27-11 TASK 855

D633W103-ARO

Page 298.15
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- f) Move the aileron trim switches on aft aisle stand panel, P8, in "RIGHT WING DOWN" direction and then "LEFT WING DOWN" direction.
- g) If the control wheels turn correctly, you corrected the fault.
- 7) If you do not find a problem with the wiring, then do these steps:
 - a) Replace the aileron/rudder trim control panel, M27036, at aft aisle stand, P8.
 - b) Re-connect connector D11013P.
 - c) Re-connect connector DM27036A.
 - d) Re-connect connector DM27127.
 - e) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- f) Move the aileron trim switches on aft aisle stand panel, P8, in "RIGHT WING DOWN" direction and then "LEFT WING DOWN" direction.
- g) If the control wheels turn correctly, you corrected the fault.

————— **END OF TASK** —————

856. Flaperon PCU (Left inboard) Actuation Confidence Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-10308, 27-10483, 27-10486.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust the left inboard flaperon power control unit (PCU), M27110. To adjust it, do this task: Flaperon Adjustment (Rigging), AMM TASK 27-11-00-820-803.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

777-200/300 FAULT ISOLATION MANUAL

- (2) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the left inboard flaperon PCU, M27110. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and install safety tags:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the ACE-R, M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27110 from the left inboard flaperon PCU, M27110.
- (d) Do a wiring check between these pins of connector DM27221AA at the E5-2 shelf and connector DM27110 at the left inboard flaperon PCU, M27110 (WDM 27-11-16):

DM27221AA	DM27110
pin F1	pin 5
pin G1	pin 15
pin K1	pin 19
pin K2	pin 7

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.

27-11 TASK 856

D633W103-ARO

Page 298.17
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 2) Re-connect connector DM27110.
- 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 4) Remove the safety tags and close these circuit breakers:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
- 6) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

857. Flaperon PCU Actuation (Left Outboard) Confidence Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-10309, 27-10484, 27-10487.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust the left outboard flaperon power control unit (PCU), M27109. To adjust it, do this task: Flaperon Adjustment (Rigging), AMM TASK 27-11-00-820-803.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801

- Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the left outboard flaperon PCU, M27109. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and install safety tags on the left power supply assembly (PSA-L), M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the ACE-L1, M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27109 from the left outboard flaperon PCU, M27109.
- (d) Do a wiring check between these pins of connector DM27121AA at the E1-5 shelf and connector DM27109 at the left outboard flaperon PCU, M27109 (WDM 27-11-15):

DM27121AA	DM27109
pin F1	pin 5
pin G1	pin 15
pin K1	pin 19
pin K2	pin 7

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27109.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- a) Repair the wiring.
 - b) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
- 5) If you do not find a problem with the wiring, then continue.
- 6) Install a new PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - c) If the maintenance message shows on the ground test display, then continue.
- (c) If there is 28 VDC at terminal QB53 of terminal block TB2501, then continue.
- (2) Do this check of the bypass solenoid-operated valve (SOV) control wiring:
- (a) Open these circuit breakers and install DO-NOT-OPERATE tags on the center power supply assembly (PSA-C), M24301:
 - 1) A1, ACE PWR
 - 2) A3, AIL PCU
 - 3) A5, FLPRN PCU
 - 4) A7, ELEV PCU
 - 5) A9, RUD PCU
 - 6) B2, STAB TRIM
 - 7) B4, AUTO-SPDBRK (L, R)
 - 8) B6, ELEV FEEL (C)
 - 9) B8, RUD TRIM ACTR (L)
 - (b) Remove the center actuator control electronics (ACE-C), M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (c) Disconnect connector DM27108A from the left inboard aileron power control unit (LIB PCU).
 - (d) Do a wiring check between these pins of connector DM27321AA for the ACE-C and connector DM27108A at the LIB PCU (WDM 27-11-12):

DM27321AA	DM27108A
pin A13	pin 17

- (e) Do a wiring check between these pins of terminal block TB2501 and connector DM27108A at the PCU (WDM 27-11-12):

TB2501	DM27108A
term QB53	pin 16

777-200/300 FAULT ISOLATION MANUAL

- (f) Do a wiring check between pin A7 of connector DM27321AB and structure ground (WDM 27-11-12).
- (g) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27108A to the PCU.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the DO-NOT-CLOSE tags and close these circuit breakers on the PSA-C, M24301:
 - a) A1, ACE PWR
 - b) A3, AIL PCU
 - c) A5, FLPRN PCU
 - d) A7, ELEV PCU
 - e) A9, RUD PCU
 - f) B2, STAB TRIM
 - g) B4, AUTO-SPDBRK (L, R)
 - h) B6, ELEV FEEL (C)
 - i) B8, RUD TRIM ACTR (L)
 - 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (h) If you do not find a problem with the wiring, then continue.
- (3) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.

777-200/300 FAULT ISOLATION MANUAL

- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the left inboard aileron PCU, M27108. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

861. Right Inboard Aileron PCU Bypass SOV Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10210.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Do a check for 28 VDC from terminal QB1 of terminal block TB5201 at the E5-2 shelf to structure ground (WDM 27-11-14).
 - (b) If there is not 28 VDC at terminal QB1 of terminal block TB5201, then do these steps:
 - 1) Repair the wiring.
 - 2) Remove the right power supply assembly (PSA-R), M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 3) Do a wiring check between these pins of terminal block TB5201 at the E5-2 shelf and the connector DM24201AD at the E5-1 shelf (WDM 27-11-14):

TB5201	DM24201AD
term QB1	pin 10

- 4) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.

777-200/300 FAULT ISOLATION MANUAL

- d) If the maintenance message does not show on the ground test display, you corrected the fault.
- 5) If you do not find a problem with the wiring, then continue.
- 6) Install a new PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - c) If the maintenance message shows on the ground test display, then continue.
- (c) If there is 28 VDC at terminal QB1 of terminal block TB5201, then continue.
- (2) Do this check of the bypass solenoid-operated valve (SOV) control wiring:
 - (a) Open these circuit breakers and install DO-NOT-OPERATE tags on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27208A from the right inboard aileron power control unit (RIB PCU).
- (d) Do a wiring check between these pins of connector DM27221AA for the ACE-R and connector DM27208A at the RIB PCU (WDM 27-11-14):

DM27221AA	DM27208A
pin A13	pin 17

- (e) Do a wiring check between these pins of terminal block TB5201 and connector DM27208A at the PCU (WDM 27-11-14):

TB5201	DM27208A
term QB1	pin 16

- (f) Do a wiring check between pin A7 of connector DM27221AB and structure ground (WDM 27-11-14).
- (g) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27208A to the PCU.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

862. Right Outboard Aileron PCU Bypass SOV Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10211.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Do a check for 28 VDC from terminal QB57 of terminal block TB1501 at the E1-5 shelf to structure ground (WDM 27-11-13).
 - (b) If there is not 28 VDC at terminal QB57 of terminal block TB1501, then do these steps:
 - 1) Repair the wiring.
 - 2) Remove the left power supply assembly (PSA-L), M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 3) Do a wiring check between these pins of terminal block TB1501 at the E1-5 shelf and the connector DM24101AD at the E1-6 shelf (WDM 27-11-13):

TB1501	DM24101AD
term QB57	pin 10
- 4) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
- 5) If you do not find a problem with the wiring, then continue.
- 6) Install a new PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.

————— END OF TASK —————

863. Left Inboard Flaperon PCU Delta Pressure Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11310.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) delta pressure feedback wiring:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf.
- (c) Disconnect connector DM27110 from the left inboard (LIB) flaperon PCU.
- (d) Do a wiring check between these pins of connector DM27221AA for the ACE-R and connector DM27110 at the LIB PCU (WDM 27-11-16):

DM27221AA	DM27110
pin F1	pin 5
pin G1	pin 15

- 1) Check for shorts to ground for pins 5 and 15.
- 2) Check for shorts between pins 5 and 15.
- 3) Check for shorts between pin 5 and pins 3, 7, 8, 9, 11, 12, 13, 16, 17, 18 and 19.

777-200/300 FAULT ISOLATION MANUAL

- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the left inboard flaperon PCU, M27110. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

864. Right Inboard Flaperon PCU Delta Pressure Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11312.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) delta pressure feedback wiring:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

Row	Col	Number	Name
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the left-2 actuator control electronics (ACE-L2), M27122, from the E1-1 shelf.
- (c) Disconnect connector DM27210 from the right inboard (RIB) flaperon PCU.
- (d) Do a wiring check between these pins of connector DM27122AA for the ACE-L2 and connector DM27210 at the RIB PCU (WDM 27-11-18):

777-200/300 FAULT ISOLATION MANUAL

DM27122AA

pin F1 pin 5
pin G1 pin 15

DM27210

- 1) Check for shorts to ground for pins 5 and 15.
 - 2) Check for shorts between pins 5 and 15.
 - 3) Check for shorts between pin 5 and pins 3, 7, 8, 9, 11, 12, 13, 16, 17, 18 and 19.
 - 4) Check for shorts between pin 15 and pins 3, 7, 8, 9, 11, 12, 13, 16, 17, 18 and 19.
- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27210 to the PCU.
 - 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - 6) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 7) If the maintenance message shows on the ground test display, then continue.
- (f) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE for M27122. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.

777-200/300 FAULT ISOLATION MANUAL

- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the right inboard flaperon PCU, M27210. These are the tasks:
- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

865. Right Outboard Flaperon PCU Delta Pressure Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11313.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) delta pressure feedback wiring:

868. Left Inboard Aileron PCU Multiple Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11210.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) transducer excitation and ground wiring:
 - (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the center power supply assembly (PSA-C), M24301:
 - 1) D8, BAT INTLK
 - (b) Remove the PSA-C, M24301. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (c) Remove the center actuator control electronics (ACE-C), M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (d) Disconnect connector DM27108A from the left inboard (LIB) aileron PCU.
 - (e) Do a wiring check between these pins of connector DM27321AA for the ACE-C and connector DM27108A at the LIB PCU (WDM 27-11-12):

DM27321AA	DM27108A
pin D12	pin 18
pin E14	pin 12
pin E15	pin 13

- 1) Check for shorts to ground for pins 12, 13 and 18.
 - 2) Check for shorts between pins 12, 13 and 18.
 - 3) Check for shorts between pin 12 and pins 3, 7, 8, 9, 11, 16, 17 and 19.
 - 4) Check for shorts between pin 13 and pins 3, 7, 8, 9, 11, 16, 17 and 19.
 - 5) Check for shorts between pin 18 and pins 3, 7, 8, 9, 11, 16, 17 and 19.
- (f) Disconnect connector DM27107B.
 - 1) Check for shorts between pin 12 and DM27107B pins 1 and 2.
 - 2) Check for shorts between pin 13 and DM27107B pins 1 and 2
 - 3) Check for shorts between pin 18 and DM27107B pins 1 and 2

 - 2) Re-connect connector DM27208A to the PCU.
 - 3) Re-connect connector DM27207B.
 - 4) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 5) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 6) Remove the DO-NOT-CLOSE tag and this circuit breaker on the PSA-R, M24201:
 - a) D8, BAT INTLK
 - 7) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (i) If you do not find a problem with the wiring, then continue.
- (j) Re-connect connector DM27208A to the PCU.
- (k) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- (2) Install a new ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Remove the DO-NOT-CLOSE tag and this circuit breaker on the PSA-R, M24201:
- 1) D8, BAT INTLK

777-200/300 FAULT ISOLATION MANUAL

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right inboard aileron PCU, M27208. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

870. Right Outboard Aileron PCU Multiple Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11213.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) transducer excitation and ground wiring:
 - (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the left power supply assembly (PSA-L), M24101:
 - 1) D8, BAT INTLK
 - (b) Remove the PSA-L, M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (c) Remove the left-1 actuator control electronics (ACE-L1), M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (d) Disconnect connector DM27207A from the right outboard (ROB) aileron PCU.
 - (e) Do a wiring check between these pins of connector DM27121AA for the ACE-L1 and connector DM27207A at the ROB PCU (WDM 27-11-13):

DM27121AA

pin D12		pin 18
pin E14		pin 12
pin E15		pin 13

DM27207A

- 1) Check for shorts to ground for pins 12, 13 and 18.
 - 2) Check for shorts between pins 12, 13 and 18.
 - 3) Check for shorts between pin 12 and pins 3, 7, 8, 9, 11, 16, 17 and 19.
 - 4) Check for shorts between pin 13 and pins 3, 7, 8, 9, 11, 16, 17 and 19.
 - 5) Check for shorts between pin 18 and pins 3, 7, 8, 9, 11, 16, 17 and 19.
- (f) Disconnect connector DM27208B.
 - 1) Check for shorts between pin 12 and DM27208B pins 1 and 2.
 - 2) Check for shorts between pin 13 and DM27208B pins 1 and 2
 - 3) Check for shorts between pin 18 and DM27208B pins 1 and 2
 - (g) Do a wiring check between these pins of connector DM27121AB for the ACE-L1 and connector DM24101AD at the PSA-L (WDM 27-11-13):

DM27121AB

pin A7		pin 4

DM24101AD

- (h) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27207A to the PCU.
 - 3) Re-connect connector DM27208B.
 - 4) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 5) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 6) Remove the DO-NOT-CLOSE tag and this circuit breaker on the PSA-L, M24101:
 - a) D8, BAT INTLK

- 7) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (i) If you do not find a problem with the wiring, then continue.
- (j) Re-connect connector DM27207A to the PCU.
- (k) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- (2) Install a new ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Remove the DO-NOT-CLOSE tag and this circuit breaker on the PSA-L, M24101:
 - 1) D8, BAT INTLK
 - (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right outboard aileron PCU, M27207. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) transducer excitation and ground wiring:
 - (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the left power supply assembly (PSA-L), M24101.
 - 1) D8, BAT INTLK
 - (b) Remove the PSA-R, M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (c) Remove the right actuator control electronics (ACE-R), M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (d) Disconnect connector DM27110 from the left inboard (LIB) flaperon PCU.
 - (e) Do a wiring check between these pins of connector DM27221AA for the ACE-R and connector DM27110 at the LIB PCU (WDM 27-11-16):

DM27221AA	DM27110
pin J1	pin 18
pin K3	pin 12
pin K4	pin 13

- 1) Check for shorts to ground for pins 12, 13 and 18.
 - 2) Check for shorts between pins 12, 13 and 18.
 - 3) Check for shorts between pin 12 and pins 3, 5, 7, 8, 9, 11, 15, 16, 17 and 19.
 - 4) Check for shorts between pin 13 and pins 3, 5, 7, 8, 9, 11, 15, 16, 17 and 19.
 - 5) Check for shorts between pin 18 and pins 3, 5, 7, 8, 9, 11, 15, 16, 17 and 19.
- (f) Do a wiring check between these pins of connector DM27221AB for the ACE-R and connector DM24201AD at the PSA-R (WDM 27-11-16):

DM27221AB	DM24201AD
pin B6	pin 16

- (g) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27110 to the PCU.

- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

872. Right Inboard Flaperon PCU Multiple Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11316.

B. Description

- (1) The Right INBD Flaperon Power Control Unit has multiple Transducer faults.

C. Possible Causes

- (1) Wiring
- (2) ACE - Left 2, M27122
- (3) Right Inboard (RIB) Flaperon PCU, M27210
- (4) FDR Wheel Force Transducer, M27014
- (5) Power Control Unit

D. Related Data

- (1) WDM 27-11-18
- (2) WDM 27-11-20

E. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - (a) If the maintenance message shows on the Ground Test Display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the Ground Test Display, then do the check that follows:
 - 1) Select Page 2 of the FLIGHT CONTROLS Maintenance Page.
 - 2) Watch the Right Inboard Flaperon position data as you slowly rotate the captain's control wheel fully clockwise.
 - 3) Watch the Right Inboard Flaperon position data as you slowly rotate the captain's control wheel fully counter-clockwise.
 - 4) If an Amber "X" showed adjacent to the Right Inboard Flaperon position data at any time while the captain's control wheel was rotated, then do the Fault Isolation Procedure below.
 - 5) If an Amber "X" did not show adjacent to the Right Inboard Flaperon position data at any time while the captain's control wheel was rotated, then there was an intermittent problem.
 - a) Monitor the airplane to see if the problem occurs on the subsequent flights.
 - b) If the problem occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803.

F. Fault Isolation Procedure

- (1) Do this check of the FDR WHEEL FORCE XDCR, M27014.
 - (a) Disconnect FDR Wheel Force XDCR, M27014 at connector DM27000.
 - (b) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - 1) If the maintenance message does not show on the Ground Test Display, replace the FDR Wheel Force XDCR, M27014. These are the tasks:
 - Wheel Force Transducer - Removal, AMM TASK 27-11-08-000-801
 - Wheel Force Transducer - Installation, AMM TASK 27-11-08-400-801
 - a) Do the Repair Confirmation at the end of this task.
 - 2) If the maintenance message still shows on the Ground Test Display, then reconnect DM27000 and continue.

- (2) Do this check of the Power Control Unit (PCU) Transducer Excitation and Ground Wiring:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Disconnect connector D11013P from the Left Power Management Panel, P110 (WDM 27-11-18).
- (c) Remove the Left-2 ACE, M27122. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Disconnect connector DM27210 from the Right Inboard (RIB) Flaperon PCU (WDM 27-11-18).
- (e) Disconnect connector DM27000 from the FDR Wheel Force XDCR (WDM 27-11-20).
- (f) Do a wiring check between these pins of connector DM27122AA for the ACE-L2 and connector DM27210 at the RIB PCU (WDM 27-11-18):

DM27122AA	DM27210
pin J1	pin 18
pin K3	pin 12
pin K4	pin 13

- 1) Make sure that there is no short to ground for pins 12, 13 and 18.
- 2) Make sure there is not a short circuit between pins 12, 13 and 18.
- 3) Make sure there is not a short circuit between pin 12 and pins 3, 5, 7, 8, 9, 11, 15, 16, 17 and 19.

K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Do the Repair Confirmation at the end of this task.
- (4) Do this task for obvious electrical problems in the applicable PCU Wiring: Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801.

NOTE: For Flight Controls PCU Wiring, a short is considered a Resistance of 50000 Ohms or less.

- (a) If you find a problem, replace the applicable PCU.
- (b) If you find no problems with the PCU Wiring, then do this task: Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802.
- 1) If you find a problem, repair or replace the applicable wiring.
- 2) Do the Repair Confirmation at the end of this task.
- (5) Replace the Right Inboard Flaperon PCU, M27210. These are the tasks:
- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do the Repair Confirmation at the end of this task.

G. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
- (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.
- (b) If the maintenance message still shows on the Ground Test Display, continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

873. Right Outboard Flaperon PCU Multiple Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11317.

ARO ALL

27-11 TASKS 872-873

D633W103-ARO

Page 298.53
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the power control unit (PCU) transducer excitation and ground wiring:
 - (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the center power supply assembly (PSA-C), M24301.
 - 1) D8, BAT INTLK
 - (b) Remove the PSA-C, M24301. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (c) Remove the center Actuator Control Electronics (ACE-C), M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (d) Disconnect connector DM27209 from the right outboard (ROB) flaperon PCU.
 - (e) Do a wiring check between these pins of connector DM27321AA for the ACE-C and connector DM27209 at the ROB PCU (WDM 27-11-17):

DM27321AA	DM27209
pin K3	pin 12
pin K4	pin 13
pin J1	pin 18

- 1) Check for shorts to ground for pins 12, 13 and 18.
- 2) Check for shorts between pins 12, 13 and 18.
- 3) Check for shorts between pin 12 and pins 3, 5, 7, 8, 9, 11, 15, 16, 17 and 19.
- 4) Check for shorts between pin 13 and pins 3, 5, 7, 8, 9, 11, 15, 16, 17 and 19.
- 5) Check for shorts between pin 18 and pins 3, 5, 7, 8, 9, 11, 15, 16, 17 and 19.
- (f) Do a wiring check between these pins of connector DM27321AB for the ACE-C and connector DM24301AD at the PSA-C (WDM 27-11-17):

DM27321AB	DM24301AD
pin B6	pin 16

- (g) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27209 to the PCU.

EFFECTIVITY
ARO ALL

- 3) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- 4) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 5) Remove the DO-NOT-CLOSE tag and close this circuit breaker on the PSA-C, M24301:
 - a) D8, BAT INTLK
- 6) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
- 7) If the maintenance message does not show on the ground test display, you corrected the fault.
- 8) If the maintenance message shows on the ground test display, then continue.
- (h) If you do not find a problem with the wiring, then continue.
- (2) Install a new ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Remove the DO-NOT-CLOSE tag and close this circuit breaker on the PSA-C, M24301:
 - 1) D8, BAT INTLK
 - (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - (c) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (d) If the maintenance message shows on the ground test display, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right outboard flaperon PCU, M27209. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

Page 298.55
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

874. Left Inboard Aileron PCU Ram Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16033.

B. Initial Evaluation

NOTE: This message can only occur when you do the Left Aileron Position ground test on the MAT. It will occur if the ground test is failed. If the ground test is passed the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) For the left inboard aileron power control unit (PCU), do this task: Aileron Adjustment (Rigging), AMM TASK 27-11-00-820-802.
- (a) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Left Aileron Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (2) Do this check of the feedback wiring:
- (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the center power supply assembly (PSA-C), M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf.
- (c) Disconnect connector DM27108A from the left inboard aileron power control unit (LIB PCU).
- (d) Do a wiring check between these pins of connector DM27321AA for the ACE-C and connector DM27108A at the LIB PCU (WDM 27-11-12):

DM27321AA	DM27108A
pin E12	pin 19
pin E13	pin 7

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
- 2) Re-connect connector DM27108A to the PCU.
- 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

777-200/300 FAULT ISOLATION MANUAL

877. Left Inboard Flaperon PCU Ram Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16037.

B. Initial Evaluation

NOTE: This message can only occur when you do the Left Flaperon Position ground test on the MAT. It will occur if the ground test is failed. If the ground test is passed the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) For the left inboard flaperon power control unit (PCU), do this task: Flaperon Adjustment (Rigging), AMM TASK 27-11-00-820-803.
- (a) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Left Flaperon Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (2) Do this check of the feedback wiring:
- (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the right power supply assembly (PSA-R), M24201 on the E5-1 shelf::

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the ACE-R, M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27110 from the inboard power control unit (PCU) on the left flaperon.
- (d) Do a wiring check between these pins of connector DM27221AA (for ACE-R) and connector DM27110 (at the flaperon PCU) (WDM 27-11-16):

DM27221AA	DM27110
pin K2	pin 7
pin K1	pin 19

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
- 2) Re-connect connector DM27110 to the inboard PCU on the left flaperon.
- 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

777-200/300 FAULT ISOLATION MANUAL

- 4) Close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Position.

- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- f) If you do not find a problem with the wiring, then continue.
- g) Re-connect connector DM27110 to the inboard PCU on the left flaperon.
- (3) Install a new ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

- (a) Close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Left Flaperon Position.
- (c) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.

Page 298.64
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the left inboard flaperon PCU, M27110. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Left Flaperon Actuator Confidence.
- (b) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Left Flaperon Position.
- (c) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

878. Right Inboard Flaperon PCU Ram Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16039.

B. Initial Evaluation

NOTE: This message can only occur when you do the Right Flaperon Position ground test on the MAT. It will occur if the ground test is failed. If the ground test is passed the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) For the right inboard flaperon power control unit (PCU), do this task: Flaperon Adjustment (Rigging), AMM TASK 27-11-00-820-803.
 - (a) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Right Flaperon Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (2) Do this check of the feedback wiring:
 - (a) Open these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the ACE-L2, M27122. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27210 from the inboard power control unit (PCU) on the right flaperon.

A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Right Flaperon Position.
- (c) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the right outboard flaperon PCU, M27209. These are the tasks:
- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Right Flaperon Actuator Confidence.
- (b) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Right Flaperon Position.
- (c) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

880. Right Inboard Aileron PCU Blocking Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10206.

EFFECTIVITY
ARO ALL

27-11 TASKS 879-880

D633W103-ARO

Page 298.69
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Do a check for 28 VDC from terminal QB57 of terminal block TB1501 at the E1-5 shelf to structure ground (WDM 27-11-13).
 - (b) If there is not 28 VDC at terminal QB57 of terminal block TB1501, then do these steps:
 - 1) Remove the left power supply assembly (PSA-L), M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of terminal block TB1501 at the E1-5 shelf and the connector DM24101AD at the E1-6 shelf (WDM 27-11-13):

TB1501	DM24101AD
term QB57	pin 10
 - (3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (4) If you do not find a problem with the wiring, then continue.
 - (5) Install a new PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - c) If the maintenance message shows on the ground test display, then continue.
- (2) Do this check of the control wiring for the blocking solenoid-operated valve (SOV):

**777-200/300
FAULT ISOLATION MANUAL**

- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

881. Right Outboard Aileron PCU Blocking Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10207.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
- (a) Do a check for 28 VDC from terminal QB1 of terminal block TB5201 at the E5-2 shelf to structure ground (WDM 27-11-14).
- (b) If there is not 28 VDC at terminal QB1 of terminal block TB5201, then do these steps:
- 1) Remove the right power supply assembly (PSA-R), M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of terminal block TB5201 at the E5-2 shelf and the connector DM24201AD at the E5-1 shelf (WDM 27-11-14):
- | | |
|--------------------|------------------|
| TB5201 | DM24201AD |
| term QB1 | pin 10 |
- (3) If you find a problem with the wiring, then do these steps:
- a) Repair the wiring.
 - b) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (4) If you do not find a problem with the wiring, then continue.
- (5) Install a new PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- c) If the maintenance message shows on the ground test display, then continue.
- (c) If there is 28 VDC at terminal QB1 of terminal block TB5201, then continue.
- (2) Do this check of the control wiring for the blocking solenoid-operated valve (SOV):
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf.
- (c) Disconnect connector DM27207B from the right outboard aileron power control unit (ROB PCU).
- (d) Do a wiring check between these pins of connector DM27221AA for the ACE-R and connector DM27207B at the ROB PCU (WDM 27-11-14):

DM27221AA	DM27207B
pin A15	pin 2

- (e) Do a wiring check between these pins of terminal block TB5201 and connector DM27207B at the PCU (WDM 27-11-14):

TB5201	DM27207B
term QB1	pin 1

- (f) Do a check for continuity between pin A7 of connector DM27221AB and structure ground (WDM 27-11-14).
- (g) If there is no continuity, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27207B to the PCU.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the DO-NOT-CLOSE tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR

FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

882. Left Inboard Flaperon PCU Bypass Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10304.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wiring:
 - (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the right power supply assembly (PSA-R), M24201

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-R	PFC BAT INTLK

- (b) Remove the PSA-R, M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
- (c) Remove the right actuator control electronics (ACE-R), M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Do a wiring check between these pins of connector DM27221AB for the ACE-R and connector DM24201AD at the PSA-R (WDM 27-11-16):

DM27221AB	DM24201AD
pin B6	pin 16

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27233 from the disconnect panel on the right end of wheel control rods.
- (d) Do a wiring check between these pins of connector DM27221AC for the ACE-R and connector DM27233 (WDM 27-11-14):

DM27221AC	DM27233
pin G15	pin 5
pin F15	pin 6

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27233 to the disconnect panel.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the DO-NOT-CLOSE tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
- (c) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right-3 wheel position transducer, M27233. These are the tasks:
 - Wheel Position Transducers Removal, AMM TASK 27-11-02-000-801
 - Wheel Position Transducers Installation, AMM TASK 27-11-02-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

885. Left Inboard Aileron PCU Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

EFFECTIVITY
ARO ALL

27-11 TASKS 884-885

D633W103-ARO

Page 298.83
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) Close this circuit breaker:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	3	CBA3-C	AIL PCU

- (a) If the circuit breaker opens when you try to close it, then do the Fault Isolation Procedure below.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:

- (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- (b) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- (c) Remove PSA-C, M24301, from E2-6. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (d) Disconnect connector DM27108A from the left inboard aileron power control unit (LIB PCU), M27108.
 - (e) Disconnect connector DM27107B from the left outboard aileron power control unit (LOB PCU), M27107.
 - (f) Do a wiring check between these pins of connector DM27108A for the LIB PCU and connector DM24301AD at the PSA-C (WDM 27-11-12):

DM27108A	DM24301AD
pin 16	pin 10

- (g) Do a wiring check between these pins of connector DM27107B for the LOB PCU and connector DM24301AD at the PSA-C (WDM 27-11-12):

DM27107B	DM24301AD
pin 1	pin 10

- (h) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27107B to the LOB PCU.

EFFECTIVITY
ARO ALL

Page 298.84
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 3) Re-connect connector DM27108A to the LIB PCU.
- 4) Re-connect connector DM24301AD to the PSA-C.
- 5) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- 6) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
 - (i) If you do not find a problem with the wiring, then continue.
- (2) Replace the PSA-C. These are the tasks:
 - Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
 - (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the left inboard aileron PCU, M27108. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
 - (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Replace the left outboard aileron PCU, M27107. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
 - (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

886. Aileron PCU (Left Inboard) Actuation Confidence Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10212.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the fault isolation procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wiring for the ram transducer on the aileron PCU:
 - (a) Remove the center actuator control electronics (ACE-C) from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (b) Disconnect connector DM27108A from the left inboard aileron PCU, M27108.
 - (c) Do a wiring check between these pins of connector DM27321AA for the ACE-C and connector DM27108A at the LIB PCU (WDM 27-11-12):

NOTE: Look for a short circuit between these two wires.

DM27321AA	DM27108A
pin E12	pin 19
pin E13	pin 7

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the ACE-C. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 3) Re-connect connector DM27108A to the aileron PCU.
 - 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - 5) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (2) Replace the left inboard aileron power control unit (PCU), M27108. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
 - (a) Re-install the ACE-C. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.

887. Aileron PCU (Left Outboard) Actuation Confidence Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10213.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the fault isolation procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wiring for the ram transducer on the aileron PCU:
- (a) Remove the left 2 actuator control electronics (ACE-L2) from the E1-1 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (b) Disconnect connector DM27107A from the left outboard aileron PCU, M27107.
- (c) Do a wiring check between these pins of connector DM27122AA for the ACE-L2 and connector DM27107A at the LOB PCU (WDM 27-11-11):

NOTE: Look for a short circuit between these two wires.

DM27122AA	DM27107A
pin E12	pin 19
pin E13	pin 7

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install the ACE-L2. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 3) Re-connect connector DM27107A to the aileron PCU.
 - 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Actuator Confidence.
 - 5) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (2) Replace the left outboard aileron power control unit (PCU), M27107. These are the tasks:
- Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801

B	6	CBB6-C	ELEV FEEL (C)

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
- (c) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the left-2 wheel position transducer, M27132. These are the tasks:
- Wheel Position Transducers Removal, AMM TASK 27-11-02-000-801
 - Wheel Position Transducers Installation, AMM TASK 27-11-02-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

891. Left-3 Wheel Position Transducer Signal Disagreement - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12005.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do the control wheel adjustment procedure. To do this check, do this task: Control Wheel and Cable Adjustment (Rigging), AMM TASK 27-11-00-700-802.
- (a) If you find a problem with the adjustment, then do these steps:
- 1) Adjust the transducer. To adjust it, do this task: Wheel Position Transducer (LVDT) Adjustment, AMM TASK 27-11-00-820-801.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.

A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27133 from the disconnect panel on the left end of wheel control rods.
- (d) Do a wiring check between these pins of connector DM27221AC for the ACE-R and connector DM27133 (WDM 27-11-14):

DM27221AC	DM27133
pin D3	pin 5
pin E2	pin 6

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27133 to the disconnect panel.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the DO-NOT-CLOSE tags and close these circuit breakers on the PSA-R, M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

FAULT ISOLATION MANUAL

894. Left Inboard Flaperon PCU Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15025.

B. Initial Evaluation

- (1) Close this circuit breaker on the right power supply assembly (PSA-R), M24201:
- (a) A5, FLPRN PCU
 - (b) If the circuit breaker opens when you try to close it, then do the Fault Isolation Procedure below.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
- (a) Open this circuit breaker and install safety tag:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-R	PFC BAT INTLK

- (b) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
P	3	C24672	R PSA TRU PWR

- (c) Remove the PSA-R, M24201, from the E5-1 shelf.
- (d) Remove connector DM27110 from the left inboard flaperon power control unit (LIB PCU), M27110.
- (e) Do a wiring check between these pins of connector DM27110 for the LIB PCU and connector DM24201AD at the PSA-R (WDM 27-11-16):

DM27110	DM24201AD
pin 16	pin 22

- (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27110 to the LIB PCU, M27110.
 - 3) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 4) Remove the safety tag and close this circuit breaker:

- (2) Do this check of the power wiring:
- (a) Re-connect connector DM27210 to the RIB PCU, M27210.
 - (b) Disconnect connector DM27119 from the spoiler PCU No. 4, M27119.
 - (c) Do a wiring check between these pins of connector DM27119 for the spoiler PCU No. 4 and connector D11013P at the P110 (WDM 27-11-18) (WDM 27-61-13):

DM27119	D11013P
pin 10	pin 9

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27119 to the spoiler PCU No. 4, M27119.
 - 3) Re-connect connector D11013P to the P110.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)

K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- 5) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (3) Do this check of the power wiring:
- (a) Re-connect connector DM27119 to the spoiler PCU No. 4, M27119.
 - (b) Disconnect connector DM27219 from the spoiler PCU No. 11, M27219.
 - (c) Do a wiring check between these pins of connector DM27219 for the spoiler PCU No. 11 and connector D11013P at the P110 (WDM 27-11-18) (WDM 27-61-13):

DM27219	D11013P
pin 10	pin 9

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27219 to the spoiler PCU No. 11, M27219.
 - 3) Re-connect connector D11013P to the P110.
 - 4) Remove the safety tags and close these circuit breakers:

- (a) These are the tasks:
- Circuit Breaker - Removal, AMM TASK 24-09-00-000-818-002
 - Circuit Breaker - Installation, AMM TASK 24-09-00-400-814-002
- (b) Re-connect connector DM27219 to the spoiler PCU No. 11, M27219.
- (c) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (d) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the RIB PCU, M27210. These are the tasks:
- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (7) Replace the spoiler PCU No. 4, M27119. These are the tasks:

777-200/300 FAULT ISOLATION MANUAL

- Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
- Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (8) Replace the spoiler PCU No. 11, M27219. These are the tasks:
 - Outboard Spoiler Power Control Unit (PCU) - Removal, AMM TASK 27-61-08-000-801
 - Outboard Spoiler Power Control Unit (PCU) - Installation, AMM TASK 27-61-08-400-801
 - (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

————— END OF TASK —————

896. Right Outboard Flaperon PCU Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15028.

B. Initial Evaluation

- (1) Remove the safety tag and close this circuit breaker:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	5	CBA5-C	FLPRN PCU

- (a) If the circuit breaker opens when you try to close it, then do the Fault Isolation Procedure below.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:

- (a) Open this circuit breaker and install safety tag:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- (b) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- (c) Remove the PSA-C, M24301, from the E2-6 shelf.
- (d) Remove connector DM27209 from the right outboard flaperon power control unit (ROB PCU), M27209.

- (e) Do a wiring check between these pins of connector DM27209 for the ROB PCU and connector DM24301AD at the PSA-C (WDM 27-11-17):

DM27209	DM24301AD
pin 16	pin 22

- (f) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27209 to the ROB PCU, M27209.
 - 3) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- 5) Remove the safety tag and close this circuit breaker:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- 6) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (g) If you do not find a problem with the wiring, then continue.
- (2) Replace the PSA-C, M24301. These are the tasks:
- Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
- (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the ROB PCU, M27209. These are the tasks:

897. Wheel Force Transducer Assembly #2 Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12501.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Force Transducer.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Force Transducer.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the wheel force transducer, M27129. These are the tasks:
 - Wheel Force Transducer - Removal, AMM TASK 27-11-08-000-801
 - Wheel Force Transducer - Installation, AMM TASK 27-11-08-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Force Transducer.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Repair the excitation and feedback wiring for the force transducer:
 - (a) Repair the wiring between these pins of connector DM27321AC for the ACE-C and connector DM27129B for the force transducer (WDM 27-11-12):

898. LOB Aileron PCU Adjustment Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16008.

B. Initial Evaluation

NOTE: This message can only occur when you do the Left Aileron Alignment ground test on the MAT. It will occur if you select NO when the MAT shows this statement during the test: Select NO if you can not align them. If you select YES this test will pass and the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Alignment.

NOTE: This ground test adjusts (rigs) the aileron. AMM 27-11-00/501 contains information that will help you do this ground test.

 - (a) If you could adjust the aileron correctly during the ground test, then you corrected the fault.
 - (b) If you could not adjust the aileron correctly during the ground test, then continue.
- (2) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the left outboard aileron power control unit (LOB PCU), M27107. These are the tasks:
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801

- (2) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right outboard power control unit (ROB PCU), M27209. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

904. **RIB Flaperon PCU Adjustment Problems - Fault Isolation**

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16015.

B. Initial Evaluation

NOTE: This message can only occur when you do the Right Flaperon Alignment ground test on the MAT. It will occur if you select NO when the MAT shows this statement during the test: Select NO if you can not align them. If you select YES this test will pass and the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Alignment.

NOTE: This ground test adjusts (rigs) the flaperon. AMM 27-11-00/501 contains information that will help you do this ground test.
- (a) If you could adjust the flaperon correctly during the ground test, then you corrected the fault.
- (b) If you could not adjust the flaperon correctly during the ground test, then continue.
- (2) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.

- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right inboard power control unit (RIB PCU), M27210. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

905. Left Inboard Aileron PCU Blocking Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10204.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, left Aileron Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Do a check for 28 VDC from terminal QA41 of terminal block TB1101 at the E1-1 shelf to structure ground (WDM 27-11-11).
 - (b) If there is not 28 VDC at terminal QA41 of terminal block TB1101, then do these steps:
 - 1) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

907. Left-2 Wheel Position Transducer Problem - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12001.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wheel position transducer excitation and feedback wiring:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the center power supply assembly (PSA-C), M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27132 (the connector for the left-2 wheel position transducer) from the disconnect panel on the left end of wheel control rods.
- (d) Do a wiring check between these pins of connector DM27321AC for the ACE-C and connector DM27132 for the transducer (WDM 27-11-12):

DM27321AC	DM27132
pin G14	pin 9
pin F15	pin 5
pin H14	pin 8
pin G15	pin 6
pin H15	pin 1

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27132 to the disconnect panel.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
- 6) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (2) Install a new ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Re-connect connector DM27132 to the disconnect panel.
- (b) Remove the safety tags and close these circuit breakers on the center power supply assembly (PSA-C), M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the left-2 wheel position transducer, M27132. These are the tasks:
- Wheel Position Transducers Removal, AMM TASK 27-11-02-000-801
 - Wheel Position Transducers Installation, AMM TASK 27-11-02-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

Page 298.121
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

908. Left-3 Wheel Position Transducer Problem - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12002.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wheel position transducer excitation and feedback wiring:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27133 (the connector for the left-3 wheel position transducer) from the disconnect panel on the left end of wheel control rods.
- (d) Do a wiring check between these pins of connector DM27221AC for the ACE-R and connector DM27133 for the transducer (WDM 27-11-14):

DM27221AC	DM27133
pin D1	pin 9
pin D3	pin 5
pin E1	pin 8
pin E2	pin 6
pin E3	pin 1

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27133 to the disconnect panel.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

777-200/300 FAULT ISOLATION MANUAL

909. Right-1 Wheel Position Transducer Problem - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12007.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wheel position transducer excitation and feedback wiring:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

910. Right-2 Wheel Position Transducer Problem - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12008.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wheel position transducer excitation and feedback wiring:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the center power supply assembly (PSA-C), M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR

Page 298.127
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

911. Right-3 Wheel Position Transducer Problem - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12009.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Wheel Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wheel position transducer excitation and feedback wiring:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27233 (the connector for the right-3 wheel position transducer) from the disconnect panel on the right end of wheel control rods.
- (d) Do a wiring check between these pins of connector DM27221AC for the ACE-R and connector DM27233 for the transducer (WDM 27-11-14):

DM27221AC	DM27233
pin G14	pin 9
pin G15	pin 5
pin H14	pin 8
pin F15	pin 6
pin H15	pin 1

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27233 to the disconnect panel.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

912. Right Flaperon Surface Delta Pressure Signal Difference Out Of Range - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10317.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Alignment.

NOTE: This ground test adjusts (rigs) the Flaperon. AMM 27-11-00/501 contains information that will help you do this ground test.

 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (4) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (5) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.

D633W103-ARO

Page 298.130
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (6) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (7) Replace the right outboard flaperon power control unit (PCU), M27209. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the right inboard flaperon PCU, M27210. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

913. Flaperon PCU (Right Outboard) Failed the ACE Monitor Test - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16057.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the ACE-C, M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27209 from the outboard power control unit (PCU) on the right flaperon.
- (d) Do a wiring check between these pins of connector DM27321AA (for ACE-C) and connector DM27209 (at the flaperon PCU) (WDM 27-11-17):

DM27321AA	DM27209
pin K2	pin 7
pin K1	pin 19
pin F1	pin 5
pin G1	pin 15

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27209 to the outboard PCU on the right flaperon.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Examine the two flaperon power control units (PCU) for the right flaperon to see if they are mechanically disconnected from the flaperon or the wing.
 - (a) If a flaperon PCUs is disconnected or damaged, then do these steps:
 - 1) Replace the applicable flaperon PCU, M27209 or M27210. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
 - a) Repair or replace all other damaged parts.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
- (2) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, continue.
- (4) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (5) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Flaperon Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, continue.
- (6) Do this test of the outboard PCU for the right flaperon:

ARO ALL

27-11 TASK 914

D633W103-ARO

Page 298.134
Sep 05/2016

777-200/300
FAULT ISOLATION MANUAL

- (a) Set the L and R FLT CONTROL HYD VALVE PWR switches for the WING to the SHUTOFF position.
- (b) Set the C FLT CONTROL HYD VALVE PWR switch for the WING to the NORM position.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (c) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (d) Look at page 2 of the flight controls maintenance pages on the MFD. To see this page, do this task: Showing a Maintenance Page, AMM TASK 31-61-00-800-804.
- (e) Monitor the right outboard FLAPERON POSITION indication on the maintenance page. At the same time look at the flaperon to see if it moves.
- (f) Turn and hold one of the control wheels fully clockwise.
 - 1) Look at the right flaperon and make sure it is fully down.
NOTE: You do not need to measure the flaperon movement. It is satisfactory if you can see that it moved down.
 - 2) Make sure the FLAPERON POSITION indication shows -5.98 to -6.63.
 - 3) Make sure the FLAPERON (right outboard) DELTA PRESS or PCU FORCE indication (whichever shows on the maintenance page) shows +5000 to +8000.
NOTE: This shows that the flaperon PCU is fully extended.
For the flaperon PCUs (unlike the other PCUs), the DELTA PRESS indication shows the force that the PCU causes, not the pressure in the PCU. Thus, the indication can show values that are more than the hydraulic system pressure.
- (g) Turn and hold one of the control wheels fully counterclockwise.
 - 1) Look at the right flaperon and make sure it is fully up.
NOTE: You do not need to measure the flaperon movement. It is satisfactory if you can see that it moved up.
 - 2) Make sure the FLAPERON POSITION indication shows +5.98 to +6.63.
 - 3) Make sure the FLAPERON DELTA PRESS or PCU FORCE indication (whichever shows on the maintenance page) shows -2500 to -5000.
- (h) Release the control wheel.
 - 1) Make sure the right flaperon is in the neutral position.
NOTE: You do not need to measure the flaperon position. It is satisfactory if you can see that it is approximately level.
- (i) If the flaperon or the indications did not operate correctly (as specified in the steps above), then do these steps:

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
 - 1) Re-connect connector DM27110 to the inboard PCU on the left flaperon.
 - 2) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 3) Close these circuit breakers on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (4) Replace the inboard PCU on the left flaperon, M27110. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

916. Flaperon PCU (Left Outboard) Failed the ACE Monitor Test - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16055.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:

777-200/300 FAULT ISOLATION MANUAL

- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the feedback wiring:
- (a) Open these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the ACE-L1, M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27109 from the outboard power control unit (PCU) on the left flaperon.
- (d) Do a wiring check between these pins of connector DM27121AA (for ACE-L1) and connector DM27109 (at the flaperon PCU) (WDM 27-11-15):

DM27121AA	DM27109
pin K2	pin 7
pin K1	pin 19
pin F1	pin 5
pin G1	pin 15

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27109 to the outboard PCU on the left flaperon.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers:

Power Supply Assembly Left, M24101

B. Initial Evaluation

NOTE: This message can only occur when you do the Wheel Force Transducer ground test on the MAT. It will occur if the ground test is failed. If the ground test is passed, the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) Look at the Flight Controls Maintenance Page 1 on the MFD. To see this page, do this task: Showing a Maintenance Page, AMM TASK 31-61-00-800-804.
- (2) Do the steps that follow to apply a force to the Captains control wheels and at the same time monitor the values for the WHEEL POSITIONS and the WHEEL FORCES on the Flight Controls Maintenance Page 1.

- (a) Release the Captains control wheel to the neutral position.

- 1) Make sure the two WHEEL FORCE indications, on the maintenance page 1, show between -1.00 and 1.00.

NOTE: The two wheel force transducers are contained in a single part. Each will give approximately the same indication as the other.

- (b) Turn the control wheel fully counterclockwise.

- 1) Make sure the two WHEEL FORCE indications show between -24.00 and -10.00.

- (c) Turn the Captains control wheel fully clockwise.

- 1) Make sure the two WHEEL FORCE indications show between 10.00 and 24.00.

- (d) Release the Captains control wheels.

- (3) Do the steps that follow to apply a force to the First Officers control wheels and at the same time monitor the values for the WHEEL POSITIONS and the WHEEL FORCES on the Flight Controls Maintenance Page 1.

- (a) Release the First Officers control wheel to the neutral position.

- 1) Make sure the two WHEEL FORCE indications, on the maintenance page 1, show between -1.00 and 1.00.

NOTE: The two wheel force transducers are contained in a single part. Each will give approximately the same indication as the other.

- (b) Turn the First Officers control wheel fully counterclockwise.

- 1) Make sure the two WHEEL FORCE indications show between -24.00 and -10.00.

- (c) Turn the First Officers control wheel fully clockwise.

- 1) Make sure the two WHEEL FORCE indications show between 10.00 and 24.00.

- (d) Release the First Officers control wheels.

- (4) If you find a problem with indication, then do these steps.

- (a) Do this task: Control Wheel Force Versus Travel Test, AMM TASK 27-11-00-720-801.

- (b) If the wheel force transducers do not operate as specified in the task, then do these steps:

- 1) Replace the wheel force transducer. These are the tasks:

- Wheel Position Transducers Removal, AMM TASK 27-11-02-000-801
- Wheel Position Transducers Installation, AMM TASK 27-11-02-400-801

- a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Control Wheel Force Transducer Test, AMM TASK 27-11-00-710-802.

