check between pins 9 and 19 of connector DV27003B on the Slat Primary Control Valve, V27003 in the Left Wheel Well.
- (d) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the Extend Solenoid on the Slat Primary Control Valve, V27003. These are the tasks:
 - Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802
 - Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802

Page 225
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 2) Do a Resistance check between pins 9 and 19 of connector DV27003B on the Slat Primary Control Valve, V27003 again (WDM 27-81-15).

NOTE: This does a check of the internal wiring on the Slat Primary Control Valve, V27003.

- a) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then replace the Slat Primary Control Valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

- Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801
- Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801

<1> Do the Repair Confirmation at the end of this task.

- b) If the Resistance is in the specified limits, then continue.

- (e) If the Resistance is in the specified limits, then continue.

- (4) Connect electrical connector DV27003B to the Slat Primary Control Valve, V27003, in the Left Wheel Well.

- (5) Do a check for 28V DC at FSEU 1. These are the steps:

- (a) Remove FSEU 1, M27001, from the E1-6 shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.

- (b) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (c) Do a check for 28V DC between pin F2 (+) on connector DM27001AC and structure ground (WDM 27-81-15).

- 1) If you do not find 28V DC at pin F2 on connector DM27001AC, then do these steps:
- a) Open this circuit breaker and install safety tag:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- b) At the P310 Power Management Panel, disconnect electrical connector D31036P.
- c) In the Left Wheel Well, disconnect electrical connector DV27003B from the Slat Primary Control Valve, V27003.
- d) Do a wiring check from the FSEU-1 connector DM27001AC to the Power Management Panel P310 connector D31036P as follows (WDM 27-81-15):

E1-6 Shelf
DM27001AC

- (b) Disconnect electrical connector DV27003A from the Slat Primary Control Valve, V27003 in the Left Wheel Well (WDM 27-81-15).
- (c) Do a Resistance check between pins 7 and 8 of connector DV27003A on the Slat Primary Control Valve, V27003 in the Left Wheel Well.
- (d) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 ohms (for the 883 Series Solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the Shutoff Solenoid on the Slat Primary Control Valve, V27003. These are the tasks:
 - Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802
 - Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802
- 2) Do a Resistance check between pins 7 and 8 of connector DV27003A on the Slat Primary Control Valve, V27003 again (WDM 27-81-15).

NOTE: This does a check of the internal wiring on the Slat Primary Control Valve, V27003.

- a) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 ohms (for the 883 Series Solenoids), then replace the Slat Primary Control Valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

- Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801
- Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801

<1> Do the Repair Confirmation at the end of this task.

- b) If the Resistance is in the specified limits, then continue.

- (e) If the Resistance is in the specified limits, continue.

- (4) Connect electrical connector DV27003A to the Slat Primary Control Valve, V27003, in the Left Wheel Well.
- (5) Do a check for 28V DC at FSEU 1 as follows:
- (a) Remove FSEU 1, M27001, from the E1-6 shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.

FAULT ISOLATION MANUAL

- (b) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (c) Do a check for 28V DC between pin D5 (+) on connector DM27001AC and structure ground (WDM 27-81-15).

- 1) If you do not find 28V DC at pin D5 on connector DM27001AC, then do these steps:
- a) Open this circuit breaker and install safety tag:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- b) At the P310 Power Management Panel, disconnect electrical connector D31036P.
- c) In the Left Wheel Well, disconnect electrical connector DV27003A from the Slat Primary Control Valve, V27003.
- d) Do a wiring check from the FSEU-1 connector DM27001AC to the Power Management Panel P310 connector D31036P as follows (WDM 27-81-15):

E1-6 Shelf	L Wheel Well
DM27001AC	DV27003A
pin D5	pin 7

L Wheel Well	P310 Panel
DV27003A	D31036P
pin 8	pin 14

- <1> If you find a problem with the wiring, then do these steps:
- <a> Repair the wiring.
- Re-connect electrical connector DV27003A.
- <c> Re-connect electrical connector D31036P.
- <d> Re-install FSEU 1, M27001. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- <e> Do the Repair Confirmation at the end of this task.
- <2> If you do not find a problem with the wiring, continue.

- 2) If you find 28V DC at pin D5 of connector DM27001AC, continue.

- (d) Replace FSEU 1, M27001. These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801

27-81 TASK 808

D633W103-ARO

Page 234
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

H. Repair Confirmation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend or retract the slats to another position. This is the task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then you corrected the problem.
 - (b) If the MAT shows LATCHED with the maintenance message, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

809. Left Wing Slat Single FSEU Asymmetry Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20861.

B. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

Page 235
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (1) Replace the slat position sensor, M27103 on the left wing.
These are the tasks:
Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,
Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.
- (2) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (3) Replace FSEU 1, M27001.
These are the tasks:
Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (4) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (5) Do a check of the wiring between FSEU 1 and the slat position sensor, M27103:
 - (a) Open these circuit breakers and install safety tags:
Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
 - (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Disconnect the connector DM27103 from slat position sensor, M27103.
 - (d) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27103 at the slat position sensor, M27103 (WDM 27-88-11):

DM27001AC	DM27103
pin K4	pin 1
pin J4	pin 2
pin G6	pin 3
pin G7	pin 4
pin F6	pin 5
pin F7	pin 6
 - (e) If you find a problem with the wiring, repair the wiring.
 - (f) Re-install FSEU 1, M27001.
 - (g) Re-connect connector DS27103.

EFFECTIVITY

27-81 TASK 809

D633W103-ARO

Page 236
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (h) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (i) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
- 1) If the maintenance message shows NOT ACTIVE (or if the message does not show), then you corrected the fault.
 - 2) If the MAT shows ACTIVE for the maintenance message, then continue.
- (6) Look for a broken or disconnected torque tube in the left wing:
- (a) Open this panel to get access to the torque tubes on the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- (b) Use the wrench flats on the torque tube outboard of the PDU to manually turn the slat drive system a maximum of four torque tube turns.
- NOTE: This will move the slats approximately 1/2 inch.
- (c) Look at the slats on the left wing for a pair of slats that do not fair or a slat that is skewed.
- NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.
- (d) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
- (e) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
- (f) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
- (g) Remove these access panels for the offset gearboxes on the lower surface of the left wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
511EB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel
521AAB	Outboard Fixed Leading Edge Panel
521ACB	Outboard Fixed Leading Edge Panel
521BB	Outboard Fixed Leading Edge Panel
521EB	Outboard Fixed Leading Edge Panel
521GB	Outboard Fixed Leading Edge Panel
521JB	Outboard Fixed Leading Edge Panel
521MB	Outboard Fixed Leading Edge Panel
521PB	Outboard Fixed Leading Edge Panel

- (7) If you find a broken or disconnected torque tube, replace the applicable torque tube or torque tube support:
- (a) If it is necessary, replace a torque tube on the inboard side of the wing

27-81 TASK 809

D633W103-ARO

Page 237
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

These are the tasks:

Inboard Wing Slat Torque Tube Removal, AMM TASK 27-81-38-000-801,
Inboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-801.

- (b) If it is necessary, replace a torque tube on the outboard side of the wing.

These are the tasks:

Outboard Wing Slat Torque Tube Removal, AMM TASK 27-81-38-000-802,
Outboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-802.

- (c) If it is necessary, replace a torque tube support on the inboard side of the wing.

These are the tasks:

Inboard Wing Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-801,
Inboard Wing Slat Torque Tube Support Installation, AMM TASK 27-81-39-400-801.

- (d) If it is necessary, replace a torque tube support on the outboard side of the wing.

These are the tasks:

Outboard Wing Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-802,
Outboard Wing Slat Torque Tube Support Installation, AMM TASK 27-81-39-400-802.

- (8) Install these access panels:

<u>Number</u>	<u>Name/Location</u>
511EB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel
521AAB	Outboard Fixed Leading Edge Panel
521ACB	Outboard Fixed Leading Edge Panel
521BB	Outboard Fixed Leading Edge Panel
521EB	Outboard Fixed Leading Edge Panel
521GB	Outboard Fixed Leading Edge Panel
521JB	Outboard Fixed Leading Edge Panel
521MB	Outboard Fixed Leading Edge Panel
521PB	Outboard Fixed Leading Edge Panel

- (9) Close this panel below the PDU:

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- (10) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

810. Slat Uncommanded Motion Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21021.

EFFECTIVITY
ARO ALL

27-81 TASKS 809-810

D633W103-ARO

Page 238
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

B. General

- (1) You can also use this task to isolate the fault if the SLATS PRIMARY FAIL (CAUTION) EICAS message is shown without a maintenance message.
 - (a) If there is no maintenance message, and you can not correct the fault, then do this task also: Slat Uncommanded Motion Problems FSEU 2 - Fault Isolation, 27-82 TASK 811.

C. Initial Evaluation

- (1) Make sure the position of the flap control lever agrees with the position of the flaps.
- (2) Make sure the ALTN FLAPS control switch is in the OFF position.
- (3) Push the ALTN FLAPS ARM switch on the control stand to arm the alternate control system.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (4) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: Use a single AC Motor Pump (ACMP) to supply power to the center system. This will cause the slats to move more slowly if there is not an intermittent fault. If you use two ACMPs or an Air Driven Pump (ADP) the slats will move further before the FSEUs stop them.

MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE SLATS. THE SLATS CAN MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (5) Push the ALTN FLAPS ARM switch on the control stand to disarm the alternate control system.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure - Uncommanded Motion below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then continue.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (6) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: Use an Air Driven Pump (ADP) to move the slats. This will allow the slats to move at their usual rate.

- (7) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

Page 239
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (8) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure - Stops Out of Detent below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.
- (9) Do this ground test on the MAT for FSEU 1: Slat Primary Control Valve Test, AMM TASK 27-81-05-740-801.

D. Fault Isolation Procedure - Uncommanded Motion

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (3) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (4) Replace the slat primary control valve, V27003.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (5) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (6) Use the primary system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (7) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

E. Fault Isolation Procedure - Stops Out of Detent

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Low Speed solenoid on the slat primary control valve, V27003 in the left wheel well:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27003B from the slat primary control valve, V27003.
- (c) Do a check of the resistance between pins 8 and 18 of connector DV27003B on the slat primary control valve V27003 in the left wheel well (WDM 27-81-15):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the Low Speed solenoid on the slat primary control valve V27003.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

- 2) Do a check of the resistance between pins 8 and 18 of connector DV27003B on the slat primary control valve, V27003 again (WDM 27-81-15).

NOTE: This does a check of the internal wiring on the primary control valve, V27003.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- (e) Connect electrical connector DV27003B to the slat primary control valve V27003.
(f) Remove the safety tag and close this circuit breaker:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (g) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
(h) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (i) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
(j) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (4) Do this check of the adjustment of the slat position sensors:
- (a) Make sure the leading edge slats are in the retracted position.
(b) Look at the SLAT POS L1, R1, L2 and R2 indications on the FLAP/SLAT maintenance page on EICAS.
(c) If one of the slat position indications is not less than 11.65, then replace the applicable slat position sensor.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

- (e) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (f) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (5) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

————— **END OF TASK** —————

811. Slat Secondary System Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21031.

B. Initial Evaluation

- (1) Use the secondary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

ARO 001-010			
B	3	C27300	SLATS ELEC MOT PWR

ARO ALL

- (a) If the circuit breakers were not closed, use the secondary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.
- NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the circuit breakers were closed, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Do this check to see if the slat drive system is locked:
- (a) Use the primary system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
- NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
- (b) If the slats do not operate with the primary system, then use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802
- (c) If the slats do not operate with the primary or the alternate system, then the slat drive system is locked.
- (d) If the slats operate with the primary or the alternate system, then the slat drive system is not locked.
- (3) If the slat drive system is locked, then do these steps:
- (a) Open this access panel to get access to the slat power drive unit (PDU):
- | <u>Number</u> | <u>Name/Location</u> |
|---------------|------------------------|
| 511AB | Leading Edge PDU Panel |
- (b) Look at the torque trip indicators on the slat PDU to see if the drive system is locked in one of the wings.
- (c) If neither of the torque trip indicators are extended, disconnect the torque tubes from the slat PDU.

EFFECTIVITY

27-81 TASK 811

D633W103-ARO

Page 244
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (d) Use the wrench flats on the torque tube on the outboard side of the PDU to manually extend and retract the left wing slats.
 - (e) Use a LE slat drive torque tube coupling adapter, SPL-1694 on the torque tube on the inboard side of the PDU to manually extend and retract the right wing slats.
 - (f) If you can extend and retract the slats on each wing, do these steps:
 - 1) Do this task: Slat Electric Motor Removal, AMM TASK 27-81-34-000-801.
 - 2) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 3) If you can turn the PDU, then install a new slat electric motor, B27001. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
 - 4) If you cannot turn the PDU, do this task: Slat Hydraulic Motor Removal, AMM TASK 27-81-33-000-801.
 - 5) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 6) If you cannot turn the PDU, then replace the slat PDU.

These are the tasks:

Slat Power Drive Unit (PDU) Removal, AMM TASK 27-81-31-000-801,
Slat Power Drive Unit (PDU) Installation, AMM TASK 27-81-31-400-801.
 - 7) Try to turn the output shaft on the slat hydraulic motor.
 - 8) If you can turn the output shaft on the hydraulic motor, then replace the slat primary control valve, V27003.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
 - 9) If you cannot turn the output shaft on the slat hydraulic motor, then install a new slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
 - 10) If it is necessary, re-install the slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
 - 11) If it is necessary, re-install the slat electric motor, B27003. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
 - (g) If one of the torque trip indicators is extended or if you cannot extend and retract the slats on one of the wings, replace the gearbox where the slat drive system is locked.
 - (h) Connect the torque tubes to the slat PDU.
 - (i) Do this task: Leading Edge Slat Drive System Adjustment, AMM TASK 27-81-00-820-801.
 - (j) Use the secondary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.
- NOTE:** Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
- 1) If the maintenance message does not show on the MAT, then you corrected the fault.

27-81 TASK 811

D633W103-ARO

Page 246
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (k) If there is 115 VAC at pins 1, 2 and 3 and 28 VDC at pin 6 of connector DB27001, then replace the slat electric motor, B27001.

These are the tasks:

Slat Electric Motor Removal, AMM TASK 27-81-34-000-801,

Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.

- 1) Turn the ALT FLAPS control switch to the OFF position.
 - 2) Push the ALT FLAPS ARM switch on the control stand to disarm the alternate control system.
 - 3) Connect the electrical connector, DB27001 to the slat electric motor, B27001.
 - 4) Use the alternate system to extend and retract the slat. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
 - 5) If the slat operate with the alternate system, then you corrected the fault.
- (l) If there is not 28 VDC at pin 6 of connector DB27001, then do this wiring check between the slat electric motor, B27001 and the Slats Bypass/Clutch Relay, K27001 on the P210 panel:
- 1) Remove the Slats Bypass/Clutch Relay, K27001 from the P210 panel (WDM 27-81-17).
 - 2) Do a wiring check between these pins of connector DB27001 on the slat electric motor, B27001 and connector DK27001 on the P210 panel (WDM 27-81-17):

DB27001

DK27001

pin 6 pin B2

- 3) If you find a problem with the wiring, then repair the wiring.
 - a) Reinstall the Slats Bypass/Clutch Relay, K27001 on the P210 panel.
 - 4) If you do not find a problem with the wiring, then install a new Slats Bypass/Clutch Relay, K27001 on the P210 panel.
 - 5) Connect the electrical connector, DB27001 to the slat electric motor, B27001.
 - 6) Use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
 - a) If the flaps operate with the alternate system, then you corrected the fault
- (m) If there is not 115 VAC at pins 1, 2 and 3 then do this wiring check between the slat electric motor, B27001 and the Slats Retract Relay, K27005 on the P210 panel:
- 1) Remove the Slats Retract Relay, K27005 from the P210 panel (WDM 27-81-18).
 - 2) Do a wiring check between these pins of connector DB27001 on the slat electric motor, B27001 and connector DK27005 on the P210 panel (WDM 27-81-18):

DB27001

DK27005

pin 1 pin A2

pin 2 pin C2

pin 3 pin B2

- 3) If you find a problem with the wiring, then repair the wiring.

- (e) Push the ALT FLAPS ARM switch on the control stand to arm the alternate control system.
- (f) Do a check for 28 VDC between pin 6 of connector DB27001 and structure ground (WDM 27-81-17).
- (g) Turn the ALT FLAPS control switch to the EXT position.
- (h) With the ALT FLAPS control switch in the EXT position do a check for 115 VAC at pins 1, 2 and 3 of connector DB27001 (WDM 27-81-18).
- (i) Turn the ALT FLAPS control switch to the RET position.
- (j) With the ALT FLAPS control switch in the RET position do a check for 115 VAC at pins 1, 2 and 3 of connector DB27001 (WDM 27-81-18).
- (k) If there is 115 VAC at pins 1, 2 and 3 and 28 VDC at pin 6 of connector DB27001, then replace the slat electric motor, B27001.

These are the tasks:

Slat Electric Motor Removal, AMM TASK 27-81-34-000-801,

Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.

- 1) Turn the ALT FLAPS control switch to the OFF position.
- 2) Push the ALT FLAPS ARM switch on the control stand to disarm the alternate control system.
- 3) Connect the electrical connector, DB27001 to the slat electric motor, B27001.
- 4) Use the secondary system to extend the slats to another position. To extend them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (l) If there is not 28 VDC at pin 6 of connector DB27001, then do this wiring check between the slat electric motor, B27001 and the Slats Bypass/Clutch Relay, K27001 on the P210 panel:

- (9) Use the secondary system to extend the slats to another position. To extend them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

813. Slat Single FSEU Asymmetry Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21051.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED with the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.
- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Look for a broken or disconnected torque tube:
- (a) Find which wing has the broken or disconnected torque tube:
- 1) Look at the 27-FLAP/SLAT maintenance page on the EICAS.
 - 2) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):
- | <u>Number</u> | <u>Name/Location</u> |
|---------------|------------------------|
| 511AB | Leading Edge PDU Panel |
- 3) Use the wrench flats on the outboard torque tube to turn the slat drive system.
 - 4) If the SLAT POS L 1 indication on the maintenance page does not change when you turn the drive system, then there is a broken or disconnected torque tube in the left wing.
 - 5) If the SLAT POS R 1 indication on the maintenance page does not change when you turn the drive system, then there is a broken or disconnected torque tube in the right wing.
- (b) If there is a broken or disconnected torque tube in the right wing, do these steps until you find the torque tube:
- 1) Look at the torque tubes and gearboxes that go through the fuselage.
 - 2) Disconnect the inboard torque tube from the slat PDU.

EFFECTIVITY

D633W103-ARO

Page 260
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 3) Use a LE slat drive torque tube coupling adapter, SPL-1694 on the torque tube to manually turn the right wing drive system a maximum of four torque tube turns.

NOTE: This will move the slats approximately 1/2 inch.

- 4) Look at the slats on the right wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.

- 5) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
- 6) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
- 7) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
- 8) Remove these access panels for the offset gearboxes on the lower surface of the right wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
611EB	Inboard Fixed Leading Edge Panel
611LB	Inboard Fixed Leading Edge Panel

521MB	Outboard Fixed Leading Edge Panel
521PB	Outboard Fixed Leading Edge Panel

- 8) Connect the inboard torque tube to the slat PDU.

- (2) Replace the applicable torque tube or torque tube support:

- (a) If it is necessary, replace a torque tube in the cargo compartment.

These are the tasks:

Cargo Compartment Slat Torque Tube Removal, AMM TASK 27-81-38-000-803,
Cargo Compartment Slat Torque Tube Installation, AMM TASK 27-81-38-400-803.

- (b) If it is necessary, replace a torque tube on the inboard side of the wing.