EFFECTIVITY

D633W103-ARO

Page 298.146
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- b) If the maintenance message does not show on the ground test display, you corrected the fault.
- c) If the maintenance message shows on the ground test display, then continue.
- (c) If the wheel force transducers operate as specified in the task, then continue.
- (5) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the center power supply assembly (PSA-C), M24301:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27129 from the disconnect panel.
- (d) Do a wiring check between these pins of connector DM27321AC for the ACE-C and connector DM27129B (WDM 27-11-12):

DM27321AC	DM27129A
pin C10	pin 5
pin C11	pin 6

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27129A to the disconnect panel.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the center power supply assembly (PSA-C), M24301:

Power Supply Assembly Center, M24301

Row	Col	Number	Name

777-200/300 FAULT ISOLATION MANUAL

- (4) Turn and hold the control wheel fully right.
 - (a) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display (on the MAT).
- (5) If the MAT shows NOT ACTIVE for the maintenance message during all the steps above, then there was an intermittent fault.
 - (a) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Alignment.

NOTE: This ground test adjusts (rigs) the Flaperon. AMM 27-11-00/501 contains information that will help you do this ground test.

 - (a) Make sure that the primary flight computer (PFC) is in NORMAL mode.
 - (b) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (c) Turn and hold the control wheel fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (d) Turn and hold the control wheel fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (e) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (f) If the maintenance message shows on the MAT, then continue.
- (2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Flaperon Position.
 - (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - (b) If no maintenance message shows on the ground test display, then continue.
- (3) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Pressurize all hydraulic systems power. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

- (b) Turn and hold the control wheel fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (c) Turn and hold the control wheel fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (d) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (e) If the maintenance message shows on the MAT, then continue.
- (7) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the right outboard flap power control unit (PCU), M27209. These are the tasks:

- Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
- Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
- (a) Pressurize all hydraulic systems power. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (b) Turn and hold the control wheel fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (c) Turn and hold the control wheel fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (d) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (e) If the maintenance message shows on the MAT, then continue.
- (9) Replace the right inboard flaperon PCU, M27210. These are the tasks:
 - Flaperon Power Control Unit - Removal, AMM TASK 27-11-12-000-801
 - Flaperon Power Control Unit - Installation, AMM TASK 27-11-12-400-801
 - (a) Pressurize all hydraulic systems power. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (b) Turn and hold the control wheel fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (c) Turn and hold the control wheel fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (d) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

————— **END OF TASK** —————

920. Control Wheel Damper Shows Red or No Color

A. Fault Isolation Procedure

- (1) If a minimum of 1/16 of an inch (1.6 millimeter) in width of green shows in the window of the damper, then the damper is serviceable.

NOTE: The damper must be at room temperature to get the correct indication.

- (2) If less than 1/16 of an inch (1.6 millimeter) of green shows, then replace the damper. These are the tasks:
 - Wheel Damper Removal, AMM TASK 27-11-03-000-801

921. Aileron Trim Is Necessary to Maintain Straight and Level Flight - Fault Isolation

A. Initial Evaluation

- (1) If the aileron trim that is necessary to maintain straight and level flight is 0.5 unit or less, then there is no fault.
- (2) If the aileron trim that is necessary to maintain straight and level flight is greater than 0.5-unit and less than 0.75 unit, do these steps:
 - (a) Check with the flight crew or review log book entries for system faults in Flight Controls, Fuel Quantity or imbalance, Engine split throttles, EPR, N1 or performance disagreements.
 - 1) If any faults exist, do the applicable tasks to correct the faults.
 - (b) Check the MAT for Flight Control or related Fuel and Engine System fault messages.
 - 1) If any fault messages exist, do the applicable tasks to correct the faults and clear the messages.
 - (c) Do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (d) Select the flap position where trim is more than 0.5 units and do these steps:
 - 1) Use the AILERON trim switches and RUDDER trim knob, on the P8 aft Aisle Stand panel to put the Captain's control wheel and the rudder to the center position.
 - 2) Visually check flight control surfaces and fairings for droops, gaps, asymmetric conditions, misalignments, mismatches or damage.
 - 3) If any conditions are visible, do the applicable tasks to correct the conditions.
 - 4) If you do not find a problem, then there is no fault.
- (3) If the aileron trim that is necessary to maintain straight and level flight is greater than 0.75 unit, then do the Fault Isolation Procedure.

B. Fault Isolation Procedure

- (1) Do these steps to check the lateral control system:
 - (a) Do this task: Aileron and Flaperon - Operational Test, AMM TASK 27-11-00-700-801.
 - 1) Do the applicable adjustment procedure.
 - (b) Do this task: Aileron Trim Test, AMM TASK 27-11-00-700-804.
 - 1) Do the applicable adjustment procedure.
 - (c) Do this task: Spoiler Operational Test, AMM TASK 27-61-00-700-801.
 - 1) Do the applicable adjustment procedure.
 - (d) Do this task: Mechanical Spoiler Adjustment and Test (Spoiler Pair 4 and 11), AMM TASK 27-61-00-700-802.
 - 1) Do the applicable adjustment procedure.

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (2) Replace the right inboard aileron power control unit (PCU-RIB), M27208. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the aileron PCU-RIB command wiring:
 - (a) Open these circuit breakers and install DO-NOT-CLOSE tags on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

Row	Col	Number	Name

 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (2) Replace the left outboard aileron power control unit (PCU-LOB), M27107. These are the tasks:
 - Aileron Power Control Unit (PCU) Removal, AMM TASK 27-11-11-000-801
 - Aileron Power Control Unit (PCU) Installation, AMM TASK 27-11-11-400-801

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the aileron PCU-LOB command wiring:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the left-2 actuator control electronics (ACE-L2), M27122, from the E1-1 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27107A from the aileron PCU-LOB, M27107.
- (d) Do a wiring check between these pins of connector DM27122AA for the ACE-L2 and connector DM27107A for the aileron PCU-LOB, M27107 (WDM 27-11-11):

DM27122AA	DM27107A
pin B14	pin 8
pin A14	pin 9

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27107A to the aileron PCU-LOB, M27107.
 - 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name

C. Fault Isolation Procedure

- (1) Do a wiring check for obvious electrical faults in the applicable PCU wiring. (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

927. Right Aileron PCUs Command Problem - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10223.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the FIM Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - (b) If no maintenance message shows on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do a wiring check for obvious electrical faults in the applicable PCU wiring. (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

928. Control Wheel Moves Beyond First Stop - Fault Isolation

A. Description

- (1) One or both of the control wheels moves beyond the first mechanical stop.

B. Initial Evaluation

- (1) Check the captain's control wheel.
 - (a) Rotate the control wheel fully clockwise or counter-clockwise until the stop is felt.

EFFECTIVITY

D633W103-ARO

Page 298.163
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (b) Apply moderate torque to the wheel.
- (c) If the wheel rotates beyond the stop, then do the Fault Isolation Procedure below.
- (d) If the wheel does not rotate beyond the stop, then there was an intermittent fault.
- (2) Check the first officer's control wheel.
 - (a) Rotate the control wheel fully clockwise or counter-clockwise until the stop is felt.
 - (b) Apply moderate torque to the wheel.
 - (c) The wheel may rotate farther until another stop is felt. This over-travel may be greater in one direction than the other. If the wheel rotates more than 1.5 units of trim beyond the first stop (measured at trim tab decal on control wheel), then do the Fault Isolation Procedure below.
 - (d) If the wheel does not rotate more than 1.5 units of trim beyond the first stop, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Captain's control wheel:
 - (a) Examine the left lateral control mechanism for damaged parts or loose parts. Replace or repair parts that have damage.
 - (b) Do this task: Control Wheel and Cable Adjustment (Rigging), AMM TASK 27-11-00-700-802.
 - (c) Rotate the control wheel fully clockwise or counter-clockwise until the stop is felt.
 - (d) Apply moderate torque to the wheel.
 - (e) If the wheel does not rotate beyond the stop, then you corrected the fault.
- (2) First officer's control wheel:
 - (a) Examine the right lateral control mechanism for damaged parts or loose parts. Replace or repair parts that have damage.
 - (b) Do this task: Control Wheel and Cable Adjustment (Rigging), AMM TASK 27-11-00-700-802.
 - (c) Rotate the control wheel fully clockwise or counter-clockwise until the stop is felt.
 - (d) Apply moderate torque to the wheel.
 - (e) If the wheel does not rotate more than 1.5 units of trim beyond the first stop, then you corrected the fault.

801. Rudder Power Control Unit (Lower) Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10402.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the command wiring:
 - (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27009A from the lower rudder power control unit (PCU).
- (d) Do a wiring check between these pins of connector DM27221AC at the E5-2 shelf and connector DM27009A at the rudder PCU (WDM 27-21-13):

DM27221AC	DM27009A
pin G3	pin 8
pin F3	pin 9

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27009A to the lower rudder PCU.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

777-200/300 FAULT ISOLATION MANUAL

- (5) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the lower rudder PCU. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

803. Rudder Surface Actuation Confidence Test Failed - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-10415, 27-10418, 27-10419, 27-10423, 27-10427, 27-10431, 27-10435, 27-10442, 27-10446, 27-10447, 27-10448, 27-10449, 27-10450, 27-10451.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Examine the three power control units (PCU) for the rudder to see if they are mechanically disconnected from the rudder or the vertical stabilizer.
 - (a) If one of the rudder PCUs is disconnected or damaged, then do these steps:
 - 1) Replace the applicable rudder PCU, M27007, M27008, M27009 . These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - a) Repair or replace all other damaged parts.

D633W103-ARO

Page 207
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
- (2) Do this test of the middle PCU for the rudder:
- (a) Set the FLT CONTROL HYD VALVE PWR C and R switches for the TAIL to the SHUTOFF position.
 - (b) Set the FLT CONTROL HYD VALVE PWR L switch for the TAIL to the NORM position.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (c) Supply hydraulic power to the left hydraulic system. To supply it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (d) Monitor the RUDDER POSITION MID indication that is on the flight controls maintenance page 2 (on the MFD). At the same time look at the rudder to see if it moves.
- (e) Push and hold the left rudder pedal (captain's or first officer's) fully forward.
 - 1) Look at the rudder and make sure it is fully left.

NOTE: You do not need to measure the rudder movement. It is satisfactory if you can see that it moved left.
 - 2) Make sure the RUDDER POSITION MID indication shows -2.80 to -3.20.
 - 3) Make sure the RUDDER DELTA PRESS MID indication shows +1700 to +3500.

NOTE: This shows that the rudder PCU is fully retracted.
- (f) Push and hold the right rudder pedal (captain's or first officer's) fully forward.
 - 1) Look at the rudder and make sure it is fully right.

NOTE: You do not need to measure the rudder movement. It is satisfactory if you can see that it moved right.
 - 2) Make sure the RUDDER POSITION indication shows +3.30 to +3.70.
 - 3) Make sure the RUDDER DELTA PRESS MID indication shows -1700 to -3500.
- (g) Release the rudder pedals.
 - 1) Make sure the rudder is in the neutral position.

NOTE: You do not need to measure the rudder position. It is satisfactory if you can see that it is approximately in its center position.
- (h) If the rudder or the indications did not operate correctly (as specified in the steps above), then do these steps:
 - 1) Replace the middle PCU on the rudder, M27008. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.

Page 208
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (i) If the rudder and the indications operated correctly, then continue.
- (3) Do this test of the upper PCU on the rudder:
 - (a) Set the FLT CONTROL HYD VALVE PWR L and R switches for the TAIL to the SHUTOFF position.
 - (b) Set the FLT CONTROL HYD VALVE PWR C switch for the TAIL to the NORM position.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (c) Supply hydraulic power to the center hydraulic system. To supply it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (d) Monitor the RUDDER POSITION UPR indication that is on the flight controls maintenance page 2 (on the MFD). At the same time look at the rudder to see if it moves.
- (e) Push and hold the left rudder pedal (captain's or first officer's) fully forward.
 - 1) Look at the rudder and make sure it is fully left.

NOTE: You do not need to measure the rudder movement. It is satisfactory if you can see that it moved left.
 - 2) Make sure the RUDDER POSITION indication shows -2.80 to -3.20.
 - 3) Make sure the RUDDER DELTA PRESS UPR indication shows +1700 to +3500.
- (f) Push and hold the right rudder pedal (captain's or first officer's) fully forward.
 - 1) Look at the rudder and make sure it is fully right.

NOTE: You do not need to measure the rudder movement. It is satisfactory if you can see that it moved right.
 - 2) Make sure the RUDDER POSITION indication shows +3.30 to +3.70.
 - 3) Make sure the RUDDER DELTA PRESS UPR indication shows -1700 to -3500.
- (g) Release the rudder pedals.
 - 1) Make sure the rudder is in the neutral position.

NOTE: You do not need to measure the rudder position. It is satisfactory if you can see that it is approximately in its center position.
- (h) If the rudder or the indications did not operate correctly (as specified in the steps above), then do these steps:
 - 1) Replace the upper PCU on the rudder, M27007. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.

- (4) Do this test of the lower PCU on the rudder:
- Set the FLT CONTROL HYD VALVE PWR L and C switches for the TAIL to the SHUTOFF position.
 - Set the FLT CONTROL HYD VALVE PWR R switch for the TAIL to the NORM position.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- Supply hydraulic power to the right hydraulic system. To supply it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - Monitor the RUDDER POSITION LWR indication that is on the flight controls maintenance page 2 (on the MFD). At the same time look at the rudder to see if it moves.
 - Push and hold the left rudder pedal (captain's or first officer's) fully forward.
 - Look at the rudder and make sure it is fully left.
NOTE: You do not need to measure the rudder movement. It is satisfactory if you can see that it moved left.
 - Make sure the RUDDER POSITION indication shows -2.80 to -3.20.
 - Make sure the RUDDER DELTA PRESS LWR indication shows +1700 to +3500.
 - Push and hold the right rudder pedal (captain's or first officer's) fully forward.
 - Look at the rudder and make sure it is fully right.
NOTE: You do not need to measure the rudder movement. It is satisfactory if you can see that it moved right.
 - Make sure the RUDDER POSITION indication shows +3.30 to +3.70.
 - Make sure the RUDDER DELTA PRESS LWR indication shows -1700 to -3500.
 - Release the rudder pedals.
 - Make sure the rudder is in the neutral position.
NOTE: You do not need to measure the rudder position. It is satisfactory if you can see that it is approximately in its center position.
 - If the rudder or the indications did not operate correctly (as specified in the steps above), then do these steps:
 - Replace the lower PCU on the rudder, M27009. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - If the rudder and the indications operated correctly, then continue.
- (5) Replace the lower PCU on the rudder, M27009. These are the tasks:

- Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the middle PCU on the rudder, M27008. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (7) Replace the upper PCU on the rudder, M27007. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

804. Rudder Trim Actuator Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10800.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check for power at the rudder trim actuator:
- (a) Open this circuit breaker and attach safety tag on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

805. Rudder Trim Actuator Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10802.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the excitation and feedback wiring:

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left 1 actuator control electronics (ACE-L1), M27121, from the E1-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27126B from the rudder trim actuator.
- (d) Do a wiring check between these contacts of connector DM27121AA at the E1-5 shelf and connector DM27126B at the rudder trim actuator (WDM 27-21-15)

DM27121AA		DM27126B	
pin E4		pin 4	
pin D4		pin 6	
pin A4		pin 9	
pin C4		pin 10	
pin B4		pin 2	

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27126B to the rudder trim actuator.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR

Page 217
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (2) Replace the rudder trim actuator, M27126. These are the tasks:
 - Rudder Trim Actuator Removal, AMM TASK 27-21-07-000-801
 - Rudder Trim Actuator Installation, AMM TASK 27-21-07-400-801
- (a) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (b) Make sure that these circuit breakers are closed on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

806. Aileron/Rudder Trim Module Manual Trim Cancel Switch Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10806.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.

EFFECTIVITY

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
- (b) If the maintenance message shows on the ground test display, then do these steps below.
 - 1) Push the MANUAL TRIM CANCEL switch on the aisle stand.
 - a) If the rudder trim indicator shows less than or equal to 0.2 unit on either directions, no action is required.
 - b) If the rudder trim indicator shows more than 0.2 unit on either directions, then do the Fault Isolation Procedure below.

C. Fault Isolation Procedure

- (1) Do this check of the MANUAL TRIM CANCEL switch:
 - (a) Open this circuit breaker and attach safety tag on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR

- (b) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
B	8	CBB8-L	RUD TRIM ACTR (L)

- (c) Remove the aileron/rudder trim module, M27036, from the control stand. To remove it, do this task: Rudder and Aileron Trim Module - Removal, AMM TASK 27-21-08-000-801.
 - (d) Do these checks at connector DM27036B on the aileron/rudder trim module.
 - 1) Make sure there is not continuity from pin 3 to pin 4.
 - 2) Make sure there is not continuity from pin 3 to pin 5.
 - 3) Make sure there is continuity from pin 4 to pin 5.
 - 4) Push and hold the MANUAL TRIM CANCEL switch.
 - a) Make sure there is not continuity from pin 3 to pin 4.
 - b) Make sure there is not continuity from pin 4 to pin 5.
 - c) Make sure there is continuity from pin 3 to pin 5.
 - 5) Release the MANUAL TRIM CANCEL switch.
 - (e) If you found a problem with the MANUAL TRIM CANCEL switch, then do these steps:
 - 1) Install a new aileron/rudder trim module, M27036. To install it, do this task: Rudder and Aileron Trim Module - Installation, AMM TASK 27-21-08-400-801.
 - 2) Open this circuit breaker and attach safety tag on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

27-21 TASK 807

D633W103-ARO

Page 223
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the lower rudder PCU, M27009. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message still shows on the ground test display, then:
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Confidence.
 - <1> If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

808. Rudder Power Control Unit (Lower) Ram Transducer Position Signal Does Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11405.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.

B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
- 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.

Page 226
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the lower rudder power control unit (PCU), M27009. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

809. Rudder Power Control Units Have Multiple Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11406.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - (b) If no maintenance message shows on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do a wiring check for obvious electrical faults in the applicable PCU wiring. (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

D633W103-ARO

Page 227
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27009A from the lower rudder power control unit (PCU).
- (d) Do a wiring check between these contacts of connector DM27221AC at the E5-2 and connector DM27009A at the rudder PCU (WDM 27-21-13):

NOTE: Check effectivity of the Wiring Diagram Manual (WDM) for the particular pin to pin check table to use.

DM27221AC	DM27009A
pin J3	pin 3
pin J4	pin 11

DM27221AC	DM27009A
pin J4	pin 3
pin J3	pin 11

- 1) Check for shorts to ground for pins 3 and 11.
- 2) Check for shorts between pins 3 and 11.
- 3) Check for shorts between pin 3 and pins 5, 7, 8, 9, 12, 13, 15, 16, 17, 18 and 19.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

814. Pedal Position Signals Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-12204, 27-12205.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Pedal Position.
- (a) If one or more maintenance messages show on the ground test display, then do these steps:
- 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
- (b) If no maintenance message shows on the ground test display, then there was an intermittent fault.

————— END OF TASK —————

815. Lower Rudder PCU Adjustment Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16018.

B. Initial Evaluation

NOTE: This message can only occur when you do the Rudder Alignment ground test on the MAT. It will occur if you select NO when the MAT shows this statement during the test: "select NO if you cannot align them". If you select YES, then this maintenance message will not show as a failure.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Alignment.
- NOTE: AMM 27-21-11/501 contains information that will help you do this ground test.
- (a) If you could adjust the rudder correctly during the ground test, then you corrected the fault.
- (b) If you could not adjust the rudder correctly during the ground test, then continue.
- (2) Exchange the ACE for M27221. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the lower rudder power control unit (PCU), M27009. These are the tasks:

————— END OF TASK —————

816. Left 1 Pedal Position Transducer Signal Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16019.

B. Initial Evaluation

NOTE: This message can only occur when you do the Pedal Position ground test on the MAT. It will occur if the ground test is failed. IF the ground test is passed the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) Adjust left 1 pedal position transducer. To adjust it, do this task: Pedal Position Transducer Adjustment (Rigging), AMM TASK 27-21-00-800-804.
- (a) Do this ground test on the MAT: 27-Primary Flight Control, System Test, Pedal Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (2) Do this check of the feedback wiring:
- (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left 1 actuator control electronics (ACE-L1), M27121, from the E1-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27008A from the middle rudder power control unit (PCU).
- (d) Do a wiring check between these contacts of connector DM27121AC at the E1-5 shelf and connector DM27008A at the rudder PCU (WDM 27-21-12):

DM27121AC	DM27008A
pin K2	pin 7
pin K1	pin 19

- 1) Check for shorts to ground for pins 7 and 19.
- 2) Check for shorts between pins 7 and 19.
- 3) Check for shorts between pin 7 and pins 3, 5, 8, 9, 11, 12, 13, 15, 16, 17 and 18.
- 4) Check for shorts between pin 19 and pins 3, 5, 8, 9, 11, 12, 13, 15, 16, 17 and 18.

- (e) Disconnect connector DM27009B.
 - 1) Check for shorts between pin 7 and DM27009B pins 2, 3, 5 and 6.
 - 2) Check for shorts between pin 19 and DM27009B pins 2, 3, 5 and 6.
- (f) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27008A to the middle rudder PCU.
 - 3) Re-connect connector DM27009B.
 - 4) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 5) Remove the safety tags and close these circuit breakers on the PSA-L, M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU

27-21 TASK 819

D633W103-ARO

Page 247
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the middle rudder PCU, M27008. These are the tasks:
- Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message still shows on the ground test display, then:
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Confidence.
 - <1> If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

820. Rudder Power Control Unit (Upper) Ram Transducer Position Signal Does Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11403.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

- (1) Do this task: Rudder Adjustment (Rigging), AMM TASK 27-21-00-800-801.
 - (a) If the Rudder Alignment procedure on the MAT passed, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
 - (b) If the Rudder Alignment procedure on the MAT did not pass, then continue.
- (2) Do this check of the feedback wiring:
 - (a) Open these circuit breakers on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR

- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the upper rudder PCU, M27007. These are the tasks:
- Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

823. Rudder Power Control Unit (Middle) EHV Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11408.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the feedback wiring:

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left 1 actuator control electronics (ACE-L1), M27121, from the E1-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27008A from the middle rudder power control unit (PCU).
- (d) Do a wiring check between these contacts of connector DM27121AC at the E1-5 and connector DM27008A at the rudder PCU (WDM 27-21-12):

NOTE: Check effectivity of the WDM for the particular pin to pin check table to use.

DM27121AC	DM27008A
pin J3	pin 3
pin J4	pin 11

DM27121AC	DM27008A
pin J4	pin 3
pin J3	pin 11

- 1) Check for shorts to ground for pins 3 and 11.
 - 2) Check for shorts between pins 3 and 11.
 - 3) Check for shorts between pin 3 and pins 5, 7, 8, 9, 12, 13, 15, 16, 17, 18 and 19.
 - 4) Check for shorts between pin 11 and pins 5, 7, 8, 9, 12, 13, 15, 16, 17, 18 and 19.
- (e) Disconnect connector DM27009B.
- 1) Check for shorts between pin 3 and DM27009B pins 2, 3, 5 and 6.
 - 2) Check for shorts between pin 11 and DM27009B pins 2, 3, 5 and 6.
- (f) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27008A to the middle rudder PCU.
 - 3) Re-connect connector DM27009B.
 - 4) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

27-21 TASK 826

D633W103-ARO

Page 265
May 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (10) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (11) Replace the upper rudder PCU, M27007. These are the tasks:
- Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (12) Replace the middle rudder PCU, M27008. These are the tasks:
- Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (13) Replace the lower rudder PCU, M27009. These are the tasks:
- Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (14) Do this check of the wiring between the ACE-C and the upper rudder PCU:

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the ACE-C, M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27007A from the upper rudder PCU, M27007.
- (d) Do a wiring check between these pins of connector DM27321AC at the E2-5 shelf and connector DM27007A at the upper rudder PCU, M27007 (WDM 27-21-11):

DM27321AC	DM27007A
pin F1	pin 5
pin G1	pin 15
pin K1	pin 19
pin K2	pin 7

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27007A.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tag and close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
- a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (g) Re-connect connector DM27007A.

27-21 TASK 826

D633W103-ARO

Page 267
May 05/2017

777-200/300
FAULT ISOLATION MANUAL

- (h) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (i) Remove the safety tag and close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (15) Do this check of the wiring from the ACE-L1 to the middle rudder PCU:
 - (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the ACE-L1, M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27008A from the middle rudder PCU, M27008.
- (d) Do a wiring check between these pins of connector DM27121AC at the E1-5 shelf and connector DM27008A at the middle rudder PCU, M27008 (WDM 27-21-12):

DM27121AC	DM27008A
pin F1	pin 5
pin G1	pin 15
pin K1	pin 19
pin K2	pin 7

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27008A.
 - 3) Re-install ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (b) Remove the ACE-R, M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27009A from the lower rudder PCU, M27009.
- (d) Do a wiring check between these pins of connector DM27221AC at the E5-2 shelf and connector DM27009A at the lower rudder PCU, M27009 (WDM 27-21-13):

DM27221AC		DM27009A	
pin F1		pin 5	
pin G1		pin 15	
pin K1		pin 19	
pin K2		pin 7	

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27009A.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

827. Pressure Signals from Gust Suppression Pressure Transducers Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17018.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Gust Suppression Pressure Transducers.
 - (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.

EFFECTIVITY

D633W103-ARO

Page 270
May 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (b) If no maintenance message shows on the ground test display, then this may be an intermittent fault.
- 1) If this intermittent fault occurs on the same airplane more than one time, do the Sensor Fault Isolation Procedure.

C. Sensor Fault Isolation Procedure

DO NOT EXCEED 4 PSI ACROSS THE TRANSDUCER DURING THE TEST. IF YOU DO, POSSIBLE DAMAGE MAY OCCUR TO THE TRANSDUCER.

- (1) Do this test if the fault described above occurs on the same airplane more than one time:
- NOTE: This test will isolate the failed gust suppression pressure sensor. Use the following table to convert from psi (pound/square-inch) to other pressure units:
- 1 psi = 2.036 inches of mercury
 - 1 psi = 68.948 millibar
 - 1 psi = 6.8948 kilopascal
 - 1 psi = 0.068 atmosphere
- (a) To perform this test properly, you must monitor the pressure measured by the gust suppression upper port on page 1 of the flight controls maintenance page on the MFD. To show the page, do this task: Showing a Maintenance Page, AMM TASK 31-61-00-800-804.
- (b) Do a check for pneumatic leaks from the pneumatic tubes:
- 1) Connect the vacuum port of the air data test set, RVSM compatible, STD-883 to the upper left side static port of the vertical fin.
 - 2) Apply -1.9 to -2.1 psi to the upper left side port and wait 2 minutes.
 - 3) Monitor the pressure measured by the gust suppression upper port on page 1 of the flight controls maintenance page.
- NOTE: The gust suppression differential pressure is shown in psi. If the signal is invalid, an X will show next to the indication.
- The maintenance page will show a positive value if the vacuum is applied to the left side port and a negative value if the vacuum is applied to the right side port.
- a) If the pressure displayed on the maintenance page is not within 0.2 psi of the vacuum applied by the test equipment, the pressure sensor is faulty and should be replaced. These are the tasks:
 - Gust Suppression Pressure Transducer Removal, AMM TASK 27-21-10-000-801
 - Gust Suppression Pressure Transducer Installation, AMM TASK 27-21-10-400-801
 - b) There is a problem with the integrity of the pneumatic tubes or joints if the vacuum displayed by the test equipment drops by more than 0.1 psi during the 2 minute period that the vacuum is applied.
 - c) If the pressure displayed on the maintenance page is within 0.2 psi of the vacuum applied by the test equipment, then there was an intermittent fault.
- 4) Using the test equipment, slowly vent the vacuum from the static port.

EFFECTIVITY
ARO ALL

27-21 TASK 827

D633W103-ARO

Page 271
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 5) Disconnect the vacuum port of the air data test set, RVSM compatible, STD-883 from the upper left side static port of the vertical fin.
- (c) Check the other gust suppression ports using the same method.
- (2) Do this task: Remove Electrical Power, AMM TASK 24-22-00-860-806.

————— **END OF TASK** —————

828. Rudder Trim Actuator Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15036.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do these steps:
 - (a) Close this circuit breaker on the left power supply assembly (PSA-L), M24101:
 - 1) B8, RUD TRIM ACTR
 - (b) If the circuit breaker opens when you try to close it, then do this procedure below: Fault Isolation Procedure - Circuit Breaker Open.
- (2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - (a) If the maintenance message shows on the ground test display, then do this check:
 - 1) If the circuit breaker is open, then do this procedure below: Fault Isolation Procedure - Circuit Breaker Open.
 - 2) If the circuit breaker stays closed, then do this procedure below: Fault Isolation Procedure - Circuit Breaker closed.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure - Circuit Breaker Closed

- (1) Replace the PSA-L, M24101. These are the tasks:
 - Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

D. Fault Isolation Procedure - Circuit Breaker Open

- (1) Do this check of the power wiring:
 - (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the PSA-L, M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-L	PFC BAT INTLK

- (b) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
P	26	C24673	L PSA TRU PWR

- (e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Confidence.
- (f) If the maintenance message does not show on the ground test display, you corrected the fault.
- (g) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the PSA-R, M24201. These are the tasks:
- Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the lower rudder PCU, M27009. These are the tasks:
- Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

May 05/2017

777-200/300 FAULT ISOLATION MANUAL

830. Lower Rudder PCU Pressure Reducer Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10411.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Do a check for 28 VDC from terminal UB61 of terminal block TB1501 at the E1-5 shelf to structure ground (WDM 27-21-12).
 - (b) If there is not 28 VDC at terminal UB61 of terminal block TB1501, then do these steps:
 - 1) Remove the left power supply assembly (PSA-L), M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of terminal block TB1501 at the E1-5 shelf and the connector DM24101AD at the E1-6 shelf (WDM 27-21-12):

TB1501	DM24101AD
term UB61	pin 29
 - (2) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (3) If you do not find a problem with the wiring, then continue.
 - (4) Install a new PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - c) If the maintenance message shows on the ground test display, then continue.
 - (5) If there is 28 VDC at terminal UB61 of terminal block TB1501, then continue.
- (2) Do this check of the control wiring for the pressure reducer solenoid-operated valve (SOV):

27-21 TASK 830

D633W103-ARO

Page 279
May 05/2017

777-200/300 FAULT ISOLATION MANUAL

831. Lower Gust Suppression Transducer Signal Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16046.

B. Initial Evaluation

NOTE: This message can only occur when you do the Gust Suppression Pressure Transducers ground test on the MAT. It will occur if the ground test is failed. If the ground test is passed the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) Do this check of the gust suppression pressure transducer wiring:
- (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left-1 actuator control electronics (ACE-L1), M27121, from the E1-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27038 from the lower gust suppression pressure transducer, M27038.
- (d) Do a wiring check between these pins of connector DM27121AB for the ACE-L1 and connector DM27038 for the transducer (WDM 27-21-14):

DM27121AB	DM27038
pin F8	pin 2
pin F9	pin 3
pin F10	pin 7
pin G8	pin 5
pin G9	pin 4

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27038 to the gust suppression pressure transducer, M27038.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

777-200/300 FAULT ISOLATION MANUAL

- 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (f) Re-connect connector DM27126A.
- (9) Install a new PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

833. Rudder Surface Delta Pressure Signal Difference Out of Range - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10416.

B. Initial Evaluation

- (1) Make sure that the primary flight computer (PFC) is in NORMAL mode.
- (2) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (3) Push and hold the Rudder Pedal fully left.
 - (a) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (4) Push and hold the rudder pedal fully right.
 - (a) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (5) If the MAT shows ACTIVE for the maintenance message during the steps above, then do the Fault Isolation Procedure below.
- (6) If the MAT shows NOT ACTIVE for the maintenance message during all the steps above, then there was an intermittent fault.
 - (a) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Alignment.

NOTE: This ground test adjusts (rigs) the Rudder. AMM 27-21-00/501 contains information that will help you do this ground test.

 - (a) Make sure that the primary flight computer (PFC) is in NORMAL mode.
 - (b) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

777-200/300 FAULT ISOLATION MANUAL

- 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (c) Push and hold the Rudder Pedal fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (d) Push and hold the rudder pedal fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (e) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (f) If the maintenance message shows on the MAT, then continue.
- (2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the maintenance message index.
 - 2) Do the specified fault isolation task.
 - (b) If no maintenance message shows on the ground test display, then continue.
- (3) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (b) Push and hold the Rudder Pedal fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (c) Push and hold the rudder pedal fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (d) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (e) If the maintenance message shows on the MAT, then continue.
- (5) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (6) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

777-200/300 FAULT ISOLATION MANUAL

- (a) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (b) Push and hold the Rudder Pedal fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (c) Push and hold the rudder pedal fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (d) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (e) If the maintenance message shows on the MAT, then continue.
- (7) Exchange the ACE for M27321. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (8) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (b) Push and hold the Rudder Pedal fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (c) Push and hold the rudder pedal fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (d) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (e) If the maintenance message shows on the MAT, then continue.
- (9) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.

- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (10) Replace the upper rudder power control unit (PCU), M27007. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (b) Push and hold the Rudder Pedal fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (c) Push and hold the rudder pedal fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (d) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (e) If the maintenance message shows on the MAT, then continue.
- (11) Replace the middle rudder PCU, M27008. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (b) Push and hold the Rudder Pedal fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (c) Push and hold the rudder pedal fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
 - (d) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (e) If the maintenance message shows on the MAT, then continue.
- (12) Replace the lower rudder PCU, M27009. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) Pressurize all the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

- 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (b) Push and hold the Rudder Pedal fully left.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (c) Push and hold the rudder pedal fully right.
 - 1) After 1.5 minutes, look for the maintenance message on the Extended Maintenance, Existing Faults display.
- (d) If the maintenance message does not show on the MAT, you corrected the fault.
 - 1) Remove all hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

————— END OF TASK —————

834. Rudder Pedals Do Not Move Freely - Fault Isolation

A. Initial Evaluation

- (1) Operate Captain's rudder pedals and then the First Officer's rudder pedals several times.
 - (a) If the rudder pedals do not move freely, then do the Fault Isolation Procedure below.
 - (b) If the rudder pedals move freely, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Do a check of rudder pedal adjustment and Travel Test. To check it, do this task: Rudder Pedal Adjustment and Travel Test, AMM TASK 27-21-00-700-805.
 - (a) If you find a problem, then do these steps.
 - 1) Examine these components, on the captain's rudder pedals, for damaged parts, loose parts, or for objects that prevent smooth movement. Replace or repair those components that have damage.
 - a) The rudder pedal jackshaft.
 - b) The rudder pedal control rod.
 - c) The rudder feel/centering mechanism.
 - d) The rudder pedal friction brake.
 - e) The pedal damper.
 - f) The rudder pedal position transducer.
 - g) The rudder pedal backdrive actuator.
 - 2) Do a check of rudder pedals Adjustment. To adjust it, do this task: Rudder Pedal Adjustment, AMM TASK 27-21-00-800-802.
 - 3) Operate Captain's rudder pedals several times.
 - 4) Operate First Officer's rudder pedals several times.
 - 5) If the rudder pedals move freely, you corrected the fault.
 - (b) If you do not find a problem, then continue.
- (2) Do a check of rudder pedals Adjustment. To adjust it, do this task: Rudder Pedal Adjustment, AMM TASK 27-21-00-800-802.
 - (a) Operate Captain's rudder pedals several times.
 - (b) Operate First Officer's rudder pedals several times.

835. Rudder Pedal Adjustment Crank Problems - Fault Isolation

A. Initial Evaluation

- (1) Turn the rudder pedal adjustment crank clockwise then counterclockwise.
 - (a) If the adjustment crank does not move freely, then do the Fault Isolation Procedure below.
 - (b) If the adjustment crank moves freely, there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Examine the radius of the flex cable curvature for the rudder pedal adjustment crank.
 - (a) If the radius of the flex cable curvature is less than 5.0 inches, then do these steps:
 - 1) Adjust the radius of the flex cable curvature. To adjust it, do this task: Rudder Pedal Adjustment, AMM TASK 27-21-00-800-802.
 - 2) If the adjustment crank moves freely, you corrected the fault.
 - (b) If the radius of the flex cable curvature is greater than 5.0 inches, then continue.
- (2) Examine the rudder pedal jackshaft mechanism for unwanted material.
 - (a) If there is unwanted material in the jackshaft mechanism, then do these steps:
 - 1) Remove the housing for the jackshaft mechanism. To remove it, do this task: Rudder Pedal Adjustment Flex Shaft Removal, AMM TASK 27-21-02-000-802.
 - 2) Remove unwanted material from the jackshaft mechanism.
 - 3) Re-install the housing for the jackshaft mechanism. To install it, do this task: Rudder Pedal Adjustment Flex Shaft Installation, AMM TASK 27-21-02-400-802.
 - 4) If the adjustment crank moves freely, you corrected the fault.
 - 5) If the adjustment crank does not move freely, then continue.
 - (b) If there is no unwanted material in the rudder pedal jackshaft mechanism, then continue.
- (3) Replace the flex cable for the adjustment crank. These are the tasks:
 - Rudder Pedal Adjustment Flex Shaft Removal, AMM TASK 27-21-02-000-802
 - Rudder Pedal Adjustment Flex Shaft Installation, AMM TASK 27-21-02-400-802
 - (a) If the adjustment crank moves freely, you corrected the fault.
 - (b) If the adjustment crank does not move freely, then continue.
- (4) Replace the jackshaft mechanism. These are the tasks:
 - Rudder Pedal Adjustment Flex Shaft Removal, AMM TASK 27-21-02-000-802
 - Rudder Pedal Adjustment Flex Shaft Installation, AMM TASK 27-21-02-400-802
 - (a) If the adjustment crank moves freely, you corrected the fault.

836. Rudder Pedal Problems - Fault Isolation

A. Initial Evaluation

- (1) Turn the rudder pedal adjustment crank clockwise then counterclockwise.
 - (a) If the pedal does not move back and forward, then do the Fault Isolation Procedure below.
 - (b) If the pedal moves back and forward, there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Replace the flex cable for the rudder pedal adjustment crank. These are the tasks:
 - Rudder Pedal Adjustment Flex Shaft Removal, AMM TASK 27-21-02-000-802
 - Rudder Pedal Adjustment Flex Shaft Installation, AMM TASK 27-21-02-400-802
 - (a) Turn the rudder pedal adjustment crank clockwise and counterclockwise.
 - (b) If the pedal moves back and forward, you corrected the fault.
 - (c) If the pedal does not move back and forward, then continue.
- (2) Replace the rudder pedal jackshaft mechanism. These are the tasks:
 - Rudder Pedal Adjustment Flex Shaft Removal, AMM TASK 27-21-02-000-802
 - Rudder Pedal Adjustment Flex Shaft Installation, AMM TASK 27-21-02-400-802
 - (a) Turn the rudder pedal adjustment crank clockwise and counterclockwise.
 - (b) If the pedal moves back and forward, you corrected the fault.

————— **END OF TASK** —————

837. Rudder Trim Indicator Light Problems - Fault Isolation

A. Initial Evaluation

- (1) Open and then close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
L	28	C27633	RUD TRIM POS IND/STAB POS IND-L

NOTE: Cycling this circuit breaker resets the rudder trim indicator. The rudder trim indicator has a software problem that makes the light go off.

- (2) If the rudder trim indicator light is off, then do the Fault Isolation Procedure below.
- (3) If the rudder trim indicator light is on, then there was an intermittent fault.

B. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Remove the rudder trim indicator, N27003.
 - (b) Do a check for 28V DC between pin 14 of connector DN27003 and structure ground (WDM 27-28-11).
 - (c) If there is not 28V DC at pin 14 of connector DN27003, then do these steps:
 - 1) Open the P110 left power management panel.
 - 2) Do a check for 28V DC at load terminal of circuit breaker C27633.
 - 3) If there is not 28V DC at the circuit breaker, then do these steps:

- a) Replace this circuit breaker:
(WDM 27-28-11)

Left Power Management Panel, P110

Row	Col	Number	Name
L	28	C27633	RUD TRIM POS IND/STAB POS IND-L

- b) Re-install the rudder trim indicator, N27003.
c) If the rudder trim indicator light is on, you corrected the fault.
- 4) If there is 28V DC at the circuit breaker, then do these steps:
- a) Repair the wiring between pin 14 of connector DN27003 at the rudder trim indicator, N27003, and the load terminal circuit breaker, C27633 (WDM 27-28-11).
b) Re-install the rudder trim indicator, N27003.
c) If the rudder trim indicator light is on, you corrected the fault.
- 5) If there is 28V DC at pin 14 of connector DN27003, then continue.
- (2) Install a new the rudder trim indicator, N27003 (WDM 27-28-11).
(a) If the rudder trim indicator light is on, you corrected the fault.

————— END OF TASK —————

838. Rudder Trim Pointer Problems - Fault Isolation

A. Fault Isolation Procedure

- (1) Replace the rudder trim indicator, N27003 (WDM 27-28-11).
(a) Turn the rudder trim to the NOSE L then NOSE R position.
(b) If the rudder trim pointer moves as commanded, you corrected the fault.

————— END OF TASK —————

839. Rudder PCU (Upper) Actuation Confidence Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-10412, 27-10420, 27-10424, 27-10428, 27-10432, 27-10436, 27-10439, 27-10443.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust the upper rudder power control unit (PCU), M27007. To adjust it, do this task: Rudder Adjustment (Rigging), AMM TASK 27-21-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the upper rudder PCU, M27007. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the ACE-C, M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27007A from the upper rudder PCU, M27007.
- (d) Do a wiring check between these pins of connector DM27321AC at the E2-5 shelf and connector DM27007A at the upper rudder PCU, M27007 (WDM 27-21-11):

- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
- Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the rudder trim position transducer, M27043. These are the tasks:
 - Rudder Trim Position Transducer Removal, AMM TASK 27-21-03-000-801
 - Rudder Trim Position Transducer Installation, AMM TASK 27-21-03-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the rudder trim actuator, M27126. These are the tasks:
 - Rudder Trim Actuator Removal, AMM TASK 27-21-07-000-801
 - Rudder Trim Actuator Installation, AMM TASK 27-21-07-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this check of the wiring for the rudder trim position transducer:

NOTE: It is not necessary to do a check of the wiring for the rudder trim actuator. There are other maintenance messages that will show if there is a problem with the wiring for the rudder trim actuator.
- (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the ACE-R, M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connectors DM27043 from the rudder trim position transducer.
- (d) Do a wiring check between these contacts of connector DM27221AA at the E5-2 shelf and connector DM27043 at the rudder trim position transducer (WDM 27-21-15):

pin A4 pin 6
pin B4 pin 5

DM27043

(e) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-connect connectors DM27043 to the rudder trim position transducer.
- 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 4) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.

(f) If you do not find a problem with the wiring, then continue.

- 1) Re-connect connectors DM27043 to the rudder trim position transducer.
- 2) Re-install ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 3) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR

- Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

841. Upper Rudder PCU Adjustment Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16016.

B. Initial Evaluation

NOTE: This message can only occur when you do the Rudder Alignment ground test on the MAT. It will occur if you select NO when the MAT shows this statement during the test: "select NO if you cannot align them". If you select YES, then this maintenance message will not show as a failure.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Alignment.

NOTE: AMM 27-21-11/501 contains information that will help you do this ground test.

 - (a) If you could adjust the rudder correctly during the ground test, then you corrected the fault.
 - (b) If you could not adjust the rudder correctly during the ground test, then continue.
- (2) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the upper rudder power control unit (PCU), M27007. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

B. Initial Evaluation

- (1) Close this circuit breaker on the center Power Supply Assembly (PSA-C), M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	9	CBA9-C	RUD PCU

- (2) If the circuit breaker opens when you try to close it, then do the Fault Isolation Procedure below.
- (3) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (4) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
- (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

777-200/300 FAULT ISOLATION MANUAL

- (b) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- (c) Remove the PSA-C, M24301, from the E2-6 shelf.
- (d) Remove connector DM27007A from the upper rudder power control unit (PCU), M27007.
- (e) Remove connector DM27008B from the middle rudder PCU, M27008.
- (f) Do a wiring check between these pins of connector DM27008B for the middle PCU and connector DM24301AD at the PSA-C (WDM 27-21-11):

DM27008B	DM24301AD
pin 3	pin 29
pin 5	pin 29

- (g) Do a wiring check between these pins of connector DM27007A for the upper PCU and connector DM24301AD at the PSA-C (WDM 27-21-11):

DM27007A	DM24301AD
pin 16	pin 29

- (h) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27007A to the upper PCU, M27007.
 - 3) Re-connect connector DM27008B to the middle PCU, M27008.
 - 4) Re-install the PSA-C, M24301.
 - 5) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- 6) Remove the DO-NOT-CLOSE tag and close this circuit breaker on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- 7) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (i) If you do not find a problem with the wiring, then continue.
- (2) Replace the PSA-C, M24301. These are the tasks:
- Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the upper rudder PCU, M27007. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Replace the middle rudder PCU, M27008. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

END OF TASK

847. Middle Rudder PCU Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15030.

B. Initial Evaluation

- (1) Close this circuit breaker on the left Power Supply Assembly (PSA-L), M24101:

Power Supply Assembly Left, M24101

777-200/300 FAULT ISOLATION MANUAL

848. Upper Rudder PCU Bypass Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10403.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Confidence.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the wiring:
- (a) Open this circuit breaker and install a DO-NOT-CLOSE tag on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- (b) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- (c) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Disconnect connector DM27007A from the upper rudder power control unit (PCU).
- (e) Remove the PSA-C, M24301.
- (f) Do a wiring check between these contacts of connector DM27321AC for ACE-C and connector DM27007A at the rudder PCU (WDM 27-21-11):

DM27321AC	DM27007A
pin F2	pin 17

- (g) Do a wiring check between these pins of connector DM24301AD for the PSA-C and connector DM27007A at the rudder PCU (WDM 27-21-11):

DM24301AD	DM27007A
pin 29	pin 16

 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the damping solenoid 881600, (component of the PCU). These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the middle rudder PCU, M27008. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Confidence.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

850. Upper Rudder PCU Pressure Reducer Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10409.

EFFECTIVITY
ARO ALL

27-21 TASKS 849-850

D633W103-ARO

Page 298.17
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Do a check for 28 VDC from terminal UB5 of terminal block TB5201 at the E5-2 shelf to structure ground (WDM 27-21-13).
 - (b) If there is not 28 VDC at terminal UB5 of terminal block TB5201, then do these steps:
 - 1) Remove the right power supply assembly (PSA-R), M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of terminal block TB5201 at the E5-2 shelf and the connector DM24201AD at the E5-1 shelf (WDM 27-21-13):

TB5201

DM24201AD

term UB5 pin 29

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If you do not find a problem with the wiring, then continue.
 - 5) Install a new PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - c) If the maintenance message shows on the ground test display, then continue.
 - (c) If there is 28 VDC at terminal UB5 of terminal block TB5201, then continue.
- (2) Do this check of the control wiring for the pressure reducer solenoid-operated valve (SOV):

777-200/300 FAULT ISOLATION MANUAL

851. Middle Rudder PCU Pressure Reducer Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10410.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Do a check for 28 VDC from terminal UB57 of terminal block TB2501 at the E2-5 shelf to structure ground (WDM 27-21-11).
 - (b) If there is not 28 VDC at terminal UB57 of terminal block TB2501, then do these steps:
 - 1) Remove the center power supply assembly (PSA-C), M24301. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of terminal block TB2501 at the E2-5 shelf and the connector DM24301AD at the E2-6 shelf (WDM 27-21-11):

TB2501	DM24301AD
term UB57	pin 29
- (2) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (3) If you do not find a problem with the wiring, then continue.
- (4) Install a new PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.
 - b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - c) If the maintenance message shows on the ground test display, then continue.
- (5) If there is 28 VDC at terminal UB57 of terminal block TB2501, then continue.
- (6) Do this check of the control wiring for the pressure reducer solenoid-operated valve (SOV):

777-200/300 FAULT ISOLATION MANUAL

852. Upper Gust Suppression Transducer Signal Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16047.

B. Initial Evaluation

NOTE: This message can only occur when you do the Gust Suppression Pressure Transducers ground test on the MAT. It will occur if the ground test is failed. If the ground test is passed the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) Do this check of the gust suppression pressure transducer wiring:
- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27039 from the upper gust suppression pressure transducer, M27039.
- (d) Do a wiring check between these pins of connector DM27321AB for the ACE-C and connector DM27039 for the transducer (WDM 27-21-14):

DM27321AB		DM27039
pin F8		pin 2
pin F9		pin 3
pin F10		pin 7
pin G8		pin 5
pin G9		pin 4

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27039 to the gust suppression pressure transducer, M27309.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

777-200/300 FAULT ISOLATION MANUAL

853. Rudder PCU (Upper) Failed the ACE Monitor Test - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16058.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (4) Replace the upper rudder PCU, M27007. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

854. Rudder Power Control Unit (Upper) Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10400.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Position.

EFFECTIVITY
ARO ALL

27-21 TASKS 853-854

Page 298.27
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the command wiring:

- (a) Open these circuit breakers on the PSA-C and attach safety tags:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
 - (c) Disconnect connector DM27007A from the upper rudder power control unit (PCU), M27007.
 - (d) Do a wiring check between these pins of connector DM27321AC at the E2-5 shelf and connector DM27007A at the rudder PCU (WDM 27-21-11):

<u>DM27321AC</u>	<u>DM27007A</u>
pin G3	pin 8
pin F3	pin 9

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27007A to the upper rudder PCU.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the PSA-C:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU

D633W103-ARO

Page 298.35
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (5) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the upper rudder PCU, M27007. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

857. Rudder Power Control Unit (Middle) Damping Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10407.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Open this circuit breaker and attach safety tag on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	9	CBA9-C	RUD PCU

- (b) Disconnect connector DM27008B from the middle rudder power control unit (PCU), M27008.

A	9	CBA9-C	RUD PCU

- 3) Check for short between these pins of connector DM27008B, to the middle rudder PCU, M27008. (WDM 27-21-11)

DM27008B	DM27008B
Pin 3	Pin 2
Pin 3	Pin 5
Pin 3	Pin 6
Pin 2	Pin 5
Pin 2	Pin 6
Pin 5	Pin 6

- a) If a short is found, repair the wiring.
- 4) Re-connect connector DM27008B to the middle rudder PCU, M27008.
- 5) Remove the safety tag and close this circuit breaker on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	9	CBA9-C	RUD PCU

- 6) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- 7) Repair the wiring between pin 3 of connector DM27008B and the PSA-C, M24301 (WDM 27-21-11).
- 8) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.

27-21 TASK 857

D633W103-ARO

Page 298.37
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (f) If there is 28 VDC at pin 3 of connector DM27008B, then continue.
- (2) Do this check of the command wiring:
- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Do a wiring check between these pins of connector DM27321AC at the E2-5 shelf and connector DM27008B at the rudder PCU (WDM 27-21-11):

DM27321AC	DM27008B
pin H3	pin 2

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27008B to the middle rudder PCU.
 - 3) Re-install the ACE-C, M27321.
 - 4) Remove the safety tag and close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
- a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (3) Do this check of the ground wiring:
- (a) Do a check for continuity from pin A5 of connector DM27321AB at the E2-5 to structure ground (WDM 27-21-11).

777-200/300 FAULT ISOLATION MANUAL

- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the middle rudder PCU. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

858. Pedal Position Transducer (Left 2) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12201.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Pedal Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the excitation and feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

C. Fault Isolation Procedure

- (1) Adjust the middle rudder power control unit (PCU), M27008. To adjust it, do this task: Rudder Adjustment (Rigging), AMM TASK 27-21-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Exchange the ACE for M27008. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (5) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (6) Replace the middle rudder PCU, M27008. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM

- (b) Remove the ACE-L1, M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27008A from the middle rudder PCU, M27008.
- (d) Do a wiring check between these pins of connector DM27121AC at the E1-5 shelf and connector DM27008A at the middle rudder PCU, M27008 (WDM 27-21-12):

<u>DM27121AC</u>		<u>DM27008A</u>
pin F1		pin 5
pin G1		pin 15
pin K1		pin 19
pin K2		pin 7

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27008A.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the PSA-L, M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust the lower rudder power control unit (PCU), M27009. To adjust it, do this task: Rudder Adjustment (Rigging), AMM TASK 27-21-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Replace the right actuator control electronics (ACE-R), M27221. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the lower rudder PCU, M27009. These are the tasks:
 - Rudder Power Control Units (PCU) Removal, AMM TASK 27-21-11-000-801
 - Rudder Power Control Units (PCU) Installation, AMM TASK 27-21-11-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321, from the E2-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27007A from the upper rudder power control unit (PCU).
- (d) Do a wiring check between these contacts of connector DM27321AC at the E2-5 shelf and connector DM27007A at the rudder PCU (WDM 27-21-11)

DM27321AC	DM27007A
pin F1	pin 5
pin G1	pin 15

- 1) Check for shorts to ground for pins 5 and 15.
 - 2) Check for shorts between pins 5 and 15.
 - 3) Check for shorts between pin 5 and pins 3, 7, 8, 9, 11, 12, 13, 16, 17, 18 and 19.
 - 4) Check for shorts between pin 15 and pins 3, 7, 8, 9, 11, 12, 13, 16, 17, 18 and 19.
- (e) Disconnect connector DM27008B.
 - 1) Check for shorts between pin 5 and DM27008B pins 2, 3, 5 and 6.
 - 2) Check for shorts between pin 15 and DM27008B pins 2, 3, 5 and 6.
 - (f) If you find a problem with the wiring, then do these steps:

865. Pedal Position Signals from Pedal Position Transducers Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12206.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Pedal Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Examine the pedal control rods for bent or loose.
 - (a) If you find a problem with the pedal control rods, then do these steps:
 - 1) Repair the pedal control rods.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Pedal Position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (b) If you do not find a problem with the pedal control rods, then continue.
- (2) Do this task: Rudder Pedal Adjustment, AMM TASK 27-21-00-800-802.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Pedal Position.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

866. Rudder PCU (Middle) Failed the ACE Monitor Test - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16059.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the ACE-L1, M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27008A from the middle rudder power control unit (PCU).
- (d) Do a wiring check between these pins of connector DM27121AC (for ACE-L1) and connector DM27008A (at the rudder PCU) (WDM 27-21-12):

EFFECTIVITY

B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (4) Exchange the ACE for M27008. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (5) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (6) Replace the middle rudder PCU, M27008. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

867. Rudder PCU (Lower) Failed the ACE Monitor Test - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16060.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the ACE-R, M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27009A from the lower rudder power control unit (PCU).
- (d) Do a wiring check between these pins of connector DM27221AC (for ACE-R) and connector DM27009A (at the rudder PCU) (WDM 27-21-11):

EFFECTIVITY

B	4	CBB4-R	AUTO-SPDBRK (L,R)

5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.

- a) If the maintenance message does not show on the ground test display, then you corrected the fault.

(f) If you do not find a problem with the wiring, then continue.

(4) Replace the lower rudder PCU, M27009. These are the tasks:

- Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
- Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801

(a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

868. Thrust Asymmetry Compensation Switch Problems - Fault Isolation

A. Maintenance Messages

(1) This task is for maintenance message: 27-10807.

B. Initial Evaluation

NOTE: This maintenance message occurs when the ACE-C finds a problem with the circuit for the thrust asymmetry compensation (TAC) switch. It occurs if the ACE finds both sides of the switch are open, or if the ACE finds both sides of the switch are closed (at the same time).

777-200/300 FAULT ISOLATION MANUAL

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do these steps:
 - (a) Set the THRUST ASYM COMP switch (on the overhead panel) to the OFF position for a minimum of 10 seconds.
 - (b) Set the switch to the AUTO position.
 - (c) After 1.5 minutes look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT.
 - 1) If the maintenance message shows ACTIVE or LATCHED, then do the Fault Isolation Procedure below.
 - 2) If the maintenance message shows NOT ACTIVE (or does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the THRUST ASYM COMP SWITCH (S3 of M27042) (WDM 27-21-16).
 - (a) Set the THRUST ASYM COMP switch (on the overhead panel) to the OFF position for a minimum of 10 seconds.
 - (b) Set the switch to the AUTO position.
 - (c) After 1.5 minutes look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT.
 - 1) If the maintenance message shows NOT ACTIVE (or does not show), then you corrected the fault.
 - 2) If the maintenance message shows ACTIVE or LATCHED, then continue.
- (2) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Set the THRUST ASYM COMP switch (on the overhead panel) to the OFF position, for a minimum of 10 seconds.
 - (b) Set the switch to the AUTO position.
 - (c) After 1.5 minutes look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT.
 - 1) If the maintenance message shows NOT ACTIVE (or does not show), then you corrected the fault.
 - 2) If the maintenance message shows ACTIVE or LATCHED, then continue.
- (4) Do this check of the switch wiring:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Rudder Trim System.
- 6) If the maintenance message does not show on the ground test display, you corrected the fault.

(e) If you do not find a problem with the wiring, then continue.

(9) Do this check of the wiring between the ACE-R and the rudder trim actuator:

(a) Open this circuit breaker and attach safety tag on the PSA-L, M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Disconnect connector DM27126A from the rudder trim actuator, M27126.
- (c) Do a wiring check between these pins of connector DM27221AA at the E5-2 shelf and connector DM27126A at the rudder trim actuator, M27126 (WDM 27-21-15):

DM27221AA	DM27126A
pin J10	pin 11

(d) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Connect connector DM27126A to the rudder trim actuator, M27126.
- 3) Re-install the control panel, M27306. To install it, do this task: Rudder and Aileron Trim Module - Installation, AMM TASK 27-21-08-400-801.
- 4) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

777-200/300 FAULT ISOLATION MANUAL

(Continued)

Standby Power Management Panel, P310

Row	Col	Number	Name
E	2	C73606	R EDIU 1A
E	3	C73607	L EDIU 2B
E	4	C73608	R EDIU 2B

D. Initial Evaluation

- (1) If maintenance message 31-68811 shows ACTIVE or LATCHED, do this task: AIMS No Output on Flight Controls ARINC 629 Bus - Fault Isolation, 31-42 TASK 908.

NOTE: This message can show after a communication problem with AIMS cabinet.

- (2) On the ADIRU/PFC DISC/TAC PANEL, do this check with the THRUST ASYM COMP (TAC) Switch, S3:

- (a) Make sure the Thrust Levers are not in the Reverse Thrust position.
- (b) Set the TAC Switch, S3, on the overhead panel to the AUTO position.
- (c) After 10 seconds, set the TAC Switch, S3, to the OFF position.
- (d) After 10 seconds, set the TAC Switch, S3, back to the AUTO position.
- (e) Look on the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT.
 - 1) If the Maintenance Message shows on the MAT, then do the Fault Isolation Procedure below.
 - 2) If the Maintenance Message shows NOT ACTIVE (or if the message does not show), then there was an intermittent fault or the fault was repaired before you operated the TAC Switch, S3, above.

NOTE: This message can show after a problem with the EDIU or the AIMS Gateway Function is repaired. This Chapter 27 Maintenance Message can occur at that time because the PFC latches the fault in its memory. This message did not show earlier because the EDIU or AIMS Maintenance Message prevented it.

E. Fault Isolation Procedure

- (1) Reload software in all three PFC as follows:
 - (a) Power down all three PFCs.
 - (b) After all three PFCs are powered down, power up the C PFC only.
 - (c) Reload software into the C PFC.

NOTE: If the software will not load, the PFC must be replaced.
 - (d) Power down the C PFC.
 - (e) Power up the R PFC only.
 - (f) Reload software into the R PFC.

NOTE: If the software will not load, the PFC must be replaced.
 - (g) Swap the L and R PFCs (do not power up any of the PFCs).
 - (h) Power up the R PFC only (PFC that was previously in the left position).
 - (i) Reload software into the R PFC.

NOTE: If the software will not load, the PFC must be replaced.
 - (j) Power down the R PFC.

 - (a) If the problem still exists, continue the Fault Isolation Procedure at the subsequent step.
 - (b) If the Maintenance Message shows NOT ACTIVE (or if the message does not show), then you corrected the fault.

————— END OF TASK —————

872. Rudder Pedal Damper Shows Red or No Color

A. Fault Isolation Procedure

- (1) If a minimum of 1/16 of an inch (in width) of green shows in the window of the damper, then the damper is serviceable.

NOTE: The damper must be at room temperature to get the correct indication.
- (2) If less than 1/16 of an inch of green shows, then replace the damper. These are the tasks:
 - Pedal Damper Removal, AMM TASK 27-21-05-000-801
 - Pedal Damper Installation, AMM TASK 27-21-05-400-801

————— END OF TASK —————

873. Rudder Trim Is Necessary to Maintain Straight and Level Flight - Fault Isolation

A. Initial Evaluation

- (1) If the rudder trim that is necessary to maintain straight and level flight is 1.0-unit or less, then there is no fault.
- (2) If the rudder trim that is necessary to maintain straight and level flight is greater than 1.0-unit, then do the Fault Isolation Procedure below.

B. Fault Isolation Procedure

- (1) Do these steps:
 - (a) Check with the flight crew or review log book entries for system faults in Flight Controls, Fuel Quantity or imbalance, Engine split throttles, EPR, N1 or performance disagreements.
 - 1) If any faults exist, do the applicable tasks to correct the faults.
 - (b) Check the MAT for Flight Control or related Fuel and Engine System fault messages.
 - 1) If any fault messages exist, do the applicable tasks to correct the faults and clear the messages.
 - (c) Do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (d) Select the flap position where trim is more than 1.0 units and do these steps:
 - 1) Use the AILERON trim switches and the RUDDER trim knob, on the P8 aft Aisle Stand panel to put the Captain's control wheel and the rudder to the center positions.

pin 5	pin G9
pin 8	pin F10

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27045 to the right modal suppression accelerometer, M27045.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU

D633W103-ARO

Page 298.76
Jan 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Modal Suppression Accelerometers.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - f) If you do not find a problem with the wiring, then continue.
- (2) Install a new ACE-R. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Re-connect connector DM27045 to the right modal suppression accelerometer, M27045.
 - (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Modal Suppression Accelerometers.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the right modal suppression accelerometer, M27045. These are the tasks:
 - Accelerometer Removal, AMM TASK 27-21-13-000-801
 - Accelerometer Installation, AMM TASK 27-21-13-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Modal Suppression Accelerometers.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

877. Accelerometer Signals from the Modal Suppression Accelerometers Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-17025.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary flight Controls, System Test, Modal Suppression Accelerometers.
 - (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - (b) If no maintenance message shows on the ground test display, then there was an intermittent fault.

879. Vibration Noise During On-Ground Rudder Movement - Fault Isolation

A. Description

Loud grinding or growling noise in the aft galley when the rudder is being moved while the plane is on the ground.

B. Possible Causes

- (1) Digital nature of the primary flight control system (PFCS) signals and the electrohydraulic servovalve (EHSV) responses to these PFCS commands.
 - (a) In normal and secondary modes, the PFC calculates a new rudder command every 12.5 milliseconds, and the command to the actuator is a series of small discrete steps instead of a smooth ramp.
 - (b) The (EHSV) on the actuator responds to these commands and results in a ripple effect in the hydraulic lines.
 - (c) This ripple effect generates the noise and it is amplified by the rudder surface, which acts as a sounding board.
- (2) Some other unidentified hydraulic or structural problems.

C. Fault Isolation Procedure

- (1) Do these steps:
 - (a) Pressurize the hydraulic power systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (b) Put the primary flight computer disconnect switch in the DISC position.
 - (c) Move the captain's left then right rudder pedals until it touch the floor and release.
 - 1) If you can still hear the noise from the aft section of the airplane, additional inspections are needed to identify the source of the noise.
 - 2) If you do not hear the noise, no further action is required.

NOTE: This condition is considered normal due to the digital nature of the PFCS signals and the EHSV responses to these commands.

- (d) Put the primary flight computer disconnect switch back to the position before you start this test.
- (e) Remove the hydraulic systems power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

————— **END OF TASK** —————

880. Noise and Vibration During On-Ground Rudder Control Surface Movement - Fault Isolation

A. Description

Abrupt noise in the aft galley or the fuselage shudders when the rudder is moved quickly through large position changes while the plane is on the ground.

B. Possible Causes

- (1) Sudden changes in hydraulic fluid volume and flow as the PCU starts to move quickly and then suddenly stops.
 - (a) When the rudder is moved quickly, a large amount of hydraulic fluid is demanded by the PCUs.
 - (b) When the rudder stops moving, the hydraulic flow abruptly stops, causing an increase in pressure and subsequent oscillations in the hydraulic lines (water hammer effect). This causes a large banging noise and some vibrations.

EFFECTIVITY
ARO ALL

27-21 TASKS 879-880

D633W103-ARO

Page 298.78
Jan 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (c) The amplitude of the noise is proportional to the commanded rate for the rudder. If the rudder is moved slowly, the pressure oscillations are lower and the banging noise is reduced.
- (2) Some other unidentified hydraulic or structural problems.

C. Fault Isolation Procedure

- (1) Do these steps:
 - (a) Pressurize the main hydraulic power system. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801
 - (b) Slowly move the captain's left rudder pedal until it touches the floor.
 - (c) Slowly release the captain's left rudder pedal to the neutral position.
 - (d) Slowly move the captain's right rudder pedal until it touches the floor.
 - (e) Slowly release the captain's right rudder pedal to the neutral position.
- (2) If you can still hear the noise or feel a vibration when the rudder pedals is moved at the slow speed, additional inspections of the rudder PCUs and surrounding structure may be necessary.
- (3) If you do not hear the noise or feel a vibration when the rudder pedals are moved at the slow speed, no further action is required.

NOTE: If the noises and vibrations only occur when the rudder is moved quickly, then this is acceptable as normal system operation.
- (4) Remove the hydraulic system power. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

801. Left Outboard Elevator PCU Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10101.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-10101, 27-10103, 27-10201, 27-10301, 27-10303, 27-10401, 27-10501, 27-10503, 27-10510, and 27-10512. If there are more than six of the following maintenance messages show, then the failures could be caused by a poor performing hydraulic pump. Perform the following procedure to isolate the failure. Turn off the left ACMP and turn on the left EDP. Cycle the flight control surfaces; spoilers, ailerons, elevators and rudder and monitor hydraulic pressure indication and check for faults. If faults are present, check the left EDP, left ACMP, filters, and check valves for FOD. Repeat test with left ACMP on and left EDP off.

- (3) Repeat the above procedure for the following maintenance messages: 27-10103, 27-10201, 27-10301, 27-10303, 27-10401, 27-10501, 27-10503, 27-10510, and 27-10512

C. Fault Isolation Procedure

- (1) Do this check of the command wiring:
 - (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left 1 actuator control electronics (ACE-L1), M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

EFFECTIVITY
ARO ALL

27-31 TASK 801

D633W103-ARO

Page 201
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (c) Disconnect connector DM27111A from the left outboard elevator power control unit (LOB PCU).
- (d) Do a wiring check between these pins of connector DM27121AC at the E1-5 and connector DM27111A at the LOB PCU (WDM 27-31-11):

DM27121AC	DM27111A
pin A14	pin 9
pin B14	pin 8

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27111A to the PCU.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
- a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (f) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE-L1, M27121 for ACE-C, M27321. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

D633W103-ARO

Page 202
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the left outboard elevator PCU, M27111. These are the tasks:
- Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

802. Left Elevator Surface Actuation Confidence Test Failed - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-10124, 27-10452, 27-10455, 27-10458, 27-10461, 27-10466.

B. Initial Evaluation

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-16048, 27-11104, 27-10128, 27-10130, 27-27-10120, 27-10121, 27-10124. If more than one of these messages show, then do the fault isolation procedures in this sequence: 27-16048, 27-11104, 27-10128, 27-10130, 27-27-10120, 27-10121, 27-10124. For example, if 27-16048 shows, then do its procedure first.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Examine the two elevator power control units (PCU) for the left elevator to see if they are mechanically disconnected from the elevator or the stabilizer.
 - (a) If one of the elevator PCUs is disconnected or damaged, then do these steps:

EFFECTIVITY
ARO ALL

D633W103-ARO

Page 203
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 1) Replace the applicable elevator PCU, M27111 or M27112. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - a) Repair or replace all other damaged parts.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
- (2) Do this test of the outboard PCU for the left elevator:
- (a) Set the C and R FLT CONTROL HYD VALVE PWR switches for the TAIL to the SHUTOFF position.
 - (b) Set the L FLT CONTROL HYD VALVE PWR switch for the TAIL to the NORM position.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (c) For the left hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (d) Find the two ELEVATOR POSITION indications that are on the left side of the flight controls maintenance page 2 (on the MFD). Monitor the bottom of the two indications. At the same time look at the elevator to see if it moves.
- (e) Push and hold one of the control columns fully forward.
 - 1) Look at the left elevator and make sure it is fully down.

NOTE: You do not need to measure the elevator movement. It is satisfactory if you can see that it moved down.
 - 2) Make sure the ELEVATOR POSITION indication shows -2.80 to -3.20.
 - 3) Make sure the ELEVATOR DELTA PRESS indication (the bottom one on the left side of the maintenance page) shows +1700 to +3500.

NOTE: This shows that the elevator PCU is fully retracted.
- (f) Pull and hold one of the control columns fully aft.
 - 1) Look at the left elevator and make sure it is fully up.

NOTE: You do not need to measure the elevator movement. It is satisfactory if you can see that it moved up.
 - 2) Make sure the ELEVATOR POSITION indication shows +3.30 to +3.70.
 - 3) Make sure the ELEVATOR DELTA PRESS indication (the bottom one on the left side of the maintenance page) shows -1700 to -3500.
- (g) Release the control column.
 - 1) Make sure the left elevator is in the neutral position.

NOTE: You do not need to measure the elevator position. It is satisfactory if you can see that it is approximately level.
 - 2) Make sure the ELEVATOR POSITION indication shows -0.10 to +0.10.

Page 204
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (h) If the elevator or the indications did not operate correctly (as specified in the steps above), then do these steps:
 - 1) Replace the outboard PCU for the left elevator, M27111. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
- (i) If the elevator and the indications operated correctly, then continue.
- (3) Do this test of the inboard PCU on the left elevator:
 - (a) Set the L and R FLT CONTROL HYD VALVE PWR switches for the TAIL to the SHUTOFF position.
 - (b) Set the C FLT CONTROL HYD VALVE PWR switch for the TAIL to the NORM position.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (c) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (d) Find the two ELEVATOR POSITION indications that are on the left side of the flight controls maintenance page 2 (on the MFD). Monitor the top of the two indications. At the same time look at the elevator to see if it moves.
- (e) Push and hold one of the control columns fully forward.
 - 1) Look at the left elevator and make sure it is fully down.

NOTE: You do not need to measure the elevator movement. It is satisfactory if you can see that it moved down.

The right elevator will not move.
 - 2) Make sure the ELEVATOR POSITION indication shows -2.80 to -3.20.
 - 3) Make sure the ELEVATOR DELTA PRESS indication (the top one on the left side of the maintenance page) shows +1700 to +3500.
- (f) Pull and hold one of the control columns fully aft.
 - 1) Look at the left elevator and make sure it is fully up.

NOTE: You do not need to measure the elevator movement. It is satisfactory if you can see that it moved up.
 - 2) Make sure the ELEVATOR POSITION indication shows +3.30 to +3.70.
 - 3) Make sure the ELEVATOR DELTA PRESS indication (the top one on the left side of the maintenance page) shows -1700 to -3500.
- (g) Release the control column.

D633W103-ARO

Page 205
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 1) Make sure the left elevator is in the neutral position.
NOTE: You do not need to measure the elevator position. It is satisfactory if you can see that it is approximately level.
- 2) Make sure the ELEVATOR POSITION indication shows -0.10 to +0.10.
- (h) If the elevator or the indications did not operate correctly (as specified in the steps above), then do these steps:
 - 1) Replace the inboard PCU on the left elevator, M27112. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (i) If the elevator and the indications operated correctly, then continue.
- (4) Replace the outboard PCU on the left elevator, M27111. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801NOTE: The steps above try to find which PCU is bad. But, the steps cannot find all of the possible problems that the PCUs can have. Thus, if you did not find a problem when you did the steps above, do these steps to replace the PCUs.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the inboard PCU on the left elevator, M27112. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- 2) Re-connect connector DM27020 to the left elevator feel actuator.
- 3) Re-install ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 4) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - f) If you do not find a problem with the wiring, then continue.
- (4) Replace the left elevator feel actuator, M27020. These are the tasks:
 - Elevator Feel Actuators Removal, AMM TASK 27-31-07-000-801
 - Elevator Feel Actuators - Installation, AMM TASK 27-31-07-400-801
- (a) Re-install ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (b) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

804. Elevator Power Control Unit (Left Outboard) EHV Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11107.

EFFECTIVITY
ARO ALL

D633W103-ARO

Page 208
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left 1 actuator control electronics (ACE-L1), M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27111A from the outboard power control unit (PCU) on the left elevator.
- (d) Do a wiring check between these pins of connector DM27121AA (for ACE-L1) and connector DM27111A (at the elevator PCU) (WDM 27-31-11):

DM27121AA	DM27111A
pin D14	pin 3
pin D15	pin 11

- (e) Check for shorts to ground for these pins:

DM27111A	GROUND
pin 3	ground
pin 11	ground

- (f) Check for shorts between these pins:

777-200/300 FAULT ISOLATION MANUAL

(Continued)

Power Supply Assembly Left, M24101

Row	Col	Number	Name
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the left outboard elevator PCU, M27111. These are the tasks:
- Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

807. Column Position Transducer (Left 1) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12100.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:

Page 224
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

809. Column Position Transducers Have Multiple Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-12106, 27-12113.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - (b) If no maintenance message shows on the ground test display, then there was an intermittent fault.

————— END OF TASK —————

810. Column Position Signals from Column Position Transducers (Left) and Column Position Transducers (Right) Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12114.

B. Initial Evaluation

NOTE: This fault only occurs when the airplane is on the ground. It occurs if the transducers for the Captain's column are in a different position than the transducers for the First Officer's column. This fault can occur if you hold one control column in a different position than the other control column for more than 0.24 seconds. A mechanical problem can also cause this fault.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this test of the captain's control column:
 - (a) Monitor the three CAPT COLUMN POSITION indications on the flight controls maintenance page 1 (on the MFD).
 - (b) Move the captain's control column through its full travel (fully forward, then fully aft, then released). Make sure that the three indications show these values:
 - 1) -1.30 to -1.50 when the column is fully forward.

EFFECTIVITY

- 2) +1.30 to +1.50 when the column is fully aft.
- 3) -0.03 to +0.03 when the column is released.
- (c) If you find a problem, then do these steps:
 - 1) Examine these components, on the captain's side, for damaged parts, loose parts, or for objects that prevent full travel. Replace those components that have damage.
 - a) The column torque tubes. These are the tasks:
 - Column Torque Tube Removal, AMM TASK 27-31-02-000-801
 - Column Torque Tube Installation, AMM TASK 27-31-02-400-801
 - b) The pushrods
 - c) The elevator feel unit. These are the tasks:
 - Elevator Feel and Centering Mechanism Removal, AMM TASK 27-31-06-000-801
 - Elevator Feel and Center Mechanism Installation, AMM TASK 27-31-06-400-801
 - d) The column breakout mechanism. These are the tasks:
 - Column Breakout Mechanism Removal, AMM TASK 27-31-03-000-801
 - Column Breakout Mechanism Installation, AMM TASK 27-31-03-400-801
 - 2) Adjust (rig) the captain's control column. To adjust it, do this task: Control Column Adjustment (Rigging), AMM TASK 27-31-00-800-802.
 - 3) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - 4) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If you did not find a problem, then continue.
- (2) Do this test of the first officer's control column:
 - (a) Monitor the three F/O COLUMN POSITION indications on the flight controls maintenance page 1 (on the MFD).
 - (b) While you move the first officer's control column through its full travel (fully forward, then fully aft, then released), make sure that the three indications show these values:
 - (c) Move the first officer's control column through its full travel (fully forward, then fully aft, then released). Make sure that the three indications show these values:
 - 1) -1.30 to -1.50 when the column is fully forward.
 - 2) +1.30 to +1.50 when the column is fully aft.
 - 3) -0.03 to +0.03 when the column is released.

- d) The column breakout mechanism. These are the tasks:
 - Column Breakout Mechanism Removal, AMM TASK 27-31-03-000-801
 - Column Breakout Mechanism Installation, AMM TASK 27-31-03-400-801
- 2) Adjust (rig) the first officer's control column. To adjust it, do this task: Control Column Adjustment (Rigging), AMM TASK 27-31-00-800-802
- 3) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
- 4) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If you did not find a problem, then continue.
- (3) Examine the column breakout mechanism for damage or a missing spring (there are 2 springs, side-by-side).
 - (a) If you find a problem with the column breakout mechanism, then do these steps:
 - 1) Replace or repair the column breakout mechanism. These are the tasks:
 - Column Breakout Mechanism Removal, AMM TASK 27-31-03-000-801
 - Column Breakout Mechanism Installation, AMM TASK 27-31-03-400-801
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (b) If you do not find a problem with the column breakout mechanism, then continue.
- (4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.

NOTE: If the elevator feel actuators are stuck in the high force position, then when you move one control column to full travel the other will not follow it.

 - (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - (b) If no maintenance message shows on the ground test display, then continue.
- (5) If the steps above did not help you find the problem, then do this check of all of the mechanical components:
 - (a) Examine these components, on the captain's and the first officer's side, for damaged parts, loose parts, or for objects that prevent full travel. Replace those components that have damage.
 - 1) The column torque tubes. These are the tasks:

811. Elevator PCU (Left Outboard) Adjustment Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16004.

B. Initial Evaluation

NOTE: This maintenance message can only occur when you do the Left Elevator Alignment ground test on the MAT. It will occur if you select NO when the MAT shows this statement during the test: "Select NO if you cannot align them". If you select YES, then this maintenance message will not show as a failure.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Alignment.

NOTE: AMM 27-31-00/501 contains information that will help you do this ground test.

 - (a) If you could adjust the elevator correctly during the ground test, then you corrected the fault.
 - (b) If you could not adjust the elevator correctly during the ground test, then continue.
- (2) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Alignment.
 - (b) If you could adjust the elevator correctly during the ground test, then you corrected the fault.
 - (c) If you could not adjust the elevator correctly during the ground test, then continue.
- (4) Replace the left outboard elevator PCU, M27111. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Alignment.

812. Elevator Feel Actuator (right) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10703.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do the following steps:
- Disconnect connector DM27021 from the right elevator feel actuator.
 - Clean the pins of the connector.
 - Re-connect connector DM27021.
 - Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
 - If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the excitation and feedback wiring:
- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

777-200/300 FAULT ISOLATION MANUAL

- (b) Remove ACE-C, M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27021 from the right elevator feel actuator.
- (d) Do a wiring check between these pins of connector DM27321AA (for ACE-C) and connector DM27021 (at the elevator feel actuator) (WDM 27-31-15):

DM27321AA	DM27021
pin E4	pin 4
pin D4	pin 6
pin A4	pin 9
pin C4	pin 10
pin B4	pin 2

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27021 to the right elevator feel actuator.
 - 3) Re-install ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tag and close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (4) Replace the right elevator feel actuator, M27021. These are the tasks:
 - Elevator Feel Actuators Removal, AMM TASK 27-31-07-000-801
 - Elevator Feel Actuators - Installation, AMM TASK 27-31-07-400-801
- (a) Re-install ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (b) Remove the safety tag and close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU

EFFECTIVITY

A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

813. Elevator Power Control Unit (Left Inboard) EHV Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11106.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
- 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the feedback wiring:
- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM

- (c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- NOTE:** For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the inboard PCU on the left elevator, M27112. These are the tasks:
- Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

— END OF TASK —

814. Elevator Power Control Unit (Right Inboard) EHV Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11108.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

- 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the outboard PCU on the right elevator, M27211. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

816. Column Position Transducer (Left 2) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12101.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.

777-200/300 FAULT ISOLATION MANUAL

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the excitation and feedback wiring:
- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the ACE-C, M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27135 for column position transducer L2.
- (d) Do a wiring check between these pins of connector DM27321AA (for ACE-C) and connector DM27135 (for the position transducer) (WDM 27-31-12):

DM27321AA	DM27135
pin A10	pin 8
pin A11	pin 9
pin B11	pin 1
pin C10	pin 6
pin C11	pin 5

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27135 for the position transducer.
 - 3) Re-install ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tag and close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU

- 1) A7, ELEV PCU
- (d) Do a check for 28V DC from pin 16 of connector DM27111A at the left outboard elevator PCU, M27111, to structure ground (WDM 27-31-11).
- (e) If there is not 28V DC at pin 16 of connector DM27111A, then do these steps:
 - 1) Remove the left power supply assembly (PSA-L), M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27111A at the left outboard elevator PCU, M27111, and connector DM24101AD at the E1-6 shelf (WDM 27-31-11):

DM27111A	DM24101AD
pin 16	pin 34
- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27111A.
 - c) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - e) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
- 4) If you do not find a problem with the wiring, then do these steps:
 - a) Install a new PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - b) Re-connect connector DM27111A.
 - c) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - d) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If there is 28V DC at pin 16 of connector DM27111A, then continue.
- (4) Do this check of the command wiring:
 - (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the power wiring:
 - (a) Open this circuit breaker and attach safety tag on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-L	ELEV PCU

- (b) Disconnect connector DM27111A from the left outboard elevator power control unit (PCU), M27111.
- (c) Remove the safety tag and close this circuit breaker on the PSA-L, M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-L	ELEV PCU

- (d) Do a check for 28V DC from pin 2 of connector DM27111A at the left outboard elevator PCU, M27111, to structure ground (WDM 27-31-11).
- (e) If there is not 28V DC at pin 2 of connector DM27111A, then do these steps:
 - 1) Remove the PSA-L, M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27111A at the left outboard elevator PCU, M27111, and connector DM24101AD at the E1-6 shelf (WDM 27-31-11):

DM27111A	DM24101AD
pin 2	pin 34

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.

- (d) Do a check for 28V DC from pin 5 of connector DM27111B at the left outboard elevator PCU, M27111, to structure ground (WDM 27-31-12).
- (e) If there is not 28V DC at pin 5 of connector DM27111B, then do these steps:
- 1) Remove the PSA-C, M24301. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27111B at the left outboard elevator PCU, M27111, and connector DM24301AD at the E2-6 shelf (WDM 27-31-12):

DM27111B	DM24301AD
pin 5	pin 34

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27111B.
 - c) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - e) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
- 4) If you do not find a problem with the wiring, then do these steps:
 - a) Install a new PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - b) Re-connect connector DM27111B.
 - c) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - d) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.

Page 260
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- e) If the maintenance message does not show on the ground test display, you corrected the fault.
 - f) If there is 28V DC at pin 5 of connector DM27111B, then continue.
- (4) Do this check of the command wiring:
- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the ACE-C, M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Do a wiring check between these pins of connector DM27321AC at the E2-5 shelf and connector DM27111B at the left outboard elevator PCU, M27111 (WDM 27-31-12):

DM27321AC	DM27111B
pin B15	pin 6

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27111B.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tag and close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- 6) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.

- (b) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (c) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the left outboard elevator PCU, M27111. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

823. Elevator Surface Delta Pressure Signal Difference (left) Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10128.

B. Initial Evaluation

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-16048, 27-11104, 27-10128, 27-10130, 27-27-10120, 27-10121, 27-10124. If more than one of these messages show, then do the fault isolation procedures in this sequence: 27-16048, 27-11104, 27-10128, 27-10130, 27-27-10120, 27-10121, 27-10124. For example, if 27-16048 shows, then do its procedure first.

777-200/300 FAULT ISOLATION MANUAL

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Adjust the left outboard elevator power control unit (PCU), M27111. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Adjust the left inboard elevator PCU, M27112. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (6) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.

777-200/300 FAULT ISOLATION MANUAL

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- NOTE:** For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the left outboard elevator PCU, M27111. These are the tasks:
- Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (9) Replace the left inboard elevator PCU, M27112. These are the tasks:
- Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (10) Do this check of the wiring between the ACE-L1 and left outboard elevator PCU:
- (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU

 - a) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

824. Elevator Power Control Unit (Left) Oscillation Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10130.

B. Initial Evaluation

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-16048, 27-11104, 27-10128, 27-10130, 27-27-10120, 27-10121, 27-10124. If more than one of these messages show, then do the fault isolation procedures in this sequence: 27-16048, 27-11104, 27-10128, 27-10130, 27-27-10120, 27-10121, 27-10124. For example, if 27-16048 shows, then do its procedure first.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Oscillation Monitor.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Adjust the left inboard elevator PCU, M27112. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Oscillation Monitor.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

777-200/300 FAULT ISOLATION MANUAL

- Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Oscillation Monitor.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (9) Replace the left inboard PCU, M27112. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Oscillation Monitor.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

825. Elevator Feel Actuator (left) Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10700.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do the following steps:
 - (a) Disconnect connector DM27020 from the left elevator feel actuator.
 - (b) Clean the pins of the connector.
 - (c) Re-connect connector DM27020.
 - (d) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
 - 1) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - 2) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

D633W103-ARO

Page 270
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

(3) Do this check of the command and engage wiring:

(a) Open these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

(b) Remove ACE-L2, M27122. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

(c) Disconnect connector DM27020 from the left elevator feel actuator.

(d) Do a wiring check between these pins of connector DM27122AA (for ACE-L2) and connector DM27020 (at the elevator feel actuator) (WDM 27-31-15):

<u>DM27122AA</u>		<u>DM27020</u>	
pin A3		pin 14	
pin B3		pin 13	
pin C1		pin 15	
pin B1		pin 5	
pin D1		pin 11	
pin D2		pin 12	

(e) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-connect connector DM27020 to the left elevator feel actuator.
- 3) Re-install ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 4) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.

a) If the maintenance message does not show on the ground test display, you corrected the fault.

(f) If you do not find a problem with the wiring, then continue.

(4) Do this check of the power and ground wiring:

27-31 TASK 825

D633W103-ARO

Page 271
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) Close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR

- (b) Do a check for 28 VDC from pin 1 (+) to pin 8 (-) of connector DM27020 (the connector for the elevator feel actuator) (WDM 27-31-15).
- (c) If there is not 28 VDC between pins 1 and 8 of DM27020, then do these steps:
- 1) Open this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR

- 2) Repair the power and ground wiring between connector DM27020 and the left power management panel, P110.

NOTE: This maintenance message is not caused by an open circuit breaker. There is a different maintenance message that will show if the circuit breaker is open.

- 3) Re-connect connector DM27020 to the left elevator feel actuator.
- 4) Re-install ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 5) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- 6) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.

- a) If the maintenance message does not show on the ground test display, you corrected the fault.

- (d) If there is 28 VDC between pins 1 and 8 of DM27020, then continue:

- (5) Replace the left elevator feel actuator, M27020. These are the tasks:

- Elevator Feel Actuators Removal, AMM TASK 27-31-07-000-801
- Elevator Feel Actuators - Installation, AMM TASK 27-31-07-400-801

- (a) Re-install ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (b) Close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

826. Elevator Power Control Unit (Left Outboard) Ram Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11101.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the feedback wiring:

B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- 6) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.

- If the maintenance message does not show on the ground test display, you corrected the fault.
 - If you do not find a problem with the wiring, then continue.
 - Re-connect connector DM27111A.
 - Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (m) Remove the safety tags and close these circuit breakers on the PSA-L, M24101:

Power Supply Assembly Left, M24101

Row	Col	Number	Name
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- If a fault is found, replace the applicable PCU.
 - If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - If a fault is found, repair or replace the applicable wiring.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - If the maintenance message shows on the ground test display, then continue.
- (5) Replace the left outboard elevator PCU, M27111. These are the tasks:

- Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

827. Column Force Signals from Column Force Transducers Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-12602, 27-12605.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Force Transducer.

NOTE: When you do the Column Force Transducer test on the MAT, monitor the COLUMN FORCE indication on maintenance page 1 of the flight controls maintenance pages. When the MAT tells you to move the column fully forward, do not move it fully forward. Alternatively, move the column forward until the COLUMN FORCE indications (on the maintenance page) show 85.0 to 99.0 (hold it in this position for a minimum of 5 seconds). If you move the column fully forward the test will fail.

- (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
- (b) If no maintenance message shows on the ground test display, then there was an intermittent fault.

————— END OF TASK —————

828. Left Outboard Elevator PCU Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15018.

B. Initial Evaluation

- (1) Open this circuit breaker and attach safety tag on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-L	ELEV PCU

- (a) If the circuit breaker opens when you try to close it, then do the Fault Isolation Procedure below.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

777-200/300 FAULT ISOLATION MANUAL

- (c) Disconnect connector DM27020 from the left elevator feel actuator, M27020.
- (d) Do a wiring check between these pins of connector DM27020 at the elevator feel actuator and connector D11013P at the P110 panel (WDM 27-31-15):

DM27020	D11013P
pin 1	pin 3

- (e) Do a wiring check between this pin of connector D11013J at the P110 panel and terminal 2 at this circuit breaker, C27613 (WDM 27-31-15):

C27613	D11013J
term 2	pin 3

- (f) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27020 to the elevator feel actuator.
 - 3) Re-connect connector D11013P to the P110 panel.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	17	C27631	FLAPS ELEC CTRL RLY PWR
K	18	C27625	AIL TRIM ACTR
K	23	C27613	ELEV FEEL ACTR

- (c) If the maintenance message shows on the ground test display, then continue.

————— **END OF TASK** —————

830. Elevator PCU (Left Inboard) Bypass Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10104.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
- 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the power wiring:
- (a) Open this circuit breaker and attach safety tag on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-C	ELEV PCU

- (b) Disconnect connector DM27112A from the left inboard elevator power control unit (PCU), M27112.
- (c) Remove the safety tag and close this circuit breaker on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-C	ELEV PCU

777-200/300 FAULT ISOLATION MANUAL

- (d) Do a check for 28V DC from pin 16 of connector DM27112A at the left inboard elevator PCU, M27112, to structure ground (WDM 27-31-11).
- (e) If there is not 28V DC at pin 16 of connector DM27112A, then do these steps:
- 1) Remove the center power supply assembly (PSA-C), M24301. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27112A at the left inboard elevator PCU, M27112, and connector DM24301AD at the E2-6 shelf (WDM 27-31-12):
- | DM27112A | DM24301AD |
|------------------|------------------|
| pin 16 | pin 34 |
- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27112A.
 - c) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - e) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If you do not find a problem with the wiring, then do these steps:
 - a) Install a new PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - b) Re-connect connector DM27112A.
 - c) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - d) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If there is 28V DC at pin 16 of connector DM27112A, then continue.
- (4) Do this check of the command wiring:
- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- (1) This task is for maintenance message: 27-11104.

B. Initial Evaluation

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-16048, 27-11104, 27-10128, 27-10130, 27-27-10120, 27-10121, 27-10124. If more than one of these messages show, then do the fault isolation procedures in this sequence: 27-16048, 27-11104, 27-10128, 27-10130, 27-27-10120, 27-10121, 27-10124. For example, if 27-16048 shows, then do its procedure first.

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.

NOTE: If the EICAS status message FLIGHT CONTROL SYS clears during the test steps, ignore the message and continue with the task.

- (a) If one or more maintenance messages show on the ground test display, then do these steps:
- 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.

777-200/300 FAULT ISOLATION MANUAL

- (b) If no maintenance message shows on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do a wiring check for obvious electrical faults in the applicable PCU wiring. (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

833. Right Elevator PCU Ram Transducer Signal Disagreement - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11105.

B. Initial Evaluation

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-16049, 27-11105, 27-10129, 27-10131, 27-27-10122, 27-10123, 27-10125. If more than one of these messages show, then do the fault isolation procedures in this sequence: 27-16049, 27-11105, 27-10129, 27-10131, 27-27-10122, 27-10123, 27-10125. For example, if 27-16049 shows, then do its procedure first.

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.

NOTE: If the EICAS status message FLIGHT CONTROL SYS clears during the test steps, ignore the message and continue with the task.

- (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
- (b) If no maintenance message shows on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do a wiring check for obvious electrical faults in the applicable PCU wiring. (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

————— END OF TASK —————

834. Column Force Transducer (Left) No. 1 Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12600.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Force Transducer.

NOTE: When you do the Column Force Transducer test on the MAT, monitor the COLUMN FORCE indication on maintenance page 1 of the flight controls maintenance pages. When the MAT tells you to move the column fully forward, do not move it fully forward. Alternatively, move the column forward until the COLUMN FORCE indications (on the maintenance page) show 85.0 to 99.0 (hold it in this position for a minimum of 5 seconds). If you move the column fully forward the test will fail.

- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the left 1 actuator control electronics (ACE-L1) recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Force Transducer (see the NOTE in the Initial Evaluation above).
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the excitation and feedback wiring:
 - (a) Disconnect connector DM27139A from the left column force transducer, M27139.
 - (b) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

- (d) Do a check for 28V DC from pin 16 of connector DM27212A at the left outboard elevator PCU, M27212, to structure ground (WDM 27-31-14).
- (e) If there is not 28V DC at pin 16 of connector DM27212A, then do these steps:
- 1) Remove the PSA-R, M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27212A at the right inboard elevator PCU, M27212, and connector DM24201AD at the E5-1 shelf (WDM 27-31-14):
- | | |
|------------------|------------------|
| DM27212A | DM24201AD |
| pin 16 | pin 34 |
- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27212A.
 - c) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - e) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If you do not find a problem with the wiring, then do these steps:
 - a) Install a new PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - b) Re-connect connector DM27212A.
 - c) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - d) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If there is 28V DC at pin 16 of connector DM27212A, then continue.
- (4) Do this check of the command wiring:
- (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

777-200/300 FAULT ISOLATION MANUAL

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the right inboard PCU, M27212. These are the tasks:
- Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

838. Elevator PCU (Right Outboard) Bypass Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10107.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the power wiring:
 - (a) Open this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- (b) Disconnect connector DM27211A from the right outboard elevator power control unit (PCU), M27211.
- (c) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- (d) Do a check for 28V DC from pin 16 of connector DM27211A at the right outboard elevator PCU, M27211, to structure ground (WDM 27-31-13).
- (e) If there is not 28V DC at pin 16 of connector DM27211A, then do these steps:
 - 1) Open the P110 left power management panel.
 - 2) Do a check of 28V DC at load terminal of circuit breaker C27609.
 - 3) If there is not 28V DC at the circuit breaker, then do these steps (WDM 27-31-13):
 - a) Replace this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- b) Re-connect connector DM27211A.
 - c) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - d) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If there is 28V DC at the circuit breaker, then do these steps:
 - a) Open this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the left inboard PCU, M27112. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

840. Elevator PCU (Left Inboard) Blocking Solenoid 1 Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10109.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

**777-200/300
FAULT ISOLATION MANUAL**

(3) Do this check of the power wiring:

- (a) Open this circuit breaker and attach safety tag on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-C	ELEV PCU

- (b) Disconnect connector DM27112A from the left inboard elevator power control unit (PCU), M27112.

- (c) Remove the safety tag and close this circuit breaker on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-C	ELEV PCU

- (d) Do a check for 28V DC from pin 2 of connector DM27112A at the left inboard elevator PCU, M27112, to structure ground (WDM 27-31-12).

- (e) If there is not 28V DC at pin 2 of connector DM27112A, then do these steps:

- 1) Remove the PSA-C, M24301. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
- 2) Do a wiring check between these pins of connector DM27112A at the left inboard elevator PCU, M27112, and connector DM24301AD at the E2-6 shelf (WDM 27-31-12):

DM27112A	DM24301AD
pin 2	pin 34

- 3) If you find a problem with the wiring, then do these steps:

- a) Repair the wiring.
- b) Re-connect connector DM27112A.
- c) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- e) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
- f) If the maintenance message does not show on the ground test display, you corrected the fault.

- 4) If you do not find a problem with the wiring, then do these steps:

- a) Install a new PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- b) Re-connect connector DM27112A.
- c) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.

- 5) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- 6) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (f) Re-connect connector DM27111B.
- (5) Do this check of the ground wiring:
 - (a) Remove the PSA-C, M24301. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (b) Do a wiring check between these pins of connector DM27321AB at the E2-5 shelf and connector DM24301AD at the E2-6 shelf (WDM 27-31-11):

DM27321AB

pin B4 pin 28

DM24301AD

- (c) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the left outboard PCU, M27111. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

842. Elevator PCU (Right Inboard) Blocking Solenoid 2 Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10112.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

(3) Do this check of the power wiring:

(a) Open this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

(b) Disconnect connector DM27212B from the right inboard elevator power control unit (PCU), M27212.

(c) Close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

(d) Do a check for 28V DC from pin 3 of connector DM27212B at the right inboard elevator PCU, M27212, to structure ground (WDM 27-31-13).

(e) If there is not 28V DC at pin 3 of connector DM27212B, then do these steps:

- 1) Open the P110 left power management panel.
- 2) Do a check of 28V DC at load terminal of circuit breaker C27609.
- 3) If there is not 28V DC at the circuit breaker, then do these steps (WDM 27-31-13):
 - a) Replace this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- b) Re-connect connector DM27212B.
 - c) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - d) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
- 4) If there is 28V DC at the circuit breaker, then do these steps:

a) Open this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- b) Repair the wiring between these pins of connector DM27212B at the right inboard elevator PCU, M27212, and the load terminal of circuit breaker C27609 (WDM 27-31-13):

DM27212B	C27609

777-200/300 FAULT ISOLATION MANUAL

(Continued)

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 5) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- 6) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If you do not find a problem with the wiring, then continue.
- (e) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (6) Install a new PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - (a) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (c) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.

Page 298.31
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the right inboard PCU, M27212. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

844. Elevator PCU (Right Outboard) Blocking Solenoid 1 Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10114.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the power wiring:

777-200/300
FAULT ISOLATION MANUAL

- (a) Open this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- (b) Disconnect connector DM27211A from the right outboard elevator power control unit (PCU), M27211.

- (c) Close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- (d) Do a check for 28V DC from pin 2 of connector DM27211A at the right outboard elevator PCU, M27211, to structure ground (WDM 27-31-13).

- (e) If there is not 28V DC at pin 2 of connector DM27211A, then do these steps:

- 1) Open the P110 left power management panel.
- 2) Do a check of 28V DC at load terminal of circuit breaker C27609.
- 3) If there is not 28V DC at the circuit breaker, then do these steps (WDM 27-31-13):

- a) Replace this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- b) Re-connect connector DM27211A.
 - c) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - d) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
- 4) If there is 28V DC at the circuit breaker, then do these steps:

- a) Open this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- b) Repair the wiring between these pins of connector DM27211A at the right outboard elevator PCU, M27211, and the load terminal of circuit breaker C27609 (WDM 27-31-13):

DM27211A	C27609
pin 2	term 2

- c) Re-connect connector DM27211A.

Page 298.33
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- d) Close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- e) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- f) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
- g) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If there is 28V DC at pin 2 of connector DM27211A, then continue.
- (4) Do this check of the command wiring:
- (a) Open these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the ACE-L2, M27122. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Do a wiring check between these pins of connector DM27122AC at the E1-1 shelf and connector DM27211A at the right outboard elevator PCU, M27211 (WDM 27-31-13):

DM27122AC	DM27211A
pin B13	pin 1

- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27211A.
 - 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)

- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the power wiring:
 - (a) Open this circuit breaker and attach safety tag on the right power supply assembly, (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-R	ELEV PCU

- (b) Disconnect connector DM27211B from the right outboard elevator power control unit (PCU), M27211.
- (c) Remove the safety tag and close this circuit breaker on the right power supply assembly, (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-R	ELEV PCU

- (d) Do a check for 28V DC from pin 3 of connector DM27211B at the left outboard elevator PCU, M27211, to structure ground (WDM 27-31-14).
- (e) If there is not 28V DC at pin 3 of connector DM27211B, then do these steps:
 - 1) Remove the PSA-R, M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27211B at the right outboard elevator PCU, M27211, and connector DM24201AD at the E5-1 shelf (WDM 27-31-14):

DM27211B	DM24201AD
pin 3	pin 34

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27211B.

FAULT ISOLATION MANUAL

- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the right outboard PCU, M27211. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

846. Elevator PCU (Left Inboard) Pressure Reducer Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10116.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the power wiring:

Page 298.41
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) Open this circuit breaker and attach safety tag on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-L	ELEV PCU

- (b) Disconnect connector DM27112B from the left inboard elevator power control unit (PCU), M27112.
- (c) Remove the safety tag and close this circuit breaker on the PSA-L, M24101:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-L	ELEV PCU

- (d) Do a check for 28V DC from pin 5 of connector DM27112B at the left inboard elevator PCU, M27112, to structure ground (WDM 27-31-11).
- (e) If there is not 28V DC at pin 5 of connector DM27112B, then do these steps:
- 1) Remove the PSA-C, M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27112B at the left inboard elevator PCU, M27112, and connector DM24101AD at the E1-6 shelf (WDM 27-31-11):

DM27112B	DM24101AD
pin 5	pin 34

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27112B.
 - c) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - e) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
- 4) If you do not find a problem with the wiring, then do these steps:
 - a) Install a new PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - b) Re-connect connector DM27112B.
 - c) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - d) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.

- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (7) Replace the right inboard elevator PCU, M27212. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: Elevator Power Control Unit Test, AMM TASK 27-31-00-700-80127-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

848. Elevator PCU (Right Outboard) Pressure Reducer Solenoid Operated Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10119.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the power wiring:

**777-200/300
FAULT ISOLATION MANUAL**

- (a) Open this circuit breaker and attach safety tag on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-R	ELEV PCU

- (b) Disconnect connector DM27111B from the left outboard elevator power control unit (PCU), M27111.
- (c) Remove the safety tag and close this circuit breaker on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-R	ELEV PCU

- (d) Do a check for 28V DC from pin 5 of connector DM27211B at the right outboard elevator PCU, M27221, to structure ground (WDM 27-31-14).
- (e) If there is not 28V DC at pin 5 of connector DM27211B, then do these steps:
- 1) Remove the PSA-R, M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27211B at the right outboard elevator PCU, M27211, and connector DM24201AD at the E2-6 shelf (WDM 27-31-12):

DM27211B	DM24201AD
pin 5	pin 34

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27211B.
 - c) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - e) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
- 4) If you do not find a problem with the wiring, then do these steps:
 - a) Install a new PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - b) Re-connect connector DM27211B.
 - c) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- d) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, right Elevator Actuator Confidence.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
 - f) If there is 28V DC at pin 5 of connector DM27211B, then continue.
- (4) Do this check of the command wiring:
- (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the ACE-R, M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Do a wiring check between these pins of connector DM27221AC at the E5-2 shelf and connector DM27211B at the right outboard elevator PCU, M27211 (WDM 27-31-14):

DM27221AC	DM27211B
pin B15	pin 6

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27211B.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the right outboard elevator PCU, M27211. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

849. Elevator PCU (Left Inboard) Actuation Confidence Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-10120, 27-10453, 27-10456, 27-10459, 27-10462, 27-10464.

B. Initial Evaluation

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-16048, 27-11104, 27-10128, 27-10130, 27-27-10120, 27-10121, 27-10124. If more than one of these messages show, then do the fault isolation procedures in this sequence: 27-16048, 27-11104, 27-10128, 27-10130, 27-27-10120, 27-10121, 27-10124. For example, if 27-16048 shows, then do its procedure first.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust the left inboard elevator power control unit (PCU), M27112. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the left inboard elevator PCU, M27112. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the ACE-C, M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.

 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust the right inboard elevator power control unit (PCU), M27212. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right inboard elevator PCU, M27212. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU

B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the ACE-R, M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27212A from the right inboard elevator PCU, M27212.
- (d) Do a wiring check between these pins of connector DM27221AC at the E5-2 shelf and connector DM27212A at the right inboard elevator PCU, M27212 (WDM 27-31-14):

<u>DM27221AC</u>	<u>DM27212A</u>
pin A12	pin 5
pin B12	pin 15
pin E12	pin 19
pin E13	pin 7

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27212A.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR

B. Initial Evaluation

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-16049, 27-11105, 27-10129, 27-10131, 27-27-10122, 27-10123, 27-10125. If more than one of these messages show, then do the fault isolation procedures in this sequence: 27-16049, 27-11105, 27-10129, 27-10131, 27-27-10122, 27-10123, 27-10125. For example, if 27-16049 shows, then do its procedure first.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust the right outboard elevator power control unit (PCU), M27211. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right outboard elevator PCU, M27211. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this check of the feedback wiring:

853. Elevator Surface Delta Pressure Signal Difference (Right) Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10129.

B. Initial Evaluation

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-16049, 27-11105, 27-10129, 27-10131, 27-27-10122, 27-10123, 27-10125. If more than one of these messages show, then do the fault isolation procedures in this sequence: 27-16049, 27-11105, 27-10129, 27-10131, 27-27-10122, 27-10123, 27-10125. For example, if 27-16049 shows, then do its procedure first.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Adjust the right outboard elevator power control unit (PCU), M27211. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Adjust the right inboard elevator PCU, M27212. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Exchange the ACE for M27221. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (6) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- NOTE:** For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the right outboard elevator PCU, M27211. These are the tasks:
- Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (9) Replace the right inboard elevator PCU, M27212. These are the tasks:
- Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

 - a) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

854. Elevator Power Control Unit (Right) Oscillation Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10131.

B. Initial Evaluation

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-16049, 27-11105, 27-10129, 27-10131, 27-27-10122, 27-10123, 27-10125. If more than one of these messages show, then do the fault isolation procedures in this sequence: 27-16049, 27-11105, 27-10129, 27-10131, 27-27-10122, 27-10123, 27-10125. For example, if 27-16049 shows, then do its procedure first.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Oscillation Monitor.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Adjust the right inboard elevator PCU, M27212. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Oscillation Monitor.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Oscillation Monitor.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (6) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Oscillation Monitor.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (8) Replace the right outboard elevator PCU, M27211. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Oscillation Monitor.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (9) Replace the right inboard PCU, M27212. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Oscillation Monitor.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message does show on the ground test display, then repeat this procedure.

————— END OF TASK —————

855. Elevator Power Control Unit (Left Inboard) Ram Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11100.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the feedback wiring:

K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- 6) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.
- a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - j) If you do not find a problem with the wiring, then continue.
 - k) Re-connect connector DM27211A.
 - l) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - m) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the right outboard elevator PCU, M27211.

These are the tasks:

Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,

Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message does show on the ground test display, then repeat this procedure.

————— END OF TASK —————

858. Column Position Transducer (Right 1) Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12107.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,

Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the excitation and feedback wiring:
 - (a) Open these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust (rig) the right 2 column position transducer, M27235. To adjust it, do this task: Control Column Adjustment (Rigging), AMM TASK 27-31-00-800-802.
 - (a) If you could adjust the column position transducer to the specified tolerances shown in AMM 27-31-00/501, then do these steps:
 - 1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
 - (b) If you could not adjust the column position transducer to the specified tolerances shown in AMM 27-31-00/501, then continue.
- (2) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27235 for column position transducer L2.
- (d) Do a wiring check between these pins of connector DM27321AA (for ACE-C) and connector DM27235 (for the position transducer) (WDM 27-31-12):

DM27321AA	DM27235
pin K9	pin 6
pin J9	pin 5

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.

27-31 TASK 862

D633W103-ARO

Page 298.90
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 2) Re-connect connector DM27235 for the position transducer.
- 3) Re-install ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 4) Remove the safety tag and close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - f) If you do not find a problem with the wiring, then continue.
 - g) Re-connect connector DM27235 for the position transducer.
- (3) Install a new ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Remove the safety tag and close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
- (c) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right 1 column position transducer, M27234.

These are the tasks:

Column Position Transducers Removal, AMM TASK 27-31-04-000-801,
Column Position Transducers Installation, AMM TASK 27-31-04-400-801.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

863. Column Position Transducer (Right 3) Position Signal Does Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12112.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust (rig) the right 3 column position transducer, M27236. To adjust it, do this task: Control Column Adjustment (Rigging), AMM TASK 27-31-00-800-802.
- (a) If you could adjust the column position transducer to the specified tolerances shown in AMM 27-31-00/501, then do these steps:
- 1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
 - 2) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 3) If the maintenance message shows on the ground test display, then continue.
- (b) If you could not adjust the column position transducer to the specified tolerances shown in AMM 27-31-00/501, then continue.
- (2) Do this check of the feedback wiring:
- (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27236 for column position transducer R3.

777-200/300 FAULT ISOLATION MANUAL

- (c) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right 1 column position transducer, M27234.
These are the tasks:
Column Position Transducers Removal, AMM TASK 27-31-04-000-801,
Column Position Transducers Installation, AMM TASK 27-31-04-400-801.
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Position.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

864. Left Inboard Elevator PCU Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15017.

B. Initial Evaluation

- (1) Open this circuit breaker and attach safety tag on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	7	CBA7-C	ELEV PCU

- (a) If the circuit breaker opens when you try to close it, then do the Fault Isolation Procedure below.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:
 - (a) Open this circuit breaker and attach safety tag on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- (b) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- (c) Remove the PSA-C, M24301, from the E2-6 shelf.

777-200/300 FAULT ISOLATION MANUAL

- (d) Disconnect connector DM27112A from the left inboard elevator power control unit (LIB PCU), M27112.
- (e) Do a wiring check between these pins of connector DM27112A for the LIB PCU and connector DM24301AD at the PSA-C (WDM 27-31-11):

DM27112A	DM24301AD
pin 16	pin 34
pin 2	pin 34

- (f) Disconnect connector DM27111B from the left outboard elevator power control unit (LOB PCU), M27111.
- (g) Do a wiring check between these pins of connector DM27112A for the LIB PCU and connector DM24301AD at the PSA-C (WDM 27-31-11):

DM27112A	DM24301AD
pin 3	pin 34
pin 5	pin 34

- (h) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connectors DM27112A and DM27111B to the PCUs.
 - 3) Re-install the PSA-C, M24301.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

Row	Col	Number	Name
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- 5) Remove the safety tag and close this circuit breaker on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
D	8	CBD8-C	PFC BAT INTLK

- 6) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (i) If you do not find a problem with the wiring, then continue.
- (2) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- (e) If the maintenance message shows on the ground test display, then continue.
- (3) Measure the resistance between these pins of connector DM27112A on the LIB PCU, M27112 (WDM 27-31-11).
- (a) Pin 2 and pin 1, specified resistance 50 - 70 ohms.
- (b) Pin 16 and pin 17, specified resistance 65-85 ohms.
- (c) If the resistance is not in the range specified for each pair of pins, then do these steps:
- 1) Replace the left inboard elevator PCU, M27112. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (d) If the resistance is in the range specified for each pair of pins, then continue.
- (4) Measure the resistance between these pins of connector DM27111B on the LOB PCU, M27111 (WDM 27-31-11).
- (a) Pin 3 and pin 2, specified resistance 50-70 ohms.
- (b) Pin 5 and pin 6, specified resistance 65-85 ohms.
- (c) If the resistance is not in the range specified for each pair of pins, then do these steps:
- 1) Replace the left outboard elevator PCU, M27111. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (d) If the resistance is in the range specified for each pair of pins, then continue.
- (5) Replace the PSA-C, M24301. These are the tasks:
- Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
 - Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (b) If the maintenance message does show on the ground test display, then repeat this procedure.

————— END OF TASK —————

865. Right Inboard Elevator PCU Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15019.

B. Initial Evaluation

- (1) Close this circuit breaker on the right power supply assembly (PSA-R), M24201:

- Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (d) If the resistance is in the range specified for each pair of pins, then continue.
- (5) Replace the PSA-R, M24201. These are the tasks:
 - Power Supply Assembly Installation, AMM TASK 24-35-01-400-801
 - Power Supply Assembly Removal, AMM TASK 24-35-01-000-801
- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (b) If the maintenance message does show on the ground test display, then repeat this procedure.

————— **END OF TASK** —————

866. Elevator Control Column (Captain's or First Officer's) Does Not Move Freely

A. Initial Evaluation

- (1) Move the Captain's control column fully aft and fully forward.
 - (a) Make sure the Captain's control column moves freely.

B. Fault Isolation Procedure

- (1) Examine the torque tube and the control column installation for unwanted objects and damaged components.
- (2) Make sure the control column is at the neutral position.
 - (a) Install rig pins E1, E2 and E3.
 - (b) If the rig pins can not be installed freely, do this task: Control Column Adjustment (Rigging), AMM TASK 27-31-00-800-802.
 - (c) Make sure the control column moves freely.
 - (d) If the control column moves freely, you corrected the fault.
- (3) If the control column does not move freely, disconnect the control rods for the elevator feel and centering mechanism, do this task: Elevator Feel and Centering Mechanism Removal, AMM TASK 27-31-06-000-801.
 - (a) Make sure the control column moves freely.
 - (b) If the control column moves freely, repair or replace the elevator feel and centering mechanism, do this task: Elevator Feel and Center Mechanism Installation, AMM TASK 27-31-06-400-801.
 - (c) If the control column moves freely, you corrected the fault.
- (4) If the control column does not move freely, do this task: Control Column Backdrive - System Test, AMM TASK 22-11-00-730-805.
 - (a) Repair or replace the backdrive actuator, if it is necessary, do this task: Control Column Backdrive Actuator Installation, AMM TASK 22-11-05-400-801.
 - (b) If the control column moves freely, you corrected the fault.
 - (c) If the control column does not move freely, then repeat this procedure.

777-200/300 FAULT ISOLATION MANUAL

867. Elevator Control Column Tension is too Light

A. Initial Evaluation

- (1) Move the Captain's control column fully aft and fully forward.
 - (a) Make sure the Captain's control column moves freely.

B. Fault Isolation Procedure

- (1) Replace the elevator feel actuator, do this task: Elevator Feel Actuators - Installation, AMM TASK 27-31-07-400-801.
- (2) If the control column tension is still too light, replace the elevator feel and centering mechanism.
 - (a) Do this task: Elevator Feel and Center Mechanism Installation, AMM TASK 27-31-06-400-801.

————— END OF TASK —————

868. Left Inboard Elevator PCU Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10100.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-10000, 27-10002, 27-10013, 27-10100, 27-10200, 27-10202, 27-10400, 27-10500, 27-10504, 27-10506, 27-10507, 27-10509, and 27-10513. If there are more than six of the following maintenance messages show, then the failures could be caused by a poor performing hydraulic pump. Perform the following procedure to isolate the failure. Turn off both center ACMPs and turn on both center ADPs. Cycle the flight control surfaces; spoilers, ailerons, elevators and rudder and monitor hydraulic pressure indication and check for faults. If faults are present, check the center ADPs, center ACMPs, filters, and check valves for FOD. Repeat test with center ACMPs on and center ADPs off.

- (3) Repeat the above procedure for the following maintenance messages: 27-10000, 27-10002, 27-10013, 27-10200, 27-10202, 27-10400, 27-10500, 27-10504, 27-10506, 27-10507, 27-10509, and 27-10513.

C. Fault Isolation Procedure

- (1) Do this check of the command wiring:

EFFECTIVITY
ARO ALL

Page 298.100
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-8 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27112A from the left inboard elevator power control unit (LIB PCU).
- (d) Do a wiring check between these pins of connector DM27321AC at the E2-5 and connector DM27112A at the LIB PCU (WDM 27-31-12):

DM27321AC	DM27112A
pin A14	pin 9
pin B14	pin 8

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27112A to the PCU.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the center power supply assembly (PSA-C), M24301, on the E2-8 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
- a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (f) If you do not find a problem with the wiring, then continue.

- (2) Exchange the ACE for M27321. This is the task:

EFFECTIVITY
ARO ALL

D633W103-ARO

Page 298.101
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the left inboard elevator PCU, M27112. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then repeat this procedure.

————— **END OF TASK** —————

869. Right Inboard Elevator PCU Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10102.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.

Page 298.102
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

- 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
- 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-10001, 27-10003, 27-10014, 27-10102, 27-10300, 27-10302, 27-10402, 27-10502, 27-10505, 27-10508, and 27-10511. If there are more than six of the following maintenance messages show, then the failures could be caused by a poor performing hydraulic pump. Perform the following procedure to isolate the failure. Turn off the right ACMP and turn on the right EDP. Cycle the flight control surfaces; spoilers, ailerons, elevators and rudder and monitor hydraulic pressure indication and check for faults. If faults are present, check the right EDP, right ACMP, filters, and check valves for FOD. Repeat test with right ACMP on and right EDP off.

- (3) Repeat the above procedure for the following maintenance messages: 27-10001, 27-10003, 27-10014, 27-10300, 27-10302, 27-10402, 27-10502, 27-10505, 27-10508, and 27-10511.

C. Fault Isolation Procedure

- (1) Do this check of the command wiring:
- (a) Disconnect connector DM27212A from the right inboard elevator power control unit (RIB PCU).
 - (b) Do a wiring check between these pins of connector DM27221AC at the E5-2 and connector DM27212A at the RIB PCU (WDM 27-31-14):

DM27221AC	DM27212A
pin A14	pin 9
pin B14	pin 8

- (c) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27212A to the PCU.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (d) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the right inboard elevator PCU, M27212. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then repeat this procedure.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the command wiring:
 - (a) Open these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the left 2 actuator control electronics (ACE-L2, M27122. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27211A from the right outboard elevator power control unit (ROB PCU).
- (d) Do a wiring check between these pins of connector DM27122AC at the E1-1 and connector DM27122A at the ROB PCU (WDM 27-31-13):

<u>DM27122AC</u>	<u>DM27211A</u>
pin A14	pin 9
pin B14	pin 8

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27211A to the PCU.
 - 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (f) Close these circuit breakers:

Left Power Management Panel, P110

- 1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (g) If you do not find a problem with the wiring, then continue.
- (2) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the right outboard elevator PCU, M27211. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

871. Elevator Power Control Unit (Left Inboard) Delta Pressure Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11110.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

D633W103-ARO

Page 298.109
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (3) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the inboard PCU on the left elevator, M27112.

These are the tasks:

Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,

Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (b) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then repeat this procedure.

————— **END OF TASK** —————

872. Elevator Power Control Unit (Right Inboard) Delta Pressure Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11112.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

(1) Do this check of the feedback wiring:

- (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27212A from the inboard power control unit (PCU) on the right elevator.
- (d) Do a wiring check between these pins of connector DM27221AC (for ACE-R) and connector DM27212A (at the elevator PCU) (WDM 27-31-14):

DM27221AC	DM27212A
pin A12	pin 5
pin B12	pin 15

- (e) Check for short to ground for these pins:

DM27212A	GROUND
pin 5	ground
pin 15	ground

- (f) Check for a short between these pins:

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Force Transducer.

NOTE: When you do the Column Force Transducer test on the MAT, monitor the COLUMN FORCE indication on maintenance page 1 of the flight controls maintenance pages. When the MAT tells you to move the column fully forward, do not move it fully forward. Alternatively, move the column forward until the COLUMN FORCE indications (on the maintenance page) show 85.0 to 99.0 (hold it in this position for a minimum of 5 seconds). If you move the column fully forward the test will fail.

- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,

Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Force Transducer (see the NOTE in the Initial Evaluation above).
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the excitation and feedback wiring:
 - (a) Disconnect connector DM27139B from the left column force transducer, M27139.
 - (b) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (c) Remove the ACE-C, M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Do a wiring check between these pins of connector DM27321AA at the E2-5 shelf and connector DM27139B at the left column force transducer, M27139 (WDM 23-31-12):

777-200/300 FAULT ISOLATION MANUAL

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Force Transducer (see the NOTE in the Initial Evaluation above).
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

878. Column Force Transducer (Right) No. 1 Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12603.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Force Transducer.

NOTE: When you do the Column Force Transducer test on the MAT, monitor the COLUMN FORCE indication on maintenance page 1 of the flight controls maintenance pages. When the MAT tells you to move the column fully forward, do not move it fully forward. Alternatively, move the column forward until the COLUMN FORCE indications (on the maintenance page) show 85.0 to 99.0 (hold it in this position for a minimum of 5 seconds). If you move the column fully forward the test will fail.

- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Force Transducer (see the NOTE in the Initial Evaluation above).
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the excitation and feedback wiring:
 - (a) Disconnect connector DM27239A from the right column force transducer, M27239.
 - (b) Open these circuit breakers:

C. Fault Isolation Procedure

- (1) Examine the left inboard elevator power control unit (PCU), M27112, for incorrect installation or mechanical failure.
 - (a) If you find problem with the installation or mechanical failure, then do these steps:
 - 1) Repair the problem.
 - 2) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - (b) If you do not find a problem with the installation and mechanical failure, then continue.
- (2) Adjust the left inboard elevator PCU, M27112. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR

777-200/300 FAULT ISOLATION MANUAL

- (c) Disconnect connector DM27212A from the inboard power control unit (PCU) on the right elevator.
- (d) Do a wiring check between these pins of connector DM27221AC (for ACE-R) and connector DM27212A (at the elevator PCU) (WDM 27-31-14):

DM27221AC	DM27212A
pin E13	pin 7
pin E12	pin 19

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27212A to the inboard PCU on the right elevator.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 5) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (g) Re-connect connector DM27212A to the inboard PCU on the right elevator.
- (4) Install a new ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.

D633W103-ARO

Page 298.131
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (5) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the right inboard elevator PCU, M27212.

These are the tasks:

Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,

Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then (27-31 TASK 882).

————— **END OF TASK** —————

882. Elevator PCU (Right Outboard) Ram Transducer Position Signal Out of Range - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16032.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.
 - (a) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - (b) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Examine the right outboard elevator power control unit (PCU), M27211, for incorrect installation or mechanical failure.
 - (a) If you find problem with the installation or mechanical failure, then do these steps:
 - 1) Repair the problem.
 - 2) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
 - (b) If you do not find a problem with the installation and mechanical failure, then continue.
- (2) Adjust the right outboard elevator PCU, M27211. To adjust it, do this task: Elevator Adjustment (Rigging), AMM TASK 27-31-00-800-801.
 - (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.

K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the left 2 actuator control electronics (ACE-L2), M27122. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27211A from the outboard power control unit (PCU) on the right elevator.
- (d) Do a wiring check between these pins of connector DM27122AC (for ACE-L2) and connector DM27211A (at the elevator PCU) (WDM 27-31-13):

DM27122AC	DM27211A
pin E13	pin 7
pin E12	pin 19

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27211A to the outboard PCU on the right elevator.
 - 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R

- (a) Close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
- NOTE:** For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.
- (a) If a fault is found, replace the applicable PCU.
- (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
- (c) If a fault is found, repair or replace the applicable wiring.
- (d) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If the maintenance message shows on the ground test display, then continue.
- (6) Replace the right outboard elevator PCU, M27211.

These are the tasks:

Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,

Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then (27-31 TASK 881).

————— **END OF TASK** —————

883. Left Elevator Surface is Inoperative - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16048.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
- (a) If one or more maintenance messages show on the ground test display, then do these steps:
- 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.

EFFECTIVITY

777-200/300 FAULT ISOLATION MANUAL

- (2) Exchange the ACE for M27121 and M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Actuator Confidence.
 - (a) If the same maintenance message “follows” the ACE that was exchanged, then the fault is isolated to the ACE. You need to replace that ACE with a known good unit and perform the Actuator Confidence test again.
 - (b) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - (c) If no maintenance message shows on the ground test display (this means that the test passes), then do these steps:

NOTE: If the test passes, then one of the ACEs, that controls the left elevator, has a fault that can be dangerous. The two ACEs must be replaced to prevent this danger.

 - 1) Replace the ACEs recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803

————— **END OF TASK** —————

884. Right Elevator Surface is Inoperative - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16049.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (a) If one or more maintenance messages show on the ground test display, then do these steps:
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - (b) Exchange the ACE for M27122 and M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - 1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - a) If the same maintenance message “follows” the ACE that was exchanged, then the fault is isolated to the ACE. You need to replace that ACE with a known good unit and perform the Actuator Confidence test again.
 - (c) If no maintenance message shows on the ground test display, (this means that the test passes), then do these steps:

NOTE: If the test passes, then one of the ACEs that controls the right elevator has a fault that can be dangerous. The two ACEs must be replaced to prevent this danger.
 - (d) Replace the ACE's recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801

EFFECTIVITY

777-200/300 FAULT ISOLATION MANUAL

- Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (e) Do the ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 1) If the elevator surface is still inoperative, and no maintenance message shows on the ground test display, (this means that the test passes), then do this task: Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801.

NOTE: It is necessary to change both PCUs because this condition can be caused by a faulty delta P sensor in one of the right elevator PCUs. The delta P sensors are not line replaceable units (LRUs), so the entire PCU will have to be replaced.
- (f) Run the full actuation confidence test to isolate which elevator PCU is causing the message.
 - 1) If the ACTUATOR PRESS SNSR EICAS message appears after replacing both ACEs and PCUs then you need to check the wiring between the ACEs and PCUs. Check the connectors and grounds for corrosion and check the wiring for continuity.

NOTE: If there is no problem with either the ACEs or PCUs (or they have all been replaced with new units, then the problem must be in the wiring between them.

————— **END OF TASK** —————

885. Elevator PCU (Left Inboard) Failed the ACE Monitor Test - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16050.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (4) Replace the left inboard elevator PCU, M27112.

These are the tasks:

Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,

Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Control Electronics Monitors.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— END OF TASK —————

886. Right Elevator Surface Actuation Confidence Test Failed - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-10125, 27-10467, 27-10470, 27-10473, 27-10476, 27-10481.

B. Initial Evaluation

NOTE: Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display on the MAT. Look for these messages: 27-16049, 27-11105, 27-10129, 27-10131, 27-27-10122, 27-10123, 27-10125. If more than one of these messages show, then do the fault isolation procedures in this sequence: 27-16049, 27-11105, 27-10129, 27-10131, 27-27-10122, 27-10123, 27-10125. For example, if 27-16049 shows, then do its procedure first.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Examine the two elevator power control units (PCU) for the right elevator to see if they are mechanically disconnected from the elevator or the stabilizer.
 - (a) If one of the elevator PCUs is disconnected or damaged, then do these steps:

D633W103-ARO

Page 298.138
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 1) Replace the applicable elevator PCU, M27211 or M27212.
These are the tasks:
Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,
Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.
 - a) Repair or replace all other damaged parts.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
- (2) Do this test of the outboard PCU for the right elevator:
- (a) Set the C and L FLT CONTROL HYD VALVE PWR switches for the TAIL to the SHUTOFF position.
 - (b) Set the R FLT CONTROL HYD VALVE PWR switch for the TAIL to the NORM position.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (c) For the right hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (d) Find the two ELEVATOR POSITION indications that are on the right side of the flight controls maintenance page 2 (on the MFD). Monitor the bottom of the two indications. At the same time look at the elevator to see if it moves.
- (e) Push and hold one of the control columns fully forward.
 - 1) Look at the right elevator and make sure it is fully down.
NOTE: You do not need to measure the elevator movement. It is satisfactory if you can see that it moved down.
 - 2) Make sure the ELEVATOR POSITION indication shows -2.80 to -3.20.
 - 3) Make sure the ELEVATOR DELTA PRESS indication (the bottom one on the right side of the maintenance page) shows +1700 to +3500.
NOTE: This shows that the elevator PCU is fully retracted.
- (f) Pull and hold one of the control columns fully aft.
 - 1) Look at the right elevator and make sure it is fully up.
NOTE: You do not need to measure the elevator movement. It is satisfactory if you can see that it moved up.
 - 2) Make sure the ELEVATOR POSITION indication shows +3.30 to +3.70.
 - 3) Make sure the ELEVATOR DELTA PRESS indication (the bottom one on the left side of the maintenance page) shows -1700 to -3500.
- (g) Release the control column.
 - 1) Make sure the right elevator is in the neutral position.
NOTE: You do not need to measure the elevator position. It is satisfactory if you can see that it is approximately level.

- 2) Make sure the ELEVATOR POSITION indication shows -0.10 to +0.10.
- (h) If the elevator or the indications did not operate correctly (as specified in the steps above), then do these steps:
 - 1) Replace the outboard PCU for the right elevator, M27211.
These are the tasks:
Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,
Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
- (i) If the elevator and the indications operated correctly, then continue.
- (3) Do this test of the inboard PCU on the right elevator:
 - (a) Set the C and R FLT CONTROL HYD VALVE PWR switches for the TAIL to the SHUTOFF position.
 - (b) Set the L FLT CONTROL HYD VALVE PWR switch for the TAIL to the NORM position.

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (c) For the left hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (d) Find the two ELEVATOR POSITION indications that are on the right side of the flight controls maintenance page 2 (on the MFD). Monitor the top of the two indications. At the same time look at the elevator to see if it moves.
- (e) Push and hold one of the control columns fully forward.
 - 1) Look at the right elevator and make sure it is fully down.
NOTE: You do not need to measure the elevator movement. It is satisfactory if you can see that it moved down.
 - 2) Make sure the ELEVATOR POSITION indication shows -2.80 to -3.20.
 - 3) Make sure the ELEVATOR DELTA PRESS indication (the top one on the right side of the maintenance page) shows +1700 to +3500.
- (f) Pull and hold one of the control columns fully aft.
 - 1) Look at the right elevator and make sure it is fully up.
NOTE: You do not need to measure the elevator movement. It is satisfactory if you can see that it moved up.
 - 2) Make sure the ELEVATOR POSITION indication shows +3.30 to +3.70.
 - 3) Make sure the ELEVATOR DELTA PRESS indication (the top one on the right side of the maintenance page) shows -1700 to -3500.
- (g) Release the control column.

D633W103-ARO

Page 298.140
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 1) Make sure the right elevator is in the neutral position.
NOTE: You do not need to measure the elevator position. It is satisfactory if you can see that it is approximately level.
- 2) Make sure the ELEVATOR POSITION indication shows -0.10 to +0.10.
- (h) If the elevator or the indications did not operate correctly (as specified in the steps above), then do these steps:
 - 1) Replace the inboard PCU on the right elevator, M27212.
These are the tasks:
Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,
Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.
 - 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - 3) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (i) If the elevator and the indications operated correctly, then continue.
- (4) Replace the outboard PCU on the right elevator, M27211.
These are the tasks:
Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,
Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.
NOTE: The steps above try to find which PCU is bad. But, the steps cannot find all of the possible problems that the PCUs can have. Thus, if you did not find a problem when you did the steps above, do these steps to replace the PCUs.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the inboard PCU on the right elevator, M27212.
These are the tasks:
Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,
Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Actuator Confidence.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

887. Left Inboard Elevator PCU Multiple Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11114.

EFFECTIVITY

27-31 TASKS 886-887

D633W103-ARO

Page 298.141
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.
 - 2) If the fault occurs on the subsequent flights, then do this task: Intermittent Fault for Primary Flight Controls - Fault Isolation, 27-98 TASK 803

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Elevator Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Do this check of the excitation wiring for the power control unit (PCU) transducers:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the left inboard elevator PCU, M27112.

These are the tasks:

Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,

Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Left Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

888. Right Inboard Elevator PCU Multiple Transducer Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11116.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Elevator Position.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.
 - 1) Monitor the airplane to see if the fault occurs on the subsequent flights.

- (i) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27211A to the PCU.
 - 3) Re-connect connector DM27212B.
 - 4) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 5) Close these circuit breakers:

Left Power Management Panel, P110

Row	Col	Number	Name
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R

27-31 TASK 889

D633W103-ARO

Page 298.153
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (4) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)

NOTE: For flight control PCU wiring, a short is considered a resistance of 50,000 Ohms or less.

- (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (5) Replace the right outboard elevator PCU, M27211.

These are the tasks:

Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801,

Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Right Aileron Position.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

890. Column Force Transducer (left 2) Transducer Signal Out of Range - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-16026.

B. Initial Evaluation

NOTE: This message can only occur when you do the Column Force Transducer ground test on the MAT. It will occur if the ground test is failed. If the ground test is passed the maintenance message will not show on the ground test display.

C. Fault Isolation Procedure

- (1) Adjust the left 2 column force transducer, M27139. To adjust it, do this task: Control Column Adjustment (Rigging), AMM TASK 27-31-00-800-802.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Column Force Transducer.

NOTE: When you do the Column Force Transducer test on the MAT, monitor the COLUMN FORCE indication on maintenance page 1 of the flight controls maintenance pages. When the MAT tells you to move the column fully forward, do not move it fully forward. Alternatively, move the column forward until the COLUMN FORCE indications (on the maintenance page) show 85.0 to 99.0 (hold it in this position for a minimum of 5 seconds). If you move the column fully forward the test will fail.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

893. Right Outboard Elevator PCU Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15020.

B. Initial Evaluation

- (1) Close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)

- (a) If the circuit breaker opens when you try to close it, then do the Fault Isolation Procedure below.
- (2) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (3) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the power wiring:

- (a) Open this circuit breaker and attach safety tag on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-R	PFC BAT INTLK

- (b) Open this circuit breaker and install safety tag:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
P	3	C24672	R PSA TRU PWR

- (c) Remove the PSA-R, M24201, from the E5-1 shelf.
- (d) Disconnect connector DM27212A from the right inboard elevator power control unit (RIB PCU), M27212.
- (e) Do a wiring check between these pins of connector DM27212A for the RIB PCU and connector DM24201AD at the PSA-R (WDM 27-31-11):

DM27212A		DM24201AD
pin 16		pin 34
pin 2		pin 34

- (f) Disconnect connector DM27211B from the right outboard elevator power control unit (ROB PCU), M27211.
- (g) Do a wiring check between these pins of connector DM27211B for the ROB PCU and connector DM24201AD at the PSA-R (WDM 27-31-11):

- (h) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connectors DM27212A and DM27211B to the PCUs.
 - 3) Re-install the PSA-R, M24201.
 - 4) Remove the safety tag and close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
P	3	C24672	R PSA TRU PWR

- 5) Remove the safety tag and close this circuit breaker on the right power supply assembly (PSA-R), M24201:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-R	PFC BAT INTLK

- 6) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
 - (i) If you do not find a problem with the wiring, then continue.
- (2) Do this task for obvious electrical faults in the applicable PCU wiring: (Power Control Unit (PCU) Wiring and Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-801)
 - (a) If a fault is found, replace the applicable PCU.
 - (b) If no faults are found with the PCU wiring, then do this task to check for applicable PCU airplane wiring: (Power Control Unit (PCU) Airplane Wiring Resistance and Low Voltage Insulation Resistance (LVIR) Checks, AMM TASK 27-00-00-700-802)
 - (c) If a fault is found, repair or replace the applicable wiring.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
- (3) Measure the resistance between these pins of connector DM27212A on the RIB PCU, M27212 (WDM 27-31-11).
 - (a) Pin 2 and pin 1, specified resistance 50-70 ohms.
 - (b) Pin 16 and pin 17, specified resistance 65-85 ohms.
 - (c) If the resistance is not in the range specified for each pair of pins, then do these steps:
 - 1) Replace the right inboard elevator PCU, M27212. These are the tasks:
 - Elevator Power Control Units (PCU) - Removal, AMM TASK 27-31-09-000-801
 - Elevator Power Control Units (PCU) - Installation, AMM TASK 27-31-09-400-801
 - 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

894. Elevator Feel Actuator (Right) Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15035.

B. Initial Evaluation

- (1) Open this circuit breaker and attach safety tag on the center power supply assembly (PSA-C), M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	6	CBB6-C	ELEV FEEL (C)

- (a) If the circuit breaker opens when you try to close it, then do this procedure below: Fault Isolation Procedure - Circuit Breaker Open.
- (2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
- (a) If the maintenance message shows on the ground test display, then do this check:
- 1) If the circuit breaker is open, then do this procedure below: Fault Isolation Procedure - Circuit Breaker Open.
 - 2) If the circuit breaker stayed closed, then do this procedure below: Fault Isolation Procedure - Circuit Breaker Closed.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure - Circuit Breaker Closed

- (1) Replace the PSA-C, M24301.

These are the tasks:

Power Supply Assembly Removal, AMM TASK 24-35-01-000-801,

Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Elevator Feel System.
- (b) If the maintenance message does not show on the ground test display, you corrected the fault.

D. Fault Isolation Procedure - Circuit Breaker Open

- (1) Do this check of the power wiring:

- (a) Open this circuit breaker and attach safety tag on the center power supply assembly (PSA-C), M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- (b) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
M	5	C24676	C PSA BAT PWR
M	15	C24674	C PSA TRU PWR

- (c) Remove the PSA-C, M24301.
- (d) Disconnect connector DM27021 from the right elevator feel actuator, M27021.
- (e) Do a wiring check between these pins of connector DM27021 at the elevator feel actuator and connector DM24301AD at the PSA-C (WDM 27-31-15):

<u>DM27021</u>	<u>DM24301AD</u>
pin 1	pin 24

- (f) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27021 to the elevator feel actuator.
 - 3) Re-install the PSA-C.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27140. This is the task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (3) Replace the left 1 pitch rate transducer, M27140. These are the tasks:
 - Pitch Rate Sensor - Removal, AMM TASK 27-31-11-000-801
 - Pitch Rate Sensor - Installation, AMM TASK 27-31-11-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Pitch Rate Transducer.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If failures of the pitch rate transducers have occurred when running the above ground test on the MAT, use the following procedure to identify any actual failed components:
 - a) If the Pitch Rate Transducer System Test fails, with any of the following Maintenance Messages, then check Chapter 27 Primary Flight Controls Existing Faults:
 - 27-13070
 - 27-13071
 - 27-13072
 - 27-13073
 - 27-13074
 - <1> If these messages do not appear in Existing Faults, then there are no faulty pitch rate transducers, or the fault is intermittent.
 - b) If an "ACE internal fault or is in Direct Mode" message, as follows, were indicated in the test results screen, follow the applicable FIM Task:
 - 27-16041
 - 27-16042
 - 27-16043
 - 27-16044
 - c) If any of the Pitch Rate Transducer maintenance messages are present in Existing Faults after the test, then cycle the power to all three PFCs. Re-check Chapter 27 Primary Flight Controls Existing Faults. If any of the Pitch Rate Transducer maintenance messages are still present, then follow the applicable FIM 27-31 TASKS.
 - d) If one of the following four "ACE internal fault" messages is present in Existing Faults after the ground test, pressurize all three hydraulic systems:

- 27-13000
- 27-13001
- 27-13002
- 27-13003

<1> If the fault persists, follow the appropriate FIM Task. If the fault clears, it was a nuisance induced by the test.

NOTE: The above sequence of (check Existing Faults, cycle the PFC power, and pressurize hydraulics) applies to subsequent executions of the Pitch Rate Transducer Test while isolating or trouble shooting the problem.

NOTE: The pitch rate transducer values may be viewed on Page 1 of the Flight Controls Maintenance Page. This may help confirm a faulty sensor/wiring/ACE path in the case of failures due to large static offsets.