These are the tasks:

Inboard Wing Slat Torque Tube Removal, AMM TASK 27-81-38-000-801,
Inboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-801.

- (c) If it is necessary, replace a torque tube on the outboard side of the wing.

These are the tasks:

Outboard Wing Slat Torque Tube Removal, AMM TASK 27-81-38-000-802,
Outboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-802.

- (d) If it is necessary, replace a leading edge pressure seal.

These are the tasks:

Leading Edge Pressure Seal Removal, AMM TASK 27-81-39-000-804,
Leading Edge Pressure Seal Installation, AMM TASK 27-81-39-400-804.

- (e) If it is necessary, replace a torque tube support on the inboard side of the wing.

These are the tasks:

Inboard Wing Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-801,
Inboard Wing Slat Torque Tube Support Installation, AMM TASK 27-81-39-400-801.

- (f) If it is necessary, replace a torque tube support on the outboard side of the wing.

These are the tasks:

Outboard Wing Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-802,
Outboard Wing Slat Torque Tube Support Installation, AMM TASK 27-81-39-400-802.

- (g) If it is necessary, replace a torque tube support in the cargo compartment.

These are the tasks:

511AB	Leading Edge PDU Panel

(b) On the right wing,

<u>Number</u>	<u>Name/Location</u>
611EB	Inboard Fixed Leading Edge Panel
611LB	Inboard Fixed Leading Edge Panel
621AAB	Outboard Fixed Leading Edge Panel
621ACB	Outboard Fixed Leading Edge Panel
621BB	Outboard Fixed Leading Edge Panel
621EB	Outboard Fixed Leading Edge Panel
621GB	Outboard Fixed Leading Edge Panel
621JB	Outboard Fixed Leading Edge Panel
621MB	Outboard Fixed Leading Edge Panel
621PB	Outboard Fixed Leading Edge Panel

(c) On the left wing,

<u>Number</u>	<u>Name/Location</u>
511EB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel
521AAB	Outboard Fixed Leading Edge Panel
521ACB	Outboard Fixed Leading Edge Panel
521BB	Outboard Fixed Leading Edge Panel
521EB	Outboard Fixed Leading Edge Panel
521GB	Outboard Fixed Leading Edge Panel
521JB	Outboard Fixed Leading Edge Panel
521MB	Outboard Fixed Leading Edge Panel
521PB	Outboard Fixed Leading Edge Panel

(5) Replace the slat position sensor 1L, M27103 on the left wing.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

(6) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.

(a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

(b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.

(7) Replace the slat position sensor 1R, M27104 on the right wing.

These are the tasks:

777-200/300 FAULT ISOLATION MANUAL

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,
Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

- (8) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.
- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (9) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (10) Remove FSEU 1, M27001 from the E1-6 shelf.
- (11) Do a check of the wiring between FSEU 1 and the slat position sensor 1L, M27103:
- (a) Disconnect the connector DM27103 from slat position sensor 1L, M27103.
 - (b) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27103 at the slat position sensor 1L, M27103 (WDM 27-88-11):

DM27001AC	DM27103
pin K4	pin 1
pin J4	pin 2
pin G6	pin 3
pin G7	pin 4
pin F6	pin 5
pin F7	pin 6

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27103.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - a) If the maintenance message does not show on the MAT, then you corrected the fault.
- (d) If you did not find a problem with the wiring, or if the MAT shows ACTIVE for the maintenance message, then continue.

- (12) Connect the connector DM27103 to slat position sensor 1L, M27103.
- (13) Do a check of the wiring between FSEU 1 and the slat position sensor 1R, M27104:
- (a) Disconnect the connector DM27104 from slat position sensor 1R, M27104.
 - (b) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27104 at the slat position sensor 1R, M27104 (WDM 27-88-11):

DM27001AA	DM27104
pin A4	pin 1
pin B4	pin 2
pin D6	pin 3
pin D7	pin 4
pin E6	pin 5
pin E7	pin 6

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27104.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - a) If the maintenance message does not show on the MAT, then you corrected the fault.
 - (d) If you did not find a problem with the wiring, or if the MAT shows ACTIVE for the maintenance message, then continue.
- (14) Connect the connector DM27104 to slat position sensor 1R, M27104.
- (15) Install a new FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (16) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (17) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
- (a) If the maintenance message does not show on the MAT, then you corrected the fault.

Page 265
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

814. Left and Right Slat Position Sensor Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21161.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Use the alternate system to retract the slats to the retracted position. To retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
 - (3) Replace the other slat position sensor 1L, M27103 or 1R, M27104.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (4) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (5) Remove FSEU 1, M27001 from the E1-6 shelf.
- (6) Do a wiring check between FSEU 1, M27001 and slat position sensor 1R, M27104 on the right wing:
 - (a) Disconnect connector DM27104 from slat position sensor 1R, M27104 on the right wing.
 - (b) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DM27104 at the slat position sensor 1R, M27104 on the right wing (WDM 27-88-11):

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Make sure that this circuit breaker is closed:

Right Power Management Panel, P210

Row	Col	Number	Name
K	8	C27630	SLATS ELEC CTRL RLY PWR

- (a) If the circuit breaker was not closed, then do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
 - 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the circuit breaker was closed, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Replace the Slats Extend Relay, K27003 on the P210 panel (WDM 27-81-17).
 - (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
 - 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (3) Do this wiring check:
 - (a) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (b) Do a wiring check between these pins of connector DM27001AA on the E1-6 shelf and connector D21039P on the P210 panel (WDM 27-81-17):

DM27001AA	D21039P
pin E2	pin 16

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001 on the E1-6 shelf.
 - 3) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
 - 4) If the maintenance message does not show on the MAT, then you corrected the fault.

824. Primary Slats Extend Slow Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25031.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.

NOTE: This fault can occur if there is not sufficient hydraulic power available. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power. The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the slats.

- (a) If the maintenance message does not show on the ground test display, then do the Fault Isolation Procedure - Intermittent Extend Solenoid Problem below.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Extend Problem below.

C. Fault Isolation Procedure - Intermittent Extend Solenoid Problem

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (3) Do a wiring check of the Primary Extend solenoid on the slat primary control valve, V27003 in the left main wheel well:

- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27003B from the slat primary control valve, V27003 in the left wheel well.
- (c) Do a check of the resistance between pins 9 and 19 of connector DV27003B on the slat primary control valve, V27003 in the left wheel well (WDM 27-81-15):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the Primary Extend solenoid on the slat primary control valve, V27003.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

- 2) Do a check of the resistance between pins 9 and 19 of connector DV27003B on the slat primary control valve, V27003 again (WDM 27-81-15).

NOTE: This does a check of the internal wiring on the primary control valve, V27003.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- (e) Connect electrical connector DV27003B to the slat primary control valve, V27003 in the left wheel well.
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

- 1) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Extend Problem below.
 - 2) If the maintenance message does not show on the ground test display, then you corrected the fault.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

D. Fault Isolation Procedure - Slow Extend Problem

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- NOTE: The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the slats. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power.
- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
- NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

27-81 TASK 824

D633W103-ARO

Page 283
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (15) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

825. Primary Slats Retract Slow Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25051.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.

NOTE: This fault can occur if there is not sufficient hydraulic power available. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power. The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the slats.

- (a) If the maintenance message does not show on the ground test display, then do the Fault Isolation Procedure - Intermittent Retract Solenoid Problem below.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Retract Problem below.

C. Fault Isolation Procedure - Intermittent Retract Solenoid Problem

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Primary Retract solenoid on the slat primary control valve, V27003 in the left main wheel well:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

EFFECTIVITY
ARO ALL

27-81 TASKS 824-825

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27003B from the slat primary control valve, V27003 in the left wheel well.
- (c) Do a check of the resistance between pins 2 and 17 of connector DV27003B on the slat primary control valve, V27003 in the left wheel well (WDM 27-81-15):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the Primary Retract solenoid on the slat primary control valve, V27003.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.
- 2) Do a check of the resistance between pins 2 and 17 of connector DV27003B on the slat primary control valve, V27003 again (WDM 27-81-15).

NOTE: This does a check of the internal wiring on the primary control valve, V27003.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- (e) Connect electrical connector DV27003B to the slat primary control valve, V27003 in the left wheel well.
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (g) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
 - 1) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Retract Problem below.

777-200/300 FAULT ISOLATION MANUAL

- 2) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

D. Fault Isolation Procedure - Slow Retract Problem

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the slats. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power.

- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.

**777-200/300
FAULT ISOLATION MANUAL**

- (5) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	12	C27606	SLATS PRI DR CTRL 1

- (6) Disconnect electrical connector DV27003B from the slat primary control valve V27003 in the left wheel well.
- (7) Remove FSEU 1, M27001 from the E1-6 shelf.
- (8) Do this wiring check between the Low Speed Solenoid and FSEU 1:
- (a) Do a wiring check between these pins on connector DM27001AC at the E1-6 shelf and connector DV27003B at the slat primary control valve, V27003 in the left wheel well (WDM 27-81-15):

DM27001AC	DV27003B
pin F3	pin 8

- (b) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DV27003B.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

C. Fault Isolation Procedure

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the center hydraulic system is not pressurized, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (5) Replace the Primary Extend solenoid on the slat primary control valve, V27003.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
 - (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (6) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (7) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.

EFFECTIVITY
ARO ALL

27-81 TASK 826

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT does not show PASSED after the ground test, then replace the slat primary control valve, V27003.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (b) If the MAT shows PASSED after the ground test, then continue.
- (8) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (9) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (10) Do a check of the internal wiring in the primary control valve, V27003 for the Primary Extend solenoid:
 - (a) Disconnect electrical connector DV27003B from the slat primary control valve V27003 in the left wheel well.
 - (b) Do a check of the resistance between pins 9 and 19 of connector DV27003B on the slat primary control valve, V27003 in the left wheel well (WDM 27-81-15):
 - (c) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the slat primary control valve, V27003.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- 2) Connect electrical connector DV27003B to the slat primary control valve V27003 in the left wheel well.
- 3) Remove the safety tags and close these circuit breakers:

827. Primary Slats Low Speed Operate Fast Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-25081, 27-25101.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

EFFECTIVITY
ARO ALL

777-200/300 FAULT ISOLATION MANUAL

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the Low Speed solenoid on the slat primary control valve, V27003.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.
 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
 - (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (4) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
 - (a) If the MAT does not show PASSED after the ground test, then replace the slat primary control valve, V27003.
These are the tasks:
Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
 - 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
 - (b) If the MAT shows PASSED after the ground test, then continue.
 - (b) If the MAT shows PASSED after the ground test, then continue.
- (6) Open these circuit breakers and install safety tags:
Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1
- (7) Do a check of the internal wiring in the primary control valve, V27004 for the Low Speed solenoid:
 - (a) Disconnect electrical connector DV27003B from the slat primary control valve, V27003 in the left wheel well.

- (15) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, slats Primary Control Valve Test-FSEU 1.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (16) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

END OF TASK

828. Primary Slats Low Speed Retract Slow Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25091.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the center hydraulic system is not pressurized, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (5) Replace the Primary Retract solenoid on the slat primary control valve, V27003.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
 - (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (6) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (7) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
- (a) If the MAT does not show PASSED after the ground test, then replace the slat primary control valve, V27003.
- These are the tasks:
- Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
- Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
- 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

Right Power Panel, P200

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
ARO 011-999			
B	1	C27300	SLATS ELEC MOT PWR
ARO 001-010			
B	3	C27300	SLATS ELEC MOT PWR

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
ARO ALL			
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (d) If you do not find a problem with the wiring, or if the maintenance message shows on the ground test display, then install a new FSEU 1. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (e) Install the slats bypass/clutch relay, K27001 on the P210 power management panel (WDM 27-81-17).
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

Right Power Panel, P200

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
ARO 011-999			
B	1	C27300	SLATS ELEC MOT PWR
ARO 001-010			
B	3	C27300	SLATS ELEC MOT PWR

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
ARO ALL			
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (g) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (h) If the maintenance message shows on the ground test display, then replace the slats bypass/clutch relay, K27001 on the P210 power management panel (WDM 27-81-17).

Page 298.7
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (i) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (j) If the maintenance message shows on the ground test display, then continue.
- (7) Do this check of the slats extend relay, K27003:
 - (a) Remove the slats extend relay, K27003 from the P210 power management panel (WDM 27-81-17).
 - (b) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DK27003 at the P210 power management panel (WDM 27-81-17):

DM27001AA	DK27003
pin E2	pin X2

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Install the slats extend relay, K27003 on the P210 power management panel (WDM 27-81-17).
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

ARO ALL

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breakers were closed, then continue.
- (2) Use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
- (a) If the slats do not operate in alternate mode, replace the slat electric motor, B27001. These are the tasks:
- Slat Electric Motor Removal, AMM TASK 27-81-34-000-801,
Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
- 1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the slats operate in alternate mode, then continue.
- (3) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
- (a) If the MAT shows PASSED after the ground test, then replace FSEU 1, M27001. These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- 1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the MAT does not show PASSED after the ground test, then continue.

ARO ALL

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breakers were closed, then continue.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (3) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (4) Do this wiring check of the Bypass Solenoid on the slat primary control valve, V27003:
 - (a) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

- (b) Disconnect electrical connector DV27003A from the slat primary control valve V27003 in the left wheel well.
- (c) Do a check of the resistance between pins 10 and 16 of connector DV27003A on the slat primary control valve, V27003 in the left wheel well (WDM 27-81-17):

NOTE: This does a check of the Bypass solenoid on the primary control valve, V27003.

- (d) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the Bypass solenoid on the slat primary control valve, V27003.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

EFFECTIVITY
ARO ALL

27-81 TASK 831

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

- 2) Do a check of the resistance between pins 10 and 16 of connector DV27003A on the slat primary control valve, V27003 again (WDM 27-81-17).

NOTE: This does a check of the internal wiring on the primary control valve, V27003.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- b) If the resistance between the pins is in the limit, then continue.
- 3) Connect electrical connector DV27003A to the slat primary control valve V27003 in the left wheel well.
- 4) Remove the safety tag and close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- 6) If you do not find a problem with the wiring, then continue.
- (5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 2.
 - (a) If the MAT shows PASSED after the ground test, then replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the MAT does not show PASSED after the ground test, then continue.
- (6) Do this check of the slats bypass/clutch relay, K27001:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

777-200/300 FAULT ISOLATION MANUAL

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (20) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

832. Slats Shutoff Valve Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25141.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the Shutoff Solenoid on the slat primary control valve, V27003 in the left wheel well.
- These are the tasks:
- Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.
- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 2.
- (a) If the MAT does not show PASSED after the ground test, then replace the slat primary control valve, V27003.

Page 298.21
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- (b) If the MAT shows PASSED after the ground test, then replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, then continue.
- (6) Do this wiring check:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

833. Slats Primary System Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25151.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check to see if the slat drive system is locked:
 - (a) Use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
 - (b) If the slats operate with the alternate system, the slat drive system is not locked.
 - (c) If the slats do not operate with the alternate system, the slat drive system is locked.
- (2) If the slat drive system is locked, do these steps:
 - (a) Open this access panel to get access to the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel
 - (b) Look at the torque trip indicators on the slat PDU to see if the drive system is locked in one of the wings.
 - (c) If neither of the torque trip indicators are extended, disconnect the torque tubes from the slat power drive unit (PDU).

EFFECTIVITY

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (d) Use the wrench flats on the torque tube on the outboard side of the PDU to manually extend and retract the left wing slats.
- (e) Use a LE slat drive torque tube coupling adapter, SPL-1694 on the torque tube on the inboard side of the PDU to manually extend and retract the right wing slats.
- (f) If you can extend and retract the slats on each wing, do these steps:
 - 1) Do this task: Slat Electric Motor Removal, AMM TASK 27-81-34-000-801.
 - 2) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 3) If you can turn the PDU, install a new slat electric motor, B27001. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
 - 4) If you cannot turn the PDU, do this task: Slat Hydraulic Motor Removal, AMM TASK 27-81-33-000-801.
 - 5) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 6) If you cannot turn the PDU, replace the slat PDU.

These are the tasks:

Slat Power Drive Unit (PDU) Removal, AMM TASK 27-81-31-000-801,
Slat Power Drive Unit (PDU) Installation, AMM TASK 27-81-31-400-801.
 - 7) Try to turn the output shaft on the slat hydraulic motor.
 - 8) If you can turn the output shaft on the hydraulic motor, replace the slat primary control valve, V27003.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
 - 9) If you cannot turn the output shaft on the slat hydraulic motor, install a new slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
 - 10) If it is necessary, re-install the slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
 - 11) If it is necessary, re-install the slat electric motor, B27003. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
- (g) If one of the torque trip indicators is extended or if you cannot extend and retract the slats on one of the wings, replace the gearbox where the slat drive system is locked.
- (h) Connect the torque tubes to the slat PDU.
 - (i) Do this task: Leading Edge Slat Drive System Adjustment, AMM TASK 27-81-00-820-801.
 - (j) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) If the slat drive system is not locked, then continue.
- (4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 2.

27-81 TASK 833

D633W103-ARO

Page 298.24
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT does not show PASSED after the ground test, then replace the slat primary control valve, V27003.
- These are the tasks:
- Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
- (b) If the MAT shows PASSED after the ground test, then replace FSEU 1, M27001.
- These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
- (a) If the maintenance message shows on the ground test display, then replace the slat primary control valve, V27003.
- These are the tasks:
- Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
- (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (6) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, then continue.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (7) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (8) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (9) Do a wiring check between the slat primary control valve, V27003 and FSEU 1, M27001:
- (a) Open these circuit breakers and install safety tags:

777-200/300 FAULT ISOLATION MANUAL

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (10) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
- (11) Replace the slat hydraulic motor.
These are the tasks:
Slat Hydraulic Motor Removal, AMM TASK 27-81-33-000-801,
Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
- (12) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

834. Slat Secondary System Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25161.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that these circuit breakers are closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

Right Power Panel, P200

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
ARO 011-999			
B	1	C27300	SLATS ELEC MOT PWR
ARO 001-010			
B	3	C27300	SLATS ELEC MOT PWR

ARO ALL

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (b) If the circuit breakers were closed, or if the maintenance message shows on the ground test display, then continue.
- (2) Do this check to see if the slat drive system is locked:
 - (a) Use the primary system to extend and retract the slats. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (b) If the slats do not operate with the primary system, then the slat drive system is locked.
 - (c) If the slats operate with the primary system, then the slat drive system is not locked.
- (3) If the slat drive system is locked, do these steps:
 - (a) Open this access panel to get access to the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel
 - (b) Look at the torque trip indicators on the slat PDU to see if the drive system is locked in one of the wings.
 - (c) If neither of the torque trip indicators are extended, disconnect the torque tubes from the slat power drive unit (PDU).
 - (d) Use the wrench flats on the torque tube on the outboard side of the PDU to manually extend and retract the left wing slats.
 - (e) Use a LE slat drive torque tube coupling adapter, SPL-1694 on the torque tube on the inboard side of the PDU to manually extend and retract the right wing slats.
 - (f) If you can extend and retract the slats on each wing, do these steps:
 - 1) Do this task: Slat Electric Motor Removal, AMM TASK 27-81-34-000-801.
 - 2) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 3) If you can turn the PDU, install a new slat electric motor, B27001. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
 - 4) If you cannot turn the PDU, do this task: Slat Hydraulic Motor Removal, AMM TASK 27-81-33-000-801.
 - 5) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 6) If you cannot turn the PDU, replace the slat PDU.

These are the tasks:

Slat Power Drive Unit (PDU) Removal, AMM TASK 27-81-31-000-801,
Slat Power Drive Unit (PDU) Installation, AMM TASK 27-81-31-400-801.
 - 7) Try to turn the output shaft on the slat hydraulic motor.
 - 8) If you can turn the output shaft on the hydraulic motor, replace the slat primary control valve, V27003.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

777-200/300 FAULT ISOLATION MANUAL

- 9) If you cannot turn the output shaft on the slat hydraulic motor, install a new slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
 - 10) If it is necessary, re-install the slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
 - 11) If it is necessary, re-install the slat electric motor, B27003. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
- (g) If one of the torque trip indicators is extended or if you cannot extend and retract the slats on one of the wings, replace the gearbox where the slat drive system is locked.
- (h) Connect the torque tubes to the slat PDU.
- (i) Do this task: Leading Edge Slat Drive System Adjustment, AMM TASK 27-81-00-820-801.
- (j) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) If the slat drive system is not locked, use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.

NOTE: This step is intended to find if the slats do not extend, retract or do not operate at all with electric power.

- (5) If the slats do not operate with the alternate system, then replace the slat electric motor, B27001.

These are the tasks:

Slat Electric Motor Removal, AMM TASK 27-81-34-000-801,

Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.

- (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (6) If the slats do not extend with the alternate system, then replace the Slats Extend Relay, K27003 on the P210 Panel (WDM 27-81-17).
- (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) If the slats do not retract with the alternate system, then replace the Slats Retract Relay, K27005 on the P210 Panel (WDM 27-81-17).
- (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

Page 298.29
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 2) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the Slats Bypass/Clutch Relay, K27001 on the P210 panel (WDM 27-81-17).
- (9) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, then continue.
- (10) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (11) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, then continue.
- (12) Do a check of the wiring between the Slats Bypass/Clutch Relay, K27001 and FSEU 1, M27001:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Remove the Slats Bypass/Clutch Relay, K27001 from the P210 panel (WDM 27-81-17).
- (d) Do a wiring check between these pins of connector DM27001AA on the E1-6 shelf and connector DK27001 on the P210 panel (WDM 27-81-17):

DM27001AA	DK27001
pin G5	pin X2

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
- 2) Re-install FSEU 1 on the E1-6 shelf.
- 3) Re-install the Slats Bypass/Clutch Relay, K27001 on the P210 panel.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (28) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

835. Slat Asymmetry Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25171.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

Page 298.37
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Use the alternate system to retract the slats to the retracted position. To retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
- (3) Look at the SLAT POS L1 and SLAT POS R1 indications on the FLAP/SLAT maintenance page on EICAS.
 - (a) Replace the slat position sensor for the slat position indication which is further from slat number 10.
NOTE: The slat position sensor for FLAP POS L1 is M27103 at slat number 1. The slat position sensor for SLAT POS R1 is M27104 at slat number 14.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (4) Replace the other slat position sensor 1L, M27103 or 1R, M27104.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (6) Remove FSEU 1, M27001 from the E1-6 shelf.
- (7) Do a check of the wiring between FSEU 1 and the slat position sensor 1L, M27103:
 - (a) Disconnect the connector DM27103 from slat position sensor 1L, M27103.
 - (b) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27103 at the slat position sensor 1L, M27103 (WDM 27-88-11):

DM27001AC	DM27103
pin K4	pin 1
pin J4	pin 2
pin G6	pin 3
pin G7	pin 4
pin F6	pin 5
pin F7	pin 6

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.

EFFECTIVITY
ARO ALL

- 3) Re-connect connector DM27103.
- 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (d) If you did not find a problem with the wiring, then continue.
- (e) Re-connect connector DM27103 to slat position sensor L1, M27103 on the left wing.
- (8) Do a check of the wiring between FSEU 1 and the slat position sensor 1R, M27104:
 - (a) Disconnect the connector DM27104 from slat position sensor 1R, M27104.
 - (b) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27104 at the slat position sensor 1R, M27104 (WDM 27-88-11):

DM27001AA	DM27104
pin A4	pin 1
pin B4	pin 2
pin D6	pin 3
pin D7	pin 4
pin E6	pin 5
pin E7	pin 6

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27104.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (d) If you did not find a problem with the wiring, then continue.
- (e) Re-connect connector DM27104 to slat position sensor R1, M27104 on the right wing.
- (9) Re-install FSEU 1, M27001 on the E1-6 shelf.

EFFECTIVITY

Page 298.39
Sep 05/2017

**777-200/300
FAULT ISOLATION MANUAL**

- (10) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (11) Look for a broken or disconnected torque tube:

- (a) Find which wing has the broken or disconnected torque tube:

- 1) Look at the 27-FLAP/SLAT maintenance page on the EICAS.
- 2) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- 3) Use the wrench flats on the torque tube outboard of the PDU to manually turn the slat drive system a maximum of four torque tube turns.

NOTE: This will move the slats approximately 1/2 inch.

- 4) If the SLAT POS L 1 indication on the maintenance page does not change when you turn the drive system, then there is a broken or disconnected torque tube in the left wing.
- 5) If the SLAT POS R 1 indication on the maintenance page does not change when you turn the drive system, then there is a broken or disconnected torque tube in the right wing.

- (b) If there is a broken or disconnected torque tube in the right wing, do these steps until you find the torque tube:

- 1) Look at the torque tubes and gearboxes that go through the aft end of the forward cargo compartment.
- 2) Look at the slats on the right wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.

- 3) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
- 4) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
- 5) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
- 6) If it is necessary, remove these access panels for the offset gearboxes on the lower surface of the right wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
611EB	Inboard Fixed Leading Edge Panel
611LB	Inboard Fixed Leading Edge Panel
621AAB	Outboard Fixed Leading Edge Panel
621ACB	Outboard Fixed Leading Edge Panel
621BB	Outboard Fixed Leading Edge Panel

EFFECTIVITY

<u>Number</u>	<u>Name/Location</u>
621EB	Outboard Fixed Leading Edge Panel
621GB	Outboard Fixed Leading Edge Panel
621JB	Outboard Fixed Leading Edge Panel
621MB	Outboard Fixed Leading Edge Panel
621PB	Outboard Fixed Leading Edge Panel

- (c) If there is a broken or disconnected torque tube in the left wing, do these steps until you find the torque tube:

- 1) Look at the slats on the left wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.

- 2) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
- 3) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
- 4) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
- 5) If it is necessary, remove these access panels for the offset gearboxes on the lower surface of the left wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
511EB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel
521AAB	Outboard Fixed Leading Edge Panel
521ACB	Outboard Fixed Leading Edge Panel
521BB	Outboard Fixed Leading Edge Panel
521EB	Outboard Fixed Leading Edge Panel
521GB	Outboard Fixed Leading Edge Panel
521JB	Outboard Fixed Leading Edge Panel
521MB	Outboard Fixed Leading Edge Panel
521PB	Outboard Fixed Leading Edge Panel

- 6) Connect the inboard torque tube to the slat PDU.

- (12) Replace the applicable torque tube or torque tube support:

- (a) If it is necessary, replace a torque tube in the cargo compartment.

These are the tasks:

Cargo Compartment Slat Torque Tube Removal, AMM TASK 27-81-38-000-803,
Cargo Compartment Slat Torque Tube Installation, AMM TASK 27-81-38-400-803.

- (b) If it is necessary, replace a torque tube on the inboard side of the wing.

These are the tasks:

Inboard Wing Slat Torque Tube Removal, AMM TASK 27-81-38-000-801,
Inboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-801.

- (c) If it is necessary, replace a torque tube on the outboard side of the wing.

836. Slats Extend Solenoid Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25421.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breaker was closed, continue.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (3) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (5) Disconnect electrical connector DV27003B from the slat primary control valve V27003 in the left wheel well.
- (6) Do this wiring check of the Primary Extend Solenoid on the slat primary control valve, V27003:
- (a) Do a check of the resistance between pins 9 and 19 of connector DV27003B on the slat primary control valve V27003 in the left wheel well (WDM 27-81-15):
- (b) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the Primary Extend solenoid on the slat primary control valve V27003.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

- 2) Do a check of the resistance between pins 9 and 19 of connector DV27003B on the slat primary control valve, V27003 again (WDM 27-81-15).

NOTE: This does a check of the internal wiring on the primary control valve, V27003.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- b) If the resistance between the pins is in the limit, then continue.
- 3) Connect electrical connector DV27003B to the slat primary control valve V27003 in the left wheel well.
- 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

777-200/300 FAULT ISOLATION MANUAL

- (4) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (5) Disconnect electrical connector DV27003B from the slat primary control valve V27003 in the left wheel well.
- (6) Do this wiring check of the Primary Retract Solenoid on the slat primary control valve, V27003:
- (a) Do a check of the resistance between pins 2 and 17 of connector DV27003B on the slat primary control valve V27003 in the left wheel well (WDM 27-81-15):
- (b) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the Primary Retract solenoid on the slat primary control valve V27003.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

- 2) Do a check of the resistance between pins 2 and 17 of connector DV27003B on the slat primary control valve, V27003 again (WDM 27-81-15).

NOTE: This does a check of the internal wiring on the primary control valve, V27003.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- b) If the resistance between the pins is in the limit, then continue.
- 3) Connect electrical connector DV27003B to the slat primary control valve V27003 in the left wheel well.
- 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

777-200/300 FAULT ISOLATION MANUAL

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (15) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

838. Slats Low Speed Solenoid Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25441.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breaker was closed, continue.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (3) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.

- (5) Disconnect electrical connector DV27003B from the slat primary control valve V27003 in the left wheel well.
- (6) Do this wiring check of the Primary Low Speed Solenoid on the slat primary control valve, V27003:
- (a) Do a check of the resistance between pins 8 and 18 of connector DV27003B on the slat primary control valve V27003 in the left wheel well (WDM 27-81-15):
- (b) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- 1) Replace the Primary Low Speed solenoid on the slat primary control valve V27003.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

- 2) Do a check of the resistance between pins 8 and 18 of connector DV27003B on the slat primary control valve, V27003 again (WDM 27-81-15).

NOTE: This does a check of the internal wiring on the primary control valve, V27003.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- b) If the resistance between the pins is in the limit, then continue.
- 3) Connect electrical connector DV27003B to the slat primary control valve V27003 in the left wheel well.

- 4) Remove the safety tags and close these circuit breakers:

777-200/300 FAULT ISOLATION MANUAL

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (15) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

840. Slats Extend Relay Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25461.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, or if the circuit breaker was closed, continue.
- (2) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- 4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (c) If you do not find a problem with the wiring, then continue.
- (8) Open these circuit breakers and install safety tags:
- Standby Power Management Panel, P310**
- | <u>Row</u> | <u>Col</u> | <u>Number</u> | <u>Name</u> |
|------------|------------|---------------|-------------|
| A | 8 | C27513 | SNSR EXC 1 |
| D | 3 | C27601 | FSEU 1 |
- (9) Remove FSEU 1, M27001 from the E1-6 shelf.
- (10) Do this wiring check between the autoslat priority valve and FSEU 1:
- (a) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DV27105 at the autoslat priority valve, V27105 in the right wheel well (WDM 27-81-19):

DM27001AA	DV27105
pin E1	pin 2

- (b) If you find a problem with the wiring, do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DV27105.
 - 4) Remove the safety tags and close these circuit breakers:
- Right Power Management Panel, P210**
- | <u>Row</u> | <u>Col</u> | <u>Number</u> | <u>Name</u> |
|------------|------------|---------------|---------------------|
| K | 5 | C27607 | SLATS PRI DR CTRL 2 |
- Standby Power Management Panel, P310**
- | <u>Row</u> | <u>Col</u> | <u>Number</u> | <u>Name</u> |
|------------|------------|---------------|-------------|
| A | 8 | C27513 | SNSR EXC 1 |
| D | 3 | C27601 | FSEU 1 |
- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
- 6) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (c) If you do not find a problem with the wiring, then continue.
- (11) Install a new FSEU 1, M27001. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (12) Re-connect connector DV27105 to the autoslat priority valve, V27105.

777-200/300 FAULT ISOLATION MANUAL

- (13) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (14) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (15) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

————— **END OF TASK** —————

844. Slat Hydraulic Pressure Low Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20950.

B. Fault Isolation Procedure

NOTE: This maintenance message can occur if the slats are operated when the center hydraulic system pressure is low or off. This can occur when the center hydraulic system is intentionally off. Therefore, it is possible that there are no problems with the airplane.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- NOTE: Use the Air Driven Pumps (ADPs) to supply hydraulic power.
- (2) Do these steps to find hydraulic system problems:
- (a) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS, 29 Hydraulic System page on the MAT.
- (b) If you find maintenance messages for the center hydraulic system, then do these steps:
- 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - 3) After you have corrected the maintenance messages for the hydraulic system, then continue.

777-200/300 FAULT ISOLATION MANUAL

- (c) If there are no maintenance messages for the center hydraulic system, then continue.
- (3) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: While the slats operate, look at the hydraulic synoptic page on the MFD to make sure the hydraulic pressure stays higher than 2500 psi.

- (a) If the slats operate in the primary mode, and the hydraulic pressure stays above 2500 psi, then you corrected the fault.
- (b) If the slats do not operate in the primary mode, then continue.
- (4) Replace FSEU 1, M27001, or FSEU 2, M27002 that reported the fault.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

————— **END OF TASK** —————

845. Slat Primary Circuit Breaker Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20971.

B. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: This step will cause the maintenance message to become INACTIVE. Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

- (2) Move the flap control lever to a position which does not agree with the position of the slats.
- (3) Move the flap control lever to agree with the position of the slats.
- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (a) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: This step will cause the maintenance message to become INACTIVE. Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

- (b) Move the flap control lever to a different position.
- (c) Move the flap control lever to agree with the position of the slats.
- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- 2) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.

777-200/300 FAULT ISOLATION MANUAL

- (2) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: This step will cause the maintenance message to become INACTIVE. Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

- (b) Move the flap control lever to a different position.

- (c) Move the flap control lever to agree with the position of the slats.

- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— END OF TASK —————

846. Right Wing Slat Single FSEU Asymmetry Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20911.

B. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

- (3) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

- (a) If the MAT shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.

- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Replace the slat position sensor, M27104 on the right wing.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

- (2) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (3) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (4) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Do a check of the wiring between FSEU 1 and the slat position sensor, M27104:
 - (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Disconnect the connector DM27104 from slat position sensor, M27104.
- (d) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27104 at the slat position sensor, M27104 (WDM 27-88-11):

DM27001AA	DM27104
pin A4	pin 1
pin B4	pin 2
pin D6	pin 3
pin D7	pin 4
pin E6	pin 5
pin E7	pin 6

- (e) If you find a problem with the wiring, repair the wiring.
- (f) Re-install FSEU 1, M27001.
- (g) Re-connect connector DS27104.
- (h) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1

(Continued)

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	3	C27601	FSEU 1

- (i) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
- 1) If the maintenance message shows NOT ACTIVE (or if the message does not show), then you corrected the fault.
 - 2) If the MAT shows ACTIVE for the maintenance message, then continue.
- (6) Look for a broken or disconnected torque tube in the right wing:
- (a) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- (b) Look at the torque tubes and gearboxes that go through the fuselage.
- (c) Use the wrench flats on the torque tube outboard of the PDU to manually turn the slat drive system a maximum of four torque tube turns.
NOTE: This will move the slats approximately 1/2 inch.
- (d) Look at the slats on the right wing for a pair of slats that do not fair or a slat that is skewed.
NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.
- (e) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
- (f) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
- (g) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
- (h) Remove these access panels for the offset gearboxes on the lower surface of the right wing to get access to the torque tubes:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

- (2) Use the secondary system to extend the slats to another position. To extend them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— END OF TASK —————

849. Slat Secondary Uncommanded Motion Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-21281, 27-21282.

B. Initial Evaluation

- (1) Make sure the ALTN FLAPS control switch is in the OFF position.

WARNING

MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE SLATS. THE SLATS CAN MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Push the ALTN FLAPS ARM switch on the control stand to arm the alternate control system.

NOTE: Look for movement of the slats when you arm the alternate control system. As soon as you see the slats move, disarm the alternate control system.

- (a) If the slats move when you arm the alternate control system, then do the Fault Isolation Procedure below.
 - (b) If the slats do not move when you arm the alternate control system, then continue.
- (3) Push the ALTN FLAPS ARM switch on the control stand to disarm the alternate control system.
 - (4) Use the MAT to select SECONDARY MODE INHIBIT OVERRIDE - FSEU 1 or SECONDARY MODE INHIBIT OVERRIDE - FSEU 2.

NOTE: Look for movement of the slats when you override the secondary mode inhibit.

- (a) If the slats move when you select SECONDARY MODE INHIBIT OVERRIDE, then do the Fault Isolation Procedure below.
- (b) If the slats do not move when you select SECONDARY MODE INHIBIT OVERRIDE, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) If the slats moved in the extend direction while the alternate control system was armed, replace the Slats Extend relay, K27003 on the right power management panel, P210 (WDM 27-81-18).
- (2) If the slats moved in the retract direction while the alternate control system was armed, replace the Slats Retract relay, K27005 on the right power management panel, P210 (WDM 27-81-18).

- (p) Push the ALTN FLAPS ARM switch on the control stand to arm the alternate control system.

NOTE: Look for movement of the slats when you arm the alternate control system. As soon as you see the slats move, disarm the alternate control system.

- (q) If the slats do not move when you arm the alternate control system, then do these steps:

- 1) Push the ALTN FLAPS ARM switch on the control stand to disarm the alternate control system.
- 2) Use the MAT to select SECONDARY MODE INHIBIT OVERRIDE - FSEU 1 or SECONDARY MODE INHIBIT OVERRIDE - FSEU 2.

NOTE: Look for movement of the slats when you override the secondary mode inhibit.

- 3) If the slats do not move when you select SECONDARY MODE INHIBIT OVERRIDE, then you corrected the fault.

————— **END OF TASK** —————

850. Slats Uncommanded Motion During Test - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25630.

B. Fault Isolation Procedure

- (1) Look at the MAT Existing Faults display to find the SLATS PRIMARY UNCOMMANDED MOTION or SLATS SECONDARY UNCOMMANDED MOTION maintenance message.

NOTE: The maintenance messages numbers are: 27-21021, 27-21022 (Slats Primary Uncommanded Motion), 27-21281 and 27-21282 (Slats Secondary Uncommanded Motion).

- (2) Do the fault isolation procedure for the applicable maintenance message.

————— **END OF TASK** —————

851. Leading Edge Slats Slow Operation Problems - Fault Isolation

A. Initial Evaluation

- (1) If the trailing edge flaps and leading edge slats are not in the fully retracted position, retract them. To retract the flaps and slats, do this task: Retract the Leading Edge Slats, AMM TASK 27-81-00-860-805.

EFFECTIVITY
ARO ALL

27-81 TASKS 849-851

D633W103-ARO

777-200/300 FAULT ISOLATION MANUAL

- (2) Record the time necessary to extend the leading edge slats and the trailing edge flaps with the primary system:
 - (a) Use the primary system to extend the slats and the flaps to the fully extended position. To extend them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (b) If the time necessary to fully extend the leading edge slats is more than 45 seconds and the time necessary to fully extend the trailing edge flaps is more than 1 minute, then do the Fault Isolation Procedure below.
 - (c) If the time necessary to fully extend the leading edge slats is less than 45 seconds and the time necessary to fully extend the trailing edge flaps is less than 1 minute, then the system is operating correctly.
 - (d) If the time necessary to fully extend the leading edge slats is more than 45 seconds and the time necessary to fully extend the trailing edge flaps is less than 1 minute, then check the position of the low speed solenoid on the slat primary control valve
 - (e) If the time necessary to fully extend the leading slats is less than 45 seconds and the time necessary to fully extend the trailing edge flaps is more than 1 minute, then do the steps in the following task to check the position of the low speed solenoid on the flap primary control valve: Trailing Edge Flaps Slow Operation Problems - Fault Isolation, 27-51 TASK 875.
 - (f) It is also recommended to do the Slat Primary Control Valve Test, AMM TASK 27-81-05-740-801. If more than one failure is found then fault can possibly be with PCV. If only a single fault then T/S the fault shown on the MAT.

B. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the flap/slat priority valve.

These are the tasks:

Flap/Slat Priority Valve Removal, AMM TASK 27-51-06-000-801,

Flap/Slat Priority Valve Installation, AMM TASK 27-51-06-400-801.

- (a) Use the primary system to extend the slats. To extend them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - 1) If the slats extend in less than 45 seconds, then you corrected the fault.
 - 2) If the slats do not extend in less than 45 second, then continue.
- (4) Do a check of the position of the low speed solenoid on the slat primary control valve:

EFFECTIVITY
ARO ALL

27-81 TASK 851

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Look at the SLATS MODE indication on the FLAP/SLAT maintenance page on the MFD.
- (b) If the SLATS MODE is LO SPD, then do this wiring check of the low speed solenoid on the slat primary control valve, V27003 in the left main wheel well:

- 1) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- 2) Disconnect electrical connector DV27003B from the slat primary control valve, V27003 in the left wheel well.
- 3) Do a check of the resistance between pins 8 and 18 of connector DV27003B on the slat primary control valve, V27003 in the left wheel well (WDM 27-81-15):
- 4) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

- a) Replace the Low Speed solenoid on the slat primary control valve, V27003.
These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

- b) Do a check of the resistance between pins 8 and 18 of connector DV27003B on the slat primary control valve, V27003 again (WDM 27-81-15).

NOTE: This does a check of the internal wiring on the primary control valve, V27003.

- c) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.

NOTE: The series numbers are the first three numbers taken from the part number of each solenoid.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- d) If the resistance is in the limits, then continue.
- 5) Connect electrical connector DV27003B to the flap primary control valve, V27003 in the left wheel well.
- 6) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

- (c) If the SLATS MODE is not LO SPD, then continue.
- (5) Do a check of the torque trip indicators for the leading edge slat drive system:
- (a) Open this access panel to get access to the slat power drive unit (PDU):
- | <u>Number</u> | <u>Name/Location</u> |
|---------------|------------------------|
| 511AB | Leading Edge PDU Panel |
- (b) Look at the torque trip indicators on the slat PDU to see if one of them is extended.
- (c) If neither of the torque trip indicators are extended, disconnect the torque tubes from the slat PDU.
- (d) Use the wrench flats on the torque tube on the outboard side of the PDU to manually extend and retract the left wing slats.
- (e) Use a LE slat drive torque tube coupling adapter, SPL-1694 on the torque tube on the inboard side of the PDU to manually extend and retract the right wing slats.
- (f) If one of the torque trip indicators is extended or if you cannot extend and retract the slats on one of the wings, then replace the gearbox where the slat drive system is jammed.
- (g) Connect the torque tubes to the slat PDU.
- (h) Do this task: Leading Edge Slat Drive System Adjustment, AMM TASK 27-81-00-820-801.
- (i) Close this access panel below the slat power drive unit (PDU):
- | <u>Number</u> | <u>Name/Location</u> |
|---------------|------------------------|
| 511AB | Leading Edge PDU Panel |
- (j) Use the primary system to extend the slats. To extend them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
- 1) If the slats extend in less than 45 seconds, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (6) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

777-200/300 FAULT ISOLATION MANUAL

801. Slat Asymmetry Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20942.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED with the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (2) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Replace the two slat position sensors on the left wing, M27103 and M27203.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.
- (4) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (5) Replace the two slat position sensors on the right wing, M27104 and M27204.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

EFFECTIVITY

27-82 TASK 801

D633W103-ARO

Page 201
Jan 05/2013

777-200/300 FAULT ISOLATION MANUAL

- (6) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (7) Do a check of the wiring between FSEU 1 and FSEU 2 and the slat position sensors on the left wing:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Disconnect the connector DM27103 from slat position sensor, M27103.
- (e) Disconnect the connector DM27203 from slat position sensor, M27203.
- (f) Do a wiring check between these pins of connector DM27001AC at the E1-6 shelf and connector DM27103 at the slat position sensor, M27103 (WDM 27-88-11):

DM27001AC

pin K4		pin 1
pin J4		pin 2
pin G6		pin 3
pin G7		pin 4
pin F6		pin 5
pin F7		pin 6

DM27103

- (g) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27203 at the slat position sensor, M27203 (WDM 27-88-12):

DM27002AC

pin K4		pin 1
pin J4		pin 2
pin G6		pin 3
pin G7		pin 4
pin F6		pin 5
pin F7		pin 6

DM27203

- (h) If you find a problem with the wiring, repair the wiring.

EFFECTIVITY
ARO ALL

Page 202
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (i) Re-install FSEU 1, M27001.
- (j) Re-install FSEU 2, M27002.
- (k) Re-connect connector DS27103.
- (l) Re-connect connector DS27203.
- (m) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (8) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (9) Do a check of the wiring between FSEU 1 and FSEU 2 and the slat position sensors on the right wing:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (d) Disconnect the connector DM27104 from slat position sensor, M27104.
 - (e) Disconnect the connector DM27204 from slat position sensor, M27204.
 - (f) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DM27104 at the slat position sensor, M27104 (WDM 27-88-11):

pin E6	pin 5
pin E7	pin 6

- (g) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27203 at the slat position sensor, M27204 (WDM 27-88-12):

DM27002AA	DM27204
pin A4	pin 1
pin B4	pin 2
pin D6	pin 3
pin D7	pin 4
pin E6	pin 5
pin E7	pin 6

- (h) If you find a problem with the wiring, repair the wiring.
- (i) Re-install FSEU 1, M27001.
- (j) Re-install FSEU 2, M27002.
- (k) Re-connect connector DS27104.
- (l) Re-connect connector DS27204.
- (m) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (10) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (11) Look for a broken or disconnected torque tube:
- (a) Find which wing has the broken or disconnected torque tube:
- 1) Look at the 27-FLAP/SLAT maintenance page on the EICAS.

Page 204
Jan 05/2013

777-200/300 FAULT ISOLATION MANUAL

- 2) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- 3) Use the wrench flats the torque tube outboard of the PDU to turn the slat drive system.
 - 4) If the SLAT POS L 1 and 2 indications on the maintenance page do not change when you turn the drive system, the broken or disconnected torque tube is in the left wing.
 - 5) If the SLAT POS R 1 and 2 indications on the maintenance page do not change when you turn the drive system, the broken or disconnected torque tube is in the right wing.
- (b) If the broken or disconnected torque tube is in the right wing, do these steps until you find the torque tube:
- 1) Look at the torque tubes and gearboxes that go through the fuselage.
 - 2) Disconnect the inboard torque tube from the slat PDU.
 - 3) Use a LE slat drive torque tube coupling adapter, SPL-1694 to manually turn the right wing drive system a maximum of four torque tube turns.
NOTE: This will move the slats approximately 1/2 inch.
 - 4) Look at the slats on the right wing for a pair of slats that do not fair or a slat that is skewed.
NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.
 - 5) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
 - 6) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
 - 7) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
 - 8) Remove these access panels for the offset gearboxes on the lower surface of the right wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
611EB	Inboard Fixed Leading Edge Panel
611LB	Inboard Fixed Leading Edge Panel
621AAB	Outboard Fixed Leading Edge Panel
621ACB	Outboard Fixed Leading Edge Panel
621BB	Outboard Fixed Leading Edge Panel
621EB	Outboard Fixed Leading Edge Panel
621GB	Outboard Fixed Leading Edge Panel
621JB	Outboard Fixed Leading Edge Panel
621MB	Outboard Fixed Leading Edge Panel
621PB	Outboard Fixed Leading Edge Panel

- 9) Connect the inboard torque tube to the slat PDU.

- (c) If the broken or disconnected torque tube is in the left wing, do these steps until you find the torque tube:
- 1) Disconnect the outboard torque tube from the slat PDU.
 - 2) Use the wrench flats on the torque tube to manually turn the left wing drive system a maximum of four torque tube turns.
NOTE: This will move the slats approximately 1/2 inch.
 - 3) Look at the slats on the left wing for a pair of slats that do not fair or a slat that is skewed.
NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.
 - 4) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
 - 5) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
 - 6) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
 - 7) Remove these access panels for the offset gearboxes on the lower surface of the left wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
511EB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel
521AAB	Outboard Fixed Leading Edge Panel
521ACB	Outboard Fixed Leading Edge Panel
521BB	Outboard Fixed Leading Edge Panel
521EB	Outboard Fixed Leading Edge Panel
521GB	Outboard Fixed Leading Edge Panel
521JB	Outboard Fixed Leading Edge Panel
521MB	Outboard Fixed Leading Edge Panel
521PB	Outboard Fixed Leading Edge Panel

- 8) Connect the outboard torque tube to the slat PDU.
- (12) Replace the applicable torque tube or torque tube support:
- (a) If it is necessary, replace a torque tube in the cargo compartment.
These are the tasks:
Cargo Compartment Slat Torque Tube Removal, AMM TASK 27-81-38-000-803,
Cargo Compartment Slat Torque Tube Installation, AMM TASK 27-81-38-400-803.
 - (b) If it is necessary, replace a torque tube on the inboard side of the wing.
These are the tasks:
Inboard Wing Slat Torque Tube Removal, AMM TASK 27-81-38-000-801,
Inboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-801.
 - (c) If it is necessary, replace a torque tube on the outboard side of the wing.
These are the tasks:
Outboard Wing Slat Torque Tube Removal, AMM TASK 27-81-38-000-802,
Outboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-802.

521PB	Outboard Fixed Leading Edge Panel

- (14) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— END OF TASK —————

802. Left Wing Slat Asymmetry Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20852.

B. Initial Evaluation

DO NOT DO A TEST OF THE SLAT SYSTEM WITH HYDRAULIC OR ELECTRIC POWER BEFORE YOU DO A CHECK FOR A BREAK IN THE DRIVE SYSTEM. IF YOU OPERATE THE SLATS WITH POWER, YOU CAN CAUSE DAMAGE TO THE SYSTEM.

- (1) Do not try to operate the slats before you do the Fault Isolation Procedure below.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Look for a broken or disconnected torque tube in the left wing:
- (a) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- (b) Use the wrench flats on the torque tube outboard of the PDU to manually turn the slat drive system a maximum of four torque tube turns.

NOTE: This will move the slats approximately 1/2 inch.

- 1) Use the FLAP/SLAT maintenance page to find which direction to move slats.

NOTE: If the SLAT POS L indications are more than the SLAT POS R indications, move the slats in the retract direction. If the SLAT POS L indications are less than the SLAT POS R indications, move the slats in the extend direction.

- (c) Carefully watch the slats on the left wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.

- (d) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.

EFFECTIVITY

Page 208
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (e) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
- (f) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
- (g) Remove these access panels for the offset gearboxes on the lower surface of the left wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
511EB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel
521AAB	Outboard Fixed Leading Edge Panel
521ACB	Outboard Fixed Leading Edge Panel
521BB	Outboard Fixed Leading Edge Panel
521EB	Outboard Fixed Leading Edge Panel
521GB	Outboard Fixed Leading Edge Panel
521JB	Outboard Fixed Leading Edge Panel
521MB	Outboard Fixed Leading Edge Panel
521PB	Outboard Fixed Leading Edge Panel

- (2) If you find a broken or disconnected torque tube, replace the applicable torque tube or torque tube support:
 - (a) If it is necessary, replace a torque tube on the inboard side of the wing.
These are the tasks:
Inboard Wing Slat Torque Tube Removal, AMM TASK 27-81-38-000-801,
Inboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-801.
 - (b) If it is necessary, replace a torque tube on the outboard side of the wing.
These are the tasks:
Outboard Wing Slat Torque Tube Removal, AMM TASK 27-81-38-000-802,
Outboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-802.
 - (c) If it is necessary, replace a torque tube support on the inboard side of the wing.
These are the tasks:
Inboard Wing Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-801,
Inboard Wing Slat Torque Tube Support Installation, AMM TASK 27-81-39-400-801.
 - (d) If it is necessary, replace a torque tube support on the outboard side of the wing.
These are the tasks:
Outboard Wing Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-802,
Outboard Wing Slat Torque Tube Support Installation, AMM TASK 27-81-39-400-802.

- (3) Install these access panel:

<u>Number</u>	<u>Name/Location</u>
511EB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel

Inboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-801.
- (c) If it is necessary, replace a torque tube on the outboard side of the wing.
- These are the tasks:
- Outboard Wing Slat Torque Tube Removal, AMM TASK 27-81-38-000-802,
Outboard Wing Slat Torque Tube Installation, AMM TASK 27-81-38-400-802.
- (d) If it is necessary, replace a leading edge pressure seal.
- These are the tasks:
- Leading Edge Pressure Seal Removal, AMM TASK 27-81-39-000-804,
Leading Edge Pressure Seal Installation, AMM TASK 27-81-39-400-804.
- (e) If it is necessary, replace a torque tube support on the inboard side of the wing.
- These are the tasks:
- Inboard Wing Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-801,
Inboard Wing Slat Torque Tube Support Installation, AMM TASK 27-81-39-400-801.
- (f) If it is necessary, replace a torque tube support on the outboard side of the wing.
- These are the tasks:
- Outboard Wing Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-802,
Outboard Wing Slat Torque Tube Support Installation, AMM TASK 27-81-39-400-802.
- (g) If it is necessary, replace a torque tube support in the cargo compartment.
- These are the tasks:
- Cargo Compartment Slat Torque Tube Support Removal, AMM TASK 27-81-39-000-803,
Cargo Compartment Torque Tube Support Installation, AMM TASK 27-81-39-400-803.

- (3) Install these access panels:

<u>Number</u>	<u>Name/Location</u>
621ACB	Outboard Fixed Leading Edge Panel
621BB	Outboard Fixed Leading Edge Panel
621EB	Outboard Fixed Leading Edge Panel
621GB	Outboard Fixed Leading Edge Panel
621JB	Outboard Fixed Leading Edge Panel
621MB	Outboard Fixed Leading Edge Panel
621PB	Outboard Fixed Leading Edge Panel

- (4) Close this access panel below the PDU:

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- (5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.

- (6) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (7) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.

- (8) Replace the two slat position sensors on the right wing, M27104 and M27204.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

- (9) Do these ground tests on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1, Test of Slats Only and 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

804. Slat Primary Low Speed Solenoid Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20962.

B. Description

- (1) Slats Primary Low Speed Solenoid circuit is open.

C. Possible Causes

- (1) Slats Primary Low Speed Solenoid, V3
- (2) Slat Primary Control Valve, V27003
- (3) Wiring
- (4) Flap/Slat Electronics Unit (FSEU) 2, M27002

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault.

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

E. Related Data

- (1) WDM 27-81-16
- (2) SSM 27-81-15

F. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 2 is IN CONTROL.

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend or retract the slats to another position. This is the task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then there was an intermittent problem.

D633W103-ARO

Page 214
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

G. Fault Isolation Procedure

NOTE: When you do the AMM Procedure to install a component, it is not necessary to do the test given at the end of the AMM Task. The steps in this FIM Procedure are a sufficient test.

WARNING

MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

- (1) If the Downlock Pins are not installed on the Main and Nose Landing Gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

MAKE CERTAIN MAIN LANDING GEAR DOOR SAFETY LOCKS ARE INSTALLED WHEN PERSONS WORK IN WHEELWELL AREAS. DOOR MOVEMENT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.

- (3) Do a wiring check of the Low Speed Solenoid as follows:

- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27003B from the Slat Primary Control Valve, V27003 in the Left Wheel Well (WDM 27-81-16).
- (c) Do a Resistance check between pins 5 and 12 of connector DV27003B on the Slat Primary Control Valve, V27003 in the Left Wheel Well.
- (d) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then do these steps:
- 1) Replace the Low Speed Solenoid on the Slat Primary Control Valve, V27003. These are the tasks:
 - Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802
 - Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802
 - 2) Do a Resistance check between pins 5 and 12 of connector DV27003B on the Slat Primary Control Valve, V27003 again (WDM 27-81-16).

NOTE: This does a check of the internal wiring on the Slat Primary Control Valve, V27003.

- a) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then replace the Slat Primary Control Valve, V27003. These are the tasks:
- Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801
 - Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801

27-82 TASK 804

D633W103-ARO

Page 215
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- <1> Do the Repair Confirmation at the end of this task.
- b) If the Resistance is in the specified limits, then continue.
- (e) If the Resistance is in the specified limits, continue.
- (4) Connect electrical connector DV27003B to the Slat Primary Control Valve, V27003, in the Left Wheel Well.
- (5) Do a check for 28V DC at FSEU 2 as follows:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Remove FSEU 2, M27002, from the E4-1 shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (c) Make sure that this circuit breaker is closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

- (d) Do a check for 28V DC between pin F3 (+) on connector DM27002AC and structure ground (WDM 27-81-16).
- 1) If you do not find 28V DC at pin F3 on connector DM27002AC, then do these steps:
- a) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

- b) At the P210 Power Management Panel, disconnect electrical connector D21026P.
- c) In the Left Wheel Well, disconnect electrical connector DV27003B from the Slat Primary Control Valve, V27003.
- d) Do a wiring check from the FSEU-2 connector DM27002AC to the Power Management Panel P210 connector D21026P as follows (WDM 27-81-16):

E4-1 Shelf	L Wheel Well
DM27002AC	DV27003B
pin F3	pin 12

L Wheel Well	P210 Panel
DV27003B	D21026P
pin 5	pin 14

- <1> If you find a problem with the wiring, then do these steps:
- <a> Repair the wiring.
- Re-connect electrical connector DV27003B.

- <c> Re-connect electrical connector D21026P.
- <d> Re-install FSEU 2, M27002. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- <e> Do the Repair Confirmation at the end of this task.
- <2> If you do not find a problem with the wiring, continue.
- 2) If you find 28V DC at pin F3 of connector DM27002AC, continue.
- (e) Replace FSEU 2, M27002. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801

H. Repair Confirmation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 2 is IN CONTROL

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend or retract the slats to another position. This is the task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then you corrected the problem.
 - (b) If the MAT shows LATCHED with the maintenance message, then continue the Fault Isolation Procedure at the subsequent step.

END OF TASK

805. Slat Primary Circuit Breaker Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20972.

B. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 2 is IN CONTROL.

NOTE: This step will cause the maintenance message to become INACTIVE. Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.
- (2) Move the flap control lever to a position which does not agree with the position of the slats.
- (3) Move the flap control lever to agree with the position of the slats.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

777-200/300 FAULT ISOLATION MANUAL

E. Related Data

- (1) WDM 27-81-16
- (2) SSM 27-81-15

F. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 2 is IN CONTROL.

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to retract the slats to another position. This is the task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then there was an intermittent problem.

G. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

- (1) If the Downlock Pins are not installed on the Main and Nose Landing Gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

MAKE CERTAIN MAIN LANDING GEAR DOOR SAFETY LOCKS ARE INSTALLED WHEN PERSONS WORK IN WHEELWELL AREAS. DOOR MOVEMENT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Retract Solenoid as follows:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- (b) Disconnect electrical connector DV27003B from the Slat Primary Control Valve, V27003 in the Left Wheel Well (WDM 27-81-16).
- (c) Do a Resistance check between pins 4 and 14 of connector DV27003B on the Slat Primary Control Valve, V27003 in the Left Wheel Well.
- (d) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then do these steps:
- 1) Replace the Retract Solenoid on the Slat Primary Control Valve, V27003. These are the tasks:
 - Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802
 - Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802
 - 2) Do a Resistance check between pins 4 and 14 of connector DV27003B on the Slat Primary Control Valve, V27003 again (WDM 27-81-16).
- NOTE:** This does a check of the internal wiring on the Slat Primary Control Valve, V27003.
- a) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then replace the Slat Primary Control Valve, V27003. These are the tasks:
 - Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801
 - Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801

<1> Do the Repair Confirmation at the end of this task.
 - b) If the Resistance is in the specified limits, then continue.
- (e) If the Resistance is specified limits, then continue.
- (4) Connect electrical connector DV27003B to the Slat Primary Control Valve, V27003, in the Left Wheel Well.
- (5) Do a check for 28V DC at FSEU 2 as follows:
- (a) Remove FSEU 2, M27002, from the E4-1 shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
 - (b) Make sure that this circuit breaker is closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

- (c) Do a check for 28V DC between pin D2 (+) on connector DM27002AC and structure ground (WDM 27-81-16).
- 1) If you do not find 28V DC at pin D2 on connector DM27002AC, then do these steps:
 - a) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- b) At the P210 Power Management Panel, disconnect electrical connector D21026P.
- c) In the Left Wheel Well, disconnect electrical connector DV27003B from the Slat Primary Control Valve, V27003.
- d) Do a wiring check from the FSEU-2 connector DM27002AC to the Power Management Panel P210 connector D21026P as follows (WDM 27-51-16):

E4-1 Shelf	L Wheel Well
DM27002AC	DV27003B
pin D2	pin 4
L Wheel Well	P210 Panel
DV27003B	D21026P
pin 14	pin 14

- <1> If you find a problem with the wiring, then do these steps:
 - <a> Repair the wiring.
 - Re-connect electrical connector DV27003B.
 - <c> Re-connect electrical connector D21026P.
 - <d> Re-install FSEU 2, M27002. This is the task: WDM 27-81-16.
 - <e> Do the Repair Confirmation at the end of this task.

<2> If you do not find a problem with the wiring, continue.

2) If you find 28V DC at pin D2 of connector DM27002AC, continue.

- (d) Replace FSEU 2, M27002. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801

H. Repair Confirmation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 2 is IN CONTROL

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to retract the slats to another position. This is the task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then you corrected the problem.

D633W103-ARO

Page 227
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- a) If the Resistance is not in the limit of 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 ohms (for the 883 Series Solenoids), then replace the Slat Primary Control Valve, V27003. These are the tasks:
 - Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801
 - Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801

<1> Do the Repair Confirmation at the end of this task.
- b) If the Resistance in the specified limits, then continue.
- (e) If the Resistance is in the specified limits, then continue.
- (4) Connect electrical connector DV27003A to the Slat Primary Control Valve, V27003, in the Left Wheel Well.
- (5) Do a check for 28V DC at FSEU 2. These are the steps:
 - (a) Remove FSEU 2, M27002, from the E4-1 shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
 - (b) Make sure that this circuit breaker is closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

- (c) Do a check for 28V DC between pin D5 (+) on connector DM27002AC and structure ground (WDM 27-81-16).
 - 1) If you do not find 28V DC at pin D5 on connector DM27002AC, then do these steps:
 - a) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

- b) At the P210 Power Management Panel, disconnect electrical connector D21026P.
- c) In the Left Wheel Well, disconnect electrical connector DV27003A from the Slat Primary Control Valve, V27003.
- d) Do a wiring check from the FSEU-2 connector DM27002AC to the Power Management Panel P210 connector D21026P as follows (WDM 27-51-16):

E4-1 Shelf	L Wheel Well
DM27002AC	DV27003A
pin D5	pin 12

L Wheel Well	P210 Panel
DV27003A	D21026P
pin 14	pin 14

- <1> If you find a problem with the wiring, then do these steps:
- <a> Repair the wiring.
 - Re-connect electrical connector DV27003A.
 - <c> Re-connect electrical connector D21026P.

<d> Re-install FSEU 2, M27002. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

<e> Do the Repair Confirmation at the end of this task.

<2> If you do not find a problem with the wiring, continue.

2) If you find 28V DC at pin D5 of connector DM27002AC, continue.

(d) Replace FSEU 2, M27002. These are the tasks:

- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
- Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801

H. Repair Confirmation

(1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 2 is IN CONTROL

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

(3) Use the Primary System to extend or retract the slats to another position. This is the task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

- (a) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then you corrected the problem.
- (b) If the MAT shows LATCHED with the maintenance message, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

809. Left Wing Slat Single FSEU Asymmetry Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

(1) This task is for maintenance message: 27-20862.

B. Initial Evaluation

(1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 2 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

(2) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

- (3) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Replace the slat position sensor, M27203 on the left wing.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,
Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.
- (2) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (3) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (4) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (5) Do a check of the wiring between FSEU 2 and the slat position sensor, M27203:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Disconnect the connector DM27203 from slat position sensor, M27203.
- (d) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27203 at the slat position sensor, M27203 (WDM 27-88-12):

pin J4		pin 2
pin G6		pin 3
pin G7		pin 4
pin F6		pin 5
pin F7		pin 6

DM27203

- (e) If you find a problem with the wiring, repair the wiring.
- (f) Re-install FSEU 2, M27002.
- (g) Re-connect connector DS27203.
- (h) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (i) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - 1) If the maintenance message shows NOT ACTIVE (or if the message does not show), then you corrected the fault.
 - 2) If the MAT shows ACTIVE for the maintenance message, then continue.
- (6) Look for a broken or disconnected torque tube in the left wing:
 - (a) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel
 - (b) Use the wrench flats on the torque tube outboard of the PDU to manually turn the slat drive system a maximum of four torque tube turns.

NOTE: This will move the slats approximately 1/2 inch.
 - (c) Look at the slats on the left wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.
 - (d) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
 - (e) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
 - (f) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.

Page 232
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (9) Close this access panel below the PDU:

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- (10) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

810. Right Wing Slat Single FSEU Asymmetry Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20912.

B. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 2 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
- (a) If the MAT shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Replace the slat position sensor, M27204 on the right wing.
- These are the tasks:
- Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,
Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.
- (2) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (3) Replace FSEU 2, M27002.
- These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (4) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Do a check of the wiring between FSEU 2 and the slat position sensor, M27204:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Remove FSEU 2, M27002 from the E4-1 shelf.
- (c) Disconnect the connector DM27204 from slat position sensor, M27204.
- (d) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27204 at the slat position sensor, M27204 (WDM 27-88-12):

<u>DM27002AA</u>		<u>DM27204</u>
pin A4		pin 1
pin B4		pin 2
pin D6		pin 3
pin D7		pin 4
pin E6		pin 5
pin E7		pin 6

- (e) If you find a problem with the wiring, repair the wiring.
- (f) Re-install FSEU 2, M27002.
- (g) Re-connect connector DS27204.
- (h) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (i) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 1) If the maintenance message shows NOT ACTIVE (or if the message does not show), then you corrected the fault.
 - 2) If the MAT shows ACTIVE for the maintenance message, then continue.
- (6) Look for a broken or disconnected torque tube in the right wing:
- (a) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel
 - (b) Look at the torque tubes and gearboxes that go through the fuselage.
 - (c) Use the wrench flats on the torque tube outboard of the PDU to manually turn the slat drive system a maximum of four torque tube turns.

NOTE: This will move the slats approximately 1/2 inch.
 - (d) Look at the slats on the right wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.
 - (e) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
 - (f) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
 - (g) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
 - (h) Remove these access panels for the offset gearboxes on the lower surface of the right wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
611EB	Inboard Fixed Leading Edge Panel
611LB	Inboard Fixed Leading Edge Panel

621GB	Outboard Fixed Leading Edge Panel
621JB	Outboard Fixed Leading Edge Panel
621MB	Outboard Fixed Leading Edge Panel
621PB	Outboard Fixed Leading Edge Panel
- (7) If you find a broken or disconnected torque tube, replace the applicable torque tube or torque tube support:
- (a) If it is necessary, replace a torque tube in the cargo compartment.

These are the tasks:

Cargo Compartment Slat Torque Tube Removal, AMM TASK 27-81-38-000-803,
Cargo Compartment Slat Torque Tube Installation, AMM TASK 27-81-38-400-803.
 - (b) If it is necessary, replace a torque tube on the inboard side of the wing.

These are the tasks:

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (11) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2 Test of Slats Only.
 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

811. Slat Uncommanded Motion Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21022.

B. Initial Evaluation

- (1) Make sure the position of the flap control lever agrees with the position of the flaps.
- (2) Make sure the ALTN FLAPS control switch is in the OFF position.
- (3) Push the ALTN FLAPS ARM switch on the control stand to arm the alternate control system.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (4) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: Use a single AC Motor Pump (ACMP) to supply power to the center system. This will cause the slats to move more slowly if there is not an intermittent fault. If you use two ACMPs or and Air Driven Pump (ADP) the slats will move further before the FSEUs stop them.

MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE SLATS. THE SLATS CAN MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (5) Push the ALTN FLAPS ARM switch on the control stand to disarm the alternate control system.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure - Uncommanded Motion below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then continue.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (6) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
NOTE: Use an Air Driven Pump (ADP) to move the slats. This will allow the slats to move at their usual rate.
- (7) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 2 is IN CONTROL.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.
- (8) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
 - (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure - Stops Out of Detent below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.
- (9) Do this ground test on the MAT for FSEU 2: Slat Primary Control Valve Test, AMM TASK 27-81-05-740-801.

C. Fault Isolation Procedure - Uncommanded Motion

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (3) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (4) Replace the slat primary control valve, V27003.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

Page 239
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (c) Do a check of the resistance between pins 5 and 12 of connector DV27003B on the slat primary control valve, V27003 in the left wheel well (WDM 27-81-16):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
- 1) Replace the Low Speed solenoid on the slat primary control valve, V27003.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.
 - 2) Do a check of the resistance between pins 5 and 12 of connector DV27003B on the slat primary control valve, V27003 again (WDM 27-81-16).
NOTE: This does a check of the internal wiring on the primary control valve, V27003.
 - a) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.
These are the tasks:
Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
- (e) Connect electrical connector DV27003B to the slat primary control valve V27003.
- (f) Remove the safety tag and close this circuit breaker:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (g) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (h) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.
- (i) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (j) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (4) Do this check of the adjustment of the slat position sensors:
- (a) Make sure the leading edge slats are in the retracted position.

- (b) Look at the torque trip indicators on the slat PDU to see if the drive system is locked in one of the wings.
- (c) If neither of the torque trip indicators are extended, disconnect the torque tubes from the slat PDU.
- (d) Use the wrench flats on the torque tube on the outboard side of the PDU to manually extend and retract the left wing slats.
- (e) Use a LE slat drive torque tube coupling adapter, SPL-1694 on the torque tube on the inboard side of the PDU to manually extend and retract the right wing slats.
- (f) If you can extend and retract the slats on each wing, do these steps:
 - 1) Do this task: Slat Electric Motor Removal, AMM TASK 27-81-34-000-801.
 - 2) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 3) If you can turn the PDU, then install a new slat electric motor, B27001. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
 - 4) If you cannot turn the PDU, do this task: Slat Hydraulic Motor Removal, AMM TASK 27-81-33-000-801.
 - 5) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 6) If you cannot turn the PDU, then replace the slat PDU.
These are the tasks:
Slat Power Drive Unit (PDU) Removal, AMM TASK 27-81-31-000-801,
Slat Power Drive Unit (PDU) Installation, AMM TASK 27-81-31-400-801.
 - 7) Try to turn the output shaft on the slat hydraulic motor.
 - 8) If you can turn the output shaft on the hydraulic motor, then replace the slat primary control valve, V27003.
These are the tasks:
Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
 - 9) If you cannot turn the output shaft on the slat hydraulic motor, then install a new slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
 - 10) If it is necessary, re-install the slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
 - 11) If it is necessary, re-install the slat electric motor, B27003. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
- (g) If one of the torque trip indicators is extended or if you cannot extend and retract the slats on one of the wings, replace the gearbox where the slat drive system is locked.
- (h) Connect the torque tubes to the slat PDU.
- (i) Do this task: Leading Edge Slat Drive System Adjustment, AMM TASK 27-81-00-820-801.

D633W103-ARO

Page 243
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (j) Use the secondary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 2) If the maintenance message shows on the MAT, then continue.
- (4) If the slats do not operate with the alternate system, then do a check of the electrical power to the slat electric motor, B27001:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

Right Power Panel, P200

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (g) Turn the ALT FLAPS control switch to the EXT position.
- (h) With the ALT FLAPS control switch in the EXT position do a check for 115 VAC at pins 1, 2 and 3 of connector DB27001 (WDM 27-81-18).
- (i) Turn the ALT FLAPS control switch to the RET position.
- (j) With the ALT FLAPS control switch in the RET position do a check for 115 VAC at pins 1, 2 and 3 of connector DB27001 (WDM 27-81-18).
- (k) If there is 115 VAC at pins 1, 2 and 3 and 28 VDC at pin 6 of connector DB27001, then replace the slat electric motor, B27001.

These are the tasks:

Slat Electric Motor Removal, AMM TASK 27-81-34-000-801,

Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.

- 1) Turn the ALT FLAPS control switch to the OFF position.
 - 2) Push the ALT FLAPS ARM switch on the control stand to disarm the alternate control system.
 - 3) Connect the electrical connector, DB27001 to the slat electric motor, B27001.
 - 4) Use the alternate system to extend and retract the slat. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
 - 5) If the slat operate with the alternate system, then you corrected the fault.
- (l) If there is not 28 VDC at pin 6 of connector DB27001, then do this wiring check between the slat electric motor, B27001 and the Slats Bypass/Clutch Relay, K27001 on the P210 panel:
- 1) Remove the Slats Bypass/Clutch Relay, K27001 from the P210 panel (WDM 27-81-17).
 - 2) Do a wiring check between these pins of connector DB27001 on the slat electric motor, B27001 and connector DK27001 on the P210 panel (WDM 27-81-17):
- | | |
|-----------------|----------------|
| DB27001 | DK27001 |
| pin 6 | pin B2 |
- 3) If you find a problem with the wiring, then repair the wiring.
 - a) Reinstall the Slats Bypass/Clutch Relay, K27001 on the P210 panel.
 - 4) If you do not find a problem with the wiring, then install a new Slats Bypass/Clutch Relay, K27001 on the P210 panel.
 - 5) Connect the electrical connector, DB27001 to the slat electric motor, B27001.
 - 6) Use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
 - a) If the flaps operate with the alternate system, then you corrected the fault
- (m) If there is not 115 VAC at pins 1, 2 and 3 then do this wiring check between the slat electric motor, B27001 and the Slats Retract Relay, K27005 on the P210 panel:
- 1) Remove the Slats Retract Relay, K27005 from the P210 panel (WDM 27-81-18).
 - 2) Do a wiring check between these pins of connector DB27001 on the slat electric motor, B27001 and connector DK27005 on the P210 panel (WDM 27-81-18):

777-200/300 FAULT ISOLATION MANUAL

813. Slat Secondary System Auto Test Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21042.

B. Initial Evaluation

- (1) Use the secondary system to extend the slats to another position. To extend them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Make sure that these circuit breakers are closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

27-82 TASK 813

D633W103-ARO

Page 252
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 3) Connect the electrical connector, DB27001 to the slat electric motor, B27001.
- 4) Use the secondary system to extend the slats to another position. To extend them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (l) If there is not 28 VDC at pin 6 of connector DB27001, then do this wiring check between the slat electric motor, B27001 and the Slats Bypass/Clutch Relay, K27001 on the P210 panel:

- 1) Remove the Slats Bypass/Clutch Relay, K27001 from the P210 panel (WDM 27-81-17).
- 2) Do a wiring check between these pins of connector DB27001 on the slat electric motor, B27001 and connector DK27001 on the P210 panel (WDM 27-81-17):

DB27001	DK27001
pin 6	pin B2

- 3) If you find a problem with the wiring, then repair the wiring.
 - a) Reinstall the Slats Bypass/Clutch Relay, K27001 on the P210 panel.
- 4) If you do not find a problem with the wiring, then install a new Slats Bypass/Clutch Relay, K27001 on the P210 panel.
- 5) Connect the electrical connector, DB27001 to the slat electric motor, B27001.
- 6) Use the secondary system to extend the slats to another position. To extend them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (m) If there is not 115 VAC at pins 1, 2 and 3 then do this wiring check between the slat electric motor, B27001 and the Slats Retract Relay, K27005 on the P210 panel:
- 1) Remove the Slats Retract Relay, K27005 from the P210 panel (WDM 27-81-18).
 - 2) Do a wiring check between these pins of connector DB27001 on the slat electric motor, B27001 and connector DK27005 on the P210 panel (WDM 27-81-18):

DB27001	DK27005
pin 1	pin A2
pin 2	pin C2
pin 3	pin B2

- 3) If you find a problem with the wiring, then repair the wiring.

**777-200/300
FAULT ISOLATION MANUAL**

- a) Reinstall the Slats Retract Relay, K27005 on the P210 panel.
- 4) If you do not find a problem with the wiring, then do this wiring check between the Slats Retract Relay, K27005 and the Slats Extend Relay K27003 on the P210 panel:
 - a) Remove the Slats Extend Relay, K27003 from the P210 panel (WDM 27-81-18).
 - b) Do a wiring check between these pins of connector DK27003 and connector DK27005 on the P210 panel (WDM 27-81-18):

DK27003		DK27005	
pin A1		pin A3	
pin A3		pin A1	
pin B1		pin B3	
pin B3		pin C1	
pin C1		pin C3	
pin C3		pin B1	

- c) If you find a problem with the wiring, then repair the wiring.
- d) Reinstall the Slats Retract Relay, K27005 on the P210 panel.
- e) Reinstall the Slats Extend Relay, K27003 on the P210 panel.
- 5) If you do not find a problem with the wiring, then install a new Slats Extend Relay, K27003 and a new Slats Retract Relay, K27005 on the P210 panel.
- 6) Connect the electrical connector, DB27001 to the slat electric motor, B27001.
- 7) Use the secondary system to extend the slats to another position. To extend them, do this task: Leading Edge Slat System Operation With Secondary Control, AMM TASK 27-81-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (n) Connect the electrical connector, DB27001 to the slat electric motor, B27001.
- (o) Turn the ALT FLAPS control switch to the OFF position.
- (p) Push the ALT FLAPS ARM switch on the control stand to disarm the alternate control system.
- (q) Close this access panel on the lower surface of the left wing:

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel

- (3) Do this check of the wiring between the Slats Bypass/Clutch Relay, K27001 and FSEU 2, M27002:
 - (a) Remove the Slats Bypass/Clutch Relay, K27001 from the P210 panel (WDM 27-81-17).
 - (b) Do a wiring check between these pins of connector DM27002AA on the E4-1 shelf and connector DK27001 on the P210 panel (WDM 27-81-17):

27-82 TASK 813

D633W103-ARO

Page 257
Sep 05/2017

777-200/300
FAULT ISOLATION MANUAL

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

814. Slat Single FSEU Asymmetry Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21052.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED with the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Look for a broken or disconnected torque tube:
- (a) Find which wing has the broken or disconnected torque tube:
- 1) Look at the 27-FLAP/SLAT maintenance page on the EICAS.
 - 2) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):
- | <u>Number</u> | <u>Name/Location</u> |
|---------------|------------------------|
| 511AB | Leading Edge PDU Panel |
- 3) Use the wrench flats on the outboard torque tube to turn the slat drive system.
 - 4) If the SLAT POS L 2 indication on the maintenance page does not change when you turn the drive system, then there is a broken or disconnected torque tube in the left wing.
 - 5) If the SLAT POS R 2 indication on the maintenance page does not change when you turn the drive system, then there is a broken or disconnected torque tube in the right wing.
- (b) If there is a broken or disconnected torque tube in the right wing, do these steps until you find the torque tube:
- 1) Look at the torque tubes and gearboxes that go through the fuselage.
 - 2) Disconnect the inboard torque tube from the slat PDU.
 - 3) Use a LE slat drive torque tube coupling adapter, SPL-1694 on the torque tube to manually turn the right wing drive system a maximum of four torque tube turns.