- 3) If the maintenance message shows on the ground test display, then continue.
- (4) Exchange the ACE for M27121. This is the task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
- (5) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Pitch Rate Transducer.
 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If failures of the pitch rate transducers have occurred when running the above ground test on the MAT, use the following procedure to identify any actual failed components:
 - a) If the Pitch Rate Transducer System Test fails, with any of the following Maintenance Messages, then check Chapter 27 Primary Flight Controls Existing Faults:
 - 27-13070
 - 27-13071
 - 27-13072
 - 27-13073
 - 27-13074
 - <1> If these messages do not appear in Existing Faults, then there are no faulty pitch rate transducers, or the fault is intermittent.
 - b) If an "ACE internal fault or is in Direct Mode" message, as follows, were indicated in the test results screen, follow the applicable FIM Task:
 - 27-16041
 - 27-16042
 - 27-16043

777-200/300 FAULT ISOLATION MANUAL

- c) If any of the Pitch Rate Transducer maintenance messages are present in Existing Faults after the test, then cycle the power to all three PFCs. Re-check Chapter 27 Primary Flight Controls Existing Faults. If any of the Pitch Rate Transducer maintenance messages are still present, then follow the applicable FIM 27-31 TASKS.
- d) If one of the following four “ACE internal fault” messages is present in Existing Faults after the ground test, pressurize all three hydraulic systems:
- 27-13000
 - 27-13001
 - 27-13002
 - 27-13003
- <1> If the fault persists, follow the appropriate FIM Task. If the fault clears, it was a nuisance induced by the test.
- NOTE:** The above sequence of (check Existing Faults, cycle the PFC power, and pressurize hydraulics) applies to subsequent executions of the Pitch Rate Transducer Test while isolating or trouble shooting the problem.
- NOTE:** The pitch rate transducer values may be viewed on Page 1 of the Flight Controls Maintenance Page. This may help confirm a faulty sensor/wiring/ACE path in the case of failures due to large static offsets.
- 3) If the maintenance message shows on the ground test display, then continue.
- (6) Do this check of the feedback wiring:
- (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left 1 actuator control electronics (ACE-L1), M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27140 from the left 1 pitch rate transducer, M27140.
- (d) Do a wiring check between these pins of connector DM27121AB (for ACE-L1) and connector DM27140 (at the left 1 pitch rate transducer) (WDM 27-31-16):

DM27121AB		DM27140
pin K08		pin 2
pin K09		pin 3
pin K10		pin 10

— END OF TASK —

901. Pitch Rate Transducer (Right 2) Signal Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13072.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Pitch Rate Transducer.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation procedure below.
 - (b) If failures of the pitch rate transducers have occurred when running the above ground test on the MAT, use the following procedure to identify any actual failed components:
 - 1) If the Pitch Rate Transducer System Test fails, with any of the following Maintenance Messages, then check Chapter 27 Primary Flight Controls Existing Faults:
 - 27-13070
 - 27-13071
 - 27-13072
 - 27-13073
 - 27-13074
 - a) If these messages do not appear in Existing Faults, then there are no faulty pitch rate transducers, or the fault is intermittent.
 - 2) If an "ACE internal fault or is in Direct Mode" message, as follows, were indicated in the test results screen, follow the applicable FIM Task:
 - 27-16041
 - 27-16042
 - 27-16043
 - 27-16044
 - 3) If any of the Pitch Rate Transducer maintenance messages are present in Existing Faults after the test, then cycle the power to all three PFCs. Re-check Chapter 27 Primary Flight Controls Existing Faults. If any of the Pitch Rate Transducer maintenance messages are still present, then follow the applicable FIM 27-31 TASKS.

- <1> If these messages do not appear in Existing Faults, then there are no faulty pitch rate transducers, or the fault is intermittent.
- b) If an “ACE internal fault or is in Direct Mode” message, as follows, were indicated in the test results screen, follow the applicable FIM Task:
- 27-16041
 - 27-16042
 - 27-16043
 - 27-16044
- c) If any of the Pitch Rate Transducer maintenance messages are present in Existing Faults after the test, then cycle the power to all three PFCs. Re-check Chapter 27 Primary Flight Controls Existing Faults. If any of the Pitch Rate Transducer maintenance messages are still present, then follow the applicable FIM 27-31 TASKS.
- d) If one of the following four “ACE internal fault” messages is present in Existing Faults after the ground test, pressurize all three hydraulic systems:
- 27-13000
 - 27-13001
 - 27-13002
 - 27-13003
- <1> If the fault persists, follow the appropriate FIM Task. If the fault clears, it was a nuisance induced by the test.
- NOTE: The above sequence of (check Existing Faults, cycle the PFC power, and pressurize hydraulics) applies to subsequent executions of the Pitch Rate Transducer Test while isolating or trouble shooting the problem.
- NOTE: The pitch rate transducer values may be viewed on Page 1 of the Flight Controls Maintenance Page. This may help confirm a faulty sensor/wiring/ACE path in the case of failures due to large static offsets.
- 3) If the maintenance message shows on the ground test display, then continue.
- (4) Exchange the ACE for M27321. This is the task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (5) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Pitch Rate Transducer.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If failures of the pitch rate transducers have occurred when running the above ground test on the MAT, use the following procedure to identify any actual failed components:

- a) If the Pitch Rate Transducer System Test fails, with any of the following Maintenance Messages, then check Chapter 27 Primary Flight Controls Existing Faults:
- 27-13070
 - 27-13071
 - 27-13072
 - 27-13073
 - 27-13074
- <1> If these messages do not appear in Existing Faults, then there are no faulty pitch rate transducers, or the fault is intermittent.
- b) If an "ACE internal fault or is in Direct Mode" message, as follows, were indicated in the test results screen, follow the applicable FIM Task:
- 27-16041
 - 27-16042
 - 27-16043
 - 27-16044
- c) If any of the Pitch Rate Transducer maintenance messages are present in Existing Faults after the test, then cycle the power to all three PFCs. Re-check Chapter 27 Primary Flight Controls Existing Faults. If any of the Pitch Rate Transducer maintenance messages are still present, then follow the applicable FIM 27-31 TASKS.
- d) If one of the following four "ACE internal fault" messages is present in Existing Faults after the ground test, pressurize all three hydraulic systems:
- 27-13000
 - 27-13001
 - 27-13002
 - 27-13003
- <1> If the fault persists, follow the appropriate FIM Task. If the fault clears, it was a nuisance induced by the test.
- NOTE: The above sequence of (check Existing Faults, cycle the PFC power, and pressurize hydraulics) applies to subsequent executions of the Pitch Rate Transducer Test while isolating or trouble shooting the problem.
- NOTE: The pitch rate transducer values may be viewed on Page 1 of the Flight Controls Maintenance Page. This may help confirm a faulty sensor/wiring/ACE path in the case of failures due to large static offsets.
- 3) If the maintenance message shows on the ground test display, then continue.
- (6) Do this check of the feedback wiring:

D633W103-ARO

Page 298.185
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27240 from the right 2 pitch rate transducer, M27240.
- (d) Do a wiring check between these pins of connector DM27321AB (for ACE-C) and connector DM27240 (at the right 2 pitch rate transducer) (WDM 27-31-16):

DM27321AB	DM27240
pin K08	pin 2
pin K09	pin 3
pin K10	pin 10

- (e) Do a wiring check between these pins of connector DM27321AC (for ACE-C) and connector DM27240 (at the right 2 pitch rate transducer) (WDM 27-31-16):

DM27321AC	DM27240
pin C13	pin 7
pin C15	pin 5
pin C14	pin 4

- (f) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27240 to the right 2 pitch rate transducer, M27240.
 - 3) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the PSA-C, M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Transducer Pitch Transducer.
- If the maintenance message does not show on the ground test display, then you corrected the fault.
 - If failures of the pitch rate transducers have occurred when running the above ground test on the MAT, use the following procedure to identify any actual failed components:
 - If the Pitch Rate Transducer System Test fails, with any of the following Maintenance Messages, then check Chapter 27 Primary Flight Controls Existing Faults:
 - 27-13070
 - 27-13071
 - 27-13072
 - 27-13073
 - 27-13074

<a> If these messages do not appear in Existing Faults, then there are no faulty pitch rate transducers, or the fault is intermittent.
 - If an "ACE internal fault or is in Direct Mode" message, as follows, were indicated in the test results screen, follow the applicable FIM Task:
 - 27-16041
 - 27-16042
 - 27-16043
 - 27-16044
 - If any of the Pitch Rate Transducer maintenance messages are present in Existing Faults after the test, then cycle the power to all three PFCs. Re-check Chapter 27 Primary Flight Controls Existing Faults. If any of the Pitch Rate Transducer maintenance messages are still present, then follow the applicable FIM 27-31 TASKS.
 - If one of the following four "ACE internal fault" messages is present in Existing Faults after the ground test, pressurize all three hydraulic systems:
 - 27-13000
 - 27-13001
 - 27-13002
 - 27-13003

<a> If the fault persists, follow the appropriate FIM Task. If the fault clears, it was a nuisance induced by the test.

NOTE: The above sequence of (check Existing Faults, cycle the PFC power, and pressurize hydraulics) applies to subsequent executions of the Pitch Rate Transducer Test while isolating or trouble shooting the problem.

NOTE: The pitch rate transducer values may be viewed on Page 1 of the Flight Controls Maintenance Page. This may help confirm a faulty sensor/wiring/ACE path in the case of failures due to large static offsets.

- 6) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Upper Gust Suppression Transducer Signal Problems - Fault Isolation, 27-21 TASK 852.

————— **END OF TASK** —————

902. Pitch Rate Transducer (Right 1) Signal Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-13073.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Pitch Rate Transducer.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation procedure below.
- (b) If failures of the pitch rate transducers have occurred when running the above ground test on the MAT, use the following procedure to identify any actual failed components:
- 1) If the Pitch Rate Transducer System Test fails, with any of the following Maintenance Messages, then check Chapter 27 Primary Flight Controls Existing Faults:
 - 27-13070
 - 27-13071
 - 27-13072
 - 27-13073
 - 27-13074

a) If these messages do not appear in Existing Faults, then there are no faulty pitch rate transducers, or the fault is intermittent.
 - 2) If an “ACE internal fault or is in Direct Mode” message, as follows, were indicated in the test results screen, follow the applicable FIM Task:
 - 27-16041
 - 27-16042
 - 27-16043
 - 27-16044
 - 3) If any of the Pitch Rate Transducer maintenance messages are present in Existing Faults after the test, then cycle the power to all three PFCs. Re-check Chapter 27 Primary Flight Controls Existing Faults. If any of the Pitch Rate Transducer maintenance messages are still present, then follow the applicable FIM 27-31 TASKS.
 - 4) If one of the following four “ACE internal fault” messages is present in Existing Faults after the ground test, pressurize all three hydraulic systems:
 - 27-13000
 - 27-13001
 - 27-13002

————— **END OF TASK** —————

904. Noise and Vibration During On-Ground Elevator Control Surface Movement - Fault Isolation

A. Description

When the elevator is moved quickly through large position changes, a sudden noise may be heard in the aft galley or the fuselage may shudder. These on-ground noises and vibrations are considered normal for this airplane due to the sudden changes in flow of hydraulic fluid as the elevator PCU quickly starts and stops.

B. Possible Causes

- (1) Sudden changes in fluid volume and flow as the PCU starts to move quickly and then suddenly stops.

NOTE: This is also known as hydraulic hammer.

- (2) Some other unidentified hydraulic or structural problem.

EFFECTIVITY
ARO ALL

27-31 TASKS 903-904

D633W103-ARO

Page 298.194
Sep 05/2017

777-200/300
FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

- (1) Do the following steps to determine if the noise or vibrations are due to hydraulic hammer from sudden PCU movement.
 - (a) Pressurize the main hydraulic power system. To pressurize the hydraulics, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801
 - (b) Slowly move the control column aft from the neutral position until it touches the aft stop.
 - (c) Move the control column slowly forward until it touches the forward stop.
 - (d) Move the control column slowly aft from the forward stop to the neutral position and release the control column.
- (2) If you can still hear the noise or feel a vibration when the control column is moved at the slow speed, additional inspections of the elevator PCUs and surrounding structure may be necessary.

D. Repair Confirmation

- (1) If you cannot hear a noise or feel vibration when the elevator is moved at slow speeds, then there is no problem with the elevator PCU or surrounding structure. If the noise and vibrations only occur when the elevator is moved quickly, then this is acceptable and normal system operation. There is no problem.
 - (a) Remove the hydraulic system power, as necessary. Do the following: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

777-200/300 FAULT ISOLATION MANUAL

801. Pitch Trim Channel (Right) Trim Up Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10001.

B. Description

- (1) The Right Pitch Trim Channel does not follow the Trim UP command.

C. Possible Causes

- (1) Right Stab Auto Shutdown Relay, K27008
- (2) Right Stabilizer Trim Control Module (STCM) Shutoff Valve, V6
- (3) Right STCM Trim-up Control Solenoid Valve, V2
- (4) Right STCM Trim-up Arm Solenoid Valve, V4
- (5) Right Actuator Control Electronics (ACE), M27221
- (6) Left ACE, M27122
- (7) Right STCM, M27213
- (8) Right Stabilizer Position Module, M27031
- (9) Wiring

D. Circuit Breakers

- (1) These are the primary circuit breakers related to the fault:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	24	C27612	STAB TRIM ARM-R

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	2	CBB2-R	STAB TRIM

E. Related Data

- (1) WDM 27-41-13
- (2) WDM 27-41-14
- (3) WDM 27-41-15

F. Initial Evaluation

- (1) Do the Stabilizer Mechanical Trim Rate Test (Right Hydraulic System), AMM TASK 27-41-00-700-808.
 - (a) If the Horizontal Stabilizer does not move up or down when you use the Right Hydraulic System, or it moves too slowly, then there is a mechanical problem with the Right Channel of the Stabilizer Trim System (STCM, Hydraulic Motor, or Hydraulic Brake). You must repair the mechanical problem(s) before you do the troubleshooting of the Electrical System below.
 - 1) If the MAT shows ACTIVE for the maintenance message, do the Fault Isolation Procedure below.

777-200/300 FAULT ISOLATION MANUAL

- 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there could be a problem related to the Electrical System. Do this Ground Test on the Maintenance Access Terminal (MAT): 27 Primary Flight Controls, SYSTEM TEST, Stabilizer System (How to Do a Ground Test, AMM TASK 45-10-00-740-819).
 - a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent problem.

G. Fault Isolation Procedure

- (1) Do this check to make sure that the Right Hydraulic System STCM Shutoff Valve, V6 is open.
 - (a) Find the STCM Shutoff Valve, V6 (AMM TASK 27-41-10-000-801).
 - (b) Make sure that the lever on the valve is in the OPEN position.
 - 1) If the lever is not in the OPEN position, then do these steps:
 - a) Disconnect connector DM27213A from the STCM Shutoff Valve (WDM 27-41-13).
 - b) Do a check for 28 VDC between pins 3 and 1 of connector DM27213A.
 - <1> If you find 28V DC, replace the Right Stab Auto Shutdown Relay, K27008.
 - <a> Connect connector DM27213A to the STCM Shutoff Valve.
 - Do the Repair Confirmation at the end of this task.
 - <2> If you do not find 28V DC, continue.
 - c) Do a check for 28 VDC between pins 2 and 1 of connector DM27213A.
 - <1> If you find 28V DC, replace the Right Stabilizer Trim Control Module (STCM) Shutoff Valve, V6. These are the tasks:
 - STCM Shutoff Valve Removal, AMM TASK 27-41-10-000-801
 - STCM Shutoff Valve Installation, AMM TASK 27-41-10-400-801
 - <a> Do the Repair Confirmation at the end of this task.
 - <2> If you do not find 28V DC between pins 2 and 1 of connector DM27213A, replace the Right Stab Auto Shutdown Relay, K27008.
 - <a> Connect connector DM27213A to the STCM Shutoff Valve.
 - Do the Repair Confirmation at the end of this task.
 - I. If the problem continues, examine and repair the wiring between the STCM and the Right Stab Auto Shutdown Relay, K27008 as follows (WDM 27-41-13):

NOTE: The remaining power wiring (from the circuit breaker to the cutout switch and from the switch to the relay) is monitored by the ACE. If this wiring (including the switch and the circuit breaker) were bad, there would be a different maintenance message.

- (6) Exchange the ACE for M27221. This is the task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
 - (a) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 1) Do the Repair Confirmation at the end of this task.
- (7) Exchange the ACE for M27122. This is the task: This is the task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
 - (a) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 1) Do the Repair Confirmation at the end of this task.
- (8) Replace the Right STCM, M27213. These are the tasks:
 - Stabilizer Trim Control Modules (STCM) Removal, AMM TASK 27-41-07-000-801
 - Stabilizer Trim Control Modules (STCM) Installation, AMM TASK 27-41-07-400-801
 - (a) Do the Repair Confirmation at the end of this task.
- (9) Replace the Right SPM, M27031. These are the tasks:
 - Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801
 - Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801
 - (a) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.
 - (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

802. Pitch Trim Channel (Right) Trim Down Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10003.

B. Description

- (1) The Right Pitch Trim Channel does not follow the Trim DOWN command.

C. Possible Causes

- (1) Right Stab Auto Shutdown Relay, K27008
- (2) Right Stabilizer Trim Control Module (STCM) Shutoff Valve, V6
- (3) Right STCM Trim-Down Control Solenoid Valve, V1
- (4) Right STCM Trim-up Arm Solenoid Valve, V3
- (5) Right ACE, M27221
- (6) Left ACE, M27122

803. Right Stabilizer Uncommanded Trim Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10005.

EFFECTIVITY
ARO ALL

27-41 TASKS 802-803

D633W103-ARO

Page 209
May 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the Extended Maintenance, Present Leg Faults display on the MAT for maintenance messages 27-10018, 27-10020, 27-10022, and 27-10024.
- (2) If maintenance message 27-10018 shows in Present Leg Faults, then do these steps:
 - (a) Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - (b) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (c) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (d) Replace the trim-up control solenoid valve, V002, on the right stabilizer trim control module, M27213. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
- (3) If maintenance message 27-10020 shows in Present Leg Faults, then do these steps:
 - (a) Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - (b) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (c) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (d) Exchange the ACE for M27213. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (e) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (f) Replace the trim-down control solenoid valve, V001, on the right stabilizer trim control module, M27213p. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801

- (4) If maintenance message 27-10022 shows in Present Leg Faults, then do these steps:
- Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - Exchange the ACE for M27213. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - Replace the trim-up arm solenoid valve, V004, on the right stabilizer trim control module, M27213. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
- (5) If maintenance message 27-10024 shows in Present Leg Faults, then do these steps:
- Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - Exchange the ACE for M27213. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - Replace the trim-down arm solenoid valve, V003, on the right stabilizer trim control module, M27213. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
- (6) If two of the specified maintenance messages showed in Present Leg Faults and you did the steps given above for each one, you corrected the fault.
- (7) If none of the specified maintenance messages showed in Present Leg Faults, then do these steps:
- Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Replace the ACE recommended by the previous step. These are the tasks:

804. Right Stabilizer Auto Shutdown Relay Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10008.

EFFECTIVITY
ARO ALL

27-41 TASKS 803-804

D633W103-ARO

Page 212
May 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

NOTE: This fault will occur if the "R" stabilizer cutout switch, on the control stand, is in the CUTOUT position.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of the stabilizer cutout switch, S27054:
 - (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Remove the safety tag and close this circuit breaker on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:
 - 1) B2, STAB TRIM
- (d) Set STAB R CUTOUT switch on the pilots' control stand to the CUTOUT position.
- (e) Do a check for 28 VDC from pin A4 of connector DM27221AC to structure ground (WDM 27-41-13).
- (f) If there is 28 VDC at pin A4 of DM27221AC, then do these steps:
 - 1) Replace the stabilizer cutout switch R, S27054. These are the tasks:
 - Stabilizer Cutout Switches Removal, AMM TASK 27-41-04-000-801
 - Stabilizer Cutout Switches Installation, AMM TASK 27-41-04-400-801
 - 2) Install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 3) Remove the safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR

B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 3) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (c) If there is not 28 VDC at pin A4 of DM27221AC, then continue.
- (3) Do a check for 28 VDC from terminal VA01 of terminal block TB4152 to structure ground (WDM 27-41-13).
- (4) If there is 28 VDC at terminal VA01 of terminal block TB4152, then do these steps:
 - (a) Open this circuit breaker on the PSA-R, M24201:
 - 1) B2, STAB TRIM
 - (b) Remove the right stab auto shutdown relay, K27008 (WDM 27-41-13).

NOTE: This relay is on the top of the AEO160 disconnect panel, which is above the forward access door, 112AL.

- 3) Re-install PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If you do not find a problem with the wiring, then continue.
- (12) Install a new PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— **END OF TASK** —————

805. Right Stabilizer Auto Shutdown Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10010.

B. Possible Causes

- (1) Stabilizer Trim Control Module (STCM) Shutoff Valve, V006
- (2) Right Stabilizer Auto Shutdown Relay, K27008
- (3) Wiring

C. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

D. Fault Isolation Procedure

- (1) Do this check of the stabilizer's response to the control switches:
 - (a) Pressurize the right hydraulic system.
 - (b) Make sure that the left and center hydraulic systems are not pressurized.
 - (c) Set the PRIMARY FLIGHT COMPUTERS switch on the P5 overhead panel to DISC.
 - (d) Set the STAB R switch on the P10 pilots' control stand to CUTOUT.
 - (e) Look for movement of the stabilizer during the subsequent two steps.
 - 1) Push and hold the STAB TRIM switches on either control wheel to the NOSE UP position for 5 seconds.
 - 2) Push and hold the STAB TRIM switches on either control wheel to the NOSE DN position for 5 seconds.
 - (f) Release the pressure in the right hydraulic system.

777-200/300 FAULT ISOLATION MANUAL

- (g) Set the STAB R switch on the P10 pilots' control stand to NORM.
- (2) If the stabilizer did not move up or down when you operated the switches, then do these steps:
- (a) Remove the right stab auto shutdown relay, K27008.
- (b) Do a check for 28V DC from pins X1, A2, and B2 of connector DK27008 to structure ground (WDM 27-41-13):
- (c) If there is not 28V DC at pins X1, A2, or B2 of DK27008, then do these steps:
- 1) Repair the applicable wiring between these pins of connector DK27008 at the right stab auto shutdown relay, K27008, and terminal block TB4152 in the EE bay (STA 153, WL 205, and BL R009) (WDM 27-41-13):

DK27008	TB4152
pin A2	term VA01
pin X1	term VA01
pin B2	term VB03

- 2) Disconnect connector DM27221AC and do a wiring check between the following pins:

DK27008	TB4152
pin B1	term VA03

DK27008	DM27221AC
pin X2	pin A4

- 3) Repair wires as necessary.
- 4) Reconnect connector DM27221AC.
- 5) Re-install the right stab auto shutdown relay, K27008.
- 6) Do the Repair Confirmation at the end of the task.
- (d) If there is 28V DC at pins X1, A2, and B2, then continue.
- (e) Install a new right stab auto shutdown relay, K27008.
- (f) Do the Repair Confirmation at the end of the task.
- (3) If the stabilizer moved up or down when you operated the switches, then do these steps:
- (a) Disconnect connector DM27213A from the right stabilizer trim control module (STCM), M27213.
- (b) Do a wiring check between these contacts of connector DM27313A at the right STCM and terminal block TB4152 in the EE bay (STA 153, WL 205, and BL R009) (WDM 27-41-13):

DM27213A	TB4152
pin 3	term VA03

- (c) Do a continuity check from pin 1 of connector DM27213A to structure ground (WDM 27-41-13).
- (d) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
- 2) Re-connect connector DM27213A.

Page 220
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 3) Do the Repair Confirmation at the end of the task.
- (e) If you do not find a problem with the wiring, then do these steps:
 - 1) Do these tasks to replace the shutoff valve, V006, on the right STCM, M27213:
 - a) STCM Shutoff Valve Removal, AMM TASK 27-41-10-000-801
 - b) STCM Shutoff Valve Installation, AMM TASK 27-41-10-400-801
 - 2) Re-connect connector DM27213A.
 - 3) Do the Repair Confirmation at the end of the task.

E. Repair Confirmation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then continue the Fault Isolation Procedure at the subsequent step.
 - (b) If the maintenance message does not show on the ground test display, you corrected the problem.

————— END OF TASK —————

806. Stabilizer Trim Control Module (Center) Trim Up Arm Solenoid Valve Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10017.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the solenoid valve, V4, on the center stabilizer trim control module (STCM), M27313.
These are the tasks:
STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,
STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.
NOTE: This solenoid valve controls the trim up function.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Do this check for electrical power to the solenoid valve:

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf and install safety tags:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left 1 actuator control electronics (ACE-L1), M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Remove the safety tag and close this circuit breaker on the PSA-L, M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	2	CBB2-L	STAB TRIM

- (d) Do a check for 28 VDC between pin A2 (+) of connector DM27121AC on the ACE-L1 and pin B8 (-) of connector DM27121AB on the ACE-L1 (WDM 27-41-12).
- (e) If there is 28 VDC between pin A2 of DM27121AC and pin B8 of DM27121AB, then do these steps:

- 1) Open this circuit breaker on PSA-L, M24101, on the E1-6 shelf and install safety tag:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	2	CBB2-L	STAB TRIM

- 2) Install a new ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 3) Remove the safety tag and close this circuit breaker on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	2	CBB2-L	STAB TRIM

- 4) Make sure that these circuit breakers are closed on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

B	8	CBB8-L	RUD TRIM ACTR (L)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If there is not 28 VDC between pin A2 of DM27121AC and pin B8 of DM27121AB, then continue.
- (3) Do this check of the wiring to the solenoid:
- (a) Remove PSA-L, M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
- (b) Measure the resistance between pin 17 of connector DM24101AD at the E1-6 and pin A2 of connector DM27121AC at the E1-5 (WDM 27-41-12).
- NOTE:** The solenoid valve has a resistance of approximately 70 ohms.
- (c) If the resistance between pin 17 of DM24101AD and pin A2 of DM27121AC is not 50-100 ohms, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Make sure that these circuit breakers are closed on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If you did not find a problem with the wiring, then continue.
 - c) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (6) Install a new PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

————— END OF TASK —————

807. Stabilizer Position Module (Left) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11000.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.

NOTE: This ground test unlatches the fault, but does not do a test of the system. This test will show FAILED, ignore this failure.

- (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.

C. Fault Isolation Procedure

- (1) Do this check of the excitation and feedback wiring:

777-200/300 FAULT ISOLATION MANUAL

808. Stabilizer Position Modules Have Multiple Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11006.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: This maintenance message only occurs if there is more than one problem with the stabilizer position system. When you correct one problem, this message can go away and a different message (27-11003, 27-11004, or 27-11005) can show. This is good because it shows you only have one problem remaining. When this occurs, do the Fault Isolation Procedure for the new maintenance message.

- (1) Adjust the left, right, and center stabilizer position modules. To adjust the stabilizer position modules, do this task: Horizontal Stabilizer Position Module and Travel Limiter Adjustment, AMM TASK 27-48-00-820-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,

Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the left stabilizer position module, M27015.

These are the tasks:

Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801,

Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Exchange the ACE for M27321. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (6) Replace the ACE recommended by the previous step.
- These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (7) Replace the center stabilizer position module recommended by the previous step.
- These are the tasks:
- Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801,
Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801.
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (8) Exchange the ACE for M27221. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (9) Replace the ACE recommended by the previous step.
- These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (10) Replace the right stabilizer position module, M27031.
- These are the tasks:
- Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801,
Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801.
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.

777-200/300 FAULT ISOLATION MANUAL

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

809. Pitch Trim Switches (Left) Nose Up Switches Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12400.

B. Initial Evaluation

- (1) Push the two pitch trim switches on the captain's control wheel down (airplane nose up). Hold them down for a minimum of five seconds.

NOTE: If you hold the switches down for less than five seconds, the maintenance message will stay latched.

- (a) Release the pitch trim switches.
- (2) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

NOTE: This fault can occur if a person moves only one of the two pitch trim switches on the captain's control wheel.

- (3) If the MAT shows LATCHED or ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.

C. Fault Isolation Procedure

- (1) Operate the two pitch trim switches on the captain's control wheel and make sure they both return to the center position.
 - (a) If the switches do not return to the center position, then do these steps:
 - 1) Replace the pitch trim switches, S27039.
These are the tasks:
Pitch Trim Switches Removal, AMM TASK 27-41-01-000-801,
Pitch Trim Switches Installation, AMM TASK 27-41-01-400-801.
 - 2) Push the two pitch trim switches on the captain's control wheel up. Hold them up for a minimum of five seconds.
 - 3) Release the pitch trim switches.
 - 4) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - (b) If the switches do return to the center position, then continue.
- (2) Do this check of the pitch trim switch circuits.
 - (a) Look at page 3 of the maintenance pages for the flight controls on the MFD.
 - 1) Make sure the CAPT PITCH TRIM ARM indication for ACE-L1 shows NO. If the indication does not show NO, then the pitch trim arm circuit has a problem.
 - 2) Make sure the CAPT PITCH TRIM CTRL indication for ACE-C shows NO. If the indication does not show NO, then the pitch trim control circuit has a problem.
 - (b) Push the two pitch trim switches on the captain's control wheel down (airplane nose up).
 - (c) Look at page 3 of the maintenance pages for the flight controls on the MFD.
 - 1) Make sure the CAPT PITCH TRIM ARM indication for ACE L1 shows UP. If the indication does not show UP, then the pitch trim arm circuit has a problem.

- 2) Make sure the CAPT PITCH TRIM CTRL indication for ACE C shows UP. If the indication does not show UP, then the pitch trim control circuit has a problem.
- (d) Release the pitch trim switches.
- (3) If the pitch trim arm circuit has a problem, then do these steps:
 - (a) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (b) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

 - 1) Push the two pitch trim switches on the captain's control wheel down (airplane nose up). Hold them down for a minimum of five seconds.
 - 2) Release the pitch trim switches.
 - 3) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - 4) If the MAT shows LATCHED for the maintenance message, then continue.
 - (c) Replace the pitch trim switches, S27039.

These are the tasks:

Pitch Trim Switches Removal, AMM TASK 27-41-01-000-801,
Pitch Trim Switches Installation, AMM TASK 27-41-01-400-801.

 - 1) Push the two pitch trim switches on the captain's control wheel down (airplane nose up). Hold them down for a minimum of five seconds.
 - 2) Release the pitch trim switches.
 - 3) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - 4) If the MAT shows LATCHED for the maintenance message, then continue.
 - (d) Repair the wiring between the pitch trim switch and these pins of connector DM27121AC (the connector for the ACE-L1) (WDM 27-41-12):

NOTE: The colors specified in this table are for the wires that connect to the pitch trim switch wires at the center of the control wheel.

NOTE: Disconnect only one wire at a time so you cannot connect the wrong wires together.

Switch Wire	DM27121AC
red	pin K15
blue	pin J14
yellow	pin J15

- 1) Push the two pitch trim switches on the captain's control wheel down (airplane nose up). Hold them down for a minimum of five seconds.
- 2) Release the pitch trim switches.
- 3) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.

Page 231
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

810. Stabilizer Position Module (Center) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11001.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.

NOTE: This ground test unlatches the fault, but does not do a test of the system. This test will show FAILED, ignore this failure.

- (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.

C. Fault Isolation Procedure

- (1) Do this check of the excitation and feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27030 from the center stabilizer position module.
- (d) Do a wiring check between these contacts of connector DM27321AC (for ACE-C) and connector DM27030 (at the stabilizer position module) (WDM 27-41-11):

DM27321AC		DM27030	
pin B1		pin 3	
pin B2		pin 2	
pin C1		pin 4	
pin C2		pin 1	
pin C3		pin 5	

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27030 to the stabilizer position module.

EFFECTIVITY
ARO ALL

 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.

————— END OF TASK —————

811. Stabilizer Position Module (Right) Position Transducer Feedback Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11002.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.

NOTE: This ground test unlatches the fault, but does not do a test of the system. This test will show FAILED, ignore this failure.

- (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.

C. Fault Isolation Procedure

- (1) Do this check of the excitation and feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (b) Remove the right actuator control electronics (ACE-R), M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27031 from the right stabilizer position module.
- (d) Do a wiring check between these contacts of connector DM27221AC (for ACE-R) and connector DM27031 (at the stabilizer position module) (WDM 27-41-13):

- (3) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.

————— END OF TASK —————

812. STCM-R Hydraulic Brake Pressure Switch Fault - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10014.

B. Description

- (1) The Right Stabilizer Trim Control Module Hydraulic Brake Pressure Switch is inoperative.

C. Possible Causes

- (1) Right STCM Brake Pressure Switch, S1
- (2) Right Stabilizer Trim Control Module, M27213
- (3) Right ACE, M27221
- (4) Wiring
- (5) Right Stabilizer Hydraulic Motor

D. Related Data

- (1) WDM 27-41-13

E. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this task for the related Stabilizer Hydraulic Motor: Stabilizer Mechanical Trim Rate Test (Right Hydraulic System), AMM TASK 27-41-00-700-808.

NOTE: Poor performing Stabilizer Hydraulic Motors have resulted in setting Brake Pressure Switch faults. This test verifies proper operation of the related Stabilizer Hydraulic Motor.

- (3) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the test stopped before it was completed (the test would not complete and must be aborted), then, do this task: Horizontal Stabilizer Position Module and Travel Limiter Adjustment, AMM TASK 27-48-00-820-801.

777-200/300 FAULT ISOLATION MANUAL

- 1) Do the Stabilizer System Test again.
- (b) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (c) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent problem.

F. Fault Isolation Procedure

- (1) Replace the Brake Pressure Switch, S1, on the Right Stabilizer Trim Control Module (STCM-R), M27213. These are the tasks:
 - STCM Brake Pressure Switch Removal, AMM TASK 27-41-09-000-801
 - STCM Brake Pressure Switch Installation, AMM TASK 27-41-09-400-801
- (a) Do the Repair Confirmation procedure at the end of this task.
- (2) Do these steps to make sure that the Brake Pressure Switch operates correctly when operated from the Pitch Trim Switches or the Alternate Pitch Trim Levers using the Right Hydraulic System.
 - (a) Do this task: Supply Electrical Power, AMM TASK 24-22-00-860-805.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (b) For the Right Hydraulic System only, do one of the following tasks:

NOTE: The center hydraulic power must be off.

NOTE: The right ACMP does not have enough flow.

 - 1) (Left or Right Hydraulic System Pressurization with an Engine-Driven Pump (EDP), AMM TASK 29-11-00-860-804)
 - 2) (Main Hydraulic System Pressurization with a Portable Hydraulic Cart, AMM TASK 29-11-00-860-802).
- (c) Monitor page 3 of the maintenance pages for the Flight Controls on the Multi-Functional Display (MFD) (AMM TASK 31-61-00-800-804).
 - 1) Make sure these indications show.

NOTE: Ignore the other indications on maintenance page 3.

	ACE			
	L1	L2	C	R
STCM BRK RELEASE PRESS	--	--	NO	NO

- (d) Push the two Pitch Trim Switches on the Captain's Control Wheel up and hold it for approximately 5 seconds.

Page 240
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the solenoid valve, V5, on the right stabilizer trim control module (STCM-R), M27213.

These are the tasks:

STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,

STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.

NOTE: This solenoid valve controls the trim rate function.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.
 - (c) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (2) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (3) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,

Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.
 - (c) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (4) Do this check of the power wiring:
 - (a) Disconnect connector DM27213D from the STCM-R.
 - (b) Do a check for 28V DC from pin 2 of connector DM27213D to structure ground (WDM 27-41-14).
 - (c) If there is not 28V DC at pin 2 of connector DM27213D, then do these steps:
 - 1) Re-connect connector DM27213D.
 - 2) Repair the wiring between these pins of connector DM27213D at the STCM-R, M23213, and the load terminal of circuit breaker C27612 (WDM 27-41-14):

DM27213D

C27612

pin 2 term 2

- 3) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 4) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.
- (d) If there is 28 VDC at pin 2 of connector DM27213D, then continue.

Page 241
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

(5) Do this check of the command wiring:

(a) Open these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

(b) Remove the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

(c) Do a wiring check between these pins of connector DM27213D at the STCM-R, M27213, and connector DM27122AC at the E1-1 shelf (WDM 27-41-14):

DMM27213D

pin 1

DM27122AC

pin A4

(d) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-connect connector DM27213D.
- 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 4) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR

K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.

6) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.

(e) If you do not find a problem with the wiring, then continue.

(f) Reconnect connector DM27213D.

(6) Do this check of the ground wiring:

(a) Do a continuity check between pin B8 of connector DM27122AB at the E1-1 shelf and structure ground (WDM 27-41-14).

(b) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.

K	28	C27608	ACE-L2 PWR

- 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- 5) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.

————— END OF TASK —————

814. STCM-R Trim Down Solenoid Valve Command Problems from ACE-L2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10022.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the solenoid valve, V3, on the right stabilizer trim control module (STCM-R), M27213.

These are the tasks:

STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,

STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.

NOTE: This solenoid valve arms the trim down function.

 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step.

- (1) This task is for maintenance message: 27-12404.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure.
- (2) If the MAT shows LATCHED for the maintenance message, then do these steps:
 - (a) Do this task: Pitch Trim Switch Test, AMM TASK 27-41-00-700-803.
 - (b) If there were problems when you did the steps of the test, then do the Fault Isolation Procedure below.
 - (c) If there were no problems when you did the steps of the test, then no maintenance action is necessary. The captain or first officer made an operational error of the airplane during the flight.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this task: Pitch Trim Switch Test, AMM TASK 27-41-00-700-803.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
 - (c) If the MAT shows LATCHED for the maintenance message, then continue.
- (3) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (a) Do this task: Pitch Trim Switch Test, AMM TASK 27-41-00-700-803.

- (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (c) If the MAT shows LATCHED for the maintenance message, then continue.
- (5) Replace the pitch trim switches, S27039. These are the tasks:
 - Pitch Trim Switches Removal, AMM TASK 27-41-01-000-801
 - Pitch Trim Switches Installation, AMM TASK 27-41-01-400-801
- (a) Do this task: Pitch Trim Switch Test, AMM TASK 27-41-00-700-803.
- (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (c) If the MAT shows LATCHED for the maintenance message, then continue.
- (6) Do this check of the wiring from the switches to the ACE-L1:
 - (a) Disconnect connector D2105J from the pitch trim switches, S27039.
 - (b) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU

A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (c) Remove the ACE-L1, M27121, from the E1-5 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Do a wiring check between these pins of connector D2105J at the left control wheel and connector DM27121AC at the E1-5 shelf (WDM 27-41-12):

D2105J	DM27121AC
pin 1	pin K15
pin 3	pin J15

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector D2105J.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the PSA-L, M24101:

Power Supply Assembly Left, M24101

819. STCM-R Trim Up Solenoid Valve Command Problems from ACE-R - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10020.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.
- (3) If MM 27-10019 is also set, check the operation of the STCM Motor Operated Shutoff Valves (MOSOVs). Do this task: Stabilizer Cutout Test, AMM TASK 27-41-00-700-811

C. Fault Isolation Procedure

- (1) Replace the solenoid valve, V2, on the right stabilizer trim control module (STCM-R), M27213. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801

NOTE: This solenoid valve controls the trim up function.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right stabilizer position module, M27031. These are the tasks:

Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801,
Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801.

 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.

Page 259
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this check of the power wiring:
- (a) Disconnect connector DM27213C from the STCM-R, M27213.
 - (b) Do a check for 28 VDC from pin 8 of connector DM27213C at the STCM-R, M27213, to structure ground (WDM 27-41-13).
 - (c) If there is not 28V DC at pin 8 of connector DM27213C, then do these steps:
 - 1) Remove the right power supply assembly (PSA-R), M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27213C at the STCM-R, M27213C, and connector DM24201AD at the E5-1 shelf (WDM 27-41-13):

DM27213C	DM24201AD
pin 8	pin 17

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27213C.
 - c) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If you do not find a problem with the wiring, then do these steps:
 - a) Install a new PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - b) Re-connect connector DM27213C.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (d) If there is 28V DC at pin 2 of connector DM27213C, then continue.
- (6) Do this check of the wiring from the position module to the STCM-R:
- (a) Disconnect connector DM27031 from the position module, M27031.
 - (b) Do a wiring check between these pins of connector DM27031 at the position module and connector DM27213C at the STCM-R (WDM 27-41-13):

DM27031	DM27213C
pin 9	pin 5

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27031.

27-41 TASK 819

D633W103-ARO

Page 260
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 3) Re-connect connector DM27213C.
- 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If you do not find a problem with the wiring, then continue.
- (e) Re-connect connector DM27013C.
- (7) Do this check of the command wiring:
 - (a) Open these circuit breakers and attach safety tags on the PSA-R, M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU

- (b) Remove the ACE-R, M27221. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Do a wiring check between these pins of connector DM27221AC at the E5-2 shelf and connector DM27031 at the position module, M27031 (WDM 27-41-13):

DM27221AC	DM27031
pin A2	pin 10

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27031.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the PSA-R, M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.

Page 261
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (f) Re-connect connector DM27031.
- (8) Do this check of the ground wiring:
 - (a) Remove the PSA-R, M24201. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (b) Do a wiring check between these pins of connector DM27221AB at the E5-2 shelf and connector DM24201AD at the E5-1 shelf (WDM 27-41-13):

DM27221AB	DM24201AD
pin B8	pin 18

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Make sure that these circuit breakers are closed on the PSA-R, M24201, on the E5-1 shelf:

Power Supply Assembly Right, M24201

Row	Col	Number	Name
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	5	CBA5-R	FLPRN PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If you do not find a problem with the wiring, then continue.
- (e) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (9) Install a new PSA-R, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

D633W103-ARO

Page 262
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust the left stabilizer position module, M27015. To adjust it, do this task: Horizontal Stabilizer Position Module and Travel Limiter Adjustment, AMM TASK 27-48-00-820-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Do this check of the feedback wiring:
 - (a) Open these circuit breaker and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6 shelf:

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
A	9	CBA9-L	RUD PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove the left 1 actuator control electronics (ACE-L1), M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27015 from the left stabilizer position module.
- (d) Do a wiring check between these contacts of connector DM27121AC (for ACE-L1) and connector DM27015 (at the stabilizer position module) (WDM 27-41-12):

<u>DM27121AC</u>		<u>DM27015</u>
pin C1		pin 4
pin C2		pin 1

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27015 to the stabilizer position module.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

821. Alternate Pitch Trim Lever Switch Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-18000.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27 Primary Flight Control, System Test, Alternate Pitch Trim Levers.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) If the ALTN PITCH TRIM LEV status message was displayed and the right and left alternate pitch trim levers are more than 0.9 inches (23 millimeters) apart, do this task: Stabilizer Control Cable Adjustment, AMM TASK 27-41-00-800-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) If the ALTN PITCH TRIM LEV status message was displayed and the right and left alternate pitch trim levers are less than 0.9 inches (23 millimeters) apart, then continue.
- (3) Monitor page 3 of the maintenance pages for the flight controls, on the multi-functional display (MFD) (AMM TASK 31-61-00-800-804).
 - (a) Pressurize the left, center, and right hydraulic systems. To pressurize them, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: The stabilizer is only operated by the center and right hydraulic systems, but all three must be pressurized for the PFCs to find if there is a problem.
 - (b) Find the applicable indications in Table 201 and Table 202 below.
 - (c) If the table has a corrective action for the indications, then do these steps:
 - 1) Make a note of the corrective action.
 - 2) Do the applicable steps for the corrective action.

NOTE: The steps are after Table 205 and Table 206.
 - (d) If the table has no corrective action for the indications, then continue (go to the first step after Table 201).

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (4) If the corrective action is the wiring between the alternate pitch trim lever, S27046, and L-AIMS, then do these steps:
- Remove the left aircraft information management system (AIMS-L) cabinet, M31101, from the E3-1 shelf. To remove it, do this task: AIMS Cabinet Removal, AMM TASK 31-41-21-000-802.
 - Do a wiring check between pin 45 of connector D6611 for the AIMS-L and structure ground (WDM 27-41-15).
 - Make sure there is a continuity.
 - Push the alternate pitch trim levers fully forward.
 - Make sure there is no continuity.
 - Pull the alternate pitch trim levers fully aft.
 - Make sure there is no continuity.
 - Release the alternate pitch trim levers.
 - If you find a problem with the wiring, then do these steps:
 - Repair the wiring.
 - Re-install the AIMS-L, M31101. To install it, do this task: AIMS Cabinet Installation, AMM TASK 31-41-21-400-801.
 - Do this ground test on the MAT: 27 Primary Flight Control, System Test, Alternate Pitch Trim Levers.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - If you do not find a problem with the wiring, then do these steps:
 - Do the corrective action below for the replacement of the input/output module in the L-AIMS.
- (5) If the corrective action is the wiring between the alternate pitch trim lever, S27046, and R-AIMS, then do these steps:
- Remove the right aircraft information management system (AIMS-R) cabinet, M31201, from the E2-1 shelf. To remove it, do this task: AIMS Cabinet Removal, AMM TASK 31-41-21-000-802.
 - Do a wiring check between pin 45 of connector D6711 for the AIMS-R and structure ground (WDM 27-41-15).
 - Make sure there is a continuity.
 - Push the alternate pitch trim levers fully forward.
 - Make sure there is no continuity.
 - Pull the alternate pitch trim levers fully aft.
 - Make sure there is no continuity.
 - Release the alternate pitch trim levers.
 - If you find a problem with the wiring, then do these steps:
 - Repair the wiring.
 - Re-install the AIMS-R, M31201. To install it, do this task: AIMS Cabinet Installation, AMM TASK 31-41-21-400-801.
 - Do this ground test on the MAT: 27 Primary Flight Control, System Test, Alternate Pitch Trim Levers.

FAULT ISOLATION MANUAL

- (17) If the corrective action is the replacement of the input/output module in the applicable AIMS, then do these steps:
- (a) Replace the #1 input/output module (IOM(M009) in the applicable AIMS.
These are the tasks:
Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801,
Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - (b) Re-install the applicable AIMS cabinet. To install it, do this task: AIMS Cabinet Installation, AMM TASK 31-41-21-400-801
 - (c) Do this ground test on the MAT: 27 Primary Flight Control, System Test, Alternate Pitch Trim Levers.
 - (d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (e) If the maintenance message shows on the ground test display, then continue.
 - (f) Replace the #2 IOM(M008) in the applicable AIMS.
These are the tasks:
Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801,
Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - (g) Do this ground test on the MAT: 27 Primary Flight Control, System Test, Alternate Pitch Trim Levers.
 - (h) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (i) If the maintenance message shows on the ground test display, then continue.
 - (j) Replace the #3 IOM(M004) in the applicable AIMS.
These are the tasks:
Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801,
Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
 - (k) Do this ground test on the MAT: 27 Primary Flight Control, System Test, Alternate Pitch Trim Levers.
 - (l) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (m) If the maintenance message shows on the ground test display, then continue.
- (18) Replace the #4 IOM(M003) in the applicable AIMS.
These are the tasks:
Input/Output Module (IOM) Removal, AMM TASK 31-41-11-000-801,
Input/Output Module (IOM) Installation, AMM TASK 31-41-11-400-801.
- (a) Do this ground test on the MAT: 27 Primary Flight Control, System Test, Alternate Pitch Trim Levers.
 - (b) If the maintenance message does not show on the ground test display, you corrected the fault.

822. ALTN PITCH TRIM Command Problems - Fault Isolation

A. Initial Evaluation

- (1) Pressurize the right and center hydraulic systems. To pressurize the right and center hydraulic systems, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) Move the ALTN PITCH TRIM lever to the NOSE UP then to the NOSE DOWN position.
 - (b) If the stabilizer does not move up and down as commanded, then do the Fault Isolation Procedure below.
 - (c) If the stabilizer moves up and down as commanded, then there was an intermittent fault. Do this step to complete the task:
 - 1) Do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

B. Fault Isolation Procedure

- (1) Adjust the stabilizer control cable. To adjust it, do this task: Stabilizer Control Cable Adjustment, AMM TASK 27-41-00-800-801.
 - (a) Pressurize the right and center hydraulic systems. To pressurize the right and center hydraulic systems, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (b) Move the ALTN PITCH TRIM lever to the NOSE UP then to the NOSE DOWN position.
 - (c) If the stabilizer moves up and down as commanded, you corrected the fault. Do this step to complete the task:
 - 1) Do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (d) If the stabilizer does not move up and down as commanded, then continue.
- (2) Do a check of the stabilizer trim control module (STCM):
 - (a) Remove hydraulic power from the center hydraulic system. To remove it, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (b) Move the ALTN PITCH TRIM lever to the NOSE UP then to the NOSE DOWN position.
 - (c) If the stabilizer does not move up and down as commanded, then do these steps:
 - 1) Exchange the ACE for M27213. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - 2) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 3) Replace the right STCM, M27213. These are the tasks:
 - Stabilizer Trim Control Modules (STCM) Removal, AMM TASK 27-41-07-000-801
 - Stabilizer Trim Control Modules (STCM) Installation, AMM TASK 27-41-07-400-801
 - 4) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - 5) Move the ALTN PITCH TRIM lever to the NOSE UP then to the NOSE DOWN position.