NOTE: This will move the slats approximately 1/2 inch.

EFFECTIVITY

D633W103-ARO

Page 258
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 4) Look at the slats on the right wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.

- 5) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
- 6) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
- 7) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
- 8) Remove these access panels for the offset gearboxes on the lower surface of the right wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
611EB	Inboard Fixed Leading Edge Panel
611LB	Inboard Fixed Leading Edge Panel

621JB	Outboard Fixed Leading Edge Panel
621MB	Outboard Fixed Leading Edge Panel
621PB	Outboard Fixed Leading Edge Panel

- 9) Connect the inboard torque tube to the slat PDU.

- (c) If there is a broken or disconnected torque tube in the left wing, do these steps until you find the torque tube:

- 1) Disconnect the outboard torque tube from the slat PDU.
- 2) Use the wrench flats to manually turn the left wing drive system a maximum of four torque tube turns.

NOTE: This will move the slats approximately 1/2 inch.

- 3) Look at the slats on the left wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.

- 4) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
- 5) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
- 6) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
- 7) Remove these access panels for the offset gearboxes on the lower surface of the left wing to get access to the torque tubes:

777-200/300 FAULT ISOLATION MANUAL

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

- (8) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (9) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (10) Remove FSEU 2, M27002 from the E4-1 shelf.
- (11) Do a check of the wiring between FSEU 2, M27002 and the slat position sensor 2L, M27203:
- (a) Disconnect the connector DM27203 from slat position sensor 2L, M27203.
- (b) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27203 at the slat position sensor 2L, M27203 (WDM 27-88-12):

DM27002AC	DM27203
pin K4	pin 1
pin J4	pin 2
pin G6	pin 3
pin G7	pin 4
pin F6	pin 5
pin F7	pin 6

- (c) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27203.
 - 4) Remove the safety tags and close these circuit breakers:

**777-200/300
FAULT ISOLATION MANUAL**

- (13) Do a check of the wiring between FSEU 2, M27002 and the slat position sensor 2R, M27204:
- (a) Disconnect the connector DM27204 from slat position sensor 2R, M27204.
 - (b) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27204 at the slat position sensor 2R, M27204 (WDM 27-88-12):

DM27002AA		DM27204	
pin A4		pin 1	
pin B4		pin 2	
pin D6		pin 3	
pin D7		pin 4	
pin E6		pin 5	
pin E7		pin 6	

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27204.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Page 263
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

815. Left and Right Slat Position Sensor Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21162.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Use the alternate system to retract the slats to the retracted position. To retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
- (3) Look at the SLAT POS L2 and SLAT POS R2 indications on the FLAP/SLAT maintenance page on EICAS.
 - (a) Replace the slat position sensor for the slat position indication which is further from 10.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

NOTE: The slat position sensor for SLAT POS L2 is M27203 on the left wing. The slat position sensor for SLAT POS R2 is M27204 on the right wing.

- (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (4) Replace the other slat position sensor 2L, M27203 or 2R, M27204.

These are the tasks:

Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

- (3) Do this wiring check:
 - (a) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (b) Do a wiring check between these pins of connector DM27002AA on the E4-1 shelf and connector D21039P on the P210 panel (WDM 27-81-17):

DM27002AA	D21039P
pin E2	pin 16

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002 on the E4-1 shelf.
 - 3) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.
- 4) If the maintenance message does not show on the MAT, then you corrected the fault.

————— END OF TASK —————

821. Slats Secondary Auto Test, Relay K27003 Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20782.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED with the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Make sure that this circuit breaker is closed:

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.

NOTE: This fault can occur if there is not sufficient hydraulic power available. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power. The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the slats.

- (a) If the maintenance message does not show on the ground test display, then do the Fault Isolation Procedure - Intermittent Extend Solenoid Problem below.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Extend Problem below.

C. Fault Isolation Procedure - Intermittent Extend Solenoid Problem

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Primary Extend solenoid on the slat primary control valve, V27003 in the left main wheel well:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27003B from the slat primary control valve, V27003 in the left wheel well.
- (c) Do a check of the resistance between pins 11 and 15 of connector DV27003B on the slat primary control valve, V27003 in the left wheel well (WDM 27-81-16):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - 1) Replace the Primary Extend solenoid on the slat primary control valve, V27003.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

D. Fault Isolation Procedure - Slow Extend Problem

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the slats. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power.

- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (5) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- (12) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
- (a) If the MAT does not show PASSED after the ground test, then replace the slat primary control valve, V27003.
- These are the tasks:
- Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
- (b) If the MAT shows PASSED after the ground test, then replace FSEU 2, M27002.
- These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (13) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
- (a) If the maintenance message shows on the ground test display, replace the slat primary control valve, V27003.
- These are the tasks:
- Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
- (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (14) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (15) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

————— **END OF TASK** —————

828. Primary Slats Retract Slow Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25052.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.

NOTE: This fault can occur if there is not sufficient hydraulic power available. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power. The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the slats.

- (a) If the maintenance message does not show on the ground test display, then do the Fault Isolation Procedure - Intermittent Retract Solenoid Problem below.

EFFECTIVITY
ARO ALL

27-82 TASKS 827-828

Page 283
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Retract Problem below.

C. Fault Isolation Procedure - Intermittent Retract Solenoid Problem

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Primary Retract solenoid on the slat primary control valve, V27003 in the left main wheel well:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27003B from the slat primary control valve, V27003 in the left wheel well.
- (c) Do a check of the resistance between pins 4 and 14 of connector DV27003B on the slat primary control valve, V27003 in the left wheel well (WDM 27-81-16):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
- 1) Replace the Primary Retract solenoid on the slat primary control valve, V27003.
- These are the tasks:
- Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.
- 2) Do a check of the resistance between pins 4 and 14 of connector DV27003B on the slat primary control valve, V27003 again (WDM 27-81-16).
- NOTE:** This does a check of the internal wiring on the primary control valve, V27003.
- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- (e) Connect electrical connector DV27003B to the slat primary control valve, V27003 in the left wheel well.
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (g) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
 - 1) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Retract Problem below.
 - 2) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

D. Fault Isolation Procedure - Slow Retract Problem

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the slats. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power.

- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- 2) If the maintenance message shows on the ground test display, then continue.

777-200/300 FAULT ISOLATION MANUAL

829. Primary Slats Low Speed Extend Slow Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25072.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the center hydraulic system is not pressurized, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (5) Replace the Primary Extend solenoid on the slat primary control valve, V27003.

These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

- (10) Do a check of the internal wiring in the primary control valve, V27003 for the Primary Extend solenoid:
- (a) Disconnect electrical connector DV27003B from the slat primary control valve V27003 in the left wheel well.
 - (b) Do a check of the resistance between pins 11 and 15 of connector DV27003B on the slat primary control valve V27003 in the left wheel well (WDM 27-81-16):
 - (c) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - 1) Replace the slat primary control valve, V27003.
These are the tasks:
Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

830. Primary Slats Low Speed Operate Fast Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-25082, 27-25102.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

777-200/300 FAULT ISOLATION MANUAL

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the Low Speed solenoid on the slat primary control valve, V27003.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.
 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
 - (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (4) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 1.
 - (a) If the MAT does not show PASSED after the ground test, then replace the slat primary control valve, V27003.
These are the tasks:
Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
 - 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
 - (b) If the MAT shows PASSED after the ground test, then continue.
 - (b) If the MAT shows PASSED after the ground test, then continue.
- (6) Open these circuit breakers and install safety tags:
Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

————— **END OF TASK** —————

831. Primary Slats Low Speed Retract Slow Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25092.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the center hydraulic system is not pressurized, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slats Primary Control Valve Test-FSEU 2.
- NOTE:** Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (d) If you do not find a problem with the wiring, or if the maintenance message shows on the ground test display, then install a new FSEU 2. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (e) Install the slats bypass/clutch relay, K27001 on the P210 power management panel (WDM 27-81-17).
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

27-82 TASK 832

D633W103-ARO

Page 298.6
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Remove the slats extend relay, K27003 from the P210 power management panel (WDM 27-81-17).
- (b) Do a wiring check between these pins on connector DM27002AA at the E4-1 shelf and connector DK27003 at the P210 power management panel (WDM 27-81-17):

DM27002AA	DK27003
pin E2	pin X2

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Install the slats extend relay, K27003 on the P210 power management panel (WDM 27-81-17).
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (g) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (h) If the maintenance message shows on the ground test display, then replace the slats extend relay, K27003 on the P210 power management panel (WDM 27-81-17).
- (i) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

833. Secondary Slats Retract Slow Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25122.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that these circuit breakers are closed:

777-200/300 FAULT ISOLATION MANUAL

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, or if the circuit breakers were closed, then continue.
- (2) Use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
- (a) If the slats do not operate in alternate mode, replace the slat electric motor, B27001.
These are the tasks:
Slat Electric Motor Removal, AMM TASK 27-81-34-000-801,
Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
 - 1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, or if the slats operate in alternate mode, then continue.
 - (3) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Slats Only.
 - (a) If the MAT shows PASSED after the ground test, then replace FSEU 2, M27002.
These are the tasks:
Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
 - 1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the MAT does not show PASSED after the ground test, then continue.
 - (4) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

834. Secondary Slats Do Not Operate Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25132.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 2.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that these circuit breakers are closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

ARO ALL

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 2.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breakers were closed, then continue.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (3) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (4) Do this wiring check of the Bypass Solenoid on the slat primary control valve, V27003:

EFFECTIVITY
ARO ALL

27-82 TASK 834

Page 298.13
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

- (b) Disconnect electrical connector DV27003A from the slat primary control valve V27003 in the left wheel well.
- (c) Do a check of the resistance between pins 10 and 16 of connector DV27003A on the slat primary control valve V27003 in the left wheel well (WDM 27-81-17):
- (d) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:

- 1) Replace the Bypass solenoid on the slat primary control valve V27003.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

- 2) Do a check of the resistance between pins 10 and 16 of connector DV27003A on the slat primary control valve, V27003 again (WDM 27-81-17).

NOTE: This does a check of the internal wiring on the primary control valve, V27003.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the slat primary control valve, V27003.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,

Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- b) If the resistance between the pins is in the limit, then continue.
- 3) Connect electrical connector DV27003A to the slat primary control valve V27003 in the left wheel well.
- 4) Remove the safety tag and close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 2.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- 6) If you do not find a problem with the wiring, then continue.
- (5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
- (a) If the MAT shows PASSED after the ground test, then replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

EFFECTIVITY
ARO ALL

777-200/300 FAULT ISOLATION MANUAL

835. Slats Shutoff Valve Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25142.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 2.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Replace the Shutoff Solenoid on the slat primary control valve, V27003 in the left wheel well.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-81-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-81-05-400-802.

 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 2.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
 - (a) If the MAT does not show PASSED after the ground test, then replace the slat primary control valve, V27003.

These are the tasks:

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
 - (b) If the MAT shows PASSED after the ground test, then replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

FAULT ISOLATION MANUAL

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (7) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

————— **END OF TASK** —————

836. Slats Primary System Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25152.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 2.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check to see if the slat drive system is locked:
- (a) Use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
 - (b) If the slats operate with the alternate system, the slat drive system is not locked.
 - (c) If the slats do not operate with the alternate system, the slat drive system is locked.
- (2) If the slat drive system is locked, do these steps:
- (a) Open this access panel to get access to the slat power drive unit (PDU):

<u>Number</u>	<u>Name/Location</u>
511AB	Leading Edge PDU Panel
 - (b) Look at the torque trip indicators on the slat PDU to see if the drive system is locked in one of the wings.
 - (c) If neither of the torque trip indicators are extended, disconnect the torque tubes from the slat power drive unit (PDU).
 - (d) Use the wrench flats on the torque tube on the outboard side of the PDU to manually extend and retract the left wing slats.
 - (e) Use a LE slat drive torque tube coupling adapter, SPL-1694 on the torque tube on the inboard side of the PDU to manually extend and retract the right wing slats.
 - (f) If you can extend and retract the slats on each wing, do these steps:
 - 1) Do this task: Slat Electric Motor Removal, AMM TASK 27-81-34-000-801.
 - 2) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 3) If you can turn the PDU, install a new slat electric motor, B27001. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.

- 4) If you cannot turn the PDU, do this task: Slat Hydraulic Motor Removal, AMM TASK 27-81-33-000-801.
- 5) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
- 6) If you cannot turn the PDU, replace the slat PDU.
These are the tasks:
Slat Power Drive Unit (PDU) Removal, AMM TASK 27-81-31-000-801,
Slat Power Drive Unit (PDU) Installation, AMM TASK 27-81-31-400-801.
- 7) Try to turn the output shaft on the slat hydraulic motor.
- 8) If you can turn the output shaft on the hydraulic motor, replace the slat primary control valve, V27003.
These are the tasks:
Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
- 9) If you cannot turn the output shaft on the slat hydraulic motor, install a new slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
- 10) If it is necessary, re-install the slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
- 11) If it is necessary, re-install the slat electric motor, B27003. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
- (g) If one of the torque trip indicators is extended or if you cannot extend and retract the slats on one of the wings, replace the gearbox where the slat drive system is locked.
- (h) Connect the torque tubes to the slat PDU.
- (i) Do this task: Leading Edge Slat Drive System Adjustment, AMM TASK 27-81-00-820-801.
- (j) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) If the slat drive system is not locked, then continue.
- (4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Slat Primary Control Valve Test-FSEU 1.
 - (a) If the MAT does not show PASSED after the ground test, then replace the slat primary control valve, V27003.
These are the tasks:
Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
 - (b) If the MAT shows PASSED after the ground test, then replace FSEU 2, M27002.
These are the tasks:
Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

777-200/300 FAULT ISOLATION MANUAL

- (b) Look at the torque trip indicators on the slat PDU to see if the drive system is locked in one of the wings.
- (c) If neither of the torque trip indicators are extended, disconnect the torque tubes from the slat power drive unit (PDU).
- (d) Use the wrench flats on the torque tube on the outboard side of the PDU to manually extend and retract the left wing slats.
- (e) Use a LE slat drive torque tube coupling adapter, SPL-1694 on the torque tube on the inboard side of the PDU to manually extend and retract the right wing slats.
- (f) If you can extend and retract the slats on each wing, do these steps:
 - 1) Do this task: Slat Electric Motor Removal, AMM TASK 27-81-34-000-801.
 - 2) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 3) If you can turn the PDU, install a new slat electric motor, B27001. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
 - 4) If you cannot turn the PDU, do this task: Slat Hydraulic Motor Removal, AMM TASK 27-81-33-000-801.
 - 5) Use a LE slat drive torque tube coupling adapter, SPL-1694 to try to turn the slat power drive unit (PDU) in the extend and retract directions.
 - 6) If you cannot turn the PDU, replace the slat PDU.

These are the tasks:
Slat Power Drive Unit (PDU) Removal, AMM TASK 27-81-31-000-801,
Slat Power Drive Unit (PDU) Installation, AMM TASK 27-81-31-400-801.
 - 7) Try to turn the output shaft on the slat hydraulic motor.
 - 8) If you can turn the output shaft on the hydraulic motor, replace the slat primary control valve, V27003.

These are the tasks:
Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.
 - 9) If you cannot turn the output shaft on the slat hydraulic motor, install a new slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
 - 10) If it is necessary, re-install the slat hydraulic motor. To install it, do this task: Slat Hydraulic Motor Installation, AMM TASK 27-81-33-400-801.
 - 11) If it is necessary, re-install the slat electric motor, B27003. To install it, do this task: Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
- (g) If one of the torque trip indicators is extended or if you cannot extend and retract the slats on one of the wings, replace the gearbox where the slat drive system is locked.
- (h) Connect the torque tubes to the slat PDU.
- (i) Do this task: Leading Edge Slat Drive System Adjustment, AMM TASK 27-81-00-820-801.
- (j) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.

777-200/300 FAULT ISOLATION MANUAL

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- 2) If the maintenance message shows on the ground test display, then continue.
- (4) If the slat drive system is not locked, use the alternate system to extend and retract the slats. To extend and retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
NOTE: This step is intended to find if the slats do not extend, retract or do not operate at all with electric power.
- (5) If the slats do not operate with the alternate system, then replace the slat electric motor, B27001.
These are the tasks:
Slat Electric Motor Removal, AMM TASK 27-81-34-000-801,
Slat Electric Motor Installation, AMM TASK 27-81-34-400-801.
 - (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
 - (6) If the slats do not extend with the alternate system, then replace the Slats Extend Relay, K27003 on the P210 Panel (WDM 27-81-17).
 - (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
 - (7) If the slats do not retract with the alternate system, then replace the Slats Retract Relay, K27005 on the P210 Panel (WDM 27-81-17).
 - (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
 - (8) Replace the Slats Bypass/Clutch Relay, K27001 on the P210 panel (WDM 27-81-17).
 - (9) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Slats Only.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, then continue.
 - (10) Do a check of the wiring between the Slats Bypass/Clutch Relay, K27001 and FSEU 2, M27002:

27-82 TASK 837

D633W103-ARO

Page 298.34
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (30) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

838. Slat Asymmetry Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25172.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 2, M27002.
- These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Use the alternate system to retract the slats to the retracted position. To retract them, do this task: Leading Edge Slat System Operation With Alternate Control, AMM TASK 27-81-00-860-802.
- (3) Look at the SLAT POS L2 and SLAT POS R2 indications on the FLAP/SLAT maintenance page on EICAS.
- (a) Replace the slat position sensor for the slat position indication which is further from 10.
- These are the tasks:
- Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,
Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.
- NOTE:** The slat position sensor for SLAT POS L2 is M27203 on the left wing. The slat position sensor for SLAT POS R2 is M27204 on the right wing.
- (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (4) Replace the other slat position sensor 2L, M27203 or 2R, M27204.
- These are the tasks:
- Slat Position Sensor Removal, AMM TASK 27-88-03-000-801,

777-200/300 FAULT ISOLATION MANUAL

Slat Position Sensor Installation, AMM TASK 27-88-03-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (6) Remove FSEU 2, M27002 from the E4-1 shelf.
- (7) Do a check of the wiring between FSEU 2, M27002 and the slat position sensor 2L, M27203:
- (a) Disconnect the connector DM27203 from slat position sensor 2L, M27203.
 - (b) Do a wiring check between these pins of connector DM27002AC at the E4-1 shelf and connector DM27203 at the slat position sensor 2L, M27203 (WDM 27-88-12):

DM27002AC	DM27203
pin K4	pin 1
pin J4	pin 2
pin G6	pin 3
pin G7	pin 4
pin F6	pin 5
pin F7	pin 6

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27203.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (d) If you did not find a problem with the wiring, then continue.
- (e) Connect the connector DM27203 to slat position sensor 2L, M27203.
- (8) Do a check of the wiring between FSEU 2, M27002 and the slat position sensor 2R, M27204:
- (a) Disconnect the connector DM27204 from slat position sensor 2R, M27204.
 - (b) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DM27204 at the slat position sensor 2R, M27204 (WDM 27-88-12):

pin B4	pin 2
pin D6	pin 3
pin D7	pin 4
pin E6	pin 5
pin E7	pin 6

- (c) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-connect connector DM27204.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (d) If you did not find a problem with the wiring, then continue.
- (e) Connect the connector DM27204 to slat position sensor 2R, M27204.
- (9) Re-install FSEU 2, M27002 on the E4-1 shelf.
- (10) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (11) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2, Test of Slats Only.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, then continue.
- (12) Look for a broken or disconnected torque tube:
 - (a) Find which wing has the broken or disconnected torque tube:
 - 1) Look at the 27-FLAP/SLAT maintenance page on the EICAS.
 - 2) Open this access panel to get access to the torque tubes on the slat power drive unit (PDU):

Number	Name/Location
511AB	Leading Edge PDU Panel

27-82 TASK 838

D633W103-ARO

Page 298.37
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 3) Use the wrench flats on the torque tube outboard of the PDU to manually turn the slat drive system a maximum of four torque tube turns.

NOTE: This will move the slats approximately 1/2 inch.

- 4) If the SLAT POS L 2 indication on the maintenance page does not change when you turn the drive system, then there is a broken or disconnected torque tube in the left wing.
- 5) If the SLAT POS R 2 indication on the maintenance page does not change when you turn the drive system, then there is a broken or disconnected torque tube in the right wing.

- (b) If there is a broken or disconnected torque tube in the right wing, do these steps until you find the torque tube:

- 1) Look at the torque tubes and gearboxes that go through the aft end of the forward cargo compartment.
- 2) Look at the slats on the right wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.

- 3) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.
- 4) If you see a slat that appears to be skewed, look for a broken or disconnected torque tube between the offset gearboxes for that slat.
- 5) Look for a broken torque tube between the outboard end of the inboard slat and the inboard end of the outboard slats.
- 6) If it is necessary, remove these access panels for the offset gearboxes on the lower surface of the right wing to get access to the torque tubes:

<u>Number</u>	<u>Name/Location</u>
611EB	Inboard Fixed Leading Edge Panel
611LB	Inboard Fixed Leading Edge Panel
621AAB	Outboard Fixed Leading Edge Panel
621ACB	Outboard Fixed Leading Edge Panel
621BB	Outboard Fixed Leading Edge Panel
621EB	Outboard Fixed Leading Edge Panel
621GB	Outboard Fixed Leading Edge Panel
621JB	Outboard Fixed Leading Edge Panel
621MB	Outboard Fixed Leading Edge Panel
621PB	Outboard Fixed Leading Edge Panel

- (c) If there is a broken or disconnected torque tube in the left wing, do these steps until you find the torque tube:

- 1) Look at the slats on the left wing for a pair of slats that do not fair or a slat that is skewed.

NOTE: To find a skewed slat, look at the clearance between the lower trailing edge of the slat and the fixed lower panels.

- 2) If you see a pair of slats that do not fair, look for a broken or disconnected torque tube between the slats.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breaker was closed, continue.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (3) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (4) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

777-200/300 FAULT ISOLATION MANUAL

Slat Primary Control Valve Removal, AMM TASK 27-81-05-000-801,
Slat Primary Control Valve Installation, AMM TASK 27-81-05-400-801.

- b) If the resistance between the pins is in the limit, then continue.
- 3) Connect electrical connector DV27003B to the slat primary control valve V27003 in the left wheel well.
- 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	12	C27606	SLATS PRI DR CTRL 1

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (c) If you do not find a problem with the wiring, then continue.
- (7) Do this wiring check between the slat primary control valve, V27003 and the P210 panel:
 - (a) Do a wiring check between these pins on connector D21026P at the P210 right power management panel and connector DV27003B at the slat primary control valve, V27003 in the left wheel well (WDM 27-81-16):

D21026P	DV27003B
pin 14	pin 14

- (b) If there is a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Connect electrical connector DV27003B to the slat primary control valve V27003 in the left wheel well.
 - 3) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, or if the circuit breaker was closed, continue.
- (2) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	8	C27630	SLATS ELEC CTRL RLY PWR

Right Power Panel, P200

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

Right Power Panel, P200

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
ARO 011-999			
B	1	C27300	SLATS ELEC MOT PWR
ARO 001-010			
B	3	C27300	SLATS ELEC MOT PWR

ARO ALL

- (b) Remove the Slats Extend Relay, K27003 from the P210 panel.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Do a wiring check between these pins on connector DM27002AA at the E4-1 shelf and connector DK27003 at the P210 panel (WDM 27-81-17):

DM27002AA	DK27003
pin E2	pin X2

- (e) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 2, M27002.
 - 3) Re-install the Slats Extend Relay, K27003.
 - 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

777-200/300 FAULT ISOLATION MANUAL

846. Autoslat Priority Valve Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25562.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breaker was closed, continue.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (3) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (4) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

- (5) Disconnect electrical connector DV27105 from the autoslat priority valve, V27105 in the right wheel well.
- (6) Do this wiring check of the autoslat priority valve, V27105:
 - (a) Do a continuity check between pins 1 and 2 of connector DV27105 on the autoslat priority valve V27105 in the right wheel well (WDM 27-81-19):

EFFECTIVITY
ARO ALL

27-82 TASK 846

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

(b) If there is no continuity between the pins, do these steps:

- 1) Replace the autoslat priority valve, V27105.

These are the tasks:

Autoslat Priority Valve - Main Landing Gear - Removal, AMM
TASK 27-81-06-000-801,

Autoslat Priority Valve - Main Landing Gear - Installation, AMM
TASK 27-81-06-400-801.

- 2) Remove the safety tag and close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

- 3) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.

- a) If the maintenance message does not show on the ground test display, then you corrected the fault.

(c) If you do not find a problem with the wiring, then continue.

(7) Do this wiring check between the autoslat priority valve, V27105 and the P210 panel:

- (a) Do a wiring check between these pins on connector D21026P at the P210 power management panel and connector DV27105 at the autoslat priority valve, V27105 in the right wheel well (WDM 27-81-16), (WDM 27-81-19):

D21026P	DV27105
pin 14	pin 1

(b) If there is a problem with the wiring, do these steps:

- 1) Repair the wiring.
- 2) Connect electrical connector DV27105 to the autoslat priority valve, V27105 in the right wheel well.
- 3) Remove the safety tag and close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	5	C27607	SLATS PRI DR CTRL 2

- 4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.

- a) If the maintenance message does not show on the ground test display, then you corrected the fault.

(c) If you do not find a problem with the wiring, then continue.

(8) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

K	4	C27602	FSEU 2
K	5	C27607	SLATS PRI DR CTRL 2

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
 - 6) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (c) If you do not find a problem with the wiring, then continue.
- (11) Install a new FSEU 2, M27002. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (12) Re-connect connector DV27105 to the autoslat priority valve, V27105.
- (13) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2
K	5	C27607	SLATS PRI DR CTRL 2

- (14) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

 WARNING	OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (15) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

777-200/300 FAULT ISOLATION MANUAL

801. Slat Skew Sensor 2A Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21091.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the slat skew sensor S27009 on slat No. 2.
These are the tasks:
Outboard Slat Skew Sensor Removal, AMM TASK 27-89-11-000-801,
Outboard Slat Skew Sensor Installation, AMM TASK 27-89-11-400-801.
- (2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (3) Replace FSEU 1, M27001.
These are the tasks:
Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (4) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
 - (a) If the maintenance message does not show on the MAT, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Do a wiring check between FSEU 1, M27001 and the outboard slat skew sensor S27009:
 - (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Disconnect connector DS27009 from the outboard slat skew sensor S27009.

EFFECTIVITY
ARO ALL

27-89 TASK 801

777-200/300 FAULT ISOLATION MANUAL

- (c) Remove FSEU 1, M27001 from the E1-6 shelf.
- (d) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DS27009 at the outboard slat skew sensor, S27009 (WDM 27-89-11):

DM27001AA	DS27009
pin B7	pin 1
pin B8	pin 2

- (e) If you find a problem with the wiring, repair the wiring:
- (f) Re-install FSEU 1, M27001.
- (g) Re-connect connector DS27009.
- (h) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (i) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.

————— **END OF TASK** —————

802. Slat Skew Sensor 13A Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21071.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the slat skew sensor S27010 on slat No. 13.

These are the tasks:

Outboard Slat Skew Sensor Removal, AMM TASK 27-89-11-000-801,

Outboard Slat Skew Sensor Installation, AMM TASK 27-89-11-400-801.

777-200/300 FAULT ISOLATION MANUAL

- (2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (3) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (4) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Do a wiring check between FSEU 1, M27001 and the outboard slat skew sensor S27010:
 - (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Disconnect connector DS27010 from the outboard slat skew sensor S27010.
 - (c) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (d) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DS27010 at the outboard slat skew sensor, S27010 (WDM 27-89-11):

DM27001AA	DS27010
pin A5	pin 1
pin A6	pin 2

- (e) If you find a problem with the wiring, repair the wiring:
 - (f) Re-install FSEU 1, M27001.
 - (g) Re-connect connector DS27010.
 - (h) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

————— END OF TASK —————

803. Slat No. 7 Skew Sensors Inboard and Outboard A Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21101.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Find which slat skew sensor S27013 or S27017 does not agree with the slat skew sensors for FSEU 2.
 - (a) Look at the 27-FLAP/SLAT maintenance page on the EICAS.
 - (b) If SLAT 7 - OTBD 1 does not agree with the SLAT 7 - OTBD 2 and - INBD 2, then slat skew sensor S27013 does not agree.
 - (c) If SLAT 7 - INBD 1 does not agree with the SLAT 7 - OTBD 2 and - INBD 2, then slat skew sensor S27017 does not agree.
- (2) If slat skew sensor S27013 does not agree, do these steps:
 - (a) Replace the slat skew sensor S27013 on the outboard auxiliary track in slat No. 7.

These are the tasks:

Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801,
Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801.
 - (b) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
 - (c) Replace FSEU 1, M27001.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Find which slat skew sensor S27014 or S27018 does not agree with the slat skew sensors for FSEU 2.
 - (a) Look at the 27-FLAP/SLAT maintenance page on the EICAS.
 - (b) If SLAT 8 - OTBD 1 does not agree with the SLAT 8 - OTBD 2 and - INBD 2, then slat skew sensor S27014 does not agree.
 - (c) If SLAT 8 - INBD 1 does not agree with the SLAT 8 - OTBD 2 and - INBD 2, then slat skew sensor S27018 does not agree.
- (2) If slat skew sensor S27014 does not agree, do these steps:
 - (a) Replace the slat skew sensor S27014 on the outboard auxiliary track in slat No. 8.

These are the tasks:

Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801,
Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801.
 - (b) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
 - (c) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
 - (d) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

 - 1) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 2) If the MAT shows ACTIVE for the maintenance message, then continue.

**777-200/300
FAULT ISOLATION MANUAL**

- (e) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (f) Disconnect connector DS27014 from the inboard slat skew sensor S27014.
(g) Remove FSEU 1, M27001 from the E1-6 shelf.
(h) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DS27014 at the inboard slat skew sensor, S27014 (WDM 27-89-11):

DM27001AA		DS27014	
pin A7		pin 1	
pin A8		pin 2	

- (i) If you find a problem with the wiring, repair the wiring.
(j) Re-install FSEU 1, M27001.
(k) Re-connect connector DS27014.
(3) If slat skew sensor S27018 does not agree, do these steps:

- (a) Replace the slat skew sensor S27018 on the inboard auxiliary track in slat No. 8.

These are the tasks:

Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801,

Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801.

- (b) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.

- 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
- 2) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.

- (c) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (d) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

- (1) Replace the slat skew sensor S27017 on the inboard auxiliary track in slat No. 7.

These are the tasks:

Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801,

Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801.

- (2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.

(a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.

(b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.

- (3) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (4) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

(a) If the maintenance message does not show on the MAT, then you corrected the fault.

(b) If the MAT shows ACTIVE for the maintenance message, then continue.

- (5) Do a wiring check between FSEU 1, M27001 and the inboard slat skew sensor, S27017:

(a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

(b) Disconnect connector DS27017 from the inboard slat skew sensor S27017.

(c) Remove FSEU 1, M27001 from the E1-6 shelf.

(d) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DS27017 at the inboard slat skew sensor, S27017 (WDM 27-89-11):

DM27001AA	DS27017
pin C7	pin 1
pin C8	pin 2

(e) If you find a problem with the wiring, repair the wiring.

(f) Re-install FSEU 1, M27001.

(g) Re-connect connector DS27017.

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (i) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.

— END OF TASK —

806. Slat Skew Sensor 7 Outboard A Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21121.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
- (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the slat skew sensor S27013 on the outboard auxiliary track in slat No. 7.
- These are the tasks:
- Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801,
Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801.
- (2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
- (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (3) Replace FSEU 1, M27001.
- These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (j) If the maintenance message does not show on the MAT, then you corrected the fault.

————— END OF TASK —————

809. Slat No. 2 Skew Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25331.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Open this access panel to get access to the slat skew mechanism in slat No. 2:
- | <u>Number</u> | <u>Name/Location</u> |
|---------------|------------------------------|
| 526CB | Slat No. 2 Cove Access Panel |
- (2) Measure the clearance between the slat skew sensor, S27009 and the target on the outboard slat skew mechanism.
- (a) If the clearance between the slat skew target and sensor is more than 1.35 inches, then do these steps:
- 1) Look at the outboard slats on the left wing to determine if a slat has a skew.
 - 2) If the outboard slats have a skew, then repair the slat drive system.
 - 3) If the slats do not have a skew, then, do this task: Outboard Slat Skew Cable Adjustment, AMM TASK 27-89-13-820-801.
- (b) If the clearance between the slat skew target and sensor is not more than 1.35 inches, then continue.
- (3) Replace the slat skew sensor S27009 on slat No. 2.
- These are the tasks:
- Outboard Slat Skew Sensor Removal, AMM TASK 27-89-11-000-801,
Outboard Slat Skew Sensor Installation, AMM TASK 27-89-11-400-801.
- (4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, then continue.
- (5) Replace FSEU 1, M27001.
- These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

811. Slat No. 2 Skew Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21081.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Open this access panel to get access to the slat skew mechanism in slat No. 2:

<u>Number</u>	<u>Name/Location</u>
526CB	Slat No. 2 Cove Access Panel
- (2) Measure the clearance between the slat skew sensor, S27009 and the target on the outboard slat skew mechanism.
 - (a) If the clearance between the slat skew target and the sensor is more than 1.35 inches, then do these steps:
 - 1) Look at the outboard slats on the left wing to determine if a slat has a skew.
 - 2) If the outboard slats have a skew, then repair the slat drive system.
 - 3) If the slats do not have a skew, then, do this task: Outboard Slat Skew Cable Adjustment, AMM TASK 27-89-13-820-801.
 - 4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the clearance between the slat skew target and sensor is not more than 1.35 inches, then continue.
- (3) Replace the slat skew sensor S27009 on slat No. 2.

These are the tasks:

Outboard Slat Skew Sensor Removal, AMM TASK 27-89-11-000-801,

Outboard Slat Skew Sensor Installation, AMM TASK 27-89-11-400-801.
- (4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (5) Replace FSEU 1, M27001.

EFFECTIVITY

27-89 TASKS 810-811

D633W103-ARO

Page 220
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (6) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.
(b) If the MAT shows ACTIVE for the maintenance message, then continue.
(7) Do this wiring check between the outboard slat skew sensor, S27009 and FSEU 1, M27001:
(a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Disconnect connector DS27009 from the outboard slat skew sensor S27009.
(c) Remove FSEU 1, M27001 from the E1-6 shelf.
(d) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DS27009 at the outboard slat skew sensor, S27009 (WDM 27-89-11):

DM27001AA	DS27009
pin B7	pin 1
pin B8	pin 2

- (e) If you find a problem with the wiring, do these steps:
1) Repair the wiring.
2) Re-install FSEU 1, M27001.
3) Re-connect connector DS27009.
4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- a) If the maintenance message does not show on the MAT, then you corrected the fault.

————— **END OF TASK** —————

812. Slat No. 7 Skew Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25341.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Find which slat skew sensor S27013 or S27017 does not agree with the slat skew sensors for FSEU 2.
- (a) Look at the 27-FLAP/SLAT maintenance page on the EICAS.
- (b) If SLAT 7 - OTBD A does not agree with the SLAT 7 - OTBD B and - INBD B, then slat skew sensor S27013 does not agree.
- (c) If SLAT 7 - INBD A does not agree with the SLAT 7 - OTBD B and - INBD B, then slat skew sensor S27017 does not agree.
- (d) If SLAT 7 - INBD A and OTBD A agree with the SLAT 7 - OTBD B and - INBD B, then it is likely that slat No. 7 has a skew.
- (2) If slat No. 7 has a skew, do these steps:
- (a) Remove these access panels below slat No. 7 to get access to the slat drive system between the rotary actuators:

<u>Number</u>	<u>Name/Location</u>
511CB	Inboard Fixed Leading Edge Panel
511EB	Inboard Fixed Leading Edge Panel
511GB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel
511MB	Inboard Fixed Leading Edge Panel

- (b) Find where the drive system is disconnected and repair or replace the applicable parts.
- (c) Do this task: Leading Edge Slat Drive System Adjustment, AMM TASK 27-81-00-820-801.
- (d) Install these access panels below slat No. 7:

<u>Number</u>	<u>Name/Location</u>
511CB	Inboard Fixed Leading Edge Panel
511EB	Inboard Fixed Leading Edge Panel
511GB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel

777-200/300 FAULT ISOLATION MANUAL

(Continued)

<u>Number</u>	<u>Name/Location</u>
511MB	Inboard Fixed Leading Edge Panel

- (3) If slat skew sensor S27013 does not agree, do these steps:

- (a) Open this access panel:

<u>Number</u>	<u>Name/Location</u>
511LB	Inboard Fixed Leading Edge Panel

- (b) Replace the slat skew sensor S27013 on the outboard auxiliary track in slat No. 7. These are the tasks:

- Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801
- Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801

- (c) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- 2) If the maintenance message shows on the ground test display, then continue.

- (d) Replace FSEU 1, M27001. These are the tasks:

- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
- Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801

- (e) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- 2) If the maintenance message shows on the ground test display, then continue.

- (f) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (g) Disconnect connector DS27013 from the inboard slat skew sensor S27013.
- (h) Remove FSEU 1, M27001 from the E1-6 shelf.
- (i) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DS27013 at the inboard slat skew sensor, S27013 (WDM 27-89-11):

<u>DM27001AA</u>	<u>DS27013</u>
pin C5	pin 1
pin C6	pin 2

- (j) If you find a problem with the wiring, then repair the wiring.
- (k) Re-install FSEU 1, M27001.
- (l) Re-install connector DS27013.