- 6) If the stabilizer moves up and down as commanded, you corrected the fault. Do this step to complete the task:
 - a) Do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (d) If the stabilizer moves up and down as commanded, then continue.
- (3) Exchange the ACE for M27313. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (5) Replace the center STCM, M27313. These are the tasks:
 - Stabilizer Trim Control Modules (STCM) Removal, AMM TASK 27-41-07-000-801
 - Stabilizer Trim Control Modules (STCM) Installation, AMM TASK 27-41-07-400-801
- (a) Pressurize the center hydraulic system. To pressurize it, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (b) Move the ALTN PITCH TRIM lever to the NOSE UP then to the NOSE DOWN position.
- (c) If the stabilizer moves up and down as commanded, you corrected the fault. Do this step to complete the task:
 - 1) Do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

————— END OF TASK —————

823. ALTN PITCH TRIM Does Not Move Freely - Fault Isolation

A. Initial Evaluation

- (1) Pressurize the right and center hydraulic systems. To pressurize the right and center hydraulic systems, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) Move the ALTN PITCH TRIM lever to the NOSE UP then to the NOSE DOWN position.
 - (b) If the stabilizer does not move freely, then do the Fault Isolation Procedure below.
 - (c) If the stabilizer moves freely, then there was an intermittent fault. Do this step to complete the task:
 - 1) Do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

B. Fault Isolation Procedure

- (1) Adjust the ALTN PITCH TRIM lever. To adjust it, do this task: Alternate Pitch Trim Lever Adjustment, AMM TASK 27-41-00-800-803.
 - (a) Pressurize the right and center hydraulic systems. To pressurize the right and center hydraulic systems, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (b) Move the ALTN PITCH TRIM lever to the NOSE UP then to the NOSE DOWN position.
 - (c) If the ALTN PITCH TRIM lever moves freely, you corrected the fault. Do this step to complete the task:
 - 1) Do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (d) If the ALTN PITCH TRIM lever does not move freely, then continue.
- (2) Adjust the stabilizer control cable. To adjust it, do this task: Stabilizer Control Cable Adjustment, AMM TASK 27-41-00-800-801.
 - (a) Move the ALTN PITCH TRIM lever to the NOSE UP then to the NOSE DOWN position.
 - (b) If the ALTN PITCH TRIM lever moves freely, you corrected the fault. Do this step to complete the task:
 - 1) Do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
 - (c) If the ALTN PITCH TRIM lever does not move freely, then continue.
- (3) Adjust the stabilizer trim control module. To adjust it, do this task: Stabilizer Trim Control Module Adjustment (Rigging) (Fig. 501), AMM TASK 27-41-00-800-802.
 - (a) Move the ALTN PITCH TRIM lever to the NOSE UP then to the NOSE DOWN position.
 - (b) If the ALTN PITCH TRIM lever moves freely, you corrected the fault. Do this step to complete the task:
 - 1) Do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

END OF TASK

824. Stabilizer Position Indicator (Left) Problems (Blank or No Light) - Fault Isolation

A. Initial Evaluation

NOTE: The stabilizer position indicator has a temperature sensor in it. If the temperature in the indicator is less than approximately -5° C (23° F), the light will not come on.

- (1) Open and then close this circuit breaker:

Left Power Management Panel, P110

Row	Col	Number	Name
L	28	C27633	RUD TRIM POS IND/STAB POS IND-L

NOTE: Cycling this circuit breaker resets the stabilizer trim indicator. The stabilizer trim indicator has a software problem that makes the light go off.

- (a) If the stabilizer position indicator operates correctly, then no repair is necessary.
- (b) If the stabilizer position indicator does not operate correctly, then continue.
- (2) Look to see if the stabilizer position or greenband indication shows on the stabilizer position indicator.
 - (a) If the stabilizer position or greenband indication shows on the stabilizer position indicator, then do this procedure below: Fault Isolation Procedure - No Light.
 - (b) If the stabilizer position and greenband indications do not show on the stabilizer position indicator, then do this procedure below: Fault Isolation Procedure - Indicator Blank.

B. Fault Isolation Procedure - No Light

- (1) Replace the stabilizer position indicator, N27001. These are the tasks:
 - Stabilizer Position Indicator Removal, AMM TASK 27-48-02-000-801
 - Stabilizer Position Indicator Installation, AMM TASK 27-48-02-400-801

NOTE: The light in the stabilizer position indicator cannot be replaced.

- (a) If the stabilizer position indicator comes on, then you corrected the fault.

C. Fault Isolation Procedure - Indicator Blank

- (1) Do this task: Stabilizer Position Indicator Removal, AMM TASK 27-48-02-000-801.
- (2) Remove the safety tag and close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
L	28	C27633	RUD TRIM POS IND/STAB POS IND-L

- (3) Do a check for 28 VDC from pin 14 (+) to pin 15 (-) of connector DN27001 for the stabilizer position indicator (WDM 27-28-11) (WDM 27-48-11).
- (4) If there is not 28 VDC between pin 14 and pin 15 (of DN27001), then do these steps:
 - (a) Do a voltage check from pin 14 (+) of connector DN27001 for the stabilizer position indicator to structure ground (WDM 27-28-11) (WDM 27-48-11).
 - (b) If there is 28 VDC between pin 14 (of DN27001) and structure ground, then do these steps:
 - 1) Open this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
L	28	C27633	RUD TRIM POS IND/STAB POS IND-L

- 2) Repair the wiring from pin 15 (of DN27001) to structure ground (WDM 27-48-11).
- 3) Re-install the stabilizer position indicator. To install it, do this task: Stabilizer Position Indicator Installation, AMM TASK 27-48-02-400-801.
- 4) Close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
L	28	C27633	RUD TRIM POS IND/STAB POS IND-L

- 5) If the stabilizer position indicator comes on, then you corrected the fault.
- (c) If there is not 28 VDC between pin 14 (of DN27001) and structure ground, then do these steps:
 - 1) Do the following (WDM 27-28-11):

Do a voltage check from term 2 (+) of this circuit breaker to structure ground:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
L	28	C27633	RUD TRIM POS IND/STAB POS IND-L

- 2) If there is not 28 VDC at term 2 of the circuit breaker, C27633, then do these steps (WDM 27-28-11):
 - a) Replace this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
L	28	C27633	RUD TRIM POS IND/STAB POS IND-L

Page 282
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (6) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display for chapter 31 AIMS - Left AIMS. For instructions about the EXISTING FAULTS display, do this task: How to Find Active or Latched Maintenance Messages in One ATA System, AMM TASK 45-10-00-740-818.

NOTE: The stabilizer position indicator will go blank if the signal it receives from AIMS is bad.

- (a) If one or more maintenance messages show on the EXISTING FAULT display, then do these steps:
- 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.

————— **END OF TASK** —————

825. Stabilizer Position Indicators on Control Stand Do Not Agree - Fault Isolation

A. **Fault Isolation Procedure**

NOTE: Adjustment of the stabilizer position modules will not correct this fault. The primary flight computers (PFC) use the data from the three stabilizer position modules to calculate one value for stabilizer position. The PFCs then send only this one stabilizer position (through AIMS) to the two stabilizer position indicators.

- (1) Look at page 2 of the maintenance pages for the primary flight controls (on the MFD). For instructions on how to show a maintenance page, do this task: Showing a Maintenance Page, AMM TASK 31-61-00-800-804.
- (a) Use the following table to compare the position shown on the stabilizer position indicators to the position shown on the maintenance page. Find which stabilizer position indicator shows the incorrect position.

Stabilizer Position Indication Conversion

Stab Position Indicator Value	Maintenance Page Value (approximate)	Stab Position Indicator Value	Maintenance Page Value (approximate)
0	150	7.5	1
1	130	8	-11
2	110	9	-31
3	90	10	-51
4	70	11	-71
5	50	12	-91
6	30	13	-112
7	9	14	-132

- (b) Replace the stabilizer position indicator (N27001 left; N27002 right) that does not agree with the position that shows on the maintenance page. These are the tasks:
- Stabilizer Position Indicator Removal, AMM TASK 27-48-02-000-801
 - Stabilizer Position Indicator Installation, AMM TASK 27-48-02-400-801
- 1) If the stabilizer position indicators show the correct position, you corrected the fault.

826. Pitch Trim Channel (Center) Trim Up Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10000.

B. Description

- (1) The Right Pitch Trim Channel does not follow the Trim UP command.

C. Possible Causes

- (1) Center Stab Auto Shutdown Relay, K27007
- (2) Center Stabilizer Trim Control Module (STCM) Shutoff Valve, V6
- (3) Center STCM Trim-up Control Solenoid Valve, V2
- (4) Center STCM Trim-up Arm Solenoid Valve, V4
- (5) Center ACE, M27321
- (6) Left ACE-1, M27121
- (7) Center STCM, M27313
- (8) Center Stabilizer Position Module, M27030
- (9) Wiring

D. Circuit Breakers

- (1) These are the primary circuit breakers related to the fault:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	2	CBB2-C	STAB TRIM

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	2	CBB2-L	STAB TRIM

E. Related Data

- (1) WDM 27-41-11
- (2) WDM 27-41-12

F. Initial Evaluation

- (1) Do the Stabilizer Mechanical Trim Rate Test (Right Hydraulic System), AMM TASK 27-41-00-700-808.
 - (a) If the Horizontal Stabilizer does not move up or down when you use the Center Hydraulic System, or it moves too slowly, then there is a mechanical problem with the Center Channel of the Stabilizer Trim System (STCM, Hydraulic Motor, or Hydraulic Brake). You must repair the mechanical problem(s) before you do the troubleshooting of the Electrical System below.
 - 1) If the MAT shows ACTIVE for the maintenance message, do the Fault Isolation Procedure below.
 - 2) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there could be a problem related to the Electrical System. Do this Ground Test on the MAT: 27 Primary Flight Controls, SYSTEM TEST, Stabilizer System (How to Do a Ground Test, AMM TASK 45-10-00-740-819).

Page 284
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent problem.

G. Fault Isolation Procedure

(1) Do this check to make sure that the Center Hydraulic System STCM Shutoff Valve, V6 is open.

(a) Find the STCM Shutoff Valve, V6 (AMM TASK 27-41-10-000-801).

(b) Make sure that the lever on the valve is in the OPEN position.

1) If the lever is not in the OPEN position, then do these steps:

a) Disconnect connector DM27313A from the STCM Shutoff Valve (WDM 27-41-11).

b) Do a check for 28 VDC between pins 3 and 1 of connector DM27313A.

<1> If you find 28V DC, replace the Center Stab Auto Shutdown Relay, K27007.

<a> Connect connector DM27313A to the STCM Shutoff Valve.

 Do the Repair Confirmation at the end of this task.

<2> If you do not find 28V DC, continue.

c) Do a check for 28 VDC between pins 2 and 1 of connector DM27313A.

<1> If you find 28V DC, replace the Center Stabilizer Trim Control Module (STCM) Shutoff Valve, V6. These are the tasks:

- STCM Shutoff Valve Removal, AMM TASK 27-41-10-000-801
- STCM Shutoff Valve Installation, AMM TASK 27-41-10-400-801

<a> Do the Repair Confirmation at the end of this task.

<2> If you do not find 28V DC between pins 2 and 1 of connector DM27313A, replace the Center Stab Auto Shutdown Relay, K27007.

<a> Connect connector DM27313A to the STCM Shutoff Valve.

 Do the Repair Confirmation at the end of this task.

- I. If the problem continues, examine and repair the wiring between the STCM and the Center Stab Auto Shutdown Relay, K27007 as follows (WDM 27-41-13):

NOTE: The remaining power wiring (from the circuit breaker to the cutout switch and from the switch to the relay) is monitored by the ACE. If this wiring (including the switch and the circuit breaker) were bad, there would be a different maintenance message.

- (2) Disconnect connector DM27313C from the Center STCM, M27313 (WDM 27-41-11).
- (3) Do a check for 28 VDC between pins 2 and 1 of connector DM27313C.
 - (a) If you find 28V DC, replace the Center STCM Trim Up Control Valve, V2. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
 - 1) Do the Repair Confirmation at the end of this task.
 - (b) If you do not find 28V DC, examine the wiring between the STCM and the Power Supply Assembly-Right (PSA-C), M24301 as follows (WDM 27-41-11):

C STCM	PSA-C
DM27313C	DM24301AD
pin 2	pin 17

- 1) If you find problems, do these steps:
 - a) Repair the wiring.
 - b) Connect connector DM27313C to the Center STCM, M27313.
 - c) Do the Repair Confirmation at the end of this task.
- (4) Disconnect connector DM27313B from the Center STCM, M27313 (WDM 27-41-12).
- (5) Do a check for 28V DC between pins 2 and 1 of connector DM27313B.
 - (a) If you find 28V DC, replace the Center STCM Trim Up Arm Valve, V4. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
 - 1) Do the Repair Confirmation at the end of this task.
 - (b) If you do not find 28V DC between pins 2 and 1 of connector DM27313B, examine the wiring between the STCM and the Power Supply Assembly-Left (PSA-L) (STAB TRIM ARM-C circuit breaker, CBB2) as follows (WDM 27-41-12).

C STCM	PSA-L
DM27313B	DM24101AD
pin 2	pin 17

- 1) If you find problems, do these steps:
 - a) Repair the wiring.
 - b) Connect connector DM27313B to the Center STCM, M27313.
 - c) Do the Repair Confirmation at the end of this task.
- (6) Exchange the ACE for M27321. This is the task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
 - (a) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - 1) Do the Repair Confirmation at the end of this task.

- (2) Disconnect connector DM27313C from the Center STCM, M27313 (WDM 27-41-11).
- (3) Do a check for 28 VDC between pins 2 and 1 of connector DM27313C.
- (a) If you find 28V DC, replace the Center STCM Trim Down Control Valve, V1. These are the tasks:
- STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
- 1) Do the Repair Confirmation at the end of this task.
- (b) If you do not find 28V DC, examine the wiring between the STCM and the Power Supply Assembly-Right (PSA-C), M24301 as follows (WDM 27-41-11):

C STCM	PSA-C
DM27313C	DM24301AD
pin 2	pin 17

- 1) If you find problems, do these steps:
- a) Repair the wiring.
- b) Connect connector DM27313C to the Center STCM, M27313.

777-200/300 FAULT ISOLATION MANUAL

- c) Do the Repair Confirmation at the end of this task.
- (4) Disconnect connector DM27313B from the Center STCM, M27313 (WDM 27-41-12).
- (5) Do a check for 28V DC between pins 2 and 1 of connector DM27313B.
- (a) If you find 28V DC, replace the Center STCM Trim Down Arm Valve, V3. These are the tasks:
- STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
- 1) Do the Repair Confirmation at the end of this task.
- (b) If you do not find 28V DC between pins 2 and 1 of connector DM27313B, examine the wiring between the STCM and the Power Supply Assembly-Left (PSA-L) (STAB TRIM ARM-C circuit breaker, CBB2) as follows (WDM 27-41-12).
- | C STCM | PSA-L |
|-----------------|------------------|
| DM27313B | DM24101AD |
| pin 2 | pin 17 |
- 1) If you find problems, do these steps:
- a) Repair the wiring.
- b) Connect connector DM27313B to the Center STCM, M27313.
- c) Do the Repair Confirmation at the end of this task.
- (6) Exchange the ACE for M27321. This is the task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
- (a) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- 1) Do the Repair Confirmation at the end of this task.
- (7) Exchange the ACE for M27121. This is the task: This is the task: Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27.
- (a) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- 1) Do the Repair Confirmation at the end of this task.
- (8) Replace the Center STCM, M27313. These are the tasks:
- Stabilizer Trim Control Modules (STCM) Removal, AMM TASK 27-41-07-000-801
 - Stabilizer Trim Control Modules (STCM) Installation, AMM TASK 27-41-07-400-801
- (a) Do the Repair Confirmation at the end of this task.
- (9) Replace the Center SPM, M27030. These are the tasks:
- Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801
 - Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801
- (a) Do the Repair Confirmation at the end of this task.

777-200/300 FAULT ISOLATION MANUAL

H. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.
 - (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— **END OF TASK** —————

828. Center Stabilizer Uncommanded Trim Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10004.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look at the Extended Maintenance, Present Leg Faults display on the MAT for maintenance messages 27-10017, 27-10019, 27-10021, and 27-10023.
- (2) If maintenance message 27-10017 shows in Present Leg Faults, then do these steps:
 - (a) Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - (b) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (c) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (d) Replace the trim-up control solenoid valve, V002, on the center stabilizer trim control module, M27313. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
- (3) If maintenance message 27-10019 shows in Present Leg Faults, then do these steps:
 - (a) Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - (b) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (c) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801

777-200/300 FAULT ISOLATION MANUAL

- Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (d) Replace the trim-down control solenoid valve, V001, on the center stabilizer trim control module, M27313. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
- (4) If maintenance message 27-10021 shows in Present Leg Faults, then do these steps:
 - (a) Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - (b) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (c) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (d) Replace the trim-up arm solenoid valve, V004, on the center stabilizer trim control module, M27313. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
- (5) If maintenance message 27-10023 shows in Present Leg Faults, then do these steps:
 - (a) Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - (b) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (c) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (d) Replace the trim-down arm solenoid valve, V003, on the center stabilizer trim control module, M27313. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
- (6) If two of the specified maintenance messages showed in Present Leg Faults and you did the steps given above for each one, you corrected the fault.
- (7) If none of the specified maintenance messages showed in Present Leg Faults, then do these steps:
 - (a) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - (b) Replace the ACE recommended by the previous step. These are the tasks:
 - Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
 - (c) Replace these solenoid valves on the center stabilizer trim control module, M27313. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801

777-200/300 FAULT ISOLATION MANUAL

- STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
 - 1) Trim-up control, V002
 - 2) Trim-down control, V001
 - 3) Trim-up arm, V004
 - 4) Trim-down arm, V003.
- (d) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
- (8) Replace the center stabilizer trim control module, M27313. These are the tasks:
 - Stabilizer Trim Control Modules (STCM) Removal, AMM TASK 27-41-07-000-801
 - Stabilizer Trim Control Modules (STCM) Installation, AMM TASK 27-41-07-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

829. Center Stabilizer Auto Shutdown Relay Command Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10007.

B. Initial Evaluation

NOTE: This fault will occur if the "C" stabilizer cutout switch, on the control stand, is in the CUTOFF position.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check of stabilizer cutout switch, S27055:
 - (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-R), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU

830. Center Stabilizer Auto Shutdown Test Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10009.

B. Possible Causes

- (1) Stabilizer Trim Control Module (STCM) Shutoff Valve, V006
- (2) Center Stabilizer Auto Shutdown Relay, K27007

EFFECTIVITY
ARO ALL

27-41 TASKS 829-830

D633W103-ARO

Page 298.2
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (3) Wiring

C. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

D. Fault Isolation Procedure

- (1) Do this check of the stabilizer's response to the control switches:
 - (a) Pressurize the center hydraulic system.
 - (b) Make sure that the left and right hydraulic systems are not pressurized.
 - (c) Set the PRIMARY FLIGHT COMPUTERS switch on the P5 overhead panel to DISC.
 - (d) Set the STAB C switch on the P10 pilots' control stand to CUTOUT.
 - (e) Look for movement of the stabilizer during the subsequent two steps.
 - 1) Push and hold the STAB TRIM switches on either control wheel to the NOSE UP position for 5 seconds.
 - 2) Push and hold the STAB TRIM switches on either control wheel to the NOSE DN position for 5 seconds.
 - (f) Release the pressure in the center hydraulic system.
 - (g) Set the STAB C switch on the P10 pilots' control stand to NORM.
- (2) If the stabilizer did not move up or down when you operated the switches, then do these steps:
 - (a) Remove the center stab auto shutdown relay, K27007 (WDM 27-41-11).
 - (b) Do a check for 28V DC from pins X1, A2, and B2 of connector DK27007 to structure ground (WDM 27-41-11).
 - (c) If there is not 28V DC at pins X1, A2, or B2 of DK27007, then do these steps:
 - 1) Repair the applicable wiring between these pins of connector DK27007 at the center stab auto shutdown relay, K27007 and terminal block TB4151 in the EE bay (STA 150, WL 202, and BL L009) (WDM 27-41-11):

DK27007	TB4151
pin A2	term VA01
pin X1	term VA01
pin B2	term VB03

- 2) Disconnect connector DM27321AC and do a wiring check between the following pins:

DK27007	TB4151
pin B1	term VA03

EFFECTIVITY

DK27007

pin X2

DM27321AC

pin A4

- 3) Repair wires as necessary.
- 4) Reconnect connector DM27321AC.
- 5) Re-install the center stab auto shutdown relay, K27007.
- 6) Do the Repair Confirmation at the end of the task.
- (d) If there is 28V DC at pins X1, A2, and B2 of DK27007, then continue.
- (e) Install a new center stab auto shutdown relay, K27007.
- (f) Do the Repair Confirmation at the end of the task.
- (3) If the stabilizer moved up or down when you operated the switches, then do these steps:
 - (a) Disconnect connector DM27313A from the center stabilizer trim control module (STCM), M27313.
 - (b) Do a wiring check between these contacts of connector DM27313A at the center STCM and terminal block TB4151 in the EE bay (STA 150, WL 202, and BL L009) (WDM 27-41-11):

DM27313A

pin 3

TB4151

term VA03

- (c) Do a continuity check from pin 1 of connector DM27313A to structure ground (WDM 27-41-11).
- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27313A.
 - 3) Do the Repair Confirmation at the end of the task.
- (e) If you do not find a problem with the wiring, then do these steps:
 - 1) Do these tasks to replace the shutoff valve, V006, on the center STCM, M27313:
 - a) STCM Shutoff Valve Removal, AMM TASK 27-41-10-000-801
 - b) STCM Shutoff Valve Installation, AMM TASK 27-41-10-400-801
 - 2) Re-connect connector DM27313A.
 - 3) Do the Repair Confirmation at the end of the task.

E. Repair Confirmation

- (1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Actuator Confidence.
 - (a) If the maintenance message shows on the ground test display, then continue the Fault Isolation Procedure at the subsequent step.
 - (b) If the maintenance message does not show on the ground test display, you corrected the problem.

831. STCM (Center) Hydraulic Brake Pressure Switch Fault - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10013.

EFFECTIVITY
ARO ALL

27-41 TASKS 830-831

D633W103-ARO

Page 298.4
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

B. Description

- (1) The Center Stabilizer Trim Control Module Hydraulic Brake Pressure Switch is inoperative.

C. Possible Causes

- (1) Center STCM Brake Pressure Switch, S1
- (2) Center Stabilizer Trim Control Module, M27313
- (3) Center ACE, M27321
- (4) Wiring
- (5) Center Stabilizer Hydraulic Motor

D. Related Data

- (1) WDM 27-41-11

E. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this task for the related Stabilizer Hydraulic Motor: Stabilizer Mechanical Trim Rate Test (Center Hydraulic System), AMM TASK 27-41-00-700-813.

NOTE: Poor performing Stabilizer Hydraulic Motors have resulted in setting Brake Pressure Switch faults. This test verifies proper operation of the related Stabilizer Hydraulic Motor.

- (3) If the MAT shows LATCHED for the maintenance message, then do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the test stopped before it was completed (the test would not complete and must be aborted), then, do this task: Horizontal Stabilizer Position Module and Travel Limiter Adjustment, AMM TASK 27-48-00-820-801.
 - 1) Do the Stabilizer System Test again.
 - (b) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (c) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent problem.

F. Fault Isolation Procedure

- (1) Replace the Brake Pressure Switch, S1, on the Center Stabilizer Trim Control Module (STCM-C), M27313. These are the tasks:
 - STCM Brake Pressure Switch Removal, AMM TASK 27-41-09-000-801,
 - STCM Brake Pressure Switch Installation, AMM TASK 27-41-09-400-801.
 - (a) Do the Repair Confirmation procedure at the end of this task.
- (2) Do these steps to make sure that the Brake Pressure Switch operates correctly when operated from the Pitch Trim Switches or the Alternate Pitch Trim Levers using the Center Hydraulic System.
 - (a) Do this task: Supply Electrical Power, AMM TASK 24-22-00-860-805.
 - (b) Remove the hydraulic power from the Right Hydraulic System. (AMM TASK 29-11-00-860-808).

WARNING

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

(c) For the Center Hydraulic System only, do one of the following tasks:

- 1) Center Hydraulic System Pressurization with an Air-Driven Pump (ADP), AMM TASK 29-11-00-860-805
- 2) Main Hydraulic System Pressurization with a Portable Hydraulic Cart, AMM TASK 29-11-00-860-802
- 3) Main Hydraulic System Pressurization with an Alternating Current Motor Pump, AMM TASK 29-11-00-860-803.

NOTE: You must use both center Alternating Current Motor Pumps to have enough flow.

(d) Monitor page 3 of the maintenance pages for the Flight Controls on the Multi-Functional Display (MFD) (AMM TASK 31-61-00-800-804).

- 1) Make sure these indications show.

NOTE: Ignore the other indications on maintenance page 3.

	ACE			
	L1	L2	C	R
STCM BRK RELEASE PRESS	--	--	NO	NO

(e) Push the two Pitch Trim Switches on the captain's Control Wheel up and hold it for approximately 5 seconds.

- 1) Make sure these indications show.

NOTE: Ignore the other indications on maintenance page 3.

	ACE			
	L1	L2	C	R
STCM BRK RELEASE PRESS	--	--	YES	NO

(f) Release the Pitch Trim Switches.

- 1) Make sure these indications show.

NOTE: Ignore the other indications on maintenance page 3.

	ACE			
	L1	L2	C	R
STCM BRK RELEASE PRESS	--	--	NO	NO

(g) Push the two Pitch Trim Switches on the captain's Control Wheel down and hold it for approximately 5 seconds.

Page 298.7
Sep 05/2016

**777-200/300
FAULT ISOLATION MANUAL**

- (j) If any of the indications on maintenance page 3 does not show as indicated above, then replace the Center Stabilizer Trim Control Module, M27313. These are the tasks:
- Stabilizer Trim Control Modules (STCM) Removal, AMM TASK 27-41-07-000-801
 - Stabilizer Trim Control Modules (STCM) Installation, AMM TASK 27-41-07-400-801.
- 1) If the maintenance message does not show on the Ground Test Display, you corrected the problem.
- (k) If all indications on the maintenance page 3 show as indicated above, then continue.
- (3) Exchange the ACE for M27321. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- (a) Do the Repair Confirmation procedure at the end of this task.
- (5) Do this check of the wiring:
- (a) Open these circuit breakers and attach safety tags on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the ACE-C, M27321. This is the task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27313D from the STCM-C, M27313.
- (d) Do a wiring check between these pins of connector DM27313E at the STCM-C, M27313, and connector DM27321AC at the E2-5 shelf (WDM 27-41-11):

DM27313E

pin 1 pin B6
pin 2 pin A6

DM27321AC

- (e) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-connect connector DM27313E.
 - 3) Re-install the ACE-C, M27321. This is the task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- 4) Remove the safety tags and close these circuit breakers on the center power supply assembly (PSA-C), M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 5) Do the Repair Confirmation procedure at the end of this task.
- (f) If you do not find a problem with the wiring, then replace the Center Stabilizer Hydraulic Motor. These are the tasks:
 - Stabilizer Hydraulic Motor Removal, AMM TASK 27-41-11-000-801
 - Stabilizer Hydraulic Motor Installation, AMM TASK 27-41-11-400-801
- 1) Do the Repair Confirmation at the end of this task.

G. Repair Confirmation

- (1) Do this Ground Test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the maintenance message does not show on the Ground Test Display, you corrected the problem.
 - (b) If the maintenance message still shows on the Ground Test Display, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

832. STCM-C Trim Rate Solenoid Valve Command Problems from ACE-L2 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10015.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the solenoid valve, V5, on the center stabilizer trim control module (STCM-C), M27313.

These are the tasks:

STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,

STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.

NOTE: This solenoid valve controls the trim rate function.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.
 - (c) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (2) Exchange the ACE for M27121. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.
 - (c) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (4) Do this check of the power wiring:
- (a) Disconnect connector DM27313D from the STCM-C.
 - (b) Do a check for 28V DC from pin 2 of connector DM27313D to structure ground (WDM 27-41-12).
 - (c) If there is not 28V DC at pin 2 of connector DM27313D, then do these steps:
 - 1) Re-connect connector DM27313D.
 - 2) Repair the wiring between these pins of connector DM27313D at the STCM-C, M23213, and connector DM24101AD at the E1-6 shelf (WDM 27-41-12):

DMM27213D	DM24101AD
pin 2	pin 17

- 3) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 4) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.
- (d) If there is 28 VDC at pin 2 of connector DM27313D, then continue.
- (5) Do this check of the command wiring:
- (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6.

Power Supply Assembly Left, M24101

- 1) Repair the wiring.
 - 2) Re-connect connector DM27313D.
 - 3) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6.

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- 6) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (f) Reconnect connector DM27313D.
- (6) Do this check of the ground wiring:
- (a) Remove the PSA-L, M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
- (b) Do a wiring check between these pins of connector DM27121AB at the E1-5 shelf and connector M24101AD at the E1-6 shelf (WDM 27-41-14):

DM27122AB	DM24101AD
pin B8	pin 18

- (c) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

- (1) Replace the solenoid valve, V4, on the right stabilizer trim control module (STCM), M27213. These are the tasks:

- STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
- STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801

NOTE: This solenoid valve controls the trim up function.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Do this check for electrical power to the solenoid valve:
- (a) Open these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R

K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (b) Remove the left 2 actuator control electronics (ACE-L2), M27122. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Close this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	24	C27612	STAB TRIM ARM-R

- (d) Do a check for 28 VDC between pin A2 (+) of connector DM27122AC on the ACE-L2 and pin B8 (-) of connector DM27122AB on the ACE-L2 (WDM 27-41-14).
- (e) If there is 28 VDC between pin A2 of DM27122AC and pin B8 of DM27122AB, then do these steps:
- 1) Open this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	24	C27612	STAB TRIM ARM-R

- 2) Install a new ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 3) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (f) If there is not 28 VDC between pin A2 of DM27121AC and pin B8 of DM27121AB, then continue.
- (3) Do this check of the wiring to the solenoid:
 - (a) Disconnect connector D11013P from the P110 left power management panel.
 - (b) Measure the resistance between pin 11 of connector D11013P at the P110 panel pin A2 of connector DM27122AC at the E1-1 (WDM 27-41-14).

NOTE: The solenoid valve has a resistance of approximately 70 ohms.
 - (c) If the resistance between pin 11 of D11013P and pin A2 of DM27122AC is not 50-100 ohms, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector D11013P.
 - 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Open this circuit breaker:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	24	C27612	STAB TRIM ARM-R

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If the resistance between pin 11 of D11013P and pin A2 of DM27122AC is 50-100 ohms, then continue.
- (4) Do a check for continuity from pin A2 of connector DM27122AC to structure ground (WDM 27-41-14).
 - (a) If there is continuity from pin A2 of DM27122AC to ground, then do these steps:
 - 1) Repair the wiring (WDM 27-41-12).
 - 2) Re-connect connector D11013P.
 - 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

777-200/300 FAULT ISOLATION MANUAL

- (3) If MM 27-10020 is also set, check the operation of the STCM Motor Operated Shutoff Valves (MOSOVs). Do this task: Stabilizer Cutout Test, AMM TASK 27-41-00-700-811

C. Fault Isolation Procedure

- (1) Replace the solenoid valve, V2, on the center stabilizer trim control module (STCM-C), M27313. These are the tasks:

- STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
- STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801

NOTE: This solenoid valve controls the trim up function.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27321. This is the task:
- Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step. These are the tasks:
- Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801
 - Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the center stabilizer position module, M27030. These are the tasks:
- Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801
 - Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801
- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this check of the power wiring:
- (a) Disconnect connector DM27313C from the STCM-C, M27313.
- (b) Do a check for 28 VDC from pin 8 of connector DM27313C at the STCM-C, M27313, to structure ground (WDM 27-41-11).
- (c) If there is not 28V DC at pin 8 of connector DM27313C, then do these steps:
- 1) Remove the center power supply assembly (PSA-R), M24301. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27233C at the STCM-C, M27313C, and connector DM24301AD at the E2-6 shelf (WDM 27-41-11):

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the solenoid valve, V3, on the center stabilizer trim control module (STCM-C), M27313.

These are the tasks:

STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,

STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.

NOTE: This solenoid valve controls the trim down function.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27121. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,

Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Do this check of the power wiring:
 - (a) Disconnect connector DM27313B from the STCM-C.
 - (b) Do a check for 28V DC from pin 2 of connector DM27313D to structure ground (WDM 27-41-12).
 - (c) If there is not 28V DC at pin 2 of connector DM27313D, then do these steps:
 - 1) Repair the wiring between these pins of connector DM27213D at the STCM-R, M23213, and connector DM24101AD at the E1-6 shelf (WDM 27-41-12):

777-200/300 FAULT ISOLATION MANUAL

- 2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (d) If there is 28 VDC at pin 2 of connector DM27313B, then continue.
- (5) Do this check of the command wiring:
 - (a) Open these circuit breakers and attach safety tags on the left power supply assembly (PSA-L), M24101, on the E1-6.

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- (b) Remove ACE-L1, M27121. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Do a wiring check between these pins of connector DM27313B at STCM-C, M27313 and connector DM27121AC at the E1-5 shelf (WDM 27-41-12):

DM27313D

pin 1 pin A4

DM27121AC

- (d) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27313B.
 - 3) Re-install ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove the safety tags and close these circuit breakers on the left power supply assembly (PSA-L), M24101, on the E1-6.

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-L	ACE PWR
A	3	CBA3-L	AIL PCU
A	5	CBA5-L	FLPRN PCU
A	7	CBA7-L	ELEV PCU
B	2	CBB2-L	STAB TRIM
B	4	CBB4-L	AUTO SPDBRK (L,R)
B	8	CBB8-L	RUD TRIM ACTR (L)

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.

**777-200/300
FAULT ISOLATION MANUAL**

- (e) If you do not find a problem with the wiring, then continue.
- (f) Reconnect connector DM27313B.
- (6) Do this check of the ground wiring:
 - (a) Remove the PSA-L, M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (b) Do a wiring check between these pins of connector DM27121AB at the E1-5 shelf and connector DM24101AD at the E1-6 shelf (WDM 27-41-12):

DM27121AB	DM24101AD
pin B8	pin 18

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install the ACE-L1, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 3) Re-install the PSA-L, M27101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 4) Make sure that these circuit breakers are closed on the left power supply assembly (PSA-L), M24101, on the E1-6.

Power Supply Assembly Left, M24101

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

777-200/300 FAULT ISOLATION MANUAL

836. STCM-C Trim Down Solenoid Valve Command Problems from ACE-C - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10023.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the solenoid valve, V1, on the center stabilizer trim control module (STCM-C), M27313.

These are the tasks:

STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,

STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.

NOTE: This solenoid valve controls the trim down function.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) Exchange the ACE for M27321. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (3) Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,

Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the center stabilizer position module, M27030.

These are the tasks:

Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801,

Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801.

 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.

777-200/300 FAULT ISOLATION MANUAL

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (5) Do this check of the power wiring:
- (a) Disconnect connector DM27313C from the STCM-C, M27313.
 - (b) Do a check for 28 VDC from pin 2 of connector DM27313C at the STCM-C, M27313, to structure ground (WDM 27-41-11).
 - (c) If there is not 28V DC at pin 2 of connector DM27313C, then do these steps:
 - 1) Remove the center power supply assembly (PSA-C), M24301. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - 2) Do a wiring check between these pins of connector DM27313C at the STCM-C, M27313C, and connector DM24301AD at the E2-6 shelf (WDM 27-41-11):

DM27313C	DM24301AD
pin 2	pin 17

- 3) If you find a problem with the wiring, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27313C.
 - c) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - d) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 4) If you do not find a problem with the wiring, then do these steps:
 - a) Install a new PSA-C, M24201. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - b) Re-connect connector DM27313C.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (d) If there is 28V DC at pin 2 of connector DM27213C, then continue.
- (6) Do this check of the wiring from the position module to the STCM-C:
- (a) Disconnect connector DM27030 from the position module, M27030.
 - (b) Do a wiring check between these pins of connector DM27030 at the position module and connector DM27313C at the STCM-C (WDM 27-41-11):

DM27030	DM27313C
pin 6	pin 1

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-connect connector DM27030.

777-200/300 FAULT ISOLATION MANUAL

837. Stabilizer Position Module (Center) Signal Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-11004.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Adjust the center stabilizer position module, M27030. To adjust it, do this task: Horizontal Stabilizer Position Module and Travel Limiter Adjustment, AMM TASK 27-48-00-820-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the MAT shows ACTIVE for the maintenance message (or if the maintenance message does not show), you corrected the fault.
 - 2) If the MAT shows ACTIVE or LATCHED for the maintenance message, then continue.
- (2) Do this check of the feedback wiring:
 - (a) Open these circuit breakers and attach safety tags on the PSA-C, M24301, on the E2-6 shelf:

Power Supply Assembly Center, M24301

Row	Col	Number	Name
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- (b) Remove the center actuator control electronics (ACE-C), M27321. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (c) Disconnect connector DM27030 from the center stabilizer position module.
- (d) Do a wiring check between these contacts of connector DM27321AC (for ACE-C) and connector DM27030 (at the stabilizer position module) (WDM 27-41-11):

DM27321AC	DM27030
pin C1	pin 4
pin C2	pin 1

- 2) If the maintenance message shows on the ground test display, then continue.
- (4) Replace the right stabilizer position module, M27031.

These are the tasks:

Stabilizer Position Module - Removal, AMM TASK 27-48-01-000-801,

Stabilizer Position Module - Installation, AMM TASK 27-48-01-400-801.

- (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

839. Pitch Trim Switches (Left) Nose Down Switches Do Not Agree - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-12401.

B. Initial Evaluation

- (1) Push the two pitch trim switches on the captain's control wheel up (airplane nose down). Hold them up for a minimum of five seconds.

NOTE: If you hold the switches up for less than five seconds, the maintenance message will stay latched.

- (a) Release the pitch trim switches.
- (2) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

NOTE: This fault can occur if a person moves only one of the two pitch trim switches on the captain's control wheel.

- (3) If the MAT shows LATCHED or ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.

C. Fault Isolation Procedure

- (1) Operate the two pitch trim switches on the captain's control wheel and make sure they both return to the center position.

- (a) If the switches do not return to the center position, then do these steps:

- 1) Replace the pitch trim switches, S27039.

These are the tasks:

Pitch Trim Switches Removal, AMM TASK 27-41-01-000-801,

Pitch Trim Switches Installation, AMM TASK 27-41-01-400-801.

- 2) Push the two pitch trim switches on the captain's control wheel down. Hold them down for a minimum of five seconds.
- 3) Release the pitch trim switches.
- 4) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
- (b) If the switches do return to the center position, then continue.
- (2) Do this check of the pitch trim switch circuits.
 - (a) Look at page 3 of the maintenance pages for the flight controls on the MFD.

777-200/300 FAULT ISOLATION MANUAL

- 1) Make sure the CAPT PITCH TRIM ARM indication for ACE-L1 shows NO. If the indication does not show NO, then the pitch trim arm circuit has a problem.
- 2) Make sure the CAPT PITCH TRIM CTRL indication for ACE-C shows NO. If the indication does not show NO, then the pitch trim control circuit has a problem.
- (b) Push the two pitch trim switches on the captain's control wheel up (airplane nose down).
- (c) Look at page 3 of the maintenance pages for the flight controls on the MFD.
 - 1) Make sure the CAPT PITCH TRIM ARM indication for ACE L1 shows DOWN. If the indication does not show DOWN, then the pitch trim arm circuit has a problem.
 - 2) Make sure the CAPT PITCH TRIM CTRL indication for ACE C shows DOWN. If the indication does not show DOWN, then the pitch trim control circuit has a problem.
- (d) Release the pitch trim switches.
- (3) If the pitch trim arm circuit has a problem, then do these steps:
 - (a) Replace the left 1 actuator control electronics (ACE-L1), M27121, at the E1-5 shelf.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

 - 1) Push the two pitch trim switches on the captain's control wheel up (airplane nose down). Hold them up for a minimum of five seconds.
 - 2) Release the pitch trim switches.
 - 3) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - 4) If the MAT shows LATCHED for the maintenance message, then continue.
 - (b) Replace the pitch trim switches, S27039.

These are the tasks:

Pitch Trim Switches Removal, AMM TASK 27-41-01-000-801,
Pitch Trim Switches Installation, AMM TASK 27-41-01-400-801.

 - 1) Push the two pitch trim switches on the captain's control wheel up (airplane nose down). Hold them up for a minimum of five seconds.
 - 2) Release the pitch trim switches.
 - 3) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - 4) If the MAT shows LATCHED for the maintenance message, then continue.
 - (c) Repair the wiring between the pitch trim switch and these pins of connector DM27121AC (the connector for the ACE-L1) (WDM 27-41-12):

NOTE: The colors specified in this table are for the wires that connect to the pitch trim switch wires at the center of the control wheel.

NOTE: Disconnect only one wire at a time so you cannot connect the wrong wires together.

EFFECTIVITY
ARO ALL

27-41 TASKS 841-842

D633W103-ARO

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure.
- (2) If the MAT shows LATCHED for the maintenance message, then do these steps:
 - (a) Do this task: Pitch Trim Switch Test, AMM TASK 27-41-00-700-803.
 - (b) If there were problems when you did the steps of the test, then do the Fault Isolation Procedure below.
 - (c) If there were no problems when you did the steps of the test, then no maintenance action is necessary. The captain or first officer made an operational error of the airplane during the flight.

C. Fault Isolation Procedure

- (1) Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (2) Replace the right actuator control electronics (ACE-R) recommended by the previous step.
These are the tasks:
Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Do this task: Pitch Trim Switch Test, AMM TASK 27-41-00-700-803.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
 - (c) If the MAT shows LATCHED for the maintenance message, then continue.
- (3) Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
- (4) Replace the ACE recommended by the previous step.
These are the tasks:
Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - (a) Do this task: Pitch Trim Switch Test, AMM TASK 27-41-00-700-803.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
 - (c) If the MAT shows LATCHED for the maintenance message, then continue.
- (5) Replace the pitch trim switches, S27044.
These are the tasks:
Pitch Trim Switches Removal, AMM TASK 27-41-01-000-801,
Pitch Trim Switches Installation, AMM TASK 27-41-01-400-801.
 - (a) Do this task: Pitch Trim Switch Test, AMM TASK 27-41-00-700-803.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
 - (c) If the MAT shows LATCHED for the maintenance message, then continue.
- (6) Do this check of the wiring from the switches to the ACE-L2:
 - (a) Disconnect connector D2112J from the pitch trim switches, S27044.

777-200/300
FAULT ISOLATION MANUAL

- (b) Open these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (c) Remove the ACE-L2, M27122, from the E1-1 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (d) Do a wiring check between these pins of connector D2112J at the right control wheel and connector DM27122AC at the E1-1 shelf (WDM 27-41-14):

D2112J	DM27122AC
pin 1	pin K15
pin 3	pin J15

- (e) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-connect connector D2112J.
- 3) Re-install the ACE-L2, M27122. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
- 4) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- 5) Do this task: Pitch Trim Switch Test, AMM TASK 27-41-00-700-803.
 - 6) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (7) Do this check of wiring from the switches to the ACE-R:
- (a) Re-connect connector D2112J.
 - (b) Re-install the ACE-L2, M27121. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.

777-200/300 FAULT ISOLATION MANUAL

- (c) Close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	23	C27613	ELEV FEEL ACTR
K	24	C27612	STAB TRIM ARM-R
K	25	C27611	AIL PCU LIB(BLK)/LOB(BYP)
K	26	C27610	FLPRN PCU RIB(BYP)/SPLR 4&11
K	27	C27609	ELEV PCU RIB(BLK)/ROB(BYP)
K	28	C27608	ACE-L2 PWR

- (d) Disconnect connector D2111J from the pitch trim switches, S27044.
- (e) Open these circuit breakers and attach safety tags on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf.

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-R	ACE PWR
A	3	CBA3-R	AIL PCU
A	7	CBA7-R	ELEV PCU
A	9	CBA9-R	RUD PCU
B	2	CBB2-R	STAB TRIM
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- (f) Remove the ACE-R, M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (g) Do a wiring check between these pins of connector D2111J at the right control wheel and connector DM27221AC at the E5-2 shelf (WDM 27-41-13):

D2111J	DM27221AC
pin 1	pin K15
pin 3	pin J15

- (h) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install the pitch trim switches, S27044. To install it, do this task: Pitch Trim Switches Installation, AMM TASK 27-41-01-400-801.
 - 3) Re-install the ACE-R, M27221. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 4) Remove safety tags and close these circuit breakers on the right power supply assembly (PSA-R), M24201, on the E5-1 shelf.

FAULT ISOLATION MANUAL

(Continued)

Power Supply Assembly Right, M24201

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
B	4	CBB4-R	AUTO-SPDBRK (L,R)

- 5) Do this task: Pitch Trim Switch Test, AMM TASK 27-41-00-700-803.
- 6) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

————— **END OF TASK** —————

843. Stabilizer Trim Control Module (Center) Arm Solenoid Valve Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15013.

B. Initial Evaluation

- (1) Close this circuit breaker on the center power supply assembly (PSA-L), M24301:
 - (a) B2, STAB TRIM
 - (b) If the circuit breaker opens when you try to close it, then do this procedure below: Fault Isolation Procedure - Circuit Breaker Open.
- (2) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the maintenance message shows on the ground test display, then do this check:
 - 1) If the circuit breaker is open, then do this procedure below: Fault Isolation Procedure - Circuit Breaker Open.
 - 2) If the circuit breaker stayed closed, then do this procedure below: Fault Isolation Procedure - Circuit Breaker Closed.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure - Circuit Breaker Open

- (1) Do this check of the power wiring:
 - (a) Remove the left power supply assembly (PSA-L), M24101. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
 - (b) Disconnect connectors DM27313B and DM27313D from the center stabilizer trim control module (STCM-C), M27313.
 - (c) Do a wiring check between these pins of connectors DM27313B and DM27313D at the STCM-C and connector D11013P at the P110 panel (WDM 27-41-12):

DM27313B	DM24101AD
pin 2	pin 12

DM27313D	DM24101AD
pin 2	pin 12

DM27313B	DM27313B
pin 8	pin 4

- (d) If you find a problem with the wiring, then do these steps:

Page 298.43
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 1) Repair the wiring.
- 2) Re-connect connectors DM27313B and DM27313D to the STCM-C.
- 3) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
- (e) If you do not find a problem with the wiring, then continue.
- (2) Measure the resistance between pin 2 and pin 1 of connector DM27313B (the connector for the trim arm solenoid valves, V3 and V4) on the STCM-C, M27313 (WDM 27-41-12).
 - (a) If the resistance is not 50-100 ohms, then do these steps:
 - 1) Replace the trim down arm solenoid valve, V3, on the STCM-C, M27313.

These are the tasks:
STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,
STCM Brake Pressure Switch Removal, AMM TASK 27-41-09-000-801.
 - 2) Re-connect connectors DM27313B and DM27313D to the STCM-C.
 - 3) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (b) If the resistance is 50-100 ohms, then continue.
- (3) Measure the resistance between pin 5 and pin 8 of connector DM27313B (the connector for the trim arm solenoid valves, V3 and V4) on the STCM-C, M27313 (WDM 27-41-12).
 - (a) If the resistance is not 50-100 ohms, then do these steps:
 - 1) Replace the trim up arm solenoid valve, V4, on the STCM-C, M27313.

These are the tasks:
STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,
STCM Brake Pressure Switch Removal, AMM TASK 27-41-09-000-801.
 - 2) Re-connect connectors DM27313B and DM27313D to the STCM-R.
 - 3) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (b) If the resistance is 50-100 ohms, then continue.
- (4) Measure the resistance between pin 2 and pin 1 of connector DM27313D (the connector for the trim rate solenoid valve, V5) on the STCM-C, M27313 (WDM 27-41-12).
 - (a) If the resistance is not 50-100 ohms, then do these steps:

D633W103-ARO

Page 298.44
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 1) Replace the trim rate solenoid valve, V3, on the STCM-C, M27313.
These are the tasks:
STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,
STCM Brake Pressure Switch Removal, AMM TASK 27-41-09-000-801.
- 2) Re-connect connectors DM27313B and DM27313D to the STCM-C.
- 3) Re-install the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
- 4) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the resistance is 50-100 ohms, then continue.
- (5) Install a new PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - (a) Re-connect connectors DM27313B and DM27313D to the STCM-C.
 - (b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

D. Fault Isolation Procedure - Circuit Breaker Closed

- (1) Replace the PSA-L, M24101. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.

————— END OF TASK —————

844. Stabilizer Trim Control Module (Center) Control Solenoid Valve Circuit Breaker Open - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-15015.

B. Initial Evaluation

- (1) If the STAB C cutout switch (on the control stand in the flight compartment) is not in the NORM position, then set it to the NORM position.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

Page 298.45
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

NOTE: You must do the Initial Evaluation above before you do this Fault Isolation Procedure.

- (1) Open this circuit breaker and attach safety tag on the center power supply assembly (PSA-C), M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- (2) Remove the PSA-R, M24201, from the E5-1 shelf. To remove it, do this task: Power Supply Assembly Removal, AMM TASK 24-35-01-000-801.
- (3) Remove the right actuator control electronics (ACE-R), M27221, from the E5-2 shelf. To remove it, do this task: Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801.
- (4) Do a check for continuity (a short) from pin 17 of connector DM24301AD (the connector for the PSA) to structure ground (WDM 27-41-11).
- (5) If there is not continuity from pin 17 of connector DM24301AD to ground, then do these steps:
 - (a) Install a new PSA-R, M24201. To remove it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.
 - 1) Re-install the ACE-C, M27321. To install it, do this task: Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - 2) Close these circuit breakers on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	1	CBA1-C	ACE PWR
A	3	CBA3-C	AIL PCU
A	5	CBA5-C	FLPRN PCU
A	7	CBA7-C	ELEV PCU
A	9	CBA9-C	RUD PCU
B	2	CBB2-C	STAB TRIM
B	6	CBB6-C	ELEV FEEL (C)

- 3) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (b) Replace the stabilizer auto shutdown relay, K27007 (WDM 27-41-11).

NOTE: This relay is on the top of the AEO160 disconnect panel, which is above the forward access door, 112AL.

- 1) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.

Page 298.46
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- (c) Disconnect connector DM27313C (the connector for the trim control solenoid valves, V1 and V3) from the center stabilizer trim control module (STCM-C), M27313.
- (d) Measure the resistance between pin 2 (+) and pin 1 (-) of connector DM27313C on the STCM-C, M27313 (WDM 27-41-11).

NOTE: Connect the positive (+) connector on your meter to pin 2 and the negative (-) connector to pin 1. If you make the opposite connections with the meter, you will get an incorrect indication on the meter. It will show too low of a resistance.

- 1) If the resistance between pin 2 and pin 1 of connector DM27313C is not 50-100 ohms, then do these steps:
 - a) Replace the trim down control solenoid valve, V1, on the STCM-C, M27313. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
 - b) Re-connect connector DM27313C to the STCM-C.
 - c) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - d) If the maintenance message does not show on the ground test display, you corrected the fault.
- 2) If the resistance between pin 2 and pin 1 of connector DM27313C is 50-100 ohms, then continue.
- (e) Measure the resistance between pin 8 (+) and pin 5 (-) of connector DM27313C on the STCM-C, M27313 (WDM 27-41-11).

NOTE: Connect the positive (+) connector on your meter to pin 8 and the negative (-) connector to pin 5. If you make the opposite connections with the meter, you will get an incorrect indication on the meter. It will show too low of a resistance.

- 1) If the resistance between pin 8 and pin 5 of connector DM27313C is not 50-100 ohms, then do these steps:
 - a) Replace the trim up control solenoid valve, V2, on the STCM-C, M27313. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
 - b) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - c) If the maintenance message does not show on the ground test display, you corrected the fault.
- 2) If the resistance between pin 8 and pin 5 of connector DM27313C is 50-100 ohms, then continue.
- 3) Do a check for continuity (a short) from these pins of connector DM27313C (the airplane wiring connector, not the connector on the STCM).
 - a) Pin 1 to pin 2, 4, 6, or 8.
 - b) Pin 5 to pin 2, 4, 6, or 8.
- 4) If there is continuity from pin 1 or 5 to one of the other pins, then do these steps:
 - a) Repair the wiring.
 - b) Re-connect connector DM27313C to the STCM.

Page 298.48
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- a) Replace the trim up control solenoid valve, V2, on the STCM-C, M27313. These are the tasks:
 - STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801
 - STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801
- b) Re-connect connector DM27313C to the STCM-C.
- c) Re-install the PSA-C, M24301.
- d) Remove the safety tag and close this circuit breaker on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- e) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - f) If the maintenance message does not show on the ground test display, you corrected the fault.
- 6) If the resistance between pin 5 and pin 8 of connector DM27313C is 50-100 ohms, then continue.
 - 7) Repair the wiring at connector DM27313C (WDM 27-41-11).
 - a) Re-connect connector DM27213C to the STCM-R.
 - b) Re-install the PSA-C, M24301.
 - c) Make sure that this circuit breaker is closed on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- d) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - e) If the maintenance message does not show on the ground test display, you corrected the fault.
- (b) If there is continuity from pin 17 of connector DM24201AD to ground, then continue.
 - (9) Disconnect connector DM27313A (the connector for the shutoff valve, V6) from the right stabilizer trim control module (STCM-R), M27313.
 - (10) Do a check for continuity from pin 17 of connector DM24301AD (the connector for the PSA) to structure ground (WDM 27-41-11).
 - (a) If there is not continuity from pin 17 of connector DM24201AD to ground, then do these steps:
 - 1) Replace the center STCM shutoff valve, valve V6 of M27313. These are the tasks:
 - STCM Shutoff Valve Removal, AMM TASK 27-41-10-000-801
 - STCM Shutoff Valve Installation, AMM TASK 27-41-10-400-801
 - 2) Re-connect connectors DM27213A and DM27313C to the STCM-C.
 - 3) Re-install the PSA-C, M24301. To install it, do this task: Power Supply Assembly Installation, AMM TASK 24-35-01-400-801.

Page 298.49
Sep 05/2016

777-200/300 FAULT ISOLATION MANUAL

- 4) Make sure that this circuit breaker is closed on the PSA-C, M24301:

Power Supply Assembly Center, M24301

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	8	CBD8-C	PFC BAT INTLK

- 5) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- If the maintenance message does not show on the ground test display, you corrected the fault.
 - If there is continuity from pin 17 of connector DM24201AD to ground, then continue.
- (11) Replace the stabilizer auto shutdown relay, K27007 (WDM 27-41-11).
- NOTE: This relay is on the top of the AEO160 disconnect panel, which is above the forward access door, 112AL.
- Do a check for continuity from pin 17 of connector DM24301AD (the connector for the PSA) to structure ground (WDM 27-41-11).
 - If there is not continuity from pin 17 of connector DM24301AD to ground, then do these steps:
 - Re-connect connectors DM27213A and DM27313C to the STCM-C.
 - Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - If there is continuity from pin 17 of connector DM24201AD to ground, then continue.
- (12) Disconnect the wires from the center stabilizer cutout switch, S27055. For access to the wires, do this task: Stabilizer Cutout Switches Removal, AMM TASK 27-41-04-000-801.
- (13) Do a check for continuity from pin 17 of connector DM24301AD (the connector for the PSA) to structure ground (WDM 27-41-11).
- If there is not continuity from pin 17 of connector DM24301AD to ground, then do these steps:
 - Install a new center stabilizer cutout switch, S27055. To install it, do this task: Stabilizer Cutout Switches Installation, AMM TASK 27-41-04-400-801.
 - Re-connect connectors DM27313A and DM27313C to the STCM-R.
 - Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - If the maintenance message does not show on the ground test display, you corrected the fault.
 - If the maintenance message shows on the ground test display, then continue.
 - Repair this wiring between the stabilizer cutout switch (S27055), the STCM shutoff valve (V6 on M27313), and the stabilizer auto shutdown relay (K27007) (WDM 27-41-11):

- 1) If the maintenance message does not show on the ground test display, you corrected the fault.

END OF TASK

845. Uncommanded Pitch Trim Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10006.

B. Initial Evaluation

NOTE: This maintenance message will occur only if a fault exists in both the center and right pitch trim channels.

- (1) Look for these maintenance messages on the Extended Maintenance, Present Leg Faults display on the MAT: 27-10017, 27-10018, 27-10019, 27-10020, 27-10021, 27-10022, 27-10023 and 27-10024.
- (a) If one or more of these messages shows, then do the Fault Isolation Procedure below.
- (b) If none of these messages shows, then continue.
- (2) If the MAT shows ACTIVE for maintenance message 27-10006, then do the Fault Isolation Procedure below.
- (3) If the MAT shows LATCHED for the maintenance message 27-10006, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
- (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for these maintenance messages on the Extended Maintenance, Present Leg Faults display on the MAT: 27-10017, 27-10018, 27-10019, 27-10020, 27-10021, 27-10022, 27-10023 and 27-10024.

- (2) If maintenance message 27-10017 shows in Present Leg Faults, then do these steps:
- Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - Replace the trim-up control solenoid valve, V002, on the center stabilizer trim control module, M27313.

These are the tasks:

STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,
STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.
- (3) If maintenance message 27-10018 shows in Present Leg Faults, then do these steps:
- Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - Replace the trim-up control solenoid valve, V002, on the right stabilizer trim control module, M27213.

These are the tasks:

STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,
STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.
- (4) If maintenance message 27-10019 shows in Present Leg Faults, then do these steps:
- Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - Exchange the ACE for M27221. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - Replace the trim-down control solenoid valve, V001, on the center stabilizer trim control module, M27313.

These are the tasks:

STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,
STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.

- (8) If maintenance message 27-10023 shows in Present Leg Faults, then do these steps:
- Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - Replace the trim-down arm solenoid valve, V003, on the center stabilizer trim control module, M27313.

These are the tasks:

STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,
STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.
- (9) If maintenance message 27-10024 shows in Present Leg Faults, then do these steps:
- Find the message in the FIM Maintenance Message Index and do the specified fault isolation task.
 - Exchange the ACE for M27122. This is the task:
 - Swapping the Actuator Control Electronics (ACEs), 27-02 TASK A27
 - Replace the ACE recommended by the previous step.

These are the tasks:

Actuator Control Electronics (ACE) Removal, AMM TASK 27-02-02-000-801,
Actuator Control Electronics (ACE) Installation, AMM TASK 27-02-02-400-803.
 - Replace the trim-down arm solenoid valve, V003, on the right stabilizer trim control module, M27213.

These are the tasks:

STCM Solenoid Valve Removal, AMM TASK 27-41-08-000-801,
STCM Solenoid Valve Installation, AMM TASK 27-41-08-400-801.
- (10) If two of the specified maintenance messages showed in Present Leg Faults and you did the steps given above for each one, you corrected the fault.
- (11) If none of the specified maintenance messages showed in Present Leg Faults, then do these steps:
- Make sure these electrical connectors are connected (WDM 27-41-15) (WDM 27-41-16):

NOTE: This message will occur if too many of the signals from the switches for the alternate pitch trim levers are not received by the PFCs when the levers are moved. A minimum of two of the following connectors (one for the switches on the arm lever, and one for the switches on the control lever) must be disconnected to cause this fault.

777-200/300 FAULT ISOLATION MANUAL

846. Pitch Trim Channel (Center) Does Not Operate Because of Low Hydraulic Pressure - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10025.

B. Initial Evaluation

NOTE: This maintenance message can occur if you move the pitch trim switches or the alternate pitch trim levers when center hydraulic pressure is low (or off). Because this maintenance message can occur when the hydraulic system is intentionally off, it is possible that there are no problems with the airplane.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do these steps to find hydraulic system problems:
 - (a) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS, 29 Hydraulic System page on the MAT.
 - (b) If you find maintenance messages related to the center hydraulic system, then do these steps.
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - 3) After you have corrected the maintenance messages for the hydraulic system, do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If there are no maintenance messages for the center hydraulic system, then continue.
- (2) Replace the center-left hydraulic interface module (HYDIM-CL) card, A4, in the left systems card file (LSCF), P85. These are the tasks:
 - Hydraulic Interface Module (HYDIM) Cards Removal, AMM TASK 29-11-50-000-801
 - Hydraulic Interface Module (HYDIM) Cards Installation, AMM TASK 29-11-50-400-801
 - (a) Do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - 1) If the maintenance message does not show on the ground test display, you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (3) Replace the center-right hydraulic interface module (HYDIM-CR) card, A4, in the right systems card file (RSCF), P84. These are the tasks:
 - Hydraulic Interface Module (HYDIM) Cards Removal, AMM TASK 29-11-50-000-801

847. Pitch Trim Channel (Right) Does Not Operate Because of Low Hydraulic Pressure - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-10026.

B. Initial Evaluation

NOTE: This maintenance message can occur if you move the pitch trim switches or the alternate pitch trim levers when right hydraulic pressure is low (or off). Because this maintenance message can occur when the hydraulic system is intentionally off, it is possible that there are no problems with the airplane.

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED for the maintenance message, then do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - (a) If the MAT shows ACTIVE or LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do these steps to find hydraulic system problems:
 - (a) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS, 29 Hydraulic System page on the MAT.
 - (b) If you find maintenance messages related to the right hydraulic system, then do these steps.
 - 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.
 - 3) After you have corrected the maintenance messages for the hydraulic system, do this ground test on the MAT: 27-Primary Flight Controls, System Test, Stabilizer System.
 - a) If the maintenance message does not show on the ground test display, you corrected the fault.
 - (c) If there are no maintenance messages for the right hydraulic system, then continue.
- (2) Replace the right hydraulic interface module (HYDIM-R) card, A17, in the right systems card file (RSCF), P84. These are the tasks:
 - Hydraulic Interface Module (HYDIM) Cards Removal, AMM TASK 29-11-50-000-801
 - Hydraulic Interface Module (HYDIM) Cards Installation, AMM TASK 29-11-50-400-801

————— END OF TASK —————

848. Stabilizer Position Indicator (Right) Problems (Blank or No Light) - Fault Isolation

A. Initial Evaluation

NOTE: The stabilizer position indicator has a temperature sensor in it. If the temperature in the indicator is less than approximately -5° C (23° F), the light will not come on.

- (1) Open and then close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

NOTE: Cycling this circuit breaker resets the stabilizer trim indicator. The stabilizer trim indicator has a software problem that makes the light go off.

- (a) If the stabilizer position indicator operates correctly, then no repair is necessary.
 - (b) If the stabilizer position indicator does not operate correctly, then continue.
- (2) Look to see if the stabilizer position or greenband indication shows on the stabilizer position indicator.
 - (a) If the stabilizer position or greenband indication shows on the stabilizer position indicator, then do this procedure below: Fault Isolation Procedure - No Light.
 - (b) If the stabilizer position and greenband indications do not show on the stabilizer position indicator, then do this procedure below: Fault Isolation Procedure - Indicator Blank.

B. Fault Isolation Procedure - No Light

- (1) Replace the stabilizer position indicator, N27002. These are the tasks:
 - Stabilizer Position Indicator Removal, AMM TASK 27-48-02-000-801
 - Stabilizer Position Indicator Installation, AMM TASK 27-48-02-400-801

NOTE: The light in the stabilizer position indicator cannot be replaced.

- (a) If the stabilizer position indicator comes on, then you corrected the fault.

C. Fault Isolation Procedure - Indicator Blank

- (1) Do this task: Stabilizer Position Indicator Removal, AMM TASK 27-48-02-000-801.
- (2) Remove the safety tag and close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- (3) Do a check for 28 VDC from pin 14 (+) to pin 15 (-) of connector DN27002 for the stabilizer position indicator (WDM 27-48-11).
- (4) If there is not 28 VDC between pin 14 and pin 15 (of DN27002), then do these steps:
 - (a) Do a voltage check from pin 14 (+) of connector DN27002 for the stabilizer position indicator to structure ground (WDM 27-48-11).
 - (b) If there is 28 VDC between pin 14 (of DN27002) and structure ground, then do these steps:

- 1) Open this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- 2) Repair the wiring from pin 15 (of DN27002) to structure ground (WDM 27-48-11).
- 3) Re-install the stabilizer position indicator. To install it, do this task: Stabilizer Position Indicator Installation, AMM TASK 27-48-02-400-801.
- 4) Close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- 5) If the stabilizer position indicator comes on, then you corrected the fault.
- (c) If there is not 28 VDC between pin 14 (of DN27002) and structure ground, then do these steps (WDM 27-48-11):

- 1) Do a voltage check from term 2 (+) to structure ground of this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- 2) If there is not 28 VDC at term 2 of the circuit breaker, C27634, then do these steps (WDM 27-48-11):

- a) Replace this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- b) Open this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- c) Re-install the stabilizer position indicator. To install it, do this task: Stabilizer Position Indicator Installation, AMM TASK 27-48-02-400-801.
- d) Close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- e) If the stabilizer position indicator comes on, then you corrected the fault.
- 3) If there is 28 VDC at term 2 of the circuit breaker, C27634, then do these steps:

- a) Open this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- b) Repair the wiring between the circuit breaker and pin 14 of connector DN27002 (the connector for the stabilizer position indicator) (WDM 27-48-11).
- c) Re-install the stabilizer position indicator. To install it, do this task: Stabilizer Position Indicator Installation, AMM TASK 27-48-02-400-801.
- d) Close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- e) If the stabilizer position indicator comes on, then you corrected the fault.

- (5) If there is 28 VDC between pin 14 and pin 15, then do these steps:

- (a) Open this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- (b) Install a new stabilizer position indicator. To install it: do this task: Stabilizer Position Indicator Installation, AMM TASK 27-48-02-400-801.
- (c) Close this circuit breaker:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	10	C27634	STAB POS IND-R

- (d) If the stabilizer position indicator comes on, then you corrected the fault.
- (e) If the stabilizer position indicator does not come on, then continue.

- (6) Look at the EXTENDED MAINTENANCE, EXISTING FAULTS display for chapter 31 AIMS - right AIMS. For instructions about the EXISTING FAULTS display, do this task: How to Find Active or Latched Maintenance Messages in One ATA System, AMM TASK 45-10-00-740-818.

NOTE: The stabilizer position indicator will go blank if the signal it receives from AIMS is bad.

- (a) If one or more maintenance messages show on the EXISTING FAULT display, then do these steps:
- 1) Find each message in the Maintenance Message Index.
 - 2) Do the specified fault isolation task.

FAULT ISOLATION MANUAL

849. ALTN PITCH TRIM Levers Do Not Align - Fault Isolation

A. Initial Evaluation

- (1) Pressurize the right and center hydraulic systems. To pressurize the right and center hydraulic systems, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) Move the ALTN PITCH TRIM levers to the NOSE UP then to the NOSE DOWN position.
 - (b) If the distance between the ends of the ALTN PITCH TRIM levers is more than 0.9 inches (23 millimeters), then do the Fault Isolation Procedure below.
 - (c) If the distance between the ends of the ALTN PITCH TRIM levers is less than or equal to 0.9 inches (23 millimeters), then there is no alternate pitch trim operational impact.

B. Fault Isolation Procedure

- (1) Adjust the stabilizer control cables. To adjust them, do this task: Stabilizer Control Cable Adjustment, AMM TASK 27-41-00-800-801.
 - (a) Move the ALTN PITCH TRIM levers to the NOSE UP then to the NOSE DOWN position.
 - (b) If the distance between the ends of the ALTN PITCH TRIM levers is more than 0.9 inches (23 millimeters), then continue with the Fault Isolation Procedure.
 - (c) If the distance between the ends of the ALTN PITCH TRIM levers is less than or equal to 0.9 inches (23 millimeters), then there is no alternate pitch trim operational impact.
- (2) Adjust the ALTN PITCH TRIM levers. To adjust them, do this task: Alternate Pitch Trim Lever Adjustment, AMM TASK 27-41-00-800-803.
 - (a) Move the ALTN PITCH TRIM levers to the NOSE UP then to the NOSE DOWN position.
 - (b) If the distance between the ends of the ALTN PITCH TRIM levers is less than or equal to 0.9 inches (23 millimeters), then there is no alternate pitch trim operational impact.

801. Flap Primary Low Speed Solenoid Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20371.

B. Description

- (1) The Flaps Primary Low Speed Solenoid circuit is open.

C. Possible Causes

- (1) Flaps Primary Low Speed Solenoid, V3
- (2) Flap Primary Control Valve, V27004
- (3) Wiring
- (4) Flap/Slat Electronics Unit (FSEU) 1, M27001

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault.

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	11	C27604	FLAPS PRI DR CTRL 1

E. Related Data

- (1) WDM 27-51-15
- (2) SSM 27-51-15

F. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then there was an intermittent problem.

27-51 TASK 801

D633W103-ARO

Page 201
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

G. Fault Isolation Procedure

NOTE: When you do the AMM Procedure to install a component, it is not necessary to do the test given at the end of the AMM Task. The steps in this FIM Procedure are a sufficient test.

WARNING

MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

- (1) If the Downlock Pins are not installed on the Main and Nose Landing Gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

MAKE CERTAIN MAIN LANDING GEAR DOOR SAFETY LOCKS ARE INSTALLED WHEN PERSONS WORK IN WHEELWELL AREAS. DOOR MOVEMENT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
(3) Do a wiring check of the Low Speed Solenoid as follows (WDM 27-51-15):

- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27004B from the Flap Primary Control Valve, V27004 in the Right Wheel Well.
(c) Do a Resistance check between pins 8 and 18 of connector DV27004B on the Flap Primary Control Valve, V27004 in the Right Wheel Well.
(d) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then do these steps:

- 1) Replace the Low Speed Solenoid on the Flap Primary Control Valve, V27004.
These are the tasks:

- Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802
- Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802

- 2) Do a Resistance check between pins 8 and 18 of connector DV27004B on the Flap Primary Control Valve, V27004 again (WDM 27-51-15).

NOTE: This does a check of the internal wiring on the Flap Primary Control Valve, V27004.

- a) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then replace the Flap Primary Control Valve, V27004. These are the tasks:

- Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
- Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801

- <1> Do the Repair Confirmation at the end of this task.
- b) If the Resistance is in the specified limits, then continue.
- (e) If the Resistance is in the specified limits, then continue.
- (4) Connect electrical connector DV27004B to the Flap Primary Control Valve, V27004, in the Right Wheel Well.
- (5) Do a check for 28V DC at FSEU 1 as follows:
- (a) Remove FSEU 1, M27001, from the E1-6 Shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (b) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (c) Do a check for 28V DC between pins F1 (+) on connector DM27001AC and structure ground (WDM 27-51-15).
- 1) If you do not find 28V DC at pin F1 of connector DM27001AC, then do these steps:
- a) Open this circuit breaker and install safety tag:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- b) At the P310 Power Management Panel, disconnect electrical connector D31037P.
- c) In the Right Wheel Well, disconnect electrical connector DV27004B from the Flap Primary Control Valve, V27004.
- d) Do a wiring check from the FSEU-1 connector DM27001AC to the Power Management Panel P310 connector D31037P as follows (WDM 27-51-15):

E1-6 Shelf	R Wheel Well
DM27001AC	DV27004B
pin F1	pin 8

R Wheel Well	P310 Panel
DV27004B	D31037P
pin 18	pin 13

- <1> If you find a problem with the wiring, then do these steps:
- <a> Repair the wiring.
- Re-connect electrical connector DV27004B.
- <c> Re-connect electrical connector D31037P.
- <d> Re-install FSEU 1, M27001. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- <e> Do the Repair Confirmation at the end of this task.
- <2> If you do not find a problem with the wiring, continue.

EFFECTIVITY

D633W103-ARO

Page 203
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 2) If you find 28V DC at pin F1 of connector DM27001AC, continue.
- (d) Replace FSEU 1, M27001. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801
- 1) Do the Repair Confirmation at the end of this task.

H. Repair Confirmation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 1 is IN CONTROL

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (a) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then you corrected the problem.
 - (b) If the MAT shows LATCHED with the maintenance message, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

802. Flap Primary System Problems - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-20390, 27-20391, 27-20392.

B. Initial Evaluation

- (1) If the PRESENT LEG FAULTS Display on the MAT shows LATCHED for the maintenance message 27-20441 or 27-20442, then do these steps:
 - (a) If maintenance message 27-20441 shows LATCHED, do the Flap Secondary System Problems FSEU 1 - Fault Isolation, 27-51 TASK 807.
 - (b) If maintenance message 27-20442 shows LATCHED, do the Flap Secondary System Problems FSEU 2 - Fault Isolation, 27-52 TASK 807.
- (2) If the MAT shows maintenance messages 27-20390, 27-20391, 27-20392 as INACTIVE on the Ground but ACTIVE or LATCHED in the Air (including AHM, or PIREPs records), then look for INACTIVE maintenance message 27-20441 or 27-20442.
 - (a) If maintenance message 27-20441 shows INACTIVE on the MAT, do the Flap Secondary System Problems FSEU 1 - Fault Isolation, 27-51 TASK 807.
 - (b) If maintenance message 27-20442 shows INACTIVE on the MAT, do the Flap Secondary System Problems FSEU 2 - Fault Isolation, 27-52 TASK 807.
- (3) If the PRESENT LEG FAULTS Display on the MAT shows LATCHED for the maintenance message 27-20381 or 27-20382, then do these steps:

EFFECTIVITY

27-51 TASKS 801-802

D633W103-ARO

Page 204
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Make sure that these circuit breakers are closed:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (b) Do the Fault Isolation Procedure - Solenoid Check below.
- (4) If the PRESENT LEG FAULTS Display on the MAT does not show LATCHED for the maintenance message 27-20381 or 27-20382, then do these steps:
- (a) Cycle the ALTN FLAPS ARM Switch on the Control Stand.

NOTE: This will cause the maintenance message to become INACTIVE.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (b) Pressurize the Center Hydraulic System. This is the task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (c) Use the Primary System to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
- 1) If the MAT shows LATCHED for the maintenance message, then do the Fault Isolation Procedure - Hydraulics Check below.
 - 2) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure - Flaps Relay K27002 Check

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.
- (2) Replace the Flaps Bypass/Clutch Relay, K27002 on the P110 panel (WDM 27-51-17).

- (a) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- 2) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.

D. Fault Isolation Procedure - Solenoid Check

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

MAKE CERTAIN MAIN LANDING GEAR DOOR SAFETY LOCKS ARE INSTALLED WHEN PERSONS WORK IN WHEELWELL AREAS. DOOR MOVEMENT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a check of the Primary Extend solenoid on the flap primary control valve, V27004 in the right wheel well:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27004B from the flap primary control valve, V27004.
- (c) Measure the resistance between these pairs of pins of the connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-15):
- 1) Pins 9 and 19, specified resistance 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids).
 - 2) Pins 11 and 15, specified resistance 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids).

Page 206
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (d) Do a continuity check between pins 9, 11, 15 and 19 of the connector DV27004B on the flap primary control valve and structure ground.
- (e) If the resistance between the pins is not in the limit, or if there is continuity to ground, then do these steps:

- 1) Replace the Primary Extend solenoid on the flap primary control valve, V27004.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.

- 2) Do a check of the resistance between pins 9 and 19, and pins 11 and 15 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-15).

NOTE: This does a check of the internal wiring on the primary control valve, V27004.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,

Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

- b) If the resistance is in the limit, then continue.
- 3) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.
- 4) Remove the safety tags and close these circuit breakers:

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- 5) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- 6) Use the primary system to extend the flaps to another position. To extend them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 7) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 8) If there is continuity between the pins, or if the MAT shows LATCHED for the maintenance message, then continue.
- (4) Do a check of the Primary Retract solenoid on the flap primary control valve, V27004 in the right wheel well:

- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27004B from the flap primary control valve, V27004.
- (c) Measure the resistance between these pairs of pins of the connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-15):
- 1) Pins 2 and 17, specified resistance 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids).
 - 2) Pins 4 and 14, specified resistance 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids).
- (d) Do a continuity check between pins 2, 4, 14 and 17 of the connector DV27004B on the flap primary control valve and structure ground.
- (e) If the resistance between the pins is not in the limit, or if there is continuity to ground, then do these steps:
- 1) Replace the Primary Retract solenoid on the flap primary control valve, V27004.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.
 - 2) Do a check of the resistance between pins 2 and 17, and pins 4 and 14 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-15).
NOTE: This does a check of the internal wiring on the primary control valve, V27004.
 - a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.
These are the tasks:
Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.
 - b) If the resistance is in the limit, then continue.
 - 3) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.

777-200/300 FAULT ISOLATION MANUAL

E. Fault Isolation Procedure - Hydraulics Check

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Replace the flap hydraulic motor.

These are the tasks:

Flap Hydraulic Motor Removal, AMM TASK 27-51-33-000-801,

Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.

- (2) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

- (b) If the MAT shows LATCHED with the maintenance message, then continue.

- (3) Replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,

Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

- (4) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

- (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

————— **END OF TASK** —————

803. Flap Primary Extend Solenoid Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20401.

B. Description

- (1) Flaps Primary Extend Solenoid circuit is open.

C. Possible Causes

- (1) Flaps Primary Extend Solenoid, V2
- (2) Flap Primary Control Valve, V27004
- (3) Wiring
- (4) FSEU 1, M27001

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault.

A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	11	C27604	FLAPS PRI DR CTRL 1

E. Related Data

- (1) WDM 27-51-15
- (2) SSM 27-51-15

F. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then there was an intermittent problem.

G. Fault Isolation Procedure

NOTE: When you do the AMM Procedure to install a component, it is not necessary to do the test given at the end of the AMM Task. The steps in this FIM Procedure are a sufficient test.

MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

- (1) If the Downlock Pins are not installed on the Main and Nose Landing Gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

MAKE CERTAIN MAIN LANDING GEAR DOOR SAFETY LOCKS ARE INSTALLED WHEN PERSONS WORK IN WHEELWELL AREAS. DOOR MOVEMENT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Extend Solenoid as follows (WDM 27-51-15):

EFFECTIVITY

- (b) Disconnect electrical connector DV27004B from the Flap Primary Control Valve, V27004 in the Right Wheel Well.
- (c) Do a Resistance check between pins 9 and 19 of connector DV27004B on the Flap Primary Control Valve, V27004 in the Right Wheel Well.
- (d) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then do these steps:
- 1) Replace the Extend Solenoid on the Flap Primary Control Valve, V27004. These are the tasks:
 - Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802
 - Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802
 - 2) Do a Resistance check between pins 9 and 19 of connector DV27004B on the Flap Primary Control Valve, V27004 again (WDM 27-51-15).
- NOTE:** This does a check of the internal wiring on the Flap Primary Control Valve, V27004.
- a) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then replace the Flap Primary Control Valve, V27004. These are the tasks:
 - Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
 - Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801

<1> Do the Repair Confirmation at the end of this task.
 - b) If the Resistance is in the specified limits, then continue.

- (e) If the Resistance is in the specified limits, then continue.

- (4) Connect electrical connector DV27004B to the Flap Primary Control Valve, V27004, in the Right Wheel Well.

- (5) Do a check for 28V DC at FSEU 1 as follows:

- (a) Remove FSEU 1, M27001, from the E1-6 Shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (b) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (c) Do a check for 28V DC between pin G1 (+) on connector DM27001AC and structure ground (WDM 27-51-15).

- 1) If you do not find 28V DC at pin G1 of connector DM27001AC, then do these steps:

777-200/300 FAULT ISOLATION MANUAL

805. Flap Primary Shutoff Solenoid Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20421.

B. Description

- (1) The Flaps Primary Shutoff Solenoid circuit is open.

C. Possible Causes

- (1) Flaps Primary Shutoff Solenoid, V1
- (2) Flap Primary Control Valve, V27004
- (3) Wiring
- (4) FSEU 1, M27001

D. Circuit Breakers

- (1) These are the primary circuit breakers related to this fault.

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	11	C27604	FLAPS PRI DR CTRL 1

E. Related Data

- (1) WDM 27-51-15
- (2) SSM 27-51-15

F. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM Switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the primary system to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then there was an intermittent problem.

777-200/300 FAULT ISOLATION MANUAL

G. Fault Isolation Procedure

NOTE: When you do the AMM Procedure to install a component, it is not necessary to do the test given at the end of the AMM Task. The steps in this FIM Procedure are a sufficient test.

WARNING

MAKE SURE THAT THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR CAN RETRACT. THIS CAN CAUSE INJURIES TO PERSONS, AND DAMAGE TO EQUIPMENT.

- (1) If the Downlock pins are not installed on the Main and Nose Landing Gear, do this task:
Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

MAKE CERTAIN MAIN LANDING GEAR DOOR SAFETY LOCKS ARE INSTALLED WHEN PERSONS WORK IN WHEELWELL AREAS. DOOR MOVEMENT CAN CAUSE INJURY TO PERSONS AND DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
(3) Do a wiring check of the Shutoff Solenoid as follows:

- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27004A from the Flap Primary Control Valve, V27004 in the Right Wheel Well WDM 27-51-15.
(c) Do a Resistance check between pins 7 and 8 of connector DV27004A on the Flap Primary Control Valve, V27004 in the Right Wheel Well.
(d) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 ohms (for the 883 Series Solenoids), then do these steps:
- 1) Replace the Shutoff Solenoid on the Flap Primary Control Valve, V27004. These are the tasks:
 - Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802
 - Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802
 - 2) Do a Resistance check between pins 7 and 8 of connector DV27004A on the Flap Primary Control Valve, V27004 again (WDM 27-51-15).

NOTE: This does a check of the internal wiring on the Flap Primary Control Valve, V27004.

- a) If the Resistance is not 56.5 ± 5.0 Ohms (for the 391 Series Solenoids) or 77 ± 7 Ohms (for the 883 Series Solenoids), then replace the Flap Primary Control Valve, V27004. These are the tasks:
- Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
 - Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801

Page 219
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- <1> Do the Repair Confirmation at the end of this task.
- b) If the Resistance is in the specified limits, then continue.
- (e) If the Resistance is in the specified limits, continue.
- (4) Connect electrical connector DV27004A to the Flap Primary Control Valve, V27004, in the Right Wheel Well.
- (5) Do a check for 28V DC at FSEU 1 as follows:
- (a) Remove FSEU 1, M27001, from the E1-6 shelf. This is the task: Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801.
- (b) Make sure that this circuit breaker is closed:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (c) Do a check for 28V DC between pin G5 (+) on connector DM27001AC and structure ground (WDM 27-51-15).
- 1) If you do not find 28V DC at pin G5 on connector DM27001AC, then do these steps:
- a) Open this circuit breaker and install safety tag:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- b) At the P310 Power Management Panel, disconnect electrical connector D31037P.
- c) In the Right Wheel Well, disconnect electrical connector DV27004A from the Flap Primary Control Valve, V27004.
- d) Do a wiring check from the FSEU-1 connector DM27001AC to the Power Management Panel P310 connector D31037P as follows (WDM 27-51-15):

E1-6 Shelf	R Wheel Well
DM27001AC	DV27004A
pin G5	pin 7

R Wheel Well	P310 Panel
DV27004A	D31037P
pin 8	pin 13

- <1> If you find a problem with the wiring, then do these steps:
- <a> Repair the wiring.
- Re-connect electrical connector DV27004A.
- <c> Reconnect electrical connector D31037P.
- <d> Re-install FSEU 1, M27001. This is the task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- <e> Do the Repair Confirmation at the end of this task.
- <2> If you do not find a problem with the wiring, continue.

- 2) If you find 28V DC at pin G5 of connector DM27001AC, continue.
- (d) Replace FSEU 1, M27001. These are the tasks:
 - Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801
 - Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801

H. Repair Confirmation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL

NOTE: Use the FLAP/SLAT Maintenance Page on EICAS to find which FSEU is IN CONTROL.

WARNING

KEEP PERSONNEL AND EQUIPMENT AWAY FROM THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONNEL AND DAMAGE TO EQUIPMENT.

- (2) For the Center Hydraulic System, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (3) Use the Primary System to extend or retract the flaps to another position. This is the task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (a) If the MAT EXISTING FAULTS Display does not show LATCHED for the maintenance message, then you corrected the problem.
 - (b) If the MAT shows LATCHED with the maintenance message, then continue the Fault Isolation Procedure at the subsequent step.

————— END OF TASK —————

806. Flap Uncommanded Motion Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20431.

B. General

- (1) You can also use this task to isolate the fault if the FLAPS PRIMARY FAIL (CAUTION) EICAS message is shown without a maintenance message.
 - (a) If there is no maintenance message, and you can not correct the fault, then do this task also: Flap Uncommanded Motion Problems FSEU 2 - Fault Isolation, 27-52 TASK 806.

C. Initial Evaluation

- (1) Make sure the position of the flap control lever agrees with the position of the flaps.
- (2) Make sure the ALTN FLAPS control switch is in the OFF position.
- (3) Push the ALTN FLAPS ARM switch on the control stand to arm the alternate control system.

FAULT ISOLATION MANUAL

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (4) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: Use a single AC Motor Pump (ACMP) to supply power to the center system. This will cause the flaps to move more slowly if there is not an intermittent fault. If you use two ACMPs or an Air Driven Pump (ADP) the flaps will move further before the FSEUs stop them.

MOVE ALL PERSONS AND EQUIPMENT AWAY FROM THE FLAPS. THE FLAPS CAN MOVE AND CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (5) Push the ALTN FLAPS ARM switch on the control stand to disarm the alternate control system.
- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure - Uncommanded Motion below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then continue.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (6) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: Use an Air Driven Pump (ADP) to move the flaps. This will allow the flaps to move at their usual rate.

- (7) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

- (8) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

- (a) If the MAT shows LATCHED with the maintenance message, then do the Fault Isolation Procedure - Stops Out of Detent below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.
- (9) Do this ground test on the MAT for FSEU 1: Flap Primary Control Valve Test, AMM TASK 27-51-05-740-801.

D. Fault Isolation Procedure - Uncommanded Motion

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (2) Replace the flap primary control valve, V27004. These are the tasks:
 - Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
 - Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801

WARNING

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (4) Use the primary system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

 - (a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (5) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

E. Fault Isolation Procedure - Stops Out of Detent

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Low Speed solenoid on the flap primary control valve, V27004 in the right main wheel well:

- (b) Disconnect electrical connector DV27004B from the flap primary control valve, V27004 in the right wheel well.
- (c) Do a check of the resistance between pins 8 and 18 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-15):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
- 1) Replace the Low Speed solenoid on the flap primary control valve, V27004. These are the tasks:
 - Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802
 - Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802
 - 2) Do a check of the resistance between pins 8 and 18 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-15).
- NOTE:** This does a check of the internal wiring on the primary control valve, V27004.
- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004. These are the tasks:
 - Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
 - Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801
- (e) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (g) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (h) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
 - (i) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (j) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (4) Do this check of the adjustment of the flap position sensors:
- (a) Make sure the trailing edge flaps are in the retracted position.
 - (b) Look at the FLAPS POS L1, R1, L2 and R2 indications on the FLAP/SLAT maintenance page on EICAS.
 - (c) If one of the flap position indications is not less than 12.03, then replace the applicable flap position sensor. These are the tasks:
 - Flap Position Sensor Removal, AMM TASK 27-58-03-000-801
 - Flap Position Sensor Installation, AMM TASK 27-58-03-400-801
- NOTE: The flap position sensor for FLAP POS L1 and L2 are in the left wheel well. The flap position sensor for FLAP POS R1 and R2 are in the right wheel well.

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (d) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (e) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
- (f) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (5) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

807. Flap Secondary System Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20441.

B. Initial Evaluation

- (1) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Make sure that these circuit breakers are closed:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (a) If the circuit breakers were not closed, use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the circuit breakers were closed, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Do this check to see if the flap drive system is locked:

EFFECTIVITY

Page 226
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Use the primary system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (b) If the flaps do not operate with the primary system, then use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802
- (c) If the flaps do not operate with the primary or the alternate system, then the flap drive system is locked.
- 1) Continue on to the next fault isolation step.
- (d) If the flaps operate with the primary system or the alternate system, then the flap drive system is not locked.
- 1) Continue with the inspection of the torque trip indicators in the subsequent fault isolation steps.
- (3) If the flap drive system is locked, then do these steps:

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (a) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (b) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (c) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (d) Disconnect the torque tubes inboard of the flap position sensor gearboxes.

CAUTION

DO NOT TURN THE MANUAL DRIVE WITH MORE THAN 1200 POUND-INCHES TORQUE OR FASTER THAN 400 RPM. YOU CAN CAUSE DAMAGE TO THE POSITION SENSOR GEARBOX AND THE TORQUE TUBES.

CAUTION

DO NOT LET THE BALLSCREW NUTS HIT THE UPSTOPS OR DOWNSTOPS. YOU CAN CAUSE DAMAGE TO THE SHEAROUT IN THE POSITION SENSOR GEARBOX.

- (e) Use the manual drive on the flap position sensor gearboxes to extend and retract the flaps on each wing. To manually operate the flaps, do this task: Trailing Edge Flap System Manual Operation, AMM TASK 27-51-00-980-801.

Page 227
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (f) If you can extend and retract the flaps on each wing, do these steps:
- 1) Do this task: Flap Electric Motor Removal, AMM TASK 27-51-34-000-801.
 - 2) Use an T.E. flap torque tube coupling drive adapter, SPL-1704 to turn the flap power drive unit (PDU) in the extend and retract directions.
 - 3) If you can turn the PDU, install a new flap electric motor, B27002. To install it, do this task: Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
 - 4) If you cannot turn the PDU, do this task: Flap Hydraulic Motor Removal, AMM TASK 27-51-33-000-801.
 - 5) Use an T.E. flap torque tube coupling drive adapter, SPL-1704 to turn the flap power drive unit (PDU) in the extend and retract directions.
 - 6) If you cannot turn the PDU, replace the flap power drive unit (PDU). These are the tasks:
 - Flap Power Drive Unit (PDU) Removal, AMM TASK 27-51-31-000-801
 - Flap Power Drive Unit (PDU) Installation, AMM TASK 27-51-31-400-801
 - 7) Try to turn the output shaft on the flap hydraulic motor.
 - 8) If you can turn the output shaft on the hydraulic motor, replace the flap primary control valve, V27004. These are the tasks:
 - Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
 - Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801
 - 9) If you cannot turn the output shaft on the flap hydraulic motor, install a new flap hydraulic motor. To install it, do this task: Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.
 - 10) If it is necessary, re-install the flap hydraulic motor. To install it, do this task: Flap Hydraulic Motor Installation, AMM TASK 27-51-33-400-801.
 - 11) If it is necessary, re-install the flap electric motor. To install it, do this task: Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.
- (g) If you cannot extend and retract the flaps on one of the wings, find where the flap drive system is locked:
- 1) Open the access panels on the applicable wing:
 - a) If the flap drive system on the left wing is locked, open the following panels:

<u>Number</u>	<u>Name/Location</u>
573DR	Flap Support Fairing No. 3 Panel
576CL	Flap Support Fairing No. 2 Panel
577DL	Flap Support Fairing No. 1 Panel
 - b) If the flap drive system on the right wing is locked, open the following panels:

<u>Number</u>	<u>Name/Location</u>
673DL	Flap Support Fairing No. 6 Panel
676CR	Flap Support Fairing No. 7 Panel
677DR	Flap Support Fairing No. 8 Panel
 - 2) Look at the torque trip indicators on the transmissions on the applicable wing.
 - 3) If the torque trip indicator shows tripped for a transmission, do these steps:
 - a) Disconnect the torque tubes from the applicable transmission.