FAULT ISOLATION MANUAL

814. Slat No. 13 Skew Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25361.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Remove this access panel to get access to the slat skew mechanism in slat No. 13:

<u>Number</u>	<u>Name/Location</u>
626CB	Slat No. 13 Cove Access Panel

- (2) Measure the clearance between the slat skew sensor, S27010 and the target on the outboard slat skew mechanism.
- (a) If the clearance between the slat skew target and sensor is more than 1.35 inches, then do these steps:
- 1) Look at the outboard slats on the right wing to determine if a slat has a skew.
 - 2) If the outboard slats have a skew, then repair the slat drive system.
 - 3) If the slats do not have a skew, then, do this task: Outboard Slat Skew Cable Adjustment, AMM TASK 27-89-13-820-801.
- (b) If the clearance between the slat skew target and sensor is not more than 1.35 inches, then continue.
- (3) Replace the slat skew sensor S27010 on slat No. 13.
- These are the tasks:
- Outboard Slat Skew Sensor Removal, AMM TASK 27-89-11-000-801,
Outboard Slat Skew Sensor Installation, AMM TASK 27-89-11-400-801.
- (4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, then continue.
- (5) Replace FSEU 1, M27001.
- These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (6) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message shows on the ground test display, then continue.
- (7) Do this wiring check between the outboard slat skew sensor, S27010 and FSEU 1, M27001:
 - (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Disconnect connector DS27010 from the outboard slat skew sensor S27010.
- (c) Remove FSEU 1, M27001 from the E1-6 shelf.
- (d) Do a wiring check between these pins of connector DM27001AA at the E1-6 shelf and connector DS27010 at the outboard slat skew sensor, S27010 (WDM 27-89-11):

<u>DM27001AA</u>	<u>DS27010</u>
pin A5	pin 1
pin A6	pin 2

- (e) If you find a problem with the wiring, repair the wiring:
- (f) Re-install FSEU 1, M27001.
- (g) Re-connect connector DS27010.
- (h) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (i) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 1.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (8) Install this access panel in slat No. 13:

<u>Number</u>	<u>Name/Location</u>
626CB	Slat No. 13 Cove Access Panel

————— **END OF TASK** —————

815. Slat Skew Sensor 2B Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21092.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the slat skew sensor S27011 on slat No. 2.
These are the tasks:
Outboard Slat Skew Sensor Removal, AMM TASK 27-89-11-000-801,
Outboard Slat Skew Sensor Installation, AMM TASK 27-89-11-400-801.
- (2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (3) Replace FSEU 2, M27002.
These are the tasks:
Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (4) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.
 - (a) If the maintenance message does not show on the MAT, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Do a wiring check between FSEU 2, M27002 and the outboard slat skew sensor S27011:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

Row	Col	Number	Name
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Disconnect connector DS27011 from the outboard slat skew sensor S27011.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DS27011 at the outboard slat skew sensor, S27011 (WDM 27-89-13):

DM27002AA	DS27011
pin B7	pin 1
pin B8	pin 2

- (e) If you find a problem with the wiring, repair the wiring:

777-200/300 FAULT ISOLATION MANUAL

817. Slat No. 13 Skew Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21062.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Remove this access panel to get access to the slat skew mechanism in slat No. 13:

<u>Number</u>	<u>Name/Location</u>
626CB	Slat No. 13 Cove Access Panel
- (2) Measure the clearance between the slat skew sensor, S27012 and the target on the outboard slat skew mechanism.
 - (a) If the clearance between the slat skew target and the sensor is more than 1.35 inches, then do these steps:
 - 1) Look at the outboard slats on the right wing to determine if a slat has a skew.
 - 2) If the outboard slats have a skew, then repair the slat drive system.
 - 3) If the slats do not have a skew, then, do this task: Outboard Slat Skew Cable Adjustment, AMM TASK 27-89-13-820-801.
 - 4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the clearance between the slat skew target and sensor is not more than 1.35 inches, then continue.
- (3) Replace the slat skew sensor S27012 on slat No. 13.

These are the tasks:

Outboard Slat Skew Sensor Removal, AMM TASK 27-89-11-000-801,

Outboard Slat Skew Sensor Installation, AMM TASK 27-89-11-400-801.
- (4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - (a) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (5) Replace FSEU 2, M27002.

These are the tasks:

819. Slat No. 7 Skew Sensors Inboard and Outboard B Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21102.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Find which slat skew sensor S27015 or S27019 does not agree with the slat skew sensors for FSEU 1.
 - (a) Look at the 27-FLAP/SLAT maintenance page on the EICAS.
 - (b) If SLAT 7 - OTBD 2 does not agree with the SLAT 7 - OTBD 1 and - INBD 1, then slat skew sensor S27015 does not agree.
 - (c) If SLAT 7 - INBD 2 does not agree with the SLAT 7 - OTBD 1 and - INBD 1, then slat skew sensor S27019 does not agree.
- (2) If slat skew sensor S27015 does not agree, do these steps:
 - (a) Replace the slat skew sensor S27015 on the outboard auxiliary track in slat No. 7.

These are the tasks:

Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801,

Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801.
 - (b) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- 2) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (c) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (d) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 2) If the MAT shows ACTIVE for the maintenance message, then continue.
- (e) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (f) Disconnect connector DS27015 from the inboard slat skew sensor S27015.
- (g) Remove FSEU 2, M27002 from the E4-1 shelf.
- (h) Do a wiring check between these pins of connector DM27001AA at the E4-1 shelf and connector DS27015 at the inboard slat skew sensor, S27015 (WDM 27-89-13):

DM27002AA	DS27015
pin C5	pin 1
pin C6	pin 2

- (i) If you find a problem with the wiring, then repair the wiring.
 - (j) Re-install FSEU 2, M27002.
 - (k) Re-connect connector DS27015.
- (3) If slat skew sensor S27019 does not agree, do these steps:
 - (a) Replace the slat skew sensor S27019 on the inboard auxiliary track in slat No. 7.

These are the tasks:

Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801,
Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801.
 - (b) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.

777-200/300 FAULT ISOLATION MANUAL

- (c) Replace FSEU 2, M27002.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (d) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.
- 2) If the MAT shows ACTIVE for the maintenance message, then continue.

- (e) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (f) Disconnect connector DS27019 from the inboard slat skew sensor S27019.
- (g) Remove FSEU 2, M27002 from the E4-1 shelf.
- (h) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DS27019 at the inboard slat skew sensor, S27019 (WDM 27-89-13):

DM27002AA	DS27019
pin C7	pin 1
pin C8	pin 2

- (i) If you find a problem with the wiring, repair the wiring.
 - (j) Re-install FSEU 2, M27002.
 - (k) Re-connect connector DS27019.
- (4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (5) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

820. Slat No. 8 Skew Sensors Inboard and Outboard B Problems FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21132.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - (a) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Find which slat skew sensor S27016 or S27020 does not agree with the slat skew sensors for FSEU 1.
 - (a) Look at the 27-FLAP/SLAT maintenance page on the EICAS.
 - (b) If SLAT 8 - OTBD 2 does not agree with the SLAT 8 - OTBD 1 and - INBD 1, then slat skew sensor S27016 does not agree.
 - (c) If SLAT 8 - INBD 2 does not agree with the SLAT 8 - OTBD 1 and - INBD 1, then slat skew sensor S27020 does not agree.
- (2) If slat skew sensor S27016 does not agree, do these steps:
 - (a) Replace the slat skew sensor S27016 on the outboard auxiliary track in slat No. 8. These are the tasks:
 - Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801
 - Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801
 - (b) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
 - (c) Replace FSEU 2, M27002. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
 - (d) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

 - 1) If the maintenance message does not show on the MAT, then you corrected the fault.
 - 2) If the MAT shows ACTIVE for the maintenance message, then continue.

**777-200/300
FAULT ISOLATION MANUAL**

- (e) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (f) Disconnect connector DS27016 from the inboard slat skew sensor S27016.
- (g) Remove FSEU 2, M27002 from the E4-1 shelf.
- (h) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DS27016 at the inboard slat skew sensor, S27016 (WDM 27-89-13):

DM27002AA		DS27016	
pin A7		pin 1	
pin A8		pin 2	

- (i) If you find a problem with the wiring, repair the wiring.
- (j) Re-install FSEU 2, M27002.
- (k) Re-connect connector DS27016.
- (3) If slat skew sensor S27020 does not agree, do these steps:
- (a) Replace the slat skew sensor S27020 on the inboard auxiliary track in slat No. 8. These are the tasks:
- Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801
 - Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801
- (b) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
- 1) If the MAT EXISTING FAULTS display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT EXISTING FAULTS display shows LATCHED for the maintenance message, then continue.
- (c) Replace FSEU 2, M27002. These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (d) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.
- 2) If the MAT shows ACTIVE for the maintenance message, then continue.

- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Do a wiring check between FSEU 2, M27002 and the inboard slat skew sensor, S27016:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Disconnect connector DS27016 from the inboard slat skew sensor S27016.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DS27016 at the inboard slat skew sensor, S27016 (WDM 27-89-13):

DM27002AA		DS27016
pin A7		pin 1
pin A8		pin 2

- (e) If you find a problem with the wiring, repair the wiring.
- (f) Re-install FSEU 2, M27002.
- (g) Re-connect connector DS27016.
- (h) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (i) Use the primary system to extend or retract the slats to another position. To extend or retract them, do this task: Leading Edge Slat System Operation With Primary Control, AMM TASK 27-81-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 2 is IN CONTROL. If FSEU 2 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 2 IN CONTROL.

777-200/300 FAULT ISOLATION MANUAL

- (j) If the maintenance message does not show on the MAT, then you corrected the fault.

————— END OF TASK —————

825. Slat No. 2 Skew Problems During Test FSEU 2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25332.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Remove this access panel to get access to the slat skew mechanism in slat No. 2:
- | <u>Number</u> | <u>Name/Location</u> |
|---------------|------------------------------|
| 526CB | Slat No. 2 Cove Access Panel |
- (2) Measure the clearance between the slat skew sensor, S27011 and the target on the outboard slat skew mechanism.
- (a) If the clearance between the slat skew target and sensor is more than 1.35 inches, then do these steps:
- 1) Look at the outboard slats on the left wing to determine if a slat has a skew.
 - 2) If the outboard slats have a skew, then repair the slat drive system.
 - 3) If the slats do not have a skew, then, do this task: Outboard Slat Skew Cable Adjustment, AMM TASK 27-89-13-820-801.
- (b) If the clearance between the slat skew target and sensor is not more than 1.35 inches, then continue.
- (3) Replace the slat skew sensor S27011 on slat No. 2. These are the tasks:
- Outboard Slat Skew Sensor Removal, AMM TASK 27-89-11-000-801
 - Outboard Slat Skew Sensor Installation, AMM TASK 27-89-11-400-801
- (4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, then continue.
- (5) Replace FSEU 2, M27002. These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (6) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

Page 251
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Find which slat skew sensor S27015 or S27019 does not agree with the slat skew sensors for FSEU 1.
- (a) Look at the 27-FLAP/SLAT maintenance page on the EICAS.
 - (b) If SLAT 7 - OTBD B does not agree with the SLAT 7 - OTBD A and - INBD A, then slat skew sensor S27015 does not agree.
 - (c) If SLAT 7 - INBD B does not agree with the SLAT 7 - OTBD A and - INBD A, then slat skew sensor S27019 does not agree.
 - (d) If SLAT 7 - INBD B and OTBD B agree with the SLAT 7 - OTBD A and - INBD A, then it is likely that slat No. 7 has a skew.
- (2) If slat No. 7 has a skew, do these steps:

- (a) Remove these access panels below slat No. 7 to get access to the slat drive system between the rotary actuators:

<u>Number</u>	<u>Name/Location</u>
511CB	Inboard Fixed Leading Edge Panel
511EB	Inboard Fixed Leading Edge Panel
511GB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel
511MB	Inboard Fixed Leading Edge Panel

- (b) Find where the drive system is disconnected and repair or replace the applicable parts.
- (c) Do this task: Leading Edge Slat Drive System Adjustment, AMM TASK 27-81-00-820-801.
- (d) Install these access panels below slat No. 7:

<u>Number</u>	<u>Name/Location</u>
511CB	Inboard Fixed Leading Edge Panel
511EB	Inboard Fixed Leading Edge Panel
511GB	Inboard Fixed Leading Edge Panel
511LB	Inboard Fixed Leading Edge Panel
511MB	Inboard Fixed Leading Edge Panel

- (3) If slat skew sensor S27015 does not agree, do these steps:

- (a) Close this access panel:

<u>Number</u>	<u>Name/Location</u>
511LB	Inboard Fixed Leading Edge Panel

- (b) Replace the slat skew sensor S27015 on the outboard auxiliary track in slat No. 7. These are the tasks:
 - Inboard Slat Skew Sensor Removal, AMM TASK 27-89-01-000-801
 - Inboard Slat Skew Sensor Installation, AMM TASK 27-89-01-400-801
- (c) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

C. Fault Isolation Procedure

- (1) Open this access panel to get access to the slat skew mechanism in slat No. 13:

<u>Number</u>	<u>Name/Location</u>
626CB	Slat No. 13 Cove Access Panel
- (2) Measure the clearance between the slat skew sensor, S27012 and the target on the outboard slat skew mechanism.
 - (a) If the clearance between the slat skew target and sensor is more than 1.35 inches, then do these steps:
 - 1) Look at the outboard slats on the right wing to determine if a slat has a skew.
 - 2) If the outboard slats have a skew, then repair the slat drive system.
 - 3) If the slats do not have a skew, then, do this task: Outboard Slat Skew Cable Adjustment, AMM TASK 27-89-13-820-801.
 - (b) If the clearance between the slat skew target and sensor is not more than 1.35 inches, then continue.
- (3) Replace the slat skew sensor S27012 on slat No. 13. These are the tasks:
 - Outboard Slat Skew Sensor Removal, AMM TASK 27-89-11-000-801
 - Outboard Slat Skew Sensor Installation, AMM TASK 27-89-11-400-801
- (4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, then continue.
- (5) Replace FSEU 2, M27002. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- (6) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, then continue.
- (7) Do this wiring check between the outboard slat skew sensor, S27012 and FSEU 2, M27002:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (b) Disconnect connector DS27012 from the outboard slat skew sensor S27012.
- (c) Remove FSEU 2, M27002 from the E4-1 shelf.
- (d) Do a wiring check between these pins of connector DM27002AA at the E4-1 shelf and connector DS27012 at the outboard slat skew sensor, S27012 (WDM 27-89-13):

**777-200/300
FAULT ISOLATION MANUAL**

DM27002AA	DS27012
pin A5	pin 1
pin A6	pin 2

- (e) If you find a problem with the wiring, repair the wiring:
- (f) Re-install FSEU 2, M27002.
- (g) Re-connect connector DS27012.
- (h) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

- (i) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Inboard Slat Skew Test-FSEU 2.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (8) Install this access panel in slat No. 13:

<u>Number</u>	<u>Name/Location</u>
626CB	Slat No. 13 Cove Access Panel

777-200/300 FAULT ISOLATION MANUAL

801. Procedure To Be Determined - Fault Isolation

A. Fault Isolation Procedure

- (1) At this time the FIM does not have a procedure for this fault. The FIM will contain a procedure for this fault in the future.

————— **END OF TASK** —————

802. Observed Fault with Correlated Maintenance Messages - Fault Isolation

A. Initial Evaluation

- (1) Find the fault code to the right of the fault description in the Observed Faults List (at the front of the FIM).
 - (a) The first two digits of the fault code are the FIM chapter that you need. Go to the Fault Code Index in that chapter and find the fault code.
 - (b) Find the maintenance message to the right of the fault code.
 - (c) Find the task number on the same line as the maintenance message number.
 - (d) Go to the task in the FIM and do the steps in the task.

————— **END OF TASK** —————

803. Intermittent Fault for Primary Flight Controls - Fault Isolation

A. Initial Evaluation

- (1) If the MAT shows ACTIVE or LATCHED for the maintenance message, the fault is not intermittent. Do the fault isolation task for the maintenance message.
- (2) If the MAT does not show ACTIVE or LATCHED for the maintenance message, do the Fault Isolation Procedure below.

B. Fault Isolation Procedure

- (1) Review the maintenance history of the airplane for prior actions related to the intermittent fault.
- (2) Make sure to keep a careful record of all maintenance actions performed.

NOTE: Troubleshooting intermittent faults is not like other fault isolation tasks. It requires a more complete understanding of the components related to the fault, how they interact, and what each troubleshooting procedure is trying to accomplish. There is no strict order of troubleshooting. You must use your judgment on what procedure or procedures to accomplish. Troubleshooting may occur over a period of several flights.

NOTE: The following troubleshooting procedures are generally arranged in increasing degree of complexity.

- (3) The troubleshooting procedures are summarized as follows:
 - (a) Change Configuration and Monitor – A component related to the fault is swapped with another component of the same part number. The airplane is monitored to see if the fault follows the swapped component or stays the same.
 - (b) Perform Specialized Tests/Checks – Perform tests/checks related to the fault and analyze the results.
 - (c) Visual Inspections – Perform visual inspections of the related components and wiring.
 - (d) Component Wiring Checks – Conduct on-wing checks of component wiring related to the fault.
 - (e) Airplane Wiring Checks – Conduct on-wing checks of airplane wiring related to the fault.

Page 201
Jan 05/2013

777-200/300 FAULT ISOLATION MANUAL

(4) Change Configuration and Monitor

NOTE: Only components that can be readily accessed and swapped without special tooling are considered in this procedure.

(a) Actuation Control Electronics (ACE)

- 1) From the applicable WDM or SSM page determine which ACE controls the suspect component.
- 2) Swap the ACE with an ACE from another position and make a record of the ACE S/Ns and positions.
- 3) Monitor the fault history for subsequent flights.
- 4) If the fault follows the ACE, do these tasks to replace the ACE:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

(5) Perform Specialized Tests/Checks

(a) Aircraft Maintenance Manual (AMM)

- 1) Review page block 500 of the AMM for the suspect component and its system for any related operational or functional tests.

NOTE: The ACE monitor test should only be performed if it is required by the Fault Isolation procedure or scheduled maintenance task. If the ACE monitor test fails, it will generate a FLIGHT CONTROL SYS EICAS status message, which must be cleared in order to dispatch the aircraft.

- 2) Use your judgment to determine what tests to run for the suspect fault.
- 3) Follow standard troubleshooting to isolate and correct any detected faults.

(b) Specialize Service Documents

- 1) Review specialized service documents (e.g., Maintenance Tips, Fleet Team Digest Articles, Service Letters, etc) for any special action related to the fault.
- 2) Use your judgment to determine what action to take based upon the specialized service document.

(6) Visual Inspections

(a) Wiring

- 1) Visually examine the wire bundles connected to the suspect component for any damage (see SWPM 20-14-11).
- 2) Disconnect the electrical connector to the suspect component and visually examine the airplane connector and the component connector for any damage or contamination.

(b) Hardware

- 1) Visually examine the suspect component for any abnormalities such as corrosion, seized control rod bearings, exposed wiring, cracked housings, etc.

(7) Component Wiring Checks

NOTE: Flight control wiring checks do not include data bus wiring.

NOTE: For flight control wiring a resistance less than 50,000 Ohms between isolated circuits should be considered a short circuit.

(a) Power Control Units (PCUs)

- 1) If the fault is related to a PCU, then do the following steps:

27-98 TASK 803

D633W103-ARO

Page 202
Jan 05/2017

777-200/300 FAULT ISOLATION MANUAL

- Do this task to check the resistance ranges for in-service PCU wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
 - Do this task to check the low-voltage insulation resistance for in-service PCU wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.
- (b) Other Flight Control Components
- 1) From the applicable SSM page or component maintenance manual (CMM), determine which contact sets form isolated circuits.
 - 2) Do a set-to-set and set-to-case low voltage insulation resistance (LVIR) check for each contact set.
- (8) Airplane Wiring Checks
- (a) Power Control Units (PCUs)
- 1) If the fault is related to a PCU, then do the following steps:
 - Do this task to check the low-voltage insulation resistance for in-service PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
 - Do this task to check the resistance ranges for in-service PCU airplane wiring: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
- (b) Other Flight Control Components
- 1) From the applicable WDM or SSM page determine which ACE controls the suspect component.
 - 2) If applicable, open the circuit breaker that supplies power to the suspect component.
 - 3) Remove the applicable ACE and disconnect the electrical connector or connectors from the suspect component.
 - 4) From the applicable WDM or SSM page determine which circuits have not been isolated. Isolated circuits should have no connection directly or indirectly. For example, there may be contacts whose circuits are connected at a terminal block or are spliced (direct connection). Removing the applicable ACE will not isolate these circuits. Or, some circuits may be connected through a component whose electrical connector was not disconnected (indirect connection); for example, connected through an LVDT.
 - 5) Low Voltage Insulation Resistance (LVIR)

NOTE: For flight control wiring a resistance less than 50,000 Ohms between isolated circuits should be considered a short circuit.

 - a) Do a contact-to-contact and contact-to-connector shell LVIR check for each isolated circuit at the airplane connector for the suspect component. Shake the connector wiring for each contact to see if the resistance changes.
 - 6) Circuit resistance

777-200/300
FAULT ISOLATION MANUAL

- a) Measure the resistance of each circuit between the applicable ACE connector contact and the contact(s) common to the circuit in the airplane connector at the suspect component.

NOTE: For flight control wiring a resistance greater than 6 Ohms for a circuit should be considered an open circuit. No guidance is available for indirectly connected circuits.