- b) Try to turn the torque tube couplings on the applicable transmission.
- c) If you cannot turn the transmission, disconnect the ballscrew from the transmission.
- d) Try to turn the torque tube couplings on the transmission.
- e) If you cannot turn an inboard flap inboard transmission, replace the applicable transmission. These are the tasks:
 - Inboard Flap Inboard Transmission Removal, AMM TASK 27-51-15-000-801
 - Inboard Flap Inboard Transmission Installation, AMM TASK 27-51-15-400-801
- f) If you cannot turn an inboard flap outboard transmission, replace the applicable transmission. These are the tasks:
 - Inboard Flap Outboard Transmission Removal, AMM TASK 27-51-15-000-802
 - Inboard Flap Outboard Transmission Installation, AMM TASK 27-51-15-400-802
- g) If you cannot turn an outboard flap inboard transmission, replace the applicable transmission. These are the tasks:
 - Outboard Flap Inboard Transmission Removal, AMM TASK 27-51-25-000-801
 - Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801
- h) If you cannot turn an outboard flap outboard transmission, replace the applicable transmission. These are the tasks:
 - Outboard Flap Outboard Transmission Removal, AMM TASK 27-51-25-000-802
 - Outboard Flap Inboard Transmission Installation, AMM TASK 27-51-25-400-801
- i) Try to turn the ballscrew on the applicable transmission.
- j) If you cannot turn the ballscrew for the inboard flap inboard transmission, replace the applicable ballscrew. These are the tasks:
 - Inboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-801
 - Inboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-801
- k) If you cannot turn the ballscrew for the inboard flap outboard transmission, replace the applicable ballscrew. These are the tasks:
 - Inboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-16-000-802
 - Inboard Flap Outboard Ballscrew and Gimbal Installation, AMM TASK 27-51-16-400-802
- l) If you cannot turn the ballscrew for the outboard flap inboard transmission, replace the applicable ballscrew. These are the tasks:
 - Outboard Flap Inboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-802

Page 229
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- Outboard Flap Inboard Ballscrew and Gimbal Installation, AMM TASK 27-51-26-400-802
- m) If you cannot turn the ballscrew for the outboard flap outboard transmission, replace the applicable ballscrew. These are the tasks:
 - Outboard Flap Outboard Ballscrew and Gimbal Removal, AMM TASK 27-51-26-000-801
 - Outboard Flap Outboard Ballscrew and Gimbal Installation, AMM TASK 27-51-26-400-801
- n) If it is necessary, connect the ballscrew to the transmission.
- o) Connect the torque tubes to the applicable transmission.
- p) Reset the torque trip indicator on the applicable transmission.
- 4) If none of the torque trip indicators show, or if you did not find a problem with a transmission or ballscrew, examine the other gearboxes for the flap drive system on the applicable wing:
 - a) Disconnect the torque tubes from the applicable gearbox.
 - b) If you cannot manually turn the applicable gearbox, replace the gearbox.
 - c) Connect the torque tubes to the applicable gearbox.
- 5) Close the access panels on the applicable wing:
 - a) Close these access panels:

<u>Number</u>	<u>Name/Location</u>
573DR	Flap Support Fairing No. 3 Panel
576CL	Flap Support Fairing No. 2 Panel
577DL	Flap Support Fairing No. 1 Panel
 - b) Close these access panels:

<u>Number</u>	<u>Name/Location</u>
673DL	Flap Support Fairing No. 6 Panel
676CR	Flap Support Fairing No. 7 Panel
677DR	Flap Support Fairing No. 8 Panel
- (h) Connect the torque tubes to the flap position sensor gearboxes.
- (i) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (j) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
- (k) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.
- 2) If the maintenance message shows on the MAT, then continue.
- (4) If the flap drive system is not locked, do a visual check of the torque trip indicators on the flap transmissions.
- (5) If a torque trip indicator shows tripped, then do these steps on the applicable flap drive mechanism:
 - (a) Do a detailed visual inspection of the flap drive mechanism for misaligned, or damaged parts.
 - (b) Lubricate the applicable transmission, ballscrew and gimbal:
 - 1) For an inboard flap, inboard transmission, do this task: Inboard Flap Inboard Transmission, Ballscrew and Gimbal Lubrication, AMM TASK 12-21-09-640-802.
 - 2) For an inboard flap, outboard transmission, do this task: Inboard Flap Outboard Transmission, Ballscrew and Gimbal Lubrication, AMM TASK 12-21-09-640-807.
 - 3) For an outboard flap, inboard transmission, do this task: Outboard Flap Inboard Transmission, Ballscrew and Gimbal Lubrication, AMM TASK 12-21-09-640-810.
 - 4) For an outboard flap, outboard transmission, do this task: Outboard Flap Outboard Transmission, Ballscrew and Gimbal Lubrication, AMM TASK 12-21-09-640-804.
 - (c) Fill the applicable transmission with oil. To fill a transmission, do this task: Flap PDU and Electric Motor Servicing, AMM TASK 12-13-09-610-801.
 - (d) Reset the torque trip indicator on the applicable transmission.
 - (e) Use the primary system to retract and extend the flaps. To retract and extend them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
 - (f) Use the secondary system to retract and extend the flaps. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.
 - 1) If the flaps operate with the primary and secondary systems, and if the maintenance message does not show on the MAT, then you corrected the fault.
 - 2) If the flaps do not operate, or if the maintenance message shows on the MAT, then continue.
- (6) Use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- (7) If the flaps do not operate with the alternate system, then do a check of the electrical power to the flap electric motor, B27002:
 - (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (b) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (c) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
(d) Disconnect the electrical connector, DB27002 from the flap electric motor, B27002.
(e) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (f) Push the ALT FLAPS ARM switch on the control stand to arm the alternate control system.
(g) Do a check for 28 VDC between pin 6 of connector DB27002 and structure ground (WDM 27-51-17).
(h) Turn the ALT FLAPS control switch to the EXT position.
(i) With the ALT FLAPS control switch in the EXT position do a check for 115 VAC at pins 1, 2 and 3 of connector DB27002 (WDM 27-51-18).
(j) Turn the ALT FLAPS control switch to the RET position.
(k) With the ALT FLAPS control switch in the RET position do a check for 115 VAC at pins 1, 2 and 3 of connector DB27002 (WDM 27-51-18).
(l) If there is 115 VAC at pins 1, 2 and 3 and 28 VDC at pin 6 of connector DB27002, then replace the flap electric motor, B27002. These are the tasks:
- Flap Electric Motor Removal, AMM TASK 27-51-34-000-801
 - Flap Electric Motor Installation, AMM TASK 27-51-34-400-801
- 1) Turn the ALT FLAPS control switch to the OFF position.
 - 2) Push the ALT FLAPS ARM switch on the control stand to disarm the alternate control system.

- 3) Connect the electrical connector, DB27002 to the flap electric motor, B27002.
 - 4) Use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - 5) If the flaps operate with the alternate system, then you corrected the fault.
- (m) If there is not 28 VDC at pin 6 of connector DB27002, then do this wiring check between the flap electric motor, B27002 and the Flaps Bypass/Clutch Relay, K27002 on the P110 panel:

- 1) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel (WDM 27-51-17).
- 2) Do a wiring check between these pins of connector DB27002 on the flap electric motor, B27002 and connector DK27002 on the P110 panel (WDM 27-51-17):

DB27002	DK27002
pin 6	pin B2

- 3) If you find a problem with the wiring, then repair the wiring.
 - a) Reinstall the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
 - 4) If you do not find a problem with the wiring, then install a new Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
 - 5) Connect the electrical connector, DB27002 to the flap electric motor, B27002.
 - 6) Use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
 - a) If the flaps operate with the alternate system, then you corrected the fault
- (n) If there is not 115 VAC at pins 1, 2 and 3 then do this wiring check between the flap electric motor, B27002 and the Flaps Retract Relay, K27006 on the P110 panel:
- 1) Remove the Flaps Retract Relay, K27006 from the P110 panel (WDM 27-51-18).
 - 2) Do a wiring check between these pins of connector DB27002 on the flap electric motor, B27002 and connector DK27006 on the P110 panel (WDM 27-51-18):

DB27002	DK27006
pin 1	pin A2
pin 2	pin B2
pin 3	pin C2

- 3) If you find a problem with the wiring, then repair the wiring.
 - a) Reinstall the Flaps Retract Relay, K27006 on the P110 panel.
- 4) If you do not find a problem with the wiring, then do this wiring check between the Flaps Retract Relay, K27006 and the Flaps Extend Relay K27004 on the P110 panel:
 - a) Remove the Flaps Extend Relay, K27004 from the P110 panel (WDM 27-51-18).
 - b) Do a wiring check between these pins of connector DK27004 and connector DK27006 on the P110 panel (WDM 27-51-18):

FAULT ISOLATION MANUAL

- (17) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.

————— **END OF TASK** —————

808. Flap Secondary System Auto Test Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20451.

B. Initial Evaluation

- (1) Use the secondary system to extend the flaps to another position. To extend them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

- (1) Make sure that these circuit breakers are closed:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (a) If the circuit breakers were not closed, use the secondary system to extend the flaps to another position. To extend them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (b) If the circuit breakers were closed, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Do a check of the electrical power to the flap electric motor, B27002:

EFFECTIVITY

- (a) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (b) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (c) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
(d) Disconnect the electrical connector, DB27002 from the flap electric motor, B27002.
(e) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (f) Push the ALT FLAPS ARM switch on the control stand to arm the alternate control system.
(g) Do a check for 28 VDC between pin 6 of connector DB27002 and structure ground (WDM 27-51-17).
(h) Turn the ALT FLAPS control switch to the EXT position.
(i) With the ALT FLAPS control switch in the EXT position do a check for 115 VAC at pins 1, 2 and 3 of connector DB27002 (WDM 27-51-18).
(j) Turn the ALT FLAPS control switch to the RET position.
(k) With the ALT FLAPS control switch in the RET position do a check for 115 VAC at pins 1, 2 and 3 of connector DB27002 (WDM 27-51-18).
(l) If there is 115 VAC at pins 1, 2 and 3 and 28 VDC at pin 6 of connector DB27002, then replace the flap electric motor, B27002.

These are the tasks:

27-51 TASK 808

D633W103-ARO

Page 239
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

Flap Electric Motor Removal, AMM TASK 27-51-34-000-801,
Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.

- 1) Turn the ALT FLAPS control switch to the OFF position.
- 2) Push the ALT FLAPS ARM switch on the control stand to disarm the alternate control system.
- 3) Connect the electrical connector, DB27002 to the flap electric motor, B27002.
- 4) Use the secondary system to extend the flaps to another position. To extend them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - b) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (m) If there is not 28 VDC at pin 6 of connector DB27002, then do this wiring check between the flap electric motor, B27002 and the Flaps Bypass/Clutch Relay, K27002 on the P110 panel:
- 1) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel (WDM 27-51-17).
 - 2) Do a wiring check between these pins of connector DB27002 on the flap electric motor, B27002 and connector DK27002 on the P110 panel (WDM 27-51-17):

DB27002	DK27002
pin 6	pin B2

- 3) If you find a problem with the wiring, then repair the wiring.
 - a) Reinstall the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
- 4) If you do not find a problem with the wiring, then install a new Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
- 5) Connect the electrical connector, DB27002 to the flap electric motor, B27002.
- 6) Use the secondary system to extend the flaps to another position. To extend them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
- (n) If there is not 115 VAC at pins 1, 2 and 3 then do this wiring check between the flap electric motor, B27002 and the Flaps Retract Relay, K27006 on the P110 panel:
- 1) Remove the Flaps Retract Relay, K27006 from the P110 panel (WDM 27-51-18).
 - 2) Do a wiring check between these pins of connector DB27002 on the flap electric motor, B27002 and connector DK27006 on the P110 panel (WDM 27-51-18):

FAULT ISOLATION MANUAL

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (r) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.
- (3) Do this check of the wiring between the Flaps Bypass/Clutch Relay, K27002 and FSEU 1, M27001:
- (a) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel (WDM 27-51-17).
- (b) Do a wiring check between these pins of connector DM27001AA on the E1-6 shelf and connector DK27002 on the P110 panel (WDM 27-51-17):

DM27001AA	DK27002
pin D5	pin X2

- (c) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1 on the E1-6 shelf.
 - 3) Re-install the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

- (7) If the voltage is in the limit, install a new FSEU 1. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (8) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the maintenance message does not show on the MAT, then you corrected the fault.

————— **END OF TASK** —————

811. Left and Right Flap Position Sensor Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20691.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Use the alternate system to retract the flaps to the retracted position. To retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- (3) Look at the FLAP POS L1 and FLAP POS R1 indications on the FLAP/SLAT maintenance page on EICAS.

- (a) Replace the flap position sensor for the flap position indication which is further from 10.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,
Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

NOTE: The flap position sensor for FLAP POS L1 is M27101 in the left wheel well. The flap position sensor for FLAP POS R1 is M27102 in the right wheel well.

- (b) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
- (c) If the MAT shows ACTIVE for the maintenance message, then continue.
- (4) Replace the other flap position sensor 1L, M27101 or 1R, M27102.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message, then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (5) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (6) Remove FSEU 1, M27001 from the E1-6 shelf.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (7) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (8) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (9) Do a wiring check between FSEU 1, M27001 and flap position sensor R1, M27102:
- (a) Disconnect connector DM27102 from flap position sensor R1, M27102 in the right main wheel well.
 - (b) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DM27102 at the flap position sensor 1R, M27102 in the right wheel well (WDM 27-58-11):

DM27001AA	DM27102
pin A3	pin 1
pin B3	pin 2
pin D9	pin 3
pin D10	pin 4
pin E9	pin 5
pin E10	pin 6

- (c) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DM27102.

- (1) This task is for maintenance message: 27-20751.

B. Initial Evaluation

- (1) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace the Flaps Bypass/Clutch Relay, K27002 on the P110 panel (WDM 27-51-17).
 - (a) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

 - 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Do this wiring check:
 - (a) Remove the Flaps Bypass/Clutch Relay, K27002 from the P110 panel.
 - (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Do a wiring check between these pins of connector DM27001AA on the E1-6 shelf and connector DK27002 on the P110 panel (WDM 27-51-17):

DM27001AA

pin D5

(d) If you find a problem with the wiring, then do these steps:

- 1) Repair the wiring.
- 2) Re-install FSEU 1, M27001 on the E1-6 shelf.
- 3) Re-install the Flaps Bypass/Clutch Relay, K27002 on the P110 panel.
- 4) Use the secondary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Secondary Control, AMM TASK 27-51-00-860-803.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 5) If the maintenance message does not show on the MAT, then you corrected the fault.

————— **END OF TASK** —————

818. Flaps Secondary Auto Test, Relay K27002 Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-20761.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows LATCHED with the maintenance message, then do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that this circuit breaker is closed:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

- (a) If the circuit breaker was not closed, do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the circuit breaker was closed, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (2) Replace the Flaps Bypass/Clutch Relay, K27002 on the P110 panel (WDM 27-51-17).
 - (a) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
 - 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

Page 264
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

C. Fault Isolation Procedure

(1) Do this check to see if the fault is in FSEU 1:

(a) Open these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

(b) Exchange FSEU 1, M27001 (E1-6 shelf) with FSEU 2, M27002 (E4-1 shelf).

(c) Close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

(d) If the MAT Existing Faults display shows ACTIVE for maintenance message 27-20892, then do these steps:

1) Replace FSEU 2 (this is the FSEU initially installed in the position of FSEU 1).

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

2) If the MAT Existing Faults display shows NOT ACTIVE for maintenance message 27-20892 (or if the message does not show), then you corrected the fault.

(e) If the MAT Existing Faults display shows ACTIVE for maintenance message 27-20891, then continue.

(2) Replace the flap lever position sensor, M27037 in the control stand.

These are the tasks:

Flap Lever Position Sensor Removal, AMM TASK 27-51-03-000-801,

Flap Lever Position Sensor Installation, AMM TASK 27-51-03-400-801.

(a) If the MAT Existing Faults display shows NOT ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

(b) If the MAT shows ACTIVE for the maintenance message, then continue.

(3) Do this check of the wiring between FSEU 1, M27001 and the flap lever position sensor, M27037:

EFFECTIVITY
ARO ALL

27-51 TASK 823

D633W103-ARO

Page 265
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Disconnect connectors DM27037A and DM27037B for the flap lever position sensor, M27037 in the control stand.
- (d) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DM27037A at the flap lever position sensor, M27037 in the control stand (WDM 27-51-13):

DM27001AA	DM27037A
pin A2	pin 1
pin B2	pin 2
pin A9	pin 4
pin B9	pin 5

- (e) Do a wiring check between these pins on connector DM27001AC at the E1-6 shelf and connector DM27037B at the flap lever position sensor, M27037 in the control stand (WDM 27-51-13):

DM27001AC	DM27037B
pin K2	pin 1
pin J2	pin 2
pin K9	pin 4
pin J9	pin 5

- (f) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connectors DM27037A and DM27037B.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) If the MAT Existing Faults display does not show ACTIVE for the maintenance message (or if the message does not show), then you corrected the fault.

————— **END OF TASK** —————

824. Left to Right Flap Position Sensor Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21191.

EFFECTIVITY
ARO ALL

Page 266
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

- (2) Use the primary system to extend the flaps to the 30-unit position, then retract the flaps to the retracted position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
 - (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
 - (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a visual check of the torque tubes between the flap power drive unit (PDU) and the flap position sensor gearboxes and the wiring for the flap position sensors in the left and right wheel wells.
 - (a) If you find a problem with the wiring, repair the wiring.
 - (b) If the torque tubes are broken or disconnected, connect or replace the torque tubes.

These are the tasks:

Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,

Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.

- 1) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
- 2) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.

Page 267
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (c) If you do not find a problem with the torque tubes, then continue.
- (4) Replace the flap position sensor 1L, M27101 in the left wheel well.
- These are the tasks:
- Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,
Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.
- (a) Use the primary system to extend the flaps to the 30-unit position, then retract the flaps to the retracted position. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
- NOTE:** Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (5) Replace FSEU 1, M27001.
- These are the tasks:
- Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (a) Use the primary system to extend the flaps to the 30-unit position, then retract the flaps to the retracted position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.
- NOTE:** Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
- 1) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - 2) If the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (6) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (7) Remove FSEU 1, M27001 from the E1-6 shelf.
- (8) Do this check of the wiring between the flap position sensor 1L, M27101 and FSEU 1, M27001:
- (a) Disconnect the connector DM27101 flap position sensor 1L, M27101 in the left wheel well.
 - (b) Do a wiring check between these pins on connector DM27001AC at the E1-6 shelf and connector DM27101 on flap position sensor 1L, M27101 (WDM 27-58-11):

825. Left and Right Flap Position Sensor Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21201.

B. Initial Evaluation

- (1) Cycle the ALTN FLAPS ARM switch on the control stand until FSEU 1 is IN CONTROL.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to find which FSEU is IN CONTROL.

- (2) Use the primary system to extend the flaps to the 30-unit position and retract them to the retracted position. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- (a) If the MAT Existing Faults display shows LATCHED for the maintenance message, then do the Fault Isolation Procedure below.
- (b) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

NOTE: When you do the AMM procedure to install a component, it is not necessary to do the test given at the end of the AMM task. The steps in this FIM procedure are a sufficient test.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a check of the torque tubes between the flap power drive unit (PDU) and the flap position sensor gearboxes in the left and right wheel wells.
 - (a) If the torque tubes are broken or disconnected, connect or replace the torque tubes.

These are the tasks:

Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803,

Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803.

 - 1) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.

Page 271
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- 2) Use the primary system to extend the flaps to the 30-unit position and retract them to the retracted position. To extend and retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- a) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If you do not find a problem with the torque tubes, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (4) Make sure the flaps are in the retracted position. To retract them, do this task: Retract the Trailing Edge Flaps, AMM TASK 27-51-00-860-805.
- (5) Make sure the index marks for the rig indicator on the flap position sensor gearbox align.
- (6) Use the FLAP/SLAT maintenance page on EICAS to make sure the four FLAP POS indications are in the limit of 8.50 to 11.00.
- (7) If FLAP POS indications are not in the limit, replace the applicable flap position sensors.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

NOTE: FLAP POS L1 is M27101; FLAP POS R1 is M27102; FLAP POS L2 is M27201; FLAP POS R2 is M27202.

- (a) If the four FLAP POS indications on the FLAP/SLAT maintenance page on EICAS are in the limit of 8.50 to 11.00, do this test:
 - 1) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.
 - 2) If the MAT Existing Faults display does not show LATCHED for the maintenance message, then you corrected the fault.
 - (b) If the four FLAP POS indications on the FLAP/SLAT maintenance page on EICAS are not the limit, or if the MAT Existing Faults display shows LATCHED for the maintenance message, then continue.
- (8) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the four FLAP POS indications on the FLAP/SLAT maintenance page on EICAS are in the limit of 8.50 to 11.00, do this test:

- (12) Replace the flap position sensor 1L, M27101 in the left wheel well.

These are the tasks:

Flap Position Sensor Removal, AMM TASK 27-58-03-000-801,

Flap Position Sensor Installation, AMM TASK 27-58-03-400-801.

- (a) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.
- 2) If the maintenance message shows on the MAT, then continue.
- (13) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) Use the primary system to extend or retract the flaps to another position. To extend or retract them, do this task: Trailing Edge Flap System Operation With Primary Control, AMM TASK 27-51-00-860-801.

NOTE: Use the FLAP/SLAT maintenance page on EICAS to make sure FSEU 1 is IN CONTROL. If FSEU 1 is not IN CONTROL, cycle the ALTN FLAPS ARM switch to get FSEU 1 IN CONTROL.

- 1) If the maintenance message does not show on the MAT, then you corrected the fault.

Page 278
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (14) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

— END OF TASK —

827. Primary Flaps Extend Slow Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25181.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.

NOTE: This fault can occur if there is not sufficient hydraulic power available. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power. The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the flaps.

- (a) If the maintenance message does not show on the ground test display, then do the Fault Isolation Procedure - Intermittent Extend Solenoid Problem below.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Extend Problem below.

C. Fault Isolation Procedure - Intermittent Extend Solenoid Problem

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Primary Extend solenoid on the flap primary control valve, V27004 in the right main wheel well:
- (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

Row	Col	Number	Name
K	9	C27632	FLAPS PRI DR CTRL 2

G	11	C27604	FLAPS PRI DR CTRL 1

- (b) Disconnect electrical connector DV27004B from the flap primary control valve, V27004 in the right wheel well.
- (c) Do a check of the resistance between pins 9 and 19 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-15):
- (d) If the resistance is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - 1) Replace the Primary Extend solenoid on the flap primary control valve, V27004.
These are the tasks:
Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,
Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.
 - 2) Do a check of the resistance between pins 9 and 19 of connector DV27004B on the flap primary control valve, V27004 again (WDM 27-51-15).
NOTE: This does a check of the internal wiring on the primary control valve, V27004.
 - a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.
These are the tasks:
Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.
- (e) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.
- (f) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

777-200/300 FAULT ISOLATION MANUAL

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

D. Fault Isolation Procedure - Slow Extend Problem

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.

NOTE: The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the flaps. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power.

- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- 2) If the maintenance message shows on the ground test display, then continue.

- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

- (3) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1:

- (a) If the FLAP/SLAT CONTROL 1 EICAS message shows, then replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (b) If the FLAP/SLAT CONTROL 1 EICAS message does not show, then continue.

- (4) If the AFT FLAPS PRIMARY EXTEND COIL fault shows on the MAT, then replace the Primary Extend solenoid on the flap primary control valve, V27004.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.

- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1:

- (b) If the MAT shows PASSED after the ground test, then do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.

- 1) If the MAT shows PASSED after the ground test, then you corrected the fault.

- (c) Do this wiring check between FSEU 1, M27001 and the primary control valve, V27004 in the right wheel well:

FAULT ISOLATION MANUAL**

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (9) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

END OF TASK

828. Primary Flaps Operate Fast Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance messages: 27-25191, 27-25211.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
- (a) If the MAT does not show PASSED after the ground test, then replace the flap primary control valve, V27004.
These are the tasks:
Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.
 - (b) If the MAT shows PASSED after the ground test, then replace FSEU 1, M27001.
These are the tasks:
Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
 - 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
 - 2) If the MAT shows PASSED after the ground test, then continue.
- (2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
- (a) If the maintenance message shows on the ground test display, replace the flap primary control valve, V27004.
These are the tasks:
Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.
 - (b) If the maintenance message does not show on the ground test display, then you corrected the fault.

- (3) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

829. Primary Flaps Retract Slow Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25201.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.

NOTE: This fault can occur if there is not sufficient hydraulic power available. You must operate the Air Driven Pumps (ADPs) for the center hydraulic system to supply hydraulic power. The AC Motor Pumps (ACMPs) for the center hydraulic system will not supply sufficient hydraulic power to operate the flaps.

- (a) If the maintenance message does not show on the ground test display, then do the Fault Isolation Procedure - Intermittent Retract Solenoid Problem below.
- (b) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure - Slow Retract Problem below.

C. Fault Isolation Procedure - Intermittent Retract Solenoid Problem

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (2) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (3) Do a wiring check of the Primary Retract solenoid on the flap primary control valve, V27004 in the right main wheel well:
 - (a) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>

G	11	C27604	FLAPS PRI DR CTRL 1

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
- (8) Do this wiring check between the Retract Solenoid and FSEU 1:
 - (a) Do a wiring check between these pins on connector DM27001AC at the E1-6 shelf and connector DV27004B at the flap primary control valve, V27004 in the right wheel well (WDM 27-51-15):

DM27001AC	DV27004B
pin D1	pin 2

- (b) If you find a problem with the wiring, do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DV27004B.

Page 289
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

- (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (14) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (15) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

———— END OF TASK ————

830. Primary Flaps Low Speed Extend Slow Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25221.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the center hydraulic system is not pressurized, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.

777-200/300 FAULT ISOLATION MANUAL

- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (5) Replace the Primary Extend solenoid on the flap primary control valve, V27004. These are the tasks:
- Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802
 - Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802
- (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
- (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (6) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (7) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
- (a) If the MAT does not show PASSED after the ground test, then replace the flap primary control valve, V27004. These are the tasks:
- Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801
 - Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801
- 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
- a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- b) If the maintenance message shows on the ground test display, then continue.
- (b) If the MAT shows PASSED after the ground test, then continue.
- (8) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

KEEP PERSONS AND EQUIPMENT CLEAR OF THE FLIGHT CONTROL SURFACES, THE THRUST REVERSERS, AND THE LANDING GEAR. THESE COMPONENTS CAN MOVE SUDDENLY WHEN YOU SUPPLY HYDRAULIC POWER. THIS CAN CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (1) If the center hydraulic system is not pressurized, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.

NOTE: Use the 29 HYDRAULICS maintenance page on EICAS to make sure the C1 or C2 ADP operates and hydraulic pressure is more than 2500 psi.

 - 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - 2) If the maintenance message shows on the ground test display, then continue.
- (2) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (5) Replace the Primary Retract solenoid on the flap primary control valve, V27004.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.

 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.

EFFECTIVITY
ARO ALL

Page 298.1
Sep 05/2017

777-200/300 FAULT ISOLATION MANUAL

- (b) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (c) If the maintenance message shows on the ground test display, then continue.
- (6) For the center hydraulic system, do this task: Main Hydraulic System Pressurization, AMM TASK 29-11-00-860-801.
- (7) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 2.
 - (a) If the MAT does not show PASSED after the ground test, then replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.

 - 1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, then continue.
 - (b) If the MAT shows PASSED after the ground test, then continue.
- (8) For the center hydraulic system, do this task: Main Hydraulic System Power Removal, AMM TASK 29-11-00-860-808.
- (9) Open these circuit breakers and install safety tags:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- (10) Do a check of the internal wiring in the primary control valve, V27004 for the Primary Retract solenoid:
 - (a) Disconnect electrical connector DV27004B from the flap primary control valve, V27004.
 - (b) Do a check of the resistance between pins 2 and 17 of connector DV27004B on the flap primary control valve, V27004 in the right wheel well (WDM 27-51-15):
 - (c) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - 1) Replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
Flap Primary Control Valve Installation, AMM TASK 27-51-05-400-801.
 - 2) Connect electrical connector DV27004B to the flap primary control valve, V27004 in the right wheel well.

EFFECTIVITY
ARO ALL

- 3) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
G	11	C27604	FLAPS PRI DR CTRL 1

- 4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.

- a) If the maintenance message does not show on the ground test display, then you corrected the fault.

- (d) If the resistance between the pins is in the limit, or if the maintenance message shows on the ground test display, then continue.

- (11) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (12) Remove FSEU 1, M27001 from the E1-6 shelf.

- (13) Do a wiring check between these pins on connector DM27001AC at the E1-6 shelf and connector DV27004B at the flap primary control valve, V27004 in the right wheel well (WDM 27-51-15):

DM27001AC	DV27004B
pin D1	pin 2

- (a) If you find a problem with the wiring, do these steps:

- 1) Repair the wiring.
- 2) Re-install FSEU 1, M27001.
- 3) Re-connect connector DV27004B.
- 4) Remove the safety tags and close these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	9	C27632	FLAPS PRI DR CTRL 2

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1
G	11	C27604	FLAPS PRI DR CTRL 1

- 5) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.

777-200/300 FAULT ISOLATION MANUAL

- (18) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, Flaps Primary Control Valve Test-FSEU 1.
- (a) If the maintenance message does not show on the ground test display, then you corrected the fault.

WARNING

OBEY THE REMOVAL PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (19) Do this task: Landing Gear Door Safety Pins Removal, AMM TASK 32-00-15-080-801.

END OF TASK

833. Secondary Flaps Extend Slow Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25261.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Make sure that these circuit breakers are closed:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

- (a) If the circuit breakers were not closed, do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breakers were closed, continue.
- (2) Use the alternate system to extend and retract the flaps. To extend and retract them, do this task: Trailing Edge Flap System Operation With Alternate Control, AMM TASK 27-51-00-860-802.
- (a) If the flaps do not operate in alternate mode, replace the flap electric motor, B27002.
- These are the tasks:
- Flap Electric Motor Removal, AMM TASK 27-51-34-000-801,
- Flap Electric Motor Installation, AMM TASK 27-51-34-400-801.

777-200/300 FAULT ISOLATION MANUAL

- 1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, or if the flaps operate in alternate mode, continue.
- (3) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 2, Test of Flaps Only.
 - (a) If the maintenance message does not show on the ground test display, replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
 - 1) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - b) If the maintenance message shows on the ground test display, continue.
- (4) Open these circuit breakers and install safety tags:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (5) Remove FSEU 1, M27001 from the E1-6 shelf.
- (6) Do this check of the flaps bypass/clutch relay, K27002:
 - (a) Remove the flaps bypass/clutch relay, K27002 from the P110 power management panel (WDM 27-51-17).
 - (b) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DK27002 at the P110 power management panel (WDM 27-51-17):

DM27001AA	DK27002
pin D5	pin X2

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.

777-200/300 FAULT ISOLATION MANUAL

(Continued)

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	3	C27601	FSEU 1

- (5) Remove FSEU 1, M27001 from the E1-6 shelf.
- (6) Do this check of the flaps bypass/clutch relay, K27002:
 - (a) Remove the flaps bypass/clutch relay, K27002 from the P110 power management panel (WDM 27-51-17).
 - (b) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DK27002 at the P110 power management panel (WDM 27-51-17):

DM27001AA	DK27002
pin D5	pin X2

- (c) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Install the flaps bypass/clutch relay, K27002 on the P110 power management panel (WDM 27-51-17).
 - 4) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (d) If you do not find a problem with the wiring, or if the maintenance message shows on the ground test display, then install a new FSEU 1. To install it, do this task: Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (e) Install the flaps bypass/clutch relay, K27002 on the P110 power management panel (WDM 27-51-17).

FAULT ISOLATION MANUAL**

- (f) Remove the safety tags and close these circuit breakers:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

Left Power Panel, P100

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
D	2	C27301	FLAPS ELEC MOT PWR

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (g) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (h) If the maintenance message shows on the ground test display, then replace the flaps bypass/clutch relay, K27002 on the P110 power management panel (WDM 27-51-17).
- (i) Do this ground test on the MAT: 27 High Lift System, System Test, Secondary System Test-FSEU 1, Test of Flaps Only.
- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (j) If the maintenance message shows on the ground test display, then continue.
- (7) Do this check of the flaps retract relay, K27006:
- (a) Remove the flaps retract relay, K27006 from the P110 power management panel (WDM 27-51-17).
 - (b) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DK27006 at the P110 power management panel (WDM 27-51-17):

DM27001AA	DK27006
pin G1	pin X2

- (c) If you find a problem with the wiring, then do these steps:
- 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Install the flaps retract relay, K27006 on the P110 power management panel (WDM 27-51-17).
 - 4) Remove the safety tags and close these circuit breakers:

777-200/300 FAULT ISOLATION MANUAL

835. Flap Control Lever Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25411.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
 - (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
 - (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 2.
 - (a) If the MAT does not show PASSED after the ground test, then replace the flap lever position sensor, M27037.

These are the tasks:
Flap Lever Position Sensor Removal, AMM TASK 27-51-03-000-801,
Flap Lever Position Sensor Installation, AMM TASK 27-51-03-400-801.
 - (b) If the MAT shows PASSED after the ground test, then replace FSEU 1, M27001.

These are the tasks:
Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.
- (2) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
 - (a) If the maintenance message does not show on the ground test display, then you corrected the fault.
 - (b) If the maintenance message shows on the ground test display, then continue.
- (3) Do this wiring check between the flap lever position sensor, M27037 and FSEU 1, M27001:
 - (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Disconnect electrical connector DM27037A on the control stand for the flap lever position sensor, M27037 (WDM 27-51-13).
- (d) Do a wiring check between these pins on connector DM27001AA at the E1-6 shelf and connector DM27037A at the control stand (WDM 27-51-13):

A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) Do this ground test on the MAT: 27 High Lift System, System Test, Primary System Test-FSEU 1.
- 6) If the maintenance message does not show on the ground test display, then you corrected the fault.

————— **END OF TASK** —————

836. Flaps Skew and Position Sensor Problems FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21221.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Look for broken or disconnected torque tubes for the flap drive system:

NOTE: It is likely that there are broken or disconnected torque tubes between the flap position sensor gearboxes and flap supports No. 1 and 8.

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (a) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (b) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (c) Look at the torque tubes in the main landing gear wheel wells outboard of the position sensor gearboxes to see if they are broken or disconnected.
- (d) Look at the indications for the INBD FLAPS and OUTBD FLAPS on the FLAP/SLAT maintenance page on EICAS.
- 1) Compare the indications for the adjacent flap supports to see if they are different by more than 1 volt.
- 2) If the indications are different by more than 1 volt, then look at the torque tubes between the applicable flap supports.

661DB	Midspan Fixed Trailing Edge Panel
661EB	Midspan Fixed Trailing Edge Panel

- (k) If you see a broken or disconnected torque tube, replace the applicable torque tube, torque tube support or no-back brake:
 - 1) If it is necessary, replace an outboard wing torque tube. These are the tasks:
 - Outboard Wing Flap Torque Tube Removal, AMM TASK 27-51-38-000-801
 - Outboard Wing Flap Torque Tube Installation, AMM TASK 27-51-38-400-801
 - 2) If it is necessary, replace an inboard wing torque tube. These are the tasks:
 - Inboard Wing Flap Torque Tube Removal, AMM TASK 27-51-38-000-802
 - Inboard Wing Flap Torque Tube Installation, AMM TASK 27-51-38-400-802
 - 3) If it is necessary, replace torque tube in the wheel well. These are the tasks:
 - Wheel Well Flap Torque Tube Removal, AMM TASK 27-51-38-000-803
 - Wheel Well Flap Torque Tube Installation, AMM TASK 27-51-38-400-803
 - 4) If it is necessary, replace an outboard wing torque tube support. These are the tasks:
 - Outboard Wing Torque Tube Support Removal, AMM TASK 27-51-39-000-802
 - Outboard Wing Torque Tube Support Installation, AMM TASK 27-51-39-400-802
 - 5) If it is necessary, replace an inboard wing torque tube support. These are the tasks:
 - Inboard Wing Torque Tube Support Removal, AMM TASK 27-51-39-000-801
 - Inboard Wing Torque Tube Support Installation, AMM TASK 27-51-39-400-801
- (l) Do this task: Trailing Edge Flap Drive System Adjustment, AMM TASK 27-51-00-820-801.
- (m) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
- (n) Install the applicable access panels:

- 1) Install these access panels between flap supports No. 1 and No. 2:

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Replace the ARINC 629 coupler, B27301, in the P311 panel.

These are the tasks:

ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801,

ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.

NOTE: This coupler connects the control channel for FSEU 1 to the Systems 629 Bus C1.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Replace the ARINC 629 coupler, B27302, in the P311 panel.

These are the tasks:

ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801,

ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.

NOTE: This coupler connects the monitor channel for FSEU 1 to the Systems 629 Bus C1.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (4) Do this check of the wiring from FSEU 1 to the coupler, B27301:
 - (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Disconnect the connector DB27301 from the coupler B27301.
 - (d) Do a wiring check between these pins of connector DM27001AB on FSEU 1, M27001 and connector DB27301 at the P311 panel (WDM 27-51-11):

- (f) If you do not find a problem with the wiring, then continue.
- (5) Re-connect connector DB27301 to the coupler, B27301.
- (6) Do this check of the wiring from FSEU 1 to the coupler, B27302:
 - (a) Disconnect the connector DB27302 from the coupler B27302.
 - (b) Do a wiring check between these pins of connector DM27001AD on FSEU 1, M27001 and connector DB27302 at the P311 panel (WDM 27-51-11):

DM27001AD	DB27302
pin 3TR	pin 1
pin 3T	pin 2
pin 6TR	pin 4
pin 6T	pin 5

- (c) If you find a problem with the wiring, then do these steps:
- 1) Replace the ARINC 629 wiring (SWPM 20-11-11).
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DB27302 to the coupler, B27302.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

838. FSEU 1 Monitor Channel No Input from Control Channel on Systems 629 Bus-L - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-21241.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Replace the ARINC 629 coupler, B27102, in the P111 panel.

These are the tasks:

ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801,

ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.

NOTE: This coupler connects the monitor channel for FSEU 1 to the Systems 629 Bus-L.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Replace the ARINC 629 coupler, B27101, in the P111 panel.

These are the tasks:

ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801,

ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.

NOTE: This coupler connects the control channel for FSEU 1 to the Systems 629 Bus-L.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
 - (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (4) Do this check of the wiring from FSEU 1 to the coupler, B27102:
 - (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (c) Disconnect the connector DB27102 from the coupler B27102.

777-200/300 FAULT ISOLATION MANUAL

- (d) Do a wiring check between these pins of connector DM27001AD on FSEU 1, M27001 and connector DB27102 at the P111 panel (WDM 27-51-11):

DM27001AD	DB27102
pin 2TR	pin 1
pin 2T	pin 2
pin 5TR	pin 4
pin 5T	pin 5

- (e) If you find a problem with the wiring, then do these steps:
- 1) Replace the ARINC 629 wiring (SWPM 20-11-11).
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DB27102 to the coupler, B27102.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

Row	Col	Number	Name
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (5) Re-connect connector DB27102 to the coupler, B27102.
- (6) Do this check of the wiring from FSEU 1 to the coupler, B27101:
- (a) Disconnect the connector DB27101 from the coupler B27101.
- (b) Do a wiring check between these pins of connector DM27001AB on FSEU 1, M27001 and connector DB27101 at the P111 panel (WDM 27-51-11):

DM27001AB	DB27101
pin 2TR	pin 1
pin 2T	pin 2
pin 5TR	pin 4
pin 5T	pin 5

- (c) If you find a problem with the wiring, then do these steps:
- 1) Replace the ARINC 629 wiring (SWPM 20-11-11).
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DB27101 to the coupler, B27101.
 - 4) Remove the safety tags and close these circuit breakers:

777-200/300 FAULT ISOLATION MANUAL

- 5) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.

————— END OF TASK —————

839. FSEU Synchronization Problems During Test FSEU 1 - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-25011.

B. Initial Evaluation

- (1) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
- (a) If the maintenance message shows on the ground test display, then do the Fault Isolation Procedure below.
- (b) If the maintenance message does not show on the ground test display, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Do this check to see if the fault is in FSEU 1:

- (a) Open these circuit breakers:

Right Power Management Panel, P210

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
F	21	C27514	SNSR EXC 2
K	4	C27602	FSEU 2

777-200/300 FAULT ISOLATION MANUAL

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- 2) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 2.
- 3) If the maintenance message 27-25012 does not show on the ground test display, then you corrected the fault.
- (f) If the maintenance message 27-25011 shows on the ground test display, then continue.
- (2) Do this check of the wiring between FSEU 1, M27001 and FSEU 2, M27002:
 - (a) Remove FSEU 1, M27001 from the E1-6 shelf.
 - (b) Remove FSEU 2, M27002 from the E4-1 shelf.
 - (c) Do a wiring check between these pins of connector DM27001AC on FSEU 1, M27001 and connector DM27002AA on FSEU 2, M27002 (WDM 27-51-12):

DM27001AC

pin C1
pin C2

DM27002AA

pin F3
pin F5

- (d) Do a wiring check between these pins of connector DM27001AA on FSEU 1, M27001 and connector DM27002AC on FSEU 2, M27002 (WDM 27-51-11):

DM27001AA

pin F3
pin F5

DM27002AC

pin C1
pin C2

- (e) If you find a problem with the wiring, then do these steps:
 - 1) Repair the wiring.
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-install FSEU 2, M27002.
 - 4) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
 - a) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (f) If you do not find a problem with the wiring (or if the maintenance message shows), then continue.
- (3) Replace FSEU 1 (this is the FSEU initially installed in the position of FSEU 2).

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,
Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

 - (a) Do this ground test on the MAT: 27 High Lift System, LRU Replacement Test, FSEU 1.
 - (b) If the maintenance message does not show on the ground test display, then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

B. Initial Evaluation

NOTE: This message can only occur during the start of a test. It will occur when you select NO when the MAT shows this statement: Slats & Flaps Retracted. If you select YES this maintenance message will not show on the ground test display.

- (1) Retract the trailing edge flaps to the UP position. To retract the flaps, do this task: Retract the Trailing Edge Flaps, AMM TASK 27-51-00-860-805.
- (2) Retract the leading edge slats to the retracted position. To retract the slats, do this task: Retract the Leading Edge Slats, AMM TASK 27-81-00-860-805.
- (3) If you can retract the flaps and slats, then you corrected the fault.

————— **END OF TASK** —————

841. FSEU 1 No Output on Systems 629 Bus - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-28801.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.

————— **END OF TASK** —————

842. FSEU 1 No Output Systems 629 Bus-L - Fault Isolation

A. Maintenance Messages

- (1) This task is for maintenance message: 27-28841.

B. Initial Evaluation

- (1) If the MAT shows ACTIVE for the maintenance message, then do the Fault Isolation Procedure below.
- (2) If the MAT shows NOT ACTIVE for the maintenance message, then there was an intermittent fault.

C. Fault Isolation Procedure

- (1) Replace FSEU 1, M27001.

These are the tasks:

Flap/Slat Electronics Unit (FSEU) Removal, AMM TASK 27-51-01-000-801,

Flap/Slat Electronics Unit (FSEU) Installation, AMM TASK 27-51-01-400-801.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.

777-200/300 FAULT ISOLATION MANUAL

- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (2) Replace the ARINC 629 couplers, B27101 and B27102, in the P111 panel.

These are the tasks:

ARINC 629 Current-Mode Coupler Removal, AMM TASK 23-91-01-000-801,

ARINC 629 Current-Mode Coupler Installation, AMM TASK 23-91-01-400-801.

NOTE: Coupler B27101 connects the control channel for FSEU 1 to the Systems 629 Bus-L.
Coupler B27102 connects the monitor channel for FSEU 1 to the Systems 629 Bus-L.

- (a) If the MAT shows NOT ACTIVE for the maintenance message (or if the maintenance message does not show), then you corrected the fault.
- (b) If the MAT shows ACTIVE for the maintenance message, then continue.
- (3) Do this check of the wiring from FSEU 1 to the coupler, B27102:
- (a) Open these circuit breakers and install safety tags:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- (b) Remove FSEU 1, M27001 from the E1-6 shelf.
- (c) Disconnect the connector DB27102 from the coupler B27102.
- (d) Do a wiring check between these pins of connector DM27001AD on FSEU 1, M27001 and connector DB27102 at the P111 panel (WDM 27-51-11):

DM27001AD	DB27102
pin 2TR	pin 1
pin 2T	pin 2
pin 5TR	pin 4
pin 5T	pin 5

- (e) If you find a problem with the wiring, then do these steps:
- 1) Replace the ARINC 629 wiring (SWPM 20-11-11).
 - 2) Re-install FSEU 1, M27001.
 - 3) Re-connect connector DB27102 to the coupler, B27102.
 - 4) Remove the safety tags and close these circuit breakers:

Standby Power Management Panel, P310

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
A	8	C27513	SNSR EXC 1
D	3	C27601	FSEU 1

- 5) If the MAT shows NOT ACTIVE for the maintenance message (or if the message does not show), you corrected the fault.
- (f) If you do not find a problem with the wiring, then continue.
- (4) Re-connect connector DB27102 to the coupler, B27102.
- (5) Do this check of the wiring from FSEU 1 to the coupler, B27101:
- (a) Disconnect the connector DB27101 from the coupler B27101.

- 1) If the maintenance message does not show on the ground test display, then you corrected the fault.
- (b) If the maintenance message shows on the ground test display, or if the circuit breakers were closed, then continue.
- (2) Make sure that the flap position sensors are in rig, do this task: Flap Position Sensor Installation, AMM TASK 27-58-03-400-801

WARNING

MAKE SURE THE DOWNLOCK PINS ARE INSTALLED ON ALL THE LANDING GEAR. WITHOUT THE DOWNLOCK PINS, THE LANDING GEAR COULD RETRACT AND CAUSE INJURIES TO PERSONS AND DAMAGE TO EQUIPMENT.

- (3) If the downlock pins are not installed on the main and nose landing gear, do this task: Landing Gear Downlock Pins Installation, AMM TASK 32-00-30-480-801.

WARNING

OBEY THE INSTALLATION PROCEDURE FOR THE DOOR GROUND SAFETY PINS. THE DOORS OPEN AND CLOSE QUICKLY. THE MOVEMENT OF THE DOORS CAN CAUSE INJURIES TO PERSONS OR DAMAGE TO EQUIPMENT.

- (4) Do this task: Landing Gear Door Safety Pins Installation, AMM TASK 32-00-15-480-801.
- (5) Do this wiring check of the Bypass solenoid on the flap primary control valve, V27004:
 - (a) Open this circuit breaker and install safety tag:

Left Power Management Panel, P110

<u>Row</u>	<u>Col</u>	<u>Number</u>	<u>Name</u>
K	17	C27631	FLAPS ELEC CTRL RLY PWR

- (b) Disconnect electrical connector DV27004A from the flap primary control valve, V27004 in the right wheel well.
- (c) Do a check of the resistance between pins 10 and 16 of connector DV27004A on the flap primary control valve, V27004 in the left wheel well (WDM 27-51-17):
- (d) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then do these steps:
 - 1) Replace the Bypass solenoid on the flap primary control valve, V27004.

These are the tasks:

Primary Control Valve Solenoid Removal, AMM TASK 27-51-05-000-802,

Primary Control Valve Solenoid Installation, AMM TASK 27-51-05-400-802.

- 2) Do a check of the resistance between pins 10 and 16 of connector DV27004A on the flap primary control valve, V27004 again (WDM 27-51-17).

NOTE: This does a check of the internal wiring on the primary control valve, V27004.

- a) If the resistance between the pins is not in the limit of 56.5 ± 5.0 ohms (for the 391 series solenoids) or 77 ± 7 ohms (for the 883 series solenoids), then replace the flap primary control valve, V27004.

These are the tasks:

Flap Primary Control Valve Removal, AMM TASK 27-51-05-000-801,
